There are pushes in all directions for the waters of the upper Missouri River. The lower States all need the water for commerce. I understand that. I hope, however, that the U.S. Army Corps of Engineers also understands the concerns I have and that the people of the State of Montana have. There is common ground here, but a solution must take our concerns into consideration as well as those of other parts of the country.

---

By Mr. BUMPERS:

S. 2680. A bill to provide for the relief of certain persons in Stone County, AR, deprived of property as a result of a 1973 dependent resurvey by the Bureau of Land Management; to the Committee on Energy and Natural Resources.

SETTLEMENT OF FOREST SERVICE LANDLINE SURVEY DISPUTE

● Mr. BUMPERS. Mr. President, today I am introducing legislation to resolve a dispute in my State involving a Forest Service landline survey and approximately 25 adjacent landowners. I am hopeful that enactment of this legislation will put to rest what has become a very difficult and contentious issue.

In 1973, the Bureau of Land Management [BLM] conducted a dependent resurvey of a portion of township 15 north, range 12 west in Stone County, AR, for the Ozark National Forest. During the preparation of this survey, the BLM found what it believed to be evidence of the original Government Land Office [GLO] survey conducted in 1890. This evidence, in the form of a remnant of the original GLO corner at the northeast corner of section 12, was located approximately 200 feet from the monuments set years before by several private surveyors. It is these earlier private surveys, as well as a 1935 survey conducted by the Forest Service, that have been used by the Forest Service and private landowners to mark their respective boundaries in this area for almost 60 years.

In reality, however, the problem really goes back much further. In an April 27 letter to one of the affected landowners regarding this situation, the Department of Agriculture states:

To compound the problem it appears that even though public domain lands in this area were reserved for national forest purposes in 1908, no attempt was made by the United States to locate the original survey corners. The existing property boundaries were accepted as the line between Federal and private lands without further survey. Also when the Forest Service marked the landlines several decades later, they again relied on the established lines on the ground. They did not take the time to mark the landlines in the 56 community correctly or they did not apply the expertise to property locate the Federal-private property lines before marking.

The situation we are confronted with now is that beginning late last year the Forest Service, using the 1973 BLM dependent resurvey, finally began to mark its official boundaries based on that BLM survey. As a result of this survey, the Forest Service has identified several encroachments on Federal land by adjoining private landowners. As you might imagine, Mr. President, the individual property owners affected by this new survey do not consider themselves encroaching on the Forest Service or anyone else. Many of these people and their predecessors and ancestors have lived on and used this land for over 70 years. In many instances, generations of the same family have occupied these properties, made improvements, grown crops, and raised livestock. Now, after all these years, these people are being told that this land doesn't belong to them and that under existing law the only remedy available to most of them is to purchase the land from the Government at its current fair market value. In my view, this is clearly an unacceptable solution to this problem.

Mr. President, the Forest Service personnel involved in this situation in Arkansas recognize that this is a problem. The supervisor of the Ozark National Forest, Lynn Neff, and his staff have been very helpful to me and my office in seeking a solution to this problem that is both fair to the individuals involved and Government. Under existing law, however, the Forest Service's options are limited.

The bill I am introducing today would authorize and direct the Secretary of Agriculture to convey these disputed lands to the owners of the adjacent property without further consideration if the claimants comply with certain requirements specified in the legislation.

Mr. President, the Forest Service estimates that a total of some 50 acres is involved in this case. It further estimates that the total value of these lands is probably somewhere between $7,500–$8,000. For those of us in the Congress used to dealing with bills affecting millions of acres of land and millions if not billions of dollars, this may not sound like a significant issue.

Let me assure my colleagues that for these people, their families, and the community of 56 Arkansans, this is a matter of extreme urgency and importance. I plan to do all I can to help them resolve this issue and I hope I can count on the support of my colleagues.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at this point.

There being no objection the bill was ordered to be printed in the RECORD, as follows:

S. 2680

*Be it enacted in the Senate and the House of Representatives in the United States of America in Congress assembled,* That

(a) IN GENERAL.—Notwithstanding any other provision of law, the Secretary of Agriculture (hereinafter in this Act referred to as the "Secretary") is authorized and directed to convey, without consideration, all right, title and interest of the United States in and to certain lands in Stone County, Arkansas, to any person claiming to have been deprived by the United States of title to such land (hereinafter in this Act referred to as the "claimant"), provided the Secretary determines that such claimant satisfies the conditions set forth in subsections (b) and (c).

(b) CONDITIONS OF CONVEYANCE.—Lands shall be conveyed by the Secretary only to claimants owning real property located adjacent to National Forest System lands in Stone County, Arkansas, and only for claims arising as a result of—.

(1) the dependent resurvey conducted by the Bureau of Land Management (hereinafter in this Act referred to as the "BLM") of a portion of Township 15 North, Range 12 West, Stone County, Arkansas, as executed by the BLM in 1973; or

(2) subsequent Forest Service surveys based on the BLM resurvey referred to in paragraph (1).

(c) DOCUMENTATION REQUIRED.—(1) Any application by a claimant for conveyance of title shall be accompanied by a description of the land to be conveyed, information relating to the claim of ownership of such land, proof of the claimant's residential or agricultural use of such land, and such other information as the Secretary may require.

(2) Such application must be submitted to the Secretary not later than two years after the date of enactment of this Act.●

---

By Mr. DIXON (for himself and Mr. D'AMATO):

S.J. Res. 325. Joint resolution to disapprove of renewal of most-favored-nation status for the People's Republic of China [PRC]; to the Committee on Finance.

DISAPPROVAL OF MOST-FAVORED-NATION TRADING STATUS FOR THE PEOPLE'S REPUBLIC OF CHINA

● Mr. DIXON. Mr. President, I am introducing Senate Joint Resolution 325 at this time because the President will be making his plans on whether to renew China's most-favored-nation status shortly, and I want to let the administration know of my strong feelings, as well as those of Senator D'AMATO, on this issue.

I will make more extensive remarks on Thursday morning, May 24, 1990.

I ask unanimous consent that a copy of the joint resolution be printed at this point in the RECORD.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 325

Whereas the People's Republic of China has been a beneficiary of most-favored-nation status since it was first granted in 1980;

Whereas the Government of the People's Republic of China brutally attacked and killed thousands of unarmed prodemocracy students in Tiananmen Square on June 3, 1989;

Whereas the Government of the People's Republic of China steadfastly refused to acknowledge the deaths or the Chinese military's direct involvement in the massacre;

Whereas the Government of the People's Republic of China has stepped up the persecution of the Roman Catholic Church and other religious groups;

Whereas the Government of the People's Republic of China has purged or persecuted Chinese academics, journalists, police, and government officials who expressed any support for the democracy movement, and has placed new restrictions on international travel and study on any of its citizens suspected of supporting democratic ideals;

Whereas the Government of the People's Republic of China refuses to provide the names of those arrested and the crimes they are charged with, and conducts most of the trials of those accused in secret;

Whereas the Government of the People's Republic of China refuses to allow dissident Fang Lizhi and his wife Li Shuzian free passage out of country;

Whereas the Government of the People's Republic of China continues to repress and imprison voices of democracy within China;

Whereas the Government of the People's Republic of China has introduced new measures intended to suppress freedom of thought and speech against the populace;

Whereas the Government of the People's Republic of China continues to intimidate China students in the United States, and their families in the People's Republic of China for their prodemocracy activities;

Whereas such actions stand in defiant contrast to the values, principles, and policies of the United States;

Whereas most-favored-nation status has enabled the People's Republic of China to develop a growing trade surplus with the United States, amounting to 9.7 billion dollars between 1988 and 1990; and

Whereas renewal of most-favored-nation status would show United States support for a brutal, murderous regime and ignore the actions taken by the Government of the People's Republic of China against Chinese students and others who believe in and fight for democracy: Now, therefore, be it

*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,* That, notwithstanding any other provision of law, products of the People's Republic of China shall not receive nondiscriminatory treatment (most-favored-nation treatement) during the one-year period beginning on the date of the enactment of this joint resolution.●

---

By Mr. D'AMATO (for himself and Mr. LAUTENBERG):

S.J. Res. 326. Joint resolution to designate December 21, 1990, as a "Day of Observance for the Victims of Terrorism"; to the Committee on the Judiciary.

DAY OF OBSERVANCE FOR THE VICTIMS OF TERRORISM

● Mr. D'AMATO. Mr. President, today I am introducing a resolution calling for the designation of December 21, 1990, as a day of observance for the victims of terrorism. Senator LAUTENBERG, my friend from New Jersey and chairman of the Transportation Appropriations Subcommittee who served with me on the President's Commission on Aviation Security and Terrorism, joins me as an original cosponsor of this resolution.

On December 21, 1988, a terrorist bomb destroyed Pan American World Airways Flight 103, killing all 259 passengers and crew on board, and 11 residents of Lockerbie, Scotland, on the ground. This was not an act directed against any one person; this was an act directed against this country, and its values and democratic ideals—all of which were symbolized by the American flag painted on the tail of that airliner.

The horrors of the destruction of Pan Am 103 at 31,000 feet over the tiny village of Lockerbie cannot be overstated. In our report to the President, the Commission recognized that we as a country have a special obligation to these victims of acts of terrorism that are in reality acts of aggression against this Nation. Accordingly, our report makes a series of recommendations to accomplish just that—including compensation for such innocent victims. We are working on separate legislation to implement the Commission's recommendations.

Mr. President, we cannot undo the damage, the pain, the suffering and the loss inflicted by the terrorists who in a cold and heartless act destroyed the lives of the Pan Am 103 victims and shattered the lives of their families and friends. Pan Am 103 families have persevered and endured; their courage and commitment is a shining example to us all. But perhaps more importantly, that courage and commitment, in a free and democratic country, has resulted in major changes—the Presidential Commission being just one tangible piece of evidence.

So, it is fitting that we provide due recognition to those who perished simply because terrorists wanted to kill Americans on an American flag carrier. This resolution would designate December 21, 1990, the 2-year anniversary of the destruction of Pan Am 103, as a day of observance of the victims of terrorism. Let us remember all those who have been the object of terrorist attacks simply because they are symbols of our Nation, the beliefs we hold dear, and the values that have made this country great. And let us rededicate ourselves to the protection of our citizens and the eradication of terrorism.

Mr. President, I ask unanimous consent that the text of this resolution be printed in the RECORD in its entirety.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 326

Whereas, on December 21, 1988, Pan American World Airways Flight 103 was destroyed over Lockerbie, Scotland, by a terrorist bomb, resulting in the death of 270 people, including the airline passengers and crew and persons on the ground;

Whereas The United States Government has a special obligation to the innocent victims of acts of terrorism that are directed toward the United States and not at innocent persons;

Whereas the United States must remain ever vigilant in protecting the citizens of this Nation against acts of terrorist violence:

Whereas it is appropriate for the people of the United States to commemorate the innocent victims of terrorism and the tragic suffering that results from acts of terrorism: Now, therefore, be it

*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,* That December 21, 1990, is designated as a "Day of Observance for the Victims of Terrorism", and the President is authorized and requested to issue a proclamation calling upon the people of the United States to observe such day with appropriate ceremonies, activities, and programs.●

## ADDITIONAL COSPONSORS

S. 370

At the request of Mr. CHAFEE, the name of the Senator from New Jersey [Mr. BRADLEY] was added as a cosponsor of S. 370, a bill to amend the Land and Water Conservation Fund Act and the National Historic Preservation Act, to establish the American Heritage Trust, for purposes of enhancing the protection of the Nation's natural, historical, cultural, and outdoor recreational heritage, and for other purposes.

S. 434

At the request of Mr. REID, the name of the Senator from Wyoming [Mr. SIMPSON] was added as a cosponsor of S. 434, a bill to prohibit a State from imposing an income tax on the pension income of individuals who are not residents or domiciliaries of that State.

S. 454

At the request of Mr. ROCKEFELLER, the name of the Senator from Pennsylvania [Mr. SPECTER] was added as a cosponsor of S. 454, a bill to provide additional funding for the Appalachian development highway system.

S. 455

At the request of Mr. ROCKEFELLER, the name of the Senator from Pennsylvania [Mr. SPECTER] was added as a cosponsor of S. 455, a bill to extend the Appalachian Regional Development Act of 1965 and to provide authorizations for the Appalachian Highway and Appalachian Area Development Programs.

S. 501

At the request of Mr. D'AMATO, the name of the Senator from Rhode Island [Mr. PELL] was added as a cosponsor of S. 501, a bill to amend the Internal Revenue Code of 1986 to make permanent, and to increase the amount of, the exclusion for amounts received under qualified group legal services plans.

S. 567

At the request of Mr. BOREN, the name of the Senator from Montana [Mr. BURNS] was added as a cosponsor of S. 567, a bill to amend the Internal Revenue Code of 1986 to allow income from the sale of certain used automobiles to be computed on the installment sales method, and for other purposes.

S. 700

At the request of Mr. BOREN, the name of the Senator from Montana [Mr. BURNS] was added as a cosponsor of S. 700, a bill to amend the Internal Revenue Code fo 1986 to meet the growing challenge of America's infrastructure needs.

S. 865

At the request of Mr. METZENBAUM, the names of the Senator from Delaware [Mr. BIDEN, the Senator from

Colorado [Mr. WIRTH], the Senator from Wisconsin [Mr. KOHL], the Senator from Tennessee [Mr. GORE], the Senator from Hawaii [Mr. INOUYE], and the Senator from New York [Mr. D'AMATO] were added as cosponsors of S. 865, a bill to amend the Sherman Act regarding retail competition.

S. 982

At the request of Mr. REID, the name of the Senator from Maine [Mr. COHEN] was added as a cosponsor of S. 982, a bill to repeal a provision of Federal tort claim law relating to the civil liability of Government contractors for certain injuries, losses of property, and deaths and for other purposes.

S. 1273

At the request of Mr. BOREN, the name of the Senator from Montana [Mr. BURNS] was added as a cosponsor of S. 1273, a bill to amend the Internal Revenue Code of 1986 with respect to treatment by cooperatives of gains or losses from sale of certain assets.

S. 1511

At the request of Mr. PRYOR, the names of the Senator from New Mexico [Mr. BINGAMAN] and the Senator from Hawaii [Mr. AKAKA] were added as cosponsors of S.1511, a bill to amend the Age Discrimination in Employment Act of 1967 to clarify the protections given to older individuals in regard to employee benefit plans, and for other purposes.

S. 1664

At the request of Mr. HEINZ, the name of the Senator from Maine [Mr. COHEN] was added as a cosponsor of S. 1664, a bill to establish a congressional commemorative medal for members of the Armed Forces who were present during the attack on Pearl Harbor on December 7, 1941.

S. 1860

At the request of Mr. BOREN, the names of the Senator from Michigan [Mr. RIEGLE], the Senator from New Mexico [Mr. BINGAMAN], the Senator from Nebraska [Mr. EXON], the Senator from New Mexico [Mr. DOMENICI], and the Senator from Alabama [Mr. SHELBY] were added as cosponsors of S. 1860, a bill to amend title 38, United States Code, to require the Secretary of Veterans Affairs to furnish outpatient medical services for any disability of a former prisoner of war.

S. 1974

At the request of Mr. HARKIN, the name of the Senator from Tennessee [Mr. GORE] was added as a cosponsor of S. 1974, a bill to require new televisions to have built in decoder circuitry.

S. 1981

At the request of Mr. HOLLINGS, the name of the Senator from Maryland [Ms. MIKULSKI] was added as a cosponsor of S. 1981, a bill to permit the Bell Telephone Companies to conduct research on, design, and manufacture telecommunications equipment and for other purposes.

S. 2041

At the request of Mr. SYMMS, the name of the Senator from West Virginia [Mr. BYRD] was added as a cosponsor of S. 2041, a bill to amend title XVIII of the Social Security Act to provide uniform national conversion factors for services of certified registered nurse anesthetists.

S. 2078

At the request of Mr. WARNER, the name of the Senator from Connecticut [Mr. LIEBERMAN] was added as a cosponsor of S. 2078, a bill to recognize the organization known as the National Center for Therapeutic Riding.

S. 2161

At the request of Mr. HATFIELD, the name of the Senator from South Carolina [Mr. HOLLINGS] was added as a cosponsor of S. 2161, a bill to establish within the Department of Education an Office of Vocational and Adult Education and Community Colleges.

S. 2239

At the request of Mr. PELL, the name of the Senator from Alabama [Mr. HEFLIN] was added as a cosponsor of S. 2239, a bill to amend title 10, United States Code, to require sealed bids and competitive proposals for the procurement of professional services by the Department of Defense to be evaluated on the basis of a 40-hour work week.

S. 2250

At the request of Mr. DECONCINI, the names of the Senator from Massachusetts [Mr. KENNEDY], and the Senator from Massachusetts [Mr. KERRY] were added as cosponsors of S. 2250, a bill to amend title 5, United States Code, with respect to setting rates of basic pay for law enforcement officers, and for other purposes.

S. 2319

At the request of Mr. GARN, the name of the Senator from South Carolina [Mr. HOLLINGS] was added as a cosponsor of S. 2319, a bill to amend the Federal Deposit Insurance Act and the Federal Credit Union Act to protect the deposit insurance funds, to limit the depository institutions, credit unions, and other mortgage lenders acquiring real property through foreclosure or similar means, or in a fiduciary capacity, and for other purposes.

S. 2384

At the request of Mr. BOREN, the name of the Senator from Rhode Island [Mr. PELL] was added as a cosponsor of S. 2384, a bill to amend the Internal Revenue Code of 1986 with respect to the treatment of certain real estate activities under the limitations on losses from passive activities.

S. 2445

At the request of Mr. BOSCHWITZ, the name of the Senator from California [Mr. WILSON] was added as a cosponsor of S. 2445, a bill to amend the Food Stamp Act of 1977 to require participating retail food stores and wholesale food concerns to provide their taxpayer identifying numbers to the Secretary; to establish criminal penalties applicable to laundering funds obtained from trafficking in coupons; and for other purposes.

S. 2605

At the request of Mr. PRYOR, the names of the Senator from Louisiana [Mr. JOHNSTON], the Senator from Montana [Mr. BAUCUS], and the Senator from Mississippi [Mr. LOTT] were added as cosponsors of S. 2605, a bill to amend title XIX of the Social Security Act to provide mechanisms to control Medicaid drug prices while assuring that beneficiaries receive quality medical care, physicians' prerogative to prescribe is protected and the role of pharmacists is enhanced.

S. 2666

At the request of Mr. GORE, the names of the Senator from New Jersey [Mr. LAUTENBERG], and the Senator from Maryland [Ms. MIKULSKI] were added as cosponsors of S. 2666, a bill to authorize the United States contribution to an international account established by the parties to the Montreal Protocol on Substances that Deplete the Ozone Layer, for the purpose of assisting developing nations in their efforts to comply with the provisions of the Protocol, and for other purposes.

SENATE JOINT RESOLUTION 274

At the request of Mr. LAUTENBERG, the names of the Senator from Indiana [Mr. COATS], the Senator from Kansas [Mrs. KASSEBAUM], the Senator from North Dakota [Mr. BURDICK], the Senator from Pennsylvania [Mr. SPECTER], the Senator from California [Mr. WILSON], the Senator from Rhode Island [Mr. CHAFEE], and the Senator from Connecticut [Mr. DODD] were added as cosponsors of Senate Joint Resolution 274, a joint resolution to designate the week beginning June 10, 1990 as "National Scleroderma Awareness Week."

SENATE JOINT RESOLUTION 276

At the request of Mr. LIEBERMAN, the names of the Senator from Washington [Mr. GORTON], the Senator from Minnesota [Mr. DURENBERGER], the Senator from Vermont [Mr. JEFFORDS], the Senator from Iowa [Mr. GRASSLEY], the Senator from Texas [Mr. BENTSEN], the Senator from Minnesota [Mr. BOSCHWITZ], and the Senator from Kansas [Mrs. KASSEBAUM] were added as cosponsors of Senate Joint Resolution 276, a joint resolution designating the week beginning July 22, 1990, as "Lyme Disease Awareness Week."

SENATE JOINT RESOLUTION 277

At the request of Mr. LUGAR, the names of the Senator from South Dakota [Mr. DASCHLE] and the Senator from Vermont [Mr. JEFFORDS] were added as cosponsors of Senate Joint

Resolution 277, a joint resolution designating October 6, 1990, as "German-American Day."

SENATE JOINT RESOLUTION 279

At the request of Mr. SPECTER, the name of the Senator from West Virginia [Mr. ROCKEFELLER] was added as a cosponsor of Senate Joint Resolution 279, a joint resolution to designate the week of September 16, 1990, through September 22, 1990, as "National Rehabilitation Week."

SENATE JOINT RESOLUTION 281

At the request of Mr. DECONCINI, the name of the Senator from Texas [Mr. BENTSEN] was added as a cosponsor of Senate Joint Resolution 281, a joint resolution to designate September 13, 1990, as "National D.A.R.E. Day."

SENATE JOINT RESOLUTION 282

At the request of Mr. WILSON, the names of the Senator from New York [Mr. MOYNIHAN] and the Senator from Virginia [Mr. ROBB] were added as cosponsors of Senate Joint Resolution 282, a joint resolution to designate the decade beginning January 1, 1990, as the "Decade of the Child."

SENATE JOINT RESOLUTION 292

At the request of Mr. PELL, the name of the Senator from Oklahoma [Mr. BOREN] was added as a cosponsor of Senate Joint Resolution 292, a joint resolution to designate the year 1991 as the "Year of the Lifetime Reader."

SENATE JOINT RESOLUTION 301

At the request of Mr. PELL, the names of the Senator from New York [Mr. D'AMATO], the Senator from Alabama [Mr. HEFLIN], the Senator from Texas [Mr. BENTSEN], the Senator from California [Mr. CRANSTON], and the Senator from South Dakota [Mr. PRESSLER] were added as cosponsors of Senate Joint Resolution 301, a joint resolution designating October 1990 as "National Breast Cancer Awareness Month."

SENATE JOINT RESOLUTION 304

At the request of Mr. SHELBY, the names of the Senator from Maryland [Mr. SARBANES], the Senator from Virginia [Mr. ROBB], the Senator from Maryland [Ms. MIKULSKI], the Senator from Utah [Mr. GARN], the Senator from Wisconsin [Mr. KOHL], and the Senator from Georgia [Mr. NUNN] were added as cosponsors of Senate Joint Resolution 304, a joint resolution to designate October 17, 1990, as "National Drug-Free Schools and Communities Education and Awareness Day."

SENATE CONCURRENT RESOLUTION 127

At the request of Mr. KENNEDY, the name of the Senator from Hawaii [Mr. INOUYE] was added as a cosponsor of Senate Concurrent Resolution 127, a concurrent resolution to express the sense of Congress that Greyhound Lines, Inc., and the Amalgamated Transit Union should pursue meaningful negotiations under the auspices of the Federal Mediation and Conciliation Service and the Secretary of Labor to resolve their dispute and restore vital transportation services to American communities.

## SENATE CONCURRENT RESOLUTION 134—RELATIVE TO THE WHITE HOUSE CONFERENCE ON AGING

Mr. HEINZ (for himself, Mr. PRYOR, Mr. COHEN, Mr. GLENN, Mr. PRESSLER, Mr. BRADLEY, Mr. GRASSLEY, Mr. BURDICK, Mr. WILSON, Mr. JOHNSTON, Mr. SIMPSON, Mr. BREAUX, Mrs. KASSEBAUM, Mr. SHELBY, Mr. REID, Mr. GRAHAM, and Mr. KOHL) submitted the following concurrent resolution; which was referred to the Committee on Labor and Human Resources:

S. CON. RES. 134

Whereas White House Conferences on Aging were called by Presidents in 1961, 1971 and 1981, establishing a rich tradition of effective, nonpartisan dialogue on issues affecting the nation's senior citizens;

Whereas Congress, under the Older Americans Act Amendments of 1987 (42 U.S.C. 3001 note), authorized the President to call a White House Conference on Aging in 1991;

Whereas the President has not yet called for a 1991 White House Conference on Aging;

Whereas one of the goals of such conferences is full participation by individuals, State and local governments, and public and private organizations;

Whereas further delay in the call for a 1991 White House Conference on Aging could jeopardize the goal of full participation and limit the success and value of the conference's recommendations and findings for Congress;

Whereas it remains the sense of Congress that a 1991 White House Conference on Aging will make meaningful contributions to public debate over a wide range of issues and programs affecting the nation's elderly; and

Whereas planning for such a conference has been delayed in anticipation and expectation of a Presidential announcement: Now, therefore, be it

*Resolved by the Senate (the House of Representatives concurring),* That it is the sense of Congress that the President should immediately call for a 1991 White House Conference on Aging and begin planning and implementing such a conference without delay.

● Mr. HEINZ. Mr. President, I rise today to express the sense of the Congress on a topic of importance to all generations of Americans: the convening of the 1991 White House Conference on Aging. With my esteemed colleagues, I submitted a concurrent resolution calling upon the President to call without delay for the beginning of planning and preparation for this Conference.

The history of the decennial White House Conferences on Aging is long and diverse, encompassing the agenda of aging policy issues from 1961 to the last conference in 1981. At these meetings, scholars, advocates, and policymakers have established a rich tradition of effective, nonpartisan dialog. Society has reaped the benefits of that dialog in new strategies for addressing the concerns and difficulties of our growing older population. In 1961, for example, conferees hammered out the policy agenda for Medicare; in 1971, they forged initiatives in minority health policy.

The time has come to meet again. In 1990, the issues affecting older persons—income security, health, housing, and social services among the most pressing—have reached unprecedented complexity and are in urgent need of new solutions.

An important example is the issue of long-term care: A growing proportion of our population is in need of community-based care or nursing home care. Indeed, the number of very elderly people, who are three times more likely to need personal care than younger retirees, is growing more than twice as fast as the general population. We must develop a policy and a clear vision of the way we will fund and deliver long-term care to meet the needs of that population. And, as we found in the Pepper Commission, we need our best thinkers from many fields to reach that goal.

The need for a national policy on long-term care illustrates well the fact that aging issues affect not only the elderly themselves, but all generations of Americans. According to a recent poll, four out of five Americans have been affected in the past 4 years by the need for long-term care for someone close to them. Many Americans have served personally as caregivers; 70 percent of all community-based long-term care is provided by family members. Those who carry a heavy share of the burden are the women of the "sandwich generation," with growing children and aging parents, who frequently must leave jobs and forgo opportunities in order to cope with the demands of care for loved ones. Our policy on long-term care must recognize and respond to their needs, in order to keep families together and keep capable workers in the work force.

Clearly, planning for a successful conference of this magnitude cannot take place overnight. Rather, it will require an extraordinary amount of time and coordination to assure the dialog will be productive. I share with many aging advocates a growing concern that further delay in authorization will jeopardize the very purpose and usefulness of the conference. For past White House conferences, the Chief Executive signaled the time for preparation at least a year in advance—a minimum deadline which will soon have passed.

The responsibility and authority to convene the Conferences on Aging are given by Congress to the President; we

can now only urge and advise. As advocates for solutions to aging issues, we stand ready to start the race to a gathering of excellent minds in a meaningful discourse on these issues. We believe the President will take up this opportunity to authorize the White House Conference on Aging, and we urge immediate action.●

● Mr. COHEN. Mr. President, I am pleased to join my colleagues on the Special Committee on Aging in submitting a concurrent resolution calling for a White House Conference on Aging in America.

Currently, the elderly comprise 12 percent of the population nationwide. As America ages and people live longer, that percentage will increase. Current estimates indicate that, by the year 2040, the population over 65 will have doubled and the population over 85 will have quadrupled. There will be many more Americans needing the support of Federal programs like Medicare and Social Security, many more elderly needing the attention provided by long-term care services, and many more retirees seeking ways of offering their vast skills to American society.

Estimates suggest, for example, that 1.9 million people live in nursing homes, but by 2040 that figure may reach 4.6 million. We need to adequately fund Medicaid and Medicare to ensure that the most vulnerable and fragile Americans are not denied the care they so desperately need. We need to find ways of drawing talented and compassionate people into careers which serve those who need long-term care. And we need to ask ourselves how best to prepare for the future when the demand for long-term care will dwarf our current needs.

The current debate over the Social Security reserves is another indication that we must address the long range health of our system of support for retirees. The Committee on Aging recently held hearings on the Social Security Administration and its service to beneficiaries. An elderly woman testified that, discouraged from applying for supplemental income, she became a charity case. She told the committee that she live on dried beans and a few potatoes while she waited to receive her monthly check. An advocacy group for the aging helped her get the benefits which she had been wrongly denied. But the years of struggle remain a vivid recollection and an unnecessary hardship.

Too often, however, we think of the elderly as frail and helpless. To those who are, we must extend our aid. But nursing homes and the hardship of survival are but a part of the picture. Last fall, my colleague Congresswoman SNOWE and I held a hearing in Maine on health care for the rural elderly. We had the privilege of hearing some remarkable stories, none more heartening than that of Roy Gallagher, a 78-year-old gentleman from East Machias. He stated that, "[I]n Maine, especially in my experience in Washington County, we are so proud and independent that we don't want to entangle anybody else in our affairs. We want to do it on our own."

Roy Gallagher's statement conveys the spirit of independence and self-reliance that is the hallmark of our country. Elderly citizens have much to give to our Nation and we need to be as grateful for their contributions as we are sensitive to their needs. A survey of voluntarism recently showed that 40 percent of those 65 to 74 volunteer an average of 6 hours each week—the largest number of hours in any age group surveyed. Any assessment of the elderly in America will draw attention to the many civic-minded older Americans who give definition to the term, "community service."

A Conference on Aging would give us the opportunity to step back and assess American attitudes toward—and treatment of—this important segment of our population. It would give us new perspectives on the Federal role in serving the needs of this population. And it would remind us that Americans—old and young—share a common dedication to our country, devotion to family, and, ultimately, journey through life.

I urge my colleagues to support the concurrent resolution we are submitting today calling for this conference.●

## AMENDMENTS SUBMITTED

## CONSTITUTIONAL PROCEDURES FOR THE IMPOSITION OF THE SENTENCE OF DEATH

### SPECTER AMENDMENTS NOS. 1684 AND 1685

(Ordered to lie on the table.)

Mr. SPECTER submitted two amendments intended to be proposed by him to the bill (S. 1970) to establish constitutional procedures for the imposition of the sentence of death, and for other purposes, as follows:

AMENDMENT No. 1684

At the appropriate place, insert the following:

That (a) Congress finds that—

(1) career criminals commit a larger percentage of the violent and major felonies afflicting society, causing immeasurable physical injury to innocent persons and damage, destruction, or loss to their property estimated at billions of dollars annually, thereby terrorizing law-abiding citizens, disrupting the community, and undermining respect to law:

(2) the continuing criminal activity of career criminals adversely affects interstate commerce;

(3) despite prior convictions for serious offenses, many repeat offenders are placed on probation or sentenced to unduly short terms of imprisonment by State judges, to the detriment of public safety;

(4) many repeat offenders cannot reasonably be rehabilitated and, unless incarcerated for life, will commit further felonies;

(5) many States have "habitual criminal" statutes providing for life sentences for repeat offenders, upon subsequent felony convictions;

(6) many State prison systems are severely overcrowded, understaffed, and unable to confine convicts sentenced to life imprisonment under such statutes in a safe, secure, and humane manner;

(7) State judges may be deterred by the lack of sufficient prison space, staff, and funding from imposing life sentences for offenders as provided by State law, and the legislatures in those States without habitual criminal statutes may be dissuaded by such considerations from enacting such statutes;

(8) the interests of justice and public safety would be served if State authorities felt free to impose life sentences for repeat major offenders unrestrained by such considerations;

(9) the Federal Bureau of Prisons sometimes has empty cells available and can make additional space available by consolidating inmates, consistent with suitable standards, and ultimately can open additional institutions and cells, without great cost or delay, in certain Federal facilities, including abandoned military facilities and Public Health Service Hospitals; and

(10) the Federal Bureau of Prisons has an outstanding record in safety, effectively, and humanely confining inmates sentenced to life imprisonment.

(b) The Congress declares that the purpose of this Act is to remove undue restraints on States imposing life sentences on repeat major offenders by authorizing the Federal Government to assume custody of prisoners sentenced under State habitual criminal statutes to imprisonment for life, without cost to the State.

SEC. 2. (a) Upon request by a State pursuant to section 3, the Federal Bureau of Prisons of the Department of Justice shall promptly arrange and accept custody of convicts who are sentenced to life imprisonment under the habitual criminal statutes of a State, to the extent that space is or can be made readily available in the Federal prison system. The Federal Bureau of Prisons shall confine such convicts until certification to the Attorney General by appropriate authorities of the State that the sentence of a transferred prisoner has been terminated by parole, pardon, or otherwise as provided by State law, or, absent such certification, for the natural life of the prisoner.

(b) This act shall apply only to the incarceration of persons sentenced to imprisonment for life under the State habitual criminal statutes after the date of enactment.

SEC. 3. (a) All applications for Federal incarceration under this Act shall be subject to approval by the Attorney General of the United States and shall include a certification by the State that the prisoner to be transferred has been sentenced to life imprisonment under a State habitual offender statute.

(b) The Attorney General shall have the authority to review the nature and circumstances of the offenses committed by any prisoner who is proposed for transfer and the existing capacities of the State prison system from which transfer is sought. The Attorney General may reject any application for Federal incarceration based upon

such consideration and upon the availability of space in the Federal prison system. The decisions of the Attorney General under this subsection shall not be subject to review by Federal or State courts.

---

AMENDMENT NO. 1685

At the appropriate place, insert the following:

That this Act may be cited as the "National Violent Crime Program Authorization Act, Fiscal Year 1990".

SEC. 2. On the basis of evidence, information, and documents and testimony collected by the committees and subcommittees of the Congress and the reports and recommendations of various national commissions, including the National Commission on Criminal Justice Standards and Goals (1973) and the Attorney General's Violent Crime Task Force (1981), the Congress hereby makes and adopts the following findings:

(1) Violent crime and drug trafficking have become a severe national problem affecting the personal safety and general welfare of citizens of the United States and an intolerable burden upon Interstate Commerce.

(2) The economic costs of crime are estimated to exceed $100,000,000,000 per year and the total cost of crime including pain, suffering, and psychological duress are estimated to exceed $500,000,000,000 per year.

(3) The Federal Government presently allocates approximately $6,500,000,000 of its annual budget to crime control and criminal justice. This allocation represents just over one-half of 1 per centum of the Federal budget.

(4) It is estimated that spending by State and local law enforcement and criminal justice agencies of the various States is approximately $24,000,000,000 a year. Due to limited revenues, rising costs, and other factors, the States and localities are severely limited in their capability to provide greater resources for law enforcement and criminal justice.

(5) Every year, serious crime afflicts one in every five American households. One in every ten households is affected by criminal violence.

(6) The violent crime rate in America has reached unprecedented and intolerable levels. The violent crime rate has risen 400 per centum since 1945; the United States suffers from a crime rate which is many times that of any other industrial democracy.

(7) The resources available at all levels of government are seriously inadequate to secure public safety. Consequently, only a small fraction of crimes result in an arrest, a small fraction of arrests result in trial and conviction, in contrast to plea bargain, and only a small fraction of convictions for violent offenses result in sentences to prison.

(8) Career criminals constitute less than 10 per centum of all persons arrested but commit more than 60 per centum of the offenses. Despite the priority accorded to them, career criminals are often not handled effectively due to inadequate resources.

(9) Likewise, crime prevention programs have not been given sufficient resources, resulting in much serious crime that could have been prevented. Particular attention is needed for juvenile offenders to break the escalating crime cycle, for drug addicted offenders and for providing literacy and training in marketable job skills to prisoners nearing the end of their sentences.

(10) Drug trafficking, which is estimated to have grown to an $80,000,000,000 a year business that contributes to and causes a high proportion of the violent activity, has not been curtailed despite recent increases in the level of effort, particulary by Federal enforcement agencies.

(11) The prison systems in more than forty States are so overcrowded as to be subject to court orders to release inmates prematurely and to deter judges from imposing sentences in individual cases that fit the crime and the criminal. The prison population has risen sharply in recent years. However, in many States few if any prisons have been built in recent decades.

(12) Major efforts are needed to improve the treatment of victims and witnesses in criminal cases and to compensate them for physical and economic injury and loss.

(13) In order to insure speedy justice, numerous court reforms are needed, including improved case screening and diversion programs, use of computers and other techniques to control judicial calendars.

(14) To improve the arrest rate, conviction rate, and sentences for career criminals, special units are needed in police departments, prosecutors' offices, and other agencies.

In light of the foregoing, a comprehensive national program must be commenced. Such a program should devote 1 per centum of the Federal budget or approximately $10,000,000,000 for a period of up to ten years with the goal of cutting violent crime for profit in half.

SEC. 3. In order to begin such a program in fiscal year 1990 and to begin it in a gradual, orderly manner, there is authorized to be appropriated for the fiscal year ending September 30, 1990, to carry out the National Violent Crime Program:

(a) For the detection, investigation, apprehension, prosecution, and incarceration of individuals involved in violent crime activity and drug trafficking, not otherwise provided for, $1,200,000,000, of which $300,000,000 for construction of new facilities and construction, remodeling, and equipping buildings and facilities at existing detention and correctional institutions shall remain available until expended, and notwithstanding any other provision of law, there is authorized payment in advance for expenses arising out of contractual and reimbursable agreements with State and local enforcement agencies engaged in cooperative violent crime and drug trafficking enforcement activities, as follows:

| | (Millions) |
|---|---|
| Fugitive programs | 125 |
| New Federal prosecutions for violent crimes, such as bank and commercial robbery | 175 |
| Drug enforcement | 300 |
| Training, lab, identification, and other support services and technical assistance to States by Federal agencies | 150 |
| Research and development, for example, design means to end plea-bargaining and cut trial delays in half | 150 |
| Construction of correctional facilities for Federal inmates and operating costs | 125 |
| Temporary detention facilities for State inmate "overflow" and permanent prisons for confinement of all State habitual offenders sentenced to life | 175 |

(b) For Justice assistance and to carry out the functions of the Justice Office of Assistance, $3,650,000,000, all of which shall remain available until expended: *Provided*, That such funds may only be used to carry out the National Violent Crime Program, pursuant to regulations issued by the Head of Justice Office Assistance and policies and priorities established by the Attorney General in consultation with the Congress and appropriate congressional committees, as follows:

| | (Millions) |
|---|---|
| Improve investigations with special detective squads | 300 |
| Improve case screening and diversion | 75 |
| Improve violent crime prosecutions by forming career criminal units | 75 |
| Improve convict diagnosis, classification, and correctional programming | 175 |
| Prison and other construction | 625 |
| Job training/prison industry/functional literacy training | 175 |
| Juvenile delinquent intervention | 425 |
| Runaways and missing children | 175 |
| Victim/witness | 300 |
| Crime prevention—Schools | 300 |
| Crime prevention—Neighborhoods | 300 |
| Crime prevention—Commercial | 300 |
| Drug treatment | 300 |
| Calendar control applying research and development results to specific localties | 125 |

---

## GRAHAM (AND OTHERS) AMENDMENT NO. 1686

Mr. GRAHAM (for himself, Mr. DECONCINI, and Mr. BRYAN) proposed an amendment to the bill S. 1970, supra, as follows:

Strike title II of the bill and insert the following:

TITLE II—HABEAS CORPUS REFORM

SEC. 201. SHORT TITLE.

This title may be cited as the "Habeas Corpus Reform Act of 1990".

SEC. 202. SPECIAL HABEAS CORPUS PROCEDURES IN CAPITAL CASES.

(a) IN GENERAL.—Part IV of title 28, United States Code, is amended by inserting immediately following chapter 153 the following new title:

"CHAPTER 154—SPECIAL HABEAS CORPUS PROCEDURES IN CAPITAL CASES

"Sec.

"2256. Prisoners in State custody subject to capital sentence; appointment of counsel; requirement of rule of court or statute; procedures for appointment
"2257. Mandatory stays of execution; duration; limits on stays of execution; successive petitions
"2258. Filing of habeas corpus petition; time requirement; tolling rules
"2259. Certificate of probable cause inapplicable
"2260. Counsel in capital cases; trial and post-conviction; standards

**"§ 2256. Prisoners in State custody subject to capital sentence; appointment of counsel; requirement of rule of court or statute; procedures for appointment**

"(a) This chapter shall apply to cases arising under section 2254 of this title brought by prisoners in State custody who are subject to a capital sentence. It shall apply only if subsection (b) is satisfied.

"(b) This chapter is applicable if a State establishes by rule of its court of last resort

or by statute a mechanism for the appointment, compensation, and payment of reasonable fees and litigation expenses of competent counsel consistent with section 2260 of this title.

"(c) No counsel appointed pursuant to subsection (b) to represent a State prisoner under capital sentence shall have previously represented the prisoner at trial or on direct appeal in the case for which the appointment is made unless the prisoner and counsel expressly request continued representation.

"(d) The ineffectiveness or incompetence of counsel appointed under this chapter during State of Federal collateral post-conviction proceedings shall not be a ground for relief in a proceeding arising under this chapter or section 2254 of this title. This limitation shall not preclude the appointment of different counsel at any phase of State or Federal post-conviction proceedings.

**"§ 2257. Mandatory stays of execution; duration; limits on stays of execution; successive petitions**

"(a) Upon the entry in a court of record of an order pursuant to section 2260 of this title, a warrant or order setting an execution date for a State prisoner shall be stayed upon application to any court that would have jurisdiction over any proceedings filed pursuant to section 2254 of this title. The application shall recite that the State has invoked the post-conviction review procedures of this chapter and that the scheduled execution is subject to stay.

"(b) A stay of execution granted pursuant to subsection (a) shall expire if—

"(1) a State prisoner fails to file a habeas corpus petition under section 2254 of this title within the time required in section 2258 of this title; or

"(2) upon completion of district court and court of appeals review under section 2254 of this title the petition for relief is denied and—

"(A) the time for filing a petition for certiorari has expired and no petition has been filed;

"(B) a timely petition for certiorari was filed and the Supreme Court denied the petition; or

"(C) a timely petition for certiorari was filed and upon consideration of the case, the Supreme Court disposed of it in a manner that left the capital sentence undisturbed; or

"(3) a State prisoner under capital sentence waives the right to pursue habeas corpus review under section 2254 of this title—

"(A) before a court of competent jurisdiction;

"(B) in the presence of counsel; and

"(C) after having been advised of the consequences of his decision.

"(c) If one of the conditions provided in subsection (b) is satisfied, no Federal court thereafter shall have the authority to enter a stay of execution or grant relief in a capital case unless—

"(1) the basis for the stay and request for relief is a claim not previously presented by the prisoner in State or Federal courts, and the failure to raise the claim is—

"(A) the result of State action in violation of the Constitution or laws of the United States;

"(B) the result of the Supreme Court recognition of a new Federal right that is retroactively applicable; or

"(C) based on a factual predicate that could not have been discovered through the exercise of reasonable diligence; and

"(2) the facts underlying the claim would be sufficient, if proven, to undermine the court's confidence in the jury's determination of guilt on the offense or offenses for which the death penalty was imposed, or in the validity of the sentence of death.

**"§ 2258. Filing of habeas corpus petition; time requirement; tolling rules**

"(a) Any petition for habeas corpus relief under section 2254 of this title must be filed in the appropriate district court not later than 365 days after the date of filing in the State court of last resort of an order issued in compliance with section 2260(a)(2) of this title.

"(b) The time requirements established by this section shall be tolled—

"(1) from the date that a petition for certiorari is filed in the Supreme Court until the date of final disposition of the petition if a State prisoner seeks review of a capital sentence that has been affirmed on direct appeal by the court of last resort of the State or has otherwise become final for State law purposes;

"(2) during any periods in which a State prisoner under capital sentence has properly filed request for post-conviction review pending before a State court of competent jurisdiction which period shall, if all State filing rules are met in a timely manner, run continuously from the date that the State prisoner initially files for post-conviction review until final disposition of the case by the State court of last resort, and further until final disposition of the matter by the Supreme Court of the United States, if a timely petition for review is filed; and

"(3) during an additional period not to exceed 90 days, if counsel for the State prisoner—

"(A) moves for an extension of time in the United States district court that would have proper jurisdiction over the case upon the filing of a habeas corpus petition under section 2254 of this title; and

"(B) makes a showing of good cause for counsel's inability to file the habeas corpus petition within the 365-day period established by this section.

**"§ 2259. Certificate of probable cause inapplicable**

"The requirement of a certificate of probable cause in order to appeal from the district court to the court of appeals does not apply to habeas corpus cases subject to this chapter except when a second or successive petition is filed.

**"§ 2260. Counsel in capital cases; trial and post-conviction; standards**

"(a) A mechanism for the provision of counsel services to indigents sufficient to invoke the provisions of this chapter shall—

"(1) provide for counsel to—

"(A) indigents charged with offenses for which capital punishment is sought;

"(B) indigents who have been sentenced to death and who seek appellate or collateral review in State court; and

"(C) indigents who have been sentenced to death and who seek certiorari review in the United States Supreme Court; and

"(2) provide for the entry of an order of a court of record appointing one or more counsel to represent the prisoner except upon a judicial determination (after a hearing, if necessary) that—

"(A) the prisoner is not indigent; or

"(B) the prisoner knowingly and intelligently waives the appointment of counsel.

"(b)(1)(A) Except as provided in paragraph (2), at least one attorney appointed pursuant to this chapter before trial, if applicable, and at least one attorney appointed pursuant to this chapter after trial, if applicable, shall have been certified by a statewide certification authority. The States may elect to create one or more certification authorities (but not more than three such certification authorities) to perform the responsibilities set forth in subparagraph (B).

"(B) The certification authority for counsel at any stage of a capital case shall be—

"(i) a special committee, constituted by the State court of last resort or by State statute, relying on staff attorneys of a defender organization, members of the private bar, or both;

"(ii) a capital litigation resource center, relying on staff attorneys, members of the private bar, or both; or

"(iii) a statewide defender organization, relying on staff attorneys, members of the private bar, or both.

"(C) The certification authority shall—

"(i) certify attorneys qualified to represent persons charged with capital offenses or sentenced to death;

"(ii) draft and annually publish procedures and standards by which attorneys are certified and rosters of certified attorneys; and

"(iii) periodically review the roster of certified attorneys, monitor the performance of all attorneys certified, and withdraw certification from any attorney who fails to meet high performance standards in a case to which the attorney is appointed, or fails otherwise to demonstrate continuing competence to represent prisoners in capital litigation.

"(2) In a State that has a publicly-funded public defender system that is not organized on a statewide basis, the requirements of paragraph (1) shall have been deemed to have been satisfied if at least one attorney appointed pursuant to this chapter before trial shall be employed by a State funded public defender organization, and if the highest court of the State finds on an annual basis that the standards and procedures established and maintained by such organization (which have been filed by such organization and reviewed by such court on an annual basis) insure that the attorneys working for such organization demonstrate continuing competence to represent indigents in capital litigation.

"(c) If a State has not elected to comply with the provisions of subsection (b), in the case of an appointment made before trial, at least one attorney appointed under this chapter must have been admitted to practice in the court in which the prosecution is to be tried for not less than 5 years, and must have not less than 3 years' experience in the trial of felony prosecutions in that court.

"(d) If a State has not elected to comply with the provisions of subsection (b), in the case of an appointment made after trial, at least one attorney appointed under this chapter must have been admitted to practice in the court of last resort of the State for not less than 5 years, and must have had not less than 3 years' experience in the handling of appeals in that State courts in felony cases.

"(e) Notwithstanding any other provision of this section, a court, for good cause, may appoint another attorney whose background, knowledge or experience would otherwise enable the attorney to properly represent the defendant, with due consider-

ation of the seriousness of the possible penalty and the unique and complex nature of the litigation.

"(f) Upon a finding in ex parte proceedings that investigative, expert or other services are reasonably necessary for the representation of the defendant, whether in connection with issues relating to guilt or issues relating to sentence, the court shall authorize the defendant's attorney to obtain such services on behalf of the defendant and shall order the payment of fees and expenses therefor, under subsection (g). Upon finding that timely procurement of such services could not practically await prior authorization, the court may authorize the provision of any payment of services nunc pro tunc.

"(g) Notwithstanding the rates and maximum limits generally applicable to criminal cases and any other provision of law to the contrary, the court shall fix the compensation to be paid to an attorney appointed under this subsection (other than State employees) and the fees and expenses to be paid for investigative, expert, and other reasonably necessary services authorized under subsection (c), at such rates or amounts as the court determines to be reasonably necessary to carry out the requirements of this subsection.".

(b) AMENDMENTS TO TABLE OF CHAPTERS.—The table of chapters for part IV of title 28, United States Code, is amended by inserting after the item for chapter 153 the following:

"154. Special habeas corpus procedures in capital cases..... 2256"

SEC. 303. LAW CONTROLLING IN FEDERAL HABEAS PROCEEDINGS.

(a) IN GENERAL.—Chapter 153 of title 28, United States Code, is amended by inserting after section 2255 the following:

**"§ 2255A. Law controlling Federal habeas corpus proceedings**

"All claims in habeas corpus petitions brought by State prisoners in State custody who are subject to a capital sentence shall be governed by the law as it was when the petitioner's sentence became final, supplemented by any interim change in the law promulgated by the Supreme Court, if the Supreme Court determines, in light of the purpose to be served by the change, the extent of the reliance on previous law by law enforcement authorities, and the effect on the administration of justice, that it would be just to give prisoners the benefit of the interim change in law.".

(b) AMENDMENT TO TABLE OF SECTIONS.—The table of sections for chapter 153 of title 28, United States Code, is amended by inserting after the item for section 2255 the following:

"2255A. Law controlling Federal habeas corpus proceedings.".

(c) APPLICABILITY OF SECTION.—The amendments made by this section shall apply only to prisoners whose sentences have become final after the date of enactment of this Act.

---

## THURMOND (AND OTHERS) AMENDMENT NO. 1687

Mr. THURMOND (for himself, Mr. SPECTER, Mr. HATCH, and Mr. SIMPSON) proposed an amendment to the bill S. 1970, supra, as follows:

Strike Title Two and insert in lieu thereof the following: "TITLE TWO—HABEAS CORPUS REFORM"

SEC. . SPECIAL HABEAS CORPUS PROCEDURES IN CAPITAL CASES.

(a) IN GENERAL.—Part IV of title 28, United States Code, is amended by inserting immediately following chapter 153 the following new chapter:

"CHAPTER 154—SPECIAL HABEAS CORPUS PROCEDURES IN CAPITAL CASES

"Sec.

"2261. Defendants subject to capital punishment and prisoners in State custody subject to capital sentence; appointment of counsel; requirement of rule of court or statute; procedures for appointment.

"2262. Mandatory stay of execution; duration; limits on stays of execution; successive petitions.

"2263. Filing of habeas corpus petition; time requirements; tolling rules.

"2264. Evidentiary hearings; scope of Federal review; district court adjudication.

"2265. Certificate of probable cause inapplicable.

"2266. Counsel in capital cases; trial and post-conviction standards.

"2267. Law controlling in Federal habeas corpus proceeding; retroactivity.

"2268. Habeas corpus time requirements.

**§ 2261. Defendants subject to capital punishment and prisoners in State custody subject to capital sentence; appointment of counsel; requirement of rule of court or statute; procedures for appointment**

"(a) This chapter shall apply—

"(1) to—

"(A) cases in which the defendant is tried for a capital offense; or

"(B) cases arising under section 2254 of this title brought by prisoners in State custody who are subject to a capital sentence; and

"(2) only if subsections (b) and (c) are satisfied.

"(b) This chapter is applicable if a State establishes by rule of its court of last resort or by statute a mechanism for the appointment, compensation, and payment of reasonable fees and litigation expenses of competent counsel consistent with section 2266 of this title.

"(c) Any mechanism for the appointment, compensation, and reimbursement of counsel as provided in subsection (b) must offer counsel to all State defendants tried for a capital offense and all State prisoners under capital sentence and must provide for the entry of an order by a court of record—

"(1) appointing one or more counsel to represent the defendant or prisoner upon a finding that the defendant or prisoner—

"(A) is indigent and has accepted the offer; or

"(B) is unable competently to decide whether to accept or reject the offer;

"(2) finding, after a hearing, if necessary, that the defendant or prisoner has rejected the offer of counsel and made the decision with an understanding of its legal consequences; or

"(3) denying the appointment of counsel upon a finding that the defendant or prisoner is not indigent.

"(d) No counsel appointed pursuant to subsections (b) and (c) to represent—

"(1) a State defendant being tried for a capital offense; or

"(2) prisoner under capital sentence during direct appeals in the State courts,

shall have previously represented the defendant or prisoner at trial or on direct appeal in the case for which the appointment is made unless the defendant or prisoner and counsel expressly request continued representation.

"(e) The ineffectiveness or incompetence of counsel during State or Federal collateral post-conviction proceedings in a capital case shall not be a ground for relief in a proceeding arising under this chapter of this title. This subsection shall not preclude the appointment of different counsel at any phase of Federal post-conviction proceedings.

**§ 2262. Mandatory stay of execution; duration; limits on stays of execution; successive petitions**

"(a) Upon the entry in the appropriate State court of record of an order pursuant to section 2261(c) of this title for a prisoner under capital sentence, a warrant or order setting an execution date for a State prisoner shall be stayed upon application to any court that would have jurisdiction over any proceedings filed pursuant to this chapter. The application must recite that the State has invoked the procedures of this chapter and that the scheduled execution is subject to stay.

"(b) A stay of execution granted pursuant to subsection (a) shall expire if—

"(1) a State prisoner fails to file a habeas corpus petition under this chapter within the time required in section 2263 of this title; or

"(2) upon completion of district court and court of appeals review under this chapter, the petition for relief is denied and—

"(A) the time for filing a petition for certiorari has expired and no petition has been filed;

"(B) a timely petition for certiorari was filed and the Supreme Court denied the petition; or

"(C) a timely petition for certiorari was filed and upon consideration of the case, the Supreme Court disposed of it in a manner that left the capital sentence undisturbed; or

"(3) before a court of competent jurisdiction, a State prisoner under capital sentence waives the right to pursue habeas corpus review under section 2254 of this title, in the presence of counsel and after having been advised of the consequences of making the waiver.

"(c) If one of the conditions in subsection (b) has occurred, no Federal court thereafter shall have the authority to enter a stay of execution or grant relief in a capital case unless—

"(1) the basis for the stay and request for relief is a claim not previously presented in the State or Federal courts;

"(2) the failure to raise the claim—

"(A) was the result of State action in violation of the Constitution or laws of the United States;

"(B) was the result of a recognition by the Supreme Court of a new fundamental right that is retroactively applicable; or

"(C) is due to the fact the claim is based on facts that could not have been discovered through the exercise of reasonable diligence in time to present the claim for State or Federal post-conviction review; and

"(3) the filing of any successive petition for a writ of habeas corpus is authorized by the appropriate court of appeals in accordance with section 2264(c) and the facts underlying the claim would be sufficient, if proven, to undermine the court's confidence in the jury's determination of guilt on the offense or offenses for which the death penalty was imposed, or newly discovered facts,

which are not based upon or include opinion evidence, expert or otherwise, which would be sufficient to undermine the court's confidence in the validity of the death sentence.

**"§ 2263. Filing of habeas corpus petition; time requirements; tolling rules**

"(a) Any petition filed under this chapter for habeas corpus relief must be filed in the appropriate district court not later than 60 days after the filing in the appropriate State court of record of an order issued in compliance with section 2261(c) of this title. The time requirements established by this section shall be tolled—

"(1) from the date that a petition for certiorari is filed in the Supreme Court until the date of final disposition of the petition if a State prisoner seeks review of a capital sentence that has been affirmed on direct appeal by the court of last resort of the State or has otherwise become final for State law purposes; and

"(2) during an additional period not to exceed 60 days, if counsel for the State prisoner—

"(A) moves for an extension of time in Federal district court that would have jurisdiction over the case upon the filing of a habeas corpus petition under section 2254 of this title; and

"(B) makes a showing of good cause for counsel's inability to file the habeas corpus petition within the 60 day period established by this section. A court that finds that good cause has been shown shall explain in writing the basis for such a finding.

(b) A notice of appeal from a judgment of the district court in a claim under this chapter shall be filed within 20 days of the entry of judgment.

(c) A petition for a writ of certiorari to the Supreme Court of the United States in a claim under this chapter shall be filed within 20 days of the issuance of the mandate by the court of appeals.

**"§ 2264. Evidentiary hearings; scope of Federal review; district court adjudication**

"(a) Whenever a State prisoner under a capital sentence files a petition for habeas corpus relief to which this chapter applies, the district court—

"(1) shall determine the sufficiency of the evidentiary record for habeas corpus review; and

"(2) May conduct an evidentiary hearing when the court, in its discretion, determines that such hearing is necessary to complete the record for habeas corpus review.

"(b) Upon the development of a complete evidentiary record, the district court shall rule on the merits of the claims properly before it within the time limits established in section 2268 of this title.

"(c)(1) except as provided in paragraph (2), a district court may not consider a successive claim under this chapter.

"(c)(2) A district court may only consider a successive claim under this chapter if the petitioner seeks leave to file a successive petition in the appropriate court of appeals."

"(c)(3) In a case in which the appropriate court of appeals grants leave to file a successive petition, the time limits established by this chapter shall be applicable to all further proceedings under the successive petition.

**§ 2265. Certificate of probable cause inapplicable**

"The requirement of a certificate of probable cause in order to appeal from the district court to the court of appeals does not apply to habeas corpus cases subject to this chapter.

**"§ 2266. Counsel in capital cases; trial and post-conviction standards**

"(a) A mechanism for the provision of counsel services to indigents sufficient to invoke the provisions of this chapter shall:

"(1) provide for counsel to indigents charges with offenses for which capital punishment is sought, to indigents who have been sentenced to death and who seek appellate or collateral review in state court, and to indigents who have been sentenced to death and who seek certiorari review in the United States Supreme Court; collateral review in State court, and to indigents who have been sentenced to death and who seek certiorari review in the United States Supreme Court.

"(2) provide for the entry of an order of a court of record appointing one or more counsel to represent the prisoner except upon a judicial determination (after a hearing, if necessary) that (A) the prisoner is not indigent; or (B) the prisoner knowingly and intelligently waives the appointment of counsel.

"(b)(1) Except as provided below, at least one attorney appointed pursuant to this chapter before trial, if applicable, and at least one attorney appointed pursuant to this chapter after trial, if applicable, shall have been certified by a statewide certification authority. The States may elect to create one or more certification authorities (but not more than three such certification authorities) to perform the responsibilities set forth below. The certification authority for counsel at any stage of a capital case shall be:

"(i) a special committee, constituted by the State court of last resort or by State law, relying on staff attorneys of a defender organization, members of the private bar, or both; or

(ii) a capital litigation resource center, relying on staff attorneys, members of the private bar, or both; or

(iii) a statewide defender organization, relying on staff attorneys, members of the private bar, or both.

The certification authority shall:

(iv) certify attorneys qualified to represent persons charged with capital offenses or sentenced to death; and

(v) draft and annually publish procedures and standards by which attorneys are certified and rosters of certified attorneys; and

(vi) periodically review the roster of certified attorneys, monitor the performance of all attorneys certified, and withdraw certification from any attorney who fails to meet high performance standards in a case to which the attorney is appointed; or fails otherwise to demonstrate continuing competence to represent prisoners in capital litigation.

"(2) In a State that has a publicly funded public defender system that is not organized on a statewide basis, the requirements of section 2261(b) shall have been deemed to have been satisfied if at least one attorney appointed pursuant to this chapter before trial shall be employed by a state funded public defender organization, if the highest court of the State finds on an annual basis that the standards and procedures established and maintained by such organization (which have been filed by such organization and reviewed by such court on an annual basis) ensure that the attorneys working for such organization demonstrate continuing competence to represent indigents in capital litigation.

"(c) If a State has not elected to establish one or more statewide certification authorities to certify counsel eligible to be appointed before trial to represent indigents, in the case of an appointment made before trial, at least one attorney appointed under this chapter must have been admitted to practice in the court in which the prosecution is to be tried for not less than 5 years, and must have not less than 3 years' experience in the trial of felony prosecutions in that court.

(d) If a State has not elected to establish one or more statewide certification authorities to certify counsel eligible to be appointed after trial to represent indigents, in the case of an appointment made after trial, at least one attorney appointed under this chapter must have been admitted to practice in the court of last resort of the State for not less than 5 years, and must have had not less than 3 years' experience in the handling of appeals in that State courts in felony cases.

"(e) Notwithstanding this subsection, a court, for good cause, may appoint another attorney whose background, knowledge or experience would otherwise enable the attorney to properly represent the defendant, with due consideration of the seriousness of the possible penalty and the unique and complex nature of the litigation.

"(f) Upon a finding in ex parte proceedings that investigative, expert or other services are reasonably necessary for the representation of the defendant, whether in connection with issues relating to guilt or issues relating to sentence, the court shall authorize the defendant's attorney to obtain such services on behalf of the defendant and shall order the payment of fees and expenses therefor, under subsection (g). Upon finding that timely procurement of such services could not practically await prior authorization, the court may authorize the provision of any payment of services nunc pro tunc.

"(g) The court shall fix the compensation to be paid to an attorney appointed under this subsection (other than State employees) and the fees and expenses to be paid for investigative, expert, and other reasonably necessary services authorized under subsection (c), at such rates or amounts as the court determines to be reasonably necessary to carry out the requirements of this subsection.

**"§ 2267. Law controlling in Federal habeas corpus proceedings; retroactivity**

"In cases subject to this chapter, all claims shall be governed by the law as it was when the petitioner's sentence became final. A court considering a claim under this chapter shall consider intervening decisions by the Supreme Court of the United States which establish fundamental constitutional rights.

**"§ 2268. Habeas corpus time requirements**

"(a) A Federal district court shall determine any petition for a writ of habeas corpus brought under this chapter within 110 days of filing.

"(b) The court of appeals shall hear and determine any appeal of the granting, denial, or partial denial of a petition for a writ of habeas corpus brought under this chapter within 90 days after the notice of appeal is filed.

"(c) The Supreme Court shall act on any petition for a writ of certiorari in a case brought under this chapter within 90 days after the petition is filed.

"(d) The Administrative Office of United States Courts shall report annually to Con-

gress on the compliance by the courts with the time limits established in this section.".

(b) AMENDMENT TO TABLE OF CHAPTERS.—The table chapters for part IV of title 28, United States Code, is amended by inserting after the item for chapter 153 the following:

"154. Special habeas corpus procedures in capital cases..... 2261".

(c) AMENDMENT TO SECTION 2254 OF TITLE 28.—Section 2254(c) of title 28, United States Code, is amended by—

(1) striking "An applicant" and inserting "(1) Except as provided in paragraph (2), an applicant"; and

(2) adding at the end thereof the following:

"(2) An applicant in a capital case shall be deemed to have exhausted the remedies available in the courts of the State when he has exhausted any right to direct appeal in the State.".

---

## D'AMATO AMENDMENT NO. 1688

(Ordered to lie on the table.)

Mr. D'AMATO submitted an amendment intended to be proposed by him to the bill S. 1970, supra, as follows:

At the appropriate place insert the following:

SECTION . SHORT TITLE

This subtitle may be cited as the "Drug Kingpin Death Penalty Act of 1990."

SEC. . DEATH PENALTY AUTHORIZATIONS AND PROCEDURES.

Title 18 of the United States Code is amended—

(a) by adding the following new chapter after chapter 227:

CHAPTER 228—DEATH PENALTY

"Sec.
"3591. Sentence of death.
"3592. Factors to be considered in determining whether a sentence of death is justified.
"3593. Special hearing to determine whether a sentence of death is justified.
"3594. Imposition of a sentence of death.
"3595. Review of a sentence of death.
"3596. Implementation of sentence of death.
"3597. Use of State facilities.
"3598. Appointment of counsel.
"3599. Collateral Attack on Judgment Imposing Sentence of Death

"SECTION 3591. SENTENCE OF DEATH.

"A defendant who has been found guilty of—

"(a) an offense referred to in section 408(c)(1) of the Controlled Substances Act (21 U.S.C. 848(c)(1)), committed as part of a continuing criminal enterprise offense under the conditions described in subsection (b) of that section;

"(b) an offense referred to in section 408(c)(1) of the Controlled Substances Act (21 U.S.C. 848(c)(1)), committed as part of a continuing criminal enterprise offense under that section, where the defendant is a principal administrator, organizer or leader of such an enterprise, and the defendant, in order to obstruct the investigation or prosecution of the enterprise or an offense involved in the enterprise, attempts to kill or knowingly directs, advises, authorizes, or assists another to attempt to kill any public officer, juror, witness, or member of the family or household of such a person; or

"(c) an offense constituting a felony violation of the Controlled Substances Act (21 U.S.C. 801 et seq.), the Controlled Substances Import and Export Act (21 U.S.C. 951 et seq.), or the Maritime Drug Law Enforcement Act (46 U.S.C. App. 1901 et seq.), where the defendant, intending to cause death or acting with reckless disregard for human life, engages in such a violation, and the death of another person results in the course of the violation or from the use of the controlled substance involved in the violation;

shall be sentenced to death if, after consideration of the factors set forth in section 3592 in the course of a hearing held pursuant to section 3593, it is determined that imposition of a sentence of death is justified: Provided, That no person may be sentenced to death who was less than eighteen years of age at the time of the offense; and provided that if a defendant described in section 3591(b) or (c) is not sentenced to death, said defendant shall be sentenced to life in prison.

"SEC. 3592. FACTORS TO BE CONSIDERED IN DETERMINING WHETHER A SENTENCE OF DEATH IS JUSTIFIED.

"(a) MITIGATING FACTORS.—In determining whether a sentence of death is justified for an offense described in section 3591, the jury, or if there is no jury, the court, shall consider each of the following mitigating factors and determine which, if any, exist:

"(1) MENTAL CAPACITY.—The defendant's mental capacity to appreciate the wrongfulness of his conduct or to conform his conduct to the requirements of law was significantly impaired, regardless of whether the capacity was so impaired as to constitute a defense to the charge.

"(2) DURESS.—The defendant was under unusual and substantial duress, regardless of whether the duress was of such a degree as to constitute a defense to the charge.

"(3) PARTICIPATION IN OFFENSE MINOR.—The defendant is punishable as a principal (as defined in section 2 of title 18 of the United States Code) in the offense, which was committed by another, but the defendant's participation was relatively minor, regardless of whether the participation was so minor as to constitute a defense to the charge.

The jury, or if there is no jury, the court, shall consider whether any other aspect of the defendant's character or record or any other circumstance of the offense that the defendant may proffer as a mitigating factor exists.

"(b) AGGRAVATING FACTORS—In determining whether a sentence of death is justified for an offense described in section 3591, the jury, or if there is no jury, the court, shall consider each of the following aggravating factors and determine which, if any, exist—

"(1) PREVIOUS CONVICTION OF OFFENSE FOR WHICH A SENTENCE OF DEATH OR LIFE IMPRISONMENT WAS AUTHORIZED.—The defendant has previously been convicted of another Federal or State offense resulting in the death of a person, for which a sentence of life imprisonment or death was authorized by statute.

"(2) PREVIOUS CONVICTIONS OF VIOLENT OFFENSES.—The defendant has previously been convicted of two or more Federal or State offenses, each punishable by a term of imprisonment of more than one year, committed on different occasions, involving the infliction of, or attempted infliction of, serious bodily injury or death uopn another person.

"(3) PREVIOUS CONVICTIONS OF DRUG OFFENSES.—The defendant has previously been convicted of two or more Federal or State offenses, each punishable by a term of imprisonment of more than one year, committed on different occasions, involving the importation, manufacture, or distribution of a controlled substance (as defined in section 102 of the Controlled Substances Act (21 U.S.C. 802)).

"(4) PREVIOUS CONVICTIONS OF VIOLENT AND DRUG OFFENSES.—The Defendant has previously been convicted of a Federal or State offense, punishable by a term of imprisonment of more than one year, involving the infliction of, or attempted infliction of, serious bodily injury or death upon another person, and has previously been convicted of a Federal or State offense, committed on a different occasion and punishable by a term of imprisonment of more than one year, involving the importation, manufacture, or distribution of a controlled substance (as defined in section 102 of the Controlled Substances Act (21 U.S.C. 802)).

"(5) SERIOUS DRUG FELONY CONVICTION.—The defendant has previously been convicted of another Federal or State offense involving the manufacture, distribution, importation, or possession of a controlled substance (as defined in section 102 of the Controlled Substances Act (21 U.S.C. 802)) for which a sentence of five or more years of imprisonment was authorized by statute.

"(6) USE OF FIREARM.— In committing the offense, or in furtherance of a continuing criminal enterprise of which the offense was a part, the defendant used a firearm or knowingly directed, advised, authorized, or assisted another to use a firearm, as defined in section 921 of this title, to threaten, intimidate, assault, or injure a person.

"(7) DISTRIBUTION TO PERSONS UNDER TWENTY-ONE.—The offense, or a continuing criminal enterprise of which the offense was a part, involved a violation of section 405 of the Controlled Substances Act (21 U.S.C. 845) which was committed directly by the defendant or for which the defendant would be liable under section 2 of this title.

"(8) DISTRIBUTION NEAR SCHOOLS.—The offense, or a continuing criminal enterprise of which the offense was a part, involved a violation of section 405A of the Controlled Substances Act (21 U.S.C. 845a) which was committed directly by the defendant or for which the defendant would be liable under section 2 of this title.

"(9) USING MINORS IN TRAFFICKING.—The offense, or a continuing criminal enterprise of which the offense was a part, involved a violation of section 405B of the Controlled Substances Act (21 U.S.C. 845b) which was committed directly by the defendant or for which the defendant would be liable under section 2 of this title.

"(10) LETHAL ADULTERANT.—The offense involved the importation, manufacture, or distribution of a controlled substance (as defined in section 102 of the Controlled Substances Act (21 U.S.C. 802)) mixed with a potentially lethal adulterant, and the defendant was aware of the presence of the adulterant.

The jury, or if there is no jury, the court, may consider whether any other aggravating factors exist.

"SEC. 3593. SPECIAL HEARING TO DETERMINE WHETHER A SENTENCE OF DEATH IS JUSTIFIED.

"(a) NOTICE BY THE GOVERNMENT.—Whenever the Government intends to seek the death penalty for an offense described in section 3591, the attorney for the government, a reasonable time before the trial, or before acceptance by the court of a plea of guilty, or at such time thereafter as the court may permit upon a showing of good

cause, shall sign and file with the court, and serve on the defendant, a notice—

"(1) that the Government in the event of conviction will seek the sentence of death; and

"(2) setting forth the aggravating factor or factors enumerated in section 3592 and any other aggravating factor not specifically enumerated in section 3592, that the Government, if the defendant is convicted, will seek to prove as the basis for the death penalty.

The court may permit the attorney for the government to amend the notice upon a showing of good cause.

"(b) HEARING BEFORE A COURT OR JURY.—When the attorney for the government has filed a notice as required under subsection (a) and the defendant is found guilty of an offense described in section 3591, the judge who presided at the trial or before whom the guilty plea was entered, or another judge if that judge is unavailable, shall conduct a separate sentencing hearing, to determine the punishment to be imposed. Prior to such a hearing no presentence report shall be prepared by the United States Probation Service, notwithstanding the provisions of the Federal Rules of Criminal Procedure. The hearing shall be conducted—

"(1) before the jury that determined the defendant's guilt;

"(2) before a jury impaneled for the purpose of the hearing if—

"(A) the defendant was convicted upon a plea of guilty;

"(B) the defendant was convicted after a trial before the court sitting without a jury;

"(C) the jury that determined the defendant's guilt was discharged for good cause; or

"(D) after initial imposition of a sentence under this section, reconsideration of the sentence under the section is necessary; or

"(3) before the court alone, upon motion of the defendant and with the approval of the attorney for the government.

A jury impaneled pursuant to paragraph (2) shall consist of twelve members, unless, at any time before the conclusion of the hearing, the parties stipulate, with the approval of the court, that it shall consist of a lesser number.

"(c) PROOF OF MITIGATING AND AGGRAVATING FACTORS.—At the hearing, information may be presented as to—

"(1) any matter relating to any mitigating factor listed in section 3592 and any other mitigating factor; and

"(2) any matter relating to any aggravating factor listed in section 3592 for which notice has been provided under subsection (a)(2) and (if information is presented relating to such a listed factor) any other aggravating factor for which notice has been so provided.

Information presented may include the trial transcript and exhibits. Any other information relevant to such mitigating or aggravating factors may be presented by either the government or the defendant, regardless of its admissibility under the rules governing admission of evidence at criminal trials, except that information may be excluded if its probative value is outweighed by the danger of creating unfair prejudice, confusing the issues, or misleading the jury. The attorney for the government and for the defendant shall be permitted to rebut any information received at the hearing, and shall be given fair opportunity to present argument as to the adequacy of the information to establish the existence of any aggravating or mitigating factor, and as to the appropriateness in that case of imposing a sentence of death. The attorney for the government shall open the argument. The defendant shall be permitted to reply. The government shall then be permitted to reply in rebuttal. The burden of establishing the existence of an aggravating factor is on the government, and is not satisfied unless the existence of such a factor is established beyond a reasonable doubt. The burden of establishing the existence of any mitigating factor is on the defendant, and is not satisfied unless the existence of such a factor is established by a preponderance of the evidence.

"(d) RETURN OF SPECIAL FINDINGS.—The jury, or if there is no jury, the court, shall consider all the information received during the hearing. It shall return special findings identifying any aggravating factor or factors set forth in section 3592 found to exist and any other aggravating factor for which notice has been provided under subsection (a) found to exist. A finding with respect to a mitigating factor may be made by one or more members of the jury, and any member of the jury who finds the existence of a mitigating factor may consider such factor established for purposes of this section regardless of the number of jurors who concur that the factor has been established. A finding with respect to any aggravating factor must be unanimous. If no aggravating factor set forth in section 3592 is found to exist, the court shall impose a sentence other than death authorized by law.

"(e) RETURN OF A FINDING CONCERNING A SENTENCE OF DEATH.—If an aggravating factor required to be considered under section 3592(b) is found to exist, the jury, or if there is no jury, the court, shall then consider whether the aggravating factor or factors found to exist outweigh any mitigating factor or factors. The jury, or if there is no jury, the court, shall recommend a sentence of death if it unanimously finds at least one aggravating factor and no mitigating factor or if it finds one or more aggravating factors which outweigh any mitigating factors. In any other case, it shall not recommend a sentence of death. The jury shall be instructed that it must avoid any influence of sympathy, sentiment, passion, prejudice, or other arbitrary factors in its decision, and should make such a recommendation as the information warrants.

"(f) SPECIAL PRECAUTION TO ASSURE AGAINST DISCRIMINATION.—

In a hearing held before a jury, the court, prior to the return of a finding under subsection (e), shall instruct the jury that, in considering whether a sentence of death is justified, it shall not consider the race, color, religious beliefs, national origin, or sex of the defendant or of any victim and that the jury is not to recommend a sentence of death unless it has concluded that it would recommend a sentence of death for the crime in question no matter what the race, color, religious beliefs, national origin, or sex of the defendant or of any victim may be. The jury, upon return of a finding under subsection (e), shall also return to the court a certificate, signed by each juror, that consideration of the race, color, religious beliefs, national origin, or sex of the defendant or any victim was not involved in reaching his or her individual decision and that the individual juror would have made the same recommendation regarding a sentence for the crime in question no matter what the race, color, religious beliefs, national origin, or sex of the defendant or any victim may be.

SEC. 3594. IMPOSITION OF A SENTENCE OF DEATH.

"Upon the recommendation under section 3593(e) that a sentence of death be imposed, the court shall sentence the defendant to death. Otherwise the court shall impose a sentence, other than death, authorized by law. Notwithstanding any other provision of law, if the maximum term of imprisonment for the offense is life imprisonment, the court may impose a sentence of life imprisonment without the possibility of release or furlough.

SEC. 3595. REVIEW OF A SENTENCE OF DEATH.

"(a) APPEAL.—In a case in which a sentence of death is imposed, the sentence shall be subject to review by the court of appeals upon appeal by the defendant. Notice of appeal of the sentence must be filed within the time specified for the filing of a notice of appeal of the judgment of conviction. An appeal of the sentence under this section may be consolidated with an appeal of the judgment of conviction and shall have priority over all other cases.

"(b) REVIEW.—The court of appeals shall review the entire record in the case, including——

"(1) the evidence submitted during the trial;

"(2) the information submitted during the sentencing hearing;

"(3) the procedures employed in the sentencing hearing; and

"(4) the special findings returned under section 3593(d).

"(c) DECISION AND DISPOSITION.——

"(1) If the court of appeals determines that——

"(A) the sentence of death was not imposed under the influence of passion, prejudice, or any other arbitrary factor; and

"(B) the evidence and information support the special findings of the existence of an aggravating factor or factors;

it shall affirm the sentence.

"(2) In any other case, the court of appeals shall remand the case for reconsideration under section 3593 or for imposition of another authorized sentence as appropriate.

"(3) The court of appeals shall state in writing the reasons for its disposition of an appeal of sentence of death under this section.

"SEC. 3596. IMPLEMENTATION OF SENTENCE OF DEATH.

"(a) A person who has been sentenced to death pursuant to the provisions of this chapter shall be committed to the custody of the Attorney General until exhaustion of the procedures for appeal of the judgment of conviction and for review of the sentence. When the sentence is to be implemented, the Attorney General shall release the person sentenced to death to the custody of a United States Marahal, who shall supervise implementation of the sentence in the manner prescribed by the law of the State in which the sentence is imposed. If the law of such State does not provide for implementation of a sentence of death, the court shall designate another State, the law of which does so provide, and the sentence shall be implemented in the manner prescribed by such law.

"(b) A sentence of death shall not be carried out upon a person who lacks the mental capacity to understand the death penalty and why it was imposed on that person, or upon a woman while she is pregnant.

"(c) No employee of any State department of corrections or the Federal Bureau of Prisons and no employee providing services to that department or bureau under contract

shall be required, as a condition of that employment or contract shall be required, as a condition of that employment or contractual obligation, to be in attendance at or to participate in any execution carried out under this section if such participation is contrary to the moral or religious convictions of the employee. For purposes of this subsection, the term 'participate in any execution' includes personal preparation of the condemned individual and the apparatus used for the execution, and supervision of the activities of other personnel in carrying out such activities.

SEC. 3597. USE OF STATE FACILITIES.

"A United States Marshal charged with supervising the implementation of a sentence of death may use appropriate State or local facilities for the purpose, may use the services of an appropriate State of local official or of a person such as an official employed for the purpose, and shall pay the costs thereof in an amount approved by the Attorney General.

SEC. 3598. APPOINTMENT OF COUNSEL.

"(a) FEDERAL CAPITAL CASES.——

"(1) REPRESENTATION OF INDIGENT DEFENDANTS.—Nothwithstanding any other provision of law, this subsection shall govern the appointment of counsel for any defendant against whom a sentence of death is sought, or on whom a sentence of death has been imposed, for an offense against the United States, where the defendant is or becomes financially unable to obtain adequate representation. Such a defendant shall be entitled to appointment of counsel from the commencement of trial proceedings until one of the conditions specified in section 3599(b) of this title has occurred.

"(2) REPRESENTATION BEFORE FINALITY OF JUDGMENT.—A defendant within the scope of this subsection shall have counsel appointed for trial representation as provided in section 3005 of this title. At least one counsel so appointed shall continue to represent the defendant until the conclusion of direct review of the judgment, unless replaced by the court with other qualified counsel.

"(3) REPRESENTATION AFTER FINALITY OF JUDGMENT.—When a judgment imposing a sentence of death has become final through affirmance by the Supreme Court on direct review, denial of certiorari by the Supreme Court on direct review, or expiration of the time for seeking direct review in the court of appeals or the Supreme Court, the government shall promptly notify the district court that imposed the sentence. Within 10 days of receipt of such notice, the district court shall proceed to make a determination whether the defendant is eligible under this subsection for appointment of counsel for subsequent proceedings. On the basis of the determination, the court shall issue an order: (A) appointing one or more counsel to represent the defendant upon a finding that the defendant is financially unable to obtain adequate representation and wishes to have counsel appointed or is unable competently to decide whether to accept or reject appointment of counsel; (B) finding, after a hearing if necessary, that the defendant rejected appointment of counsel and made the decision with an understanding of its legal consequences; or (C) denying the appointment of counsel upon a finding that the defendant is financially able to obtain adequate representation. Counsel appointed pursuant to this paragraph shall be different from the counsel who represented the defendant at trial and on direct review unless the defendant and counsel request a continuation or renewal of the earlier representation.

"(4) STANDARDS FOR COMPETENCE OF COUNSEL.—In relation to a defendant who is entitled to appointment of counsel under this subsection, at least one counsel appointed for trial representation must have been admitted to the bar for at least five years and have at least three years of experience in the trial of felony cases in the federal district courts. If new counsel is appointed after judgment, at least one counsel so appointed must have been admitted to the bar for at least five years and have at least three years of experience in the litigation of felony cases in the federal courts of appeals or the Supreme Court. The court, for good cause, may appoint counsel who does not meet these standards, but whose background, knowledge, or experience would otherwise enable him or her to properly represent the defendant, with due consideration of the seriousness of the penalty and the nature of the litigation.

"(5) APPLICABILITY OF CRIMINAL JUSTICE ACT.—Except as otherwise provided in this subsection, the provisions of section 3006A of this title shall apply to appointments under this subsection.

"(6) CLAIMS OF INEFFECTIVENESS OF COUNSEL.—The ineffectiveness or incompetence of counsel during proceedings on a motion under section 2255 of title 28, United States Code, in a capital case shall not be a ground for relief from the judgment or sentence in any proceeding. This limitation shall not preclude the appointment of different counsel at any stage of the proceedings.

"(b) STATE CAPITAL CASES.—The laws of the United States shall not be construed to impose any requirement with respect to the appointment of counsel in any proceeding in a state court or other state proceeding in a capital case, other than any requirement imposed by the Constitution of the United States. In a proceeding under section 2254 of title 28, United States Code, relating to a state capital case, or any subsequent proceeding on review, appointment of counsel for a petitioner who is or becomes financially unable to afford counsel shall be in the discretion of the court, except as provided by a rule promulgated by the Supreme Court pursuant to statutory authority. Such appointment of counsel shall be governed by the provisions of section 3006A of this title.

"SEC. 3599. COLLATERAL ATTACK ON JUDGMENT IMPOSING SENTENCE OF DEATH.

"(a) TIME FOR MAKING SECTION 2255 MOTION.—In any case in which a sentence of death has been imposed for an offense against the United States and the judgment has become final as described in section 3598(a)(3) of this title, a motion in the case under section 2255 of title 28, United States Code, must be filed within 90 days of the issuance of the order relating to appointment of counsel under section 3598(a)(3) of this title. The court in which the motion is filed, for good cause shown, may extend the time for filing for a period not exceeding 60 days. A motion described in this section shall have priority over all non-capital matters in the district court, and in the court of appeals on review of the district court's decision.

"(b) STAY OF EXECUTION.—The execution of a sentence of death shall be stayed in the course of direct review of the judgment and during the litigation of an initial motion in the case under section 2255 of title 28, United States Code. The stay shall run continuously following imposition of the sentence, and shall expire if—

"(1) the defendant fails to file a motion under section 2255 of title 28, United States Code, within the time specified in subsection (a), or fails to make a timely application for court of appeals review following the denial of such a motion by a district court; or

"(2) upon completion of district court and court of appeals review under section 2255 of title 28, United States Code, the motion under that section is denied and (A) the time for filing a petition for certiorari has expired and no petition has been filed; (B) a timely petition for certiorari was filed and the Supreme Court denied the petition; or (C) a timely petition for certiorari was filed and upon consideration of the case, the Supreme Court disposed of it in a manner that left the capital sentence undisturbed; or

"(3) before a district court, in the presence of counsel and after having been advised of the consequences of his decision, the defendant waives the right to file a motion under section 2255 of title 28, United States Code.

"(c) FINALITY OF THE DECISION ON REVIEW.—If one of the conditions specified in subsection (b) has occurred, no court thereafter shall have the authority to enter a stay of execution or grant relief in the case unless—

"(1) the basis for the stay and request for relief is a claim not presented in earlier proceedings; and

"(2) the failure to raise the claim is (A) the result of governmental action in violation of the Constitution or laws of the United States; (B) the result of the Supreme Court recognition of a new federal right that is retroactively applicable; or (C) based on a factual predicate that could not have been discovered through the exercise of reasonable diligence in time to present the claim in earlier proceedings; and

"(3) the facts underlying the claim would be sufficient, if proven, to undermine the court's confidence in the determination of guilt on the offense or offenses for which the death penalty was imposed."; and

(b) In the chapter analysis of part II, by adding the following new item after the item relating to chapter 227:

"228. Death penalty ..... 3591".

---

## DECONCINI AMENDMENT NO. 1689

(Ordered to lie on the table.)

Mr. DECONCINI (for himself, Mr. D'AMATO, Mr. HATCH, Mr. MURKOWSKI, and Ms. MIKULSKI) submitted an amendment intended to be proposed by him to the bill S. 1970, supra, as follows:

At the appropriate place, insert the following:

SEC. . PROHIBITION OF CERTAIN DRUG ADVERTISEMENTS.

Section 403 of the Controlled Substances Act (21 U.S.C. 843) is amended—

(1) by redesignating subsections (c) and (d) as subsections (d) and (e), respectively; and

(2) by inserting a new subsection (c) as follows:

"(c)(1) It shall be unlawful for any person to print, publish, place, or otherwise cause to appear in any newspaper, magazine, handbill, or other publication, any direct or indirect advertisement, knowing, or under

circumstances where one reasonably should know that the purpose of the advertisement, in whole or in part, is to promote or facilitate the distribution or transfer of a Schedule I controlled substance.

"(2) As used in this section, the term 'indirect advertisment' means an advertisement for a catalogue of Schedule I controlled substances, the name, address, phone number, or similar information relating to a contact for obtaining a Schedule I controlled substance, and any similar advertisement whose purpose is to indirectly promote or facilitate the transfer or distribution of a Schedule I controlled substance.".

## THURMOND AMENDMENT NO. 1690

Mr. THURMOND proposed an amendment to the bill S. 1970, supra, as follows:

On page 19, line 7, strike the period after the word "retarded" and insert in lieu the following: "and is wholly lacking in the capacity to understand the difference between right from wrong.".

## NOTICES OF HEARINGS

SELECT COMMITTEE ON INDIAN AFFAIRS

Mr. INOUYE. Mr. President, I would like to announce that the Select Committee on Indian Affairs will be holding a hearing on Thursday, June 7, 1990, beginning at 9:30 a.m., in 485 Russell Senate Office Building on S. 2340, the Indian Children's Services and Family Violence Prevention Act.

Those wishing additional information should contact the Select Committee on Indian Affairs at 224-2251.

Mr. President, I would like to announce that the Select Committee on Indian Affairs will be holding an oversight hearing on Thursday, June 14, 1990, beginning at 2 p.m., in 485 Russell Senate Office Building on Indian Health Service nurse shortage.

Those wishing additional information should contact the Select Committee on Indian Affairs at 224-2251.

Mr. President, I would like to announce that the Select Committee on Indian Affairs will be holding an oversight hearing on Thursday, June 21, 1990, beginning at 2 p.m., in 485 Russell Senate Office Building on S. 2451, to establish in the Department of the Interior a Trust Counsel for Indian Assets.

Those wishing additional information should contact the Select Committee on Indian Affairs at 224-2251.

COMMITTEE ON RULES AND ADMINISTRATION

Mr. FORD. Mr. President, I wish to announce that the Committee on Rules and Administration will meet on Thursday, June 21, 1990, to hold hearings. The committee will receive testimony on the following legislation: Senate Concurrent Resolution 122, to establish an Albert Einstein Congressional Fellowship Program, at 9:30 a.m.; and Senate Resolution 206, to establish a point of order against material that earmarks research moneys for designated institutions without competition, at 10:30 a.m.

Senators and Representatives who wish to testify or submit a statement for the hearing record on Senate Concurrent Resolution 122 or Senate Resolution 206 are requested to have their staffs contact Carole Blessington of the Rules Committee at 224-0278. Individuals and organizations interested in providing oral or written testimony are also requested to contact Ms. Blessington.

## AUTHORITY FOR COMMITTEES TO MEET

COMMITTEE ON LABOR AND HUMAN RESOURCES

Mr. BIDEN. Mr. President, I ask unanimous consent that the Committee on Labor and Human Resources be authorized to meet during the session of the Senate on Wednesday, May 23, at 2 p.m., for a hearing on the nominations of Michael Williams to be Assistant Secretary of the Office of Civil Rights, Department of Education.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON LABOR AND HUMAN RESOURCES

Mr. BIDEN. Mr. President, I ask unanimous consent that the Committee on Labor and Human Resources be authorized to meet during the session of the Senate on Wednesday, May 23, at 9:30 a.m., for a hearing on "The Freedom of Choice Act: The Health Aspects of Abortion."

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON SUPERFUND, OCEAN AND WATER PROTECTION

Mr. BIDEN. Mr. President, I ask unanimous consent that the Subcommittee on Superfund, Ocean and Water Protection, Committee on Environment and Public Works, be authorized to meet during the session of the Senate on Wednesday, May 23, beginning at 9:30 a.m., to conduct a markup of S. 203, the Ground Water Research and Education Act and, immediately following the markup, at 10 a.m., to conduct a hearing on pending legislation to require local educational agencies to conduct testing for radon contamination in schools (S. 1697; the Radon Testing for a Safe Schools Act).

The PRESIDING OFFICER. Without objection, it is so ordered.

SELECT COMMITTEE ON INTELLIGENCE

Mr. BIDEN. Mr. President, I ask unanimous consent that the Select Committee on Intelligence be authorized to meet during the session of the Senate on Wednesday May 23, 1990 at 2 p.m. to hold an open hearing on intelligence matters.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON STRATEGIC FORCES AND NUCLEAR DETERRENCE

Mr. BIDEN. Mr. President, I ask unanimous consent that the Armed Services Committee, Subcommittee on Strategic Forces and Nuclear Deterrence be authorized to meet in open session on Wednesday, May 23, 1990, at 2:30 p.m. to receive testimony on Department of Energy budget requests for fiscal year 1991.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON STRATEGIC FORCES AND NUCLEAR DETERRENCE AND THE SUBCOMMITTEE ON DEFENSE INDUSTRY AND TECHNOLOGY

Mr. BIDEN. Mr. President, I ask unanimous consent that the Subcommittee on Strategic Forces and Nuclear Deterrence and the Subcommittee on Defense Industry and Technology of the Committee on Armed Services be authorized to meet jointly during the session of the Senate on Wednesday, May 23, 1990, at 9:30 a.m. to receive testimony on Department of Energy laboratory management in review of S. 2171, the Department of Defense Authorization Act for fiscal year 1991.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON GOVERNMENTAL AFFAIRS

Mr. BIDEN. Mr. President, I ask unanimous consent that the Committee on Governmental Affairs be authorized to meet on Wednesday, May 23, at 2 p.m. for a hearing on the nomination of Jerry D. Jennings, nominee to be Deputy Director, Federal Emergency Management Agency [FEMA].

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON PUBLIC LANDS, NATIONAL PARKS AND FORESTS

Mr. BIDEN. Mr. President, I ask unanimous consent that the subcommittee on Public Lands, National Parks and Forests be authorized to meet during the session of the Senate 2 p.m., Wednesday, May 23 for a hearing to receive testimony on the "Report of the Interagency Scientific Committee to address the conservation of the Northern Spotted Owl."

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. BIDEN. Mr. President, I ask unanimous consent that the full committee of the Committee on Energy and Natural Resources be authorized to meet during the session of the Senate 9:30 a.m., Wednesday, May 23 for a business meeting to conduct pending calendar business.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON COMMERCE, SCIENCE, AND TRANSPORTATION

Mr. BIDEN. Mr. President, I ask unanimous consent that the Committee on Commerce, Science, and Transportation, be authorized to meet during the session of the Senate on May 23, 1990, at 9:30 a.m. on the competitive challenge facing the U.S. in-

dustry: Review of the administration's technology policy, priorities, and competitiveness strategy.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON AGRICULTURE, NUTRITION, AND FORESTRY

Mr. BIDEN. Mr. President, I ask unanimous consent that the Committee on Agriculture, Nutrition, and Forestry be allowed to meet during the session of the Senate on Wednesday, May 23, 1990, at 2 p.m. to hold a business meeting on the 1990 farm bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS

Mr. BIDEN. Mr. President, I ask unanimous consent that the Committee on Banking, Housing, and Urban Affairs be allowed to meet during the session of the Senate Wednesday, May 23, 1990, at 10 a.m. to conduct a hearing on the semiannual report of the Resolution Trust Corporation Oversight Board.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON HOUSING AND URBAN AFFAIRS

Mr. BIDEN. Mr. President, I ask unanimous consent that the Subcommittee on Housing and Urban Affairs of the Committee on Banking, Housing, and Urban Affairs be allowed to meet during the session of the Senate Wednesday, May 23, 1990, at 2 p.m. to conduct a hearing on the financial strength of the Federal Housing Administration.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON FOREIGN RELATIONS

Mr. BIDEN. Mr. President, I ask unanimous consent that the Committee on Foreign Relations be authorized to meet during the session of the Senate on Wednesday, May 23, at 10 a.m. to hold a hearing on the supplemental State authorization bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON FOREIGN RELATIONS

Mr. BIDEN. Mr. President, I ask unanimous consent that the Committee on Foreign Relations be authorized to meet during the session of the Senate on Wednesday, May 23, at 2 p.m. to hold a nomination hearing on Harry Shlaudeman to be Ambassador to the Republic of Nicaragua.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ADDITIONAL STATEMENTS

## BUDGET SCOREKEEPING REPORT

● Mr. SASSER. Mr. President, I hereby submit to the Senate the latest budget scorekeeping report for fiscal year 1990, prepared by the Congressional Budget Office in response to section 308(b) of the Congressional Budget Act of 1974, as amended. This report was prepared consistent with standard scorekeeping conventions. This report also serves as the scorekeeping report for the purposes of section 311 of the Budget Act.

The report shows that current level spending is under the budget resolution by $3.5 billion in budget authority, and over the budget resolution by $4 billion in outlays. Current level is under the revenue floor by $5.2 billion.

The current estimate of the deficit for purposes of calculating the maximum deficit amount under section 311(a) of the Budget Act is $114.6 billion, $14.6 billion above the maximum deficit amount for 1990 of $100 billion.

The report follows:

U.S. CONGRESS,
CONGRESSIONAL BUDGET OFFICE,
*Washington, DC. May 21, 1990.*

Hon. JIM SASSER,
*Chairman, Committee on the Budget, U.S. Senate, Washington, D.C.*

DEAR MR. CHAIRMAN: The attached report shows the effects of congressional action on the budget for fiscal year 1990 and is current through May 18, 1990. The estimates of budget authority, outlays, and revenues are consistent with the technical and economic assumptions of the 1990 concurrent resolution on the budget (H. Con. Res. 106). This report is submitted under section 308(b) and in aid of section 311 of the Congressional Budget Act, as amended, and meets the requirements for Senate scorekeeping of section 5 of Senate Concurrent Resolution 32, the 1986 first concurrent resolution on the budget.

Since my last report, dated May 14, 1990, the Congress has cleared for the President's signature H.R. 1805, an act making technical amendments to title 5 of the United States Code. This action decreases the current level estimate of outlays.

Sincerely,

ROBERT D. REISCHAUER.

THE CURRENT LEVEL REPORT FOR THE U.S. SENATE, 101ST CONGRESS, 2D SESS., AS OF MAY 18, 1990

[In billions of dollars]

| | Current level [1] | Budget resolution H. Con. Res. 106 | Current level +/− resolution |
|---|---|---|---|
| Fiscal year 1990 | | | |
| Budget authority | 1,325.9 | 1,329.4 | −3.5 |
| Outlays | 1,169.2 | 1,165.2 | 4.0 |
| Revenues | 1,060.3 | 1,065.5 | −5.2 |
| Debt subject to limit | 3,026.7 | 3,122.7 | −96.0 |
| Direct loan obligations | 19.1 | 19.3 | −.2 |
| Guaranteed loan commitments | 114.7 | 107.3 | 7.4 |
| Deficit | 114.6 | [2] 100.0 | [3] 14.6 |

[1] The current level represents the estimated revenue and direct spending effects (budget authority and outlays) of all legislation that Congress has enacted in this or previous sessions or sent to the President for his approval and is consistent with the technical and economic assumptions of H. Con. Res. 106. In addition, estimates are included of the direct spending effects for all entitlement or other mandatory programs requiring annual appropriations under current law even though the appropriations have not been made. The current level of debt subject to limit reflects the latest U.S. Treasury information on public debt transactions. In accordance with Sec. 102(a) of the Balanced Budget and Emergency Deficit Control Reaffirmation Act (101 Stat. 762) the current level deficit amount compared to the maximum deficit amount does not include asset sales.

[2] Maximum deficit amendment [MDA] in accordance with section 3(7)(E) of the Congressional Budget Act, as amended.

[3] Current level plus or minus MDA.

THE CURRENT LEVEL REPORT, 101ST CONGRESS, 2D SESS., SENATE SUPPORTING DETAIL, FISCAL YEAR 1990 AS OF CLOSE OF BUSINESS, MAY 18, 1990

[In millions of dollars]

## ROGER EBLE DAY

● Mr. BURNS. Mr. President, I rise to proclaim Roger Eble Day in Billings, MT. Today we are urging the community of Billings to pay special tribute to a most outstanding superintendent in recognition of his extraordinary leadership abilities.

Roger has a reputation as an innovator in education. He was the first doctoral student sponsored by the Missoula County Board and in 1976, he received his doctorate in education administration and supervision from the University of Montana.

Throughout his educational career, Roger Eble has been active in a variety of civic and professional activities, including Special Olympics, Carroll College, YMCA Board, Chamber of Commerce, Rotary, School Administrators of Montana, Phi Delta Kappa, United Way, and the Lutheran Church.

It is with great sadness that I introduce this proclamation into the RECORD. Roger has been diagnosed with terminal cancer and will not be with us for much longer. I cannot emphasize the impact he has had upon education in Montana and he will be sorely missed.

With that Mr. President, I ask to have printed in the RECORD Roger's biography and a proclamation by the County of Yellowstone.

The material follows:

U.S. SENATE,
*Washington, DC, May 23, 1990.*

Mr. ROGER F. EBLE,
*Tommy Armour Circle, Billings, MT.*

DEAR ROGER: It gives me great pleasure to submit a few words from this lofty place called Washington, DC. There is nobody any loftier, in my opinion, than you, Roger. I just wish we had a train load of "can do" folks like you around, but God did not want to over-burden us with such talents.

I am delighted that a scholarship fund is being set up with your permission, to seek out those who go into public education, setting for themselves the standards that you have set for yourself. I am aware that those standards may be a handicap for some, but they never have been for you.

This is what this is all about—self set standards, not standards imposed by some high-minded, low-productive government agency who would tell us all that men and women are equal regardless of God-given talents or the lack thereof.

You are the symbol of what is good about America—one who is, and will always be, dedicated to the high ideals of public education. There is no higher calling than perfecting the art of preparing and shaping young minds for life.

But you, old Roger, didn't stop there. You went on to develop the art of managing. After all, that is what binds the ole machine together and makes it work. One must gain the respect of those who are the nuts and bolts—the folks who serve the community on the school boards, the PTAs, the teachers, the folks that keep the physical plants in ship shape and most importantly—the students. Respect from and for this community, while maintaining the high standard and integrity of a public trust, has been the result of your efforts.

You are a man, a husband, a father, and a public servant who has known joy and elation as well as sorrow and disappointment, and that is why you are so special. You and your unique qualities are what inspire a Nation's people to higher levels. I thank God this little ole Iowa boy walks through our community.

Phyllis joins me in this salute and we sure wish we could be with you all this evening. God bless you all.

Sincerely,

CONRAD BURNS,
*U.S. Senator.*

### IOWA BORN AND BRED

On November 18, 1939, Roger Franklin Eble was born to Edith and George Eble in Council Bluffs, Iowa. Seven years later, Roger was joined by a sister Barbara. Roger's mother Edith was a homemaker and teacher, and his dad George was a grocery store owner and an outstanding civic leader who participated in many of the town's activities and was highly respected throughout southwest Iowa.

Roger's formative years were spent in the rural southwest town of Shelby. There he enjoyed the friendship of Melvin Berg and Ralph Peterson. Roger also showed an affinity for music and sports. He played the clarinet and sang in the school chorus. A true competitor, he ran track and played baseball, basketball and football, winning numerous athletic awards during his high school career. Roger was a member of two Shelby state tournament basketball teams.

In 1956 as a high school junior, Roger met Karen Lou Thomsen from nearby Avoca, Iowa. They were married in 1960 and graduated from the University of Iowa in 1961, both becoming teachers in Underwood, Iowa. Roger taught social studies from 1961-64 at Underwood Junior High School and was the wrestling and football coach for the high school. After taking one year off to sell IBM computers in Omaha, Nebraska, Roger returned to the field of education—his real love—and took the job of high school principal at Tri-Center High School in Neola, Iowa. He was 26. In 1965, he also received his master's degree in educational administration from the University of Nebraska.

In 1968, Roger made a big decision to leave Iowa and take his young family which now included a daughter Michelle and son Charles to Missoula, Montana, where at age 29, Roger Eble became the principal at Hellgate High School. He was the youngest high school principal in the United States.

Roger came to Hellgate with a reputation as innovator in education and with plans to institute flexible modular scheduling and optional study halls. Modular scheduling involved laying out the school day in blocks so that the length of classes could be varied according to the needs of the course and the materials being covered.

Eble was principal of Hellgate High for six years before moving on to become the Director of the Missoula County High School at Ft. Missoula. There he supervised business education, forestry and vocational agriculture classes and child-care courses. In addition, he coordinated the district's student-teacher program. During this time, Roger also became the first doctoral student sponsored by the Missoula County School Board. In 1976, he received his doctorate in Educational Administration and Supervision from the University of Montana. Two more daughters—Shannon and Holly—were added to the Eble family.

In 1977, Roger Eble was rising to the top of the educational administration ladder as he look the job of Superintendent of Schools in Libby, Montana. Three years later at the age of 40, Eble became the superintendant for Helena District #1. The Helena school board was impressed with Eble's orientation toward students and classroom experience. While at Libby, Eble had required himself and all of the administrative staff to teach in some area. His practice was to teach one day a month.

Continuing with his personal style of leadership, Eble established himself as a popular superintendent in Helena from 1980-87. Educators in Helena reported: "He gives us the job to do, he gives us the direction to take and we do it."

In May 1987, Eble was named the new superintendent of the Billings Public Schools, the largest school district in Montana. Eble came to the district after an acrimonious period when there had been dissension among the school board, teachers, superintendent and public. In a short period of time, Eble was credited with healing the rifts in the Billings district and restoring harmony, in spite of extreme budget constraints and the necessity to lay off 109 staff members.

Throughout his educational career, Roger Eble has been active in a variety of civil and professional activities, including Special Olympics, Carroll College, YMCA Board, Chamber of Commerce, Rotary, School Administrators of Montana, Phi Delta Kappa, United Way, and the Lutheran Church. While campaign chairman of the Billings United Way, he helped to raise over one million dollars for the first time in the campaign's history. In 1989, In recognition of his extraordinary leadership abilities, Roger Eble was awarded the G.V. Erickson Award by his peers in education. He has also been honored by the Rotary Club of Billings, the Montana Association of School Curriculum Directors, and the Billings Education Association.

With his reputation as an educator and leader at its peak, Roger Eble announced his retirement due to ill health effective June 30, 1990.

### PROCLAMATION

Whereas in 1968, Roger Eble came to Missoula, MT from Iowa and was the youngest high school principal in the United States; and

Whereas Roger Eble had a reputation as an innovator in education and planned to institute flexible modular scheduling and optional study halls; and

Whereas from Missoula Hellgate High, he moved on to become the Director of the Missoula County High School at Fort Missoula where he supervised business education, forestry and vocational agriculture classes and child-care courses; and

Whereas during this time, Roger became the first doctoral student sponsored by the Missoula County Board and in 1976, he received his doctorate in Educational Administration and Supervision from the University of Montana; and

Whereas in 1977, Roger Eble was rising to the top of the educational administration ladder and took the job of Superintendent of Schools in Libby, Montana, three years later became the Superintendent for Helena District #1; and

Whereas in May of 1987, Roger Eble was named the new Superintendent of Billings Public Schools, the largest school district in Montana; and

Whereas in a short period of time, Roger was credited with healing the rifts in the Billings District and restoring harmony in spite of extreme budget constraints and the necessity to lay off 109 staff members; and

Whereas throughout his educational career, Roger Eble has been active in a variety of civic and professional activities, including Special Olympics, Carroll College, YMCA Board, Chamber of Commerce, Rotary, School Administrators of Montana, Phi Delta Kappa, United Way, and the Lutheran Church.

Now therefore, we, the Board of County Commissioners of Yellowstone County, Billings, Montana do hereby proclaim Wednesday, May 23, 1990, and "Roger Eble Day in Billings" and urge our community to pay special tribute to a most outstanding Superintendent in recognition of his extraordinary leadership abilities and, as reported by educators in Helena, "He gives us the job to do, he gives us the direction to take and we do it."●

## EXPLANATION FOR RECORD ON VOTING ABSENCES

● Mr. LIEBERMAN. Mr. President, as an observer to the elections in Romania, I was away from Washington on official business from May 17, 1990, to May 21, 1990. I was coleader of a 60-member international delegation sponsored by the National Democratic Institute/National Republican Institute for International Affairs.

On May 17, 1990, there were four rollcall votes in the Senate for the RECORD. I would like to inform my constituents and colleagues how I would have voted had I been present that day.

On rollcall votes 98 and 99—amendments 1638 and 1648 to S. 195, the Chemical and Biological Weapons Proliferation Act, I would have voted "aye." On rollcall vote 100—a motion to close debate on the committee substitute for S. 195, I would have voted "aye." On rollcall vote 101—final passage of H.R. 3033, as amended, I would have voted "aye."●

## THE 25TH ANNIVERSARY OF THE RHODE ISLAND CHAPTER OF THE CONSTRUCTION SPECIFICATIONS INSTITUTE

● Mr. CHAFEE. Mr. President, this year marks the 25th anniversary of the Rhode Island chapter of the Construction Specifications Institute. CSI is a nationwide organization that establishes uniform standards for documents used in building our bridges, workplaces, and homes.

Rhode Island's CSI chapter began in 1965 through the efforts of Harry Johnson, who worked as a specifications writer for the Providence architectural firm of C.E. MaGuire. At that time, the construction industry was hampered by the lack of a uniform set of standards for preparing blueprints and other documents. Harry Johnson realized that the best way for Rhode Island's construction industry to become more competitive was to adopt CSI's standards and form a Rhode Island chapter.

Since 1965, uniform building specifications have been used to strengthen and modernize Rhode Island's infrastructure. CSI's standards play an important role in virtually every engineering and building project undertaken in Rhode Island today.

CSI of Rhode Island has grown beyond its initial purpose by contributing valuable educational programs to engineers and architects, and by helping their industry respond to the changing needs of society. For instance, the Rhode Island chapter has earned many awards from CSI's national body for its outstanding seminars on topics ranging from fire safety to hazardous materials to alternative energy resources. When new laws were enacted to ensure access to buildings for people with disabilities, Rhode Island's CSI chapter joined the Paraplegic Association of Rhode Island in teaching industry members how to accommodate the needs of people with disabilities within blueprints and related structural documents.

Therefore, Mr. President, I ask my colleagues to join me in congratulating all of the members of the Rhode Island chapter of the Construction Specifications Institute for their 25 years of commitment to excellence.●

## S. 940, THE JEMEZ AND PECOS RIVERS WILD AND SCENIC RIVERS ADDITION ACT OF 1989

● Mr. DOMENICI. Mr. President, last night the Senate approved H.R. 644, which designates segments of the Pecos River and of the East Fork of the Jemez River in New Mexico as components of the Wild and Scenic Rivers System.

Last year, Senator BINGAMAN introduced S. 940, the Senate companion legislation to H.R. 644. I was pleased to cosponsor this bill, which passed the Senate in September 1989. I want to congratulate my colleague, Senator BINGAMAN, for his efforts on this important legislation. Without his diligent efforts, this legislation would not have been possible.

H.R. 644 was introduced in the House of Representatives by Congressman BILL RICHARDSON of New Mexico. H.R. 644 was amended in the House with language that restates and slightly modifies the provisions contained in the Wild and Scenic Rivers Act regarding the issuance of patents to mining claims within the corridor of rivers included in the Wild and Scenic Rivers System. In particular, a patent for lands included in the Wild and Scenic Rivers System will convey title only to the mineral deposits as the right to the use of such surface and surface resources as are required to carry on prospecting and mining operations. No patent may be issued for the surface estate. Nothing in H.R. 644 shall be construed as precluding mining operations on any valid existing claim, subject to applicable regulations prescribed by the Secretary of Agriculture.

The year 1988 marked the 20th anniversary of the Wild and Scenic Rivers Act. The first wild and scenic river in the Nation was a portion of the Rio Grande in northern New Mexico. New Mexico marked the anniversary of the enactment of the act and the designation of the Rio Grande with the passage of legislation that Senator BINGAMAN and I worked on to designate 24.6 miles of the Rio Chama as part of the Wild and Scenic Rivers System.

The designation of the Rio Chama gave New Mexico a total of approximately 78 miles of wild and scenic rivers. Approximately 53 miles of rivers in New Mexico are original components of the Wild and Scenic Rivers System. These 53 miles encompass about 49 miles of the rugged Upper Rio Grande River and the lower 4 miles of the Red River feeding into the Rio Grande near Questa, NM.

Now, after a period of careful consideration and public review, H.R. 644 will protect segments of two more rivers for the benefit and enjoyment of present and future generations. It will add 31.5 miles to the system in New Mexico—11 miles of the East Fork of the Jemez River and 20.5 miles of the Pecos River, both located in the outstanding scenery of the Santa Fe National Forest. The designation of these two rivers is a commendable way to begin the second 20 years of the Wild and Scenic Rivers System in New Mexico.

The Wild and Scenic Rivers Act provides the criteria for qualification as a wild and scenic river. A river must "possess outstandingly remarkable scenic, recreation, geologic, fish and wildlife, historic, cultural, or other

similar values." These two river segments fulfill these criteria and will be worthy additions to the Wild and Scenic Rivers System.

The East Fork of the Jemez River originates in the Valles Caldera as a small, meandering stream in the vast crater. It passes through Valles Rhyolite cliffs, a sheer-walled canyon, on its way to its junction with the Rio San Antonio, where the Jemez River is formed. This river segment passes through the heart of the Jemez Mountains' most popular recreation area.

H.R. 644 designates 5 miles of the East Fork as a "scenic river," 4 miles as a "wild river," and 2 miles as a "recreational river."

The Pecos River, famous in the folklore of the frontier, flows out of the Pecos Wilderness through rugged granite canyons and waterfalls and passes by small, high-mountain meadows. It is one of New Mexico's most heavily used trout streams.

H.R. 644 designates 13.5 miles of the Pecos River as a wild river, and 7 miles as a recreational river.

With the designation of these river segments, New Mexico will now have segments of 5 rivers as part of the system, which now includes portions of more than 70 rivers nationwide. Currently there are more than 7,300 miles in the National Wild and Scenic Rivers System.

I do want to make clear, however, that my support for this bill has been conditioned upon several assurances that I have received from the Forest Service.

First, the Forest Service will not have nor will it utilize condemnation authority to acquire fee title to private lands in the river corridors to be designated under H.R. 644. The only interests in land that the Federal Government might acquire are scenic easements, and these will only be obtained from willing sellers in this case.

Second, individuals who currently own private land in the river corridors designated under H.R. 644 will continue to be able to use and develop their property as they have in the past. H.R. 644 does not divest private property owners of any rights that they currently have.

Third, property owners in the recreational river corridors designated under H.R. 644 will be able to construct new facilities on their property. Property owners in the scenic river corridors will also be able to construct new facilities on their property, so long as such facilities do not interfere with the free flow of the river.

Fourth, there is no current mining activity within the river corridors designated under H.R. 644. However, there is a patent application pending for approximately 180 acres of mining claims within the corridor proposed for the East Fork of the Jemez River. No provision in H.R. 644 or the Wild and Scenic Rivers Act will diminish the claimants right to mine the minerals claimed on the 180 acres. Any patent that may be issued for these approximately 180 acres will convey title only to the mineral deposits and the right to the use of such surface and surface resources as are required to carry on mining operations. Any mining that may occur on Federal lands within the corridor will be subject to reasonable regulations as are prescribed by the Secretary of Agriculture.

Fifth, the Forest Service does not intend to seek an additional appropriation of water rights as a result of the designation of these rivers under the Wild and Scenic Rivers Act.

Sixth, the House amendment will not impose any undue new restrictions to lands included in this bill beyond those already in the Wild and Scenic Rivers Act.

Mr. President, in conclusion, I strongly support H.R. 644. The Pecos and East Fork of the Jemez are rivers that clearly meet all the criteria for inclusion in the Wild and Scenic Rivers System. They are truly beautiful national treasures that need protection under the Wild and Scenic Rivers Act.●

## HUNTINGTON, NY, FIGHTS DRUG ABUSE HEAD ON

● Mr. MOYNIHAN. Mr. President, I rise to speak to my colleagues on the most important issue of substance abuse prevention. I specifically refer to the fine efforts of the Huntington Union Free School District in Huntington, NY.

Huntington Union Free School District has published a parent's guidebook to substance abuse prevention entitled "What You Can Do." The booklet describes symptoms of drug abuse behavior, the effects of illegal drugs, and specific approaches on assisting drug-abusing children. Huntington superintendent of schools Richard B. Strock's introduction, "Our Goal Is Drug Free Students," outlines the goals of Huntington's program. I ask that his introduction be printed in the RECORD.

The introduction follows:

OUR GOAL IS DRUG-FREE STUDENTS

Our society is threatened by the scourge of illegal drugs. Especially our children are at risk as the result of this growing menace. The Huntington Public Schools are committed to protecting them.

First, we must be vigilant in our efforts to maintain a drug-free school environment. We need to send a very clear message to our students and to those who would corrupt them that we will not tolerate the use or sale of drugs in our schools. We will use whatever lawful means are at our disposal to punish those who disregard our warning.

Second, we will do everything in our power to influence our children to avoid the deleterious effects caused by the abuse of alcohol and other drugs. Through our substance abuse curriculum, we hope to enable our young people to avoid the pitfalls of drug involvement.

Third, we will cooperate with the families of students who become drug-involved to develop appropriate intervention strategies to help these students break out of the destructive cycle of substance abuse.

We cannot do this job alone. We need the cooperation of parents and other responsible adults in our community to send an unequivocal message to our young people—Don't Use Drugs!

This handbook has been developed to provide parents with basic information on substance abuse prevention. It will be distributed to every parent who has a child enrolled in our schools. Please read it and join with us in our continuing efforts to help our students stay drug free. Together we can make a difference in the lives of our children!

RICHARD B. STOCK,
*Superintendent of Schools.*●

## IN HONOR OF MS. ANNE ROSS FAIRBANKS

● Mr. D'AMATO. Mr. President, I rise today to honor the contributions to society of Ms. Anne Ross Fairbanks, one of my constituents from Troy, NY. In this age of indifference it is refreshing to find exceptional individuals who give of themselves to better the lives of those less fortunate. Ms. Fairbanks is one of those exceptional individuals; last week, in recognition of her dedication and self-sacrifice, President Bush named her his 147th "Daily Point of Light."

Ms. Fairbanks is truly a special human being. At the age of 67 she has channeled her energies into the service of her fellow man. Since 1985, Ms. Fairbanks has volunteered much of her time to the Joseph's House, an overnight shelter for the homeless. She also donates 10 to 20 hours a week helping out at an American Red Cross Bloodmobile.

I hold Ms. Fairbanks up as an example and a challenge to senior citizens all over America. Voluntarism and community service are not just for the young. Ms. Fairbanks has devoted her retirement years to feeding the hungry, helping the needy, and sheltering the homeless. President Bush said "From now on in America, any definition of a successful life must include serving others." Ms. Fairbanks has certainly had a successful life.

I ask all older Americans who have retired after successful careers to consider this: Now that you have retired, now that you finally have some free time, will you not do as Ms. Fairbanks has done and give a little of that time to your community, to those who desperately need not your money, but your time?●

## TUCSON STRONGLY SUPPORTS THE EXPANSION OF DAVIS-MONTHAN AIR FORCE BASE

● Mr. DECONCINI. Mr. President, last night, nearly 3,000 Tucson citizens gathered at the Tucson Convention Center to demonstrate their strong support for Davis-Monthan Air Force Base and its mission. Interest was so great that an overflow location had to be established for the crowd to listen to the hearing over the public address system.

As I indicated last week, Mr. President, Davis-Monthan AFB is being studied for possible closure by the Air Force, as directed by law. In January, the Air Force announced its intention to close Myrtle Beach, SC AFB. But, in order to comply with the law, it must also study "reasonable alternatives." Davis-Monthan and England AFB, Louisiana were determined to be the "reasonable alternatives."

The people of Tucson and Pima County are to be congratulated for their enthusiastic demonstration of support for Davis-Monthan. At an earlier public meeting held by the Air Force at Myrtle Beach, approximately 600 residents attended to express their views on the Air Force's intentions. A similar meeting is scheduled to be held in Alexandria, LA, tonight for the purpose of obtaining public comment on England AFB.

I would have liked to have been with my fellow Tucsonans last night, but debate on the assault weapons portion of the crime bill prevented my attending. Arizona's Governor, Rose Mofford, however, relayed my statement of support for Davis-Monthan and did an excellent job of expressing the State's support for the base. The Arizona Legislature passed a resolution yesterday urging President Bush and other political and military leaders to "carefully study all alternatives to closing or reducing the function of Davis-Monthan Air Force Base * * * a vital military base for Arizona's economy as well as our defense."

Similarly, Tom Volgy, the mayor of Tucson delivered a letter to the Secretary of the Air Force, Donald B. Rice, and announced the adoption of a resolution by the Tucson City Council urging the Department of the Air Force, the President, and the Congress to make a long-term commitment to the continued operation of D-M as the site for future consolidation of other Air Force activites. I will ask that the text of the letter from the mayor, as well as the resolution adopted by the city council and my statement which was presented at the public hearing last night, appear in the RECORD at the conclusion of my statement.

On June 7, I will be pleased to lead the Arizona delegation and Tucson officials in a meeting with Secretary Rice. At this meeting, I am certain that these officials will eloquently present their case that Davis-Monthan should not be closed, but instead expanded. The Secretary will also hear the words of one of his officers, Major Tom Cooper, who stated at the Myrtle Beach meeting that closing Davis-Monthan "and relocating these units would be prohibitively expensive." Many people used these words last night. Mr. President, I agree.

I ask that the material to which I referred earlier be printed in the RECORD.

The material follows:

CITY OF TUCSON,
*Tucson, AZ, May 21, 1990.*

HON. DONALD B. RICE,
*Secretary of the Air Force, Department of the Air Force,*
*The Pentagon, Room 4E871 Washington, DC.*

DEAR MR. RICE: The Tucson community was shocked recently to learn that the Air Force is seriously considering the closure of Davis-Monthan Air Force Base as an alternative to closure of Myrtle Beach AFB. Tucson and Davis-Monthan have a very strong 63-year history of mutual support and partnership. Tucson has provided a good home to those on active duty. In addition, our incomparable climate and lifestyle have led over 13,200 retired military personnel plus their dependents to currently make Tucson their home.

Davis-Monthan provides the Air Force with an incomparable strategic resource for equipment storage, personnel training, operational administrative functions, drug interdiction, and numerous missions. It is a very efficient base with almost no downtime due to weather; it is located in close proximity to the Goldwater Gunnery Range. According to figures from the Air Force, the United States has nearly $9 billion invested in facilities and inventories at Davis-Monthan.

At the same time, Davis-Monthan is a critical component of the Tucson economy. It is the second largest employer and the Air Force has estimated that Davis-Monthan had a $386 million impact on the local economy during 1989. I believe the latter numbers may be understated.

Tucson is a strong supporter of Davis-Monthan. The City and County have taken numerous actions over the past decades to assure the long-term viability of the base. In 1986, the City annexed the base, agreed to provide numerous services and at the same time extended the lease of over 4,300 acres of City land to the east of the base to the year 2052. This provides an important open buffer for the base. Land use plans have also been adopted which protect the base from encroachment. And finally, the City recently adopted one of the toughest Airport Environs Zones in the country which more than meets the criteria established by the AICUZ report. The latter ordinance places strict limits on building height, establishes employment density limits, restricts public accommodation, prohibits sensitive uses, and requires sound attenuation in facilities over a wide area.

As a further indication of the community's support for Davis-Monthan, the Mayor and Council unanimously adopted the attached Resolution at today's meeting. The Resolution urges the Air Force first to keep Davis-Monthan open and operational, but in addition it also calls on the Air Force to transfer additional missions/activities to Davis-Monthan.

I look forward to meeting with you on June 7. I very much appreciate your making the time available to discuss these and other issues related to the future of Davis-Monthan Air Force base.

Sincerely,

THOMAS J. VOLGY
*Mayor.*

---

RESOLUTION No. 15324

Whereas, Davis-Monthan Air Force Base has been a vital part of the Tucson community since 1927; and

Whereas, Davis-Monthan Air Force Base is a critically essential component of the Tucson economy, serving as the second largest employer in the community and generating an estimated $386,000,000 (three hundred eighty six million dollars) in economic impacts in 1989; and

Whereas, Davis-Monthan Air Force Base provides much-needed medical and other services to the large number of military retirees and their families in Tucson, as well as to the many retired military winter visitors to Tucson; and

Whereas, Davis-Monthan Air Force Base and the Goldwater Gunnery Range are strategically located to serve a critical role in our national defense preparedness and in the on-going war on drugs; and

Whereas, Tucson offers a climate providing unequaled opportunities for nearly unlimited flying conditions as well as for aircraft storage and maintenance; and

Whereas, Tucson has acted affirmatively to protect the environs of Davis-Monthan Air Force Base from encroachment so as to ensure its long-term operational viability; and

Whereas, Davis-Monthan Air Force Base provides unparalleled opportunities for expanded missions dealing with administrative functions, flight training, aircraft maintenance and storage, and reduction of drug smuggling: Now, therefore, be it resolved by the mayor and council of the City of Tucson, Arizona, as follows:

Section 1. That the Department of the Air Force, and other essential government decisionmakers be strongly informed and advised of the City of Tucson's strong support for the continued and expanded operation of Davis-Monthan Air Force Base.

Section 2. That the various City officers and employees be and they hereby are authorized and directed to perform all acts necessary or desirable to give effect to this resolution.

Section 3. Whereas, it is necessary for the preservation of the peace, health and safety of the City of Tucson that this resolution become immediately effective, an emergency is hereby declared to exist, and this resolution shall be effective immediately upon its passage and adoption.

---

STATEMENT OF SENATOR DENNIS DECONCINI

I regret that Senate responsibilities prevent me from being with you tonight, but I appreciate Governor Mofford's kind offer to submit my formal statement for the hearing record. We are very fortunate that the Governor has become personally involved in this issue. It is another example of the "hands-on" leadership we have come to expect from this proud Arizonan.

As for the issue we are discussing tonight, I agree with the Air Force. I agree with Major Tom Cooper of the Tactical Air Command who stated at the Myrtle Beach scoping meeting in March that closing Davis-

Monthan "and relocating these units would be prohibitively expensive."

I think it would be helpful if I quoted more of Major Cooper's statement. He discussed the alternatives which the Air Force considered when it determined that the removal of A-10s is necessary because of the drawdown of our forces in Europe. He stated that, "There are two A-10 bases in the continental United States other than Myrtle Beach. These are at Davis-Monthan, Arizona, and England Air Force Base, Louisiana. Davis-Monthan is the only A-10 training location and has an established training infrastructure, including academic and simulator facilities. It is also the home of the 41st Electronic Combat Squadron, the only EC-130 unit in the continental United States. The 602nd Tactical Air Control Wing with an OA-10/OV-10 training squadron and an extensive ground tactical air control system mission; and the Air Force Logistics Command's Aerospace Maintenance and Regeneration Center, sometimes referred to as the "aircraft boneyard." Closing this base and relocating these units would be prohibitively expensive. Davis-Monthan was therefore excluded from further consideration."

The reasons which resulted in D-Ms initial prohibition from further consideration at that time are just as true today.

Major Cooper continues by explaining that when examining a base for closure, the Air Force also considers the base's potential for growth and its ability to adapt to changes in mission and force structure. As we have already noted, Davis-Monthan has proven itself to be a very diverse and adaptable base. I would not be surprised to see its role and mission expanding in the future as the A-10 is replaced with a faster fighter. The Air Force states that it will be shifting to stateside bases from overseas bases in the future. D-Ms accessibility to the Goldwater Range and other unimpeded air space makes it ideal for these future roles. For instance, with the possibility that Bergstrom AFB in Texas will be closed, D-M could gain the C-130s or other missions which have been stationed there. For that matter, the A-10s at either Myrtle Beach or England AFBs could be transferred to D-M if they are not.

On April 30, the Air Force announced that it planned to expand the scope of the Environmental Impact Statements (EIS) of its proposal to close Myrtle Beach Air Force Base (AFB), South Carolina. As required by law, the Air Force has expanded it to include the study of two "reasonable alternatives," England AFB, Louisiana and Davis-Monthan AFB, Arizona. These EIS studies are being made in order to comply with the base closings law and the National Environmental Policy Act (NEPA).

You will recall that on January 29, 1990, Secretary of Defense Cheney announced his intention to initiate a second round of overseas and domestic base closings. One of the bases on his list was Myrtle Beach. As Air Force spokesman Captain Jack Giese has stated, "Myrtle Beach was the Air Force's choice after we looked at all three last year." I see no reason to conclude that the Air Force's determination will change in any way and I welcome the opportunity for the Air Force to gather additional data which will assuredly strengthen the case that Davis-Monthan AFB is essential.

Unlike the first round of base closings, which were determined after a cursory study by an independent commission, most base closings must adhere to specific legal criteria. These include a detailed analysis and EIS evaluation required under the NEPA law, as well as implementing Council of Environmental Quality regulations. As part of that study process, the Air Force will prepare two EISs for use in decision making regarding the proposed closure and final disposition or reprogramming of property by the Air Force. The first EIS will be prepared to assess the impact of the possible closure of each Air Force base; the second would be prepared only if there is a final decision for closure.

The study of Davis-Monthan AFB, which will begin shortly, can only serve to demonstrate the exceedingly important role served by D-M for the Air Force. Additionally, the study will likely demonstrate the expandability of D-M if the Air Force determines that such a route would be desirable in the future.

This study should also void many of the problems associated with the 1988 Base Realignment and Closing Commission. We in Arizona know only too well the problems which can occur when the functions of a base are not studied or are not studied thoroughly. At Fort Huachuca, the Army and the Secretary of Defense are only beginning to appreciate the value of Fort Huachuca, and are concluding that the realignment of the Information Systems Command is a waste of the taxpayer's dollars. With this additional, serious study of three bases, the Air Force can avoid making a similar mistake.

Those of us from southern Arizona, and those who have spent any time in the area, know that our weather is great year round. The conditions are ideal for training new pilots. We have at least 350 days of perfect flying weather annually. Neither South Carolina nor Louisiana can boast these perfect conditions. That is one of the original reasons why Davis-Monthan was located in the Tucson area.

Davis-Monthan AFB performs multiple roles, unlike those at the other bases being considered. The reason the Air Force has advocated closing Myrtle Beach is because it is solely a base for the A-10 aircraft which the Air Force plans to phase out of its inventory. D-M, on the other hand, is the host of the 836th Air Division which includes two wings—the 355th Tactical Training Wing, which uses A-10s exclusively, and the 602nd Tactical Air Control Wing, which uses OA-10s and OV-10 Broncos. The A-10s at Myrtle Beach are operational and designed to fly low in support of United States ground forces in Europe. The A-10 Thunderbolt is known as the "tank-killer aircraft." The A-10s at Davis-Monthan, conversely, are used for pilot training. While our presence in Europe is decreasing and the probability of a major conventional confrontation is thankfully reduced, there remains a need for trained pilots. D-M fits that role.

Davis-Monthan is home to the EC-130 Hercules and the 836th Medical Group. The Hercules performs a critical mission in support of both tactical ground and air operations by jamming communications and other electronics. Additionally, there are several small units at Davis-Monthan, including three F-16 fighters used by the Montana Air National Guard; training activities for the Arizona National Guard, and the expected addition in the 3rd quarter of this fiscal year of 10 F-16s from the Royal Dutch Air Force. Myrtle Beach and England AFBS have just one wing of A-10s.

Davis-Monthan also plays a major role in the drug war. It is the home of the Tucson Branch of the U.S. Customs Service Air Interdiction Program. In 1971, Customs initiated its national lead role in the surveillance and interdiction of aircraft crossing our borders with illicit narcotics on board. At that time, four Aviation Branches, strategically located along the southern border of the United States, were opened to allow Customs to undertake timely interdiction activities. The Tucson Air Branch provides a 24 hour a day, 7 days a week operational base for anti-drug smuggling activities. It employs 125 full time operations, maintenance, and investigative personnel. By 1991, it will have a total fleet of 16 interception, apprehension, and support aircraft critical to carrying out air interdiction missions on the southwest border.

The main advantage to locating the Customs Air Branch in Tucson was its ability to be co-located at Davis-Monthan Air Force Base. The site provides not only a vital security advantage, but a strategic location for interdiction of drugs from the major southern drug smuggling routes. Importantly, it is distant from the heavily congested aviation routes surrounding the Tucson International Airport. Since its inception, the Air Branch relationship with the Air Force has been an excellent one and one that continues to make Customs more efficient in interdicting illegal narcotics destined for U.S. markets. The sharing of costs for fuel and support services by both Customs and the Air Force make the location a major economic advantage to both parties. Without the continued operation of the Customs Aviation Branch at Davis-Monthan, we will sacrifice not only the financial benefits of co-location, but also the effectiveness of the Customs Service as a major deterrent in this nation's war on drugs.

Compared to many other parts of the country, southern Arizona is not heavily developed nor heavily populated. While we are proud of Arizona's environmental legacy and are cognizant of the fragility of the Sonoran Desert, we have access to appropriate undeveloped land for expansion of D-M should the Air Force determine that it would be in the Nation's best interests.

Finally, Davis-Monthan AFB is unique among the nation's air force bases. It is the home of the Aircraft Maintenance and Regeneration Center or AMARC. This facility is the "graveyard" for more than 3,000 retired and mothballed planes. These planes can be kept in this status indefinitely and the dry desert air is ideal for this purpose. In time of war, many of these planes could be brought back into service, if necessary.

Because AMARC is the only facility of its kind in the Air Force, this graveyard for planes will almost certainly remain open forever, thus preventing Davis-Monthan from ever being entirely dismantled. For this reason, the Air Force would never realize any true profit from attempting to close D-M in the future.

Davis-Monthan has approximately 5,400 military personnel on its payroll, as well as about 1,400 federal civilian employees and 1,000 non-federal, or contractor, employees. Tucson recently felt the impact of the closure of IBM's Tucson facility; costing 2,500 jobs locally. Any decisive reduction in functions or employment at Davis-Monthan would have a substantial adverse impact on Tucson as a whole. The base is a major contributor to the greater Tucson economy and, according to Ben Beuhler-Garcia of the Tucson Metropolitan Chamber of Commerce, the "civic contributions of D-M are great—to the Community Food Bank, the

Boy Scouts and the United Way, to mention a few." Contributions such as these are difficult to quantify, but the ripple effects to the community are significant.

In conclusion, the study of reasonable alternatives to the closure of Myrtle Beach AFB, South Carolina, by the Air Force will convince the Air Force that Davis-Monthan is not only essential, but is a likely site for future expansion. I can only echo the words of Major Tom Cooper, "Closing this base and relocating these units would be prohibitively expensive." I look forward to examining the conclusions of this study.●

## FORMER MEMBER OF CONGRESS WILLIAM D. HATHAWAY ENDORSES CONGRESSIONAL TERM LIMITATION

● Mr. HUMPHREY. Mr. President, I again urge all Senators to sign on to Senate Joint Resolution 235, a proposed constitutional amendment to limit congressional terms. Although Senator DECONCINI and I introduced this bill in January 1990, I continue to hear from Americans all over the country who want a term limit on Congress.

Americans are dissatisfied with the way Congress has dealt with crucial national problems of which the annual budget debacle is only one example. We need a regular influx of new Members with fresh idealism, and the courage to act on it.

I ask that a letter I have recently received from former Member William D. Hathaway appear in the RECORD immediately following my remarks. Mr. Hathaway served Maine from 1965 to 1973 in the House, and from 1973 to 1979 in the Senate.

The letter follows:

FEDERAL MARITIME COMMISSION,
*Washington, DC, February 27, 1990.*

Hon. GORDON J. HUMPHREY,
*Hart Senate Office Building, Washington, DC.*

DEAR GORDON: I wholeheartedly support S.J. Res. 235 and wish you and your colleagues well in your endeavor to obtain its passage.

If you need any help, don't hesitate to call on me.

Sincerely,

WILLIAM D. HATHAWAY.●

## EL SALVADOR

● Mr. LIEBERMAN. Mr. President, I would like to make some comments about recent developments in Central America. I am heartened that negotiations were opened between the Government of El Salvador and the guerrillas on May 16 at a neutral site in Venezuela. While they are unlikely to lead to a quick end to the war, there are signs that both sides may be making a serious effort to negotiate an end to the conflict. The government has indicated that it is willing to consider reducing the size of the army and to accept internationally verified safe-havens for the guerrillas. The guerrillas are no longer demanding government ministries that are not gained through elections. Perhaps the progress that has been made in Nicaragua is having an impact on both sides.

There has been far less progress, however, in the human rights situation. The most egregious case, of course, involves the murder of the six Jesuit priests and their two employees. I note that Speaker FOLEY's Special Task Force on El Salvador has expressed concern that this tragedy has not been investigated thoroughly enough. The report notes that the main suspect, Colonel Benavides, may not be convicted, even though some of his subordinates have admitted that he ordered them to kill the priests. Apparently, one of the rules of evidence in El Salvador is that the testimony of one codefendant is not admissible as evidence against another person charged with the same crime. This traditional Latin American legal prohibition originated in a desire to prevent biased testimony.

Nonetheless, most Latin American countries now allow the judge some flexibility in determining whether codefendant testimony should be allowed. El Salvador should do the same. Legalisms aside, the murderers of the priests should not go free. El Salvador will not be a credible democracy until these men are punished.

U.S. aid will—and should be—called into question if this case is not adequately prosecuted.

The problems surrounding the investigation are symptomatic of deeper short-comings in the El Salvador legal system. El Salvador is in desperate need of judicial reform. The government does not have enough judges or prosecutors to investigate human rights cases. And it pays less than $500 a month to those that it can afford to hire. Less money shoud be spent on the military, and more on the judiciary.

Judicial reform also will require independent police and security forces. As of now, the police are subordinate to the army, which contains elements who are opposed to investigating human rights abuses. A civilian-controlled police would reduce the influence of the army. If genuine reform occurs, the guerrillas may be more willing to abandon the battlefield for the political arena. Until then, the guerrillas will continue to fear being murdered if they enter political life in El Salvador, as has been the case in Colombia.

Mr. President, we hear talk about a peace dividend in the United States. But there is also a need for a peace dividend in El Salvador. Peace would lead to a restructuring of the military, including the transfer of the security forces to direct civilian control. A peace dividend would lead to a reduction of El Salvador's military budget, and an increase of funds spent on the Justice Ministry. And, of course, the most important dividend would be peace itself.●

## BOOKER T. WASHINGTON HIGH SCHOOL

● Mr. FOWLER. Mr. President, I rise to pay tribute to the students and faculty of Booker T. Washington High School in Atlanta, GA, who are carrying on a very important tradition of excellence in education.

This comes to mind because Tracey Thornton of my staff, who serves as counsel for budget and appropriations, and who has been with me ever since my days in the U.S. House of Representatives, is a graduate of Washington High. On June 7, she will be returning to her alma mater to address the class of 1990 as the senior luncheon speaker. Washington High is rightly proud of its many accomplished graduates, of whom Tracey is one of the foremost.

Washington High began operation way back in 1924, as the first public high school for blacks in Atlanta. That was an important breakthrough at the time. Washington High began its history, in the spirit of its namesake, with a mandate for advancement and opportunity for all our citizens. In 1925, the only exact replica of the Booker T. Washington monument in Tuskegee, AL, was erected at the school's entrance.

As times have changed and the doors of opportunity have opened wider for blacks, Washington High has expanded its mandate and stepped up to meet that challenge.

Largely through the efforts of the school principal, Dr. R.L. Collins, Washington High was placed on the National Register of Historic Places in 1986, in recognition of its historical significance and its contributions to the community and the Nation. Dr. Collins, the fifth principal in Washington High's 66-year history, assumed office in 1972. He has served the school well, and will long be honored for his many contributions.

But Dr. Collins, the students, and faculty of Washington High have many contributions yet to make. In spite of all the progress we have achieved in recent decades, there is still no absolute guarantee of equality and equal opportunity for blacks. There will be a continuing struggle to solidify our progress and to move forward to an even better day. We are now considering a civil rights bill in Congress to aid in that effort.

Still, it will be young people who make the most of their educations, who are determined to get somewhere from nowhere if need by, who will make the real difference. That is the spirit of Booker T. Washington, who

taught that education would make the difference, that education would bring economic prosperity, acceptance, and a better life for blacks.

Booker T. Washington led by example. He was born in a one-room cabin with a dirt floor and grew up in poverty in West Virginia, where he was able to attend school 3 or 4 months out of each year. He himself determined that, against all obstacles, he would study at the renowned Hampton Institute in Virginia.

He took his small earnings from working in the mines of West Virginia and traveled as far as Richmond, where he arrived penniless and slept in a hole under a sidewalk. He awoke the next day and found himself near a vessel from which pig iron was being unloaded. So he talked his way into a job unloading pig iron and stayed there until he had earned his way to Hampton, with a surplus of 50 cents.

He worked his way through Hampton Institute and graduated with honors in 3 years. Later, he built Tuskegee Institute from the ground up—starting with $2,000 from the State of Alabama, one teacher, 30 students, an old church building and a shanty—into one of the leading educational institutions in our Nation, rivaling his own alma mater.

Booker T. Washington believed that one of the most important roles of education was to build character. He demonstrated that character.

That tradition has been carried on through the years by Dr. Collins and the rest of the men and women who have served and taught at Booker T. Washington High since 1924. I urge the students of Washington High to make that character manifest in 1990 and beyond, and to lead by your example.●

## INDIAN ENVIRONMENTAL REGULATORY ENHANCEMENT ACT

Mr. BIDEN. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of Calendar No. 554, S. 2075, a bill to authorize grants to enable Indian tribal goverments to regulate environmental quality.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

A bill (S. 2075) to authorize grants to improve the capability of Indian tribal governments to regulate environmental quality.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the bill?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Select Committee on Indian Affairs, with amendments; as follows:

(The parts of the bill intended to be stricken are shown in boldface brackets and the parts of the bill intended to be inserted are shown in italics.)

S. 2075

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

SHORT TITLE

SECTION 1. This Act may be cited as the "Indian Environmental Regulatory Enhancement Act of 1990".

GRANT PROGRAM

SEC. 2. Section 803 of the Native American Programs Act of 1974 (42 U.S.C. 2991b) is amended by adding at the end thereof the following new subsection:

"(d)(1) The Secretary shall award grants to Indian tribes for the purpose of funding **[**75**]** 80 percent of the costs of planning, developing, and implementing programs designed to improve the capability of the governing body of the Indian tribe to regulate environmental quality pursuant to Federal and tribal environmental laws.

"(2) The purposes for which funds provided under any grant awarded under paragraph (1) may be used include, but are not limited to—

"(A) the training and education of employees responsible for enforcing, or monitoring compliance with, environmental quality laws,

"(B) the development of tribal laws on environmental quality, and

"(C) the enforcement and monitoring of environmental quality laws.

"(3) The **[**25**]** 20 percent of the costs of planning, developing, and implementing a program for which a grant is awarded under paragraph (1) that are not to be paid from such grant may be paid by the grant recipient in cash or through the provisions of property or services, but only to the extent that such cash or property is from any source (including any Federal agency) other than a program, contract, or grant authorized under this title.

"(4) Grants shall be awarded under paragraph (1) on the basis of applications that are submitted by Indian tribes to the Secretary in such form as the Secretary shall prescribe.".

AUTHORIZATION OF APPROPRIATIONS

SEC. 3. Section 816 of the Native American Programs Act of 1974 (42 U.S.C. 2992d) is amended—

(1) by striking out "section 803A" each place it appears and inserting in lieu thereof "sections 803(d) and 803A", and

(2) by adding at the end thereof the following new subsection:

'(d) There are authorized to be appropriated **[**5,000,000**]** $8,000,000 for each of the fiscal years 1991, 1992, 1993, 1994, 1995, and 1996, for the purpose of carrying out the provisions of section 803(d).".

Mr. McCAIN. Mr. President, I would like to thank my colleagues for giving this legislation their full consideration and support. The Indian Environmental Regulatory Enhancement Act of 1990 begins to address some of the major environmental needs in Indian country. This bill would authorize the administration on native Americans in the Department of Health and Human Services to award grants to Indian tribes for the purpose of improving the capability of tribal governments to regulate environmental quality on Indian reservations pursuant to Federal and tribal laws.

For many years, Indian tribes have been attempting to address their own environmental problems without adequate Federal assistance. Historically, the Federal agencies with responsibility for environmental regulation on Indian lands have not provided adequate staff or resources to Indian tribes to develop effective environmental regulatory programs on the reservations. In order to combat growing environmental threats to Indian reservations, Indian tribes have initiated programs to improve environmental quality. Some of the environmental threats impacting Indian tribes are problems related to hazardous waste dumping on reservation lands, pesticides leaching into ground water aquifers, illegal discharges into reservation water systems, and uranium mill tailings remaining largely untreated on reservation lands. This legislation will provide some of the tools necessary for Indian tribes to address these mounting environmental concerns.

In the first session of the 101st Congress on June 23, 1989, the Select Committee on Indian Affairs held an oversight hearing on the administration of Indian programs by the Environmental Protection Agency. Among the more important needs identified was the need for assistance to train professional staff to monitor and enforce tribal environmental laws. Indian tribes have found that there is little Federal funding available through the Environmental Protection Agency to provide badly needed technical expertise; to conduct the environmental surveys necessary to determine the source and scope of pollution affecting the reservation; to hire qualified personnel with the necessary background and experience; to develop tribal environmental codes and to set environmental standards for the reservation. In many cases, the grant awards from the Environmental Protection Agency were not sufficient to even hire one professionally trained staff person for tribal environmental regulatory programs. Overall, tribal leaders have indicated a need for more than $20 million in annual ANA funding for the purposes authorized by the Indian Environmental Regulatory Enhancement Act.

The Indian Environmental Regulatory Enhancement Act would authorize $8,000,000 to be appropriated to the administration on native Americans for grant awards to Indian tribes for the purpose of improving the capability of tribal governments to regulate environmental quality pursuant to Federal and tribal laws. These grants would be made available for employee training and education, tribal code development, and improved enforcement

and monitoring. The grants would require a 20-percent match from any other funding source, or with service on in-kind property.

The financial assistance which would be made available is not intended to relieve the Environmental Protection Agency of its primary responsibility to assist tribal governments. Rather, the assistance offered by this bill is intended to provide some much needed flexibility for tribal governments. For nearly 20 years, Congress neglected to include tribal governments in the Federal environmental regulatory system. We have recently acted to correct this oversight, but we have not provided adequate financial resources to assist the tribes in their efforts to promote environmental quality. It is my hope that this bill will serve as a catalyst for increased Federal and tribal efforts to develop sound environmental regulatory programs on Indian lands.

I thank my colleagues for their support of S. 2075. I hope that the House will give prompt consideration to this legislation.

Mr. McCLURE. Will the Senator from Arizona enter into a colloquy for the purpose of clarifying my understanding of S. 2075?

Mr. McCAIN. I would be pleased to do so.

Mr. McCLURE. It is my understanding that S. 2075 is intended to be neutral in issues of jurisdiction. Under the existing Federal environmental statutes there is an established mechanism for the Environmental Protection Agency, and the Secretary of the Interior to review, evaluate and make determinations regarding any assertion of tribal regulatory jurisdiction. This process includes a requirement of notice to any affected State and affords the States an opportunity for participation prior to any final determination of the extent of tribal jurisdiction. Further, it is my understanding that these jurisdictional determinations must be made by the Environmental Protection Agency before any EPA funds are awarded to tribes for the purpose of establishing an environmental regulatory program. As part of this process EPA regularly encourages tribes and States to enter into agreements which identify mutual goals for the protection of the environment and human health and safety as well as specifying the enforcement responsibilities of the tribes and States.

Mr. McCAIN. The Senator from Idaho is correct. S. 2075 is not intended to affect in any way the process which the Senator has described. In fact, S. 2075 is intended to provide tribes with some of the financial resources necessary to enter into that process. It is my understanding that the Administration on Native Americans currently awards grants for the development of tribal environmental regulatory codes. S. 2075 would authorize ANA to award grants which are more precisely tailored to the existing Federal environmental statutes and their provisions relating to Indian tribes. It is my further understanding that ANA would limit this grant program to those tribes which are actively pursuing delegations of regulatory authority from EPA in order to maximize the effective use of Federal and tribal funds which are expended for the purpose of protecting environmental quality on Indian lands. Grant funds would definitely be made available to further the negotiation and implementation of cooperative agreements between tribes and States to promote environmental quality. As the Senator knows, I have always favored efforts to promote cooperation between the tribes and States on matters of mutual concern.

I thank the Senator from Idaho for his clarification and his support for S. 2075.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on agreeing to the committee amendments.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading and was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, shall it pass?

So the bill (S. 2075), as amended, was passed, as follows:

S. 2075

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

SHORT TITLE

SECTION 1. This Act may be cited as the "Indian Environmental Regulatory Enhancement Act of 1990".

GRANT PROGRAM

SECTION. 2. Section 803 of the Native American Programs Act of 1974 (42 U.S.C. 2991b) is amended by adding at the end thereof the following new subsection:

"(d)(1) The Secretary shall award grants to Indian tribes for the purpose of funding 80 percent of the costs of planning, developing, and implementing programs designed to improve the capability of the governing body of the Indian tribe to regulate environmental quality pursuant to Federal and tribal environmental laws.

"(2) The purposes of which funds provided under any grant awarded under paragraph (1) may be used include, but are not limited to—

"(A) the training and education of employees responsible for enforcing, or monitoring compliance with, environmental quality laws,

"(B) the development of tribal laws on environmental quality, and

"(C) the enforcement and monitoring of environmental quality laws.

"(3) The 20 percent of the costs of planning, developing, and implementing a program for which a grant is awarded under paragraph (1) that are not to be paid from such grant may be paid by the grant recipient in cash or through the provision of property or services, but only to the extent that such cash or property is from any source (including any Federal agency) other than a program, contract, or grant authorized under this title.

"(4) Grants shall be awarded under paragraph (1) on the basis of applications that are submitted by Indian tribes to the Secretary in such form as the Secretary shall prescribe.".

AUTHORIZATION OF APPROPRIATIONS

SECTION. 3. Section 816 of the Native American Programs Act of 1974 (42 U.S.C. 2992d) is amended—

(1) by striking out "section 803A" each place it appears and inserting in lieu thereof "sections 803(d) and 803A", and

(2) by adding at the end thereof the following new subsection:

"(d) There are authorized to be appropriated $8,000,000 for each of the fiscal years 1991, 1992, 1993, 1994, 1995, and 1996, for the purpose of carrying out the provisions of section 803(d).".

Mr. BIDEN. Mr. President, I move to reconsider the vote by which the bill, as amended, was agreed to.

I move to lay that motion on the table.

The motion to lay on the table was agreed to.

## EXECUTIVE SESSION

### EXECUTIVE CALENDAR

Mr. BIDEN. Mr. President, I ask unanimous consent that the Senate proceed to executive session to consider the following nominations: Calendar Nos. 778 and 779, Calendar No. 780, Calendar No. 781, Calendar No. 782, and Calendear No. 783.

I further ask unanimous consent that the nominees be confirmed en bloc; and that the statements appear in the RECORD as if read; that the motions to reconsider be laid upon the table en bloc; and that the President be immediately notified of the Senate action, and that the Senate return to legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BIDEN. Mr. President, I might point out that when I asked unanimous consent on the Executive Calendar that all those items had been cleared on the Republican side.

The nominations considered and confirmed en bloc are as follows:

NATIONAL RAILROAD PASSENGER CORPORATION

Tommy G. Thompson, of Wisconsin, to be a member of the Board of Directors of the National Railroad Passenger Corporation for a term of 4 years.

Tommy G. Thompson, of Wisconsin, to be a member of the Board of Directors of the National Railroad Passenger Corporation for the remainder of the term expiring April 27, 1990.

IN THE COAST GUARD

Rear Adm. William J. Kime, U.S. Coast Guard, to be Commandant, U.S. Coast

Guard for a term of 4 years with the grade of admiral while so serving.

The following officer of the U.S. Coast Guard Reserve for appointment to the grade of rear admiral (lower half):

George R. Merrilees.

The following rear admiral, as Vice Commandant, U.S. Coast Guard with the grade of vice admiral while so serving.

Martin H. Daniell, Jr.

The following rear admiral, as Commander, Pacific Area, U.S. Coast Guard with the grade of vice admiral while so serving.

A. Bruce Beran.

FEDERAL COMMUNICATIONS COMMISSION

Andrew Camp Barrett, of Illinois, to be a member of the Federal Communications Commission for a term of 5 years from July 1, 1990. (Reappointment.)

STATEMENT ON THE NOMINATION OF J. WILLIAM KIME

Mr. LAUTENBERG. Mr. President, I rise in support of the nomination of Bill Kime to be the 19th Commandant of the Coast Guard. Admiral Kime has a distinguished record in his 33 years of service in the Coast Guard. Importantly, his diverse record includes service as captain of the Port of Baltimore and chief of the Office of Marine Safety, Security, and Environmental Protection—both jobs critical to the protection of our marine environment. Admiral Kime has also served as chief of operations of the 7th Coast Guard District in Miami, a position on the front lines of our drug interdiction effort.

Most recently, Admiral Kime has served as Commander of the 11th Coast Guard District in California. Many of my colleagues will remember the very successful cleanup of the *American Trader* oilspill earlier this year. It was the hard work of Bill Kime, along with some fortuitous offshore winds, that kept damage to the beaches of Huntington and Newport, CA, to a minimum.

I have walked Alaskan beaches with Bill Kime, witnessing firsthand the devastation of the *Exxon Valdez*. I also had the opportunity to meet with Admiral Kime earlier this month to discuss his nomination. In both instances, I found an officer of great ability and vision who recognizes the new challenges facing the Coast Guard. One critical challenge that must be met is the need to invigorate and enhance the Coast Guard's efforts in the areas of marine safety and environmental protection.

Perhaps more than any other State, my State of New Jersey is vulnerable to deficiencies in the Coast Guard's marine environmental protection effort. In the past, sewage and medical wastes have spoiled our fisheries and our beaches. In just the last 3 years, the number of oilspills in New Jersey waters has almost tripled, while the amount of oil transported on our waters has increased only slightly. At the current rate, New Jersey will have almost 350 spills by the end of 1990. Mr. President, this record is unacceptable and must be reversed. From our conversations, I believe that Bill Kime, with his extensive experience in law enforcement, marine safety, and environmental protection, is committed to that task.

Another concern is plastics pollution washing up on our beaches. Just 2 weeks ago, my Appropriations Subcommittee on Transportation, which has funding responsibilities for the Coast Guard, looked into the Coast Guard's efforts at enforcing the international ban on the dumping of plastics at sea, commonly known as Annex V of the MARPOL Treaty. What I found, Mr. President, was most disturbing. Of the roughly 40 violations cited by the Coast Guard since March 1989, all but one came from either the 7th or 8th Coast Guard district in the Southeastern United States and the Gulf of Mexico. Except for one violation cited by the Marine Safety Office in Boston, there were no violations cited in the Northeast or the Mid-Atlantic Region. I would like to believe that the absence of cited violations indicates that there isn't a problem with plastics dumping in my region. Frankly, Mr. President, I know better and so does the Coast Guard.

Mr. President, Bill Kime was the lead negotiator for the international plastics dumping ban. If you will excuse the pun, Mr. President, Bill Kime is credited with resurrecting the plastics dumping ban and many other parts of the MARPOL Treaty from the garbage can. This unfortunate enforcement record does not do Bill Kime the credit he deserves after seeing the treaty through to its ratification.

Mr. President, this MARPOL enforcement record in my view is not a reflection of complacency on the part of the Coast Guard. Rather, it is a matter of competing priorities within a multimission agency. The district commanders in my region of the country have many things on their plate; fisheries patrols, drug interdiction, their normal search and rescue and navigation missions, and responding to an increasing number of oilspills.

Even so, we cannot accept an either/or situation when it comes to pollution prevention. We cannot settle for plastics pollution because we are concentrating on oil pollution. We must commit ourselves to preventing both, along with combating all the other forces that threaten our marine environment. That kind of commitment requires leadership—the kind of leadership that will make these priorities felt all the way from the admiral to the seaman. As Bill Kime takes the top job, I must implore him not to forget his roots in marine environmental protection and marine safety as he faces the many difficult decisions that await him.

In addition to facing many difficult decisions, Bill Kime will also face some very important opportunities as the Coast Guard enters its third century. The recent changes in the U.S.S.R. and Eastern Europe present an opportunity to deemphasize Coast Guard's continually expanding role in defense readiness. The growing Navy presence in the Caribbean and the Gulf of Mexico may offer an opportunity to maintain our efforts in drug interdiction while freeing up Coast Guard assets and personnel to commit to marine environmental protection and other critical missions, such as fisheries patrols and marine safety.

Mr. President, I wish that I could have come to the floor to say that I expect to be in a position to make life easier for Bill Kime. But fiscal reality does not allow me to be optimistic. The Coast Guard's budget has grown rapidly in recent years—up more than $600 million, almost 25 percent, since 1985. It is not likely to see much growth in the future.

The budget request before my subcommittee for fiscal year 1991 seeks an increase of 5.9 percent above the total level of resources provided to the Coast Guard in 1990. And this request only partially addresses funding increases anticipated in the pending oilspill legislation. Further, it must be recognized that our Appropriations Subcommittee on Defense provided $300 million in operating expenses for the Coast Guard last year. Compared to the level of resources provided in last year's Department of Transportation Appropriations Act, the budget request before my subcommittee, just for operating expenses, seeks an increase of more than 25 percent, an increase of almost half a billion dollars. This request will be very difficult to meet. It is one of the reasons why I am working diligently through this year's budget process to ensure the highest possible mark for Transportation.

Mr. President, the Coast Guard has a long and proud tradition that now spans 200 years. The men and women of the Coast Guard serve their country well. Bill Kime knows that I intend to do whatever I can to ensure that the Coast Guard will have the necessary resources to execute its many critical missions. Mr. President, I have confidence that Bill Kime is up to the challenges that await him, and I look forward to working with him in the years to come.

## LEGISLATIVE SESSION

The PRESIDING OFFICER. Under the previous order, the Senate will return to legislative session.

## ORDERS FOR TOMORROW

RECESS UNTIL 8:30 A.M.; APPROVAL OF JOURNAL; RESERVATION OF LEADER TIME; RESUME CONSIDERATION OF S. 1970; RECESS UNTIL 11 A.M. FOLLOWING VOTE

Mr. BIDEN. Mr. President, on behalf of the majority leader, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 8:30 a.m. Thursday, May 24; that, following the prayer, the Journal of the proceedings be deemed approved; that the time for the two leaders be reserved for their use later in the day; and that, following the reservation of leader's time, the Senate resume consideration of S. 1970, the omnibus crime legislation.

I further ask unanimous consent that upon the conclusion of the vote scheduled to begin at 10 a.m., the Senate stand in recess until 11 a.m.

Mr. President, I understand that the Republican leadership is in agreement with this request.

The PRESIDING OFFICER. Without objection, it is so ordered.

## RECESS UNTIL 8:30 A.M. TOMORROW

Mr. BIDEN. Mr. President, I ask unanimous consent that the Senate stand in recess under the previous order until 8:30 a.m. Thursday, May 24.

There being no objection, the Senate, at 9:09 p.m., recessed until Thursday, May 24, 1990, at 8:30 a.m.

## NOMINATIONS

Executive nominations received by the Senate May 23, 1990:

### DEPARTMENT OF STATE

WILLIAM B. MILAM, OF CALIFORNIA, A CAREER MEMBER OF THE SENIOR FOREIGN SERVICE, CLASS OF MINISTER-COUNSELOR, TO BE AMBASSADOR EXTRAORDINARY AND PLENIPOTENTIARY OF THE UNITED STATES OF AMERICA TO THE PEOPLE'S REPUBLIC OF BANGLADESH.

JAMES DANIEL PHILLIPS, OF KANSAS, A CAREER MEMBER OF THE SENIOR FOREIGN SERVICE, CLASS OF MINISTER-COUNSELOR, TO BE AMBASSADOR EXTRAORDINARY AND PLENIPOTENTIARY OF THE UNITED STATES OF AMERICA TO THE PEOPLE'S REPUBLIC OF THE CONGO.

THOMAS W. SIMONS, JR., OF THE DISTRICT OF COLUMBIA, A CAREER MEMBER OF THE SENIOR FOREIGN SERVICE, CLASS OF MINISTER-COUNSELOR, TO BE AMBASSADOR EXTRAORDINARY AND PLENIPOTENTIARY OF THE UNITED STATES OF AMERICA TO THE REPUBLIC OF POLAND.

### NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

MICHAEL T. BASS, OF FLORIDA, TO BE A MEMBER OF THE NATIONAL COUNCIL ON THE HUMANITIES FOR A TERM EXPIRING JANUARY 26, 1994, VICE JAMES CLAYBURN LA FORCE, JR., TERM EXPIRED.

### IN THE AIR FORCE

THE FOLLOWING-NAMED OFFICER FOR APPOINTMENT TO THE GRADE OF GENERAL WHILE ASSIGNED TO A POSITION OF IMPORTANCE AND RESPONSIBILITY UNDER TITLE 10, UNITED STATES CODE, SECTION 601:

*To be general*

LT. GEN. ROBERT C. OAKS, xxx-xx-xxxx U.S. AIR FORCE.

### IN THE ARMY

THE FOLLOWING-NAMED OFFICER FOR APPOINTMENT TO THE GRADE OF LIEUTENANT GENERAL WHILE ASSIGNED TO A POSITION OF IMPORTANCE AND RESPONSIBILITY UNDER TITLE 10, UNITED STATES CODE, SECTION 601(A):

*To be lieutenant general*

MAJ. GEN. WILLIAM H. RENO, xxx-xx-xxxx U.S. ARMY.

### IN THE AIR FORCE

THE FOLLOWING OFFICERS, U.S. AIR FORCE OFFICER TRAINING SCHOOL, FOR APPOINTMENT AS SECOND LIEUTENANTS IN THE REGULAR AIR FORCE, UNDER THE PROVISIONS OF TITLE 10, UNITED STATES CODE, SECTION 531, WITH DATES OF RANK TO BE DETERMINED BY THE SECRETARY OF THE AIR FORCE:

GERALD S ALONGE, xxx-xx-xxxx
MARK A BARNES, xxx-xx-xxxx
BRIAN C BELL, xxx-xx-xxxx
ROBERT D BERGER, xxx-xx-xxxx
MARK J BOROCZ, xxx-xx-xxxx
WILLIAM L BRIGMAN, xxx-xx-xxxx
ERIC D CAIN, xxx-xx-xxxx
PHILLIP M COCHRAN, xxx-xx-xxxx
STEPHEN R CONKLING, xxx-xx-xxxx
DANIEL J COURTOIS, xxx-xx-xxxx
KYM A COUVILLION, xxx-xx-xxxx
JOHN T CUNNINGHAM, xxx-xx-xxxx
BRIAN M DEVILEY, xxx-xx-xxxx
DAVID T GARNER, xxx-xx-xxxx
BRENT R HOFFMANN, xxx-xx-xxxx
ROLAND T JANZEN, xxx-xx-xxxx
STANFORD K KEKAUOHA, xxx-xx-xxxx
MICHAEL F KELLY, xxx-xx-xxxx
KIM D KOKKO, xxx-xx-xxxx
THEODORE S KOPEC, JR, xxx-xx-xxxx
RODNEY D KYZER, xxx-xx-xxxx
MARK T LEAVITT, xxx-xx-xxxx
JOHN F LEPORE, JR, xxx-xx-xxxx
GREGORY M LESTER, xxx-xx-xxxx
WALTER J LINDSLEY, xxx-xx-xxxx
EARL C PILLOUD, xxx-xx-xxxx
JEFFERY M RAYFORD, xxx-xx-xxxx
MATTHEW S ROBERSON, xxx-xx-xxxx
BRIAN D ROMAN, xxx-xx-xxxx
THOMAS M RUEDIGER, xxx-xx-xxxx
RONALD R RUTLEDGE, xxx-xx-xxxx
ROBERT J SKINNER, xxx-xx-xxxx
JAMES R SMITH, xxx-xx-xxxx
TIMOTHY A STACEY, xxx-xx-xxxx
ROBERT V SURPRENANT, xxx-xx-xxxx
RAMON A TRISTANI, JR, xxx-xx-xxxx
STEPHEN E VANGUNDY, xxx-xx-xxxx
MICHAEL A WILLIAMS, xxx-xx-xxxx

### IN THE ARMY

THE FOLLOWING-NAMED OFFICERS, ON THE ACTIVE DUTY LIST, FOR PROMOTION TO THE GRADE INDICATED IN THE U.S. ARMY IN ACCORDANCE WITH SECTIONS 624, 628 AND 1552, TITLE 10, UNITED STATES CODE. THE OFFICERS IDENTIFIED WITH A SINGLE ASTERISK ARE NOMINATED FOR APPOINTMENT IN THE REGULAR ARMY IN ACCORDANCE WITH SECTION 531, TITLE 10, UNITED STATES CODE. THE OFFICER IDENTIFIED WITH TWO ASTERISKS WAS SELECTED FOR PROMOTION BY THE ARMY BOARD FOR CORRECTION OF MILITARY RECORDS:

ARMY

*To be colonel*

* PRESTON L. FUNKHOUSER III, xxx-xx-xxxx

*To be lieutenant colonel*

** EDDIE R. DOWNING, xxx-xx-xxxx

*To be major*

DYFIERD A. HARRIS, xxx-xx-xxxx

MEDICAL SERVICE CORPS

*To be lieutenant colonel*

JEFFERY F. GREENE, xxx-xx-xxxx

*To be major*

* STEPHEN M. DOWNS, xxx-xx-xxxx

THE FOLLOWING-NAMED ARMY NATIONAL GUARD OF THE UNITED STATES OFFICERS FOR APPOINTMENTS IN THE RESERVE OF THE ARMY OF THE UNITED STATES, UNDER THE PROVISIONS OF TITLE 10, U.S.C. SECTIONS 593(A), 594 AND 3353:

MEDICAL CORPS

*To be colonel*

JOSE A CASTRILLO-CRUZ, xxx-xx-xxxx
RONALD F CROWN, xxx-xx-xxxx
DAVID W FURNAS, xxx-xx-xxxx
CHARLES J LARSON xxx-xx-xxxx
DAVID A SPENCER, xxx-xx-xxxx

*To be lieutenant colonel*

RICHARD W BIEK, xxx-xx-xxxx
JOHN L GUSTAVUS, xxx-xx-xxxx
HERNANE C RESTAR, xxx-xx-xxxx

### IN THE AIR FORCE

THE FOLLOWING OFFICERS FOR PROMOTION AS RESERVES OF THE AIR FORCE, UNDER THE PROVISIONS OF SECTIONS 593, 8366, AND 8372, OF TITLE 10, UNITED STATES CODE. PROMOTIONS MADE UNDER SECTION 8372 AND CONFIRMED BY THE SENATE UNDER SECTION 593 SHALL BEAR AN EFFECTIVE DATE OF 8 MARCH 1990, AND PROMOTIONS MADE UNDER SECTION 8366 SHALL BE EFFECTIVE UPON COMPLETION OF SEVEN YEARS OF PROMOTION SERVICE AND TWENTY-ONE YEARS OF TOTAL SERVICE, UNLESS A LATER PROMOTION EFFECTIVE DATE IS REQUIRED BY SECTION 8372(C), OR THE PROMOTION EFFECTIVE DATE IS DELAYED IN ACCORDANCE WITH SECTION 8380(B) OF TITLE 10.

CHAPLAIN CORPS

*To be lieutenant colonel*

ROBERT L. ALSLEBEN, xxx-xx-xxxx
ROBERT A. BRECKENRIDGE, xxx-xx-xxxx
WILLIAM A. COCHRAN, xxx-xx-xxxx
GLENN O. DARE, xxx-xx-xxxx
PAUL T. DOTSON, xxx-xx-xxxx
ALICE A. HOWARD, xxx-xx-xxxx
LINDA E. JORDAN, xxx-xx-xxxx
THOMAS E. JORDAN, xxx-xx-xxxx
FRANCIS W. LORDEMANN, xxx-xx-xxxx
FRANCIS W. LORDEMANN, xxx-xx-xxxx
ARLAN D. MENNINGA, xxx-xx-xxxx
ARTHUR R. MERRELL, xxx-xx-xxxx
HENRY J. YOUNG, xxx-xx-xxxx

JUDGE ADVOCATE

*To be lieutenant colonel*

## CONFIRMATIONS

### Executive Nominations Confirmed by the Senate May 23, 1990:

NATIONAL RAILROAD PASSENGER CORPORATION

TOMMY G. THOMPSON, OF WISCONSIN, TO BE A MEMBER OF THE BOARD OF DIRECTORS OF THE NATIONAL RAILROAD PASSENGER CORPORATION FOR A TERM OF 4 YEARS.

TOMMY G. THOMPSON, OF WISCONSIN, TO BE A MEMBER OF THE BOARD OF DIRECTORS OF THE NATIONAL RAILROAD PASSENGER CORPORATION FOR THE REMAINDER OF THE TERM EXPIRING APRIL 27, 1990.

IN THE COAST GUARD

REAR ADM. WILLIAM J. KIME, U.S. COAST GUARD, TO BE COMMANDANT, U.S. COAST GUARD FOR A TERM OF 4 YEARS WITH THE GRADE OF ADMIRAL WHILE SO SERVING.

FEDERAL COMMUNICATIONS COMMISSION

ANDREW CAMP BARRETT, OF ILLINOIS, TO BE A MEMBER OF THE FEDERAL COMMUNICATIONS COMMISSION FOR A TERM OF 5 YEARS FROM JULY 1, 1990.

THE ABOVE NOMINATIONS WERE APPROVED SUBJECT TO THE NOMINEES' COMMITMENT TO RESPOND TO REQUESTS TO APPEAR AND TESTIFY BEFORE ANY DULY CONSTITUTED COMMITTEE OF THE SENATE.

IN THE COAST GUARD

THE FOLLOWING OFFICER OF THE U.S. COAST GUARD RESERVE FOR APPOINTMENT TO THE GRADE OF REAR ADMIRAL (LOWER HALF):

GEORGE R. MERRILEES

THE FOLLOWING REAR ADMIRAL, AS VICE COMMANDANT, U.S. COAST GUARD WITH THE GRADE OF VICE ADMIRAL WHILE SO SERVING.

MARTIN H. DANIELL, JR.

THE FOLLOWING REAR ADMIRAL, AS COMMANDER, PACIFIC AREA, U.S. COAST GUARD WITH THE GRADE OF VICE ADMIRAL WHILE SO SERVING.

A. BRUCE BERAN

# HOUSE OF REPRESENTATIVES—*Wednesday, May 23, 1990*

The House met at 10 a.m. and was called to order by the Speaker pro tempore [Mr. FAZIO].

## DESIGNATION OF SPEAKER PRO TEMPORE

The SPEAKER pro tempore laid before the House the following communication from the Speaker:

WASHINGTON, DC,
*May 23, 1990.*

I hereby designate the Honorable VIC FAZIO to act as Speaker pro tempore on today.

THOMAS S. FOLEY,
*Speaker, House of Representatives.*

## PRAYER

The Chaplain, Rev. James David Ford, D.D., offered the following prayer:

As we give thanks, O God, for the gifts of creation, may we also see more clearly our responsibility to care for the Earth and all its glories. As we did not create the world and live here but for a time, we are stewards of its good graces and ought assume the tasks of treating the environment with care, so that its fruits of plenty may be for us and for our descendents and all the years to come. Grant this, O God, our earnest prayer. Amen.

## THE JOURNAL

The SPEAKER pro tempore. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

## PLEDGE OF ALLEGIANCE

The SPEAKER pro tempore. The gentleman from Florida [Mr. STEARNS] will please come forward and lead the House in the Pledge of Allegiance.

Mr. STEARNS led the Pledge of Allegiance as follows:

I pledge allegiance to the Flag of the United States of America and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

## PERMISSION FOR SUBCOMMITTEE ON TELECOMMUNICATIONS AND FINANCE OF COMMITTEE ON ENERGY AND COMMERCE TO SIT DURING 5-MINUTE RULE ON TOMORROW

Mr. MARKEY. Mr. Speaker, I ask unanimous consent that the Subcommittee on Telecommunications and Finance of the Committee on Energy and Commerce be permitted to sit while the House is reading a measure for amendment on Thursday, May 24, 1990, under the 5-minute rule.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

Mr. WALKER. Mr. Speaker, reserving the right to object, I do so to inquire of the gentleman from Massachusetts [Mr. MARKEY] whether or not this has been cleared with the minority. It is the Committee on Energy and Commerce that will have the bill on the floor today, and it seems to me the gentleman will have Members from both parties that would be involved in the battle on the floor that would be unable to attend a meeting of the subcommittee. I am a little confused by the request. Is this something that the minority has signed off on?

Mr. MARKEY. Mr. Speaker, if the gentleman will yield, Mr. LENT, Mr. RINALDO, and Mr. MICHEL have all signed off on it. We cleared it with them.

Mr. WALKER. Mr. Speaker, I thank the gentleman, and I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

## BRUTALITY AGAINST PALESTINIANS MUST STOP

(Mr. TRAFICANT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TRAFICANT. Mr. Speaker, in the last 30 months over 700 Palestinians have been murdered on the West Bank and the Gaza Strip. Over 160 of those Palestinians were children that averaged 10 years old. Over 6,500 Palestinian children have been injured by gunfire, and not one Palestinian has been armed.

Mr. Speaker, Palestinian stones are no match for Israeli cannons. But for some reason Congress, who has been the champion of human rights all over the world, has turned its eyes and turns its face from the plight of the Palestinian people.

I say today that the Palestinian people are also God's children and this brutality must stop. The silence in the House of Representatives is deafening. I encourage every Member of this body to support President Bush's peace plan for the Israelis and the PLO to negotiate. The PLO are the known representatives of the Palestinian people. I think there is too much killing on the West Bank and the Gaza Strip.

## SELF-DETERMINATION FOR KASHMIR

(Mr. BALLENGER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BALLENGER. Mr. Speaker, on May 21, Kashmir's leading Moslem priest was murdered in his office. This recent atrocity illustrates the heinous crimes being committed in the disputed territory between Pakistan, India, and China.

I rise today to encourage self-determination for the people of Kashmir. The oppressed Moslem-majority population of Kashmir has longed for independence for more than 40 years.

Over the past few months, we have heard reports of escalating violence in Kashmir, innocent people being killed and injured, and thousands of Indian military police attempting to exert greater control over the Kashmiris. A curfew and economic embargo has been placed on the capital city, Srinagar. No doubt, human rights violations are occurring everyday.

Unfortunately, we have been unable to document the truth about what is happening in this region because international human rights organizations have not been able to conduct investigations there. I have cosponsored legislation (H.R. 4641) that would deny development assistance funds to India unless their government allows human rights organizations to monitor human rights in Kashmir.

Pakistan and India have fought three wars along the border of Kashmir since 1947, and a fourth war would not serve either country's interests. A speedy resolution to this conflict would be in the best interests of everyone.

It is my hope that the people of Kashmir will be given the long-awaited opportunity to determine how they might be governed.

## TRIBUTE TO LADIES OF NEW YORK STATE AMERICAN LEGION AUXILIARY

(Mr. McNULTY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

□ This symbol represents the time of day during the House proceedings, e.g., □ 1407 is 2:07 p.m.

Matter set in this typeface indicates words inserted or appended, rather than spoken, by a Member of the House on the floor.

Mr. McNULTY. Mr. Speaker, I rise today to commend the ladies of the New York State American Legion Auxiliary.

Under the able leadership of President Helen G. Klimek, of Loudonville, this organization has begun a significant effort to prevent blindness in children.

The most common cause of poor vision in children is amblyopia, or "lazy eye," which affects as many as 10 million Americans. While early treatment is very effective, many children are denied access to treatment due to inadequate vision screening in the preschool years.

Mrs. Klimek has devoted her presidency to the development of a reliable, inexpensive, and easy-to-administer vision screening test for preschoolers. The implementation of such a test would ultimately benefit children not only in New York State, but around the country, and around the world.

Three New York hospitals, the Albany Medical Center, the Childrens' Hospital of Buffalo, and the childrens' eye clinic at Columbia-Presbyterian Hospital in New York City, are working together to develop the vision screening test.

Mr. Speaker, I applaud Mrs. Klimek and all of the individuals involved in this project for their commitment to protecting the vision of our children.

## PROVIDING FOR FURTHER CONSIDERATION OF H.R. 3030, CLEAN AIR ACT AMENDMENTS OF 1990

Mr. BONIOR. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 399 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 399

*Resolved,* That at any time after the adoption of this resolution the Speaker may, pursuant to clause 1(b) of rule XXIII, declare the House resolved into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 3030) to amend the Clean Air Act to provide for the attainment and maintenance of the national ambient air quality standards, the control of toxic air pollutants, the prevention of acid deposition, and other improvements in the quality of the Nation's air, and the bill shall be considered for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitue recommended by the Committee on Energy and Commerce now printed in the bill as an original bill for the purpose of amendment under the five-minute rule, said substitute shall be considered as having been read, and all points of order against said substitute are hereby waived. No amendment to said substitute shall be in order except the amendments printed in the supplemental report of the Committee on Rules accompanying this resolution or as specified herein. The Committee on Rules is hereby authorized to file a supplemental report at any time after the adoption of this resolution. Said amendments shall be considered in the order and manner specified in the report, shall be considered as having been read, and shall be debatable for the period specified in the report, equally divided and controlled by the proponent and a Member opposed thereto. All points of order against any amendment printed in the report are hereby waived. Said amendments shall not be subject to amendment. The amendments numbered one and three each shall be considered en bloc and shall not be subject to a demand for a division of the question in the House or in the Committee of the Whole. If more than one amendment in any of the following topic areas: (1) MACT; (2) CFCs; (3) OCS; and (4) clean cars are adopted, only the last amendment in each topic area which is adopted shall be considered as fully adopted and reported back to the House. In each topic area, it shall be in order to consider an amendment offered only with the concurrence of Representative Dingell of Michigan, Representative Lent of New York, Representative Waxman of California and Representative Madigan of Illinois in lieu of the amendments printed in the report of the Committee on Rules and all points of order against such amendments are hereby waived. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House or any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions. After passage of H.R. 3030, it shall be in order to take from the Speaker's table the bill S. 1630 and to consider said bill in the House, and it shall then be in order to move to strike out all after the enacting clause of the Senate bill and to insert in lieu thereof the provisions contained in H.R. 3030 as passed by the House and all points of order against said motion are hereby waived. It shall then be in order to move to insist on the House amendment to S. 1630 and to request a conference with the Senate.

□ 1015

The SPEAKER pro tempore (Mr. FAZIO). The gentleman from Michigan [Mr. BONIOR] is recognized for 1 hour.

Mr. BONIOR. Mr. Speaker, for purposes of debate only, I yield the customary 30 minutes to the gentleman from Tennessee [Mr. QUILLEN] pending which I yield myself such time as I may consume.

Mr. Speaker, on April 24, our Nation celebrated the 20th anniversary of Earth Day. Today, upon passage of H.R. 3030—the Clean Air Act amendments—we will ensure that our good words are backed by even better deeds.

We will take one more step in making this the environmental Congress in the environmental decade.

In Michigan, concern for the environment could not be greater. We are surrounded by the beauty of the Great Lakes. Water is our way of life.

Twenty years ago, we were worried that the Great Lakes were dying.

Today, the fish are alive, but we can't eat them because they are filled with deadly toxics much of which has fallen into the Lakes and entered the food chain from the air.

Twenty years ago, our ancient forests and mountain streams were healthy. Today, they are silent victims of acid rain.

Twenty years ago, the villians of clean air were aging smokestacks from industry. Today, they are much more diffuse: small sources spread over wide geographic areas which collectively have a potent impact on the air we breathe.

According to the Environmental Protection Agency, 121 million Americans live in areas where pollution levels exceed standards established under the Clean Air Act.

Half of our Nation's population is breathing polluted air.

We pay the price through respiratory disease, cancer, and shortened lives.

The health effects of breathing bad air will cost us far more in the long run than taking the necessary steps now to address our worst pollution problems.

H.R. 3030 will result in more Federal control on more harmful substances than any other environmental law Congress has ever enacted.

H.R. 3030 will result in sweeping emissions controls on factories and electric powerplants.

It will significantly reduce toxic air pollutants and reverse the harmful effects of acid rain. By the year 2000, sulfur dioxide emissions will be reduced by 10 million tons annually.

H.R. 3030 sets standards for the major pollutants contributing to urban smog, and all but nine cities must comply with these standards by the year 1999.

It will clean up our national parks, and greatly enhance the enforcement power of the Federal Government to make sure that polluters pay.

And H.R. 3030 will provide for cleaner burning cars and fleet vehicles.

Under current law, tailpipe emissions have already been reduced by up to 96 percent. Under H.R. 3030, automakers will be required to reduce nitrogen oxide emissions by another 60 percent, and hydrocarbons by another 40 percent in the next 6 years.

No single industry has moved so far, so fast in cleaning up the environment as the automobile industry.

In short, H.R. 3030 will completely overhaul the original Clean Air Act of 1977.

I also rise in strong support of the Wise amendment which will ensure that everyone who is displaced by this legislation has a fair shake in finding new employment.

We all benefit from cleaner air, and we should not balance the costs on the backs of our workers.

Today, Democrats stand united in support of clean air. H.R. 3030 is a Democratic bill.

Chairman JOHN DINGELL has done a remarkable job in shepherding this legislation to the floor. Together with HENRY WAXMAN and the rest of the Energy and Commerce Committee, he has put together a bill that goes much further than the administration's original proposal.

Last year, Congress adopted tough oilspill legislation. And this year, we will revise the Clean Air Act.

Since the first Earth Day in 1970, this will be the 25th major environmental bill enacted because Democrats have taken the lead.

Together these two bills will help preserve our air and our water for generations to come.

House Resolution 399 is a modified open rule providing for the further consideration of H.R. 3030.

The rule makes in order the amendment in the nature of a substitute recommended by the Energy and Commerce Committee now printed in the bill as an original bill for the purpose of amendment under the 5-minute rule.

The rule makes in order only the amendments printed in the supplemental report accompanying this resolution. The Rules Committee may file a supplemental report any time after the adoption of this resolution.

The amendments are to be considered in the order and manner specified in the report. The debate time is equally divided and controlled, and all points of order against the amendments are waived. The amendments are not subject to amendment.

Amendments numbered 1 and 3 each are to be considered en bloc and are not subject to division.

If more than one amendment is adopted on any of the following four issues, only the last amendment passed shall be considered as finally adopted: First, maximum available control technology; second, chlorofluorocarbons; third, Outer Continental Shelf oil leasing; and fourth, production of clean cars.

In each topic area, House Resolution 399 makes in order an amendment only with the concurrence of Representatives DINGELL, LENT, WAXMAN, and MADIGAN in lieu of the amendments printed in the report. All points of order against such amendments are waived.

The following amendments will not be voted on the floor as separate issues, but are instead included as part of the Energy and Commerce Committee amendment: An amendment by Representative WYDEN on national parks; by Representative RICHARDSON on reformulated gasoline; by Mr. TRAFICANT's "Buy America" provision; by Mr. CARDIN on limiting exposure to lead; and my own amendment to help train workers engaged in removing asbestos.

Finally, the rule provides one motion to recommit with or without instructions.

In order to facilitate a conference with the Senate, after passage of H.R. 3030, it shall be in order to take from the Speaker's table the bill S. 1630, the Senate clean air bill. It shall then be in order to move to strike out after the enacting clause of the Senate bill and to insert in lieu thereof the provisions contained in H.R. 3030 as passed by the House. The House may then request a conference with the Senate.

Mr. Speaker, House Resolution 399 is a fair rule allowing an open and lengthy discussion on one of the most important environmental issues facing our Nation. I urge its adoption.

Mr. Speaker, I reserve the balance of my time.

Mr. QUILLEN. Mr. Speaker, I yield myself as much time as I may use.

Mr. Speaker, the gentleman from Michigan [Mr. BONIOR] has ably explained the provisions of the rule.

Mr. Speaker, may I ask the gentleman did he get unanimous consent to change the provisions in the rule to set a deadline for the filing of the supplemental report?

Mr. BONIOR. Mr. Speaker, will the gentleman yield?

Mr. QUILLEN. I yield to the gentleman from Michigan.

Mr. BONIOR. Mr. Speaker, I have not done that yet. I am planning to discuss that with the chairman and others, but from my perspective I see no problem with it at this point. But I would prefer to discuss it a little bit before we proceed.

Mr. QUILLEN. I am pleased the gentleman is going to ask unanimous consent to change the text of the rule. The rule as reported gives the Committee on Rules authorization to file a supplemental report at any time without any time limitation. I understand that is going to be changed to limit filing to "the day of May 23, 1990." So I support that unanimous-consent request the gentleman from Michigan will make.

Mr. Speaker, we are here today on clean air. It is a high-sounding name. I do not know how anyone could be against it until they look a little bit more closely into the proposals that have been offered.

I agree with President Bush that we should not complicate our economic development to the point that we are going to lose jobs, or slow our surge forward which has provided more jobs for all Americans.

But we know we need clean air legislation. We know that what we have had in the past has worked well, but perhaps not well enough.

Passing this legislation as reported by the committee affects all of our industries in this Nation. It affects all of the coal industry, all of the chemical industry, and practically everything else including our utilities that provide the electricity that we must have in our everyday lives and our everyday industrial production. There is no question but that it affects all of these things.

So do not be deceived by the fact that clean air is an appealing title. Look at each amendment that is offered. There will be 19 possible options, not all of which will be offered. So look at each one and decide for yourself the best not only for your district or State but the Nation and world as well.

The automobile industry is going to be affected considerably, affected to the point that they might be forced to build cars that they cannot sell. What is going to happen to the economy if plants are closed or if automobiles are shipped to showrooms that cannot be sold?

The Rules Committee met late last night and was in session until almost midnight voting out a rule that could be filed. Negotiations were going on between the gentleman from Michigan [Mr. DINGELL] and the gentleman from California [Mr. WAXMAN]. I know they worked hard to reach a compromise that would be palatable to everyone, and that is impossible to do. So here we are on Wednesday, scheduled for a Memorial Day district work period shortly, faced with 16 hours of debate, 1 hour on the rule, making it 17 hours of debate with all of the votes that will come up. I would hope that this House would stay in session tonight late and tomorrow until we hammer out this legislation and get to the supplemental appropriation so that Members can keep their commitments back home for the district work period.

Mr. Speaker, this rule is a complicated rule, and I congratulate the gentleman from Michigan [Mr. DINGELL] and the gentleman from California [Mr. WAXMAN] for their patience in trying to work out a compromise satisfactory to all. My congratulations also to the members of the Committee on Energy and Commerce and the administration and to the members of the Rules Committee, and to the gentleman from Massachusetts [Mr. MOAKLEY] for his patience.

So let us not fool ourselves into believing that clean air is the only factor we have to consider. Clean air is a high-sounding name. But Members should look beneath the title and decide what to do that is best for our State and our country.

Mr. Speaker, at this point I do have some requests for time if the gentle-

man from Michigan would like for me to yield.

Mr. BONIOR. Mr. Speaker, will the gentleman yield for just one moment?

Mr. QUILLEN. I yield to the gentleman from Michigan.

□ 1030

Mr. BONIOR. Madam Speaker, I would just like to clarify one point. When one looks at the rule or the mock sheet that supports the rule and lists the amendments, one counts the time, and the gentleman counted 16 hours. Quite frankly, I made the same mistake when I was trying to add up the time this morning. But it should be pointed out to my colleagues that under the four major categories that we set up, the king of the hill, the MACT, the CFC's, the OCS, and the clean air category, there will not necessarily be 3 hours in each section; there may be 1, and at the most, there will be 2.

So my point is that we are not talking about 16 hours; we are probably talking more in the neighborhood of 10 to 12 hours for this bill. I just wanted my colleagues to know that.

Mr. QUILLEN. Madam Speaker, I certainly thank the gentleman for his clarification. I was adding up the number of minutes and hours in the rule itself, but I am happy to know that the time will not spread out over 16 hours.

Madam Speaker, I yield 4 minutes to the gentleman from New York [Mr. LENT].

Mr. LENT. Madam Speaker, I thank the gentleman for yielding this time to me.

Madam Speaker, I rise in support of the rule for further consideration of H.R. 3030, the Clean Air Act amendments. For 13 years Congress has been deadlocked over the issue of clean air. This year, under the leadership of President George Bush and with a strong spirit of compromise among congressional leaders, we have been able to craft legislation that will significantly improve the air we breathe without placing the American economy in jeopardy.

H.R. 3030 as reported is a comprehensive bipartisan compromise. It is the result of months of painstaking effort on behalf of the members of the Energy and Commerce Committee, as well as environmentalists, representatives of industry, and the administration. It is carefully balanced, and it achieves the greatest pollution reduction at the least cost to the American consumer.

I want to pay tribute to the chairman of the Committee on Energy and Commerce, the gentleman from Michigan [Mr. DINGELL] and to the gentleman from California [Mr. WAXMAN] for their willingness to work out compromises on so many of the troubling issues that were presented to us.

Using the Bush language as a starting point, the interests of the environment and the economy were weighed in arriving at complex solutions to our air quality problems. The bill's 10 million ton sulfur dioxide reduction makes it the strongest acid rain provision ever considered by Congress, yet it does so in a way that helps those areas of the country, like the Midwest, which will be asked to bear the greatest share of the cleanup cost.

Likewise, we arrived at compromises on the thorny issues of tailpipe emissions, smog, and air toxics, so that—unlike prior years—we find ourselves in a position of agreement on the most important issues framing the clean air debate.

When we reach final consideration, H.R. 3030 must still meet President Bush's tests of reasonableness and balance that he outlined to the Senate when that body considered amendments to the Clean Air Act.

Madam Speaker, I believe that H.R. 3030—as reported and with the committee amendments that are in order under this rule—meets President Bush's five tests of balance and reasonableness. It is a delicate mosaic, whereby hundreds and thousands of complex, intricate tiles form one completed picture.

This rule, while restrictive, defers to the committee's bipartisan efforts to resolve the complex environmental issues at stake here. At the same time, this rule provides for amendments on several policy issues, which we did not resolve in committee. These include MACT standards, CFC's, and production mandates for automobiles.

Responsible alternative amendments will be offered on CFC's and clean fuel vehicles for consideration by the House.

The rule also makes in order amendments dealing with the Outer Continental Shelf.

Also in order is the wise labor protection amendment. I will strongly oppose this amendment when it is taken up in title I.

As we discuss and debate each of these amendments, we must remember how far we have come, and ask ourselves whether the adoption of a particular amendment will result in the collapse of our compromise efforts, a lack of consensus in the Congress and, finally, the likelihood of a Presidential veto if the five tests of balance and reasonableness do not continue to be met.

Madam Speaker, I join my distinguished colleague, the chairman of the Energy and Commerce Committee, in urging that the Rules Committee adopt a rule that will focus the House debate on outstanding areas of major disagreement.

Mr. BONIOR. Madam Speaker, I yield 5 minutes to the gentlewoman from Ohio [Ms. OAKAR].

Ms. OAKAR. Madam Speaker, I thank my colleague for yielding time to me.

Madam Speaker, in a word, I believe this is a gag rule. Yes, there are 19 amendments that are going to be permitted to be offered. Yesterday I was told there would be five or six, but most of these amendments are recycled amendments that could have been offered in the committee and were offered in the committee process. The Members who are not on those committees have no access essentially to offering an amendment on the floor.

Madam Speaker, I would not be speaking out in this way if I did not believe that our country has an energy security problem, and that we are not addressing it.

Madam Speaker, I chair the Subcommittee on Economic Stabilization, and that subcommittee investigated over a period of 3 years our continuing problem with securing energy in sufficient and efficient supplies. In particular, the committee was informed that electric energy for the eastern seaboard is 2 percent less than needed to meet the current demand. In 1988, for example, Harvard University was closed for only the second time in its history because of blackouts. I am warning the Members of this body and indeed the administration that we are going to see blackouts in this country the likes of which we have not seen before. The problem will be aggravated by this current bill because the experts on electric reliability predicted that 12,600 megawatts of electric generating capacity will be permanently retired. The capacity margin has dropped already below 3.6 percent in terms of minimum safety requirements.

Madam Speaker, in 1982 and 1983 we were energy dependent by 28 percent. In 1989 we are now 42 percent energy dependent, and by the year 2000 we will be 60 percent energy dependent. By 1995, when many Eastern coal mines are closed permanently, we will be more dependent than ever before, and that is just the tip of the iceberg.

So, Madam Speaker, it is imperative that our country be resourceful and use all our resources. My environmental record is the second highest in my State, but one of the things that struck me was the backward looking motion of this bill when it comes to new technologies. The bill goes backward. It depends on 1960 technologies with respect to scrubbers being used, and it does not in any way address the issue of clean coal technology, and since 1987 we have spent nationally $3 billion on this type of technology. My own State of Ohio has spent $700 million alone, and we are on the cutting edge of new technologies that not only will help our own country and is the most forward way to go but will help

the European countries and China, all of whom use sulfur type coal.

Madam Speaker, we have an opportunity to export our knowledge on clean coal, but we are not given the opportunity to even debate that issue on the floor. I find that outrageous. Clean coal technology has already proven in the laboratory that it removes up to 99 percent of sulfur dioxide and similar amounts of nitrous oxide. Scrubbers do not even prevent nitrous oxide emissions. And more important to the problem of global warming, carbon dioxide would be reduced.

Madam Speaker, I think it is really outrageous that in a bill of this magnitude Members of Congress who do not serve on the appropriate committees but who have had hearings on related issues were not even allowed to offer an amendment. I think that kind of a gag rule—and make no mistake, that is what this is, even though we have all these other amendments—is the wrong way to go. We need for the world and for our own country a long term, environmental quality lifestyle, and we need long-term planning. We are always trying to slam the door shut on futuristic kinds of technologies.

So, Madam Speaker, I intend to vote strongly against the rule, and I ask my colleagues to do the same thing so that we can truly have a debate on this issue.

Mr. QUILLEN. Madam Speaker, I yield 3 minutes to the gentleman from California [Mr. DANNEMEYER].

Mr. DANNEMEYER. Madam Speaker, I rise in opposition to the rule.

The rule does not make in order an amendment that would, I think, put this bill in its proper perspective. This bill should be renamed the Third World Redevelopment Act of 1990, because the House-passed version of the bill will export 350,000 jobs to places outside the United States and the Senate-passed bill will export 700,000 jobs to places outside the United States.

There are seven titles to the bill, but I will talk briefly about three of them. The first one is the nonattainment area. If we leave the existing Clean Air Act alone, by the mid 1990's all but a handful of cities in America will be in attainment. One of those areas that will be in nonattainment will be southern California. We have some of the dirtiest air around. What we should be doing—and this is provided in the act itself—is to provide that in an area that has dirty air after the mid-1990's, from nonattainment, that the local authorities have the authority to require that new cars sold in that region have further restrictions on what comes out of the tailpipe. The fact of the matter is that the cars coming off the assembly lines in America today reduce pollution by 96 percent from what it was in 1966. This bill will squeeze out an additional 2 to 3 percent at a cost that is very extreme for every consumer in this country, namely, $600 to $1,000 per car for extra pollution control equipment.

Now, people who live in these half a dozen cities in the mid-1990's that are in nonattainment are going to have to pay for that. I live in such a region, and we will do that. But I do not believe that this cost should be borne by other areas across this country.

Dealing with acid rain, we taxpayers paid $600 million to develop the NAPAP study. This is what it said to us: 2 percent of the lakes in America are now acidic. Most have been this way since preindustrial times. If we do nothing, the number of acidic lakes will decline.

The selection of a 10-million-ton reduction of $SO_2$ was nothing more than a political statement. It has never been anything but that from the beginning, and we should recognize it for what it is—legislative overkill.

The third area deals with toxics. In order to get off the list, a compound or a product of a compound that is one of the 200 on the list must satisfy EPA that the risk to a citizen or a consumer is less than one in a million. Well, let me define what a one-in-a-million risk is. If we ride in an airliner for 2,400 miles or drive a car for 40 miles or paddle a canoe for 6 minutes, any one of us who do those things has one chance in a million of being killed. We are going to demand that kind of a standard on a person emitting pollutants in this country? This is just legislative overkill.

Madam Speaker, I realize that this bill has a powerful impetus pushing it, but I think the responsible thing for us to do is to protect American jobs, and I ask for a no vote on the rule and on the bill.

Ever since Congress passed the first Clean Air Act almost 20 years ago, the Government has reduced air pollution principally by imposing restraints on large entities—oil companies, the major auto manufacturers, and the chemical industry—which were politically acceptable targets of the Government's antipollution efforts. So long as the burden has remained on these corporate polluters, the environmental movement has prospered and grown.

Indeed, this strategy has a significantly reduced total emissions of the major pollutants. According to the Environmental Protection Agency, since 1978 emissions of ambient airborne lead have declined by 88 percent, sulphur dioxide emissions have dropped by 35 percent, carbon dioxide by 32 percent, particulate matter by 21 percent, ozone by 16 percent, and nitrogen oxide by 12 percent. But some argue that these reductions have not sufficiently protected the health of many Americans. For that reason, we have embarked upon the second phase of the fight for clean air.

This second phase will require that the Congress consider pollution control strategies that will inconvenience the average citizen. Finding acceptable ways to change the daily behavior of millions of Americans will become an essential component of any viable pollution control strategy. It remains to be seen, for example, whether the average citizen will voluntarily restrict his use of the family car. Residents in major metropolitan areas such as Los Angeles, New York, Houston, and Chicago may find environmental policemen in their backyards, telling them to douse their barbeques or mothball their gas-powered lawnmowers. They may have trouble finding a dry cleaner or bakery, and the local hardware store will almost certainly not carry their favorite brand of paint.

Someday we may encounter a backlash from citizens who resent these sort of intrusions into their everyday lives. Low income citizens, especially, will suffer from restrictions that place a cap on economic growth in their neighborhoods and which may threaten or eliminate their jobs. Will compliance with pollution control strategies break down according to the economic class of the citizen being asked to make these sacrifices? I hope not.

To avoid this sort of resistance, we must be sure that the measures we adopt actually deliver the promised improvement in overall air quality. Nothing would be worse than the embark on an expensive and controversial air pollution control odyssey that promises much, but fails to win the support of the American public.

Because the committee essentially rewrote H.R. 3030, there have been no credible estimates of the overall environmental or economic impact of the changes adopted these past few weeks. We all know, however, that several of the titles, such as the acid rain, air toxics, and nonattainment titles, will cost tens of billions of dollars annually and threaten hundreds of thousands of existing jobs. We also know that both the cost and the environmental benefit derived from removing that last ton of sulphur dioxide or hydrocarbons is enormous, relative to the cost of removing the first ton. The question we must address is whether the costs associated with removing that last ton justify the accompanying loss of jobs and competitiveness.

ACID RAIN

What prompted the week-long spectacle of intense negotiations between the so-called clean and dirty States on title V? Why did so many representatives of the utility industry choose to camp outside the Energy and Commerce hearing room for days at a time as these deliberations proceeded?

Simply put, we were attempting to allocate the future economic growth among the various regions of this Nation, as measured by our use of utility-generated electricity. The growth regions harbor very serious and, I believe, legitimate doubts over title V's effect on their future ability to grow and to meet the needs of their constituents. But, as important as this struggle is to the future of these regions, including my own, did we ever question the necessity for a 10 million ton reduction? No. For political reasons, that discussion was off the table.

The best data available on the acid rain problem comes from the preliminary report of the National Acid Precipitation Assessment

Program [the NAPAP study], yet one hears no mention of these initial findings. In fact, after spending so much of the taxpayer's money, the Congress should at least have waited for this data before plunging ahead on this issue. Would the same silence prevail if the findings had been different?

This study cost the Federal taxpayers $600 million, yet it has been completely ignored. The preliminary report concludes that only 2 percent of our lakes are acidic and that most of the acidic lakes in the Northeast have been that way since preindustrial times. NAPAP concluded that even if we do nothing, the number of acidic lakes in the Northeast will decline over the next 20 years and increase only marginally over the 50 years. Similarly, the NAPAP scientists found no evidence of widespread forest decline in North America related to acidic deposition. In fact, they believe that doubling the current level of sulfur dioxide emissions would have little effect over the next century.

One would think that these preliminary findings from a $600 million Government-funded study would have whetted the committee's appetite for the final report due later this year. An exhaustive study such as this should, at the very least, influence the final work product of this committee. But, instead, the committee accepted the premise that the reduction in sulfur dioxide should equal 10 million tons, not a ton more or less. Of course, 10 million tons is a political figure, chosen for political reasons, and seems to have attained the status of holy writ in the course of our deliberations.

In future years, when utilities encounter difficulty obtaining growth allowances under this act, or when our consumers' electric bills rise incessantly, we may wonder why the committee acted before the final release of such an ambitious study. Scholars and other observers of this process will ponder why the NAPAP data was left to collect dust while we spilled blood over the allocation of the allowance pie. We may wonder why we never considered options that would have achieved 80 or 90 percent of the emission reductions contained in this bill while avoiding unnecessary job losses and other economic costs.

THE NUCLEAR OPTION

Another issue which the committee ignored is the role that nuclear energy plays in cleaning our air. In attempting to lower emissions of sulphur dioxide and nitrogen oxide from our utility plants, the single most cost efficient and pollution-free alternative is nuclear power.

According to the Republican leader of the committee, Representative NORMAN LENT of New York, three coal or oil fired plants are required to replace the energy capacity of the Shoreham plant on Long Island, which has been delayed for more than a decade by environmental obstructionists. We must understand that every time we delay or postpone the operation of a new nuclear powerplant, we implicitly choose to burn more fossil fuels. How many of the oil or gas fired plants currently in operation or under construction would even be needed if we were to exercise our nuclear option?

JOBS

I note with interest that one of my colleagues, Mrs. COLLINS, offered an amendment to provide relief to low-income persons who face significant increases in their utility bills as a consequence of the provisions in title V. Mrs. COLLINS should be applauded for her concern on this issue. But a $10 or $20 per month utility bill increase is the least of the problems facing America's low income families as a result of this legislation. In fact, hundreds of thousands of low-income persons will suffer, directly and indirectly, from the provisions in this bill. Like the NAPAP findings, the effects of H.R. 3030 on America's underclass population have also been ignored.

A study by Robert W. Hahn and Wilbur A. Steger concluded that workers living in areas defined by the Department of Commerce as "underclass" areas—areas with high levels of chronic unemployment, low per capita income, high numbers of high school dropouts, et certera—"would be most affected by any increases in unemployment or underemployment caused by the Clean Air Act." The Clean Air Act amendments, they say, may well spell economic disaster for thousands upon thousands of already extremely troubled and hard-pressed Americans.

They estimate the Clean Air Act will place up to 2 million American jobs at risk. The air toxics title alone would jeopardize between 600,000 and 1 million jobs. As we all know, these jobs are largely at the lower end of the economic spectrum. Doesn't this require that we engage in more of what my colleague from Pennsylvania, Mr. RITTER, calls accountability? Before we happily vote for a measure that will devastate many regions and industries in this country, shouldn't we be sure that these ambitious regulatory schemes will yield some real health and environmental benefits? And, when the livelihoods of so many are at stake, isn't this burden of proof a very high one? Would a bill that achieves 90 percent of the environmental gains in the bill before us now, but which saves many of the jobs that will be destroyed, be a better bargain in the long run?

Given the enormous scope and expense of the air toxics title, just what do we know about the relationship between air toxics and human cancer? In 1981, two renowned epidemiologists from Oxford, Sir Richard Doll and Richard Petro, were commissioned by the Office of Technology Assessment to assess this relationship. At that time, alarmists were generating headlines with claims that between 70 and 90 percent of all human cancer was pollution related. They concluded that pollution accounted for only 2 percent of cancers. Their findings are summarized below:

| Cancer contributor | Percentage of total cancers |
|---|---|
| Diet | 35 |
| Tobacco | 30 |
| Infection | 10 |
| Sexual behavior | 7 |
| Occupation | 4 |
| Geophysical factors | 3 |
| Alcohol | 3 |
| Pollution | 2 |
| Medical treatments | 1 |
| Food additives | less than 1 |
| Industrial products | less than 1 |
| Unknown and other | 3 |

The EPA has accepted these estimates. As syndicated economics columnist Warren Brookes points out, a 1989 EPA risk assessment study titled "Unfinished Business" estimated that no more than 1.2 to 2.5 percent of all human cancers are caused by pollution. EPA regulatory efforts, moreover, would prevent only a fraction of these cancers—or between 0.25 and 1.3 percent of all cancers. Knowing this, who wants to be the one to deliver the news that a factory is closing due to a hypothetical cancer risk that is not as significant as smoking, diet, and other behaviorally induced factors?

For the first time in Federal law, title III of this bill quantifies the standard of residual risk analysis to be followed by the EPA. Instead of leaving this sort of analysis to expert epidemiologists, the Congress has decided in its wisdom that the EPA Administrator may remove a source of air toxics from EPA's list only when he determines that the risk of carcinogenic health effects in humans is less than "1 in 1 million to the individual in the population who is most exposed to emissions of such pollutants from the source." Dr. Vernon Houk, Director of Environmental Health at the Centers for Disease Control, criticizes a 1 in 1 million risk assessment standard:

When we push risk assessment to 1 in 1 million, we are talking scientific, not to mention economic, nonsense. Do you know what 1 in 1 million really is? It's the risk you take in driving your car 40 miles; taking a commercial jetliner 2,500 miles; canoeing for 6 months.

Every time a person travels by air from Washington to Los Angeles, in other words, he faces a risk comparable to that presented by some of the air toxics regulated under this act. We accept this microscopic level of risk in the case of air travel; we should also accept it in our industrial plants and factories.

TRANSACTION COSTS

At the micro level, the transaction costs associated with this legislation are enormous. To an entrepreneur, time is money. The costs of complying with the paperwork required under this act, especially the permitting requirements in title IV, will undoubtedly deter many individuals from starting their own businesses. The penalties section, moreover, may deter small businessmen from competing in industries that must comply with these provisions. Businessmen will think twice before expanding an existing business, out of fear that such an expansion would trigger one of the threshholds in the air toxics or nonattainment titles. Who suffers the most from these decisions? Low wage workers, of course.

American businesses hoping to compete in international markets will soon find that the cost of complying with environmental regulations is prohibitive. We already spend twice as much on pollution control—$85 billion per year—than does the entire European Community—which spends only $42 billion per year.

OZONE NONATTAINMENT

No one is more aware of the problems caused by urban smog than I, having lived in the southern California region all my life. But, again, issues which should have occupied much of this committee's time were largely ignored for political reasons. Two examples are the EPA standard for ozone nonattainment and various incentives to hasten the turnover of the current auto fleet.

An area is considered to be nonattainment for ozone if the fourth highest daily monitor

reading taken during the most recent 3-year period registers an ozone concentration above 0.12 parts per million for more than 1 hour. It is important that the standard ultimately adopted be a reasonable one because the consequences that follow designation as an ozone nonattainment area are quite expensive. Is nonattainment status warranted for areas with marginal nonattainment problems? While no one doubts the necessity of implementing strict pollution control measures in areas such as Los Angeles, the applicability of title I to areas with minor smog problems should have prompted more debate and attention than it did.

That this standard deserves stricter scrutiny is evident from the date collected by the American Petroleum Institute, which found that every nonattainment area in America, with the exception of Los Angeles, was in compliance with the ozone standard at least 99.5 percent of the time between 1981 and 1985. Some of these areas, which must now adopt expensive control measures, were in compliance 99.98 percent of the time. Put another way, some areas in complete compliance with the ERA standard 4,999 out of every 5,000 hours, yet are designated as nonattainment areas. What health threat justifies nonattainment status for areas such as these?

Second, with the exception of an amendment offered by Mr. BARTON, there was no discussion of the emission reductions that can be achieved from either tuning up old cars in need of maintenance or encouraging consumers to take them off the road entirely. Pre-1983 model year cars account for 43 percent of the vehicle miles traveled, yet contribute 84 percent of the carbon monoxide and hydrocarbons and 72 percent of the nitrogen oxide.

Syndicated environmental columnist Alston Chase believes the Congress should look for ways to expedite the turnover of our auto fleet in order to remove these old, dirty cars from our roads. He writes:

Like its predecessor, the present bill does little to stop the biggest polluters—old cars. Instead, owners of new cars must foot the bill. Emissions requirements, according to the Commerce Department, added around $1,800 to the cost of a new car in 1987. So people buying autos in Maine or Montana will be paying to eradicate smog in Los Angeles.

Unfortunately, the committee never addressed an ozone attainment strategy which would allow a stationary source, such as a dry cleaner or small factory, to obtain emission offsets from mobile sources—that is, cars. Such an approach would do more to clean up the southern California skies than anything else in the committee's product.

H.R. 3030 requires auto manufacturers to install cannisters and other emission control devices to reduce emissions from the evaporation of fuels, hydrocarbon emissions by 40 percent, and nitrogen oxide emissions by 60 percent. It is important to recall, however, that auto emissions have been reduced by 90 percent since 1970, and 96 percent since 1966, so these additional reductions represent an overall decrease of only 2 to 3 percent of the 1970 level.

I have enclosed three charts which show how much we have already reduced emissions from auto tailpipes. It is important to place these expensive new regulations in some perspective.

These requirements will add between $600 and $1,000 to the price of a new car, a price that every consumer will pay, regardless of whether they live in an attainment or nonattainment area. While it is important to squeeze every bit of cleanliness out of future cars, we should ask ourselves whether smog-ridden areas such as Los Angeles could be better served by offering the owners of pre-1983 model year cars tax incentives to replace their old, dirty cars with newer, cleaner ones. Rather than requiring consumers in pristine areas of this country to pay $600 more for a car that is only martinally cleaner than the cars being manufactured today, we could achieve the greatest emissions reductions through incentive-based policies that make it financially attractive for consumers in our dirtiest cities to purchase clean vehicles.

CONCLUSION

For all the above reasons, I believe that H.R. 3030 will destroy hundreds of thousands of American jobs, many of them held by low wage workers, for health and environmental benefits that are speculative at best. Stricter environmental regulation and the paperwork it entails will make American products less competitive in international markets, where our industries must compete with companies that do not face the sort of regulations imposed here in America. As a result, our trade deficit will grow and the American underclass will find it more difficult to get out of the poverty trap.

At some point in the near future, I predict that Americans will rebel at some of the measures contained in this legislation, and they will force all of us to reexamine these assumptions. This backlash need not be antienvironmental, it need only be rational.

□ 1045

Mr. BONIOR. Madam Speaker, I yield 4 minutes to the gentleman from Georgia [Mr. ROWLAND].

Mr. ROWLAND of Georgia. Madam Speaker, I thank the gentleman for yielding me this time.

Madam Speaker, it is my intention to support this rule. I think that it will make for wide-ranging debate which will address many of the issues relative to clean air, and in the long run we will come out with a good piece of legislation; but Madam Speaker, I must express my disappointment about one aspect of this rule and that is relative to air toxics.

I had proposed an amendment which would give us more information about the health effects of air toxics. There is much that we do not know about health effects of air toxics. Once maximum achievable control technology is instituted, then beyond that there is a residual risk. There was a risk assessment study in that area of residual risk. It was approved by the National Academy of Science, supported by the National Academy of Science. What we wanted to do was have a study about exactly how certain air toxics would affect an individual's health.

Let me give you an example of what I am talking about. We are all very much familiar with dioxin, but there is a great deal that we do not know about dioxin. Because of the rapid advancement of science, we are now able to determine in serum the level of dioxin. We can determine three parts per quadrillion the level of dioxin in an individual.

Now once we make a determination about that chemical being in an individual's serum, we can make a determination as to whether or not it has had some effect on the bodily processes of that individual, and we can further make a determination about whether or not any disease has been caused by that amount of dioxin.

It seems to me that we need to get the very best scientific information that we can in determining what the

health effects would be on an individual relative to certain chemicals.

I wanted to have this study so that the National Academy of Science in conjunction with universities and various other scientific groups could give us that information, but this amendment which I wanted to offer was not accepted. I am very disappointed that it was not accepted. It seems to me that the Congress ought to support that type of study so we can get the very best information that we can. So many times it seems to me that Congress makes decisions in the scientific area without really having adequate knowledge, so I am very disappointed that this amendment was not accepted.

I hope possibly in conference or at some future time we will be able to get this type of study instituted.

Mr. QUILLEN. Madam Speaker, I yield 5 minutes to the gentleman from Pennsylvania [Mr. WALKER].

Mr. WALKER. Madam Speaker, I appreciate the gentleman yielding this time to me.

Madam Speaker, this rule is deserving in a couple instances, and I think we need to focus on it and hopefully get it modified in at least one of the places where I have a problem.

There is a new sentence in this rule, something which is unprecedented for the House to do. That is, we have a sentence that says:

> The Committee on Rules is hereby authorized to file a supplemental report at any time after the adoption of this resolution.

Meaning that at any time after the adoption of the resolution, the Rules Committee could come to the floor with a whole host of new amendments that the House may or may not agree to and file a report, and the House would never have any opportunity to act upon them.

I think that is a very disturbing precedent to set, that the Committee on Rules can ignore the processes of the House and bring forth new amendments.

Now, what I have suggested as a way around this is to assure that the intent of the committee is carried out and yet we do not set this new precedent is to say that the report can be filed today, and I am hopeful that we can get that kind of modification.

I would be glad to yield to the gentleman from Michigan to ask him if we can modify the rule in order to assure that supplemental reports would have to be done on this day.

Madam Speaker, I yield to the gentleman from Michigan [Mr. BONIOR].

Mr. BONIOR. Madam Speaker, it is the intention of the gentleman from Michigan to offer a unanimous consent request on this day of May 23, 1990, at some point.

Mr. WALKER. That would help, and I appreciate the gentleman doing that so that we can take care of at least this gentleman's concern about that new provision in the rule.

The second thing I am concerned about is the process used to bring this supplemental report to the floor and some of the amendments that are going to be included in it. As an example, I happen to be the coauthor of an amendment that is going to be brought to the floor out of the Committee on Science, Space, and Technology. We worked very hard on that research amendment. I understand that in the supplemental report that the Rules Committee has added language to our amendment. In one case I knew about the language. The gentleman from New York [Mr. SOLOMON] came to us, consulted with both the majority and the minority and asked that we approve his amendment being made in order. We did so.

In the case of the gentleman from California [Mr. DYMALLY], who has also been added to the amendment, it is my understanding that the Rules Committee staff consulted with the majority committee staff on the Committee on Science, Space, and Technology, and were told flatly, "We do not want that amendment in our package."

No consultation was ever done with the minority, and yet the Rules Committee took it upon themselves to modify our amendment in their supplemental report. For the life of me, I am puzzled as to why the Rules Committee thinks that they know more than the Committee on Science, Space, and Technology, about our own amendment. Why should the Rules Committee be allowed to modify our amendment by its own action? Why could not the gentleman from California [Mr. DYMALLY] bring his amendment to the floor and have that debated? Why should the Rules Committee be in a position of doing something where they were specifically told by the committee of jurisdiction, "No, we don't want that done."

I think there is a kind of arrogance involved in that decisionmaking which is completely unacceptable.

I, for one, am disturbed now that I have to bring an amendment to the floor that does not have the approval of our full committee. This is an issue that was never brought before our full committee, and now our committee is being asked to bring to the floor an amendment which does not reflect the work of our committee. That is completely unacceptable.

I do not see how you can possibly justify the fact that you have done something like that. If you wonder why we get upset then when we get open-ended language in an amendment or in a rule, this is a good example of why we have a right to be disturbed, because the Rules Committee has taken upon itself in this instance to make a substantive decision without the approval of the committee of jurisdiction.

I would hope that maybe we could get another modification to strike that provision so that the Committee on Science, Space, and Technology, could offer on the floor the amendment that it wants to offer, not the amendment that the Rules Committee has modified for its purposes.

So I think we have reason to be disturbed about the aspects of this rule. I appreciate the gentleman from Michigan making the one modification. I wish we could get the other one.

Mr. QUILLEN. Madam Speaker, I yield 3 minutes to the gentleman from Ohio [Mr. APPLEGATE].

Mr. APPLEGATE. Madam Speaker, I rise to oppose this gag rule, conceived in subterfuge and irresponsibility.

I have never been more disappointed in all my political life than I am as I stand here on the floor today to object to this.

I would think that our forefathers who wrote the Constitution of the United States, the first amendment rights to free speech, would be spinning in their graves to know what is going on today. It defies all sense of logic to allow a bill that is going to economically and socially devastate a community and its people, and then deny these people the right to be heard in front of the people's House, and that is what we are. We are elected by those people.

Whatever happened to the constitutional right of free speech? Everybody is always talking about it. Where is it? What every happened to human rights?

This Congress is kinder and gentler to abusers of human rights in the world than they are to their own people, in El Salvador and in China and in the Soviet Union where they are denying people, and yet we are offering to give them most-favored-nation status in trade and then sending them money.

People in my district and in Appalachia and in other Midwestern States where coal provides much of the power for the United States, they need help against the onslaught of the environmentalists and those who seek to destroy us, those whose very lifeblood will be stripped, these people in my district and in Appalachia who depend for their livelihood and quality of life, their ability to be able to educate, to house, to clothe, to feed their children, they cannot do it because this bill—you are not going to see it in the next 6 months, but in the next couple years you are going to see the devastation that comes down the pike.

There was a study from the Carnegie Mellon University that backs this up. They say that upwards of 4 million jobs will be at risk when this bill is

passed and that there will be at least 750,000 jobs lost.

Now, if you think that is any small potatoes, check your own local unemployment office, talk to people who lose their livelihoods, the Midwestern States which have been the breadbasket, which have provided the food for the world and this country, have built steel mills, glass factories, and potteries. What is our reward now for keeping America strong? Denigration and denial, that is what we get.

Well, you are wrong, wrong, wrong on this, and I think I should have the opportunity to be able to offer amendments to this bill.

I am going to ask for a vote against the previous question.

Mr. QUILLEN. Madam Speaker, I yield 1 minute to the gentleman from Ohio [Mr. OXLEY].

Mr. OXLEY. Madam Speaker, I rise in support of the rule. Admittedly there are some difficulties with the rule. Any time you have a complicated piece of legislation that involves regional interests, there are going to be some concerns about that; but I have to say in all candor that the Rules Committee did a superb job in crafting this rule, giving everyone an opportunity to present their arguments. I do support the rule and will vote accordingly.

I want to take this opportunity to talk briefly about an amendment that I will be offering with my good friend and colleague, the gentleman from Illinois [Mr. BRUCE] dealing with CFC's. This will be the second proposal offered under CFC's. I would ask the membership to take a good look at where we are going with the Montreal protocol, how it affects the world situation with CFC's, and understand that our amendment tracks the Montreal protocol much closer than the Bates-Boehlert proposal that will be offered before that.

It is important to understand that the administration supports our proposal. It is a far-reaching proposal that goes a long way in reducing CFC's, but at the same time maintains American jobs where they belong and protects us against competition that would be unfair if we were to do a unilateral effort.

So I do rise in support of the rule and ask that you vote for the rule so that we can get on with the debate on this historic issue.

Mr. BONIOR. Madam Speaker, I yield 2 minutes to the gentleman from North Dakota [Mr. DORGAN].

Mr. DORGAN of North Dakota. Madam Speaker, I thank the gentleman for yielding me this time.

Madam Speaker, I intend to vote against this rule. It has a number of problems, not the least of which is a jurisdictional grab that is not insignificant to a lot of us. But let me describe a very serious problem that I think it has with something called the Clean Coal Technology Program. We have a program called the Clean Coal Technology Grant Program. This country has an enormous amount of coal that it can and will burn to supply energy to America.

Obviously, the question is, how can we burn it with less environmental consequences? How can we develop clean coal technology through research?

Well, we put together a program to provide that research opportunity all around the country to determine how we can develop new clean coal technology.

This bill that comes to the floor today takes all that money, every bit of it, and says, "What we want to do is turn this national research program into a regional subsidy to retrofit polluting plants." That makes no sense. Retrofitting plants that are polluters with money that we have determined should go for research for clean coal technology is a foolish priority.

So I wanted to offer an amendment to strip this money grab, and the Rules Committee said, "No, not at all. You can't get into this bill. You can't offer an amendment."

We are going to take this bill to the floor with no opportunity on this floor to challenge this distortion of a national program designed to promote research to enhance the environmental ability to use coal for our energy, and turn it into a regional subsidy to retrofit powerplants.

□ 1100

That is an outrage. I do not intend to vote for this rule. I think they ought to allow an amendment to strip this provision. This should not be happening in the House of Representatives.

I hope my colleagues will vote against the rule as well.

Let me ask them to come to the floor with bills that are reasonable. Ask them to give us rules that offer amendments, give us the opportunity to offer amendments to strip this type of nonsense out of these bills.

Madam Speaker, I intend to vote against the rule and I hope my colleagues will do the same.

MODIFICATIONS TO HOUSE RESOLUTION 399 OFFERED BY MR. BONIOR

Mr. BONIOR. Madam Speaker, I ask unanimous consent on page 2 of House Resolution 399, line 18, after the words "supplemental report," to strike "at any time" and insert "on this day, May 23, 1990,".

The SPEAKER pro tempore (Mrs. SCHROEDER). Is there objection to the request of the gentleman from Michigan?

There was no objection.

The text of House Resolution 399, as modified, is as follows:

H. RES. 399

*Resolved*, That at any time after the adoption of this resolution the Speaker may, pursuant to clause 1(b) of rule XXIII, declare the House resolved into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 3030) to amend the Clean Air Act to provide for the attainment and maintenance of the national ambient air quality standards, the control of toxic air pollutants, the prevention of acid deposition, and other improvements in the quality of the Nation's air, and the bill shall be considered for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Energy and Commerce now printed in the bill as an original bill for the purpose of amendment under the five-minute rule, said substitute shall be considered as having been read, and all points of order against said substitute are hereby waived. No amendment to said substitute shall be in order except the amendments printed in the supplemental report of the Committee on Rules accompanying this resolution or as specified herein. The Committee on Rules is hereby authorized to file a supplemental report on this day, May 23, 1990, after the adoption of this resolution. Said amendments shall be considered in the order and manner specified in the report, shall be considered as having been read, and shall be debatable for the period specified in the report, equally divided and controlled by the proponent and a Member opposed thereto. All points of order against any amendment printed in the report are hereby waived. Said amendments shall not be subject to amendment. The amendments numbered one and three each shall be considered en bloc and shall not be subject to a demand for a division of the question in the House or in the Committee of the Whole. If more than one amendment in any of the following topic areas: (1) MACT; (2) CFCs; (3) OCS; and (4) clean cars are adopted, only the last amendment in each topic area which is adopted shall be considered as finally adopted and reported back to the House. In each topic area, it shall be in order to consider an amendment offered only with the concurrence of Representative Dingell of Michigan, Representative Lent of New York, Representative Waxman of California and Representative Madigan of Illinois in lieu of the amendments printed in the report of the Committee on Rules and all points of order against such amendments are hereby waived. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions. After passage of H.R. 3030, it shall be in order to take from the Speaker's table the bill S. 1630 and to consider said bill in the House, and it shall then be in order to move to strike out all after the enacting clause of the Senate bill and to insert in lieu thereof the provisions contained in H.R. 3030 as passed by the House and all points of order against said motion are hereby waived. It

shall then be in order to move to insist on the House amendment to S. 1630 and to request a conference with the Senate.

Mr. BONIOR. Madam Speaker, I yield 3 minutes to the gentleman from Arkansas [Mr. ALEXANDER].

Mr. ALEXANDER. Madam Speaker, I thank the gentleman for yielding me this time.

Madam Speaker, I rise to oppose this rule. I intended to offer a substitute to the proposed Richardson-Madigan amendment that would expand the scope of the reformulated gasoline provisions that are intended to be enacted into law by this bill. Absent that opportunity, I think that I should oppose this rule.

This morning when I was driving to the Capitol, I followed a bus that was spewing out exhaust all over those who followed it, and that exhaust contained poison hydrocarbons that can affect the health of those who breathe them. We know how to clean up that exhaust. We know how to reduce those hydrocarbons, to eliminate that poison, and what do the oil companies say about that?

Madam Speaker, what have they said about that? Remember when we were working to take the lead out of gasoline, and the oil companies said, "We cannot do that." They did take it out, but they replaced it with aromatic hydrocarbons, benzene, xylene, toluene—in other words, paint thinner that we are breathing that is part of the fuel sold on the market today.

We can require these oil companies to clean up the fuels by adding oxygen. We know how to do that. It is a technology that I personally have demonstrated in my own vehicle for over 16 years. It is cheap. It is economical. It is easy to do and all of us can do it.

I believe that we should allow the people of this country to breathe cleaner air by utilizing the technology that we have to clean up the fuels that are sold on the commercial markets.

I think the people in California and New York and in Washington should be able to breathe cleaner air.

Some of my colleagues may have reservations about even the incremental steps taken by this amendment because of a big-money, big-oil advertising campaign.

They shouldn't, Madam Speaker, because those arguments really cannot hold water.

Let's look at what big oil says about proposals for specific reformulated gasoline standards, and let's compare that to the truth.

Big oil says we should trust them. They have the petroleum chemists, they hear our call to clean up the fuels, they know best how to do it, and if we just leave them alone they'll clean up gasoline.

Well, we tried that. That's what we did when we told them to get lead out of gasoline.

What they did, ladies and gentlemen, was this: they put paint thinner in our gasoline.

In industrial settings, these substances—benzene, toluene, xylene—are handled with great caution and under intensive government regulation. But whenever you pull up to the self-serve nozzle, they are like as not to slosh all over your exposed skin.

As a matter of fact, I'm told there is so much benzene in today's gasoline that if OSHA defined America's service stations as workplaces, many of them could not operate.

Now, we can require the oil companies to get these substances out of gasoline. But we don't want to deprive the consumer of his octane, and we don't want to let the oil companies to replace poison with poison, as they did in the case of lead.

So what does the legislation proposed to add?

It proposes to add oxygen. There are eight separate EPA-approved additives to put oxygen in gasoline. There is ethanol; there is MTBE, which is an ether made from methanol; there will be in the near future ETBE, which is an ether made from ethanol; and there are others.

Big oil says that oxygenated reformulated gasoline will require a $1 billion-a-year subsidy. Presumably they refer to the 6-cent-per-gallon ethanol exemption from the Federal gasoline excise tax.

That's a sham argument, Madam Speaker. For one thing, you don't have to use ethanol to meet the requirements. You can use other additives like MTBE.

For another thing, I hope you will excuse me if I'm a little skeptical about the tears big oil is shedding for the Federal Treasury.

Do you remember the oil depletion allowance?

Do you remember intangible drilling costs?

Now, I don't begrudge oil those tax benefits. I've voted for bills that contained them. I think it's necessary to have a strong domestic oil industry.

But I think it's a little much for one of the most heavily subsidized industries in America to make a public show of wringing its hands in worry over what subsidies are doing to the deficit.

It's no secret that I'm a supporter of ethanol. We don't have any ethanol plants in Arkansas right now, and we don't grow a lot of corn. But we're always looking for new products, new markets for those products, and new value-added agricultural industry.

Ever since the energy crises of the 1970's, I've worked to shift a piece of the $100 billion motor fuels market away from the oil fields of the Middle East to the grain fields of the middle south.

I've seen estimates that the other body's reformulated gasoline language, which is similar to the Richardson-Madigan amendment, would increase ethanol demand by more than 2 billion gallons over current levels. If feed grains are at $2.50 a bushel, that's more than $2 billion a year in new farmgate income by the turn of the century.

And, because the oxygen content of the Senate proposal is so low, there might be an even bigger market for makers of MTBE and other oxygenates. That means a shot in the arm for the natural gas and coal-producing regions of our great Nation, and believe me, they need it.

I believe in reformulated gasoline because I think it's wrong that the big oil companies have done everything they can to keep Arkansas farmers out of the fuel business.

I believe in reformulated gasoline because I think it's wrong that a commuter in Los Angeles, CA, has a 1-in-10,000 chance of contracting leukemia just from sitting in traffic and inhaling benzene fumes for up to 2 hours a day.

I believe in reformulated gasoline because I think it's time that we displaced some of that foreign oil in our gas tanks and did something about the fact that 40 percent of our trade deficit is due to our addiction to foreign oil.

In fact, if I had my wishes, we would be deciding on a mandatory oxygen content for all the Nation's gasoline today.

While we may not do so now, I predict that within 3 years this House will favorably consider such legislation. It will do so because oxygenated fuels are winners—winners for our environment, winners for our economy, and winners for our energy security.

Madam Speaker, there is one good thing we can say about this bill, and that is it does take a step in the right direction. It is long overdue, but it is limited. The effects of the bill are limited to nine nonattainment cities. There are more than 100 that do not attain the ozone standard in the law.

I will ask the gentleman from New Mexico [Mr. RICHARDSON] about the so-called opt-in provisions and what they mean to States that want to breathe clean air. Do we have the right, or do the States have the rights, to expand the scope of this bill?

Mr. RICHARDSON. Madam Speaker, will the gentleman yield?

Mr. ALEXANDER. I am happy to yield to the gentleman from New Mexico.

Mr. RICHARDSON. Madam Speaker, the answer to my colleague is "Yes." As the gentleman indicates, there is an opt-in provision that allows

any other nonattainment area to adopt these standards of its own free will and, subject to any domestic capacity, any State or locality may, in order to maintain attainment or just as a matter of general public policy, adopt these gasoline standards.

Madam Speaker, I thank the gentleman for his leadership over the years on this issue.

Mr. ALEXANDER. Madam Speaker, I rise in opposition to this rule.

Mr. QUILLEN. Madam Speaker, I yield such time as he may consume to the gentleman from California [Mr. DANNEMEYER].

REQUEST FOR REMOVAL OF NAME OF MEMBER AS COSPONSOR OF H.R. 3030

Mr. DANNEMEYER. Madam Speaker, I ask unanimous consent that my name be removed from the list of cosponsors of H.R. 3030.

The SPEAKER pro tempore [Mrs. SCHROEDER]. The bill has been reported. The gentleman's statement will appear in the RECORD.

Mr. QUILLEN. Madam Speaker, I yield 4 minutes to the gentleman from Pennsylvania [Mr. RITTER].

Mr. RITTER. Madam Speaker, I rise to oppose the rule.

This bill is the most significant regulatory instrument in history over industry, over transportation, and over energy and the jobs of the American workers that are included in those sectors of our economy.

I had an amendment that would have targeted the performance of the Clean Air Act Amendments of 1990, would have listed the top 25 air pollutants, worst first, would have listed EPA's cost in regulating them, would have listed the society's cost in regulating them, and then most importantly, to the Congress, to the public, it would have listed the benefits that we gained from these amendments. That amendment, unfortunately, was not accepted by the Rules Committee.

I had an amendment on clean coal. Madam Speaker, this is a scrubber bill. Scrubbers substitute a solid waste disposal problem for an air-pollution problem. Each 1,000-megawatt electric generating unit produces 1 square mile, 1 foot thick, of nasty sludge every single year. What happens to that? Clean coal reduces that new waste disposal problem.

The idea was to promote clean coal, to extend the deadline, to have a payback provision with interest; the air is cleaned up further. That amendment was not accepted either.

I had an amendment that would have not obsoleted, as Waxman-Lewis will do, obsolete the diesel engine in America. Our entire truck-based over-the-road transportation system is based primarily on heavy-duty diesel transport, and Waxman-Lewis cuts that off at the knees in spite of major new regulation on diesels in 1991 and the mandate for a smokeless diesel in 1994. That amendment was not allowed either.

I might say that Tauzin-Fields, the amendment to Waxman-Lewis, does much more to keep the heavy duty diesel engine both clean and competitive in our economy.

I want to say one last word on the Wise amendment. The Wise amendment is a wise amendment. We are spending in response to the amendments conceivably $250 billion over the next 5 years. For what real environmental benefits? Lord knows. Maybe very marginal environmental gain. But what we do know is it will cause significant dislocation amongst American manufacturing workers.

The Wise amendment puts out $50 million a year, $250 million total over 5 years. It is a drop in the bucket compared to the overall cost and the impact of this bill. I urge my colleagues to support the Wise amendment.

Mr. BONIOR. Madam Speaker, I yield 2 minutes to the gentleman from Indiana [Mr. SHARP].

Mr. SHARP. Madam Speaker, there are many difficult decisions to be made on the Clean Air Act. The one thing that is clear is we must decide if we are going to protect the public health.

Anyone who has observed this process or participated in it knows how extremely difficult it is to get 10 people, 30 people, or in our case, 435 people to come to a final decision on something this complex and this important.

The reason we have rules like this before us as we do on tax bills and on our environmental legislation is because we recognize that we cannot get a collective decision when we allow each and every intricate issue to be articulated and to tear us apart. Our sister body, the U.S. Senate, had great difficulty and missed their schedules by far as a result of a complex way in which they tried to proceed.

I think we are correct to do this.

I did want to correct the RECORD on one thing, that the clean-coal technology is not a research program, it is a demonstration program. It will go forward fundamentally as before. It will do not only retrofits, but it will also do repowering. It will be, as President Reagan insisted, part of our answer on acid rain.

What we have done is not restrict the program. What we have done is to say that eligibility shall depend on whether or not you have to take expensive actions under the Clean Air Act here.

□ 1110

I believe we will see the program accelerated as a result of requirements in this legislation, and I think that we want to see and guarantee that we advance our clean-coal technology in this country.

Mr. GORDON. Madam Speaker, for purposes of debate only, I yield 3 minutes to the gentleman from Ohio [Mr. TRAFICANT].

Mr. TRAFICANT. Madam Speaker, I am going to vote for the rule. I think the immediacy and the importance of this issue is such that it should be debated and brought to the floor. But the gentleman from Ohio [Mr. APPLEGATE] is going to bring to a vote the previous question, and those who are disgruntled should look very carefully at the measures of the gentleman from Ohio [Mr. APPLEGATE], which I will as well, and consider an opportunity for those who have been left out.

I appreciate the fact that my Buy American resolution was included and will be offered by the gentleman from Ohio [Mr. APPLEGATE] in the en bloc amendments. We are going to lose jobs through this measure and Congress should be aware today that we do not throw the baby out with the bath water. There may be massive job loss due to this bill.

In that regard I think that retrofitting and the expenditure by both the public and privatre sector should take a look at American-made goods and American-made products.

But I want to bring this down to the common level here. When I was a kid growing up in Youngstown, OH, right up the hill from the steel mills, my mother would go out on that little front porch twice a day and she would take that broom and sweep that soot off the porch.

Well, today there is no soot on those front porches. Today there are no steel mills in Youngstown, and, ladies and gentlemen, there is not even a Traficant home due to EPA, misguided trade laws and policies, and finally urban removal. That is urban removal, and that is an issue for another day.

Madam Speaker, I am cautioning the Members of this House to be careful with this bill, that we do not set in motion a policy and a program that is needed for America, but that devastates the economic infrastructure of the people who depend on livelihood the most.

I would also like to say that I appreciate the fact that we would at least encourage those individuals, those companies, those entities, those Government agencies and entities, to purchase American-made goods and services. I thank the committee and I thank my neighbor, the gentleman from Ohio [Mr. ECKART], for helping me in that process.

Mr. GORDON. Madam Speaker, for purposes of debate only, I yield 1 minute to the gentleman from New Mexico [Mr. RICHARDSON].

Mr. RICHARDSON. Madam Speaker, as the sponsor of the reformulated gasoline provision with my colleague, Mr. MADIGAN, I am pleased that a bi-

partisan committee agreement was reached on this critical issue so that it could be included in the committee amendment.

DESCRIPTION OF TODAY'S GASOLINE

The gasoline that we burn today is a complex mixture of toxic compounds and is responsible for over half of the Nation's toxic air pollution and much of our urban smog. In fact, today's gasoline is significantly more harmful than gasoline of a decade ago, containing more aromatic compounds and more volatile chemicals than ever before. The result is more fuel evaporation, more air pollution, and greater toxic exposure to the American public.

Currently, no meaningful standards govern the composition of gasoline. However, it does not have to be this way. Gasoline can be changed to a far more benign formulation while improving engine performance. Toxic and aromatic compounds can be replaced with much cleaner alcohols or alcohol derivatives such as methanol, ethanol, ethyl tertiary butyl ether [ETBE] and methyl tertiary butyl ether [MTBE] made by oil and chemical companies.

DESCRIPTION OF AMENDMENT: OZONE NONATTAINMENT

The Richardson-Madigan provision will require the 9 worst ozone nonattainment cities to sell clean gasoline that has been reformulated to remove ozone forming and toxic air pollutants. Other cities may opt-in as the program gets under way, however, EPA may delay the implementation dates to ensure that there is an ample domestic supply of reformulated gasoline.

DOES NOT MANDATE A RECIPE OR SO-CALLED GOVERNMENT GAS

The Richardson-Madigan provision does not mandate a "recipe" or so-called government gas, nor does it mandate ethanol. Instead the amendment establishes minium basic standards to reduce ozone forming and toxic air pollutants in gasoline. So long as equivalent or greater emissions reductions are achieved, oil companies are free to formulate their gasoline any way they choose.

In fact, Arco is already marketing a cleaner formulation of gasoline for the same price as regular gas in southern California. Shell, Marathon, Phillips, Conoco, and others are also reformulating gasoline at this time.

CARBON MONOXIDE NONATTAINMENT

The Richardson-Madigan provision would also require all 44 carbon monoxide nonattainment cities to sell gasoline containing a minimum of 2.7 percent oxygen to reduce carbon monoxide to acceptable levels. Those serious CO areas that fail to reduce CO to acceptable levels by the deadline would be required to sell oxygenated fuels containing 3.1 percent oxygen.

SIGNIFICANT HEALTH AND ENVIRONMENTAL BENEFITS

There are significant health and environmental benefits to be gained from reformulated gasoline. For example, during refueling or in stop and go traffic, gas station employees, motorists and pedestrians are exposed to dangerous levels of cancer causing toxics found in gasoline.

In fact, the American Lung Association estimates the annual health costs of automobile pollution range from $4.4 to $93.4 billion. The Richardson-Madigan provision requires a 15 percent reduction in toxic compound by 1994 and prohibits the dumping of these toxics in gasoline sold in attainment cities.

The Richardson-Madigan provision also requires a 15 percent reduction in ozone forming precursors by 1994. It is estimated that 20 percent of New York City's air pollution problems can be solved simply by cleaning up its gasoline. Additionally, by increasing the oxygen content of gasoline to 2.7 percent in CO nonattainment cities, it is estimated that carbon monoxide emissions can be reduced from between 15 and 34 percent.

SIGNIFICANT ENERGY, AGRICULTURAL AND TRADE POLICY BENEFITS

The Richardson-Madigan provision also has significant energy, agricultural, and trade policy benefits. Energy policy analysts have been concerned for years about our increasing reliance on OPEC—$60 billion of foreign oil and hundreds of millions of dollars of aromatic compounds are imported annually.

By replacing imported aromatics with domestically produced alcohols made from corn, wheat, or other crops, we provide an important boost to our midwestern farmers and reduce the need for farm price supports. According to the GAO, this new market could save the U.S. Treasury more than $1.2 billion now spent on farm price supports annually.

To ensure that we don't rely more heavily on foreign imports, the Richardson-Madigan provision provides waivers if there is insufficient domestic supply. In short, by reducing our reliance on imported oil and aromatic compounds, our balance of trade is sure to improve.

SIGNIFICANT CONSUMER AND AUTOMOTIVE BENEFITS

I would also highlight the consumer and automotive benefits of the Richardson-Madigan provision. The high levels of aromatic and olefins found in today's gasoline fouls engines, and creates deposits which lead to engine knocking.

By limiting the aromatic content of gasoline and requiring additives to prevent accumulation of deposits, the Richardson-Madigan provision will lead to longer and more satisfactory car performance. In fact, oxygenated fuels are recommended by General Motors to improve air quality, a policy Ford and Chrysler will soon endorse as well.

I would also point out that the Richardson-Madigan provision will discourage the purchase of unneeded octane. The recent GAO report on octane fraud indicated that despite hyping of high octane fuels, only a small percentage of new cars require fuels above 87 octane. The Richardson-Madigan provision will reduce the emphasis on octane rating and focus on producing cleaner gasoline to improve engine performance, the public health and the environment.

SIGNIFICANT ECONOMIC AND ENVIRONMENTAL BENEFITS

In closing, the Richardson-Madigan reformulated gasoline provision is environmentally and economically cost effective. Older, precatalytic cars are a significant portion of the emissions inventory, yet they cannot be retrofitted with pollution controls.

By cleaning up gasoline, our provision helps reduce pollution from all vehicles, including the oldest and dirtiest cars. Needed emission reductions can be achieved for only a few pennies per gallon, rather than ratcheting down on small stationary sources like bakeries, dry cleaners, and other small businesses with minimal environmental benefits.

REBUTTALS TO OIL COMPANY ARGUMENTS AGAINST THE RICHARDSON-MADIGAN AMENDMENT

Argument: The amendment mandates a recipe for reformulated gasoline.

Rebuttal: The Richardson-Madigan amendment establishes minimum standards to reduce ozone forming and toxic compounds. So long as equivalent or greater emissions reductions are achieved, oil companies are free to formulate their fuels any way they choose.

Argument: The amendment is tantamount to an ethanol mandate.

Rebuttal: There are seven alcohol and ether blends or oxygenates that can provide the oxygen required in the Richardson-Madigan amendment, including methyl tertiary butyl ether [MTBE] made from oil and chemical companies.

Argument: The amendment will decrease some pollution but increase others.

Rebuttal: The Richardson-Madigan amendment expressly prohibits a fuel from being certified for sale if it results in increased nitrogen oxide emissions.

Argument: There will not be enough capacity to meet demand.

Rebuttal: If there is insufficient domestic capacity to meet demand, the Richardson-Madigan amendment provides for a series of waivers.

Argument: Consumers won't buy reformulated gasoline.

Rebuttal: Consumers prefer the Richardson-Madigan reformulated gasoline amendment because it reduces the aromatic content of gasoline which fouls engines, creates engine deposits, and causes engine knocking.

Argument: The amendment will cost billions.

Rebuttal: The Congressional Research Service, and other independent analysts estimate that gasoline can be reformulated for only a few pennies per gallon.

---

TALKING POINTS IN SUPPORT OF THE RICHARDSON-MADIGAN AMENDMENT

RICHARDSON-MADIGAN AMENDMENT

Our amendment carefully tracks the Dachle-Dole-Harkin Amendment that passed the Senate by an overwhelming vote of 69 to 30. There are two important differences:

Our amendment strengthens the legislation in terms of reducing allowable benzene, a potent carcinogen, in gasoline. It also calls for greater reductions in air toxics as well as a more demanding schedule for reducing ozone levels.

Our amendment provides the oil industry with the flexibility they seek. EPA is required to approve other gasoline formulations that will result in equal to or greater reductions than will be achieved by the formulation prescribed by our amendment. We also provide the oil industry with the flexibility to average aromatic levels in reaching the limits established by legislation.

BTX—BENZENE, TOLUENE, AND XYLENE

When lead was phased out of gasoline, the oil companies turned to the aromatics, BTX, to regain the lost octane. They had other options:

They could have turned to the oxygenates: methanol, ethanol, Oxinol and other formulations—instead they fought the entry of these competitive fuels into their market, using questionable and allegedly illegal tactics. They now face litigation in Federal court for their actions.

They could have practiced "truth in advertising," accepting the reality they already knew—they were overselling octane to the disadvantage of the consumer and the environment while boosting profits. They could have cut back on their high octane gasoline "hype" and reduced the flow of polluting aromatics into gasoline with no loss of performance and with real economic and environmental benefits to the driving public.

BTX, combined with the olefins, foul the engine, the catalyst, and the environment. That is why General Motors and others join with the Congress in calling for a reduction in aromatics to 25%.

The removal of the cancer-causing agent benzene, called for in our amendment, is not enough to reduce the cancer causing effects of BTX in gasoline. There is a double whammy—some toluene and xylene convert to benzene in the combustion process.

The only answer is to reduce the levels of these troublesome chemicals in gasoline. Our amendment calls for these reductions.

GOVERNMENT GAS

The oil industry first touted reformulated gasoline to defeat the Administration's call for alternative fuels. Having largely succeeded in that effort, they then turned their attack on clean gasoline formulations that evolved over years of careful research and investigation.

They might have succeeded in their campaign to label the efforts of the United States Congress as bumbling interference in the marketplace where it not for four important factors:

The congressional position was carefully researched, and arrived at only after needed compromises to protect the environment and the reasonable interest of all parties involved;

General Motors essentially endorsed the "government gasoline" formulation as being best for cars of the past and the future;

The oil companies have lost too much of their credibility with the American public and the Congress of the United States.

If the oil companies can produce a gasoline that is better economically and environmentally than the one defined by the Congress and suggested by General Motors, EPA has been instructed, by our amendment, to certify that gasoline.

Where is the "beef?"—A threat to market domination is not a beef that most Americans are going to take seriously.

COST OF THE RICHARDSON-MADIGAN AMENDMENT

API and the oil companies started out claiming that the Daschle-Dole-Harkin Amendment would cost $100 billion dollars, regardless of the number of cities involved. Regrettably, the Department of Energy threw their weight behind API in an attempt to defeat the Senate amendment. Now, after the "cold shower of reality" has cleared a few minds, the number is down to $20 billion or so.

I will stick with the numbers that EPA and the respected Information Resources Inc. developed at the outset—less than $4 billion. A recent commitment by Tenneco to build a 12,500 bbl/day MTBE plant in Texas at a price of roughly $175 million, verifies the EPA and IRI calculation. 22 plants of that size would provide all the oxygen needed to meet the requirements of our amendment.

Of equal importance is the octane "hype" pushed by the oil companies. They take between a nickel and a dime, on the average, for every gallon of gasoline sold in the country for octane that is "blown out the tailpipe" to the disadvantage of the environment and the driving public. That loss is more than enough to cover the cost of our amendment.

AUTO PERFORMANCE

The API is claiming that "government gas" will lead to poor engine performance.

If "government gas" is so bad, why is General Motors suggesting the same formulation? Maybe it is time to shift the clean up responsibility of the nation's air to the oil companies who have enjoyed a free ride while the auto industry, and the consumers, have had to pay the price for reducing tailpipe emissions by more than 90% while gasoline has gotten dirtier.

We also believe that it is time to bring to an end the "high octane" fix the oil companies have been using to pick up an extra nickel or dime, on average, for every gallon of gasoline sold. As levels of aromatics and olefins in gasoline rise to satisfy the octane "hype," the gasoline gets dirtier. Dirty gasoline means dirty combustion and dirty engines. Dirty engines require higher octane to prevent pinging. The driver is forced to buy a higher octane gasoline. The lost nickel turns into a lost dime, or maybe even a quarter.

ARCHER DANIELS MIDLAND (ADM)

ADM and Senator Dole have taken a lot of heat in the process of launching the transition from almost total dependence on fossil transportation fuels to a position of increased reliance on domestic and renewable energy. After a decade of head-on fighting, ethanol has a total of 0.8% of the gasoline market; its competitive oxygenate, MTBE, has a little more than one percent of the market. The way the oil companies have been "beefing," we are led to believe that a two or three percent loss of their gasoline market would be a disaster. Hardly.

ADM is a "smart" company and one of the better engineering firms in their line of business in the world. Had it not been for ADM, the oil companies would have long ago wiped out the emerging ethanol industry.

However, our amendment does not play into the ADM court. It brings competition to the gasoline marketplace. It brings competition to the ethanol marketplace. If ADM does not respond to the challenge of sharing their advantage to the benefit of the farm community, the environment, and the well being of the nation, the Congress will find ways of dealing with that level of power. The extension of the ethanol tax benefits is on the horizon. Let's see how the dust settles on the Clean Air Act. We can deal with the "arrogance of power misused" in due time.

ETHANOL TAX SUBSIDIES

There is endless talk about the tax subsidies the ethanol industry is receiving. It is true, the industry receives government support, and not all of that support has been used wisely. But:

Every emerging energy industry has received government support in one form or the other—the oil industry has continued to enjoy theirs for almost a century—the nuclear industry, only a generation or two. The ethanol industry is a new-comer. The methanol industry is complaining loudly that they are not getting their share. The methanol industry has two problems: they can ride on the coat tail subsidies of the oil and gas industries, and their biggest voice is based beyond the borders of the United States.

The subsidies received by the ethanol industry have been more than offset by savings in farm program outlays. The more agricultural products going into ethanol production, the less the subsidy needed to maintain a favorable price balance for the U.S. in the international marketplace.

Subsidies of any sort are troublesome. But, time, depleting oil reserves, and advancing technology make the support for ethanol a good bet for the country.

FOOD PRICES

API and the oil companies complain that an expanded ethanol industry will increase the price of food. Again, misleading:

The production of ethanol removes only the starch or sugar from the feedstock—all the protein, fiber, oils, nutrients, some of the starch, and the yeast added during fermentation, remain behind to enrich the by-product used for feed and food. The lost carbohydrate energy can be made up with less-cost hays or legumes.

Most of the grains we ship overseas, a big market for U.S. agricultural production, is used to feed animals for their protein market. We can keep the ethanol and the chemical value home and send them the valuable protein to mix with domestic carbohydrates—everybody wins.

The cost of food is mostly in processing and marketing. Check you loaf of bread, your box of cereal, or your pound of chicken/beef/pork and trace it back to the value of the feed grain. Of course there is a connection, but any loss as a result of ethanol production will be more than made up by a strengthened farm economy unencumbered by costly production limitations.

OZONE

API and the oil companies complain that the use of ethanol will add to the formation of surface level ozone. Again, misleading:

Ozone formation in a function is the amount of volatile organic compounds (VOCs) released to the environment as a result of evaporation of the fuel, or emitted in the exhaust; the photo-chemical reactivity of the released compounds; and the amount of carbon monoxide included in the release. Routinely, this combination of releases is less with an ethanol enriched gasoline as compared to "dirtier gasoline."

The oil companies, in their routine refusal to accept ethanol, have made no attempt to formulate a gasoline that could take advantage of the economic and environmental benefits of ethanol to reduce ozone. "Ear rings can't do much to a hog." On the other hand, ethanol can add very positive environmental (ozone) benefits to a properly formulated base gasoline.

Oil companies make no mention of the benefits of ETBE, an ether made from ethanol in the same manner that MTBE is made from methanol, in reducing ozone. MTBE outsells ethanol to the oil companies two to one, not for economic or environmental reasons, but because of oil company determination to control the market with fossil fuels. ETBE, because of its low vapor blending pressure, high octane, favorable distillation curve, and oxygen content, is probably the best gasoline component to bring down ozone levels.

CARBON MONOXIDE

At last, one issue where there is agreement all around. The oxygenates will reduce CO emissions from 5 to 34 percent depending on the amount of oxygen in the resulting fuel and the vintage of the car. The older the car and the greater the amount of oxygen, the greater the CO reduction. The newer the car and the lower the oxygen content, the less CO benefit.

Even with the most modern car, the level of oxygen in our amendment should lead to a 15-20 percent reduction in carbon monoxide.

NITROGEN OXIDES

More than 75 percent of the air we and our engines burn is made of nitrogen. When that nitrogen is subjected to high temperatures (over 1000 degrees fahrenheit), that nitrogen is converted into nitrogen oxides—$NO_x$. That $NO_x$ combines with ozone precursors like VOCs and CO to form ozone.

API and the oil companies claim that ethanol-enriched gasoline increases $NO_x$ levels. It all depends:

The oxygen in ethanol leans out the burn and less air is required to properly burn the fuel. Less air, less nitrogen, less $NO_x$. But, that depends on engine settings.

Ethanol cools the combustion process. Less temperature, less $NO_x$. But, that depends on engine settings.

So, it all depends on how the gasoline is formulated and how the running parameters of the engine are set.

Actually, the issue of $NO_x$ is moot; my amendment does not allow for any increase in $NO_x$.

If the oil companies, the automakers, and the oxygenated fuels (ethanol, methanol, ETBE, ETBE) industries would work together they could formulate a fuel and design engines to reduce $NO_x$.

METHANOL

My amendment opens up the competition in the gasoline market. Methanol will play a major role in providing the required level of oxygen.

Of the seven EPA approved oxygenated fuel blends, five contained methanol in some form.

Currently, about twice as much MTBE (made from methanol) as ethanol is used by the oil companies for octane and oxygen.

It is estimated that about twice as much methanol as ethanol will be used to meet the oxygen requirement of the legislation and to provide the octane lost as the oil companies phase down aromatic levels in their gasoline.

HYDROCARBON RELEASES

API claims that the ethanol-enriched gasoline will increase levels of hydrocarbons releases. Again, misleading:

Repeated studies over the years show conclusively that ethanol-enriched gasoline reduces the release of unburned hydrocarbons;

Ethanol, when added to gasoline, does increase the vapor pressure of the mixture. Evaporative emissions will increase: However, if a favorable blendstock is provided by the oil companies for ethanol, the resulting vapor pressure will not add to evaporative emissions;

The ethers, ETBE and MTBE, actually reduce vapor pressures, evaporative emissions, and unburned hydrocarbons.

It is the same story—if the oil companies are willing to accept the alcohols and the ethers, accommodations can be made to reduce hydrocarbon emissions.

LOSS TO THE HIGHWAY TRUST FUND

There is no question that the marketing of ethanol enriched gasoline enjoys an excise gasoline tax exemption. The question is, who gets that benefit? Let us say that:

The rack price of unleaded regular gasoline is $.60 a gallon. As a base, ethanol, when blended with gasoline, replaces that fuel on a gallon per gallon basis—it is worth $.60;

The rack price of octane is $.02 an octane point. Ethanol, on the average, provides 2.5 points of octane when one gallon is blended with nine gallons of gasoline—the ethanol is worth $.50 as an octane additive;

$.60 plus $.50 is $1.10, about what ethanol is worth in today's market.

Where does the $.60 a gallon excise tax credit per gallon of ethanol go? It goes to the oil companies that blend the ethanol into gasoline for the market.

Again, cooperation between the oil companies and the ethanol industry could lead to a phase down of the excise tax exemption that comes out of the highway trust fund.

As to the future—ETBE will not receive the excise tax exemption and it will not impact on the highway trust fund. It receives a tax credit that is: (1) Taxable; (2) comes out of the general revenues; and (3) a benefit to the taxpayer in that it reduces the cost of farm program outlays by an amount greater than the cost of the benefit (the GAO and CRS have repeatedly verified these calculations).

ETHANOL MANDATE

There are seven EPA approved oxygenated fuels to meet the requirements of my amendment. Two more are being considered by EPA and will likely be approved.

The process of approving oxygenates for inclusion in gasoline by EPA will continue.

Further, if oil companies can demonstrate that their formulation (containing no oxygen or less oxygen than called for in my amendment) is equal to or better than the specified formulation, EPA must certify that new oil company gasoline formulation.

My amendment opens up the marketplace for a wide variety of high-grade liquid fuels. The API is fighting to maintain exclusive control of the marketplace on its terms.

RURAL IMPACT

For too long, American farmers have been paid not to grown crops or have been forced off the land due to a lack of markets for their crops.

This legislation will provide new markets for 300 million to 800 million bushels of corn (or corn equivalents—milo, sweet sorghum, potatoes, barley, sugar belts, sugar cane, wheat, and variety of waste streams) annually. These new markets will permit reductions in farm program outlays with major savings to the taxpayers.

Further, technology now exists to integrate fully ethanol production with a variety of food, feed, fiber, fuel, fertilizer, and chemical feedstock processes. This provides major opportunities to take advantages of the economies of integration, making the economies of scale less important.

These integrated systems can be located right in farm country, taking the value added where it will do the most good for the rural economy, with major economic impact multiplier benefits to the entire nation.

These integrated systems, taking advantage of a synergistic relationship with nature, will permit increased agricultural production while actually enhancing the environment.

My amendment will provide a needed "jump start" for the rural economy.

POTENTIAL ETHANOL PRODUCTION

The production of ethanol in this country is limited only by the creativity and hard work of the American people.

Ethanol can be made from anything that can be fermented, including waste paper, agricultural waste, trees and grass. Ethanol can even by made from sewer sludge or animal manure.

What we have before us in the opportunity to turn to America's greatest resources—bountiful land, favorable weather conditions, and hard working and creative people—to clean up the nation's air, back us out of the oil barrel, and to revitalize some of our basic industries.

There will be no trouble providing the oxygenated fuel blends required by legislation through ethanol production and through the production of the other oxygenates approved by EPA. The phase-in schedule, and limiting the requirements to nine cities, provides additional flexibility.

ALDEHYDE EMISSIONS

Aldehydes can cause a problem in that they are an irritant and contribute to ozone formation. However, modern engine and catalyst technology can deal with aldehyde emissions.

Combustion of methanol generally produces formaldehyde emissions. Ethanol causes acetaldehyde emissions which are less harmful and are less photochemically reactive than formaldehyde emissions.

The combustion of gasoline also causes aldehyde emissions.

Further, the ethers—MTBE and ETBE—(the preferred forms of oxygenates) largely eliminate concern over aldehyde emissions.

WHAT DO THE OIL COMPANIES SAY

They are saying a lot of things bad about "government gas," about ethanol, and about the "ethanol mandate."

They have hired "research firms" to prove their points using incorrect assumptions and questionable proceedures.

Underneath it all they are saying "leave the transportation fuel market alone."

WHAT ARE THE AUTO COMPANIES SAYING

General Motors has suggested a gasoline formulation essentially identical to the one proposed by my amendment.

General Motors recommends oxygenated fuels for clean air.

All automakers approve the use of ethanol blends.

Car are 90% cleaner than they were 20 years ago.

The automobile industry has assumed a disproportionate share of the burden of cleaning-up vehicle and fuels related emissions.

For a long time the auto industry have been asking the oil companies to provide the driving public with cleaner gasoline.

That is what my amendment does.

Mr. QUILLEN. Madam Speaker, I yield 2 minutes to the gentleman from Texas [Mr. FIELDS].

Mr. FIELDS. Madam Speaker, as many of my colleagues are aware, I have worked for several months with other members of the Energy and Commerce Committee to craft reasonable clean air language on alternative fuels. Mobile sources contribute significantly to the smog problem in Houston. TX, as well as other cities across the country. It is imperative that not only automobile manufacturers, but also producers of motor fuels contribute to the clean up of these emissions.

Therefore, I strongly support mandating that cleaner burning gasolines be used in our dirtiest cities. The Hall-Fields amendment adopted by the Energy and Commerce Committee requires the use of clean-burning reformulated gasoline for existing vehicles, that is—old dirtier cars and trucks—in the nine worst ozone cities.

Congressman HALL and myself entered into an accommodation. As a sponsor of the amendment, I support it. It is the product of days of negotiations between committee members including Chairmen DINGELL and WAXMAN, Congressmen LENT, HALL, SYNAR, and TAUZIN. It is far from perfect—and I will expand on that in a minute—but it is a compromise reached, I thought, in good faith by all parties. It is my understanding that input in the negotiations was received by all interested parties including farm groups and the petroleum industry.

That is why I cannot understand why the gentleman from New Mexico is upset that the compromise is included in the committee amendment as was intended.

Speaker FOLEY made it clear that he wanted clean air legislation resolved by this body with minimal controversy, and in a timely manner. The leadership told the Energy and Commerce Committee that it wanted issues worked out so that we could vote on this legislation prior to the Memorial Day recess. Honoring the Speaker's request, numerous controversial issues were negotiated and resolved by committee members and folded into the committee amendment. That is where the amendment belongs. And that's why our compromise is there.

Therefore, I want to repeat—our accommodation is a compromise. It is not opposed by the petroleum industry. All of the gentlemen's efforts to make it sound controversial aside—it is not controversial. I strongly urge all of my Republican colleagues to support this aspect of the committee amendment.

With that said, I would be remiss if I did not discuss the major elements of this proposal which must be improved in conference.

First, there is no test for feasibility. We have no idea if a gasoline can be made that meets the stringent standards required by the amendment, especially in the outyears. There is no scientific data to determine the ability to achieve the hazardous air pollutant reductions. The amendment gives EPA no authority to test for feasibility, or adjust the requirements if the fuel cannot be made.

Second, although the formula from reformulated gasoline can be met by an equivalent fuel, we are still pushing a formula. This makes no sense. Congress should establish a goal for how clean we want the fuel to be and leave it to the experts to meet that goal in the most efficient and cost-effective manner.

Third, there is no system to determine the availability of components needed for these fuels. For example, requiring 44 mainly large cities to sell only fuel containing 2.7 percent oxygen by 1992 is most likely impossible. There is not enough ethanol and ether capacity in this country to supply that much oxygen in such a short timeframe. There should be waivers in the carbon monoxide nonattainment program for lack of domestic capacity as well as for implementation of more cost-effective alternative measures.

Finally, this amendment offers no opportunity to determine the environmental impact of this complex and costly new program. The auto and petroleum industries are currently engaged in a massive research program to determine the cleanest fuel/vehicle combination possible. This amendment ignores that research. I believe that independent experts should be allowed to examine current and future data in this area and that EPA should be required to adjust the program as needed based on this review.

In closing, Madam Speaker, this matter has been negotiated and agreed to by the members of the Energy and Commerce Committee and it should not be offered separately, its not controversial. I urge all of my colleagues to support it and work with me to make needed improvements as we move to conference.

Mr. GORDON. Madam Speaker, for purposes of debate only, I yield 1 minute to the gentleman from Louisiana [Mr. TAUZIN].

Mr. TAUZIN. Madam Speaker, let me commend the Committee on Rules. This is an extraordinarily complex bill, and there are some extraordinarily controversial issues yet remaining to be settled on this House floor. The Committee on Rules has looked at those differences of opinion and has accorded as under this rule an opportunity to have those issues settled within the context of this rule.

For example, there is a major difference of opinion over whether or not in the alternative fuels section we ought to have incentives driving the marketplace for cleaner cars and mandates on fleets, or whether we ought to mandate Detroit to produce cars that may or may not be sold. That is a legitimate and yet controversial issue. The Committee on Rules has provided us ample opportunity to settle that debate on the floor.

In addition, we will be settling issues dealing with CFC's, dealing with an issue dealing with getting information on whether or not we have global warming problems. We will settle the issue of whether or not we want to compensate workers displaced.

We are providing in effect in this rule ample opportunity to settle those issues which we did not come to closure on and the major work that the Committee on Energy and Commerce did. It is with confidence I support this rule and urge Members to support it.

Mr. QUILLEN. Madam Speaker, I yield myself the balance of my time to close debate on this side.

As I said, this bill has a very high sounding name, "Clean Air." Who can be against it? But look underneath. It is not what it is purported to be. There are many inequities. But I am convinced that negotiations between the gentleman from Michigan [Mr. DINGELL] and the gentleman from California [Mr. WAXMAN] and others produced the best that was possible under the circumstances.

Madam Speaker, I urge my colleagues to look very carefully before voting for the rule.

I yield back the balance of my time.

The SPEAKER pro tempore (Mrs. SCHROEDER). The gentleman from Tennessee [Mr. QUILLEN] has utilized all of his time.

Mr. GORDON. Madam Speaker, for purposes of debate only, I yield 1 minute to the gentleman from California [Mr. WAXMAN].

Mr. WAXMAN. Madam Speaker, I rise to support the rule and to compli-

ment the members of the Committee on Rules in drafting this document that is before us. There were many demands placed on the Committee on Rules. A lot of people had a lot of different amendments, moving in different directions. There were many disputes that had to be resolved in a very short timeframe.

Madam Speaker, the rule that is before us was drafted with a great deal of care and very conscientious effort, fair to everybody. It will give us an orderly way to proceed with this most important bill in the national interest.

Madam Speaker, I commend the Committee on Rules. I look forward to supporting the rule and urge all Members to join me in doing so.

Mr. GORDON. Madam Speaker, I have no further requests for time, I yield back the balance of my time, and I move the previous question on the resolution.

The SPEAKER pro tempore. The question is on ordering the previous question.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. APPLEGATE. Madam Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 312, nays 106, not voting 14, as follows:

□ 1141

The Clerk announced the following pair:

On this vote:

Mr. Nelson for, with Mr. Craig against.

Messrs. HUTTO, PACKARD, and SCHULZE changed their vote from "yea" to "nay."

Messrs. HENRY, CAMPBELL of California, BEREUTER, and PARRIS changed their vote from "nay" to "yea."

So the previous question was rendered.

The result of the vote was announced as above recorded.

PARLIAMENTARY INQUIRY

Mr. LENT. Madam Speaker, I have a parliamentary inquiry.

The SPEAKER pro tempore (Mrs. SCHROEDER). The gentleman will state his parliamentary inquiry.

Mr. LENT. Madam Speaker, am I correct that the next vote, or the vote that is about to occur will be on the rule allowing consideration of H.R. 3030, President Bush's clean air bill?

The SPEAKER pro tempore. The gentleman is correct.

Mr. MATSUI. Mr. Speaker, I join my colleagues in supporting passage of House Resolution 399, the rule for the Clean Air Act Amendments of 1990.

The Clean Air Act was last amended by Congress in 1977. That fact in and of itself is an embarrassment to the institution. The technological advances industry has developed in the last 13 years, the newly discovered air contaminants that are unregulated by current law, and the inability of the 1977 amendments to correct some of its intended targets make enactment of new clean air legislation essential.

No State is in greater need of the environmental relief contained in this package more than my home State of California. The major urban air quality problem in California is ozone smog. Los Angeles is the only extreme violator of ozone standards in the country; furthermore, we have one severe violator in the city of San Diego and three serious transgressors, including my home city of Sacramento. This legislation contains the mechanisms, through the use of clean fuels and clean-fuel vehicles in non-attainment areas, to make wholesale reductions in ozone smog on a fixed timetable.

But California is not merely a collection of urban areas. Indeed, among the State's most

valuable resources are its many national parks and wilderness areas. The bill as amended by the proposed Energy and Commerce Committee amendment will establish programs to remedy the problem of regional haze which is beginning to plague western parks.

Finally, California's beautiful and valuable coastal regions will receive additional protection from atmospheric emissions from offshore oil and gas platforms.

This is not a flawless piece of legislation. But like the membership of the body which has produced it, this bill represents a confluence of regional and ideological interests. Furthermore, the rule we are considering is attentive to the dynamics of the contrasting views of the House on this issue. The rule, like the legislation it will restrict, is a delicate balancing act. Hopefully, it will yield a clean air bill that will improve the health of the environment as well as our Nation's citizens.

In short, Mr. Speaker, this bill has been a long time in coming and we must not let this opportunity escape us. This package will undoubtedly be the crowning achievement in a year of increased environmental awareness, and I urge my colleagues to support passage of the rule to allow for its immediate consideration.

The SPEAKER pro tempore. The question is on the resolution, as modified.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. STARK. Madam Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device; and there were—yeas 317, nays 105, answered not voting 10, as follows:

[Roll No. 130]

NOT VOTING—10

| | | |
|---|---|---|
| Barton | Lukens, Donald | Thomas (CA) |
| Craig | McCloskey | Watkins |
| Flippo | Nelson | |
| Frenzel | Robinson | |

The Clerk, announced the following pairs:

On this vote:

Mr. Nelson for, with Mr. Craig against.

Mr. Robinson for, with Mr. Thomas of California against.

Mr. LEWIS of California changed his vote from "nay" to "yea."

So the resolution, as modified, was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

## SUPPLEMENTAL REPORT ON RESOLUTION PROVIDING FOR FURTHER CONSIDERATION OF H.R. 3030, CLEAN AIR ACT AMENDMENTS OF 1990

Mr. BONIOR, from the Committee on Rules, submitted a supplemental privileged report (Rept. No. 101-494, part II) on the resolution (H. Res. 399) providing for the further consideration of the bill (H.R. 3030) to amend the Clean Air Act to provide for the attainment and maintenance of the national ambient air quality standards, which was referred to the House Calendar and ordered to be printed.

## PARLIAMENTARY INQUIRY

Mr. WALKER. Madam Speaker, I have a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state his parliamentary inquiry.

Mr. WALKER. Madam Speaker, the report that has now been filed pursuant to the rule is the only report that would be permitted under the rule, is that correct?

The SPEAKER pro tempore. That is correct.

Mr. WALKER. Madam Speaker, I thank the Chair.

## CLEAN AIR ACT AMENDMENTS OF 1990

The SPEAKER pro tempore. Pursuant to House Resolution 399 and rule XXIII, the Chair declares the House in the Committee of the Whole House on the State of the Union for the further consideration of the bill, H.R. 3030.

□ 1204

IN THE COMMITTEE OF THE WHOLE

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 3030) to amend the Clean Air Act to provide for the attainment and maintenance of the national ambient air quality standards, with Mr. HOYER in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee of the Whole rose on Monday, May 21, 1990, all time for general debate had expired.

Pursuant to the rule, the amendment in the nature of a substitute recommended by the Committee on Energy and Commerce now printed in the bill shall be considered as an original bill for the purpose of amendment and is considered as having been read.

The text of the committee amendment in the nature of a substitute is as follows:

H.R. 3030

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

*SECTION 1. SHORT TITLE, REFERENCE, AND TABLE OF CONTENTS.*

*(a) SHORT TITLE.—This Act may be cited as the "Clean Air Act Amendments of 1990".*

*(b) REFERENCE.—Whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Clean Air Act.*

*TABLE OF CONTENTS*

*TITLE I—PROVISIONS FOR ATTAINMENT AND MAINTENANCE OF NATIONAL AMBIENT AIR QUALITY STANDARDS*

*Sec. 101. General planning requirements.*
*Sec. 102. General provisions for nonattainment areas.*
*Sec. 103. Additional provisions for ozone nonattainment areas.*
*Sec. 104. Additional provisions for carbon monoxide nonattainment areas.*
*Sec. 105. Additional provisions for particulate matter (PM-10) nonattainment areas.*
*Sec. 106. Additional provisions for areas designated nonattainment for sulfur oxides, nitrogen dioxide, and lead.*
*Sec. 107. Provisions related to Indian tribes.*
*Sec. 108. Miscellaneous provisions.*
*Sec. 109. Interstate pollution.*
*Sec. 110. Conforming amendments.*

*TITLE II—PROVISIONS RELATING TO MOBILE SOURCES*

*Sec. 201. Clean fuel requirements.*
*Sec. 202. Emission standards for certain motor vehicles.*
*Sec. 203. Conforming amendment.*
*Sec. 204. Carbon monoxide emissions at cold temperatures.*
*Sec. 205. Evaporative emissions.*
*Sec. 206. Control of vehicle refueling emissions.*
*Sec. 207. Mobile source-related air toxics.*
*Sec. 208. Emission control diagnostics systems.*
*Sec. 209. Auto warranties.*
*Sec. 210. Heavy-duty trucks.*
*Sec. 211. Nonroad engines and vehicles.*
*Sec. 212. Vehicle certification.*
*Sec. 213. In-use compliance—recall.*
*Sec. 214. Compliance program fees.*
*Sec. 215. Information collection.*
*Sec. 216. Fuel volatility.*
*Sec. 217. Diesel fuel sulfur content.*
*Sec. 218. Lead substitute gasoline additives.*
*Sec. 219. Nonroad fuels.*
*Sec. 220. Fuel waivers.*
*Sec. 221. Market-based alternative controls.*
*Sec. 222. State fuel regulation.*
*Sec. 223. Enforcement.*
*Sec. 224. High altitude testing.*
*Sec. 225. Technical amendments.*

*TITLE III—HAZARDOUS AIR POLLUTANTS*

*Sec. 301. Technology-based standards for hazardous air pollutants.*

*TITLE IV—PERMITS*

*Sec. 401. Permits.*

*TITLE V—ACID DEPOSITION CONTROL*

*Sec. 501. Acid deposition control.*
*Sec. 502. New source performance standards.*

*TITLE VI—PROVISIONS RELATING TO ENFORCEMENT*

*Sec. 601. Section 113 enforcement.*
*Sec. 602. Compliance certification.*
*Sec. 603. Administrative enforcement subpoenas.*
*Sec. 604. Enforcement of administrative orders.*
*Sec. 605. Scope of emergency orders.*
*Sec. 606. Contractor listings.*
*Sec. 607. Judicial review pending reconsideration of regulation.*
*Sec. 608. Citizen suits.*
*Sec. 609. Enhanced implementation and enforcement of new source review requirements.*
*Sec. 610. Movable stationary sources.*
*Sec. 611. Enforcement of new titles of the Act.*

*TITLE VII—MISCELLANEOUS PROVISIONS*

*Sec. 701. Grants for support of air pollution planning and control programs.*
*Sec. 702. Annual report repeal.*
*Sec. 703. $NO_x$ and VOC study.*
*Sec. 704. Review and revision of criteria and standards.*
*Sec. 705. Air pollutant release investigation board.*
*Sec. 706. Emission factors.*
*Sec. 707. Land use authority.*
*Sec. 708. Authorization.*

*TITLE VIII—OTHER PROVISIONS*

*Sec. 801. Establishment of program to monitor and improve air quality in regions along the border between the United States and the United States of Mexico.*
*Sec. 802. Equivalent air quality controls among trading nations.*
*Sec. 803. Report on costs and benefits.*
*Sec. 804. United States-Mexico office within EPA.*

*TITLE I—PROVISIONS FOR ATTAINMENT AND MAINTENANCE OF NATIONAL AMBIENT AIR QUALITY STANDARDS*

*Sec. 101. General planning requirements.*
*Sec. 102. General provisions for nonattainment areas.*
*Sec. 103. Additional provisions for ozone nonattainment areas.*
*Sec. 104. Additional provisions for carbon monoxide nonattainment areas.*
*Sec. 105. Additional provisions for particulate matter (PM-10) nonattainment areas.*
*Sec. 106. Additional provisions for areas designated nonattainment for sulfur oxides, nitrogen dioxide, and lead.*
*Sec. 107. Provisions related to Indian tribes.*
*Sec. 108. Miscellaneous provisions.*
*Sec. 109. Interstate pollution.*
*Sec. 110. Conforming amendments.*

*SEC. 101. GENERAL PLANNING REQUIREMENTS.*

*(a) AREA DESIGNATIONS.—Section 107(d) (42 U.S.C. 7407(d)) is amended to read as follows:*

*"(d) DESIGNATIONS.—*

*"(1) DESIGNATIONS GENERALLY.—*

*"(A) SUBMISSION BY GOVERNORS OF INITIAL DESIGNATIONS FOLLOWING PROMULGATION OF NEW OR REVISED STANDARDS.—By such date as the Administrator may reasonably require, but not later than 1 year after promulgation of a new or revised national ambient air quality standard for any pollutant under section 109, the Governor of each State shall (and at any other time the Governor of a State deems appropriate the Governor may) submit to the Administrator a list of all areas (or portions thereof) in the State, designating as—*

*"(i) nonattainment, any area that does not meet (or that contributes to ambient air quality in a nearby area that does not meet) the national primary or secondary ambient air quality standard for the pollutant,*

*"(ii) attainment, any area (other than an area identified in clause (i)) that meets the national primary or secondary ambient air quality standard for the pollutant, or*

*"(iii) unclassifiable, any area that cannot be classified on the basis of available information as meeting or not meeting the national primary or secondary ambient air quality standard for the pollutant.*

*The Administrator may not require the Governor to submit the required list sooner than 120 days after promulgating a new or revised national ambient air quality standard.*

*"(B) PROMULGATION BY EPA OF DESIGNATIONS.—(i) Upon promulgation or revision of a national ambient air quality standard, the Administrator shall promulgate the designations of all areas (or portions thereof) submitted under subparagraph (A) as expeditiously as practicable, but in no case later than 2 years from the date of promulgation of the new or revised national ambient air quality standard. Such period may be extended for up to one year in the event the Administrator has insufficient information to promulgate the designations.*

*"(ii) In making the promulgations required under clause (i), the Administrator may make such modifications as the Administrator deems necessary to the designations of the areas (or portions thereof) submitted under subparagraph (A) (including to the boundaries of such areas or portions thereof). Whenever the Administrator intends to make a modification, the Administrator shall notify the State and provide such State with an opportunity to demonstrate why any proposed modification is inappropriate. The Administrator shall give such notification no later than 120 days before the date the Administrator promulgates the designation, including any modification thereto. If the Governor fails to submit the list in whole or in part, as required under subparagraph (A), the Administrator shall promulgate the designation that the Administrator*

deems appropriate for any area (or portion thereof) not designated by the State.

"(iii) If the Governor of any State, on the Governor's own motion, under subparagraph (A), submits a list of areas (or portions thereof) in the State designated as nonattainment, attainment, or unclassifiable, the Administrator shall act on such designations in accordance with the procedures under paragraph (3)(B) (relating to redesignation).

"(iv) A designation for an area (or portion thereof) made pursuant to this subsection shall remain in effect until the area (or portion thereof) is redesignated pursuant to paragraph (3) or (4).

"(C) DESIGNATIONS BY OPERATION OF LAW.—(i) Any area designated with respect to any air pollutant under the provisions of paragraph (1) (A), (B), or (C) of this subsection (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) is designated, by operation of law, as a nonattainment area for such pollutant within the meaning of subparagraph (A)(i).

"(ii) Any area designated with respect to any air pollutant under the provisions of paragraph (1)(E) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) is designated by operation of law, as an attainment area for such pollutant within the meaning of subparagraph (A)(ii).

"(iii) Any area designated with respect to any air pollutant under the provisions of paragraph (1)(D) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) is designated, by operation of law, as an unclassifiable area for such pollutant within the meaning of subparagraph (A)(iii).

"(2) PUBLICATION OF DESIGNATIONS AND REDESIGNATIONS.—(A) The Administrator shall publish a notice in the Federal Register promulgating any designation under paragraph (1) or (5), or announcing any designation under paragraph (4), or promulgating any redesignation under paragraph (3).

"(B) Promulgation or announcement of a designation under paragraph (1), (4) or (5) shall not be subject to the provisions of sections 553 through 557 of title 5 of the United States Code (relating to notice and comment), except nothing herein shall be construed as precluding such public notice and comment whenever possible.

"(3) REDESIGNATION.—(A) Subject to the requirements of subparagraph (E), and on the basis of air quality data, planning and control considerations, or any other air quality-related considerations the Administrator deems appropriate, the Administrator may at any time notify the Governor of any State that available information indicates that the designation of any area or portion of an area within the State or interstate area should be revised. In issuing such notification, which shall be public, to the Governor, the Administrator shall provide such information as the Administrator may have available explaining the basis for the notice.

"(B) No later than 120 days after receiving a notification under subparagraph (A), the Governor shall submit to the Administrator such redesignation, if any, of the appropriate area (or areas) or portion thereof within the State or interstate area, as the Governor considers appropriate.

"(C) No later than 120 days after the date described in subparagraph (B), the Administrator shall promulgate the redesignation, if any, of the area or portion thereof, submitted by the Governor in accordance with subparagraph (B), making such modifications as the Administrator may deem necessary, in the same manner and under the same procedure as is applicable under clause (ii) of paragraph (1)(B), except that the phrase '60 days' shall be substituted for the phrase '120 days' in that clause. If the Governor does not submit, in accordance with subparagraph (B), a redesignation for an area (or portion thereof) identified by the Administrator under subparagraph (A), the Administrator shall promulgate such redesignation, if any, that the Administrator deems appropriate.

"(D) The Governor of any State may, on the Governor's own motion, submit to the Administrator a revised designation of any area or portion thereof within the State. Within 18 months of receipt of a complete State redesignation submittal, the Administrator shall approve or deny such redesignation. The submission of a redesignation by a Governor shall not affect the effectiveness or enforceability of the applicable implementation plan for the State.

"(E) The Administrator may not promulgate a redesignation of a nonattainment area (or portion thereof) to attainment unless—

"(i) the Administrator determines that the area has attained the national ambient air quality standard;

"(ii) the Administrator has fully approved the applicable implementation plan for the area under section 110(k);

"(iii) the Administrator determines that the improvement in air quality is due to permanent and enforceable reductions in emissions resulting from implementation of the applicable implementation plan and applicable Federal air pollutant control regulations and other permanent and enforceable reductions;

"(iv) the Administrator has fully approved a maintenance plan for the area as meeting the requirements of section 175A; and

"(v) the State containing such area has met all requirements applicable to the area under this Act.

"(F) The Administrator shall not promulgate any redesignation of any area (or portion thereof) from nonattainment to unclassifiable.

"(4) NONATTAINMENT DESIGNATIONS FOR OZONE, CARBON MONOXIDE AND PARTICULATE MATTER (PM–10).—

"(A) OZONE AND CARBON MONOXIDE.—(i) Within 120 days after the date of the enactment of the Clean Air Act Amendments of 1990, each Governor of each State shall submit to the Administrator a list that designates, affirms or reaffirms the designation of, or redesignates (as the case may be), all areas (or portions thereof) of the Governor's State as attainment, nonattainment, or unclassifiable with respect to the national ambient air quality standards for ozone and carbon monoxide.

"(ii) No later than 120 days after the date the Governor is required to submit the list of areas (or portions thereof) required under clause (i) of this subparagraph, the Administrator shall promulgate such designations, making such modifications as the Administrator may deem necessary, in the same manner, and under the same procedure, as is applicable under clause (ii) of paragraph (1)(B), except that the phrase '60 days' shall be substituted for the phrase '120 days' in that clause. If the Governor does not submit, in accordance with clause (i) of this subparagraph, a designation for an area (or portion thereof), the Administrator shall promulgate the designation that the Administrator deems appropriate.

"(iii) No nonattainment area may be redesignated as an attainment area under this subparagraph.

"(iv) Notwithstanding paragraph (1)(C)(ii) of this subsection, if an ozone or carbon monoxide nonattainment area located within a metropolitan statistical area or consolidated metropolitan statistical area (as established by the Bureau of the Census) is classified under part D of this title as a Serious, Severe, or Extreme Area, the boundaries of such area are hereby revised (on the date 45 days after such classification) by operation of law to include the entire metropolitan statistical area or consolidated metropolitan statistical area, as the case may be, unless within such 45-day period the Governor (in consultation with State and local air pollution control agencies) notifies the Administrator that additional time is necessary to evaluate the application of clause (v). Whenever a Governor has submitted such a notice to the Administrator, such boundary revision shall occur on the later of the date 8 months after such classification or 14 months after the date of the enactment of the Clean Air Act Amendments of 1990 unless the Governor makes the finding referred to in clause (v), and the Administrator concurs in such finding, within such period. Except as otherwise provided in this paragraph, a boundary revision under this clause or clause (v) shall apply for purposes of any State implementation plan revision required to be submitted after the date of the enactment of the Clean Air Act Amendments of 1990.

"(v) Whenever the Governor of a State has submitted a notice under clause (iv), the Governor, in consultation with State and local air pollution control agencies, shall undertake a study to evaluate whether the entire metropolitan statistical area or consolidated metropolitan statistical area should be included within the nonattainment area. Whenever a Governor finds and demonstrates to the satisfaction of the Administrator, and the Administrator concurs in such finding, that with respect to a portion of a metropolitan statistical area or consolidated metropolitan statistical area, sources in the portion do not contribute significantly to violation of the national ambient air quality standard, the Administrator shall approve the Governor's request to exclude such portion from the nonattainment area. In making such finding, the Governor and the Administrator shall consider factors such as population density, traffic congestion, commercial development, industrial development, meteorological conditions, and pollution transport.

"(B) PM–10 DESIGNATIONS.—By operation of law, until redesignation by the Administrator pursuant to paragraph (3)—

"(i) each area identified in 52 Federal Register 29383 (Aug. 7, 1987) as a Group I area (except to the extent that such identification was modified by the Administrator before the date of the enactment of the Clean Air Act Amendments of 1990) is designated nonattainment for PM–10;

"(ii) any area containing a site for which air quality monitoring data show a violation of the national ambient air quality standard for PM–10 before January 1, 1989 (as determined under part 50, appendix K of title 40 of the Code of Federal Regulations) is hereby designated nonattainment for PM–10; and

"(iii) each area not described in clause (i) or (ii) is hereby designated unclassifiable for PM–10.

*Any designation for particulate matter (measured in terms of total suspended particulates) that the Administrator promulgated pursuant to this subsection (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) shall remain in effect for purposes of implementing the maximum allowable increases in concentrations of particulate matter (measured in terms of total suspended particulates) pursuant to section 163(d), until the Administrator determines that such designation is no longer necessary for that purpose.*

*"(5) DESIGNATIONS FOR LEAD.—The Administrator may, in the Administrator's discretion at any time the Administrator deems appropriate, require a State to designate areas (or portions thereof) with respect to the national ambient air quality standard for lead in effect as of the date of the enactment of the Clean Air Act Amendments of 1990, in accordance with the procedures under subparagraphs (A) and (B) of paragraph (1), except that in applying subparagraph (B)(i) of paragraph (1) the phrase '2 years from the date of promulgation of the new or revised national ambient air quality standard' shall be replaced by the phrase '1 year from the date the Administrator notifies the State of the requirement to designate areas with respect to the standard for lead'.".*

*(b) GENERAL REQUIREMENTS FOR IMPLEMENTATION PLANS.—Section 110(a)(2) (42 U.S.C. 7410(a)(2)) is amended to read as follows:*

*"(2) Each implementation plan submitted by a State under this Act shall be adopted by the State after reasonable notice and public hearing. Each such plan shall—*

*"(A) include enforceable emission limitations and other control measures, means, or techniques (including economic incentives such as fees, marketable permits, and auctions of emissions rights), as well as schedules and timetables for compliance, as may be necessary or appropriate to meet the applicable requirements of this Act;*

*"(B) provide for establishment and operation of appropriate devices, methods, systems, and procedures necessary to—*

*"(i) monitor, compile, and analyze data on ambient air quality, and*

*"(ii) upon request, make such data available to the Administrator;*

*"(C) include a program to provide for the enforcement of the measures described in subparagraph (A), and regulation of the modification and construction of any stationary source within the areas covered by the plan as necessary to assure that national ambient air quality standards are achieved, including a permit program as required in parts C and D;*

*"(D) contain adequate provisions—*

*"(i) prohibiting, consistent with the provisions of this title, any source or other type of emissions activity within the State from emitting any air pollutant in amounts which will—*

*"(I) contribute significantly to nonattainment in, or interfere with maintenance by, any other State with respect to any such national primary or secondary ambient air quality standard, or*

*"(II) interfere with measures required to be included in the applicable implementation plan for any other State under part C to prevent significant deterioration of air quality or to protect visibility,*

*"(ii) insuring compliance with the applicable requirements of sections 126 and 115 (relating to interstate and international pollution abatement);*

*"(E) provide (i) necessary assurances that the State (or, except where the Administrator deems inappropriate, the general purpose local government or governments, or a regional agency designated by the State or general purpose local governments for such purpose) will have adequate personnel, funding, and authority under State (and, as appropriate, local) law to carry out such implementation plan (and is not prohibited by any provision of Federal or State law from carrying out such implementation plan or portion thereof), (ii) requirements that the State comply with the requirements respecting State boards under section 128, and (iii) necessary assurances that, where the State has relied on a local or regional government, agency, or instrumentality for the implementation of any plan provision, the State has responsibility for ensuring adequate implementation of such plan provision;*

*"(F) require, as may be prescribed by the Administrator—*

*"(i) the installation, maintenance, and replacement of equipment, and the implementation of other necessary steps, by owners or operators of stationary sources to monitor emissions from such sources,*

*"(ii) periodic reports on the nature and amounts of emissions and emissions-related data from such sources, and*

*"(iii) correlation of such reports by the State agency with any emission limitations or standards established pursuant to this Act, which reports shall be available at reasonable times for public inspection;*

*"(G) provide for authority comparable to that in section 303 and adequate contingency plans to implement such authority;*

*"(H) provide for revision of such plan—*

*"(i) from time to time as may be necessary to take account of revisions of such national primary or secondary ambient air quality standard or the availability of improved or more expeditious methods of attaining such standard, and*

*"(ii) except as provided in paragraph (3)(C), whenever the Administrator finds on the basis of information available to the Administrator that the plan is substantially inadequate to attain the national ambient air quality standard which it implements or to otherwise comply with any additional requirements established under this Act;*

*"(I) in the case of a plan or plan revision for an area designated as a nonattainment area, meet the applicable requirements of part D (relating to nonattainment areas);*

*"(J) meet the applicable requirements of section 121 (relating to consultation), section 127 (relating to public notification), and part C (relating to prevention of significant deterioration of air quality and visibility protection);*

*"(K) provide for—*

*"(i) the performance of such air quality modeling as the Administrator may prescribe for the purpose of predicting the effect on ambient air quality of any emissions of any air pollutant for which the Administrator has established a national ambient air quality standard, and*

*"(ii) the submission, upon request, of data related to such air quality modeling to the Administrator;*

*"(L) require the owner or operator of each major stationary source to pay to the permitting authority, as a condition of any permit required under this Act, a fee sufficient to cover—*

*"(i) the reasonable costs of reviewing and acting upon any application for such a permit, and*

*"(ii) if the owner or operator receives a permit for such source, the reasonable costs of implementing and enforcing the terms and conditions of any such permit (not including any court costs or other costs associated with any enforcement action),*

*until such fee requirement is superseded with respect to such sources by the Administrator's approval of a fee program under title IV;*

*"(M) provide for consultation and participation by local political subdivisions affected by the plan;*

*"(N) provide for establishment (consistent with the requirements of this Act) of a small source technical assistance entity that shall—*

*"(i) offer to audit the operations of small sources to determine compliance with all requirements of this Act or offer to refer small sources to qualified auditors;*

*"(ii) provide information on alternative technologies, including equipment, chemical products, and methods of operation, which will help reduce air pollution;*

*"(iii) facilitate lawful cooperation among small generators and other persons where such cooperation would further comply with this Act; and*

*"(O) no later than 4 years after the date of the enactment of the Clean Air Act Amendments of 1990, contain a permit program meeting the requirements of title IV.".*

*(c) ADDITIONAL PROVISIONS.—Section 110 (42 U.S.C. 7410) is amended by adding the following at the end thereof:*

*"(k) ENVIRONMENTAL PROTECTION AGENCY ACTION ON PLAN SUBMISSIONS.—*

*"(1) COMPLETENESS OF PLAN SUBMISSIONS.—*

*"(A) COMPLETENESS CRITERIA.—Within 9 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate minimum criteria that any plan submission must meet before the Administrator is required to act on such submission under this subsection. The criteria shall be limited to the information necessary to enable the Administrator to determine whether the plan submission complies with the provisions of this Act.*

*"(B) COMPLETENESS FINDING.—Within 60 days of the Administrator's receipt of a plan or plan revision, but no later than 6 months after the date, if any, by which a State is required to submit the plan or revision, the Administrator shall determine whether each part of the plan or revision meets the minimum criteria established pursuant to subparagraph (A). Any plan or plan revision that a State submits to the Administrator, and that has not been determined by the Administrator (by the date 6 months after receipt of the submission) to have failed to meet the minimum criteria established pursuant to subparagraph (A), shall on that date be deemed by operation of law to meet such minimum criteria.*

*"(C) EFFECT OF FINDING OF INCOMPLETENESS.—Where the Administrator determines that a plan submission (or part thereof) does not meet the minimum criteria established pursuant to subparagraph (A), the State shall be treated as not having made the submission (or, in the Administrator's discretion, part thereof).*

*"(2) DEADLINE FOR ACTION.—Within 12 months of a determination by the Administrator (or a determination deemed by operation of law) under paragraph (1) that a State has submitted a plan or plan revision (or, in the Administrator's discretion, part thereof) that meets the minimum criteria established pursuant to paragraph (1), if applicable (or, if those criteria are not applicable, within 12 months of submission of the*

plan or revision), the Administrator shall act on the submission in accordance with paragraph (3).

"(3) FULL AND PARTIAL APPROVAL AND DISAPPROVAL.—In the case of any submittal on which the Administrator is required to act under paragraph (2), the Administrator shall approve such submittal as a whole if it meets all of the applicable requirements of this Act. If a portion of the plan revision meets all the applicable requirements of this Act, the Administrator may approve the plan revision in part and disapprove the plan revision in part. The plan revision shall not be treated as meeting the requirements of this Act until the Administrator approves the entire plan revision as complying with the applicable requirements of this Act.

"(4) CONDITIONAL APPROVAL.—The Administrator may approve a plan revision based on a commitment of the State to adopt specific enforceable measures by a date certain, but not later than 1 year after the date of approval of the plan revision. Any such conditional approval shall be treated as a disapproval if the State fails to comply with such commitment.

"(5) CALLS FOR PLAN REVISIONS.—Whenever the Administrator finds that the applicable implementation plan for any area is substantially inadequate to attain or maintain the relevant national ambient air quality standard, to mitigate adequately the interstate pollutant transport described in section 176A or section 184, or to otherwise comply with any requirement of this Act, the Administrator shall require the State to revise the plan as necessary to correct such inadequacies. The Administrator shall notify the State of the inadequacies, and may establish reasonable deadlines (not to exceed 18 months after the date of such notice) for the submission of such plan revisions. Such findings and notice shall be public. Any finding under this paragraph shall, to the extent the Administrator deems appropriate, subject the State to the requirements of this Act to which the State was subject when it developed and submitted the plan for which such finding was made, except that the Administrator may adjust any dates applicable under such requirements as appropriate (except that the Administrator may not adjust any attainment date prescribed under part D, unless such date has elapsed).

"(6) CORRECTIONS.—Whenever the Administrator determines that the Administrator's action approving, disapproving, or promulgating any plan or plan revision (or part thereof), area designation, redesignation, classification, or reclassification was in error, the Administrator may in the same manner as the approval, disapproval, or promulgation revise such action as appropriate without requiring any further submission from the State. Such determination and the basis thereof shall be provided to the State and public.

"(l) PLAN REVISIONS.—Each revision to an implementation plan submitted by a State under this Act shall be adopted by such State after reasonable notice and public hearing. The Administrator shall not approve a revision of a plan if the revision would interfere with any applicable requirement concerning attainment and reasonable further progress (as defined in section 171), or any other applicable requirement of this Act.

"(m) SANCTIONS.—The Administrator may apply any of the sanctions listed in section 179(b) at any time (or at any time after) the Administrator makes a finding, disapproval, or determination under paragraphs (1) through (4), respectively, of section 179(a) in relation to any plan or plan item (as that term is defined by the Administrator) required under this Act, with respect to any portion of the State the Administrator determines reasonable and appropriate, for the purpose of ensuring that the requirements of this Act relating to such plan or plan item are met. The Administrator shall, by rule, establish criteria for exercising his authority under the previous sentence regarding application of sanctions to portions of a State not in a nonattainment area subject to this section or part D.

"(n) SAVINGS CLAUSES.—

"(1) EXISTING PLAN PROVISIONS.—Any provision of any applicable implementation plan that was approved or promulgated by the Administrator pursuant to this section as in effect before the date of the enactment of the Clean Air Act Amendments of 1990 shall remain in effect as part of such applicable implementation plan, except to the extent that a revision to such provision is approved or promulgated by the Administrator pursuant to this Act.

"(2) ATTAINMENT DATES.—For any area not designated nonattainment, any plan or plan revision submitted or required to be submitted by a State—

"(A) in response to the promulgation or revision of a national primary ambient air quality standard in effect on the date of the enactment of the Clean Air Act Amendments of 1990, or

"(B) in response to a finding of substantial inadequacy under subsection (a)(2) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990),

shall provide for attainment of the national primary ambient air quality standards within 3 years of the date of the enactment of the Clean Air Act Amendments of 1990 or within 5 years of issuance of such finding of substantial inadequacy, whichever is later.

"(3) RETENTION OF CONSTRUCTION MORATORIUM IN CERTAIN AREAS.—In the case of an area to which, immediately before the date of the enactment of the Clean Air Act Amendments of 1990, the prohibition on construction or modification of major stationary sources prescribed in subsection (a)(2)(I) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) applied by virtue of a finding of the Administrator that the State containing such area had not submitted an implementation plan meeting the requirements of section 172(b)(6) (relating to establishment of a permit program) (as in effect immediately before the date of enactment of the Clean Air Act Amendments of 1990) or 172(a)(1) (to the extent such requirements relate to provision for attainment of the primary national ambient air quality standard for sulfur oxides by December 31, 1982) as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990, no major stationary source of the relevant air pollutant or pollutants shall be constructed or modified in such area until the Administrator finds that the plan for such area meets the applicable requirements of section 172(c)(5) (relating to permit programs) or subpart 5 of part D (relating to attainment of the primary national ambient air quality standard for sulfur dioxide), respectively.".

(d) CONFORMING AMENDMENTS.—Section 110 (42 U.S.C. 7410) is amended as follows:

(1) Strike out subparagraph (D) of section 110(a)(3).

(2) Strike out paragraph (4) of section 110(a).

(3) In subsection (c)—

(A) strike out subparagraph (A) of paragraph (2);

(B) strike out paragraph (2)(C);

(C) strike out paragraph (4); and

(D) in paragraph (5)(B) strike out "(including the written evidence required by Part D),".

(4) Strike subsection (d) and in section 302 (42 U.S.C. 7602) add the following new subsection after subsection (p):

"(q) For purposes of this Act, the term 'applicable implementation plan' means the portion (or portions) of the implementation plan, or most recent revision thereof, which has been approved under section 110, or promulgated under section 110(c), or promulgated or approved pursuant to regulations promulgated under section 301(d) and which implements the relevant requirements of this Act.".

(5) strike out subsection (e).

(6) In subsection (g), strike "the required four month period" and insert "12 months of submission of the proposed plan revision".

(7) In subsection (h)—

(A) strike "one year after the date of enactment of the Clean Air Act Amendments of 1977 and annually thereafter" and insert "5 years after the date of the enactment of the Clean Air Act Amendments of 1990, and every 3 years thereafter"; and

(B) strike the second sentence of paragraph (1).

(8) In subsection (a)(1) strike "nine months" each place it appears and insert "3 years (or such shorter period as the Administrator may prescribe)".

(e) FEDERAL FACILITIES.—Section 118(a) (42 U.S.C. 7418(a)) is amended by inserting ", including fees that meet the requirements of title IV or any other reasonable service charges that are equally applicable to, and paid by, facilities owned or operated by State, regional, or local government entities," immediately after "respecting the control and abatement of air pollution".

(f) CONFORMITY REQUIREMENTS.—Section 176(c) (42 U.S.C. 7506(c)) is amended by striking "(1)", "(2)", "(3)" and "(4)" where they appear, by inserting "(1)" after "(c)", and by adding the following at the end thereof: "Conformity to a plan means—

"(A) conformity to a plan's purpose of eliminating or reducing the severity and number of violations of the national ambient air quality standards and achieving expeditious attainment of such standards; and

"(B) that such activities will not, considering any growth likely to result from such activities—

"(i) cause or contribute to a failure to attain any standard in any area; or

"(ii) delay timely attainment of any standard or any required interim emission reductions.

"(2) No later than one year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator, in consultation with the Secretary of Transportation, shall promulgate criteria and procedures for determining conformity and for keeping the Secretary of Transportation and the Administrator informed about such projects. Such procedures shall include a requirement that each State containing an ozone or carbon monoxide nonattainment area shall submit to the Administrator and the Secretary of Transportation, within 18 months after such date of enactment, a revision to its implementation plan that includes, for each such nonattainment area, criteria and procedures for assessing the

conformity of any plan, program or project subject to the conformity requirements of this subsection.".

SEC. 102. GENERAL PROVISIONS FOR NONATTAINMENT AREAS.

(a) DEFINITIONS.—(1) Part D of title I is amended by inserting immediately after "PART D—PLAN REQUIREMENTS FOR NONATTAINMENT AREAS" the following:

"Subpart 1—Nonattainment Areas in General

"Sec. 171. Definitions.
"Sec. 172. Nonattainment plan provisions.
"Sec. 173. Permit requirements.
"Sec. 174. Planning procedures.
"Sec. 175. Environmental protection agency grants.
"Sec. 176. Limitations on certain federal assistance.
"Sec. 177. New motor vehicle emission standards in nonattainment areas.
"Sec. 178. Guidance documents.".

(2) Section 171 (42 U.S.C. 7501) is amended as follows:

(A) In the introductory language, strike out "and section 110(a)(2)(I)".

(B) Amend paragraph (1) to read as follows:

"(1) REASONABLE FURTHER PROGRESS.—The term 'reasonable further progress' means such annual incremental reductions in emissions of the relevant air pollutant as are required by this part or may reasonably be required by the Administrator for the purpose of ensuring attainment of the applicable national ambient air quality standard by the applicable date.".

(C) Amend paragraph (2) to read as follows:

"(2) NONATTAINMENT AREA.—The term 'nonattainment area' means, for any air pollutant, an area which is designated 'nonattainment' with respect to that pollutant within the meaning of section 107(d).".

(b) NONATTAINMENT PLAN PROVISIONS IN GENERAL.—Section 172 (42 U.S.C. 7502) is amended to read as follows:

"SEC. 172. NONATTAINMENT PLAN PROVISIONS IN GENERAL.

"(a) CLASSIFICATIONS AND ATTAINMENT DATES.—

"(1) CLASSIFICATIONS.—(A) On or after the date the Administrator promulgates the designation of an area as a nonattainment area pursuant to section 107(d) with respect to any national ambient air quality standard (or any revised standard, including a revision of any standard in effect on the date of the enactment of the Clean Air Act Amendments of 1990), the Administrator may classify the area for the purpose of applying an attainment date pursuant to paragraph (2), and for other purposes. In determining the appropriate classification, if any, for a nonattainment area, the Administrator may consider such factors as the severity of nonattainment in such area and the availability and feasibility of the pollution control measures that the Administrator believes may be necessary to provide for attainment of such standard in such area.

"(B) The Administrator shall publish a notice in the Federal Register announcing each classification under subparagraph (A), except the Administrator shall provide an opportunity for at least 30 days for written comment. Such classification shall not be subject to the provisions of sections 553 through 557 of title 5 of the United States Code (concerning notice and comment) and shall not be subject to judicial review until the Administrator takes final action under subsection (k) or (l) of section 110 (concerning action on plan submissions) or section 179 (concerning sanctions) with respect to any plan submissions required by virtue of such designation.

"(C) This paragraph shall not apply with respect to nonattainment areas for which classifications are specifically provided under other provisions of this part.

"(2) ATTAINMENT DATES FOR NONATTAINMENT AREAS.—(A) The attainment date for an area designated nonattainment with respect to a national primary ambient air quality standard shall be the date by which attainment can be achieved as expeditiously as practicable, but no later than 5 years from the date such area was designated nonattainment under section 107(d), except that the Administrator may extend the attainment date to the extent the Administrator determines appropriate, for a period no greater than 10 years from the date of designation as nonattainment, considering the severity of nonattainment and the availability and feasibility of pollution control measures.

"(B) The attainment date for an area designated nonattainment with respect to a secondary national ambient air quality standard shall be as expeditiously as practicable after the date such area was designated nonattainment under section 107(d).

"(C) Upon application by any State, the Administrator may extend for 1 additional year (hereinafter referred to as the 'Extension Year') the attainment date determined by the Administrator under subparagraph (A) or (B) if—

"(i) the State has complied with all requirements and commitments pertaining to the area in the applicable implementation plan, and

"(ii) in accordance with guidance published by the Administrator, no more than a minimal number of exceedances of the relevant national ambient air quality standard has occurred in the area in the year preceding the Extension Year.

No more than 2 one-year extensions may be issued under this subparagraph for a single nonattainment area.

"(D) This paragraph shall not apply with respect to nonattainment areas for which attainment dates are specifically provided under other provisions of this part.

"(b) SCHEDULE FOR PLAN SUBMISSIONS.—At the time the Administrator promulgates the designation of an area as nonattainment with respect to a national ambient air quality standard under section 107(d), the Administrator shall establish a schedule according to which the State containing such area shall submit a plan or plan revision (including the plan items) meeting the applicable requirements of subsection (c) and section 110(a)(2). Such schedule must, at a minimum, include a date or dates, extending no later than 3 years from the date of the nonattainment designation, for the submission of a plan or plan revision (including the plan items) meeting the applicable requirements of subsection (c) and section 110(a)(2).

"(c) NONATTAINMENT PLAN PROVISIONS.—The plan provisions (including plan items) required to be submitted under this part shall comply with each of the following:

"(1) IN GENERAL.—Such plan provisions shall provide for the implementation of all reasonably available control measures as expeditiously as practicable (including such reductions in emissions from existing sources in the area as may be obtained through the adoption, at a minimum, of reasonably available control technology) and shall provide for attainment of the national primary ambient air quality standards.

"(2) RFP.—Such plan provisions shall require reasonable further progress.

"(3) INVENTORY.—Such plan provisions shall include a comprehensive, accurate, current inventory of actual emissions from all sources of the relevant pollutant or pollutants in such area, including such periodic revisions as the Administrator may determine necessary to assure that the requirements of this part are met.

"(4) IDENTIFICATION AND QUANTIFICATION.—Such plan provisions shall expressly identify and quantify the emissions, if any, of any such pollutant or pollutants which will be allowed, in accordance with section 173(a)(1)(B), from the construction and operation of major new or modified stationary sources in each such area. The plan shall demonstrate to the satisfaction of the Administrator that the emissions quantified for this purpose will be consistent with the achievement of reasonable further progress and will not interfere with attainment of the applicable national ambient air quality standard by the applicable attainment date.

"(5) PERMITS FOR NEW AND MODIFIED MAJOR STATIONARY SOURCES.—Such plan provisions shall require permits for the construction and operation of new or modified major stationary sources anywhere in the nonattainment area, in accordance with section 173.

"(6) OTHER MEASURES.—Such plan provisions shall include enforceable emission limitations, and such other control measures, means or techniques (including economic incentives such as fees, marketable permits, and auctions of emission rights), as well as schedules and timetables for compliance, as may be necessary or appropriate to provide for attainment of such standard in such area by the applicable attainment date specified in this part.

"(7) COMPLIANCE WITH SECTION 110(a)(2).—Such plan provisions shall also meet the applicable provisions of section 110(a)(2).

"(8) EQUIVALENT TECHNIQUES.—Upon application by any State, the Administrator may allow the use of equivalent modeling, emission inventory, and planning procedures, unless the Administrator determines that the proposed techniques are, in the aggregate, less effective than the methods specified by the Administrator.

"(9) CONTINGENCY MEASURES.—Such plan shall provide for the implementation of specific measures to be undertaken if the area fails to make reasonable further progress, or to attain the national primary ambient air quality standard by the attainment date applicable under this part. Such measures shall be included in the plan revision as contingency measures to take effect in any such case without further action by the State or the Administrator.

"(d) PLAN REVISIONS REQUIRED IN RESPONSE TO FINDING OF PLAN INADEQUACY.—Any plan revision for a nonattainment area which is required to be submitted in response to a finding by the Administrator pursuant to section 110(k)(5) (relating to calls for plan revisions) must correct the plan deficiency (or deficiencies) specified by the Administrator and meet all other applicable plan requirements of section 110 and this part. The Administrator may reasonably adjust the dates otherwise applicable under such requirements to such revision (except for attainment dates that have not yet elapsed), to the extent necessary to achieve a consistent application of such requirements. In order to facilitate submittal by the States of adequate and approvable plans consistent with the applicable requirements of this Act, the Administrator shall, as appropriate and

*from time to time, issue written guidelines, interpretations, and information to the States which shall be available to the public, taking into consideration any such guidelines, interpretations, or information provided before the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(e) FUTURE MODIFICATION OF STANDARD.—If the Administrator relaxes a national primary ambient air quality standard after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall, within 12 months after the relaxation, promulgate requirements applicable to all areas which have not attained that standard as of the date of such relaxation. Such requirements shall provide for controls which are not less stringent than the controls applicable to areas designated nonattainment before such relaxation.".*

*(c) NEW SOURCE PERMIT REQUIREMENTS.—Section 173 (42 U.S.C. 7503) is amended as follows:*

*(1) Strike the center heading and "SEC. 173." and insert:*

*"SEC. 173. PERMIT REQUIREMENTS.".*

*(2) Insert "(a) IN GENERAL.—" before the first sentence.*

*(3) Insert the following after "(1)": "in accordance with regulations issued by the Administrator for the determination of baseline emissions in a manner consistent with the assumptions underlying the applicable implementation plan approved under section 110 and this part,".*

*(4) Make the following amendments in subparagraph (A) of paragraph (1):*

*(A) Insert "sufficient offsetting emissions reductions have been obtained, such that" immediately after the comma following "commence operation".*

*(B) Strike "allowed under the applicable implementation plan" and insert "(as determined in accordance with the regulations under this paragraph)".*

*(5) Make the following amendments in subparagraph (B) of paragraph (1):*

*(A) Insert "in the case of a new or modified major stationary source which is located in a zone (within the nonattainment area) identified by the Administrator, in consultation with the Secretary of Housing and Urban Development, as a zone to which economic development should be targeted," at the beginning thereof.*

*(B) Strike "'172(b)" and insert "172(c)".*

*(6) Make the following amendments in paragraph (4):*

*(A) Insert "the Administrator has not determined that" after "(4)".*

*(B) Strike "being carried out" and insert "not being adequately implemented".*

*(C) Replace the period at the end thereof with "; and".*

*(7) Add the following new paragraph after paragraph (4):*

*"(5) an analysis of alternative sites, sizes, production processes, and environmental control techniques for such proposed source demonstrates that benefits of the proposed source significantly outweigh the environmental and social costs imposed as a result of its location, construction, or modification.".*

*(8) Strike "(1)(A) shall be legally binding" in the concluding sentence of subsection (a), as redesignated by this subsection and insert "(1) shall be federally enforceable".*

*(9) Add a new subsection (b) to read as follows:*

*"(b) PROHIBITION ON USE OF OLD GROWTH ALLOWANCES.—Any growth allowance included in an applicable implementation plan to meet the requirements of section 172(b)(5) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) shall not be valid for use in any area that received or receives a notice under section 110(a)(2)(H)(ii) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) or under section 110(k)(1) that its applicable implementation plan containing such allowance is substantially inadequate.".*

*(10) Add the following new subsections at the end thereof:*

*"(c) OFFSETS.—(1) The owner or operator of a new or modified major stationary source may comply with any offset requirement in effect under this part for increased emissions of any air pollutant only by obtaining emission reductions of such air pollutant from the same source or other sources in the same nonattainment area, except that the State may allow the owner or operator of a source to obtain such emission reductions in another nonattainment area if (A) the other area has an equal or higher nonattainment classification than the area in which the source is located and (B) emissions from such other area contribute to a violation of the national ambient air quality standard in the nonattainment area in which the source is located. Such emission reductions shall be, by the time a new or modified source commences operation, in effect and enforceable and shall assure that the total tonnage of increased emissions of the air pollutant from the new or modified source shall be offset by an equal or greater reduction, as applicable, in the actual emissions of such air pollutant from the same or other sources in the area.*

*"(2) Emission reductions otherwise required by this Act shall not be creditable as emissions reductions for purposes of any such offset requirement. Incidental emission reductions which are not otherwise required by this Act shall be creditable as emission reductions for such purposes if such emission reductions meet the requirements of paragraph (1).*

*"(d) CONTROL TECHNOLOGY INFORMATION.—The State shall provide that control technology information from permits issued under this section will be promptly submitted to the Administrator for purposes of making such information available through the RACT/BACT/LAER clearinghouse to other States and to the general public.".*

*(d) PLANNING PROCEDURES.—Section 174 (42 U.S.C. 7504) is amended to read as follows:*

*"SEC. 174. PLANNING PROCEDURES.*

*"(a) IN GENERAL.—For any ozone or carbon monoxide nonattainment area, the State containing such area and elected officials of affected local governments shall, before the date required for submittal of the inventory described under sections 182(a)(1) and 187(a)(1), jointly review and update as necessary the planning procedures adopted pursuant to this subsection as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990, or develop new planning procedures pursuant to this subsection, as appropriate. In preparing such procedures the State and local elected officials shall determine which elements of a revised implementation plan will be developed, adopted, and implemented (through means including enforcement) by the State and which by local governments or regional agencies, or any combination of local governments, regional agencies, or the State. The implementation plan required by this part shall be prepared by an organization certified by the State, in consultation with elected officials of local governments and in accordance with the determination under the second sentence of this subsection. Such organization shall include elected officials of local governments in the affected area, and representatives of the State air quality planning agency, the State transportation planning agency, the metropolitan planning organization designated to conduct the continuing, cooperative and comprehensive transportation planning process for the area under section 134 of title 23, United States Code, the organization responsible for the air quality maintenance planning process under regulations implementing this Act, and any other organization with responsibilities for developing, submitting, or implementing the plan required by this part. Such organization may be one that carried out these functions before the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(b) COORDINATION.—The preparation of implementation plan provisions and subsequent plan revisions under the continuing transportation-air quality planning process described in section 108(e) shall be coordinated with the continuing, cooperative and comprehensive transportation planning process required under section 134 of title 23, United States Code, and such planning processes shall take into account the requirements of this part.*

*"(c) JOINT PLANNING.—In the case of a nonattainment area that is included within more than one State, the affected States may jointly, through interstate compact or otherwise, undertake and implement all or part of the planning procedures described in this section.".*

*(e) MAINTENANCE PLANS.—After section 175 insert:*

*"SEC. 175A. MAINTENANCE PLANS.*

*"(a) PLAN REVISION.—Each State which submits a request under section 107(d) for redesignation of a nonattainment area for any air pollutant as an area which has attained the national primary ambient air quality standard for that air pollutant shall also submit a revision of the applicable State implementation plan to provide for the maintenance of the national primary ambient air quality standard for such air pollutant in the area concerned for at least 10 years after the redesignation. The plan shall contain such additional measures, if any, as may be necessary to ensure such maintenance.*

*"(b) SUBSEQUENT PLAN REVISIONS.—8 years after redesignation of any area as an attainment area under section 107(d), the State shall submit to the Administrator an additional revision of the applicable State implementation plan for maintaining the national primary ambient air quality standard for 10 years after the expiration of the 10-year period referred to in subsection (a).*

*"(c) NONATTAINMENT REQUIREMENTS APPLICABLE PENDING PLAN APPROVAL.—Until such plan revision is approved and an area is redesignated as attainment for any area designated as a nonattainment area, the requirements of this part shall continue in force and effect with respect to such area.*

*"(d) CONTINGENCY PROVISIONS.—Each plan revision submitted under this section shall contain such contingency provisions as the Administrator deems necessary to assure that the State will promptly correct any violation of the standard which occurs after the redesignation of the area as an attainment area. Such provisions shall include a requirement that the State will implement all*

*measures with respect to the control of the air pollutant concerned which were contained in the State implementation plan for the area before redesignation of the area as an attainment area. The failure of any area redesignated as an attainment area to maintain the national ambient air quality standard concerned shall not result in a requirement that the State revise its State implementation plan unless the Administrator, in the Administrator's discretion, requires the State to submit a revised State implementation plan.".*

*(f) INTERSTATE TRANSPORT PROVISIONS.—*

*(1) INTERSTATE TRANSPORT COMMISSIONS.—After section 176 (42 U.S.C. 7506) insert:*

*"SEC. 176A. INTERSTATE TRANSPORT COMMISSIONS.*

*"(a) AUTHORITY TO ESTABLISH INTERSTATE TRANSPORT REGIONS.—Whenever, on the Administrator's own motion or by petition from the Governor of any State, the Administrator has reason to believe that the interstate transport of air pollutants from one or more States contributes significantly to a violation of a national ambient air quality standard in one or more other States, the Administrator may establish, by rule, a transport region for such pollutant that includes such States. The Administrator, on the Administrator's own motion or upon petition from the Governor of any State, or upon the recommendation of a transport commission established under subsection (b), may—*

*"(1) add any State or portion of a State to any region established under this subsection whenever the Administrator has reason to believe that the interstate transport of air pollutants from such State significantly contributes to a violation of the standard in the transport region, or*

*"(2) remove any State or portion of a State from the region whenever the Administrator has reason to believe that the control of emissions in that State or portion of the State pursuant to this section will not significantly contribute to the attainment of the standard in any area in the region.*

*The Administrator shall approve or disapprove any such petition or recommendation within 18 months of its receipt. The Administrator shall establish appropriate proceedings for public participation regarding such petitions and motions, including notice and comment.*

*"(b) TRANSPORT COMMISSIONS.—*

*"(1) ESTABLISHMENT.—Whenever the Administrator establishes a transport region under subsection (a), the Administrator shall establish a transport commission comprised of (at a minimum) each of the following members:*

*"(A) The Governor of each State in the region or the designee of each such Governor.*

*"(B) The Administrator or the Administrator's designee.*

*"(C) The Regional Administrator (or the Administrator's designee) for each Regional Office for each Environmental Protection Agency Region affected by the transport region concerned.*

*"(D) An air pollution control official representing each State in the region, appointed by the Governor.*

*Decisions of, and recommendations and requests to, the Administrator by each transport commission may be made only by a majority vote of all members other than the Administrator and the Regional Administrators (or designees thereof).*

*"(2) RECOMMENDATIONS.—The transport commission shall assess the degree of interstate transport of the pollutant or precursors to the pollutant throughout the transport region, assess strategies for mitigating the interstate pollution, and recommend to the Administrator such measures as the Commission determines to be necessary to ensure that the plans for the relevant States meet the requirements of section 110(a)(2)(D). Such commission shall not be subject to the provisions of the Federal Advisory Committee Act (5 U.S.C. App.).*

*"(c) COMMISSION REQUESTS.—A transport commission established under subsection (b) may request the Administrator to issue a finding under section 110(k)(5) that the implementation plan for one or more of the States in the transport region is substantially inadequate to meet the requirements of section 110(a)(2)(D). The Administrator shall approve, disapprove, or partially approve and partially disapprove such a request within 18 months of its receipt and, to the extent the Administrator approves such request, issue the finding under section 110(k)(5) at the time of such approval. In acting on such request, the Administrator shall provide an opportunity for public participation and shall address each specific recommendation made by the commission. Approval or disapproval of such a request shall constitute final agency action within the meaning of section 307(b).".*

*(2) AMENDMENTS CONFORMING TO TRANSPORT PROVISIONS.—Section 106 (42 U.S.C. 7406) is amended as follows:*

*(A) Insert "or of implementing section 176A (relating to control of interstate air pollution) or section 184 (relating to control of interstate ozone pollution)" immediately following "section 107".*

*(B) Insert "any commission established under section 176A (relating to control of interstate air pollution) or section 184 (relating to control of interstate ozone pollution) or" immediately following "program costs of".*

*(C) Insert "or such commission" in the last sentence immediately following "such agency".*

*(D) Insert "or commission" at the end thereof, immediately before the period.*

*(g) SANCTIONS.—After section 178 (42 U.S.C. 7508) insert:*

*"SEC. 179. SANCTIONS AND CONSEQUENCES OF FAILURE TO ATTAIN.*

*"(a) STATE FAILURE.—For any implementation plan or plan revision required under this part (or required in response to a finding of substantial inadequacy as described in section 110(k)(5)), if the Administrator—*

*"(1) finds that a State has failed, for an area designated nonattainment under section 107(d), to submit a plan, or to submit 1 or more of the elements (as determined by the Administrator) required by the provisions of this Act applicable to such an area, or has failed to make a submission for such an area that satisfies the minimum criteria established in relation to any such element under section 110(k),*

*"(2) disapproves a submission under section 110(k), for an area designated nonattainment under section 107, based on the submission's failure to meet one or more of the elements required by the provisions of this Act applicable to such an area,*

*"(3)(A) determines that a State has failed to make any submission as may be required under this Act, other than one described under paragraph (1) or (2), including an adequate maintenance plan, or has failed to make any submission, as may be required under this Act, other than one described under paragraph (1) or (2), that satisfies the minimum criteria established in relation to such submission under section 110(k)(1)(A), or*

*"(B) disapproves in whole or in part a submission described under subparagraph (A), or*

*"(4) finds that any requirement of an approved plan (or approved part of a plan) is not being implemented,*

*unless such deficiency has been corrected within 18 months after the finding, disapproval, or determination referred to in paragraph (1), (2), (3), and (4), one of the sanctions referred to in subsection (b) shall apply, as selected by the Administrator, until the Administrator determines that the State has come into compliance, except that if the Administrator finds a lack of good faith, both of such sanctions shall apply until the Administrator determines that the State has come into compliance. If the Administrator has selected one of such sanctions and the deficiency has not been corrected within 6 months thereafter, both of such sanctions shall apply until the Administrator determines that the State has come into compliance. In addition to any other sanction applicable as provided in this section, the Administrator may withhold all or part of the grants for support of air pollution planning and control programs that the Administrator may award under section 105.*

*"(b) SANCTIONS.—The sanctions referred to in subsection (a) are as follows:*

*"(1) HIGHWAY FUNDS.—The Secretary of Transportation shall not approve any project or award any grant under title 23, United States Code, other than for safety or mass transit.*

*"(2) OFFSETS.—In applying the emissions offset requirements of section 173 to new or modified sources or emissions units for which a permit is required under part D, the ratio of emission reductions to increased emissions shall be at least 2 to 1.*

*"(c) NOTICE OF FAILURE TO ATTAIN.—(1) As expeditiously as practicable after the applicable attainment date for any nonattainment area, but not later than 6 months after such date, the Administrator shall determine, based on the area's air quality as of the attainment date, whether the area attained the standard by that date.*

*"(2) Upon making the determination under paragraph (1), the Administrator shall publish a notice in the Federal Register containing such determination and identifying each area that the Administrator has determined to have failed to attain. The Administrator may revise or supplement such determination at any time based on more complete information or analysis concerning the area's air quality as of the attainment date.*

*"(d) CONSEQUENCES FOR FAILURE TO ATTAIN.—(1) Within 1 year after the Administrator publishes the notice under subsection (c)(2) (relating to notice of failure to attain), each State containing a nonattainment area shall submit a revision to the applicable implementation plan meeting the requirements of paragraph (2) of this subsection.*

*"(2) The revision required under paragraph (1) shall meet the requirements of section 110 and section 172. In addition, the revision shall include such additional measures as the Administrator may reasonably prescribe, including all measures that can be feasibly implemented in the area in light of technological achievability, costs, and any nonair quality and other air quality-related health and environmental impacts.*

"(3) The attainment date applicable to the revision required under paragraph (1) shall be the same as provided in the provisions of section 172(a)(2), except that in applying such provisions the phrase 'from the date of the notice under section 179(c)(2)' shall be substituted for the phrase 'from the date such area was designated nonattainment under section 107(d)' and for the phrase 'from the date of designation as nonattainment'.".

(h) FEDERAL IMPLEMENTATION PLANS.—Section 110(c)(1) (42 U.S.C. 7410(c)) is amended to read as follows: "(1) The Administrator shall promulgate a Federal implementation plan at any time within 2 years after the Administrator—

"(A) finds that a State has failed to make a required submission or finds that the plan or plan revision submitted by the State does not satisfy the minimum criteria established under section 110(k)(1)(A), or

"(B) disapproves a State implementation plan submission in whole or in part.".

SEC. 103. ADDITIONAL PROVISIONS FOR OZONE NONATTAINMENT AREAS.

Part D of title I is amended by adding the following new subpart at the end thereof:

"Subpart 2—Additional Provisions for Ozone Nonattainment Areas

"Sec. 181. Classifications and attainment dates.
"Sec. 182. Plan submissions and requirements.
"Sec. 183. Federal ozone measures.
"Sec. 184. Control of interstate ozone air pollution.
"Sec. 185. Enforcement for Severe and Extreme ozone nonattainment areas for ailure to attain.
"Sec. 185A. Transitional areas.
"Sec. 185B. $NO_x$ and VOC study.

"SEC. 181. CLASSIFICATIONS AND ATTAINMENT DATES.

"(a) CLASSIFICATION AND ATTAINMENT DATES FOR 1989 NONATTAINMENT AREAS.—(1) Each area designated nonattainment for ozone pursuant to section 107(d) shall be classified at the time of such designation, under table 1, by operation of law, as a Marginal Area, a Moderate Area, a Serious Area, a Severe Area, or an Extreme Area based on the design value for the area. The design value shall be calculated according to the interpretation methodology issued by the Administrator most recently before the date of the enactment of the Clean Air Act Amendments of 1990. For each area classified under this subsection, the primary standard attainment date for ozone shall be as expeditiously as practicable but not later than the date provided in table 1.

"TABLE 1

| Area class | Design value * | Primary standard attainment date ** |
|---|---|---|
| Marginal | 0.121 up to 0.138. | 3 years after enactment |
| Moderate | 0.138 up to 0.160. | 6 years after enactment |
| Serious | 0.160 up to 0.180. | 9 years after enactment |
| Severe | 0.180 up to 0.280. | 15 years after enactment |
| Extreme | 0.280 and above. | 20 years after enactment |

* The design value is measured in parts per million (ppm).

** The primary standard attainment date is measured from the date of the enactment of the Clean Air Amendments of 1990.

"(2) Notwithstanding table 1, in the case of a severe area with a 1988 ozone design value between 0.190 and 0.280 ppm ,the attainment date shall be 17 years (in lieu of 15 years) after the date of the enactment of the Clean Air Amendments of 1990.

"(3) At the time of publication of the notice under section 107(d)(4) (relating to area designations) for each ozone nonattainment area, the Administrator shall publish a notice announcing the classification of such ozone nonattainment area. The provisions of section 172(a)(1)(B) (relating to lack of notice and comment and judicial review) shall apply to such classification.

"(4) If an area classified under paragraph (1) (Table 1) would have been classified in another category if the design value in the area were 5 percent greater or 5 percent less than the level on which such classification was based, the Administrator may, in the Administrator's discretion, within 90 days after the initial classification, by the procedure required under paragraph (3), adjust the classification to place the area in such other category. In making such adjustment, the Administrator may consider the number of exceedances of the national primary ambient air quality standard for ozone in the area, the level of pollution transport between the area and other affected areas, including both intrastate and interstate transport, and the mix of sources and air pollutants in the area.

"(5) Upon application by any State, the Administrator may extend for 1 additional year (hereinafter referred to as the 'Extension Year') the date specified in Table 1 of subsection (a) if—

"(A) the State has complied with all requirements and commitments pertaining to the area in the applicable implementation plan, and

"(B) no more than 1 exceedance of the national ambient air quality standard level for ozone has occurred in the area in the year preceding the Extension Year.

No more than 2 one-year extensions may be issued under this paragraph for a single nonattainment area.

"(b) NEW DESIGNATIONS AND RECLASSIFICATIONS.—

"(1) NEW DESIGNATIONS TO NONATTAINMENT.—Any area that is designated attainment or unclassifiable for ozone under section 107(d)(4), and that is subsequently redesignated to nonattainment for ozone under section 107(d)(3), shall, at the time of the redesignation, be classified by operation of law in accordance with Table 1 under subsection (a). Upon its classification, the area shall be subject to the same requirements under section 110, subpart 1 of this part, and this subpart that would have applied had the area been so classified at the time of the notice under subsection (a)(3), except that any absolute, fixed date applicable in connection with any such requirement is extended by operation of law by a period equal to the length of time between the date of the enactment of the Clean Air Act Amendments of 1990 and the date the area is classified under this paragraph.

"(2) RECLASSIFICATION UPON FAILURE TO ATTAIN.—(A) Within 6 months following the applicable attainment date (including any extension thereof) for an ozone nonattainment area, the Administrator shall determine, based on the area's design value (as of the attainment date), whether the area attained the standard by that date. Except for any Severe or Extreme area, any area that the Administrator finds has not attained the standard by that date shall be reclassified by operation of law in accordance with Table 1 of subsection (a) to the higher of—

"(i) the next higher classification for the area, or

"(ii) the classification applicable to the area's design value as determined at the time of the notice required under subparagraph (B).

No area shall be reclassified as Extreme under clause (ii).

"(B) The Administrator shall publish a notice in the Federal Register, no later than 6 months following the attainment date, identifying each area that the Administrator has determined under subparagraph (A) as having failed to attain and identifying the reclassification, if any, described under subparagraph (A).

"(3) VOLUNTARY RECLASSIFICATION.—The Administrator shall grant the request of any State to reclassify a nonattainment area in that State in accordance with Table 1 of subsection (a) to a higher classification. The Administrator shall publish a notice in the Federal Register of any such request and of action by the Administrator granting the request.

"(4) FAILURE OF SEVERE AREAS TO ATTAIN STANDARD.—(A) If any Severe Area fails to achieve the national primary ambient air quality standard for ozone by the applicable attainment date (including any extension thereof), the fee provisions under section 185 shall apply within the area, the percent reduction requirements of section 182(c)(2)(B) and (C) (relating to reasonable further progress demonstration and $NO_x$ control) shall continue to apply to the area, and the State shall demonstrate that such percent reduction has been achieved in each 3-year interval after such failure until the standard is attained. Any failure to make such a demonstration shall be subject to the sanctions provided under this part.

"(B) In addition to the requirements of subparagraph (A), if the ozone design value for a Severe Area referred to in subparagraph (A) is above 0.140 ppm for the year of the applicable attainment date, or if the area has failed to achieve its most recent milestone under section 182(g), the new source review requirements applicable under this subpart in Extreme Areas shall apply in the area and the term 'major source' and 'major stationary source' shall have the same meaning as in Extreme Areas.

"(C) In addition to the requirements of subparagraph (A) for those areas referred to in subparagraph (A) and not covered by subparagraph (B), the provisions referred to in subparagraph (B) shall apply after 3 years from the applicable attainment date unless the area has attained the standard by the end of such 3-year period.

"(D) If, after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator modifies the method of determining compliance with the national primary ambient air quality standard, a design value or other indicator comparable to 0.140 in terms of its relationship to the standard shall be used in lieu of 0.140 for purposes of applying the provisions of subparagraphs (B) and (C).

"(c) REFERENCES TO TERMS.—(1) Any reference in this subpart to a 'Marginal Area', a 'Moderate Area', a 'Serious Area', a 'Severe Area', or an 'Extreme Area' shall be considered a reference to a Marginal Area, a Moderate Area, a Serious Area, a Severe Area, or

an Extreme Area as respectively classified under this section.

"(2) Any reference in this subpart to 'next higher classification' or comparable terms shall be considered a reference to the classification related to the next higher set of design values in Table 1.

"SEC. 182. PLAN SUBMISSIONS AND REQUIREMENTS.

"(a) MARGINAL AREAS.—Each State in which all or part of a Marginal Area is located shall, with respect to the Marginal Area (or portion thereof, to the extent specified in this subsection), submit to the Administrator the State implementation plan revisions (including the plan items) described under this subsection except to the extent the State has made such submissions as of the date of the enactment of the Clean Air Act Amendments of 1990.

"(1) INVENTORY.—Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a comprehensive, accurate, current inventory of actual emissions from all sources, as described in section 172(c)(3), in accordance with guidance provided by the Administrator.

"(2) CORRECTIONS TO THE STATE IMPLEMENTATION PLAN.—Within the periods prescribed in this paragraph, the State shall submit a revision to the State implementation plan that meets the following requirements—

"(A) REASONABLY AVAILABLE CONTROL TECHNOLOGY CORRECTIONS.—For any Marginal Area (or, within the Administrator's discretion, portion thereof) the State shall submit, within 6 months of the date of classification under section 181(a), a revision that includes such provisions to correct requirements in (or add requirements to) the plan concerning reasonably available control technology as were required under section 172(b) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990), as interpreted in guidance issued by the Administrator under section 108 before the date of the enactment of the Clean Air Act Amendments of 1990.

"(B) SAVINGS CLAUSE FOR VEHICLE INSPECTION AND MAINTENANCE.—(i) For any Marginal Area (or, within the Administrator's discretion, portion thereof), the plan for which already includes, or was required by section 172(b)(11)(B) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) to have included, a specific schedule for implementation of a vehicle emission control inspection and maintenance program, the State shall submit, immediately after the date of the enactment of the Clean Air Act Amendments of 1990, a revision that includes any provisions necessary to provide for a vehicle inspection and maintenance program of no less stringency than that of either the program defined in House Report Numbered 95-294, 95th Congress, 1st Session, 281-291 (1977) as interpreted in guidance of the Administrator issued pursuant to section 172(b)(11)(B) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) or the program already included in the plan, whichever is more stringent.

"(ii) Within 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall review, revise, update, and republish in the Federal Register the guidance for the States for motor vehicle inspection and maintenance programs required by this Act, taking into consideration the Administrator's investigations and audits of such program. The guidance shall, at a minimum, cover the frequency of inspections, the types of vehicles to be inspected (which shall include leased vehicles that are registered in the nonattainment area), vehicle maintenance by owners and operators, audits by the State, the test method and measures, including whether centralized or decentralized, inspection methods and procedures, quality of inspection, components covered, assurance that a vehicle subject to a recall notice from a manufacturer has complied with that notice, and effective implementation and enforcement, including ensuring that any retesting of a vehicle after a failure shall include proof of corrective action and providing for denial of vehicle registration in the case of tampering or misfueling. The guidance which shall be incorporated in the applicable State implementation plans by the States shall provide the States with continued reasonable flexibility to fashion effective, reasonable, and fair programs for the affected consumer. No later than 2 years after the Administrator promulgates regulations under section 202(m)(3) (relating to emission control diagnostics), the State shall submit a revision to such program to meet any requirements that the Administrator may prescribe under that section.

"(C) PERMIT PROGRAMS.—Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision that includes each of the following:

"(i) Provisions to require permits, in accordance with sections 172(c)(5) and 173, for the construction and operation of each new or modified major stationary source (with respect to ozone) to be located in the area.

"(ii) Provisions to correct requirements in (or add requirements to) the plan concerning permit programs as were required under section 172(b)(6) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990), as interpreted in regulations of the Administrator promulgated as of the date of the enactment of the Clean Air Act Amendments of 1990.

"(3) PERIODIC INVENTORY.—

"(A) GENERAL REQUIREMENT.—No later than the end of each 3-year period after submission of the inventory under paragraph (1) until the area is redesignated to attainment, the State shall submit a revised inventory meeting the requirements of subsection (a)(1).

"(B) EMISSIONS STATEMENTS.—(i) Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to the State implementation plan to require that the owner or operator of each stationary source of oxides of nitrogen or volatile organic compounds provide the State with a statement, in such form as the Administrator may prescribe (or accept an equivalent alternative developed by the State), for classes or categories of sources, showing the actual emissions of oxides of nitrogen and volatile organic compounds from that source. The first such statement shall be submitted within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990. Subsequent statements shall be submitted at least every year thereafter. The statement shall contain a certification that the information contained in the statement is accurate to the best knowledge of the individual certifying the statement.

"(ii) The State may waive the application of subparagraph (A) to any class or category of stationary sources which emit less than 25 tons per year of volatile organic compounds or oxides of nitrogen if the State, in its submissions under subparagraphs (1) or (3)(A), provides an inventory of emissions from such class or category of sources, based on the use of the emission factors established by the Administrator or other methods acceptable to the Administrator.

"(4) GENERAL OFFSET REQUIREMENT.—For purposes of satisfying the emission offset requirements of this part, the ratio of total emission reductions of volatile organic compounds to total increase emissions of such air pollutant shall be at least 1.1 to 1.

The Administrator may, in the Administrator's discretion, require States to submit a schedule for submitting any of the revisions or other items required under this subsection. The requirements of this subsection shall apply in lieu of any requirement that the State submit a demonstration that the applicable implementation plan provides for attainment of the ozone standard by the applicable attainment date in any Marginal area. Section 172(c)(9) (relating to contingency measures) shall not apply to Marginal Areas.

"(b) MODERATE AREAS.—Each State in which all or part of a Moderate Area is located shall, with respect to the Moderate Area, make the submissions described under subsection (a) (relating to Marginal Areas), and shall also submit the revisions to the applicable implementation plan described under this subsection.

"(1) PLAN PROVISIONS FOR REASONABLE FURTHER PROGRESS.—

"(A) GENERAL RULE.—(i) By no later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to the applicable implementation plan to provide for volatile organic compound emission reductions, within 6 years after the date of the enactment of the Clean Air Act Amendments of 1990, of at least 15 percent from baseline emissions, accounting for any growth in emissions after the year in which the Clean Air Act Amendments of 1990 are enacted. Such plan shall provide for such specific annual reductions in emissions of volatile organic compounds and oxides of nitrogen as necessary to attain the national primary ambient air quality standard for ozone by the attainment date applicable under this Act. This subparagraph shall not apply in the case of oxides of nitrogen for those areas for which the Administrator determines (when the Administrator approves the plan or plan revision) that additional reductions of oxides of nitrogen would not contribute to attainment.

"(ii) A percentage less than 15 percent may be used for purposes of clause (i) in the case of any State which demonstrates to the satisfaction of the Administrator that—

"(I) new source review provisions are applicable in the nonattainment areas in the same manner and to the same extent as required under subsection (e) in the case of Extreme Areas (with the exception that, in applying such provisions, the terms 'major source' and 'major stationary source' shall include (in addition to the sources described in section 302) any stationary source or group of sources located within a contiguous area and under common control that emits, or has the potential to emit, at least 5 tons per year of volatile organic compounds);

"(II) reasonably available control technology is required for all existing major sources (as defined in subclause (I)); and

"(III) the plan reflecting a lesser percentage than 15 percent includes all measures

*that can feasibly be implemented in the area, in light of technological achievability.*

*To qualify for a lesser percentage under this clause, a State must demonstrate to the satisfaction of the Administrator that the plan for the area includes the measures that are achieved in practice by sources in the same source category in nonattainment areas of the next higher category.*

*"(B) BASELINE EMISSIONS.—For purposes of subparagraph (A), the term 'baseline emissions' means the total amount of actual VOC or $NO_x$ emissions from all anthropogenic sources in the area during the calendar year of the enactment of which the Clean Air Act Amendments of 1990, excluding emissions that would be eliminated under the regulations described in clauses (i) and (ii) of subparagraph (D).*

*"(C) GENERAL RULE FOR CREDITABILITY OF REDUCTIONS.—Except as provided under subparagraph (D), emissions reductions are creditable toward the 15 percent required under subparagraph (A) to the extent they have actually occurred, as of 6 years after the date of the enactment of the Clean Air Act Amendments of 1990, from the implementation of measures required under the applicable implementation plan, rules promulgated by the Administrator, or a permit under title IV.*

*"(D) LIMITS ON CREDITABILITY OF REDUCTIONS.—Emission reductions from the following measures are not creditable toward the 15 percent reductions required under subparagraph (A):*

*"(i) Any measure relating to motor vehicle exhaust or evaporative emissions promulgated by the Administrator by January 1, 1990.*

*"(ii) Regulations concerning Reid Vapor Pressure promulgated by the Administrator by the date of the enactment of the Clean Air Act Amendments of 1990 or required to be promulgated under section 211(h).*

*"(iii) Measures required under subsection (a)(2)(A) (concerning corrections to implementation plans prescribed under guidance by the Administrator).*

*"(iv) Measures required under subsection (a)(2)(B) to be submitted immediately after the date of the enactment of the Clean Air Act Amendments of 1990 (concerning corrections to motor vehicle inspection and maintenance programs).*

*"(2) REASONABLY AVAILABLE CONTROL TECHNOLOGY.—The State shall submit a revision to the applicable implementation plan to include provisions to require the implementation of reasonably available control technology under section 172(c)(1) with respect to each of the following:*

*"(A) Each category of VOC sources in the area covered by a CTG document issued by the Administrator between the date of the enactment of the Clean Air Act Amendments of 1990 and the date of attainment.*

*"(B) All VOC sources in the area covered by any CTG issued before the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(C) All other major stationary sources of VOCs that are located in the area.*

*Each revision described in subparagraph (A) shall be submitted within the period set forth by the Administrator in issuing the relevant CTG document. The revisions with respect to sources described in subparagraphs (B) and (C) shall be submitted by 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, and shall provide for the implementation of the required measures as expeditiously as practicable but no later than May 31, 1995.*

*"(3) GASOLINE VAPOR RECOVERY.—*

*"(A) GENERAL RULE.—Not later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to the applicable implementation plan to require all owners or operators of gasoline dispensing systems to install and operate, by the date prescribed under subparagraph (B), a system for gasoline vapor recovery of emissions from the fueling of motor vehicles. The Administrator shall issue guidance as appropriate as to the effectiveness of such system. This subparagraph shall apply only to facilities which sell more than 10,000 gallons of gasoline per month (50,000 gallons per month in the case of an independent small business marketer of gasoline as defined in section 325).*

*"(B) EFFECTIVE DATE.—The date required under subparagraph (A) shall be—*

*"(i) 6 months after the adoption date, in the case of gasoline dispensing facilities for which construction commenced after the date of the enactment of the Clean Air Act Amendments of 1990;*

*"(ii) one year after the adoption date, in the case of gasoline dispensing facilities which dispense at least 100,000 gallons of gasoline per month, based on average monthly sales for the 2-year period before the adoption date; or*

*"(iii) 2 years after the adoption date, in the case of all other gasoline dispensing facilities.*

*Any gasoline dispensing facility described under both clause (i) and clause (ii) shall meet the requirements of clause (i).*

*"(C) REFERENCE TO TERMS.—For purposes of this paragraph, any reference to the term 'adoption date' shall be considered a reference to the date of adoption by the State of requirements for the installation and operation of a system for gasoline vapor recovery of emissions from the fueling of motor vehicles.*

*"(4) MOTOR VEHICLE INSPECTION AND MAINTENANCE.—For all Moderate Areas, the State shall submit, immediately after the date of the enactment of the Clean Air Act Amendments of 1990, a revision to the applicable implementation plan that includes provisions necessary to provide for a vehicle inspection and maintenance program as described in subsection (a)(2)(B) (without regard to whether or not the area was required by section 172(b)(11)(B) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) to have included a specific schedule for implementation of such a program).*

*"(5) GENERAL OFFSET REQUIREMENT.—For purposes of satisfying the emission offset requirements of this part, the ratio of total emission reductions of volatile organic compounds to total increase emissions of such air pollutant shall be at least 1.15 to 1.*

*"(c) SERIOUS AREAS.—Except as otherwise specified in paragraph (4), each State in which all or part of a Serious Area is located shall, with respect to the Serious Area (or portion thereof, to the extent specified in this subsection), make the submissions described under subsection (b) (relating to Moderate Areas), and shall also submit the revisions to the applicable implementation plan (including the plan items) described under this subsection. For any Serious Area, the terms 'major source' and 'major stationary source' include (in addition to the sources described in section 302) any stationary source or group of sources located within a contiguous area and under common control that emits, or has the potential to emit, at least 50 tons per year of volatile organic compounds.*

*"(1) ENHANCED MONITORING.—In order to obtain more comprehensive and representative data on ozone air pollution, not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990 the Administrator shall promulgate rules, after notice and public comment, for enhanced monitoring of ozone, oxides of nitrogen, and volatile organic compounds. The rules shall, among other things, cover the location and maintenance of monitors. Immediately following the promulgation of rules by the Administrator relating to enhanced monitoring, the State shall commence such actions as may be necessary to adopt and implement a program based on such rules, to improve monitoring for ambient concentrations of ozone, oxides of nitrogen and volatile organic compounds and to improve monitoring of emissions of oxides of nitrogen and volatile organic compounds. Each State implementation plan for the area shall contain measures to improve the ambient monitoring of such air pollutants.*

*"(2) ATTAINMENT AND REASONABLE FURTHER PROGRESS DEMONSTRATIONS.—Within 4 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to the applicable implementation plan that includes each of the following:*

*"(A) ATTAINMENT DEMONSTRATION.—A demonstration that the plan, as revised, will provide for attainment of the ozone national ambient air quality standard by the applicable attainment date. This attainment demonstration must be based on photochemical grid modeling or any other analytical method determined by the Administrator, in the Administrator's discretion, to be at least as effective.*

*"(B) REASONABLE FURTHER PROGRESS DEMONSTRATION.—A demonstration that the plan, as revised, will result in VOC emissions reductions from the baseline emissions described in subsection (b)(1)(B) equal to the following amount averaged over each consecutive 3-year period beginning 6 years after the date of the enactment of the Clean Air Act Amendments of 1990, until the attainment date:*

*"(i) at least 3 percent of baseline emissions each year; or*

*"(ii) an amount less than 3 percent of such baseline emissions each year, if the State demonstrates to the satisfaction of the Administrator that the plan reflecting such lesser amount includes all measures that can feasibly be implemented in the area, in light of technological achievability.*

*To lessen the 3 percent requirement under clause (ii), a State must demonstrate to the satisfaction of the Administrator that the plan for the area includes the measures that are achieved in practice by sources in the same source category in nonattainment areas of the next higher classification. Any determination to lessen the 3 percent requirement shall be reviewed at each milestone under section 182(g) and revised to reflect such new measures (if any) achieved in practice by sources in the same category in any State, allowing a reasonable time to implement such measures. The emission reductions described in this subparagraph shall be calculated in accordance with subsection (b)(1) (C) and (D) (concerning creditability of reductions). The reductions creditable for the period beginning 6 years after the date of the enactment of the Clean Air Act Amendments of 1990, shall include reductions that occurred before such period, computed in accordance with subsection (b)(1),*

*that exceed the 15-percent amount of reductions required under subsection (b)(1)(A).*

*"(C) $NO_x$ CONTROL.—The revision may contain, in lieu of the demonstration required under subparagraph (B), a demonstration to the satisfaction of the Administrator that the applicable implementation plan, as revised, provides for reductions of emissions of VOC's and oxides of nitrogen (calculated according to the creditability provisions of subsection (b)(1) (C) and (D)), that would result in a reduction in ozone concentrations at least equivalent to that which would result from the amount of VOC emission reductions required under subparagraph (B). Within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue guidance concerning the conditions under which $NO_x$ control may be substituted for VOC control or may be combined with VOC control in order to maximize the reduction in ozone air pollution. In accord with such guidance, a lesser percentage of VOCs may be accepted as an adequate demonstration for purposes of this subsection.*

*"(3) ENHANCED VEHICLE INSPECTION AND MAINTENANCE PROGRAM.—*

*"(A) REQUIREMENT FOR SUBMISSION.—Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to the applicable implementation plan to provide for an enhanced program to reduce hydrocarbon emissions and $NO_x$ emissions from in-use motor vehicles registered in each urbanized area (in the nonattainment area), as defined by the Bureau of the Census, with a 1980 population of 200,000 or more.*

*"(B) EFFECTIVE DATE OF STATE PROGRAMS; GUIDANCE.—The State program required under subparagraph (A) shall take effect no later than 2 years from the date of the enactment of the Clean Air Act Amendments of 1990, and shall comply in all respects with guidance published in the Federal Register (and from time to time revised) by the Administrator for enhanced vehicle inspection and maintenance programs. Such guidance shall include—*

*"(i) a performance standard achievable by a program combining emission testing, including on-road emission testing, with inspection to detect tampering with emission control devices and misfueling for all light-duty vehicles and all light-duty trucks subject to standards under section 202; and*

*"(ii) program administration features necessary to reasonably assure that adequate management resources, tools, and practices are in place to attain and maintain the performance standard.*

*Compliance with the performance standard under clause (i) shall be determined using a method to be established by the Administrator.*

*"(C) STATE PROGRAM.—The State program required under subparagraph (A) shall include, at a minimum, each of the following elements—*

*"(i) Computerized emission analyzers, including on-road testing devices.*

*"(ii) No waivers for vehicles and parts covered by the emission control performance warranty as provided for in section 207(b) unless a warranty remedy has been denied in writing, or for tampering-related repairs.*

*"(iii) In view of the air quality purpose of the program, if, for any vehicle, waivers are permitted for emissions-related repairs not covered by warranty, an expenditure to qualify for the waiver of an amount of $450 or more for such repairs (adjusted annually as determined by the Administrator on the basis of the Consumer Price Index in the same manner as provided in title IV).*

*"(iv) Enforcement through denial of vehicle registration (except for any program in operation before the date of the enactment of the Clean Air Act Amendments of 1990 whose enforcement mechanism is demonstrated to the Administrator to be more effective than the applicable vehicle registration program in assuring that noncomplying vehicles are not operated on public roads).*

*"(v) Annual emission testing and necessary adjustment, repair, and maintenance, unless the State demonstrates to the satisfaction of the Administrator that a biennial inspection, in combination with other features of the program which exceed the requirements of this Act, will result in emission reductions which equal or exceed the reductions which can be obtained through such annual inspections.*

*"(vi) Operation of the program on a centralized basis, unless the State demonstrates to the satisfaction of the Administrator that a decentralized program will be equally effective. An electronically connected testing system, a licensing system, or other measures (or any combination thereof) may be considered, in accordance with criteria established by the Administrator, as equally effective for such purposes.*

*"(vii) Inspection of emission control diagnostic systems and the maintenance or repair of malfunctions or system deterioration identified by or affecting such diagnostics systems.*

*Each State shall biennially prepare a report to the Administrator which assesses the emission reductions achieved by the program required under this paragraph based on data collected during inspection and repair of vehicles. The methods used to assess the emission reductions shall be those established by the Administrator.*

*"(4) CLEAN-FUEL VEHICLE PROGRAMS.—(A) Except to the extent that substitute provisions have been approved by the Administrator under subparagraph (B), the State shall submit to the Administrator, within 42 months of the date of the enactment of the Clean Air Act Amendments of 1990, a revision to the applicable implementation plan for each area described under section 212 to include such measures as may be necessary to ensure the effectiveness of the applicable provisions of the clean-fuel vehicle program prescribed under section 212, including all measures necessary to make the use of clean alternative fuels in clean-fuel vehicles (as defined in section 216) economic from the standpoint of vehicle owners. Such a revision shall also be submitted for each area that opts into the clean fuel-vehicle program as provided in section 212.*

*"(B) The Administrator shall approve, as a substitute for all or a portion of the clean-fuel vehicle program prescribed under section 212, any revision to the relevant applicable implementation plan that in the Administrator's judgment will achieve long-term reductions in ozone-producing and toxic air emissions equal to those achieved under section 212, or the percentage thereof attributable to the portion of the clean-fuel vehicle program for which the revision is to substitute. The Administrator may approve such revision only if it consists exclusively of provisions other than those required under this Act for the area. Any State seeking approval of such revision must submit the revision to the Administrator within 24 months of the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall approve or disapprove any such revision within 30 months of the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall publish the revision submitted by a State in the Federal Register upon receipt. Such notice shall constitute a notice of proposed rulemaking on whether or not to approve such revision and shall be deemed to comply with the requirements concerning notices of proposed rulemaking contained in sections 553 through 557 of title 5 of the United States Code (related to notice and comment). Where the Administrator approves such revision for any area, the State need not submit the revision required by subparagraph (A) for the area with respect to the portions of the Federal clean-fuel vehicle program for which the Administrator has approved the revision as a substitute.*

*"(C) Where the Administrator approves under section 214 any market-based alternative emissions reduction plan applicable in an area, the Administrator may approve a plan revision for the area providing for changes to the plan provisions otherwise required by this paragraph to ensure consistency with such alternative emissions reduction plan.*

*"(D) If the Administrator determines, under section 179, that the State has failed to submit any portion of the program required under subparagraph (A), then, in addition to any sanctions available under section 179, the State may not receive credit, in any demonstration of attainment or reasonable further progress for the area, for any emission reductions from implementation of the corresponding aspects of the Federal clean-fuel vehicle requirements established in section 212.*

*"(5) TRANSPORTATION CONTROL.—(A) Beginning 6 years after the date of the enactment of the Clean Air Act Amendments of 1990 and each third year thereafter, the State shall submit a demonstration as to whether current aggregate vehicle mileage, aggregate vehicle emissions, congestion levels, and other relevant parameters are consistent with those used for the area's demonstration of attainment. Where such parameters and emissions levels exceed the levels projected for purposes of the area's attainment demonstration, the State shall within 18 months develop and submit a revision of the applicable implementation plan that includes a transportation control measures program consisting of measures that will reduce emissions to levels that are consistent with emissions levels projected in such demonstration. The revision shall be developed in accordance with guidance issued by the Administrator pursuant to section 108(f) and shall include implementation and funding schedules that achieve expeditious emissions reductions in accordance with implementation plan projections. In the alternative, the State may offset the impact of increased vehicle miles traveled and congestion levels by implementing other controls on other source categories that will produce reductions comparable to those that would be achieved by implementation of such transportation demand management program, consistent with the emission reduction schedules in the plan.*

*"(B) Any plan revision under this subsection shall include measures to reduce congestion, including passenger vehicle trips and miles traveled per trip.*

*"(6) DE MINIMIS RULE.—The new source review provisions under this part shall ensure that increased emissions of volatile organic compounds resulting from any*

physical change in, or change in the method of operation of, a stationary source located in the area shall not be considered de minimis for purposes of determining the applicability of the permit requirements established by this Act unless the increase in net emissions of such air pollutant from such source does not exceed 25 tons when aggregated with all other net increases in emissions from the source over any period of 5 consecutive calendar years which includes the calendar year in which such increase occurred.

"(7) SPECIAL RULE FOR MODIFICATIONS OF SOURCES EMITTING LESS THAN 100 TONS.—In the case of any major stationary source of volatile organic compounds located in the area (other than a source which emits or has the potential to emit 100 tons or more of volatile organic compounds per year), whenever any change (as described in section 111(a)(4)) at that source results in any increase (other than a de minimis increase) in emissions of volatile organic compounds from any discrete operation, unit, or other pollutant emitting activity at the source, such increase shall be considered a modification for purposes of section 172(c)(5) and section 173(a), except that such increase shall not be considered a modification for such purposes if the owner or operator of the source elects to offset the increase by a greater reduction in emissions of volatile organic compounds concerned from other operations, units, or activities within the source at an internal offset ratio of at least 1.3 to 1. If the owner or operator does not make such election, such change shall be considered a modification for such purposes, but in applying section 173(a)(2) in the case of any such modification, the best available control technology (BACT), as defined in section 169, shall be substituted for the lowest achievable emission rate (LAER). The Administrator shall establish and publish policies and procedures for implementing the provisions of this paragraph.

"(8) SPECIAL RULE FOR MODIFICATIONS OF SOURCES EMITTING 100 TONS OR MORE.—In the case of any major stationary source of volatile organic compounds located in the area which emits or has the potential to emit 100 tons or more of volatile organic compounds per year, whenever any change (as described in section 111(a)(4)) at that source results in any increase (other than a de minimis increase) in emissions of volatile organic compounds from any discrete operation, unit, or other pollutant emitting activity at the source, such increase shall be considered a modification for purposes of section 172(c)(5) and section 173(a), except that if the owner or operator of the source elects to offset the increase by a greater reduction in emissions of volatile organic compounds from other operations, units, or activities within the source at an internal offset ratio of at least 1.3 to 1, the requirements of section 173(a)(2) (concerning the lowest achievable emission rate (LAER)) shall not apply.

"(9) CONTINGENCY PROVISIONS.—In addition to the contingency provisions required under section 172(c)(9), the plan revision shall provide for the implementation of specific measures to be undertaken if the area fails to meet any applicable milestone. Such measures shall be included in the plan revision as contingency measures to take effect without further action by the State or the Administrator upon a failure by the State to meet the applicable milestone.

"(10) GENERAL OFFSET REQUIREMENT.—For purposes of satisfying the emission offset requirements of this part, the ratio of total emission reductions of volatile organic compounds to total increase emissions of such air pollutant shall be at least 1.2 to 1.

Any reference to 'attainment date' in subsection (b), which is incorporated by reference into this subsection, shall refer to the attainment date for serious areas.

"(d) SEVERE AREAS.—Each State in which all or part of a Severe Area is located shall, with respect to the Severe Area, make the submissions described under subsection (c) (relating to Serious Areas), and shall also submit the revisions to the applicable implementation plan (including the plan items) described under this subsection. For any Severe Area, the terms 'major source' and 'major stationary source' include (in addition to the sources described in section 302) any stationary source or group of sources located within a contiguous area and under common control that emits, or has the potential to emit, at least 25 tons per year of volatile organic compounds.

"(1) VEHICLE MILES TRAVELED.—Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision that includes all reasonably available techniques for reducing aggregate vehicle emissions and, at a minimum, identifies and adopts specific enforceable strategies and transportation control measures to offset any growth in emissions from growth in vehicle miles traveled or numbers of vehicle trips in such area. The State shall consider, at a minimum, measures specified in section 108(f). If the State fails to include any such measure, the implementation plan shall contain an explanation of why such measure was not adopted and what emissions reduction measure was adopted to provide a comparable reduction in emissions, or reasons why such reduction is not necessary to attain the national primary ambient air quality standard for ozone.

"(2) OFFSET REQUIREMENT.—For purposes of satisfying the offset requirements pursuant to this part, the ratio of total emission reductions of VOCs to total increased emissions of such air pollutant shall be at least 1.3 to 1, except that if the State plan requires all existing major sources in the nonattainment area to use best available control technology (as defined in section 169(3)) for the control of volatile organic compounds, the ratio shall be at least 1.2 to 1.

"(3) ENFORCEMENT UNDER SECTION 185.—By December 31, 2000, the State shall submit a plan revision which includes the provisions required under section 185.

Any reference to the term 'attainment date' in subsection (b) or (c), which is incorporated by reference into this subsection (d), shall refer to the attainment date for Severe Areas.

"(e) EXTREME AREAS.—Each State in which all or part of an Extreme Area is located shall, with respect to the Extreme Area, make the submissions described under subsection (d) (relating to Severe Areas), and shall also submit the revisions to the applicable implementation plan (including the plan items) described under this subsection. The provisions of clause (ii) of subsection (c)(2)(B) (relating to reductions of less than 3 percent) and the provisions of clause (ii) of subsection (b)(1)(A) (relating to reductions of less than 15 percent) shall not apply in the case of an Extreme Area. For any Extreme Area, the terms 'major source' and 'major stationary source' includes (in addition to the sources described in section 302) any stationary source or group of sources located within a contiguous area and under common control that emits, or has the potential to emit, at least 10 tons per year of volatile organic compounds.

"(1) OFFSET REQUIREMENT.—For purposes of satisfying the offset requirements pursuant to this part, the ratio of total emission reductions of VOCs to total increased emissions of such air pollutant shall be at least 1.5 to 1, except that if the State plan requires all existing major sources in the nonattainment area to use best available control technology (as defined in section 169(3)) for the control of volatile organic compounds, the ratio shall be at least 1.2 to 1.

"(2) MODIFICATIONS.—Any change (as described in section 111(a)(4)) at a major stationary source which results in any increase in emissions from any discrete operation, unit, or other pollutant emitting activity at the source shall be considered a modification for purposes of section 172(c)(5) and section 173(a), except that for purposes of complying with the offset requirement pursuant to section 173(a)(1), any such increase shall not be considered a modification if the owner or operator of the source elects to offset the increase by a greater reduction in emissions of the air pollutant concerned from other discrete operations, units, or activities within the source at an internal offset ratio of at least 1.3 to 1. The offset requirements of this part shall not be applicable in Extreme Areas to a modification of an existing source if such modification consists of installation of equipment required to comply with the applicable implementation plan, permit, or this Act.

"(3) USE OF CLEAN FUELS OR ADVANCED CONTROL TECHNOLOGY.—For Extreme Areas, a plan revision shall be submitted within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990 to require, effective 8 years after such date, that each new, modified, and existing electric utility and industrial and commercial boiler which emits more than 25 tons per year of oxides of nitrogen—

"(A) burn as its primary fuel natural gas, methanol, or ethanol (or a comparably low polluting fuel), or

"(B) use advanced control technology (such as catalytic control technology or other comparably effective control methods) for reduction of emissions of oxides of nitrogen.

For purposes of this subsection, the term 'primary fuel' means the fuel which is used 90 percent or more of the operating time. This paragraph shall not apply during any natural gas supply emergency (as defined in title III of the Natural Gas Policy Act of 1978).

"(4) TRAFFIC CONTROL MEASURES DURING HEAVY TRAFFIC HOURS.—For Extreme Areas, each implementation plan revision under this subsection may contain provisions establishing traffic control measures applicable during heavy traffic hours to reduce the use of high polluting vehicles or heavy-duty vehicles, notwithstanding any other provision of law.

"(5) NEW TECHNOLOGIES.—The Administrator may, in accordance with section 110, approve provisions of an implementation plan for an Extreme Area which anticipate development of new control techniques or improvement of existing control technologies, and an attainment demonstration based on such provisions, if the State demonstrates to the satisfaction of the Administrator that—

"(A) such provisions are not necessary to achieve the incremental emission reductions required during the first 10 years after the

*date of the enactment of the Clean Air Act Amendments of 1990; and*

*"(B) the State has submitted enforceable commitments to develop and adopt contingency measures to be implemented as set forth herein if the anticipated technologies do not achieve planned reductions.*

*Such contingency measures shall be submitted to the Administrator no later than 3 years before proposed implementation of the plan provisions and approved or disapproved by the Administrator in accordance with section 110. The contingency measures shall be adequate to produce emission reductions sufficient, in conjunction with other approved plan provisions, to achieve the periodic emission reductions required by subsection (b)(1) or (c)(2) and attainment by the applicable dates. If the Administrator determines that an Extreme Area has failed to achieve an emission reduction requirement set forth in subsection (b)(1) or (c)(2), and that such failure is due in whole or part to an inability to fully implement provisions approved pursuant to this subsection, the Administrator shall require the State to implement the contingency measures to the extent necessary to assure compliance with subsections (b)(1) and (c)(2).*

*Any reference to the term 'attainment date' in subsection (b), (c), or (d) which is incorporated by reference into this subsection, shall refer to the attainment date for Extreme Areas.*

*"(f) $NO_x$ Requirements.—The plan provisions required under this subpart for major stationary sources of volatile organic compounds shall also apply to major stationary sources (as defined in section 302 and subsections (c), (d), and (e) of this section) of oxides of nitrogen. This subsection shall not apply in the case of oxides of nitrogen for those sources for which the Administrator determines (when the Administrator approves a plan or plan revision) that net air quality benefits are greater in the absence of reductions of oxides of nitrogen from the sources concerned. This subsection shall also not apply in the case of oxides of nitrogen for—*

*"(1) nonattainment areas not within an ozone transport region under section 184 if the Administrator determines (when the Administrator approves a plan or plan revision) that additional reductions of oxides of nitrogen would not contribute to attainment of the national ambient air quality standard for ozone in the area, or*

*"(2) nonattainment areas within such an ozone transport region if the Administrator determines (when the Administrator approves a plan or plan revision) that additional reductions of oxides of nitrogen would not produce net ozone air quality benefits in such region.*

*"(g) MILESTONES.—*

*"(1) REDUCTIONS IN EMISSIONS.—6 years after the date of the enactment of the Clean Air Amendments of 1990 and at intervals of every 3 years after, the State shall determine whether each nonattainment area (other than an area classified as Marginal or Moderate) has achieved a reduction in emissions during the preceding intervals equivalent to the total emission reductions required to be achieved by the end of such interval pursuant to subsection (b)(1) and the corresponding requirements of subsections (c)(2)(B) and (C), (d), and (e). Such reduction shall be referred to in this section as an applicable milestone.*

*"(2) COMPLIANCE DEMONSTRATION.—For each nonattainment area referred to in paragraph (1), not later than 90 days after the date on which an applicable milestone occurs (not including an attainment date on which a milestone occurs in cases where the standard has been attained), each State in which all or part of such area is located shall submit to the Administrator a demonstration that the milestone has been met. A demonstration under this paragraph shall be submitted in such form and manner, and shall contain such information and analysis, as the Administrator shall require, by rule. The Administrator shall determine whether or not a State's demonstration is adequate within 90 days after the Administrator's receipt of a demonstration which contains the information and analysis required by the Administrator.*

*"(3) SERIOUS AND SEVERE AREAS; STATE ELECTION.—If a State fails to submit a demonstration under paragraph (2) for any Serious or Severe area within the required period or if the Administrator determines that the area has not met any applicable milestone, the State shall elect, within 90 days after such failure or determination—*

*"(A) to have the area reclassified to the next higher classification,*

*"(B) to implement specific additional measures adequate, as determined by the Administrator, to meet the next milestone as provided in the applicable contingency plan, or*

*"(C) to adopt an economic incentive program as described in paragraph (4).*

*If the State makes an election under subparagraph (B), the Administrator shall, within 90 days after the election, review such plan and shall, if the Administrator finds the contingency plan inadequate, require further measures necessary to meet such milestone. Once the State makes an election, it shall be deemed accepted by the Administrator as meeting the election requirement. If the State fails to make an election required under this paragraph within the required 90-day period or within 6 months thereafter, the area shall be reclassified to the next higher classification by operation of law at the expiration of such 6-month period. Within 12 months after the date required for the State to make an election, the State shall submit a revision of the applicable implementation plan for the area that meets the requirements of this paragraph. The Administrator shall review such plan revision and approve or disapprove the revision within 9 months after the date of its submission.*

*"(4) ECONOMIC INCENTIVE PROGRAM.—(A) An economic incentive program under this paragraph shall be consistent with rules published by the Administrator and sufficient, in combination with other elements of the State plan, to achieve the next milestone. The State program may include a nondiscriminatory system, consistent with applicable law regarding interstate commerce, of State established emissions fees or a system of marketable permits, or a system of State fees on sale, import, or manufacture of products the use of which contributes to ozone formation, or any combination of the foregoing or other similar measures. The program may also include incentives and requirements to reduce vehicle emissions and vehicle miles traveled in the area, including any of the transportation control measures identified in section 108(f).*

*"(B) Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall publish rules for the programs to be adopted pursuant to subparagraph (A). Such rules shall include model plan provisions which may be adopted for reducing emissions from permitted stationary sources, area sources, and mobile sources. The guidelines shall require that any revenues generated by the plan provisions adopted pursuant to subparagraph (A) shall be used by the State for any of the following:*

*"(i) Providing incentives for achieving emission reductions.*

*"(ii) Providing assistance for the development of innovative technologies for the control of ozone air pollution and for the development of lower-polluting solvents and surface coatings. Such assistance shall not provide for the payment of more than 75 percent of either the costs of any project to develop such a technology or the costs of development of a lower-polluting solvent or surface coating.*

*"(iii) Funding the administrative costs of State programs under this Act. Not more than 50 percent of such revenues may be used for purposes of this clause.*

*"(5) EXTREME AREAS.—If a State fails to submit a demonstration under paragraph (2) for any Extreme Area within the required period, or if the Administrator determines that the area has not met any applicable milestone, the State shall, within 9 months after such failure or determination, submit a plan revision to implement an economic incentive program which meets the requirements of paragraph (4). The Administrator shall review such plan revision and approve or disapprove the revision within 9 months after the date of its submission.*

*"(h) RURAL TRANSPORT AREAS.—(1) Notwithstanding any other provision of section 181 or this section, a State containing an ozone nonattainment area that does not include, and is not adjacent to, any part of a Metropolitan Statistical Area or, where one exists, a Consolidated Metropolitan Statistical Area (as defined by the United States Bureau of the Census), which area is treated by the Administrator, in the Administrator's discretion, as a rural transport area within the meaning of paragraph (2), shall be treated by operation of law as satisfying the requirements of this section if it makes the submissions required under subsection (a) of this section (relating to marginal areas).*

*"(2) The Administrator may treat an ozone nonattainment area as a rural transport area if the Administrator finds that sources of VOC (and, where the Administrator determines relevant, $NO_x$) emissions within the area do not make a significant contribution to the ozone concentrations measured in the area or in other areas.*

*"(i) RECLASSIFIED AREAS.—Each State containing an ozone nonattainment area reclassified under section 181(b)(2) shall meet such requirements of subsections (b) through (d) of this section as may be applicable to the area as reclassified, according to the schedules prescribed in connection with such requirements, except that the Administrator may adjust any applicable deadlines (other than attainment dates) to the extent such adjustment is necessary or appropriate to assure consistency among the required submissions.*

*"(j) MULTI-STATE OZONE NONATTAINMENT AREAS.—*

*"(1) COORDINATION AMONG STATES.—Each State in which there is located a portion of a single ozone nonattainment area which covers more than one State (hereinafter in this section referred to as a 'multi-State ozone nonattainment area') shall—*

*"(A) take all reasonable steps to coordinate, substantively and procedurally, the revisions and implementation of State imple-*

mentation plans applicable to the nonattainment area concerned; and

"(B) use photochemical grid modeling or any other analytical method determined by the Administrator, in his discretion, to be at least as effective.

The Administrator may not approve any revision of a State implementation plan submitted under this part for a State in which part of a multi-State ozone nonattainment area is located if the plan revision for that State fails to comply with the requirements of this subsection.

"(2) FAILURE TO DEMONSTRATE ATTAINMENT.—If any State in which there is located a portion of a multi-State ozone nonattainment area fails to provide a demonstration of attainment of the national ambient air quality standard for ozone in that portion within the required period, the State may petition the Administrator to make a finding that the State would have been able to make such demonstration but for the failure of one or more other States in which other portions of the area are located to commit to the implementation of all measures required under section 182 (relating to plan submissions and requirements for ozone nonattainment areas). If the Administrator makes such finding, the provisions of section 179 (relating to sanctions) shall not apply, by reason of the failure to make such demonstration, in the portion of the multi-State ozone nonattainment area within the State submitting such petition.

"SEC. 183. FEDERAL OZONE MEASURES.

"(a) CONTROL TECHNIQUES GUIDELINES FOR VOC SOURCES.—Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue control techniques guidelines, in accordance with section 108, for 11 categories of stationary sources of VOC emissions for which such guidelines have not been issued as of such date of enactment, not including the categories referred to in paragraphs (3) and (4) of subsection (b) of this section. The Administrator may issue such additional control techniques guidelines as the Administrator deems necessary.

"(b) EXISTING AND NEW CTGS.—(1) Within 36 months after the date of the enactment of the Clean Air Act Amendments of 1990, and periodically thereafter, the Administrator shall review and, if necessary, update control technique guidance issued under section 108 before the date of the enactment of the Clean Air Act Amendments of 1990.

"(2) In issuing the guidelines the Administrator shall give priority to those categories which the Administrator considers to make the most significant contribution to the formation of ozone air pollution in ozone nonattainment areas, including hazardous waste treatment, storage, and disposal facilities which are permitted under subtitle C of the Solid Waste Disposal Act. Thereafter the Administrator shall periodically review and, if necessary, revise such guidelines.

"(3) Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue control techniques guidances in accordance with section 108 to reduce the aggregate emissions of volatile organic compounds into the ambient air from aerospace coatings and solvents. Such control techniques guidances shall, at a minimum, be adequate to reduce aggregate emissions of volatile organic compounds into the ambient air from the application of such coatings and solvents to such level as the Administrator determines may be achieved through the adoption of best available control measures. Such control technology guidance shall provide for such reductions in such increments and on such schedules as the Administrator determines to be reasonable, but in no event later than 10 years after the final issuance of such control technology guidance. In developing control technology guidance under this subsection, the Administrator shall consult with the Secretary of Defense, the Secretary of Transportation, and the Administrator of the National Aeronautics and Space Administration with regard to the establishment of specifications for such coatings. In evaluating VOC reduction strategies, the guidance shall take into account the applicable requirements of section 112 and the need to protect stratospheric ozone.

"(4) Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue control techniques guidances in accordance with section 108 to reduce the aggregate emissions of volatile organic compounds and PM-10 into the ambient air from paints, coatings, and solvents used in shipbuilding operations and ship repair. Such control techniques guidances shall, at a minimum, be adequate to reduce aggregate emissions of volatile organic compounds and PM-10 into the ambient air from the removal or application of such paints, coatings, and solvents to such level as the Administrator determines may be achieved through the adoption of the best available control measures. Such control techniques guidances shall provide for such reductions in such increments and on such schedules as the Administrator determines to be reasonable, but in no event later than 10 years after the final issuance of such control technology guidance. In developing control techniques guidances under this subsection, the Administrator shall consult with the appropriate Federal agencies.

"(c) ALTERNATIVE CONTROL TECHNIQUES.—Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue technical documents which identify alternative controls for all categories of stationary sources of volatile organic compounds and oxides of nitrogen which emit, or have the potential to emit 25 tons per year or more of such air pollutant. The Administrator shall revise and update such documents as the Administrator determines necessary.

"(d) GUIDANCE FOR EVALUATING COST-EFFECTIVENESS.—Within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall provide guidance to the States to be used in evaluating the relative cost-effectiveness of various options for the control of emissions from existing stationary sources of air pollutants which contribute to nonattainment of the national ambient air quality standards for ozone.

"(e) CONTROL OF EMISSIONS FROM CERTAIN SOURCES.—

"(1) DEFINITIONS.—For purposes of this subsection—

"(A) BEST AVAILABLE CONTROLS.—The term 'best available controls' means the degree of emissions reduction that the Administrator determines, on the basis of technological and economic feasibility, health, environmental, and energy impacts, is achievable through the application of the most effective equipment, measures, processes, methods, systems or techniques, including chemical reformulation, product or feedstock substitution, repackaging, and directions for use, consumption, storage, or disposal.

"(B) CONSUMER OR COMMERCIAL PRODUCT.—The term 'consumer or commercial product' means any substance, product (including paints, coatings, and solvents), or article (including any container or packaging) held by any person, the use, consumption, storage, disposal, destruction, or decomposition of which may result in the release of volatile organic compounds. The term does not include fuels or fuel additives regulated under section 211, or motor vehicles, non-road vehicles, and non-road engines as defined under section 216.

"(C) REGULATED ENTITIES.—The term 'regulated entities' means—

"(i) manufacturers, processors, wholesale distributors, or importers of consumer or commercial products for sale or distribution in interstate commerce in the United States; or

"(ii) manufacturers, processors, wholesale distributors, or importers that supply the entities listed under clause (i) with such products for sale or distribution in interstate commerce in the United States.

"(2) STUDY AND REPORT.—

"(A) STUDY.—The Administrator shall conduct a study of the emissions of volatile organic compounds into the ambient air from consumer and commercial products (or any combination thereof) in order to—

"(i) determine their potential to contribute to ozone levels which violate the national ambient air quality standard for ozone; and

"(ii) establish criteria for selecting consumer and commercial products or classes or categories thereof which shall be subject to control under this subsection.

The study shall be completed and a report submitted to Congress not later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(B) CONSIDERATION OF CERTAIN FACTORS.—In establishing the criteria under subparagraph (A)(ii), the Administrator shall take into consideration each of the following:

"(i) The uses, benefits, and commercial demand of consumer and commercial products.

"(ii) The health or safety functions (if any) served by such consumer and commercial products.

"(iii) Those consumer and commercial products which emit highly reactive volatile organic compounds into the ambient air.

"(iv) Those consumer and commercial products which are subject to the most cost-effective controls.

"(v) The availability of alternatives (if any) to such consumer and commercial products which are of comparable costs, considering health, safety, and environmental impacts.

"(3) REGULATIONS TO REQUIRE EMISSION REDUCTIONS.—

"(A) IN GENERAL.—Upon submission of the final report referred to in paragraph (2), and from time to time thereafter, the Administrator shall propose regulations for the control of any VOCs from consumer and commercial products which, in the Administrator's judgment, emit volatile organic compounds into the ambient air that may reasonably be anticipated to contribute to ozone levels that violate the national primary ambient air quality standard for ozone. Such regulations shall take into account the technical feasibility, the costs of achieving such control, the lead time required for such control, and competition. Such regulations may exempt health use products for which the Administrator, in consultation with the Commissioner of the Food and Drug Administration determines

*there are no suitable substitute. In order to carry out this section, the Administrator may, by regulation, control or prohibit any activity, including the manufacture or introduction into commerce, offering for sale, or sale of any consumer or commercial product which results in emission of volatile organic compounds into the ambient air. Not later than one year after proposal of regulations under this subsection, the Administrator shall promulgate such regulations. From time to time, and under the same procedures, the Administrator may revise any of the regulations promulgated under this subsection.*

*"(B) REGULATED ENTITIES.—Regulations under this subsection may be imposed only with respect to regulated entities.*

*"(C) USE OF CTGS.—For any consumer or commercial product the Administrator may issue control techniques guidances under this Act in lieu of regulations required under subparagraph (A) if the Administrator determines that such guidance will be substantially as effective as regulations in reducing emissions of volatile organic compounds which contribute to ozone levels in areas which violate the national ambient air quality standard for ozone.*

*"(4) BEST AVAILABLE CONTROLS.—Upon submission of the find report under paragraph (2), the Administrator shall list all categories of commercial or consumer products which release significant evaporative emissions of VOCs. At such time the Administrator shall divide the list into 4 groups establishing priorities for regulation based on the factors listed in paragraph (2). Every 2 years after promulgating such list the Administrator shall regulate one group of categories until all 4 groups are regulated. The regulations shall require best available controls.*

*"(5) SYSTEMS OF REGULATION.—The regulations under this subsection may include any system or systems of regulation as the Administrator may deem appropriate, including requirements for registration and labeling, self-monitoring and reporting, prohibitions, limitations, or reasonable fees, charges, and other economic incentives (including marketable permits and auctions of emissions rights) concerning the manufacture, processing, distribution, use, consumption, or disposal of the product.*

*"(6) FEES, ETC.—Any fees, charges, or other funds established and collected by the Administrator under such regulations shall be deposited in a special fund in the United States Treasury for licensing and other services, which thereafter shall be available until expended, subject to annual appropriation Acts, solely to carry out the activities of the Administrator for which such fees, charges, or collections are established or made.*

*"(7) ENFORCEMENT.—Any regulation established under this subsection shall be treated, for purposes of enforcement of this Act, as a standard under section 111 and any violation of such regulation shall be treated as a violation of a requirement of section 111(e).*

*"(8) STATE ADMINISTRATION.—Each State may develop and submit to the Administrator a procedure under State law for implementing and enforcing regulations promulgated under this subsection. If the Administrator finds the State procedure is adequate, the Administrator shall approve such procedure. Nothing in this paragraph shall prohibit the Administrator from enforcing any applicable regulations under this subsection.*

*"(9) SIZE, ETC.—No regulations regarding the size, shape, or labeling of a product may be promulgated, unless the Administrator determines such regulations to be useful in meeting any national ambient air quality standard.*

*"(10) STATE CONSULTATION.—Any State which proposes regulations other than those adopted under this subsection shall consult with the Administrator regarding whether any other State or local subdivision has promulgated or is promulgating regulations on any products covered under this part. The Administrator shall establish a clearinghouse of information, studies, and regulations proposed and promulgated regarding products covered under this subsection and disseminate such information collected as requested by State or local subdivisions.*

*"(f) MARINE VESSEL STANDARDS.—*

*"(1) SCHEDULE FOR STANDARDS.—(A) Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate standards applicable to the emission of VOCs and any other air pollutant from loading and unloading of marine tank vessels which the Administrator finds causes, or contributes to, air pollution that may be reasonably anticipated to endanger public health or welfare. Such standards shall require the application of reasonably available control technology, considering costs, any nonair-quality benefits, environmental impacts, energy requirements and safety factors associated with alternative control techniques. To the extent practicable such standards shall apply to loading and unloading facilities and not to marine vessels.*

*"(B) Any regulation prescribed under this subsection (and any revision thereof) shall take effect after such period as the Administrator finds (after consultation with the Secretary of the department in which the Coast Guard is operating) necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period, except that the effective date shall not be more than 2 years after promulgation of such regulations.*

*"(2) REGULATIONS ON EQUIPMENT SAFETY.—Within 6 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Secretary of the Department in which the Coast Guard is operating shall issue regulations to ensure the safety of the equipment and operations which are to control emissions from the loading and unloading of marine tank vessels, under section 3703 of title 46 of the United States Code and section 6 of the Ports and Waterways Safety Act (33 U.S.C. 1225). The regulations issued by a State or political subdivision regarding emissions from the loading and unloading of marine tank vessels shall be consistent with the regulations regarding safety of the Department in which the Coast Guard is operating.*

*"(3) AGENCY AUTHORITY.—(A) The Administrator shall ensure compliance with the vessel emission standards prescribed under paragraph (1)(A).*

*"(B) The Secretary of the Department in which the Coast Guard is operating shall ensure compliance with the regulations issued under paragraph (2).*

*"(4) STATE OR LOCAL STANDARDS.—After the Administrator promulgates standards under this section, no State or political subdivision thereof may adopt or attempt to enforce any standard respecting emissions from marine vessels subject to regulation under paragraph (1) unless such standard is no less stringent than the standards promulgated under paragraph (1).*

*"(5) ENFORCEMENT.—Any standard established under paragraph (1)(A) shall be treated, for purposes of enforcement of this Act, as a standard under section 111 and any violation of such standard shall be treated as a violation of a requirement of section 111(e).*

*"(g) OZONE DESIGN VALUE STUDY.—The Administrator shall conduct a study of whether the methodology in use by the Environmental Protection Agency as of the date of the enactment of the Clean Air Act Amendments of 1990 for establishing a design value for ozone provides a reasonable indicator of the ozone air quality of ozone nonattainment areas. The Administrator shall obtain input from States, local subdivisions thereof, and others. The study shall be completed and a report submitted to Congress not later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990. The results of the study shall be subject to peer and public review before submitting it to Congress.*

*"SEC. 184. CONTROL OF INTERSTATE OZONE AIR POLLUTION.*

*"(a) OZONE TRANSPORT REGIONS.—A single transport region for ozone (within the meaning of section 176A(a)), comprised of the States of Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, and the Consolidated Metropolitan Statistical Area that includes the District of Columbia, is hereby established by operation of law. The provisions of section 176A(a) (1) and (2) shall apply with respect to the transport region established under this section and any other transport region established for ozone, except to the extent inconsistent with the provisions of this section. The Administrator shall convene the commission required (under section 176A(b)) as a result of the establishment of such region within 6 months of the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(b) PLAN PROVISIONS FOR STATES IN OZONE TRANSPORT REGIONS.—(1) In accordance with section 110, not later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990 (or 9 months after the subsequent inclusion of a State in a transport region established for ozone), each State included within a transport region established for ozone shall submit a State implementation plan or revision thereof to the Administrator which requires the following—*

*"(A) that each area in such State that is in an ozone transport region, and that is a metropolitan statistical area or part thereof with a population of 100,000 or more comply with the provisions of section 182(c)(2)(A) (pertaining to enhanced vehicle inspection and maintenance programs); and*

*"(B) implementation of reasonably available control technology with respect to all sources of volatile organic compounds in the State covered by a control techniques guideline issued before or after the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(2) Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall complete a study identifying control measures capable of achieving emission reductions comparable to those achievable through vehicle refueling controls contained in section 182(b)(3), and such measures or such vehicle refueling controls shall be implemented in accordance with the provisions of this sec-*

tion. Notwithstanding other deadlines in this section, the applicable implementation plan shall be revised to reflect such measures within 1 year of completion of the study. For purposes of this section any stationary source that emits or has the potential to emit at least 50 tons per year of volatile organic compounds shall be considered a major stationary source and subject to the requirements which would be applicable to major stationary sources if the area were classified as a Moderate nonattainment area.

"(c) ADDITIONAL CONTROL MEASURES.—

"(1) RECOMMENDATIONS.—Upon petition of any State within a transport region established for ozone, and based on a majority vote of the Governors on the Commission (or their designees), the Commission may, after notice and opportunity for public comment, develop recommendations for additional control measures to be applied within all or a part of such transport region if the commission determines such measures are necessary to bring any area in such region into attainment by the dates provided by this subpart. The commission shall transmit such recommendations to the Administrator.

"(2) NOTICE AND REVIEW.—Whenever the Administrator receives recommendations prepared by a commission pursuant to paragraph (1) (the date of receipt of which shall hereinafter in this section be referred to as the 'receipt date'), the Administrator shall—

"(A) immediately publish in the Federal Register a notice stating that the recommendations are available and provide an opportunity for public hearing within 90 days beginning on the receipt date; and

"(B) commence a review of the recommendations to determine whether the control measures in the recommendations are necessary to bring any area in such region into attainment by the dates provided by this subpart and are otherwise consistent with this Act.

"(3) CONSULTATION.—In undertaking the review required under paragraph (2)(B), the Administrator shall consult with members of the commission of the affected States and shall take into account the data, views, and comments received pursuant to paragraph (2)(A).

"(4) APPROVAL AND DISAPPROVAL.—Within 9 months after the receipt date, the Administrator shall (A) determine whether to approve, disapprove, or partially disapprove and partially approve the recommendations; (B) notify the commission in writing of such approval, disapproval, or partial disapproval; and (C) publish such determination in the Federal Register. If the Administrator disapproves or partially disapproves the recommendations, the Administrator shall specify—

"(i) why any disapproved additional control measures are not necessary to bring any area in such region into attainment by the dates provided by this subpart or are otherwise not consistent with the Act; and

"(ii) recommendations concerning equal or more effective actions that could be taken by the commission to conform the disapproved portion of the recommendations to the requirements of this section.

"(5) FINDING.—Upon approval or partial approval of recommendations submitted by a commission, the Administrator shall issue to each State which is included in the transport region and to which a requirement of the approved plan applies, a finding under section 110(k)(5) that the implementation plan for such State is inadequate to meet the requirements of section 110(a)(2)(D). Such finding shall require each such State to revise its implementation plan to include the approved additional control measures within one year after the finding is issued.

"(d) BEST AVAILABLE AIR QUALITY MONITORING AND MODELING.—For purposes of this section, not later than 6 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate criteria for purposes of determining the contribution of sources in one area to concentrations of ozone in another area which is a nonattainment area for ozone. Such criteria shall require that the best available air quality monitoring and modeling techniques be used for purposes of making such determinations.

"SEC. 185. ENFORCEMENT FOR SEVERE AND EXTREME OZONE NONATTAINMENT AREAS FOR FAILURE TO ATTAIN.

"(a) GENERAL RULE.—Each implementation plan revision required under section 182 (d) and (e) (relating to the attainment plan for Severe and Extreme ozone nonattainment areas) shall provide that, if the area to which such plan revision applies has failed to attain the national primary ambient in quality standard for ozone by the applicable attainment date, each major stationary source of VOCs located in the area shall, except as otherwise provided under subsection (c), pay a fee to the State as a penalty for such failure, computed in accordance with subsection (b), for each calendar year beginning after the attainment date, until the area is redesignated as an attainment area for ozone. Each such plan revision should include procedures for assessment and collection of such fees.

"(b) COMPUTATION OF FEE.—

"(1) FEE AMOUNT.—The fee shall equal $5,000, adjusted in accordance with paragraph (3), per ton of VOC emitted by the source during the calendar year in excess of 80 percent of the baseline amount, computed under paragraph (2).

"(2) BASELINE AMOUNT.—For purposes of this section, the baseline amount shall be computed, in accordance with such guidance as the Administrator may provide, as the lower of the amount of actual VOC emissions ('actuals') or VOC emissions allowed under the permit applicable to the source (or, if no such permit has been issued for the attainment year, the amount of VOC emissions allowed under the applicable implementation plan ('allowables')) during the attainment year. Notwithstanding the preceding sentence, the Administrator may issue guidance authorizing the baseline amount to be determined in accordance with the lower of average actuals or average allowables, determined over a period of more than one calendar year. Such guidance may provide that such average calculation for a specific source may be used if that source's emissions are irregular, cyclical, or otherwise vary significantly from year to year.

"(3) ANNUAL ADJUSTMENT.—The fee amount under paragraph (1) shall be adjusted annually, beginning in the year beginning after the year of enactment, in accordance with section 402(b)(3)(B)(v) (relating to inflation adjustment).

"(c) EXCEPTION.—Notwithstanding any provision of this section, no source shall be required to pay any fee under subsection (a) with respect to emissions during any year that is treated as an Extension Year under section 181(a)(5).

"(d) FEE COLLECTION BY THE ADMINISTRATOR.—If the Administrator has found that the fee provisions of the implementation plan do not meet the requirements of this section, or if the Administrator makes a finding that the State is not administering and enforcing the fee required under this section, the Administrator shall, in addition to any other action authorized under this title, collect, in accordance with procedures promulgated by the Administrator, the unpaid fees required under subsection (a). If the Administrator makes such a finding under section 179(a)(4), the Administrator may collect fees for periods before the determination, plus interest computed in accordance with section 6621(a)(2) of the Internal Revenue Code of 1986 (relating to computation of interest on underpayment of Federal taxes), to the extent the Administrator finds such fees have not been paid to the State. The provisions of clauses (ii) through (iii) of section 402(b)(3)(C) (relating to penalties and use of the funds, respectively) shall apply with respect to fees collected under this subsection.

"(e) EXEMPTIONS FOR CERTAIN SMALL AREAS.—For areas with a total population under 200,000 which fail to attain the standard by the applicable attainment date, no sanction under this section or under any other provision of this Act shall apply if the area can demonstrate, consistent with guidance issued by the Administrator, that attainment in the area is prevented because of ozone or ozone precursors transported from other areas. The prohibition applies only in cases in which the area has met all requirements and implemented all measures applicable to the area under this Act.

"SEC. 185A. TRANSITIONAL AREAS.

"If an area has not violated the NAAQS for ozone for the 36-month period commencing on January 1, 1987, and ending on December 31, 1989, the Administrator shall suspend the requirements of this subpart until December 31, 1991. By June 30, 1992, the Administrator shall determine by order, based on the area's design value as of the attainment date, whether the area attained such standard by December 31, 1991. If the Administrator determines that the area attained the standard, the Administrator shall require, as part of the order, the State to submit a maintenance plan for the area within 12 months of such determination. If the Administrator determines that the area failed to attain the standard, the Administrator shall, by June 30, 1992, designate the area as nonattainment under section 107(d)(4).

"SEC. 185B. $NO_x$ AND VOC STUDY.

"The Administrator, in conjunction with the National Academy of Sciences, shall conduct a study on the role of ozone precursors in tropospheric ozone formation and control. The study should examine the roles of oxides of nitrogen and volatile organic compounds emission reductions, the role of biogenic volatile organic compounds emissions, and the basic information required for air quality models. The study should be completed and a report submitted to Congress within 2 years of the date of the enactment of the Clean Air Act Amendments of 1990.".

SEC. 104. ADDITIONAL PROVISIONS FOR CARBON MONOXIDE NONATTAINMENT AREAS.

Part D of title I is amended by adding the following new subpart at the end:

"Subpart 3—Additional Provisions for Carbon Monoxide Nonattainment Areas

"Sec. 186. Classifications and attainment dates.

"Sec. 187. Plan submissions and requirements.

"SEC. 186. CLASSIFICATION AND ATTAINMENT DATES.

"(a) CLASSIFICATION BY OPERATION OF LAW AND ATTAINMENT DATES FOR NONATTAINMENT AREAS.—(1) Each area designated nonattainment for carbon monoxide pursuant to section 107(d) shall be classified at the time of such designation under Table 1, by operation of law, as a Moderate Area or a Serious Area based on the design value for the area. The design value shall be calculated according to the interpretation methodology issued by the Administrator most recently before the date of the enactment of the Clean Air Act Amendments of 1990. For each area classified under this subsection, the primary standard attainment date for carbon monoxide shall be as expeditiously as practicable but not later than the date provided in Table 1:

"TABLE 1

| Area classification | Design value | Primary standard attainment date |
|---|---|---|
| Moderate | 9.1–16.4 ppm. | December 31, 1995. |
| Serious | 16.5 and above. | December 31, 2000. |

"(2) At the time of publication of the notice required under section 107 (designating carbon monoxide nonattainment areas), the Administrator shall publish a notice announcing the classification of each such carbon monoxide nonattainment area. The provisions of section 172(a)(1)(B) (relating to lack of notice-and-comment and judicial review) shall apply with respect to such classification.

"(3) If an area classified under paragraph (1), Table 1, would have been classified in another category if the design value in the area were 5 percent greater or 5 percent less than the level on which such classification was based, the Administrator may, in the Administrator's discretion, within 90 days after the date of the enactment of the Clean Air Act Amendments of 1990 by the procedure required under paragraph (2), adjust the classification of the area. In making such adjustment, the Administrator may consider the number of exceedances of the national primary ambient air quality standard for carbon monoxide in the area, the level of pollution transport between the area and the other affected areas, and the mix of sources and air pollutants in the area. The Administrator may make the same adjustment for purposes of paragraphs (2), (3), (6), and (7) of section 187(a).

"(4) Upon application by any State, the Administrator may extend for 1 additional year (hereinafter in this subpart referred to as the 'Extension Year') the date specified in Table 1 of subsection (a) if—

"(A) the State has complied with all requirements and commitments pertaining to the area in the applicable implementation plan, and

"(B) no more than one exceedance of the national ambient air quality standard level for carbon monoxide has occurred in the area in the year preceding the Extension Year.

No more than 2 one-year extensions may be issued under this paragraph for a single nonattainment area.

"(b) NEW DESIGNATIONS AND RECLASSIFICATIONS.—

"(1) NEW DESIGNATIONS TO NONATTAINMENT.—Any area that is designated attainment or unclassifiable for carbon monoxide under section 107(d)(4), and that is subsequently redesignated to nonattainment for carbon monoxide under section 107(d)(3), shall, at the time of the redesignation, be classified by operation of law in accordance with Table 1 under subsections (a)(1) and (a)(4). Upon its classification, the area shall be subject to the same requirements under section 110, subpart 1 of this part, and this subpart that would have applied had the area been so classified at the time of the notice under subsection (a)(2), except that any absolute, fixed date applicable in connection with any such requirement is extended by operation of law by a period equal to the length of time between the date of the enactment of the Clean Air Act Amendments of 1990 and the date the area is classified.

"(2) RECLASSIFICATION OF MODERATE AREAS UPON FAILURE TO ATTAIN.—

"(A) GENERAL RULE.—Within 6 months following the applicable attainment date for a carbon monoxide nonattainment area, the Administrator shall determine, based on the area's design value as of the attainment date, whether the area has attained the standard by that date. Any Moderate Area that the Administrator finds has not attained the standard by that date shall be reclassified by operation of law in accordance with Table 1 of subsection (a)(1) as a Serious Area.

"(B) PUBLICATION OF NOTICE.—The Administrator shall publish a notice in the Federal Register, no later than 6 months following the attainment date, identifying each area that the Administrator has determined, under subparagraph (A), as having failed to attain and identifying the reclassification, if any, described under subparagraph (A).

"(c) REFERENCES TO TERMS.—Any reference in this subpart to a 'Moderate Area' or a 'Serious Area' shall be considered a reference to a Moderate Area or a Serious Area, respectively, as classified under this section.

"SEC. 187. PLAN SUBMISSIONS AND REQUIREMENTS.

"(a) MODERATE AREAS.—Each State in which all or part of a Moderate Area is located shall, with respect to the Moderate Area (or portion thereof, to the extent specified in guidance of the Administrator issued before the date of the enactment of the Clean Air Act Amendments of 1990), submit to the Administrator the State implementation plan revisions (including the plan items) described under this subsection, within such periods as are prescribed under this subsection, except to the extent the State has made such submissions as of such date of enactment:

"(1) INVENTORY.—No later than 2 years from the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a comprehensive, accurate, current inventory of actual emissions from all sources, as described in section 172(c)(3), in accordance with guidance provided by the Administrator.

"(2) VEHICLE MILES TRAVELED.—No later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, for areas with a design value above 12.7 ppm at the time of classification, the plan revision shall contain a forecast of vehicle miles traveled in the nonattainment area concerned for each year before the year in which the plan projects the national ambient air quality standard for carbon monoxide to be attained in the area. The forecast shall be based on guidance which shall be published by the Administrator within 6 months after the date of the enactment of the Clean Air Act Amendments of 1990. The plan revision shall provide for annual updates of the forecasts to be submitted to the Administrator together with annual reports regarding the extent to which such forecasts proved to be accurate. Such annual reports shall contain estimates of actual vehicle miles traveled in each year for which a forecast was required.

"(3) CONTINGENCY PROVISIONS.—No later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, for areas with a design value above 12.7 ppm at the time of classification, the plan revision shall provide for the implementation of specific measures to be undertaken if any estimate of vehicle miles traveled in the area which is submitted in an annual report under paragraph (2) exceeds the number predicted in the most recent prior forecast or if the area fails to attain the national primary ambient air quality standard for carbon monoxide by the primary standard attainment date. Such measures shall be included in the plan revision as contingency measures to take effect without further action by the State or the Administrator if the prior forecast has been exceeded by an updated forecast or if the national standard is not attained by such deadline.

"(4) SAVINGS CLAUSE FOR VEHICLE INSPECTION AND MAINTENANCE PROVISIONS OF THE STATE IMPLEMENTATION PLAN.—Immediately after the date of the enactment of the Clean Air Act Amendments of 1990, for any Moderate Area (or, within the Administrator's discretion, portion thereof), the plan for which is of the type described in section 182(a)(2)(B) any provisions necessary to ensure that the applicable implementation plan includes the vehicle inspection and maintenance program described in section 182(a)(2)(B).

"(5) PERIODIC INVENTORY.—No later than September 30, 1995, and no later than the end of each 3 year period thereafter, until the area is redesignated to attainment, a revised inventory meeting the requirements of subsection (a)(1).

"(6) ENHANCED VEHICLE INSPECTION AND MAINTENANCE.—No later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990 in the case of Moderate Areas with a design value greater than 12.7 ppm at the time of classification, a revision that includes provisions for an enhanced vehicle inspection and maintenance program as required in section 182(c)(3) (concerning serious ozone nonattainment areas), except that such program shall be for the purpose of reducing carbon monoxide rather than hydrocarbon emissions.

"(7) ATTAINMENT DEMONSTRATION AND SPECIFIC ANNUAL EMISSION REDUCTIONS.—In the case of Moderate Areas with a design value greater than 12.7 ppm at the time of classification, no later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, a revision to provide, and a demonstration that the plan as revised will provide, for attainment of the carbon monoxide NAAQS by the applicable attainment date and provisions for such specific annual emission reductions as are necessary to attain the standard by that date.

The Administrator may, in the Administrator's discretion, require States to submit a schedule for submitting any of the revisions or other items required under this subsection. In the case of Moderate Areas with a design value of 12.7 ppm or lower at the time of classification, the requirements of this subsection shall apply in lieu of any requirement that the State submit a demonstration that the applicable implementation plan provides for attainment of the carbon

monoxide standard by the applicable attainment date.

"(b) SERIOUS AREAS.—Each State in which all or part of a Serious Area is located shall, with respect to the Serious Area, make the submissions applicable under subsection (a) to Moderate Areas with a design value of 12.7 ppm or greater at the time of classification, and shall also submit the revision and other items described under this subsection. Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990 the State shall submit a revision that includes the transportation control measures as required in section 182(d)(1) except that such revision shall be for the purpose of reducing CO emissions rather than volatile organic compound emissions. Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to require that gasoline sold, supplied, offered for sale or supply, dispensed, transported or introduced into commerce in the larger of—

"(1) the Consolidated Metropolitan Statistical Area (as defined by the United States Office of Management and Budget) (CMSA) in which the area is located, or

"(2) if the area is not located in a CMSA, the Metropolitan Statistical Area (as defined by the United States Office of Management and Budget) in which the area is located,

be blended, during the portion of the year in which the area is prone to high ambient concentrations of carbon monoxide (as determined by the Administrator), with fuels containing such level of oxygen as is necessary, in combination with other measures, to provide for attainment of the carbon monoxide national ambient air quality standard by the applicable attainment date and maintenance of the national ambient air quality standard thereafter in the area. The revision shall provide that such requirement shall take effect no later than October 1, 1993, and shall include a program for implementation and enforcement of the requirement consistent with guidance to be issued by the Administrator. Notwithstanding the preceding provisions of this paragraph, the revision described in this paragraph shall not be required for an area if the State demonstrates to the satisfaction of the Administrator that the revision is not necessary to provide for attainment of the carbon monoxide national ambient air quality standard by the applicable attainment date and maintenance of the national ambient air quality standard thereafter in the area.

"(c) AREAS WITH SIGNIFICANT STATIONARY SOURCE EMISSIONS OF CO.—

"(1) SERIOUS AREAS.—In the case of Serious Areas in which stationary sources contribute significantly to carbon monoxide levels (as determined under rules issued by the Administrator), the State shall submit a plan revision within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, which provides that the term 'major stationary source' includes (in addition to the sources described in section 302) any stationary source which emits, or has the potential to emit, 50 tons per year or more of carbon monoxide.

"(2) WAIVERS FOR CERTAIN AREAS.—The Administrator may, on a case-by-case basis, waive any requirements that pertain to transportation controls, inspection and maintenance, or oxygenated fuels where the Administrator determines by rule that mobile sources of carbon monoxide do not contribute significantly to carbon monoxide levels in the area.

"(3) GUIDELINES.—Within 6 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue guidelines for and rules determining whether stationary sources contribute significantly to carbon monoxide levels in an area.

"(d) CO MILESTONE.—

"(1) MILESTONE DEMONSTRATION.—By March 31, 1996, each State in which all or part of a Serious Area is located shall submit to the Administrator a demonstration that the area has achieved a reduction in emissions of CO equivalent to the total of the specific annual emission reductions required by December 31, 1995. Such reductions shall be referred to in this subsection as the milestone.

"(2) ADEQUACY OF DEMONSTRATION.—A demonstration under this paragraph shall be submitted in such form and manner, and shall contain such information and analysis, as the Administrator shall require. The Administrator shall determine whether or not a State's demonstration is adequate within 90 days after the Administrator's receipt of a demonstration which contains the information and analysis required by the Administrator.

"(3) FAILURE TO MEET EMISSION REDUCTION MILESTONE.—If a State fails to submit a demonstration under paragraph (1) within the required period, or if the Administrator notifies the State that the State has not met the milestone, the State shall, within 9 months after such a failure or notification, submit a plan revision to implement an economic incentive and transportation control program as described in section 182(g)(4). Such revision shall be sufficient to achieve the specific annual reductions in carbon monoxide emissions set forth in the plan by the attainment date.

"(e) MULTI-STATE CO NONATTAINMENT AREAS.—

"(1) COORDINATION AMONG STATES.—Each State in which there is located a portion of a single nonattainment area for carbon monoxide which covers more than one State ('multi-State nonattainment area') shall take all reasonable steps to coordinate, substantively and procedurally, the revisions and implementation of State implementation plans applicable to the nonattainment area concerned. The Administrator may not approve any revision of a State implementation plan submitted under this part for a State in which part of a multi-State nonattainment area is located if the plan revision for that State fails to comply with the requirements of this subsection.

"(2) FAILURE TO DEMONSTRATE ATTAINMENT.—If any State in which there is located a portion of a multi-State nonattainment area fails to provide a demonstration of attainment of the national ambient air quality standard for carbon monoxide in that portion within the period required under this part the State may petition the Administrator to make a finding that the State would have been able to make such demonstration but for the failure of one or more other States in which other portions of the area are located to commit to the implementation of all measures required under section 187 (relating to plan submissions for carbon monoxide nonattainment areas). If the Administrator makes such finding, in the portion of the nonattainment area within the State submitting such petition, no sanction shall be imposed under section 179 or under any other provision of this Act, by reason of the failure to make such demonstration.

"(f) RECLASSIFIED AREAS.—Each State containing a carbon monoxide nonattainment area reclassified under section 186(b)(2) shall meet the requirements of subsection (b) of this section, as may be applicable to the area as reclassified, according to the schedules prescribed in connection with such requirements, except that the Administrator may adjust any applicable deadlines (other than the attainment date) where such deadlines are shown to be infeasible.

"(g) FAILURE OF SERIOUS AREA TO ATTAIN STANDARD.—If the Administrator determines under section 186(b)(2) that the national primary ambient air quality standard for carbon monoxide has not been attained in a Serious Area by the applicable attainment date, the State shall submit a plan revision for the area within 9 months after the date of such determination. The plan revision shall provide that a program of incentives and requirements as described in section 182(g)(4) shall be applicable in the area, and such program, in combination with other elements of the revised plan, shall be adequate to reduce the total tonnage of emissions of carbon monoxide in the area by at least 5 percent per year in each year after approval of the plan revision and before attainment of the national primary ambient air quality standard for carbon monoxide.".

SEC. 105. ADDITIONAL PROVISIONS FOR PARTICULATE MATTER (PM-10) NONATTAINMENT AREAS.

(a) PM-10 NONATTAINMENT AREAS.—Part D of title I is amended by adding the following new subpart after subpart 3:

**"Subpart 4—Additional Provisions for Particulate Matter Nonattainment Areas**

"Sec. 188. Classifications and attainment dates.

"Sec. 189. Plan provisions and schedules for plan submissions.

"Sec. 190. Issuance of guidance.

"SEC. 188. CLASSIFICATIONS AND ATTAINMENT DATES.

"(a) INITIAL CLASSIFICATIONS.—Every area designated nonattainment for PM-10 pursuant to section 107(d) shall be classified at the time of such designation, by operation of law, as a moderate PM-10 nonattainment area (also referred to in this subpart as a 'Moderate area') at the time of such designation. At the time of publication of the notice under section 107(d)(4) (relating to area designations) for each PM-10 nonattainment area, the Administrator shall publish a notice announcing the classification of such area. The provisions of section 172(a)(1)(B) (relating to lack of notice-and-comment and judicial review) shall apply with respect to such classification.

"(b) RECLASSIFICATION AS SERIOUS.—

"(1) RECLASSIFICATION BEFORE ATTAINMENT DATE.—The Administrator may reclassify as a Serious PM-10 nonattainment area (identified in this subpart also as a 'Serious Area') any area that the Administrator determines cannot practicably attain the national ambient air quality standard for PM-10 by the attainment date (as prescribed in subsection (c)) for Moderate Areas. The Administrator shall reclassify appropriate areas as Serious by the following dates:

"(A) For areas designated nonattainment for PM-10 under section 107(d)(4), the Administrator shall propose to reclassify appropriate areas by June 30, 1991, and take final action by December 31, 1991.

"(B) For areas subsequently designated nonattainment, the Administrator shall reclassify appropriate areas within 18 months after the required date for the State's submission of a SIP for the Moderate Area.

"(2) RECLASSIFICATION UPON FAILURE TO ATTAIN.—Within 6 months following the applicable attainment date for a PM-10 nonat-

*tainment area, the Administrator shall determine whether the area attained the standard by that date. If the Administrator finds that any Moderate Area is not in attainment after the applicable attainment date—*

*"(A) the area shall be reclassified by operation of law as a Serious Area; and*

*"(B) the Administrator shall publish a notice in the Federal Register no later than 6 months following the attainment date, identifying the area as having failed to attain and identifying the reclassification described under subparagraph (A).*

*"(c) ATTAINMENT DATES.—Except as provided under subsection (d), the attainment dates for PM-10 nonattainment areas shall be as follows:*

*"(1) MODERATE AREAS.—For a Moderate Area, the attainment date shall be as expeditiously as practicable but no later than the end of the sixth calendar year after the area's designation as nonattainment, except that, for areas designated nonattainment for PM-10 under section 107(d)(4), the attainment date shall not extend beyond December 31, 1994.*

*"(2) SERIOUS AREAS.—For a Serious Area, the attainment date shall be as expeditiously as practicable but no later than the end of the tenth calendar year beginning after the area's designation as nonattainment, except that, for areas designated nonattainment for PM-10 under section 107(d)(4), the date shall not extend beyond December 31, 2001.*

*"(d) EXTENSION OF ATTAINMENT DATE FOR MODERATE AREAS.—Upon application by any State, the Administrator may extend for 1 additional year (hereinafter referred to as the 'Extension Year') the date specified in paragraph (c)(1) if—*

*"(1) the State has complied with all requirements and commitments pertaining to the area in the applicable implementation plan, and*

*"(2) no more than one exceedance of the 24-hour national ambient air quality standard level for PM-10 has occurred in the area in the year preceding the Extension Year, and the annual mean concentration of PM-10 in the area for such year is less than or equal to the standard level.*

*No more than 2 one-year extensions may be issued under the subsection for a single nonattainment area.*

*"(e) EXTENSION OF ATTAINMENT DATE FOR SERIOUS AREAS.—Upon application by any State, the Administrator may extend the attainment date for a Serious Area beyond the date specified under subsection (c), if attainment by the date established under subsection (c) would be impracticable, the State has complied with all requirements and commitments pertaining to that area in the implementation plan, and the State demonstrates to the satisfaction of the Administrator that the plan for that area includes the most stringent measures that are included in the implementation plan of any State or are achieved in practice in any State, and can feasibly be implemented in the area. At the time of such application, the State must submit a revision to the implementation plan that includes a demonstration of attainment by the most expeditious alternative date practicable. In determining whether to grant an extension, and the appropriate length of time for any such extension, the Administrator may consider the nature and extent of nonattainment, the types and numbers of sources or other emitting activities in the area (including the influence of uncontrollable natural sources and transboundary emissions from foreign countries), the population exposed to concentrations in excess of the standard, the presence and concentration of potentially toxic substances in the mix of particulate emissions in the area, and the technological and economic feasibility of various control measures. The Administrator may not approve an extension until the State submits an attainment demonstration for the area. The Administrator may grant at most one such extension for an area, of no more than 5 years.*

*"(f) WAIVERS FOR CERTAIN AREAS.—The Administrator may, on a case-by-case basis, waive any requirement applicable to any Serious Area under this subpart where the Administrator determines that anthropogenic sources of PM-10 do not contribute significantly to the violation of the PM-10 standard in the area. The Administrator may also waive a specific date for attainment of the standard where the Administrator determines that nonanthropogenic sources of PM-10 contribute significantly to the violation of the PM-10 standard in the area.*

*"SEC. 189. PLAN PROVISIONS AND SCHEDULES FOR PLAN SUBMISSIONS.*

*"(a) MODERATE AREAS.—*

*"(1) PLAN PROVISIONS.—Each State in which all or part of a Moderate Area is located shall submit, according to the applicable schedule under paragraph (2), an implementation plan that includes each of the following:*

*"(A) For the purpose of meeting the requirements of section 172(c)(5), a permit program providing that permits meeting the requirements of section 173 are required for the construction and operation of new and modified major stationary sources of PM-10.*

*"(B) Either (i) a demonstration (including air quality modeling) that the plan will provide for attainment by the applicable attainment date; or (ii) a demonstration that attainment by such date is impracticable.*

*"(C) Provisions to assure that reasonably available control measures for the control of PM-10 shall be implemented no later than December 10, 1993, or 4 years after designation in the case of an area classified as moderate after the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(2) SCHEDULE FOR PLAN SUBMISSIONS.—A State shall submit the plan required under subparagraph (1) no later than the following:*

*"(A) Within 1 year of the date of the enactment of the Clean Air Act Amendments of 1990, for areas designated nonattainment under section 107(d)(4), except that the provision required under subparagraph (1)(A) shall be submitted no later than June 30, 1992.*

*"(B) 18 months after the designation as nonattainment, for those areas designated nonattainment after the designations prescribed under section 110(b)(4).*

*"(b) SERIOUS AREAS.—*

*"(1) PLAN PROVISIONS.—In addition to the provisions submitted to meet the requirements of paragraph (a)(1) (relating to Moderate Areas), each State in which all or part of a Serious Area is located shall submit an implementation plan for such area that includes each of the following:*

*"(A) A demonstration (including air quality modeling)—*

*"(i) that the plan provides for attainment of the PM-10 national ambient air quality standard by the applicable attainment date, or*

*"(ii) for any area for which the State is seeking, pursuant to section 188(e), an extension of the attainment date beyond the date set forth in section 188(c), that attainment by that date would be impracticable, and that the plan provides for attainment by the most expeditious alternative date practicable.*

*"(B) Provisions to assure that the best available control measures for the control of PM-10 shall be implemented no later than 4 years after the date the area is classified (or reclassified) as a Serious Area.*

*"(2) SCHEDULE FOR PLAN SUBMISSIONS.—A State shall submit the demonstration required for an area under paragraph (1)(A) no later than 4 years after reclassification of the area to Serious, except that for areas reclassified under section 188(b)(2), the State shall submit the attainment demonstration within 18 months after reclassification to Serious. A State shall submit the provisions described under paragraph (1)(B) no later than 18 months after reclassification of the area as a Serious Area.*

*"(3) MAJOR SOURCES.—For any Serious Area, the terms 'major source' and 'major stationary source' include any stationary source or group of stationary sources located within a contiguous area and under common control that emits, or has the potential to emit, at least 70 tons per year of PM-10.*

*"(c) MILESTONES.—(1) Plan revisions demonstrating attainment submitted to the Administrator for approval under this subpart shall contain quantitative milestones which are to be achieved every 3 years until the area is redesignated attainment and which demonstrate reasonable further progress, as defined in section 171(1), toward attainment by the applicable date.*

*"(2) Not later than 90 days after the date on which a milestone applicable to the area occurs, each State in which all or part of such area is located shall submit to the Administrator a demonstration that all measures in the plan approved under this section have been implemented and that the milestone has been met. A demonstration under this subsection shall be submitted in such form and manner, and shall contain such information and analysis, as the Administrator shall require. The Administrator shall determine whether or not a State's demonstration under this subsection is adequate within 90 days after the Administrator's receipt of a demonstration which contains the information and analysis required by the Administrator.*

*"(3) If a State fails to submit a demonstration under paragraph (2) with respect to a milestone within the required period or if the Administrator determines that the area has not met any applicable milestone, the Administrator shall require the State, within 9 months after such failure or determination to submit a plan revision that assures that the State will achieve the next milestone (or attain the national ambient air quality standard for PM-10, if there is no next milestone) by the applicable date.*

*"(d) FAILURE TO ATTAIN.—In the case of a Serious PM-10 nonattainment area in which the PM-10 standard is not attained by the applicable attainment date, the State in which such area is located shall, after notice and opportunity for public comment, submit within 12 months after the applicable attainment date, plan revisions which provide for attainment of the PM-10 air quality standard and, from the date of such submission until attainment, for an annual reduction in PM-10 or PM-10 precursor emissions within the area of not less than 5 percent of the amount of such emissions as reported in the most recent inventory prepared for such area.*

"(e) PM-10 PRECURSORS.—The control requirements applicable under plans in effect under this part for major stationary sources of PM-10 shall also apply to major stationary sources of PM-10 precursors, except where the Administrator determines that such sources do not contribute significantly to PM-10 levels which exceed the standard in the area. The Administrator shall issue guidelines regarding the application of the preceding sentence.

"SEC. 190. ISSUANCE OF RACM AND BACM GUIDANCE.

"The Administrator shall issue, in the same manner and according to the same procedure as guidance is issued under section 108(c), technical guidance on reasonably available control measures and best available control measures for urban fugitive dust, and emissions from residential wood combustion (including curtailments and exemptions from such curtailments) and prescribed silvicultural and agricultural burning, no later than 18 months following the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall also examine other categories of sources contributing to nonattainment of the PM-10 standard, and determine whether additional guidance on reasonably available control measures and best available control measures is needed, and issue any such guidance no later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990.".

(b) PM-10 INCREMENTS IN PSD AREAS.—Section 166 (42 U.S.C. 7476) is amended by adding the following new subsection at the end:

"(f) PM-10 INCREMENTS.—The Administrator is authorized to substitute, for the maximum allowable increases in particulate matter specified in section 163(b) and section 165(d)(2)(C)(iv), maximum allowable increases in particulate matter with an aerodynamic diameter smaller than or equal to 10 micrometers. Such substituted maximum allowable increases shall be of equal stringency in effect as those specified in the provisions for which they are substituted. Until the Administrator promulgates regulations under the authority of this subsection, the current maximum allowable increases in concentrations of particulate matter shall remain in effect.".

SEC. 106. ADDITIONAL PROVISIONS FOR AREAS DESIGNATED NONATTAINMENT FOR SULFUR OXIDES, NITROGEN DIOXIDE, AND LEAD.

Part D of title I is amended by adding a new subpart after subpart 4 as follows:

"Subpart 5—Additional Provisions for Areas Designated Nonattainment for Sulfur Oxides, Nitrogen Dioxide, or Lead

"Sec. 191. Plan submission deadlines.
"Sec. 192. Attainment dates.
"Sec. 193. General savings clause.
"Sec. 194. Air Pollution Release Investigation Board.

"SEC. 191. PLAN SUBMISSION DEADLINES.

"(a) SUBMISSION.—Any State containing an area designated or redesignated under section 107(d) as nonattainment with respect to the national primary ambient air quality standards for sulfur oxides, nitrogen dioxide, or lead subsequent to the date of the enactment of the Clean Air Act Amendments of 1990 shall submit to the Administrator, within 18 months of the designation, an applicable implementation plan meeting the requirements of this part.

"(b) STATES LACKING FULLY APPROVED STATE IMPLEMENTATION PLANS.—Any State containing an area designated nonattainment with respect to national primary ambient air quality standards for sulfur oxides or nitrogen dioxide under section 107(d)(1)(C)(i), but lacking a fully approved implementation plan complying with the requirements of this Act (including part D) as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990, shall submit to the Administrator, within 18 months of the date of the enactment of the Clean Air Act Amendments of 1990, an implementation plan meeting the requirements of subpart 1 (except as otherwise prescribed by section 192).

"SEC. 192. ATTAINMENT DATES.

"(a) PLANS UNDER SECTION 191(a).—Implementation plans required under section 191(a) shall provide for attainment of the relevant primary standard as expeditiously as practicable but no later than 5 years from the date of the nonattainment designation.

"(b) PLANS UNDER SECTION 191(b).—Implementation plans required under section 191(b) shall provide for attainment of the relevant primary national ambient air quality standard within 5 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(c) INADEQUATE PLANS.—Implementation plans for nonattainment areas for sulfur oxides or nitrogen dioxide with plans that were approved by the Administrator before the date of the enactment of the Clean Air Act Amendments of 1990 but, subsequent to such approval, were found by the Administrator to be substantially inadequate, shall provide for attainment of the relevant primary standard within 5 years from the date of such finding.".

SEC. 107. PROVISIONS RELATED TO INDIAN TRIBES.

(a) DEFINITION OF AIR POLLUTION CONTROL AGENCY.—Section 302(b) (42 U.S.C. 7602(b)) is amended by—

(1) deleting "or" at the end of paragraph (3);

(2) striking the semicolons at the end of paragraphs (1), (2), and (3) and inserting periods at the end of each such paragraph; and

(3) adding the following new paragraph after paragraph (4):

"(5) An agency of an Indian tribe.".

(b) DEFINITION OF INDIAN TRIBE.—Section 302 (42 U.S.C. 7602) is amended by adding new subsection (r) to read as follows:

"(r) INDIAN TRIBE.—The term 'Indian tribe' means any Indian tribe, band, nation, or other organized group or community, including any Alaska Native village, which is Federally recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians.".

(c) SIPS.—Section 110 (42 U.S.C. 7410) is amended by adding the following new subsection after subsection (n):

"(o) INDIAN TRIBES.—If an Indian tribe submits an implementation plan to the Administrator pursuant to section 301(d), the plan shall be reviewed in accordance with the provisions for review set forth in this section for State plans, except as otherwise provided by regulation promulgated pursuant to section 301(d)(2). When such plan becomes effective in accordance with the regulations promulgated under section 301(d), the plan shall become applicable to all areas (except as expressly provided otherwise in the plan) located within the exterior boundaries of the reservation, notwithstanding the issuance of any patent and including rights-of-way running through the reservation.".

(d) TRIBAL AUTHORITY.—Section 301 (42 U.S.C. 7601) is amended by adding at the end thereof the following new subsection:

"(d) TRIBAL AUTHORITY.—(1) Subject to the provisions of paragraph (2), the Administrator—

"(A) is authorized to treat Indian tribes as States under this Act, except for purposes of the requirement that makes available for application by each State no less than one-half of 1 percent of annual appropriations under section 105; and

"(B) may provide any such Indian tribe grant and contract assistance to carry out functions provided by this Act.

"(2) The Administrator shall promulgate regulations within 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, specifying those provisions of this Act for which it is appropriate to treat Indian tribes as States. Such treatment shall be authorized only if—

"(A) the Indian tribe has a governing body carrying out substantial governmental duties and powers;

"(B) the functions to be exercised by the Indian tribe pertain to the management and protection of air resources within the exterior boundaries of the reservation or other areas within the tribe's jurisdiction; and

"(C) the Indian tribe is reasonably expected to be capable, in the judgment of the Administrator, of carrying out the functions to be exercised in a manner consistent with the terms and purposes of this Act and all applicable regulations.

"(3) The Administrator may promulgate regulations which establish the elements of tribal implementation plans and procedures for approval or disapproval of tribal implementation plans and portions thereof.

"(4) In any case in which the Administrator determines that the treatment of Indian tribes as identical to States is inappropriate or administratively infeasible, the Administrator may provide, by regulation, other means by which the Administrator will directly administer such provisions so as to achieve the appropriate purpose.

"(5) Until such time as the Administrator promulgates regulations pursuant to this subsection, the Administrator may continue to provide financial assistance to eligible Indian tribes under section 105.".

SEC. 108. MISCELLANEOUS PROVISIONS.

(a) TRANSPORTATION PLANNING GUIDANCE.—(1) Section 108(e) (42 U.S.C. 7408(e)) is amended by revising the first sentence to read as follows: "Within 9 months after the date of the enactment of the Clean Air Act Amendments of 1990 and periodically thereafter as necessary to maintain a continuous process of transportation and air quality planning, including emissions inventory development, the Administrator shall, after consultation with the Secretary of Transportation and State and local officials, update the June 1978 Transportation-Air Quality Planning Guidelines.".

(2) So much of subsection (f)(1) of section 108 (42 U.S.C. 7408) as precedes subparagraph (B) is amended to read as follows:

"(f) INFORMATION TO BE AVAILABLE.—(1) Within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall publish and make available to appropriate Federal, State, and local environmental and transportation agencies, and from time to time thereafter the Administrator shall revise—

"(A) information, prepared as appropriate after consultation with the Secretary of Transportation, and after providing public notice and opportunity for comment, regarding the emission reduction potential of

transportation control measures, including—

"(i) trip-reduction ordinances;

"(ii) employer-based transportation management plans;

"(iii) transit improvements;

"(iv) traffic-flow improvements;

"(v) areawide rideshare programs;

"(vi) park-and-ride and fringe parking programs;

"(vii) work-schedule changes;

"(viii) restriction of certain roads or lanes to, or construction of such roads or lanes for use by, passenger buses or high occupancy vehicles;

"(ix) programs to control extended idling of vehicles;

"(x) vanpool purchase incentives;

"(xi) incentives for employer-based transportation management plans;

"(xii) programs to limit portions of road surfaces to the use of nonmotorized vehicles or pedestrian use, both as to time and place;

"(xiii) programs for secure bicycle storage facilities and other facilities, including bicycle lanes;

"(xiv) programs for new construction and major reconstruction of paths or tracks solely for use by pedestrian or other nonmotorized means of transportation; and

"(xv) telecommuting.

In considering such measures for inclusion in any State implementation plan or revision thereto as may be required under this Act, the State shall choose from among and implement such measures as necessary, and should ensure adequate access to downtown, other commercial, and residential areas and avoid measures that increase or relocate emissions and congestion rather than reduce them.".

(b) RACT/BACT/LAER CLEARINGHOUSE.—Section 108 (42 U.S.C. 7408) is amended by adding the following at the end thereof:

"(h) RACT/BACT/LAER CLEARINGHOUSE.—The Administrator shall make information regarding emission control technology available to the States and to the general public through a central database. Such information shall include all control technology information received pursuant to State plan provisions requiring permits for sources, including operating permits for existing sources.".

(c) STATE REPORTS ON EMISSIONS-RELATED DATA.—Section 110 (42 U.S.C. 7410) is amended by adding the following new subsection after subsection (o):

"(p) REPORTS.—Any State shall submit, according to such schedule as the Administrator may prescribe, such reports as the Administrator may require relating to emission reductions, vehicle miles traveled, congestion levels, and any other information the Administrator may deem necessary to assess the development effectiveness, need for revision, or implementation of any plan or plan revision required under this Act.".

(d) NEW SOURCE STANDARDS OF PERFORMANCE.—(1) Section 111(b)(1)(B) (42 U.S.C. 7411(b)(1)(B)) is amended as follows:

(A) Strike "120 days" and insert "one year".

(B) Strike "90 days" and insert "one year".

(C) Strike "four years" and insert "8 years".

(D) Immediately before the sentence beginning "Standards of performance or revisions thereof" insert "Notwithstanding the requirements of the previous sentence, the Administrator need not review any such standard if the Administrator determines that such review is not appropriate in light of readily available information on the efficacy of such standard.".

(E) Add the following at the end: "When implementation and enforcement of any requirement of this Act indicate that emission limitations and percent reductions beyond those required by the standards promulgated under this section are achieved in practice, the Administrator shall, when revising standards promulgated under this section, consider the emission limitations and percent reductions achieved in practice.".

(2) Section 111(f)(1) (42 U.S.C. 7411(f)(1)) is amended to read as follows:

"(1) For those categories of major stationary sources that the Administrator listed under subsection (b)(1)(A) before the date of the enactment of the Clean Air Act Amendments of 1990 and for which regulations had not been proposed by the Administrator by such date, the Administrator shall:

"(A) propose regulations establishing standards of performance for at least 25 percent of such categories of sources within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990;

"(B) propose regulations establishing standards of performance for at least 50 percent of such categories of sources within 4 years after the date of the enactment of the Clean Air Act Amendments of 1990; and

"(C) propose regulations for the remaining categories of sources within 6 years after the date of the enactment of the Clean Air Act Amendments of 1990.".

(e) SAVINGS CLAUSE.—Section 111(a)(3) (42 U.S.C. 7411(f)(1)) is amended by adding at the end: "Nothing in title II of this Act relating to nonroad engines shall be construed to apply to stationary internal combustion engines.".

(f) REGULATION OF EXISTING SOURCES.—Section 111(d)(1)(A)(i) (42 U.S.C. 7411(d)(1)(A)(i)) is amended by striking "or 112(b)(1)(A)" and inserting "or emitted from a source category which is regulated under section 112".

(g) CONSULTATION.—The penultimate sentence of section 121 (42 U.S.C. 7421) is amended to read as follows: "The Administrator shall update as necessary the original regulations required and promulgated under this section (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) to ensure adequate consultation.".

(h) DELEGATION.—The second sentence of section 301(a)(1) (42 U.S.C. 7601(a)(1)) is amended by inserting "subject to section 307(d)" immediately following "regulations".

(i) DEFINITIONS.—Section 302 (42 U.S.C. 7602) is amended as follows:

(1) Insert the following new subsections after subsection (r):

"(s) VOC.—The term 'VOC' means volatile organic compound, as defined by the Administrator.

"(t) PM-10.—The term 'PM-10' means particulate matter with an aerodynamic diameter less than or equal to a nominal ten micrometers, as measured by such method as the Administrator may determine.

"(u) NAAQS AND CTG.—The term 'NAAQS' means national ambient air quality standard. The term 'CTG' means a Control Technique Guideline published by the Administrator under section 108.

"(v) NOx.—The term 'NOx' means oxides of nitrogen.

"(w) CO.—The term 'CO' means carbon monoxide.

"(x) SMALL SOURCE.—The term 'small source' means a source that emits less than 100 tons of regulated pollutants per year, or any class of persons that the Administrator determines, through regulation, generally lack technical ability or knowledge regarding control of air pollution.

"(y) FEDERAL IMPLEMENTATION PLAN.—The term 'Federal implementation plan' means a plan (or portion thereof) promulgated by the Administrator to fill all or a portion of a gap or otherwise correct all or a portion of an inadequacy in a State implementation plan, and which includes enforceable emission limitations or other control measures, means or techniques (including economic incentives, such as fees, marketable permits, or auctions of emissions allowances), and provides for attainment of the relevant national ambient air quality standard.".

(2) Section 302(g) (42 U.S.C. 7602(g)) is amended by adding the following at the end: "Such term includes any precursors to the formation of any air pollutant, to the extent the Administrator has identified such precursor or precursors for the particular purpose for which the term 'air pollutant' is used.".

(j) POLLUTION PREVENTION.—Section 101 (42 U.S.C. 7401) is amended as follows:

(1) Amend subsection (a)(3) to read as follows:

"(3) that air pollution prevention (that is, the reduction or elimination, through any measures, of the amount of pollutants produced or created at the source) and air pollution control at its source is the primary responsibility of States and local governments; and".

(2) Amend subsection (b)(4) by inserting "prevention and" immediately after "pollution".

(3) Add a new subsection (c) to read as follows:

"(c) POLLUTION PREVENTION.—A primary goal of this Act is to encourage or otherwise promote reasonable Federal, State, and local governmental actions, consistent with the provisions of this Act, for pollution prevention.".

(k) Title I is amended by adding the following after section 192:

"SEC. 193. GENERAL SAVINGS CLAUSE.

"Each regulation, standard, rule, notice, order and guidance promulgated or issued by the Administrator under this Act, as in effect before the date of the enactment of the Clean Air Act Amendments of 1990 shall remain in effect according to its terms, except to the extent otherwise provided under this Act, inconsistent with any provision of this Act, or revised by the Administrator. No control requirement in effect, or required to be adopted by an order, settlement agreement, or plan in effect before the date of the enactment of the Clean Air Act Amendments of 1990 in any area which is a nonattainment area for any air pollutant may be modified after such enactment in any manner unless the modification insures equivalent or greater emission reductions of such air pollutant.".

(l) BOUNDARY CHANGES.—Section 162(a) (42 U.S.C. 7472(a)) is amended by adding at the end thereof the following: "The extent of the areas designated as Class I under this section shall conform to any changes in the boundaries of such areas which have occurred subsequent to the date of the enactment of the Clean Air Act Amendments of 1977, or which may occur subsequent to the date of the enactment of the Clean Air Act Amendments of 1990.".

(m) BOUNDARIES.—Section 164(a) (42 U.S.C. 7474(a)) is amended by inserting im-

mediately before the sentence beginning "Any area (other than an area referred to in paragraph (1) or (2)" the following: "The extent of the areas referred to in paragraph (1) and (2) shall conform to any changes in the boundaries of such areas which have occurred subsequent to the date of the enactment of the Clean Air Act Amendments of 1977, or which may occur subsequent to the date of the enactment of the Clean Air Act Amendments of 1990.".

(n) ASSESSMENTS.—Section 108 (42 U.S.C. 7408) is amended by adding at the end thereof a new subsection (g) to read as follows:

"(g) ASSESSMENT OF RISKS TO ECOSYSTEMS.—The Administrator may assess the risks to ecosystems from exposure to criteria air pollutants (as identified by the Administrator in the Administrator's sole discretion).".

(o) REVIEW OF REPORTS AND PUBLIC PARTICIPATION.—Section 307 (42 U.S.C. 7607) is amended by adding the following after subsection (g):

"(h) REPORTS.—No report required by this Act to be submitted to Congress shall be subject to judicial review.

"(i) PUBLIC PARTICIPATION.—It is the intent of Congress that, consistent with the policy of the Administrative Procedures Act, the Administrator in promulgating any regulation under this Act, including a regulation subject to a deadline, shall ensure a reasonable period for public participation of at least 30 days, except as otherwise expressly provided in section 107(d), 172(a), 181(a) and (b), and 186(a) and (b).".

(p) ETHICS, FINANCIAL DISCLOSURE, AND CONFLICTS OF INTEREST.—Section 318 (42 U.S.C. 7618) is repealed.

(q) INFORMATION PROMOTING COMPLIANCE BY SMALL SOURCES.—The following new section is added after section 128:

"SEC. 129. INFORMATION FOR SMALL SOURCES.

"(a) IN GENERAL.—The Administrator shall develop, collect, evaluate, and coordinate information on compliance methods and technologies for small sources. The Administrator shall maintain a central reference library of such information, and shall disseminate such information to States or other persons seeking to comply with this Act.

"(b) EDUCATION PROGRAMS FOR SMALL SOURCES.—The Administrator shall, in cooperation with the States and their small source technical assistance programs created pursuant to section 110(a)(2)(N), develop programs for educating small sources about their obligations under this Act and means to comply.".

SEC. 109. INTERSTATE POLLUTION.

(a) AMENDMENTS TO SECTION 126.—Section 126 (42 U.S.C. 7426) is amended as follows:

(1) In subsection (b)—

(A) in the first sentence, following "major source", insert "or group of stationary sources"; and

(B) strike "110(a)(2)(E)(i)" and insert in lieu thereof "110(a)(2)(D)(ii) or this section".

(2) In subsection (c)—

(A) in the first sentence, following the words "violation of", insert "this section and"; and

(B) strike "110(a)(2)(E)(i)" wherever it appears and insert in lieu thereof "110(a)(2)(D)(ii) or this section".

(b) AMENDMENT TO SECTION 302.—Section 302(h) (42 U.S.C. 7602(h)) is amended by inserting before the period ", whether caused by transformation, conversion, or combination with other air pollutants".

SEC. 110. CONFORMING AMENDMENTS.

The Clean Air Act is amended as follows—

(1) Strike, in section 161 (42 U.S.C. 7471), "identified pursuant to section 107(d)(1)(D) or (E)" and insert "designated pursuant to section 107 as attainment or unclassifiable".

(2) Strike, in section 162(b) (42 U.S.C. 7472(b)), "identified pursuant to section 107(d)(1)(D) or (E)" and insert "designated pursuant to section 107(d) as attainment or unclassifiable";

(3) Strike, in section 167 (42 U.S.C. 7477), the reference to "included in the list promulgated pursuant to paragraph (1)(D) or (E) of subsection (d) of section 107 of this Act" and insert "designated pursuant to section 107(d) as attainment or unclassifiable".

(4) Strike subsections (a) and (b) of section 176 (42 U.S.C. 7506).

(5) Amend section 307(d)(1) (42 U.S.C. 7607(d)(1)) as follows:

(A) Subparagraph (C) is amended to read as follows:

"(C) the promulgation or revision of any standard of performance under section 111, or emission standard or limitation under section 112(d), any standard under section 112(f), or any regulation under section 112(g)(1)(D) and (F), or any regulation under section 112(m) or (n),".

(B) Subparagraph (F) is amended to read as follows:

"(F) the promulgation or revision of any regulation under title V (relating to control of acid deposition),".

(C) Delete "and" at the end of subparagraph (M), redesignate subparagraph (N) as subparagraph (U), and add the following new subparagraphs after subparagraph (M):

"(N) the promulgation or revision of any regulation pertaining to consumer and commercial products under section 183(e),

"(O) the promulgation or revision of any regulation pertaining to field citations under section 113(d)(3),

"(P) the promulgation or revision of any regulation pertaining to urban buses or the clean-fuel vehicle, clean-fuel fleet, and clean fuel programs under section 212,

"(Q) the promulgation or revision of any regulation pertaining to nonroad engines or nonroad vehicles under section 213,

"(R) the promulgation or revision of any regulation relating to motor vehicle compliance program fees under section 217,

"(S) the promulgation or revision of any regulation pertaining to market-based alternative controls under section 214, the promulgation or revision of any regulation under title IV,

"(T) the promulgation or revision of any regulation under section 183(f) pertaining to marine vessels, and".

## TITLE II—PROVISIONS RELATING TO MOBILE SOURCES

Sec. 201. Clean fuel requirements.
Sec. 202. Emission standards for certain motor vehicles.
Sec. 203. Conforming amendment.
Sec. 204. Carbon monoxide emissions at cold temperatures.
Sec. 205. Evaporative emissions.
Sec. 206. Control of vehicle refueling emissions.
Sec. 207. Mobile source-related air toxics.
Sec. 208. Emission control diagnostics systems.
Sec. 209a. Auto warranties.
Sec. 210. Heavy-duty trucks.
Sec. 211. Nonroad engines and vehicles.
Sec. 212. Vehicle certification.
Sec. 213. In-use compliance—recall.
Sec. 214. Compliance program fees.
Sec. 215. Information collection.
Sec. 216. Fuel volatility.
Sec. 217. Diesel fuel sulfur content.
Sec. 218. Lead substitute gasoline additives.
Sec. 219. Nonroad fuels.
Sec. 220. Fuel waivers.
Sec. 221. Market-based alternative controls.
Sec. 222. State fuel regulation.
Sec. 223. Enforcement.
Sec. 224. High altitude testing.
Sec. 225. Technical amendments.

SEC. 201. CLEAN FUEL REQUIREMENTS.

(a) DEFINITIONS.—Section 216 (42 U.S.C. 7550) is amended by adding the following at the end:

"(7) URBAN BUS.—The term 'urban bus' has the meaning provided under regulations of the Administrator promulgated under section 202(a).

"(8) CLEAN ALTERNATIVE FUEL.—The term 'clean alternative fuel' means any fuel (including methanol, ethanol, or other alcohols (including any mixture thereof containing 85 percent or more by volume of such alcohol with gasoline or other fuels), reformulated gasoline, diesel, natural gas, liquefied petroleum gas, and hydrogen) or power source (including electricity) used in a clean-fuel vehicle (or clean-fuel fleet vehicle) that complies with the standards and requirements applicable to such vehicle under this title when using such fuel or power source.

"(9) CLEAN-FUEL VEHICLE AND CLEAN-FUEL FLEET VEHICLE.—The term 'clean-fuel vehicle' means any motor vehicle that, when operated on clean alternative fuel, complies with the requirements of section 212(b). The term 'clean-fuel fleet vehicle' has the meaning provided in subsection (f).

"(10) EMISSIONS OF OZONE-FORMING VOLATILE ORGANIC COMPOUNDS.—The term 'emissions of ozone-forming volatile organic compounds' means motor vehicle exhaust and evaporative, refueling, and running loss emissions of oxygenated and nonoxygenated hydrocarbons, excluding methane, and, after such exclusion, adjusted for reactivity.

"(11) COVERED FLEET.—The term 'covered fleet' means 10 or more motor vehicles which are owned or operated by a single person. In determining the number of vehicles owned by a single person for purposes of this paragraph, all motor vehicles owned by such person, by any person which controls such person, by any person controlled by such person, and by any person under common control with such person shall be treated as owned by such person. The term 'covered fleet' shall not include motor vehicles held for lease or rental to the general public, motor vehicles held for sale by motor vehicle dealers (including demonstration vehicles), motor vehicles used for motor vehicle manufacturer product evaluations or tests, law enforcement and other emergency vehicles, or nonroad vehicles.

"(12) COVERED FLEET VEHICLES.—The term 'covered fleet vehicles' includes only motor vehicles in a covered fleet which are centrally fueled (or capable of being centrally fueled, as determined by rule by the Administrator) and centrally maintained (or capable of being centrally maintained), in accordance with usual practices and daily operations, primarily at a facility located in the nonattainment area and provided by, and under the direct control of, the owner or operator of the covered fleet.".

(b) CLEAN FUEL REQUIREMENTS.—Section 212 (42 U.S.C. 7546) is amended to read as follows:

"SEC. 212. CLEAN FUEL REQUIREMENTS.

"(a) URBAN BUSES.—

"(1) IN GENERAL.—Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Adminis-

*trator shall promulgate regulations under this subsection applicable to new urban buses operated primarily in a Metropolitan Statistical Area or Consolidated Metropolitan Statistical Area (as defined by the United States Office of Management and Budget) with a 1980 population of 750,000 or more. The Administrator shall also promulgate comparable regulations for existing urban buses operated primarily in such areas which, after January 1, 1995, have their engines replaced or rebuilt, taking into consideration costs, energy, safety, and other relevant factors, including lead time.*

*"(2) REQUIREMENT.—The regulations under this subsection shall provide that all new urban buses purchased or placed into service and operated by owners or operators of urban buses in the areas referred to in paragraph (1) shall be clean-fuel vehicles capable of operating, and shall be exclusively operated, on clean alternative fuel.*

*"(3) EFFECTIVE DATE AND PHASE-IN.—The Administrator shall prescribe a schedule phasing in the applicability of the requirements established by this subsection for new urban buses over the 1992 through 1995 model years as follows: the requirements shall apply to 10 percent of new urban buses purchased or placed into service in model year 1992; the requirements shall apply to 25 percent of new urban buses purchased or placed into service in model year 1993; the requirements shall apply to 60 percent of new urban buses purchased or placed into service in model year 1994; and the requirements shall apply to 100 percent of such buses in model year 1995 and thereafter. At least 30 percent of the total purchases of new urban buses for all areas in each model year after January 1, 1995, shall be clean fuel vehicles that exclusively use either natural gas, ethanol, or methanol or another clean alternative fuel with comparable emissions, as determined by the Administrator. The Administrator shall prescribe emission standards for pollutants other than particulates under section 202 for urban buses to be considered clean fuel vehicles in model year 1992 and before application of standards under subsection (b). Such standards shall be comparable to the standard for particulates under this subsection.*

*"(4) APPLICATION.—Application of one or more of the requirements prescribed under this subsection may be delayed by up to 2 years if the Administrator determines that such a delay will substantially advance the technology, improve the benefits, or lower the costs of the urban bus program established by this subsection.*

*"(5) PARTICULATE MATTER.—The regulations under section 202(a)(1) applicable to emissions of particulate matter from 1991 through 1993 model year urban buses capable of operating on diesel fuel shall contain a standard which provides that emissions of particulate matter from such buses may not exceed 0.25 grams per brake horsepower-hour. Emissions of particulate matter from urban buses purchased or placed into service after model year 1993 that use clean alternative fuels shall not exceed 0.10 grams per brake horsepower-hour. The emission standard shall be prescribed by regulation within 180 days after the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(b) STANDARDS FOR CLEAN-FUEL VEHICLES.—*

*"(1) IN GENERAL.—A motor vehicle that, when operated on a clean alternative fuel, is certified to meet the applicable emissions standards under section 202 for carbon monoxide, oxides of nitrogen, and particulate matter, and is certified to meet the emission standards specified in paragraph (2), (3), or (4), as applicable, shall be considered a clean fuel vehicle within the meaning of section 216 and this section.*

*"(2) STANDARDS FOR PASSENGER CARS AND LIGHT-DUTY TRUCKS UP TO 3,750 LBS. (LVW).—Within 26 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate standards under this paragraph applicable to all passenger cars and all light-duty trucks of up to 8,500 lbs. gross vehicle weight rating (gvwr) with a loaded vehicle weight (lvw) of up to 3,750 lbs. that are to be considered clean-fuel vehicles.*

*"(A) OZONE-FORMING VOCS.—The standards contained in the regulations under this paragraph shall require that total vehicle emissions of ozone-forming volatile organic compounds not exceed the level set forth in table 1 for such vehicles manufactured in the applicable model year:*

*"TABLE 1*

| Applicable model year | Standard |
|---|---|
| (Phase 1) 1995 through 1999. | 0.86 grams per mile* |
| (Phase 2) 2000 and after. | 0.72 grams per mile** |

**Achieving 0.86 gpm with 100% of such vehicles achieves the same reductions as achieving a 30% reduction from a 0.95 gpm car on 30% of the vehicles.*

***Achieving 0.72 gpm with 100% of such vehicles achieves the same reductions as achieving an 80% reduction from a 0.95 gpm car on 30% of the vehicles.*

*"(B) OTHER SUBSTANCES.—*

*"(i) PHASE 1.—The regulations under this paragraph shall require that, for vehicles manufactured in the model year 1995 and thereafter, total vehicle emissions of benzene, 1,3-butadiene, gasoline vapors, polycyclic organic material (POM), including POM in diesel particulates, and formaldehyde shall not exceed the level that, in the Administrator's judgment, may be reasonably expected to achieve a 12 percent reduction from the baseline in the annual incidence of human cancer attributable to such emissions. The baseline for determining the 12 percent reduction shall be the annual incidence of human cancer attributable to emissions of such air pollutants from such conventional gasoline-fueled vehicles certified to meet the standards under section 202 for model year 1994. For purposes of determining the level of such emissions from conventional gasoline-fueled vehicles for such model year 1994 standards, emissions shall be measured from vehicles using 1990 certification gasoline (indoline) with a Reid Vapor Pressure of 9.0 psi which was determined by the Administrator in September 1989 in a Special Report entitled 'Analysis of the Economic Effects of Methanol as an Automotive Fuel' to produce ozone forming volatile organic compound emissions of 0.95 gpm.*

*"(ii) PHASE 2.—The Administrator shall revise the regulations under this paragraph applicable to any model year after the model year 1999 to substitute a 24 percent reduction for the 12 percent reduction referred to in clause (i), except that if the Administrator determines on petition or on the Administrator's own motion, that (for any model year after model year 1999) it is not technically feasible to reduce emissions of such air pollutants, taking into consideration the availability and cost of the technology, and noise, energy, and safety factors, by 24 percent, the Administrator shall revise the regulations under this paragraph to limit such emission to a level that may reasonably be anticipated to achieve reduction of not less than 18 percent in the annual incidence of human cancer attributable to such emissions and include the basis for that determination in such regulations. The Administrator shall act on any such petition within 9 months after it is received.*

*"(3) LIGHT-DUTY TRUCKS.—The Administrator shall, by rule, establish standards and emission reduction levels under this subsection for light-duty trucks of up to 8,500 lbs. gross vehicle weight rating (gvwr) with a loaded vehicle weight (lvw) of 3,750 lbs. or more but less than or equal to 5,750 lbs. (lvw) manufactured during the model year 2000 and thereafter.*

*"(4) HEAVY-DUTY TRUCKS.—Effective for model years 2000 or later, the Administrator may at any time, by rule, establish standards and emission reduction levels under this subsection for motor vehicles with a gross vehicle weight rating (gvwr) of 8,500 lbs. or more. The standards and emission reduction referred to in this paragraph and paragraph (3) shall contain emission standards and reductions comparable in stringency to those under paragraph (2), taking into account the weight class and operating conditions and uses for which such vehicles are designed and the Administrator shall take into consideration the availability and cost of applicable technology and noise, energy, and safety factors. The standard established under this paragraph shall not apply with respect to emissions of particulate matter from urban buses. Such standards and reductions shall not take effect before the end of the fourth full model year after promulgation.*

*"(5) COMPLIANCE.—In determining compliance by vehicles and engines in actual use with the emission standards and reductions prescribed under this subsection by testing in-use vehicles on certification-type fuels, only vehicles that have been detectably abused, tampered with, or not maintained in a manner that would likely affect emissions performance may be excluded from the sample tested pursuant to section 207(c). When a vehicle that operates on 2 kinds of fuel is certified or tested, it shall be certified or tested on one fuel only after all traces of the other fuel that can practically be removed from the vehicle's fuel system have been removed. The Administrator may require a manufacturer to remedy nonconforming engines or vehicles pursuant to section 207(c) either (A) when a substantial number of vehicles fails to comply with the applicable emissions standards and reductions prescribed under this subsection or (B) when the average emissions performance of a representative sample does not satisfy the applicable emission standards and reductions prescribed under this subsection. Recall procedures established under this paragraph apply only to standards and reductions promulgated pursuant to this section. Any manufacturer shall be treated as complying with the requirements of this subsection if the manufacturer specifies the use of the reformulated gasoline specified by the Administrator under subsection (c)(5) and if the vehicles produced by such manufacturer for sale in the covered areas comply with the standards and requirements established under section 202 (and related provisions of this title) that are generally applicable to such vehicles in the model year in which they are produced. For purposes of this sub-*

*section, the emission level of ozone-forming volatile organic compounds shall be determined by the Administrator by testing, in accordance with the requirements and procedures of section 206, a representative sample of vehicles with no more than 62,000 miles of proper in-use operation in customer hands, as provided in the report referred to in subsection (b)(2)(B)(i). Compliance shall be determined based on the mean level of the applicable emissions from such representative sample.*

*"(6) EPA AUTHORITY.—Nothing in this section shall be construed to give the Administrator authority to mandate the production or sale of clean-fuel vehicles or to specify as applicable, the models, lines, or types of, or marketing or price practices, policies, or strategies for, vehicles subject to this section. Nothing in this section shall be construed to give the Administrator authority to mandate marketing or pricing practices, policies, or strategies for fuels.*

*"(7) CREDITS.—The Administrator shall, by rule, promulgate regulations for granting a manufacturer an appropriate amount of credits toward compliance with the requirements of this subsection for clean-fuel vehicles that achieve emission reductions greater than those required of such vehicles under this subsection and for clean fuel vehicles in classes or categories not required under this subsection. A manufacturer granted credits may use such credits or transfer some or all of the credits for use by one or more other manufacturers in the same area included in the fleet program by subsection (f) in demonstrating compliance with such requirements. Such credits may be used to treat vehicles which do not meet the requirements of this subsection as complying with the requirements of this subsection. Credits may not be used to permit the manufacture or sale of any vehicle which does not comply with standards set forth in section 202. The Administrator may make the credits available for use after consideration of enforceability, environmental and economic factors and upon such terms and conditions as the Administrator finds appropriate.*

*"(c) AVAILABILITY OF CLEAN FUELS.—*

*"(1) IN GENERAL.—Clean alternative fuels shall be made available by fuel providers as specified by the Administrator in any area in which clean-fuel vehicles or clean-fuel fleet vehicles are required to be made available under this section.*

*"(2) AVAILABILITY.—The Administrator shall determine the clean alternative fuels to be made available, and the amounts thereof necessary, to allow operation of vehicles so that they comply with the applicable emissions standards, based on motor vehicle manufacturers' projections of future sales of clean-fuel vehicles, and clean-fuel fleet vehicles consultations with the affected fleet operators and State and local governments and on a determination of cost effectiveness, taking into consideration technological feasibility, health, environment, and safety, net air quality improvement, fuel availability, consumer acceptance, capability of production of vehicles and fuels, and other relevant factors, including an evaluation of the differing characteristics of commercial, government, and passenger fleets and the capability of centrally fueled and maintained fleets to utilize clean fuels.*

*"(3) MINIMUM AVAILABILITY REQUIREMENTS.—At a minimum one clean alternative fuel shall be offered for retail sale at retail gasoline dispensing facility dispensing at least 50,000 gallons of motor vehicle fuel per month, on average, in the areas in which such vehicles are required to be made available. The Governor of any State in which the requirements of this subsection apply may modify such requirements exempting some such facilities for a period not longer than 5 years after such requirements first apply, provided that information available to the Governor indicates that such fuels will be otherwise readily available throughout the area. If a retail gasoline dispensing facility would have to remove or replace one or more motor vehicle fuel underground storage tanks and accompanying piping in order to comply with the provisions of this section, and it had removed and replaced such tank or tanks and accompanying piping prior to the date of the enactment of the Clean Air Act Amendments of 1990, it shall not be required to comply with this subsection until a period of 7 years has passed from the date of the removal and replacement of such tank or tanks.*

*"(4) CREDITS.—The Administrator shall, by rule, promulgate regulations for granting persons subject to the requirements prescribed under this subsection appropriate credits for making greater quantities of clean alternative fuels available than required under this subsection or for making available fuel which result in greater emission reductions than required under this subsection, and any person granted credits may transfer some or all of the credits for use by one or more persons in the same area included in the fleet program under subsection (f) in demonstrating compliance with such requirements. The Administrator may make the credits available for use after consideration of enforceability, safety, environmental, and economic factors and upon such terms and conditions as the Administrator finds appropriate.*

*"(5) PERFORMANCE OF CLEAN FUEL.—The Administrator shall by regulation establish specifications for any clean alternative fuel required to be made available under this subsection as the Administrator finds necessary to reduce or eliminate an unreasonable risk to public health, welfare, or safety associated with its use or to ensure acceptable vehicle maintenance and performance characteristics. In determining the specifications for each fuel or fuels to be made available, the Administrator shall select the specifications resulting in the maximum level of emissions reductions that can be achieved to the extent that it is needed to meet the standards for the applicable model years, provided that such specifications will result in the establishment of a cost effective combination of fuel or fuels and motor vehicle technology. Such specifications shall include at least one specification for a reformulated gasoline that can be utilized in gasoline-fueled vehicles satisfying the emissions standards prescribed under section 202 for the applicable model years to satisfy the requirements of subsection (b).*

*"(6) ENFORCEMENT.—A fuel provider who fails to make such fuel available as required by this section and in the regulations under this subsection shall be liable for a civil penalty under the first sentence of section 205.*

*"(d) CLEAN FUEL VEHICLE PROGRAM.—*

*"(1) IN GENERAL.—For purposes of subsections (b) and (c), all new passenger cars and all new light-duty trucks weighing up to 3,750 lbs. (lvw) manufactured in model year 1995 and thereafter and sold (in ozone nonattainment areas having a 1988 ozone design value at or above 0.180 parts per million and having a 1980 population of 250,000 or more) at the first retail sale in such areas shall be clean fuel vehicles unless the Administrator has approved a substitute program under section 183(c)(3)(B). For purposes of identifying such areas, the design value shall be calculated according to the most recent interpretation methodology issued by the Administrator before the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(2) PROGRAM APPLICATION.—Subject to provisions of paragraph (3), paragraph (1) may apply to any Serious ozone nonattainment area (as classified under subpart 2 of part D of title I) at the request of the Governor of the State in which the area is located upon the approval of the Administrator. The Administrator shall approve by rule any such request where the Governor of the State has made a determination that inclusion of the area in the clean fuel vehicle program is appropriate and would result in progress toward attainment of the national ambient air quality standard for ozone and the Administrator finds in such rule that such request is reasonable, taking into consideration the manufacturer's projection and availability of clean alternative fuels, and such determination is not arbitrary or capricious. Any additional requirements resulting from such approval shall become applicable after such period as the Administrator finds in such rule necessary for the requisite vehicles and fuels to be made available, giving appropriate consideration to model availability and the cost of compliance within such period.*

*"(3) PUBLIC HEARING.—In promulgating any regulation under this section, the Administrator shall hold at least one public hearing and shall consider the ozone, toxic and global warming benefits of the program; safety and public health issues and measures necessary to avoid any risks involved; technology, cost effectiveness, clean alternative fuel availability, results of public and private research and testing, capability of manufacturers of vehicles and fuel providers to make available such fuels and vehicles; ways to ensure customer acceptance; the expected cold start performance, serviceability, maintenance, durability, and reliability of the vehicles likely to be produced; other environmental, economic, energy, national security, and safety implications of the program; along with the results of ongoing programs demonstrating the use of motor vehicles operated on clean alternative fuels.*

*"(e) EPA DETERMINATION.—The requirements prescribed under subsections (c) (relating to availability of clean alternative fuel) and (d) (relating to the clean-fuel vehicle program) shall be delayed by up to 2 years if the Administrator determines—*

*"(1) within 30 months of the date of the enactment of the Clean Air Act Amendments of 1990 that a delay will substantially advance the technology, improve the benefits, or lower the costs of the clean-fuel vehicle program, or will ensure that the manufacturers and fuel providers will have a minimum of 3 full model years after promulgation of regulations under subsections (b), (c) and (d), or*

*"(2) that a delay is appropriate due to the likelihood of a national economic recession.*

*"(f) FLEET VEHICLE PROGRAM.—*

*"(1) CLEAN-FUEL FLEET VEHICLES.—*

*"(A) PASSENGER CARS AND LIGHT-DUTY TRUCKS OF UP TO 3,750 LBS. (LVW).—For purposes of this subsection, the term 'clean-fuel fleet vehicle' means a clean fuel vehicle that meets the applicable requirements of subsection (b) and meets a standard for ozone-forming volatile organic compounds that requires that total vehicle emissions of ozone-*

forming volatile organic compounds not exceed the level set forth in table 2, in the case of all passenger cars and light-duty trucks of up to 8,500 lbs. gross vehicle weight rating (gvwr) with a loaded vehicle weight (lvw) of up to 3,750 lbs., manufactured in the applicable model year:

"TABLE 2

| Applicable model year | Standard |
|---|---|
| (Phase 1) 1995 through 1999. | 0.66 grams per mile |
| (Phase 2) 2000 and after. | 0.25 grams per mile |

"(B) PHASE 2.—Under Phase 2, clean-fuel fleet vehicles referred to in subparagraph (A) shall also meet a reduction in emissions of other substances (as described under subsection (b)(2)(B)) of a percentage to be determined by the Administrator, by rule, that may reasonably be expected to result from the use of clean alternative fuel and clean-fuel vehicle technologies that comply with the ozone-forming VOC standards prescribed under Phase 2 or as revised under subparagraph (C).

"(C) ADJUSTMENT OF PHASE 2 REDUCTION.—The Administrator may in response to a petition filed by a manufacturer or fuel provider, or on the Administrator's own motion, by rule adjust the Phase 2 level specified in table 2 of subparagraph (A) from 0.25 gpm to not greater than 0.53 gpm if the Administrator determines in such rule that such adjustment is appropriate, giving consideration to the need to provide for attainment of the national ambient air quality standard for ozone in the areas to which this subsection applies and the technical and economic feasibility, of achieving a 0.25 gpm standard taking into consideration adequate lead time, energy, noise, and safety factors. Unless the Administrator promulgates under this subparagraph a standard of 0.53 gpm for total ozone forming volatile organic compounds, the Administrator may, in order to achieve the reduction required under this subparagraph, by rule, waive the standard for oxides of nitrogen applicable to any class or category of vehicles or engines in Phase II and establish a different standard under this title, except that such standard shall not exceed, in the case of passenger cars and light duty trucks up to 3,750 loaded vehicle weight (lvw) 0.7 grams per mile (gpm).

"(D) FLEET VEHICLES WITH LVW ABOVE 3,750.—The Administrator shall, by rule, establish standards under this subsection for emissions of ozone-forming volatile organic compounds from clean-fuel fleet vehicles manufactured in model years 1995 and thereafter with a gross vehicle weight rating of 8,500 lbs. or less with a loaded vehicle weight (lvw) of 3,751 lbs. or more but less than or equal to 5,750 lbs. (lvw) loaded vehicle weight. In addition, the Administrator may at any time, by rule, establish such standards for clean-fuel fleet vehicles with a gross vehicle weight rating (gvwr) of 8,501 lbs. or more. The standards referred to in this paragraph shall be comparable to the standards under subparagraph (A) or, as revised, under subparagraph (B). The phase-in under paragraph (2)(C) shall apply to vehicles described in this subparagraph in the same manner as to light-duty vehicles referred to in paragraph (2)(C). The Administrator shall provide lead time of 4 full model years after promulgation.

"(2) STATE IMPLEMENTATION PLAN REVISION FOR AREAS WITH DESIGN VALUE 0.18 OR HIGHER.—(A) Each State in which there is located all or part of an ozone nonattainment area subject to the clean-fuel vehicle program under subsection (d) or a consolidated Metropolitan Statistical Area (as defined by the United States Office and Management and Budget) located at an altitude greater than 4,000 feet and having a 1980 population of 300,000 or more shall prepare and submit, pursuant to section 110 and part D, a revision of its implementation plan for each such area providing for effective implementation and enforcement of the requirements of this subsection with respect to covered fleets. The revision shall include mechanisms to facilitate the transfer of credits under paragraph (6). Except in the case of an area referred to in subparagraph (B), the plan revision shall be submitted within 30 months after the date of the enactment of the Clean Air Act Amendments of 1990.

"(B) Within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall extend by rule the requirements of this subsection to any Serious ozone nonattainment area not subject to the clean fuel vehicle program under subsection (d) if the area is of comparable size and population to the areas subject to such program under subsection (d) and if the Administrator finds in such rule that extending such requirement is needed for attainment of the national primary ambient air quality standard for ozone in such area, taking into consideration the applicable State implementation plan in effect under title I, and other relevant factors.

"(C) The plan revision required under this subsection shall contain provisions requiring at least 30 percent of all new light-duty vehicles that are covered fleet vehicles acquired for use in the area by the operator of each covered fleet beginning with vehicle model year 1995, at least 50 percent of such vehicles in model year 1997, and at least 70 percent in model year 1998 and each model year thereafter be clean-fuel fleet vehicles and require (consistent with the requirements of this section regarding retail sales of fuel) fuel providers in such area to make available and accessible clean alternative fuels for such vehicles. The plan revision required under this subsection shall contain provisions substituting a 3 full model year phase-in schedule for Phase 2 vehicles at 0.25 gpm. At any time after plans are required to be submitted under this paragraph, the Administrator may by rule increase the minimum percentage of the new vehicles purchased or leased subject to the requirement of this paragraph beginning in model year 2000 or thereafter as necessary to ensure that the maximum feasible percentage of covered fleet vehicles in the area are clean-fuel fleet vehicles and operate on clean alternative fuels.

"(D) Each State shall develop such plan in consultation with fleet operators, motor vehicle and engine manufacturers, fuel providers, including fuel producers and distributors, and other interested persons and shall take into consideration the covered fleet vehicles operational range, specialty uses, vehicle and fuel availability (including fueling practices of such operator's fleet), conversion capability, costs, safety, resale value of vehicles and equipment, and other relevant factors. If a State determines, based on such factors, that the requirements of this subsection cannot be feasibly achieved or would create an undue economic hardship for the State or such fleets, the State may include a lesser percentage of clean-fuel fleet vehicles than required by subparagraph (C) in its implementation plan. The Administrator shall consider and address such factors in any such rule under subparagraph (C).

"(E) The choice of a clean-fuel fleet vehicle from available vehicles and a clean alternative fuel shall be made by the fleet owner or operator subject to the requirements of this subsection and the availability of such vehicles and fuels by motor vehicle manufacturers and fuel providers.

"(3) VEHICLE AVAILABILITY EXEMPTION.—The Administrator shall establish by rule (not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990) standards to be used to determine the availability of suitable clean-fuel fleet vehicles, taking into consideration vehicle size and type, driving range, cargo area, capacity, Federal and State axle and gross weight limits, engine performance, unique requirements for vehicle use, and other factors which may create undue economic hardship for covered fleet operators. The Administrator shall include in such rule a procedure under which a State or the Administrator shall, upon a showing by a fleet operator that suitable clean-fuel fleet vehicles or clean alternative fuels are not reasonably available from, as appropriate, a vehicle manufacturer or fuel provider, exempt such operator from the requirements of this subsection for a period of one year. The fleet operator may certify annually thereafter that such suitable clean-fuel fleet vehicles or clean alternative fuels are not available, and the State or the Administrator shall thereupon provide further annual exemption from the requirements of this subsection upon such certification, unless the Administrator or the State finds that the standards established under subparagraphs (A) and (B) can be met.

"(4) EMISSION REDUCTION CREDITS.—The Governor shall issue appropriate credits to each fleet operator for the use of clean-fuel fleet vehicles in excess of the percentage required under this subsection or for the use of clean fuel vehicles which have emissions lower than required under subparagraph (A), (B), or (C) of paragraph (1) of this subsection. The Governor shall also issue appropriate credits to operators of clean-fuel fleet vehicles within the nonattainment area but not subject to the requirements of this subsection. Any person granted such credits may trade, sell, or otherwise transfer some or all of such credits to a fleet operator who may use such credits to demonstrate compliance with the requirements of this subsection.

"(5) TRANSPORTATION CONTROL CREDITS.—The Administrator shall, by rule, ensure that transportation control measures that restrict vehicle usage do not apply to any covered fleet vehicle that is a clean-fuel vehicle meeting the applicable requirements of this subsection. Any State which obligates the operator of a clean-fuel fleet vehicle in compliance with this subsection to comply with the transportation control measures specified in section 108(f)(1)(A)(viii) (relating to high occupancy vehicles) or (i) (relating to trip- reduction ordinances) may not credit toward the percent emission reduction requirement achieved under section 183(b)(3)(B) any emission reduction pursuant to this subsection. Notwithstanding the provisions of the previous sentence, a State may credit under section 183(b)(3)(B) any emission reductions pursuant to this subsection if the State demonstrates to the satisfaction of the Administrator that any in-

crease in emissions which would result from traffic congestion caused by the operation of such fleet vehicles exceeds the emission reductions attributable (directly or indirectly) to the use of clean fuel fleet vehicles under this subsection.

"(6) VOLUNTARY COMPLIANCE.—(A) For purposes of this paragraph, the Administrator may, on the Administrator's own motion or in response to a petition from any person, establish voluntary standards for emissions of ozone-forming volatile organic compounds for any class or category of covered fleet vehicles over 8,500 lbs. gross vehicle weight rating (gvwr) which are not otherwise subject to standards under paragraph (1). The standards prescribed under this subparagraph shall be comparable to the standards under paragraph (1).

"(B) The operator of any covered fleet vehicles meeting the voluntary standards under subparagraph (A) may elect to have those vehicles operating within an area subject to paragraph (2) treated the same as a clean-fuel fleet vehicle for purposes of paragraphs (4) and (5), and the State shall take into account the emissions reductions directly attributable to voluntary compliance under this paragraph. Once such an election has been made, the operator and the vehicles covered by the election shall be subject to the same obligations and conditions as if the vehicles were subject to a standard under paragraph (1).

"(7) APPLICATION OF OTHER PROVISIONS.—This subsection shall not apply to urban buses subject to subsection (a) or to Federal Government fleets subject to subsection (h).

"(g) OXYGENATED FUELS.—

"(1) MODERATE CO AREAS WITH DESIGN VALUE ABOVE 12.7.—Each State in which there is located all or part of an area classified under section 186 as a Moderate Area for carbon monoxide which has for the most recent year a carbon monoxide design value at or above 12.7 parts per million at the time of classification (as calculated according to the most recent methodology issued before the date of the enactment of the Clean Air Act Amendments of 1990 by the Administrator) shall submit to the Administrator a State implementation plan revision under section 110 and part D of title I for such area. The plan revision shall be submitted within 1 year after the classification of the area. The plan revision shall contain provisions to require that gasoline sold, supplied, offered for sale or supply, dispensed, transported or introduced into commerce be blended, during the portion of the year in which the area is prone to high ambient concentrations of carbon monoxide (as determined by the Administrator), to contain not less than 2.0 percent oxygen. The revision shall provide that such requirement shall take effect no later than October 1, 1993, and shall include a program for implementation and enforcement of the requirement consistent with guidance to be issued by the Administrator. The Administrator may waive, in whole or in part, the requirements of this paragraph upon a demonstration by the State to the satisfaction of the Administrator that the use of oxygenated fuels would prevent or interfere with the attainment by the area of a national primary ambient air quality standard (or a State or local ambient air quality standard) for any air pollutant other than carbon monoxide. The Administrator may, upon demonstration by the State satisfactory to him, waive the requirement of this paragraph where he determines that mobile sources of carbon monoxide do not contribute significantly to carbon monoxide levels in an area. Notwithstanding the preceding sentences in this paragraph, the revision described in this paragraph shall not be required for an area if the State demonstrates to the satisfaction of the Administrator that the revision is not necessary to provide for attainment of the carbon monoxide national ambient air quality standard by the applicable attainment date and maintenance of such standard thereafter in the area and that there is an alternative means to achieve attainment and maintain such standard thereafter in the area that is more cost effective.

"(2) SERIOUS CO AREAS.—(A) In the case of a State in which there is located all or part of an area classified under section 186 as a Serious Area for carbon monoxide, the provisions of section 187(b)(4) of this Act shall be treated as satisfied only if the level of oxygen referred to in such provisions is at least 2.7 percent by weight.

"(B) The Administrator may, in whole or in part, waive the requirements set forth in this paragraph upon a demonstration by the State to the satisfaction of the Administrator that the use of oxygenated fuels which comply with such requirement would prevent or interfere with the attainment by the area of a national primary ambient air quality standard (or a State or local ambient air quality standard) for any air pollutant other than carbon monoxide.

"(3) WAIVER.—The Administrator may, upon demonstration by the State satisfactory to him, waive the requirement of subparagraph (A) of paragraph (2) where the Administrator determines that mobile sources of carbon monoxide do not contribute significantly to carbon monoxide levels in an area. Notwithstanding the requirement of subparagraph (A) of paragraph (2), the revision described in that subparagraph shall not be required for an area if the State demonstrates to the satisfaction of the Administrator that the revision is not necessary to provide for attainment of the national primary ambient air quality standard for carbon monoxide by the applicable attainment date and maintenance of such standard thereafter in the area and that there is an alternative means to achieve attainment and maintain such standard thereafter in the area that is more cost effective.

"(4) FUEL DISPENSING SYSTEMS.—Any person selling oxygenated fuel at retail pursuant to this subsection shall be required under regulations promulgated by the Administrator to label the fuel dispensing system with a notice that the fuel is oxygenated and will reduce the carbon monoxide emissions from the motor vehicle and indicate such other pertinent information for the benefit of the public.

"(5) GUIDELINES.—The Administrator shall promulgate guidelines, within 9 months after the date of the enactment of the Clean Air Act Amendments of 1990, allowing the use of marketable oxygen credits from fuels with higher oxygen content than required to offset the sale or use of fuels with a lower oxygen content than required.

"(6) DEADLINE ADJUSTMENT.—For any area classified as a Serious Area under section 186(b), the Administrator shall adjust the deadlines referred to in this subsection where necessary.

"(7) CONSTRUCTION.—Nothing in this subsection shall be interpreted as requiring an oxygenated fuels program in an area which is in attainment for carbon monoxide and such program is not necessary to maintain such standard thereafter in the area.

"(h) FEDERAL GOVERNMENT AGENCY FLEETS.—

(1) REQUIREMENT.—The President, within 180 days after the date of the enactment of the Clean Air Act Amendments of 1990, shall initiate actions providing that each department, agency, or instrumentality of the United States operating passenger cars or light-duty trucks, or both, primarily in Serious, Severe, or Extreme ozone nonattainment areas designated under subpart 2 of part D of title I, shall ensure, subject to applicable Federal procurement and related laws and annual appropriation Acts, that the maximum number of such new vehicles purchased shall be clean-fuel fleet vehicles meeting the requirements of subsection (f) of this section and that such purchases shall meet the following minimum schedule:

"(A) 30 percent of such new vehicles purchased after September 30, 1995 shall be clean-fuel vehicles meeting the requirements of subsection (f).

"(B) 50 percent of such new vehicles purchased after September 30, 1996 shall be clean-fuel vehicles meeting the requirements of subsection (f).

"(C) 70 percent of such new vehicles purchased after September 30, 1998 shall be clean-fuel vehicles meeting the requirements of subsection (f).

The President or the President's delegate may reduce the percentage of such vehicles specified in this paragraph for any model year if the department, agency, or instrumentality concerned demonstrates that the required percentage cannot be feasibly achieved or would impose unreasonable costs for the Government or would impair the mission of a department, agency, or instrumentality. For purposes of this subsection, the provisions of subsections (d)(2) and (d)(3) shall apply to each such department, agency, or instrumentality.

"(2) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this subsection for the fiscal year ending September 30, 1993, and each fiscal year thereafter. Such funds shall be available until expended.

"(3) REQUIRED OPERATION.—The President, or the President's delegate, shall before October 1, 1992, issue regulations to ensure that a vehicle acquired pursuant to this subsection—

"(A) shall be supplied with appropriate clean alternative fuel in its primary area of operation, using commercially available fueling facilities to the maximum extent practicable; and

"(B) shall be operated exclusively on such fuel except when operated so as to make it impracticable to obtain such fuel.

"(4) CONSIDERATION.—(A) Funds appropriated for carrying out this subsection shall be applied on a priority basis for expenditure first in areas of the United States which the President determines have the most severe air pollution problems.

"(B) A Federal officer or agency responsible for deciding which types of clean fuel vehicles to acquire in order to comply with this subsection shall consider as a factor in such decision which types of vehicles yield the greatest reduction in pollutants emitted per dollar spent in meeting the mission needs of such officer or agency.

"(5) COST OF VEHICLES TO FEDERAL AGENCY.—(A) Funds appropriated under this subsection for the acquisition of vehicles under this subsection shall be applicable only—

"(i) to the portion of the cost of vehicles acquired under this subsection which exceeds the cost of comparable conventional fueled vehicles;

"(ii) to the portion of the costs of fuel storage and dispensing equipment attributable to such vehicles which exceeds the costs for such purposes required for conventional fuel vehicles; and

"(iii) to the portion of the costs of operating and maintaining such vehicles which exceeds the costs for such purposes required for comparable conventional fueled vehicles.

"(B) The President or the President's delegate shall ensure that the cost to any Federal agency receiving vehicles under this subsection shall not exceed the cost to such agency of a comparable conventional fueled vehicle.

"(6) VEHICLE COSTS.—The incremental cost of vehicles acquired under this subsection over the cost of comparable conventional fueled vehicles shall not, consistent with applicable law, be applied to any calculation with respect to a limitation under law on the maximum cost of individual vehicles which may be acquired by the United States.

"(7) EXEMPTIONS.—The requirements of this subsection shall not apply to any of the following:

"(A) Vehicles being operated as an experiment in the use of alternative fuels other than alcohol, natural gas or other gaseous hydrocarbons, or electricity, or to emergency vehicles or to nonroad vehicles.

"(B) Vehicles with respect to which the President or the President's delegate has claimed an exemption based on national security consideration.

"(C) Vehicles being operated for emergency or law enforcement purposes.

"(8) SUPERCLEAN FEDERAL VEHICLE DEMONSTRATION PROGRAM.—(A) The President shall require that 10 percent of the new vehicles purchased by each department, agency, or instrumentality of the United States subject to this subsection in each of the years 1995, 1996, 1997, 1998, and 1999 shall be experimental vehicles which are designed to emit not more than 0.19 grams per mile of volatile organic compounds. Such vehicles shall operate on a diversity of alternative fuels. The certification, warranty and recall provisions of sections 206 and 207 of this title shall not apply to such vehicles.

"(B) The President shall establish a program to demonstrate, test, and report on the emissions performance, durability, and reliability of the vehicles purchased under this paragraph.

"(C) In making determinations under other provisions of this section regarding the technical feasibility of meeting emissions standards, the President shall take into account the results of the demonstrations, tests, and reports under subparagraph (B).

"(D) Experimental vehicles purchased under this paragraph shall be considered clean fuel vehicles for purposes of meeting the requirements of this subsection and such vehicles shall be credited towards the number of clean fuel vehicles required to be purchased by departments, agencies, and instrumentalities of the United States.

"(i) VEHICLE CONVERSIONS.—(1) The requirements of this section may be met through the conversion of existing gasoline or diesel-powered vehicles to a clean-fuel vehicle which comply with the applicable requirements of subsection (f).

"(2) The Administrator shall, consistent with the requirements of this title applicable to new vehicles, promulgate regulations governing such conversions. Such regulations shall establish criteria for such conversions which will ensure that a converted vehicle will, when operating on such clean alternative fuel, comply with the applicable standards under this section. Such regulations shall apply the provisions of sections 206, 207, 208, and 209 to such conversions with such modification of the applicable regulations implementing such sections as the Administrator deems necessary to implement this subsection. Any person who obtains a certification under this paragraph shall be considered a manufacturer for purposes of sections 206 and 207 and related enforcement provisions. Nothing in the preceding sentence shall require a person who obtains a certification under this paragraph to warrant any part or operation of a vehicle other than what is required under sections 206 and 207. Nothing in this paragraph shall serve to limit the applicability of any other warranty to unrelated parts or operations. The Secretary of Transportation shall, if necessary, promulgate rules under applicable motor vehicle laws regarding the safety of converted vehicles.

"(3) The conversion from a vehicle capable of operating on gasoline or diesel fuel only to a clean-fuel vehicle shall not be considered a violation of section 203(a)(3) if such conversion complies with the regulations promulgated under this subsection.

"(4) Nothing in this subsection shall be construed to require such conversions of any motor vehicle in order to achieve compliance with the requirements of subsection (b) or (f).

"(j) TANK AND FUEL SYSTEM SAFETY.—The Secretary of Transportation shall, in accordance with the National Motor Vehicle Traffic Safety Act of 1966, promulgate applicable regulations regarding the safety and use of fuel storage cylinders and fuel systems, including appropriate testing and retesting, in conversions of motor vehicles.

"(k) INFORMATION COLLECTION.—For purposes of enforcing regulations implementing this section, the Administrator may, subject to the provisions of section 208(b), by regulation, require manufacturers, distributors, and retailers of motor vehicles or motor vehicle fuels to establish and maintain records, make reports, and provide information concerning the sales of—

"(1) motor vehicles capable of operating on clean alternative fuel; and

"(2) clean alternative fuels.

Nothing in this subsection shall be construed to limit the Administrator's authority under section 114, 206, or 208.

"(l) CALIFORNIA VEHICLE PROGRAM.—In the case of ozone nonattainment areas in the State of California only, notwithstanding section 209, the State may establish more stringent standards to be applicable under subsections (b) and (f) than the standards referred to in such subsections.

"(m) REDUCTIONS IN REFUELING EMISSIONS.—Reductions in refueling emissions whether achieved from retail fuel dispensing facilities ('Stage II') or vehicle-based ('onboard') controls shall be considered in the determination of compliance with the reductions in ozone-forming volatile organic compounds and other substances required under this section.

"(n) REFORMULATED GASOLINE FOR CONVENTIONAL VEHICLES.—(1) Within 24 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administration shall, after holding at least one public hearing, promulgate regulations under section 211 establishing specifications for cleaner gasoline to be used in conventional gasoline fueled vehicles. Such standards shall require the greatest reduction in ozone-forming volatile organic compounds and air toxic emissions achievable through the reformulation of conventional gasoline, taking into consideration the cost of achieving such emission reductions, and health, environmental and energy impacts. The regulations may establish specifications for gasoline intended for use in vehicles manufactured to use leaded gasoline that are different from the specifications established for gasoline intended for use in vehicles manufactured to use unleaded gasoline.

"(2) Beginning January 1, 1995, the Administrator shall require that such reformulated gasoline or cleaner fuels be offered for sale in all ozone nonattainment areas with a 1988 design value at or above 0.18 parts per million (as calculated by the most recent interpretation methodology issued by the United States Environmental Protection Agency before the date of the enactment of the Clean Air Act Amendments of 1990).

"(o) CONSULTATION WITH DEPARTMENT OF ENERGY AND DEPARTMENT OF TRANSPORTATION.—The Administrator shall coordinate with the Secretaries of the Department of Energy and the Department of Transportation in carrying out the Administrator's duties under this section.".

(c) CONFORMING AMENDMENT.—Section 202(a)(4) (42 U.S.C. 7521(a)(4)) is amended by striking out "standards prescribed under this subsection" every place it occurs and inserting "requirements prescribed under this title".

SEC. 202. EMISSION STANDARDS FOR CERTAIN MOTOR VEHICLES.

(a) STANDARDS.—Section 202 (42 U.S.C. 7521) is amended by adding the following at the end thereof:

"(g) NMHC AND CO STANDARDS FOR MODEL YEARS AFTER 1993.—Effective with respect to the model year 1994 and thereafter, the regulations under subsection (a) applicable to emissions of nonmethane hydrocarbons (NMHC) and carbon monoxide (CO) from passenger cars and light-duty trucks (LDTs) shall contain standards which provide that emissions from a specified percentage of each manufacturer's sales volume of such cars and trucks shall comply with the levels specified in table 1. The specified percentage shall be 40 percent in model year 1994, 80 percent in 1995, and 100 percent thereafter.

"TABLE 1.—EMISSION STANDARDS FOR NHMC AND CO FROM GASOLINE AND DIESEL FUELED PASSENGER VEHICLES AND LIGHT-DUTY TRUCKS OF UP TO 6,000 LBS. GVWR

| Vehicle type | Column A * (5 yrs/50,000 mi) | | Column B ** (10 yrs/100,000 mi) | |
|---|---|---|---|---|
| | NMHC | CO | NMHC | CO |
| Passenger Cars. | 0.25 | 3.4 | 0.31 | 4.2 |
| LDT's (0-3,750 lbs LVW). | 0.25 | 3.4 | 0.31 | 4.2 |
| LDT's (3,751-5,750 lbs LVW). | 0.32 | 4.4 | 0.40 | 5.5 |

Standards are expressed in grams per mile (gpm).

LVW refers to loaded vehicle weight and GVWR refers to gross vehicle weight rating each as defined by EPA in regulations in effect as of the date of the enactment of the Clean Air Act Amendments of 1990.

* In the case of the standards under column A, for purposes of certification under section 206, the applicable useful life shall be 5 years or 50,000 miles (or the equivalent) whichever first occurs.
** In the case of the standards under column B, for purposes of certification under section 206, the applicable useful life shall be 10 years or 100,000 miles (or the equivalent), whichever first occurs.

"(h) $NO_x$ AND PM STANDARDS FOR MODEL YEARS AFTER 1993.—Effective with respect to the model years after 1993 in the case of passenger cars, and effective with respect to model years after 1994 in the case of light-duty trucks (LTDs), the regulations under subsection (a) applicable to emissions of oxides of nitrogen ($NO_x$) and particulate matter (PM) from such cars and trucks shall contain standards which provide that such emissions from a specified percentage of each manufacturer's sales volume of such cars and trucks shall comply with the levels specified in table 2. In the case of passenger cars, the specified percentage shall be 40 percent in model year 1994 and 100 percent thereafter. In the case of light-duty trucks, the specified percentage shall be 40 percent in model year 1995 and 100 percent thereafter.

TABLE 2.—EMISSION STANDARDS FOR $NO_x$ and PM From Gasoline and Diesel Fueled Passenger Cars and Light-Duty Trucks (LDTs) of Up to 6,000 LBS. GVWR

| Vehicle type | Pollutant | Standard * |
|---|---|---|
| Passenger cars and LDT's with LVW of 3,750 lbs. or less. | $NO_x$ | 0.4 gpm |
| | PM | 0.08 gpm |
| LTD's with LVW of 3,751 to 5,750 lbs. | $NO_x$ | 1.0 gpm |
| | PM | 0.08 gpme |

Standards are expressed in grams per mile (gpm).
LVW refers to loaded vehicle weight and GVWR refers to gross vehicle weight rating each as defined by EPA in regulations in effect as of the date of the enactment of the Clean Air Act Amendments of 1990.
* For these standards, for purpose of certification under section 206, the applicable useful life shall be 5 years or 50,000 miles (or the equivalent), whichever first occurs.

"(i) PHASE II STUDY.—(1) The Administrator, with the participation of the Office of Technology Assessment, shall study whether or not further reductions in emissions from passenger cars and light-duty trucks should be required pursuant to this title. The study shall consider whether to establish with respect to model years commencing after January 1, 2003, the standards and useful life period for gasoline and diesel-fueled passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less specified in the following table:

"TABLE 3—Pending Emission Standards for Gasoline and Diesel Fueled Passenger Vehicles and Light-Duty Trucks With 3,750 LBS. LVW OR LESS

| Pollutant | Emission level* |
|---|---|
| NMHC | 0.125 gpm |
| $NO_x$ | 0.2 gpm |
| CO | 1.7 gpm |

* Emission levels are expressed in grams per mile (gpm). For vehicles and engines subject to this subsection for purposes of section 202(d) and any reference thereto, the useful life of such vehicles and engines shall be a period of 10 years or 100,000 miles (or the equivalent), whichever first occurs.

Such study shall also consider other standards and useful life periods which are more stringent or less stringent than those set forth in table 3 (but more stringent than those referred to in subsections (g) and (h)).

"(2)(A) As part of the study under paragraph (1), the Administrator shall examine the need for further reductions in emissions in order to attain or maintain the national ambient air quality standards, taking into consideration the waiver provisions of section 209(b). As part of such study, the Administrator shall also examine—

"(i) the availability of technology (including the costs thereof), in the case of passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less, for meeting more stringent emission standards than those provided in subsections (g) and (h) for model years commencing not earlier than after January 1, 2003 and not later than model year 2006, including the lead time and safety and energy impacts of meeting more stringent emission standards; and

"(ii) the need for, and cost effectiveness of, obtaining further reductions in emissions from such passenger cars and light-duty trucks, taking into consideration alternative means of attaining or maintaining the national primary ambient air quality standards pursuant to State implementation plans and other requirements of this Act, including their feasibility and cost effectiveness.

"(B) The Administrator shall submit a report to Congress no later than June 1, 1997, containing the results of the study under this subsection, including the results of the examination conducted under subparagraph (A). Before submittal of such report the Administrator shall provide a reasonable opportunity for public comment and shall include a summary of such comments in the report to Congress.

"(3)(A) Based on the study under paragraph (1) the Administrator shall determine, by rule, within 3 calendar years after the report is submitted to Congress, but not later than December 31, 1999, whether—

"(i) there is a need for further reductions in emissions as provided in paragraph (2)(A);

"(ii) the technology for meeting more stringent emission standards will be available, as provided in paragraph (2)(A)(i), in the case of passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less, for model years commencing not earlier than January 1, 2003 and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); and

"(iii) obtaining further reductions in emissions from such vehicles will be needed and cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii).

The rulemaking under this paragraph shall commence within 3 months after submission of the report to Congress under paragraph (2)(B).

"(B) If the Administrator determines under subparagraph (A) that—

"(i) there is no need for further reductions in emissions as provided in paragraph (2)(A);

"(ii) the technology for meeting more stringent emission standards will not be available as provided in paragraph (2)(A)(i), in the case of passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less, for model years commencing not earlier than January 1, 2003, and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); or

"(iii) obtaining further reductions in emissions from such vehicles will not be needed or cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii),

the Administrator shall not promulgate more stringent standards than those in effect pursuant to subsections (g) and (h). (Nothing in this paragraph shall prohibit the Administrator from exercising the Administrator's authority under subsection (a) to promulgate more stringent standards for passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less at any other time thereafter in accordance with subsection (a).)

"(C) If the Administrator determines under subparagraph (A) that—

"(i) there is a need for further reductions in emissions as provided in paragraph (2)(A);

"(ii) the technology for meeting more stringent emission standards will be available, as provided in paragraph (2)(A)(i), in the case of passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less, for model years commencing not earlier than January 1, 2003, and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); and

"(iii) obtaining further reductions in emissions from such vehicles will be needed and cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii),

the Administrator shall either promulgate the standards (and useful life periods) set forth in table 3 of paragraph (1) or promulgate alternative standards (and useful life periods) which are more stringent than those referred to in subsections (g) and (h). Any such standards (or useful life periods) promulgated by the Administrator shall take effect with respect to any such vehicles or engines no earlier than the model year 2003 but not later than model year 2006, as determined by the Administrator in the rule.

"(D) Nothing in this paragraph shall be construed by the Administrator or by a court as a presumption that any standards (or useful life period) set forth in table 3 shall be promulgated in the rulemaking required under this paragraph. The action required of the Administrator in accordance with this paragraph shall be treated as a nondiscretionary duty for purposes of section 304(a)(2) (relating to citizen suits).

"(E) Unless the Administrator determines not to promulgate more stringent standards as provided in subparagraph (B) or to postpone the effective date of standards referred to in table 3 of paragraph (1) or to establish alternative standards as provided in subparagraph (C), effective with respect to model years commencing after January 1, 2003, the regulations under subsection (a) applicable to emissions of nonmethane hydrocarbons (NMHC), oxides of nitrogen (NOx), and carbon monoxide (CO) from motor vehicles and motor vehicle engines in the classes specified in table 3 of paragraph (1) above shall contain standards which provide that emissions may not exceed the pending emission levels specified in table 3 of paragraph (1).".

(b) CONFORMING AMENDMENT.—Section 202(d)(1) (42 U.S.C. 7521(d)(1)) is amended by inserting ", except as otherwise specifically provided in this title" before the semicolon at the end thereof.

(c) REVISED STANDARDS.—Subparagraph (C) of section 202(b)(1) (42 U.S.C. 7521(b)(1)(C)) is amended to read as follows:

"(C) The Administrator may promulgate regulations under subsection (a)(1) revising any standard prescribed or previously revised under this subsection, as needed to protect public health or welfare, taking costs, energy, and safety into account. Any revised standard shall require a reduction of emissions from the standard that was previously applicable. Any such revision under this title may provide for a phase-in of the standard.".

(d) PROMULGATION.—Section 202(b)(2) (42 U.S.C. 7521(b)(2)) is amended to read as follows:

"(2) Emission standards under paragraph (1), and measurement techniques on which such standards are based (if not promulgated prior to the date of the enactment of the Clean Air Act Amendments of 1990), shall be promulgated by regulation within 180 days after such date.".

SEC. 203. CONFORMING AMENDMENT.

Section 206(f)(1) (42 U.S.C. 7525(f)(1)) is amended by inserting "and light-duty trucks" immediately after "light-duty vehicles and engines".

SEC. 204. CARBON MONOXIDE EMISSIONS AT COLD TEMPERATURES.

Section 202 (42 U.S.C. 7521) is amended by adding the following new subsection after subsection (i):

"(j) COLD CO STANDARD.—(1) Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations under subsection (a) of this section applicable to emissions of carbon monoxide from 1993 and later model year light-duty vehicles and light-duty trucks when operated at 20 degrees Fahrenheit. The regulations shall contain standards which provide that emissions of carbon monoxide from a manufacturer's vehicles when operated at 20 degrees Fahrenheit may not exceed, in the case of light-duty vehicles, 10.0 grams per mile, and in the case of light-duty trucks, a level comparable in stringency to the standard applicable to light-duty vehicles. The standards also shall provide that each manufacturer's light-duty vehicle and light-duty truck fleets shall comply with applicable standards according to the following schedule: at least 40 percent of 1993 model year vehicles shall comply with applicable standards; at least 80 percent of 1994 model year vehicles shall comply with applicable standards; and 100 percent of 1995 and later model year vehicles shall comply with applicable standards.

"(2)(A) Not later than December 31, 1993, the Administrator shall complete a study assessing the need for further reductions in emissions of carbon monoxide and the maximum reductions in such emissions achievable from 1998 and later model year light-duty vehicles and light-duty trucks when operated at 20 degrees Fahrenheit.

"(B) The Administrator may promulgate (and from time to time revise) regulations under subsection (a)(1) of this section applicable to emissions of carbon monoxide from 1998 and later model year light-duty vehicles and light-duty trucks when operated at 20 degrees Fahrenheit, as needed to protect public health and welfare, taking costs into account.

"(3) The Administrator also may promulgate regulations under subsection (a)(1) applicable to emissions of carbon monoxide from heavy-duty vehicles and engines when operated at cold temperatures.".

SEC. 205. EVAPORATIVE EMISSIONS.

Section 202 (42 U.S.C. 7521) is amended by adding the following new subsection after subsection (j):

"(k) CONTROL OF EVAPORATIVE EMISSIONS.—The Administrator shall promulgate (and from time to time revise) regulations applicable to evaporative emissions of hydrocarbons from all gasoline-fueled motor vehicles—

"(1) during operation; and

"(2) over 2 or more days of nonuse;

under ozone-prone summertime conditions (as determined by regulations of the Administrator). The regulations shall take effect as expeditiously as possible and shall require the greatest degree of emission reduction achievable by means reasonably expected to be available for production during any model year to which the regulations apply, giving appropriate consideration to fuel volatility, and to cost, energy, and safety factors associated with the application of the appropriate technology. The Administrator shall commence a rulemaking under this subsection within 12 months after the date of the enactment of the Clean Air Act Amendments of 1990. If final regulations are not promulgated under this subsection within 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall submit a statement to the Congress containing an explanation of the reasons for the delay and a date certain for promulgation of such final regulations in accordance with this Act. Such date certain shall not be later than 15 months after the expiration of such 18 month deadline.".

SEC. 206. CONTROL OF VEHICLE REFUELING EMISSIONS.

Section 202(a)(6) (42 U.S.C. 7521(a)(6)) is amended to read as follows:

"(6) ONBOARD VAPOR RECOVERY.—Within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate standards under this section requiring that all new light-duty motor vehicles manufactured in the third model year after the model year in which the standards are promulgated and thereafter shall be equipped with vehicle-based ('onboard') systems for the control of evaporative emissions during vehicle refueling. The Administrator shall determine, in consultation with the Secretary of Transportation, that such systems are safe. The standards shall require that such systems provide a minimum evaporative emission capture efficiency of 95 percent. The requirements of section 182(b)(3) (relating to stage II gasoline vapor recovery) for areas classified under section 181 as moderate for ozone shall not apply after promulgation of such standards and the Administrator may revise or waive the application of the requirements of such section 182(b)(3) for areas classified under section 181 as Serious, Severe, or Extreme for ozone, as appropriate, after such time as the Administrator determines that onboard emissions control systems required under this paragraph are in widespread use throughout the motor vehicle fleet.".

SEC. 207. MOBILE SOURCE-RELATED AIR TOXICS.

Section 202 (42 U.S.C. 7521) is amended by adding the following new subsection after subsection (k):

"(l) MOBILE SOURCE-RELATED AIR TOXICS.—

"(1) STUDY.—Not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall complete a study of the need for, and feasibility of, controlling emissions of toxic air pollutants which are unregulated under this Act and associated with motor vehicles and motor vehicle fuels, and the need for, and feasibility of, controlling such emissions and the means and measures for such controls. The study shall focus on those categories of emissions that pose the greatest risk to human health or about which significant uncertainties remain, including emissions of benzene, formaldehyde, and 1, 3 butadiene. The proposed report shall be available for public review and comment and shall include a summary of all comments.

"(2) STANDARDS.—Within 54 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall, based on the study under paragraph (1), promulgate (and from time to time revise) regulations under subsection (a)(1) or section 211(c)(1) containing reasonable requirements to control hazardous air pollutants from motor vehicles and motor vehicle fuels. The regulations shall contain standards for such fuels or vehicles, or both, which the Administrator determines reflect the greatest degree of emission reduction achievable through the application of technology which will be available, taking into consideration the standards established under subsection (a), the availability and costs of the technology, and noise, energy, and safety factors, and lead time. Such regulations shall not be inconsistent with standards under section 202(a). The regulations shall, at a minimum, apply to emissions of benzene and formaldehyde.".

SEC. 208. EMISSION CONTROL DIAGNOSTICS SYSTEMS.

(a) EMISSION CONTROL DIAGNOSTICS.—Section 202 (42 U.S.C. 7521) is amended by adding the following after subsection (l):

"(m) EMISSIONS CONTROL DIAGNOSTICS.—

"(1) RULEMAKING.—The Administrator, after consideration of environmental benefits, technology, safety, and economic factors, shall promulgate (and from time to time revise) regulations requiring manufacturers to install on all new motor vehicles and motor vehicle engine diagnostics systems capable of—

"(A) accurately identifying, to the extent practicable, emission-related systems deterioration or malfunction which could cause or result in failure of the vehicle to comply with emission standards established under this section,

"(B) alerting the vehicle's owner or operator to the likely need for emission-related components or systems maintenance or repair,

"(C) storing and retrieving fault codes specified by the Administrator, and

"(D) providing access to stored information in a manner specified by the Administrator.

"(2) EFFECTIVE DATE.—The regulations prescribing emission control diagnostics systems under paragraph (1) of this subsection (and any revision thereof) shall take effect after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period and energy and safety factors.

"(3) STATE INSPECTION.—The Administrator, by regulation, may require States that have implementation plans under section 110 containing motor vehicle inspection and maintenance programs to amend their plans within 2 years of promulgation of the regulations to provide for inspection of emission control diagnostics systems (as prescribed by regulations under paragraph (1) of this subsection) and the maintenance or repair

of malfunctions or system deterioration identified by or affecting such diagnostics systems.

"(4) EMISSIONS CONTROL DIAGNOSTICS.—The Administrator shall, by regulation, require manufacturers—

"(A) to provide standardized connectors through which the emission control diagnostics system is accessed for inspection, diagnosis, service, or repair on all motor vehicles and motor vehicle engines;

"(B) to provide standardized access to the emission control diagnostics system through such connectors which shall be unrestricted and shall not require any access code or any device which is only available from a vehicle manufacturer; and

"(C) to provide standardized output of the data from the emission control diagnostics system through such connectors to a scanning device which shall be usable without the need for any unique decoding information or device.

"(5) INFORMATION AVAILABILITY.—The Administrator, by regulation, shall require (subject to the provisions of section 208(c) regarding the protection of methods or processes entitled to protection as trade secrets) manufacturers, including motor vehicle or motor vehicle engine manufacturers, to make available in a timely manner, under reasonable terms and conditions to any person engaged in the repair, diagnosing, or servicing of motor vehicles or motor vehicle engines any information reasonably necessary to utilize fully the emission control diagnostic system and to make effective emissions related repairs and service. No such information may be withheld under section 208(c) if that information is provided (directly or indirectly) by the manufacturer to franchised dealers or other persons engaged in the repair, diagnosing, or servicing of motor vehicles or motor vehicle engines. Such information shall also be available to the Administrator, subject to section 208(c), in carrying out the Administrator's responsibilities under this section.

"(6) REVIEW OF DATA.—The Administrator may, in promulgating regulations under this section, review data output from emission control diagnostic systems and revise such regulations to improve the emissions repair effectiveness by use of such data. In the review process, the Administrator should consult with the industry, including vehicle manufacturers, parts manufacturers, diagnostic equipment manufacturers, and motor vehicle repair service providers, regarding the quality and usefulness of the data provided by the emission control diagnostic system, technology developments in motor vehicle emission control diagnostics, and any other matters that would lead to improving the effectiveness of emission control systems repairs and maintenance.

"(7) BRAND, CORPORATE, AND TRADE NAMES.—The Administrator, in promulgating regulations under this subsection, shall require that information and data from the emissions control diagnostics systems not require the use of any component or service which is identified by brand, trade, or corporate name, as provided by subparagraphs (A) and (B) of section 207(c)(3).

"(8) RULEMAKING.—The Administrator shall commence a rulemaking under this subsection within 12 months after the date of the enactment of the Clean Air Act Amendments of 1990. If the final regulations under this subsection are not promulgated within 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall submit a statement to the Congress containing an explanation of the reasons for the delay and a date certain for promulgation of such final regulations in accordance with this Act. Such date certain shall not be later than 15 months after such 18-month deadline.".

(b) SCHEDULED REPLACEMENT.—The last sentence of section 207(a)(3) (42 U.S.C. 7541(a)(3)) is amended to read as follows: "The term 'designed for emission control' as used in the preceding sentence means a catalytic converter, a thermal reactor, an emission control diagnostics system, or other component installed on or in a vehicle for the sole or primary purpose of reducing vehicle emissions (not including those vehicle components which were in general use prior to model year 1968 and the primary function of which is not related to emission control).".

SEC. 209. AUTO WARRANTIES.

Section 207 (42 U.S.C. 7541) is amended as follows:

(1) Strike out "useful life (as determined under section 202(d))" each place it appears in subsection (b) and insert "the warranty period (as determined under subsection (i))".

(2) Strike so much of section 207(b) as follows the third sentence thereof.

(3) Add the following new subsection at the end thereof:

"(i) WARRANTY PERIOD.—

"(1) IN GENERAL.—For purposes of subsection (a)(1) and subsection (b), the warranty period, effective with respect to new motor vehicles and engines manufactured in the model year 1995 and thereafter, shall be the first 2 years or 24,000 miles of use (whichever first occurs), except as provided in paragraph (2).

"(2) SPECIFIED MAJOR EMISSION CONTROL COMPONENTS.—In the case of a specified major emission control component, the warranty period for purposes of subsection (a)(1) and subsection (b) shall be 5 years or 50,000 miles of use (whichever first occurs). As used in this paragraph, the term 'specified major emission control component' means only a catalytic converter or electronic emissions control unit. Nothing in this Act shall be construed to provide that any part (other than a part referred to in the preceding sentence) shall be required to be warranted under this Act for the period of 5 years or 50,000 miles referred to in this paragraph.

"(3) INSTRUCTIONS.—Subparagraph (A) of subsection (b)(2) shall apply only where the Administrator has made a determination that the instructions concerned conform to the requirements of subsection (c)(3).".

(4) Amend subsection (a)(1) by adding the following at the end thereof: "In the case of vehicles and engines manufactured in the model year 1995 and thereafter such warranty shall require that the vehicle or engine is free from any such defects for the warranty period provided under subsection (i).".

SEC. 210. HEAVY-DUTY TRUCKS.

Section 202(a)(3) (42 U.S.C. 7521(a)(3)) is amended as follows:

(1) Strike subparagraphs (A), (B), (C), (D), and (E) and insert the following:

"(A)(i) Unless the standard is changed as provided in subparagraph (B), regulations under paragraph (1) of this subsection applicable to emissions of hydrocarbons, carbon monoxide, oxides of nitrogen, and particulate matter from classes and categories of heavy-duty vehicles or engines manufactured during or after model year 1983 shall contain standards which reflect the greatest degree of emission reduction achievable through the application of technology which the Administrator determines will be available for the model year to which such standards apply, giving appropriate consideration to cost, energy, and safety factors associated with the application of such technology.

"(ii) In establishing classes or categories of vehicles or engines for purposes of regulations under this paragraph, the Administrator may base such classes or categories on gross vehicle weight, horsepower, type of fuel used, or other appropriate factors.

"(B) On the basis of information available to the Administrator concerning the effects of air pollutants emitted from heavy-duty vehicles or engines and from other sources of mobile source related pollutants on the public health and welfare, and taking costs into account, the Administrator may promulgate regulations under paragraph (1) of this subsection revising any standard promulgated under or before the date of the enactment of the Clean Air Act amendments of 1990 (or previously revised under this subparagraph).".

(2) Redesignate subparagraph (F) as subparagraph (C).

(3) Add a new subparagraph (D) to read as follows:

"(D) The Administrator shall study the practice of rebuilding heavy-duty engines and the impact rebuilding has on engine emissions. On the basis of that study and other information available to him, the Administrator may prescribe requirements to control rebuilding practices, including standards applicable to emissions from any rebuilt heavy-duty engines (whether or not the engine is past it's statutory useful life), which in the Administrator's judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare taking costs into account. Any regulation shall take effect after a period the Administrator finds necessary to permit the development and application of the requisite control measures, giving appropriate consideration to the cost of compliance within the period and energy and safety factors.".

SEC. 211. NONROAD ENGINES AND VEHICLES.

(a) DEFINITIONS.—Section 216 (42 U.S.C. 7550) is amended by adding the following at the end thereof:

"(13) NONROAD ENGINE.—The term 'nonroad engine' means an internal combustion engine (including the fuel system) that is not used in a motor vehicle or a vehicle used solely for competition, or that is not subject to standards promulgated under section 111 or section 202.

"(14) NONROAD VEHICLE.—The term 'nonroad vehicle' means a vehicle that is powered by a nonroad engine and that is not a motor vehicle or a vehicle used solely for competition.".

(b) DEFINITION OF MANUFACTURER.—Paragraph (1) of section 216 (42 U.S.C. 7550) is amended by striking out "new motor vehicles or new motor vehicle engines" every place it occurs and inserting "new motor vehicles, new motor vehicle engines, new nonroad vehicles or new nonroad engines".

(c) EMISSION STANDARDS.—Section 213 (42 U.S.C. 7547) is amended to read as follows:

"SEC. 213. NONROAD ENGINES AND VEHICLES.

"(a) EMISSIONS STANDARDS.—(1) The Administrator shall conduct a study of emissions from nonroad engines and nonroad vehicles to determine if such emissions cause, or significantly contribute to, air pollution which may reasonably be anticipated to endanger

public health or welfare. Such study shall be completed within 18 months of the date of the enactment of the Clean Air Act Amendments of 1990.

"(2) After notice and opportunity for public hearing, the Administrator shall determine within 12 months after completion of the study under paragraph (1), based upon the results of such study, whether emissions of carbon monoxide, oxides of nitrogen, and volatile organic compounds from new nonroad engines or nonroad vehicles are significant contributors to ozone or carbon monoxide concentrations in more than 1 area which has failed to attain the national ambient air quality standards for ozone or carbon monoxide.

"(3) If the Administrator makes an affirmative determination under paragraph (2), within 18 months thereafter the Administrator shall promulgate (and from time to time revise) such regulations as the Administrator deems appropriate containing standards applicable to emissions from those classes or categories of new nonroad engines and new nonroad vehicles which in the Administrator's judgment cause, or contribute to, such air pollution, taking into account costs, noise, safety and energy factors associated with the application of technology which the Administrator determines will be available for the engines and vehicles to which such standards apply. The regulations shall apply to the useful life of the engines or vehicles (as determined by the Administrator).

"(4) If the Administrator determines that any emissions from new nonroad engines or vehicles not covered by paragraph (2) significantly contribute to air pollution which may reasonably be anticipated to endanger public health or welfare, the Administrator may promulgate (and from time to time revise) such regulations as the Administrator deems appropriate containing standards applicable to emissions from those classes or categories of new nonroad engines and new nonroad vehicles which in the Administrator's judgment cause, or contribute to, such air pollution, taking into account costs, noise, safety, and energy factors associated with the application of technology which the Administrator determines will be available for the engines and vehicles to which such standards apply. The regulations shall apply to the useful life of the engines or vehicles (as determined by the Administrator).

"(b) EFFECTIVE DATE.—Standards under this section shall take effect at the earliest possible date considering the lead time necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period and energy and safety.

"(c) SAFE CONTROLS.—Effective with respect to engines or vehicles to which standards under this section apply, no emission control device, system, or element of design shall be used in a new nonroad engine or new nonroad vehicle for purposes of complying with such standards if such device, system, or element of design will cause or contribute to an unreasonable risk to public health, welfare, or safety in its operation or function. In determining whether an unreasonable risk exists, the Administrator shall consider factors including those described in section 202(a)(4)(B).

"(d) ENFORCEMENT.—The standards under this section shall be subject to sections 206, 207, 208, and 209, with such modifications of the applicable regulations implementing such sections as the Administrator deems appropriate, and shall be enforced in the same manner as standards prescribed under section 202. The Administrator shall revise or promulgate regulations as may be necessary to determine compliance with, and enforce, standards in effect under this section.".

(d) STATE STANDARDS.—Section 209 (42 U.S.C. 7543) is amended by adding the following at the end thereof:

"(e) STATE STANDARDS.—No State or any political subdivision thereof shall adopt or attempt to enforce any standard or other requirement relating to the control of emissions from new nonroad engines or nonroad vehicles subject to regulation under this Act. Subsection (b) shall not apply for purposes of this subsection.".

SEC. 212. VEHICLE CERTIFICATION.

(a) ADDITIONAL TESTING PROCEDURES.—Section 206(a) (42 U.S.C. 7525(a)) is amended by adding the following after paragraph (3):

"(4)(A) Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall revise the regulations promulgated under this subsection to add test procedures capable of determining whether 1993 and later model year light-duty vehicles and light-duty trucks, when properly maintained and used, will pass the inspection methods and procedures established under section 207(b) for that model year, under conditions reasonably likely to be encountered in the conduct of inspection and maintenance programs, but which those programs cannot reasonably influence or control. The conditions shall include fuel characteristics, ambient temperature, and short (30 minutes or less) waiting periods before tests are conducted. The Administrator shall not grant a certificate of conformity under this subsection for any 1993 or later model year vehicle or engine that the Administrator concludes cannot pass the test procedures established under this paragraph.

"(B) From time to time, the Administrator may revise the regulations promulgated under subparagraph (A), as the Administrator deems appropriate.".

(b) PROJECTED SALES NOT EXCEEDING 300.—Section 206(a)(1) (42 U.S.C. 7525(a)(1)) is amended by striking the third sentence and inserting the following: "In the case of any original equipment manufacturer (as defined by the Administrator in regulations promulgated before the date of the enactment of the Clean Air Act Amendments of 1990) of vehicles or vehicle engines whose projected sales in the United States for any model year (as determined by the Administrator) will not exceed 300, the Administrator shall not require, for purposes of determining compliance with regulations under section 202 for the useful life of the vehicle or engine, operation of any vehicle or engine manufactured during such model year for more than 5,000 miles or 160 hours, respectively, unless the Administrator by regulation prescribes otherwise. The Administrator shall apply any adjustment factors that the Administrator deems appropriate to assure that each vehicle or engine will comply during its useful life (as determined under section 202(d)) with the regulations prescribed under section 202.".

SEC. 213. IN-USE COMPLIANCE—RECALL.

Section 207(c) (42 U.S.C. 7541(c)) is amended by adding the following at the end thereof:

"(4) INTERMEDIATE IN-USE STANDARDS.—

"(A) MODEL YEARS 1994 AND 1995.—For passenger cars and light-duty trucks of less than 6,000 lbs. gross vehicle weight rating (GVWR) which are subject to standards under table 1 of section 202(g) in model years 1994 and 1995 (40 percent of the manufacturer's sales volume in model year 1994 and 80 percent in model year 1995), the standards applicable to NHMC and CO for purposes of this subsection shall be those set forth in table A in lieu of the standards for such air pollutants otherwise applicable under this title, except that any more stringent standards in effect for such purpose before the date of the enactment of the Clean Air Act Amendments of 1990 shall remain in effect until a more stringent standard takes effect as provided in paragraph (5).

"TABLE A.—INTERMEDIATE IN-USE STANDARDS

| Vehicle type | NMHC | CO |
|---|---|---|
| Passenger cars | 0.32 | 5.2 |
| LDT's (0-3,750 LVW) | 0.32 | 5.2 |
| LDT's (3,751-5,750 LVW) | 0.41 | 6.7 |

"(B) MODEL YEARS 1996 AND 1997.—In the model years 1996 and 1997, passenger cars and light-duty trucks of less than 6,000 lbs. gross vehicle weight rating (GVWR) which are not subject to final in-use standards under paragraph (5) (60 percent of the manufacturer's sales volume in model year 1996 and 20 percent in model year 1997) shall be subject to the standards for NHMC and CO for purposes of this subsection set forth in table A in lieu of those set forth in paragraph (5), except that any more stringent standards in effect for such purpose before the date of the enactment of the Clean Air Act Amendments of 1990 shall remain in effect until a more stringent standard takes effect as provided in paragraph (5).

"(C) USEFUL LIFE.—In the case of the in-use standards applicable under this paragraph for purposes of applying this subsection the applicable useful life shall be 5 years or 50,000 miles or the equivalent (whichever is less).

"(5) FINAL IN-USE STANDARDS.—After the model year 1995, for purposes of applying this subsection, in the case of the percentage specified in Implementation Schedule B of each manufacturer's sales volume of passenger cars and light-duty trucks of less than 6,000 lbs. gross vehicle weight rating (GVWR), the standards applicable to NHMC and CO shall be those set forth in table B in lieu of the standards for such air pollutants otherwise applicable under this title:

"TABLE B.—FINAL IN-USE STANDARDS

| Vehicle type | Column A * | | Column B ** | |
|---|---|---|---|---|
| | NMHC | CO | NMHC | CO |
| Passenger cars | 0.25 | 3.4 | 0.31 | 4.2 |
| LDT's (0-3,750 LVW). | 0.25 | 3.4 | 0.31 | 4.2 |
| LDT's (3,751-5,750 LVW). | 0.32 | 4.4 | 0.40 | 5.5 |

Standards are expressed in grams per mile (gpm). LVW refers to loaded vehicle weight as defined by EPA in regulations in effect as of the date of the enactment of the Clean Air Act Amendments of 1990.

* In the case of the standards under column A, for purposes of applying this subsection the applicable useful life shall be 5 years or 50,000 miles (or the equivalent), whichever first occurs.

** In the case of the standards under column B, for purposes of applying this subsection the applicable useful life shall be 7 years or 75,000 miles (or the equivalent), whichever first occurs.

"IMPLEMENTATION SCHEDULE B—IMPLEMENTATION OF FINAL IN-USE STANDARDS

| Model year | Percent |
|---|---|
| 1996 | 40 |
| 1997 | 80 |
| 1998 | 100.". |

SEC. 214. COMPLIANCE PROGRAM FEES.

Part A of title II is amended by adding the following new section at the end thereof:

"SEC. 217. MOTOR VEHICLE COMPLIANCE PROGRAM FEES.

"(a) FEE COLLECTION.—Consistent with section 9701 of title 31, United States Code, the Administrator may promulgate (and from time to time revise) regulations establishing fees to recover all reasonable costs to the Administrator associated with—

"(1) new vehicle or engine certification under section 206(a),

"(2) new vehicle or engine compliance monitoring and testing under section 206(b), and

"(3) in-use vehicle or engine compliance monitoring and testing under section 207(c).

The Administrator may establish for all foreign and domestic manufacturers a fee schedule based on such factors as the Administrator finds appropriate and equitable and nondiscriminatory, including the number of vehicles or engines produced under a certificate of conformity.

"(b) SPECIAL TREASURY FUND.—Any fees collected under this section shall be deposited in a special fund in the United States Treasury for licensing and other services which thereafter shall be available for appropriation, to remain available until expended, to carry out the Agency's activities for which the fees were collected.

"(c) LIMITATION ON FUND USE.—Moneys in the special fund referred to in subsection (b) shall not be used until after the first fiscal year commencing after the first July 1 when fees are paid into the fund.

"(d) ADMINISTRATOR'S TESTING AUTHORITY.—Nothing in this subsection shall be construed to limit the Administrator's authority to require manufacturer or confirmatory testing as provided in this part.".

SEC. 215. INFORMATION COLLECTION.

Section 208 (42 U.S.C. 7542) is amended to read as follows:

"SEC. 208. INFORMATION COLLECTION.

"(a) MANUFACTURER'S RESPONSIBILITY.—Every manufacturer of new motor vehicles or new motor vehicle engines, and every manufacturer of new motor vehicle or engine parts or components, and other persons subject to the requirements of this part, shall establish and maintain records, perform tests where such testing is not otherwise reasonably available under this part (including fees for testing), make reports and provide information the Administrator may reasonably require to determine whether the manufacturer or other person has acted or is acting in compliance with this part and regulations thereunder, or to otherwise carry out the provision of this part, and shall, upon request of an officer or employee duly designated by the Administrator, permit such officer or employee at reasonable times to have access to and copy such records.

"(b) ENFORCEMENT AUTHORITY.—For the purposes of enforcement of this section and section 207(c), officers or employees duly designated by the Administrator upon presenting appropriate credentials are authorized—

"(1) to enter, at reasonable times, any establishment of the manufacturer, or of any person whom the manufacturer engages to perform any activity required by subsection (a), for the purposes of inspecting or observing any activity conducted pursuant to subsection (a), and

"(2) to inspect records, files, papers, processes, controls, and facilities used in performing any activity required by subsection (a), by such manufacturer or by any person whom the manufacturer engages to perform any such activity.

"(c) AVAILABILITY TO THE PUBLIC; TRADE SECRETS.—Any records, reports, or information obtained under this part shall be available to the public, except that upon a showing satisfactory to the Administrator by any person that records, reports, or information, or a particular portion thereof (other than emission data), to which the Administrator has access under this section, if made public, would divulge methods or processes entitled to protection as trade secrets of that person, the Administrator shall consider the record, report, or information or particular portion thereof confidential in accordance with the purposes of section 1905 of title 18 of the United States Code. Any authorized representative of the Administrator shall be considered an employee of the United States for purposes of section 1905 of title 18 of the United States Code. Nothing in this section shall prohibit the Administrator or authorized representative of the Administrator from disclosing records, reports or information to other officers, employees or authorized representatives of the United States concerned with carrying out this Act or when relevant in any proceeding under this Act. Nothing in this section shall authorize the withholding of information by the Administrator or any officer or employee under the Administrator's control from the duly authorized committees of the Congress.".

SEC. 216. FUEL VOLATILITY.

Section 211 (42 U.S.C. 7545) is amended by adding the following new subsection after subsection (g):

"(h) REID VAPOR PRESSURE REQUIREMENTS.—(1) Not later than 6 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations making it unlawful for any person during the high ozone season (as defined by the Administrator) to sell, offer for sale, dispense, supply, offer for supply, transport, or introduce into commerce gasoline with a Reid Vapor Pressure in excess of 9.0 pounds per square inch (psi). Such regulations shall also establish more stringent Reid Vapor Pressure standards as the Administrator finds necessary to generally achieve comparable evaporative emissions (on a per-vehicle basis) nationwide, taking into consideration the enforceability of such standards, the need of an area for emission control, and economic factors.

"(2) Such regulations shall provide that the requirements of this subsection shall take effect not later than the high ozone season for 1992, and shall include such provisions as the Administrator determines are necessary to implement and enforce the requirements of this subsection.

"(3) In establishing standards for fuel volatility under this subsection, the Administrator shall permit a 1.0 pound per square inch (psi) tolerance level for gasoline containing at least 10 percent ethanol. A manufacturer or processor of gasoline containing at least 10 percent ethanol shall be deemed to be in full compliance with such standards if the Administrator provides a certification (based on testing) or other evidence acceptable to the Administrator that—

"(A) the gasoline portion of the blend complies with the gasoline volatility standards under this subsection,

"(B) the ethanol portion of the blend does not exceed its waiver conditions under subsection (f)(4), and

"(C) no additional alcohol or other additive has been added to increase the Reid Vapor Pressure of the ethanol portion of the blend.

"(4) The provisions of this subsection shall apply only to the 48 contiguous States and the District of Columbia.".

SEC. 217. DIESEL FUEL SULFUR CONTENT.

Section 211 (42 U.S.C. 7545) is amended by adding the following new subsection after subsection (h):

"(i) SULFUR CONTENT REQUIREMENTS FOR DIESEL FUEL.—(1) Effective October 1, 1993, no person shall manufacture, sell, supply, offer for sale or supply, dispense, transport, or introduce into commerce motor vehicle diesel fuel which contains a concentration of sulfur in excess of 0.05 per centum (by weight) or which fails to meet a cetane index minimum of 40.

"(2) Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations to implement and enforce the requirements of paragraph (1). The Administrator may require manufacturers and importers of diesel fuel not intended for use in motor vehicles to dye such fuel in a particular manner in order to segregate it from motor vehicle diesel fuel.

"(3) The sulfur content of fuel required to be used in the certification of 1991 through 1993 model year heavy-duty diesel vehicles and engines shall be 0.10 percent (by weight). The sulfur content and cetane index minimum of fuel required to be used in the certification of 1994 and later model year heavy-duty diesel vehicles and engines shall comply with the regulations promulgated under paragraph (2).".

"(4) The States of Alaska and Hawaii may be exempted from the requirements of this subsection in the same manner as provided in section 324. The Administrator shall take final action on any petition filed under section 324 for an exemption from the requirements of this subsection, within 12 months from the date of the petition.".

SEC. 218A. LEAD SUBSTITUTE GASOLINE ADDITIVES.

(a) ADDITIVES.—Section 211 (42 U.S.C. 7545) is amended by adding the following at the end thereof:

"(j) LEAD SUBSTITUTE GASOLINE ADDITIVES.—(1) After the date of the enactment of the Clean Air Act Amendments of 1990, any person proposing to register any gasoline additive under subsection (a) or to use any previously registered additive as a lead substitute may also elect to register the additive as a lead substitute gasoline additive for reducing valve seat wear by providing the Administrator with such relevant information regarding product identity and composition as the Administrator deems necessary for carrying out the responsibilities of paragraph (2) of this subsection (in addition to other information which may be required under subsection (b)).

"(2) In addition to the other testing which may be required under subsection (b), in the case of the lead substitute gasoline additives referred to in paragraph (1), the Administra-

tor shall develop and publish a test procedure to determine the additives' effectiveness in reducing valve seat wear and the additives' tendencies to produce engine deposits and other adverse side effects. The test procedures shall be developed in cooperation with the Secretary of Agriculture and with the input of additive manufacturers, engine and engine components manufacturers, and other interested persons. The Administrator shall enter into arrangements with an independent laboratory to conduct tests of each additive using the test procedures developed and published pursuant to this paragraph. The Administrator shall publish the results of the tests by company and additive name in the Federal Register along with, for comparison purposes, the results of applying the same test procedures to gasoline containing 0.1 gram of lead per gallon in lieu of the lead substitute gasoline additive. The Administrator shall not rank or otherwise rate the lead substitutive additives. Test procedures shall be established within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990. Additives shall be tested within 18 months of the date of the enactment of the Clean Air Act Amendments of 1990 or 6 months after the lead substitute additives are identified to the Administrator.

"(3) The Administrator may impose a user fee to recover the costs of testing of any fuel additive referred to in this subsection. The fee shall be paid by the person proposing to register the fuel additive concerned. Such fee shall not exceed $20,000 for a single fuel additive.

"(4) There are authorized to be appropriated to the Administrator not more than $1,000,000 for the first full fiscal year after the date of the enactment of the Clean Air Act Amendments of 1990 to establish test procedures and conduct engine tests as provided in this subsection. Not more than $500,000 per year is authorized to be appropriated for 5 subsequent fiscal years.

"(5) Any fees collected under this subsection shall be deposited in a special fund in the United States Treasury for licensing and other services which thereafter shall be available for appropriation, to remain available until expended, to carry out the Agency's activities for which the fees were collected.".

SEC. 219. NONROAD FUELS.

(a) FUELS AND FUEL ADDITIVES.—Section 211(a) (42 U.S.C. 7545(a)) is amended by inserting "(including any fuel or fuel additive used exclusively in nonroad engines or nonroad vehicles)" immediately after "fuel or fuel additive".

(b) ANALYTICAL TECHNIQUES.—Section 211(b)(2)(B) (42 U.S.C. 7545(2)(B)) is amended by striking "or" after "vehicle" and inserting in lieu thereof a comma, and by inserting immediately after "vehicle engine," the phrase: "nonroad engine or nonroad vehicle,".

(c) REGULATION.—Section 211(c)(1) (42 U.S.C. 7545(c)(1)) is amended by striking "or" after "motor vehicle" and inserting in lieu thereof a comma, and by inserting immediately after "motor vehicle engine" a comma followed by "or nonroad engine or nonroad vehicle".

SEC. 220. FUEL WAIVERS.

(a) COVERAGE.—Section 211(f)(1) (42 U.S.C. 7545(f)(1) is amended by inserting "(A)" immediately after "(1)" and by adding the following new subparagraph at the end thereof:

"(B) Effective upon the date of the enactment of the Clean Air Act Amendments of 1990, it shall be unlawful for any manufacturer of any fuel or fuel additive to first introduce into commerce, or to increase the concentration in use of, any fuel or fuel additive for use by any person in motor vehicles manufactured after model year 1974 which is not substantially similar to any fuel or fuel additive utilized in the certification of any model year 1975, or subsequent model year, vehicle or engine under section 206.".

(b) CONFORMING AMENDMENT.—Section 211(f)(3) (42 U.S.C. 7545(f)(3)) is amended by inserting "(A)" immediately after "(1)".

SEC. 221. MARKET-BASED ALTERNATIVE CONTROLS.

Section 214 (42 U.S.C. 7548) is amended to read as follows:

"SEC. 214. MARKET-BASED ALTERNATIVE CONTROLS.

"(a) ALTERNATIVE CONTROLS IN SOME OZONE NONATTAINMENT AREAS.—(1) Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations that, to the maximum extent feasible and notwithstanding any other section of this title, allow any fuel refiner to control emissions from motor vehicle fuels by one or more means different in type or degree from, and instead of, emission control measures prescribed under this title and section 182(b)(3) (relating to stage II refueling vapor recovery), so long as the alternative control measures achieve at least the same emissions reductions (as determined by the Administrator) over the same time period as the control measures that they would replace. The regulations shall establish performance standards for motor vehicle fuels marketed in areas described under section 212(d). The Administrator shall base such performance standards on the emission reductions that, in the Administrator's judgment, may reasonably be anticipated to result from implementation of the control measures for which motor vehicle fuel refiners may substitute alternative controls under this subsection. The regulations shall provide that any fuel refiner may substitute alternative control measures if it demonstrates, and the Administrator finds, that the combination of control measures that it would employ (including any prescribed control measures) would at least meet the performance standard applicable to it. Any fuel refiner seeking approval of alternative control measures must submit a proposal to the Administrator within 24 months of the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator must approve or disapprove any such proposal within 30 months of the date of the enactment of such Amendments. The Administrator shall publish any proposal to employ alternative control measures submitted by a fuel refiner in the Federal Register upon receipt. Such notice shall constitute a notice of proposed rulemaking on whether to approve or disapprove the proposal and be deemed to comply with the requirements concerning notice of proposed rulemaking contained in sections 553 through 557 of title 5 of the United States Code (relating to notice and comment). Until the Administrator finds that the refiner has succeeded in demonstrating that it would at least meet the performance standard, the refiner shall remain subject to all of the applicable requirements prescribed under this title. The regulations also shall provide for enforcement of alternative control measures approved under this subsection.

"(2) The regulations promulgated under this subsection shall allow to the maximum extent feasible fuel refiners to demonstrate compliance with the performance standards prescribed under paragraph (1) through averaging of reductions of ozone-producing emissions among fuel refiners, and over time, so long as averaging would achieve at least the same emissions reductions (as determined by the Administrator) as would be achieved by compliance with such performance standards in the absence of such averaging. Such regulations shall not permit manufacturers to comply with the requirements of this title through averaging of emission levels required to be achieved by vehicles manufactured by such manufacturers.

"(b) NATIONWIDE ALTERNATIVE CONTROLS.—The Administrator may promulgate regulations that, notwithstanding any other section of this title, allow any fuel refiner to control emissions from motor vehicles fuels by one or more means different in type or degree from, and instead of, emission control measures prescribed under this title or section 182(b)(3) (relating to stage II refueling vapor recovery), if first it demonstrates, and the Administrator finds, that the alternative control measures it would employ would achieve at least the same emissions reductions (as determined by the Administrator) over the same time period as the control measures that they would replace. The regulations promulgated under this subsection may also permit fuel refiners and fuel marketers to demonstrate compliance with applicable control measures through averaging of reductions of ozone-producing emissions among fuel refiners and fuel marketers, and over time, so long as such averaging would achieve at least the same emissions reductions (as determined by the Administrator) as would be achieved by compliance with such performance standards in the absence of such averaging. The regulations shall also provide for enforcement of alternative control measures approved under this section.".

SEC. 222. STATE FUEL REGULATION.

(a) IN GENERAL.—Section 211(c)(4)(A) (42 U.S.C. 7545(c)(4)(A)) is amended as follows:

(1) Strike out "use of a" and insert "any characteristic or component".

(2) In clause (i) after "control or prohibition" insert "of the characteristic or component of a fuel or fuel additive".

(3) In clause (ii) after "such" insert "characteristic or component of a".

(b) FINDING OF NECESSITY.—Section 211(c)(4)(C) (42 U.S.C. 7545(c)(4)(C)) is amended by adding the following at the end: "The Administrator may find that a State control or prohibition is necessary to achieve that standard if no other measures that would bring about timely attainment exist, or if other measures exist and are technically possible to implement, but are unreasonable or impracticable. The Administrator may make a finding of necessity under this subparagraph even if the plan for the area does not contain an approved demonstration of timely attainment.".

SEC. 223. ENFORCEMENT.

(a) INSPECTIONS AND TESTING.—Section 203(a)(2) (42 U.S.C. 7522(a)(2)) is amended to read as follows:

"(2)(A) for any person to fail or refuse to permit access to or copying of records or to fail to make reports or provide information required under section 208;

"(B) for any person to fail or refuse to permit entry, testing or inspection authorized under section 206(c) or section 208;

"(C) for any person to fail or refuse to perform tests, or have tests performed as required under section 207(c) or section 208;".

(b) TAMPERING WITH VEHICLE EMISSION CONTROLS.—(1) Section 203(a)(3) (42 U.S.C. 7522(a)(3)) is amended to read as follows:

"(3)(A) for any person to remove or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this title prior to its sale and delivery to the ultimate purchaser, or for any person knowingly to remove or render inoperative any such device or element of design after such sale and delivery to the ultimate purchaser; or

"(B) for any person to manufacture or sell, or offer to sell, or install, any part or component intended for use with, or as part of, any motor vehicle or motor vehicle engine, where a principal effect of the part or component is to bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this title, and where the person knows or should know that such part or component is being offered for sale or installed for such use or put to such use; or".

(2) At the end of section 203(a) (42 U.S.C. 7522(a)) insert the following: "No action with respect to any device or element of design referred to in paragraph (3) shall be treated as a prohibited act under that paragraph if (i) the action is for the purpose of repair or replacement of the device or element, or is a necessary and temporary procedure to repair or replace any other item and the device or element is replaced upon completion of the procedure, and (ii) such action thereafter results in the proper functioning of the device or element referred to in paragraph (3). No action with respect to any device or element of design referred to in paragraph (3) shall be treated as a prohibited act under that paragraph if the action is for the purpose of a conversion of a motor vehicle for use of a clean alternative fuel (as defined in this title) and if such vehicle complies with the applicable standard under section 202 when operating on such fuel, and if in the case of a clean alternative fuel vehicle (as defined by rule by the Administrator), the device or element is replaced upon completion of the conversion procedure and such action results in proper functioning of the device or element when the motor vehicle operates on conventional fuel.".

(c) DEFINITION.—Section 216 (42 U.S.C. 7550) is amended by adding the following at the end:

"(15) MOTOR VEHICLE OR ENGINE PART MANUFACTURER.— The term 'motor vehicle or engine part manufacturer' as used in sections 207 and 208 means any person engaged in the manufacturing, assembling or rebuilding of any device, system, part, component or element of design which is installed in or on motor vehicles or motor vehicle engines.".

(d) CIVIL AND ADMINISTRATIVE PENALTIES.—Section 205 (42 U.S.C. 7524) is amended to read as follows:

"SEC. 205. CIVIL PENALTIES.

"(a) VIOLATIONS.—Any person who violates sections 203(a)(1) or 203(a)(4), any manufacturer or dealer who violates section 203(a)(3)(A), or any person who violates regulations prescribed under sections 212 (a), (b), (f), or (i) shall be subject to a civil penalty of not more than $25,000. Any person other than a manufacturer or dealer who violates section 203(a)(3)(A) or any person who violates section 203(a)(3)(B) shall be subject to a civil penalty of not more than $2,500. Any such violation with respect to paragraph (1), (3)(A), or (4) of section 203(a) shall constitute a separate offense with respect to each motor vehicle or motor vehicle engine. Any such violation with respect to section 203(a)(3)(B) shall constitute a separate offense with respect to each part or component. Any person who violates section 203(a)(2), or regulations prescribed under section 212(c), shall be subject to a civil penalty of not more than $25,000 per day of violation.

"(b) CIVIL ACTIONS.—The Administrator may commence a civil action to assess and recover any civil penalty under subsection (a) of this section, section 211(d), or section 213(d). Any action under this subsection may be brought in the district court of the United States for the district in which the violation is alleged to have occurred or in which the defendant resides or has the Administrator's principal place of business, and the court shall have jurisdiction to assess a civil penalty. In determining the amount of any civil penalty to be assessed under this subsection, the court shall take into account the gravity of the violation, the economic benefit or savings (if any) resulting from the violation, the size of the violator's business, the violator's history of compliance with this title, action taken to remedy the violation, the effect of the penalty on the violator's ability to continue in business, and such other matters as justice may require. In any such action, subpoenas for witnesses who are required to attend a district court in any district may run into any other district.

"(c) ADMINISTRATIVE ASSESSMENT OF CERTAIN PENALTIES.—

"(1) ADMINISTRATIVE PENALTY AUTHORITY.—In lieu of commencing a civil action under subsection (b), the Administrator may assess any civil penalty prescribed in subsection (a) of this section, section 211(d), or section 213(d), except that the maximum amount of penalty sought against each violator in a penalty assessment proceeding shall not exceed $200,000, unless the Administrator and the Attorney General jointly determine that a matter involving a larger penalty amount is appropriate for administrative penalty assessment. Any such determination by the Administrator and the Attorney General shall not be subject to judicial review. Assessment of a civil penalty under this subsection shall be by an order made on the record after opportunity for a hearing in accordance with sections 554 and 556 of title 5 of the United States Code. The Administrator shall issue reasonable rules for discovery and other procedures for hearings under this paragraph. Before issuing such an order, the Administrator shall give written notice to the person to be assessed an administrative penalty of the Administrator's proposal to issue such order and provide such person an opportunity to request such a hearing on the order, within 30 days of the date the notice is received by such person. The Administrator may compromise, or remit, with or without conditions, any administrative penalty which may be imposed under this section.

"(2) DETERMINING AMOUNT.—In determining the amount of any civil penalty assessed under this subsection, the Administrator shall take into account the gravity of the violation, the economic benefit or savings (if any) resulting from the violation, the size of the violator's business, the violator's history of compliance with this title, action taken to remedy the violation, the effect of the penalty on the violator's ability to continue in business, and such other matters as justice may require.

"(3) EFFECT OF ADMINISTRATOR'S ACTION.—(A) Action by the Administrator under this subsection shall not affect or limit the Administrator's authority to enforce any provision of this Act; except that any violation,

"(i) with respect to which the Administrator has commenced and is diligently prosecuting an action under this subsection, or

"(ii) for which the Administrator has issued a final order not subject to further judicial review and the violator has paid a penalty assessment under this subsection,

shall not be the subject of civil penalty action under subsection (b).

"(B) No action by the Administrator under this subsection shall affect any person's obligation to comply with any section of this Act.

"(4) FINALITY OF ORDER.—An order issued under this subsection shall become final 30 days after its issuance unless a petition for judicial review is filed under paragraph (5).

"(5) JUDICIAL REVIEW.—Any person against whom a civil penalty is assessed in accordance with this subsection may seek review of the assessment in the United States District Court for the District of Columbia, or for the district in which the violation is alleged to have occurred, in which such person resides, or where such person's principal place of business is located, within the 30-day period beginning on the date a civil penalty order is issued by simultaneously sending a copy of the filing by certified mail to the Administrator and the Attorney General. The Administrator shall file in the court a certified copy, or certified index, as appropriate, of the record on which the order was issued within 30 days. The court shall not set aside or remand any order issued in accordance with the requirements of this subsection unless there is not substantial evidence in the record, taken as a whole, to support the finding of a violation or unless the Administrator's assessment of the penalty constitutes an abuse of discretion, and the court shall not impose additional civil penalties unless the Administrator's assessment of the penalty constitutes an abuse of discretion. In any proceedings, the United States may seek to recover civil penalties assessed under this section.

"(6) COLLECTION.—If any person fails to pay an assessment of a civil penalty imposed by the Administrator as provided in this subsection—

"(A) after the order making the assessment has become final, or

"(B) after a court in an action brought under paragraph (5) has entered a final judgment in favor of the Administrator,

the Administrator shall request the Attorney General to bring a civil action in an appropriate district court to recover the amount assessed (plus interest at rates established pursuant to section 6621(a)(2) of the Internal Revenue Code of 1986 from the date of the final order or the date of the final judgment, as the case may be). In such an action, the validity, amount, and appropriateness of the penalty shall not be subject to review. Any person who fails to pay on a timely basis the amount of an assessment of a civil penalty as described in the first sentence of this paragraph shall be required to pay, in addition to that amount and interest, the United States' enforcement expenses, including attorneys fees and costs for collection proceedings, and a quarterly nonpayment penalty for each quarter during which such failure to pay persists. The nonpayment penalty shall be in an amount equal to 10 percent of the aggregate amount of that

person's penalties and nonpayment penalties which are unpaid as of the beginning of such quarter.".

(e) ENFORCEMENT OF FUELS REGULATIONS.—Section 211(d) (42 U.S.C. 7545(d)) is amended to read as follows:

"(d) PENALTIES AND INJUNCTIONS.—

"(1) CIVIL PENALTIES.—Any person who violates subsection (a), (f), or (g) of this section or the regulations prescribed under subsection (c), (h), or (i) of this section or the regulations prescribed under subsection 212(c) or who fails to furnish any information or conduct any tests required by the Administrator under subsection (b) of this section shall be liable to the United States for a civil penalty of not more than the sum of $25,000 for every day of such violation and the amount of economic benefit or savings resulting from the violation. Any violation with respect to a regulation prescribed under subsection (c) of this section or section 212(c) which establishes a regulatory standard based upon a multiday averaging period shall constitute a separate day of violation for each and every day in the averaging period. Civil penalties shall be assessed in accordance with subsections (b) and (c) of section 205.

"(2) INJUNCTIVE AUTHORITY.—The district courts of the United States shall have jurisdiction to restrain violations of subsections (a), (f), and (g) of this section and of the regulations prescribed under subsection (c), (h), or (i) of this section or section 212(c), to award other appropriate relief, and to compel the furnishing of information and the conduct of tests required by the Administrator under subsection (b) of this section. Actions to restrain such violations and compel such actions shall be brought by and in the name of the United States. In any such action, subpoenas for witnesses who are required to attend a district court in any district may run into any other district.".

(f) MISFUELING.—Section 211(g) (42 U.S.C. 7545(g)) is amended to read as follows:

"(g) MISFUELING.—No person shall introduce, or cause or allow the introduction of, leaded gasoline into any motor vehicle which is labeled 'unleaded gasoline only,' which is equipped with a gasoline tank filler inlet designed for the introduction of unleaded gasoline, which is a 1990 or later model year motor vehicle, or which that person knows or should know is a vehicle designed solely for the use of unleaded gasoline. Nothing in this section shall limit the applicability of section 211(d)(3).".

SEC. 224. HIGH ALTITUDE TESTING.

Section 215 (42 U.S.C. 7549) is amended by adding the following at the end thereof:

"(e) HIGH ALTITUDE TESTING.—The Administrator shall promptly establish at least one testing center (in addition to the testing centers existing on the date of the enactment of the Clean Air Act Amendments of 1990) located at a site that represents high altitude conditions, to ascertain in a reasonable manner whether, when in actual use throughout their useful life (as determined under section 202(d)), each class or category of vehicle and engines to which regulations under section 202 apply conforms to the emissions standards established by such regulations. For purposes of this subsection, the term 'high altitude conditions' refers to high altitude as defined in regulations of the Administrator in effect as of the date of the enactment of the Clean Air Act Amendments of 1990.".

SEC. 225. TECHNICAL AMENDMENTS.

The Clean Air Act is amended as follows:

(1) In section 202(b)(3) (42 U.S.C. 7521(b)(3)), strike out "(3) For purposes of this part—" and redesignate subparagraphs (A), (B) and (C) of section 202(b)(3) as paragraphs (16), (17), and (18) of section 216, redesignate clauses (i) and (ii) of new paragraph (16) as subparagraphs (A) and (B), respectively, in new subparagraph (B) strike "as provided in clause (i)" and insert "as provided in subparagraph (A)", and after "by subsection (b)" insert "of section 202".

(2) Strike out section 202(b)(4) (42 U.S.C. 7521(b)(4)).

(3) Strike out section 202(b)(5) (42 U.S.C. 7521(b)(5)).

(4) In section 202(b)(6) (42 U.S.C. 7521(b)(6))—

(A) strike out "(A)" after "(6)",

(B) strike out subparagraph (B), and

(C) redesignate paragraph (6) as paragraph (3) and redesignate clauses (i) through (iii) as subparagraphs (A) through (C).

(5) Strike out section 202(b)(7) (42 U.S.C. 7521(b)(7)).

(6) Strike out section 203(c) (42 U.S.C. 7522(c)).

(7) Strike out "announce in the Federal Register and" in section 206(e) (42 U.S.C. 7525(e)).

(8) In section 206(f) (42 U.S.C. 7525(f))—

(A) strike out "(1)" after "(f)", and

(B) strike out paragraph (2).

(9) In section 207(g) (42 U.S.C. 7526(g)), strike out "(but not designed for emission control under the terms of the last three sentences of section 207(a)(1)" and insert "(but not designed for emission control under the terms of the last sentence of section 207(a)(3))".

(10) In section 231(a) (42 U.S.C. 7571(a)), strike out paragraph (1) and redesignate paragraphs (2) and (3) as paragraphs (1) and (2), respectively.

## TITLE III—HAZARDOUS AIR POLLUTANTS

Sec. 301. Technology-based standards for hazardous air pollutants.

SEC. 301. TECHNOLOGY-BASED STANDARDS FOR HAZARDOUS AIR POLLUTANTS.

Section 112 (42 U.S.C. 7412) is amended to read as follows:

"SEC. 112. HAZARDOUS AIR POLLUTANTS.

"(a) DEFINITIONS.—For the purposes of this section—

"(1) MAJOR SOURCE.—The term 'major source', for pollutants other than radionuclides, means any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit considering controls, in the aggregate, 10 metric tons per year or more of any hazardous air pollutant or 25 metric tons per year or more of any combination of hazardous air pollutants which have been listed pursuant to subsection (b). The Administrator may establish a lesser quantity for a major source other than specified in the previous sentence on the basis of the potency, characteristics of the air pollutant, or other relevant factors. For radionuclides, such term shall have the meaning specified by the Administrator by rule, considering radiation dose.

"(2) AREA SOURCE.—The term 'area source' means any source that is not a major source but that is a member of a source category listed under this section based on aggregate emissions, or potential aggregate emissions, of a listed pollutant or pollutants.

"(3) NEW SOURCE.—The term 'new source' means a stationary source the construction or reconstruction of which is commenced after the Administrator proposes regulations under this section establishing an emission standard applicable to such source category or subcategory pursuant to subsection (d) or (f).

"(4) ELECTRIC UTILITY.—The term 'electric utility steam generating unit' means any fossil fuel fired steam electric generating unit that is constructed for the purpose of supplying more than one-third of its potential electric output capacity and more than 25 megawatts electrical output to any utility power distribution system for sale. Any steam supplied to a steam distribution system for the purpose of providing steam to a steam-electric generator that would produce electrical energy for sale is also considered in determining the electrical energy output capacity of the facility.

"(5) OTHER TERMS.—The terms 'stationary source', 'owner or operator', and 'existing' source shall have the same meaning as such terms have under section 111(a).

"(b) HAZARDOUS AIR POLLUTANT LIST.—

"(1) ESTABLISHMENT OF LIST.—The Congress establishes for purposes of this section a list of hazardous air pollutants as follows:

| CAS number | Chemical name |
|---|---|
| 75070 | Acetaldehyde |
| 60355 | Acetamide |
| 75058 | Acetonitrile |
| 98862 | Acetophenone |
| 53963 | 2-Acetylaminofluorene |
| 107028 | Acrolein |
| 79061 | Acrylamide |
| 79107 | Acrylic acid |
| 107131 | Acrylonitrile |
| 107051 | Allyl chloride |
| 92671 | 4-Aminobiphenyl |
| 62533 | Aniline |
| 90040 | o-Anisidine |
| 1332214 | Asbestos |
| 71432 | Benzene (including benzene from gasoline) |
| 92875 | Benzidine |
| 98077 | Benzotrichloride |
| 100447 | Benzyl chloride |
| 92524 | Biphenyl |
| 117817 | Bis(2-ethylhexyl)phthalate (DEHP) |
| 542881 | Bis(chloromethyl)ether |
| 75252 | Bromoform |
| 106990 | 1,3-Butadiene |
| 156627 | Calcium cyanamide |
| 105602 | Caprolactam |
| 133062 | Captan |
| 63252 | Carbaryl |
| 75150 | Carbon disulfide |
| 56235 | Carbon tetrachloride |
| 463581 | Carbonyl sulfide |
| 120809 | Catechol |
| 133904 | Chloramben |
| 57749 | Chlordane |
| 7782505 | Chlorine |
| 79118 | Chloroacetic acid |
| 532274 | 2-Chloroacetophenone |
| 108907 | Chlorobenzene |
| 510156 | Chlorobenzilate |
| 67663 | Chloroform |
| 107302 | Chloromethyl methyl ether |
| 126998 | Chloroprene |
| 1319773 | Cresols/Cresylic acid (isomers and mixture) |
| 95487 | Cresols/Cresylic acid (isomers and mixture) |
| 108394 | Cresols/Cresylic acid (isomers and mixture) |
| 106445 | Cresols/Cresylic acid (isomers and mixture) |
| 98828 | Cumene |
| 94757 | 2,4-D, salts and esters |
| 3547044 | DDE |
| 334883 | Diazomethane |
| 132649 | Dibenzofurans |
| 96128 | 1,2-Dibromo-3-chloropropane |
| 84742 | Dibutylphthalate |
| 106467 | 1,4-Dichlorobenzene(p) |
| 91941 | 3,3-Dichlorobenzidene |

| CAS number | Chemical name |
|---|---|
| 111444 | Dichloroethyl ether (Bis(2-chloroethyl)ether) |
| 542756 | 1,3-Dichloropropene |
| 62737 | Dichlorvos |
| 111422 | Diethanolamine |
| 121697 | N,N-Diethyl aniline (N,N-Dimethylaniline) |
| 64675 | Diethyl sulfate |
| 119904 | 3,3-Dimethoxybenzidine |
| 60117 | Dimethyl aminoazobenzene |
| 119937 | 3,3'-Dimethyl benzidine |
| 79447 | Dimethyl carbamoyl chloride |
| 68122 | Dimethyl formamide |
| 57147 | 1,1-Dimethyl hydrazine |
| 131113 | Dimethyl phthalate |
| 77781 | Dimethyl sulfate |
| 534521 | 4,6-Dinitro-o-cresol, and salts |
| 51285 | 2,4-Dinitrophenol |
| 121142 | 2,4-Dinitrotoluene |
| 123911 | 1,4-Dioxane (1,4-Diethyleneoxide) |
| 122667 | 1,2-Diphenylhydrazine |
| 106898 | Epichlorohydrin (1-Chloro-2,3-epoxypropane) |
| 106887 | 1,2-Epoxybutane |
| 140885 | Ethyl acrylate |
| 100414 | Ethyl benzene |
| 51796 | Ethyl carbamate (Urethane) |
| 75003 | Ethyl chloride (Chloroethane) |
| 106934 | Ethylene dibromide (Dibromoethane) |
| 107062 | Ethylene dichloride (1,2-Dichloroethane) |
| 107211 | Ethylene glycol |
| 151564 | Ethylene imine (Aziridine) |
| 75218 | Ethylene oxide |
| 96457 | Ethylene thiourea |
| 75343 | Ethylidene dichloride (1,1-Dichloroethane) |
| 50000 | Formaldehyde |
| 76448 | Heptachlor |
| 118741 | Hexachlorobenzene |
| 87683 | Hexachlorobutadiene |
| 77474 | Hexachlorocyclopentadiene |
| 67721 | Hexachloroethane |
| 822060 | Hexamethylene-1,6-diisocyanate |
| 680319 | Hexamethylphosphoramide |
| 110543 | Hexane |
| 302012 | Hydrazine |
| 7647010 | Hydrochloric acid |

NOTE: For all listings above which contain the word "compounds" and for glycol ethers, the following applies: Unless otherwise specified, these listings are defined as including any unique chemical substance that contains the named chemical (i.e., antimony, arsenic, etc.) as part of that chemical's infrastructure.

[1] X'CN where X = H' or any other group where a formal dissociation may occur. For example KCN or Ca(CN)2

[2] includes mono- and di- ethers of ethylene glycol, diethylene glycol, and triethylene glycol R-(OCH2CH2)n-OR' where
n = 1, 2, or 3
R = alkyl or aryl groups
R' = R, H, or groups which, when removed, yield glycol ethers with the structure: R-(OCH2CH)n-OH Polymers are excluded from the glycol category.

[3] includes glass microfibers, glass wool fibers, rock wool fibers, and slag wool fibers, each characterized as "respirable" (fiber diameter less than 3.5 micrometers) and possessing an aspect ratio (fiber length divided by fiber diameter) greater than 3.

[4] includes organic compounds with more than one benzene ring, and which have a boiling point greater than or equal to 100°C

[5] a type of atom which spontaneously undergoes radioactive decay.

"(2) ADDITIONS AND DELETIONS.—The Administrator may add or delete a substance from the list under paragraph (1).

"(A) ADDITIONS.—A substance may be added to the list under paragraph (1) if the Administrator determines in the Administrator's judgment that the substance is an air pollutant and that there is sufficient evidence to establish that the pollutant is known to cause or can reasonably be anticipated to cause in humans one or more of the following:

"(i) cancer or developmental effects, or

"(ii) serious or irreversible—

"(I) reproductive dysfunctions,

"(II) neurological disorders,

"(III) heritable gene mutations,

"(IV) other chronic health effects, or

"(V) adverse acute human health effects.

"(B) DELETIONS.—The Administrator may delete a pollutant from the list under paragraph (1) if the Administrator determines that the criteria described in subparagraph (A) do not apply. For pollutants on the list which do not have a CAS number and which are comprised of more than one unique chemical substance, the Administrator may determine that one or more of such substances shall not be considered a hazardous air pollutant if the Administrator determines that such substance or substances do not meet the criteria described in subparagraph (A).

"(C) FURTHER INFORMATION.—If the Administrator determines that information on the health effects of a substance is not sufficient to make a determination required by this paragraph, the Administrator may use any authority available to the Administrator to acquire such information.

"(3) PETITIONS.—Beginning at any time after the list is published under subsection (c), any person may petition the Administrator to modify the list of hazardous air pollutants under this subsection by adding or deleting a substance. Within 18 months after receipt of a petition, the Administrator shall either grant or deny the petition by publishing a written explanation of the reasons for the Administrator's decision. Any such petition shall include a showing by the petitioner that there is adequate data on the health effects of the pollutant or other evidence adequate to support the petition. The Administrator may not deny a petition solely on the basis of inadequate resources or time for review. No air pollutant which is listed under section 108(a) may be added to the list under this section.

"(4) REVIEW.—The Administrator shall periodically review the list established by this subsection and publish the results thereof and, where appropriate, revise such list by rule.

"(c) SOURCE CATEGORY LIST.—(1) Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall publish, and shall from time to time, but no less often than every 8 years, revise, if appropriate, in response to public comment or new information, a list of all categories and subcategories of major sources and area sources designated under paragraph (3) of the air pollutants listed pursuant to subsection (b)(1).

"(2) For the categories and subcategories the Administrator lists, the Administrator shall establish emission standards under subsection (d), according to the schedule in subsection (e).

"(3) The Administrator shall list and designate, based on actual or estimated aggregate emissions of a listed pollutant or pollutants, sufficient categories and subcategories of area sources to ensure that area sources representing 90 percent of the area source emissions of each hazardous air pollutant are subject to regulation under this section. For purposes of this section, the term 'area sources' shall not include motor

vehicles or nonroad vehicles subject to regulation under title II.

"(4) The Administrator may, in the Administrator's discretion, list any category or subcategory previously regulated under this section as in effect before the date of the enactment of the Clean Air Act Amendments of 1990.

"(5) The Administrator may decide not to list a source category or subcategory, and the Administrator may withdraw a source category or subcategory from the list under this subsection, on petition of any person or on the Administrator's own motion, whenever the Administrator makes the following determination or determinations, as applicable:

"(A) In the case of hazardous air pollutants emitted by sources in the category or subcategory that may result in cancer in humans, a determination that no source in the category or subcategory (or group of sources in the case of area sources) emits such hazardous air pollutants in quantities which may cause a lifetime risk of cancer greater than one in one million to the individual in the population who is most exposed to emissions of such pollutants from the source (or group of sources in the case of area sources).

"(B) In the case of hazardous air pollutants that may result in adverse health effects in humans other than cancer, a determination that emissions from no source in the category or subcategory concerned (or group of sources in the case of area sources) exceed a level which is adequate to protect public health with an ample margin of safety.

The Administrator shall grant or deny a petition under this paragraph within 1 year after the petition is filed.

"(6) The Administrator shall establish a separate category or subcategory covering research or laboratory facilities, as necessary to assure the equitable treatment of such facilities. For purposes of this section, 'research or laboratory facility' means any stationary source whose primary purpose is to conduct research and development into new processes and products, where such source is operated under the close supervision of technically trained personnel and is not engaged in the manufacture of products for commercial sale in commerce, except in a de minimis manner.

"(d) MAXIMUM ACHIEVABLE CONTROL TECHNOLOGY EMISSION STANDARDS.—(1) The Administrator shall promulgate regulations establishing emission standards for each category or subcategory of major sources and area sources in accordance with the schedule provided in subsection (e). The Administrator may distinguish among classes, types, and sizes of sources within a category or subcategory in establishing such standards. The Administrator may set standards for emissions of radionuclides from a category or subcategory separately from regulating other listed pollutants emitted by that category or subcategory.

"(2) Emission standards promulgated under this subsection shall be applicable to new and existing major sources and area sources in each category or subcategory, and shall require the maximum degree of reduction in emissions of the air pollutants subject to this section (including a prohibition of such emissions, if achievable) that the Administrator, taking into consideration the cost of achieving such emission reduction, and any nonair quality and other air quality-related health and environmental impacts, and energy requirements, determines is achievable through application of measures, processes, methods, systems or techniques including measures which—

"(A) reduce the volume of, or eliminate emissions of, such pollutants through process changes, substitution of materials or other modifications such as reuse or recycling;

"(B) enclose systems or processes to eliminate emissions;

"(C) collect, capture or treat such pollutants when released from a process, stack, storage or fugitive emissions point;

"(D) are design, equipment, work practice or operational methods, or radiation dose standards;

"(E) establish requirements for operator training or certification; or

"(F) are a combination of the above.

If the Administrator finds that it is not feasible to prescribe or enforce an emission standard, the Administrator may instead issue regulations requiring any of the measures identified in this paragraph, or any combination of such measures. None of the measures described in subparagraphs (A) through (D) shall, consistent with the provisions of section 114(c), in any way compromise any United States patent or United States trademark right, or any confidential business information, or any trade secret or any other intellectual property right.

"(3) The maximum degree of reduction in emissions that is deemed achievable for new sources in a category or subcategory shall not be less stringent than the emission control that is achieved in practice by the best controlled similar source, as determined by the Administrator. Emissions standards promulgated under this subsection for existing sources in a category or subcategory may be less stringent than standards for new sources in the same category or subcategory but shall be at least as stringent as the emissions controls achieved in practice by the best controlled similar sources. Consistent with the preceding provisions of this paragraph, these determinations for new and existing sources, shall take into account energy, environmental, economic impacts, and other costs as well as any other factors identified by the Administrator by rule. If the Administrator finds that no similar source employs controls reflecting the maximum available control technolgy, the Administrator may establish emissions standards or regulations meeting the requirements of this section without regard to the performance of similar sources. Emission standards under this section for radionuclides shall be set based upon radiation dose.

"(4) Emission standards or other regulations promulgated under this subsection shall be effective upon promulgation.

"(5) In promulgating emission standards for a source category under this subsection, the Administrator shall prescribe a date for compliance with the standards for existing sources. In no event shall such date be later than 3 years after promulgation of the standards.

"(6) With respect only to categories and subcategories of area sources listed pursuant to subsection (c), the Administrator may, in lieu of the authorities provided in paragraph (2) and subsection (f), elect to promulgate standards or requirements applicable to sources in such categories or subcategories which provide for the use of generally available control technologies or management practices by such sources to reduce emissions of listed hazardous air pollutants.

"(7) The Administrator shall from time to time, but no less often than every 8 years after promulgation of standards under this subsection, review and, if appropriate, revise such standards.

"(e) SCHEDULE FOR STANDARDS.—(1) The Administrator shall promulgate standards for categories and subcategories listed under subsection (c) according to the following schedule:

"(A) Emission standards for not less than 10 categories or subcategories shall be promulgated not later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(B) Emission standards for 25 per centum of the listed categories and subcategories shall be promulgated not later than 4 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(C) Emission standards for an additional 25 per centum of the listed categories and subcategories shall be promulgated not later than 7 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(D) Emission standards for the remaining categories and subcategories shall be promulgated not later than 10 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(E) In the case of source categories and subcategories listed after publication of the initial list required under subsection (c)(1), emission standards under this section for the category or subcategory shall be promulgated within 10 years after the date of the enactment of the Clean Air Act Amendments of 1990, or within 2 years after the date on which such category or subcategory is listed, whichever is later.

"(2) In determining priorities for promulgating standards under subsection (d), the Administrator shall consider—

"(A) the quantity and location of emissions or reasonably anticipated emissions of air pollutants subject to this section that each category or subcategory will emit;

"(B) the known or anticipated adverse effects of such pollutants on public health; and

"(C) the efficiency of grouping categories or subcategories according to the pollutants emitted, or the processes or technologies used.

"(f) RESIDUAL RISK.—(1) Not later than 8 years after the date of the enactment of the Clean Air Act Amendments of 1990 the Administrator shall investigate and report, after consultation with the Surgeon General and after an opportunity for public comment, to Congress on:

"(A) Methods of calculating the risk to public health remaining, or likely to remain, from sources subject to regulation under this section after the application of standards under subsection (d).

"(B) The public health significance of such estimated remaining risk and the technologically and commercially available methods and costs of reducing such risks.

"(C) The actual health effects with respect to persons living in the vicinity of sources, any available epidemiological or other health studies, risks presented by background concentrations of hazardous air pollutants, any uncertainties in risk assessment methodology or other health assessment technique, and any negative health consequences to the community of efforts to reduce such risks.

"(D) Recommendations as to legislation regarding such remaining risk.

"(2) If Congress does not act on any recommendation submitted under paragraph (1), the Administrator shall, within 8 years after promulgation of standards for each

category or subcategory of sources pursuant to subsection (d), promulgate standards for such category or subcategory in accordance with this section (as in effect before the date of the enactment of the Clean Air Act Amendments of 1990) if promulgation of such standards is required in order, in the Administrator's judgment, to provide an ample margin of safety to protect public health in accordance with this section (as in effect before the date of the enactment of the Clean Air Act Amendments of 1990). The Administrator shall determine whether or not to promulgate such standards, and if the Administrator decides to promulgate such standards, shall promulgate the standards, 8 years after promulgation of the standards under subsection (d) for each source category or subcategory concerned. In the case of categories or subcategories for which standards under subsection (d) are required to be promulgated within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall have 9 years after promulgation of standards under subsection (d) to make the determination under the preceding sentence and, if required, to promulgate the standards under this paragraph. Nothing in subsection (c)(5) or (g)(1)(A) or in any other provision of this section shall be construed as affecting, or applying to, the Administrator's interpretation of this section, as in effect before the date of the enactment of the Clean Air Act Amendments of 1990.

"(3) Any emission standard established pursuant to this subsection shall become effective upon promulgation.

"(4) No air pollutant to which a standard under this subsection applies may be emitted from any stationary source in violation of such standard, except that in the case of an existing source—

"(A) such standard shall not apply until 90 days after its effective date, and

"(B) the Administrator may grant a waiver permitting such source a period of up to 2 years after the effective date of a standard to comply with the standard if the Administrator finds that such period is necessary for the installation of controls and that steps will be taken during the period of the waiver to assure that the health of persons will be protected from imminent endangerment.

"(g) ALTERNATIVE EMISSIONS LIMITATIONS.—(1) Notwithstanding the requirements of subsection (d), a State with a program approved under title IV, may issue a permit that authorizes—

"(A) a major source (or area sources in a category or subcategory in an area) to comply with alternative emission limitations in lieu of standards under this section, if the owner or operator presents evidence sufficient to demonstrate that emissions from the source (or such area sources) in compliance with such limitations—

"(i) in the case of hazardous air pollutants emitted by the source (or such area sources ) which may result in cancer in humans, do not cause a lifetime risk of cancer greater than one in 1,000,000 to the actual person who is most exposed to emissions of such pollutants from such source (or group of sources in the case of area sources); and

"(ii) in the case of hazardous air pollutants that may result in adverse health effects in humans other than cancer, do not exceed a level which is adequate to protect public health with an ample margin of safety;

"(B)(i) any existing source, for which the owner or operator demonstrates that it has achieved a reduction of 90 percent or more in emissions of listed pollutants (95 percent or more in the case of listed particulate pollutants) from the source before proposal of an applicable standard promulgated pursuant to subsection (d), to meet emission limitations based on such reduction in lieu of such standard for a period of 5 years from the otherwise applicable compliance date; the reduction shall be determined with respect to verifiable and actual emissions on an annual average basis and in a base year not earlier than calendar year 1987, unless emissions in the base year are artificially or substantially greater than emissions in other years before implementation of emissions reduction measures;

"(ii) any existing source to comply with a standard under subsection (d) 5 years after promulgation if the source, within 5 years before proposal of the standard under subsection (d), has achieved a level of emission rate or emission reduction which complies (or would comply if the source is not subject to such standards) with the best available control technology determination (as defined in section 169(3)), which is applicable to the source category and prevailing at the time the reduction is achieved; and

"(iii) any existing source to comply with a standard under subsection (d) 5 years after promulgation if the source, within 5 years before proposal of the standard under subsection (d), has achieved a level of emission rate or emission reduction which complies (or would comply if the source is not subject to such standard) with the lowest achievable emissions rate (as defined by section 171) which is applicable to the source category and prevailing at the time the reduction is achieved.

The Administrator shall review emissions from sources subject to emissions limitations under subparagraph (B) according to subsection (f) at the same time that other sources in the category or subcategory are reviewed.

"(2) The Administrator shall promulgate regulations to carry out paragraph (1) as expeditiously as practicable, but not later than 24 months after the date of the enactment of the Clean Air Act Amendments of 1990.

"(3) Rules published pursuant to paragraph (1) may identify categories or subcategories of sources listed under subsection (c) for which no alternative emission limitations may be established, including categories or subcategories of area sources for which emission standards are promulgated to control combined emissions from sources, rather than emissions of individual sources.

"(4) The regulations under paragraph (1) shall establish methods for assessing the significance of public health risks and methods for evaluating evidence presented by an owner or operator applying for alternative emissions limitations under this subsection. Any modeling demonstration performed to support a showing under subsection (g)(1)(A) shall comply with such regulations. Any stack height credit used in a modeling demonstration shall be based on the lesser of actual stack height of the source as it existed on January 1, 1989, or the stack height credit as provided in regulations issued by the Administrator.

"(5) An existing source which achieves the reduction referred to in paragraph (1)(B)(i) after the proposal of an applicable standard but before January 1, 1994, may qualify under paragraph (1)(B)(i) if the source makes an enforceable commitment to achieve such reduction before the proposal of the standard. Such commitment shall be enforceable to the same extent as a regulation under this section.

"(6) Any State with a program approved under title IV may issue a permit that grants an extension permitting an existing source up to 2 additional years to comply with standards under subsection (d) if such additional period is necessary for the installation of controls. An additional extension of up to 3 years may be added for mining waste operations if the 5-year compliance time is insufficient to dry and cover mining waste in order to reduce emissions of any pollutant listed under subsection (b).

"(7) No alternative emission limitation under this paragraph shall take effect until it is approved by the Administrator.

"(8) If the State in which a source is located does not have a program approved under title IV, the Administrator may grant any extensions authorized under this subsection for such source.

"(h) PRECONSTRUCTION AND OPERATING REQUIREMENTS.—After the effective date of any standard or under subsection (d) or (f), or an alternative emission limitation under subsection (g)—

"(1) no person may construct any new major source subject to such emission standard or limitation unless the Administrator, or a State with a permit program approved under title IV, determines that such source, if properly constructed and operated, will comply with the standard or limitation; and

"(2) no person may operate any new or existing source subject to an emission standard or limitation except in compliance with such standard or limitation (and any schedule which is applicable under subsection (d)(5) or (f)(4)).

"(i) TECHNICAL ASSISTANCE.—The Administrator shall establish and maintain an air toxics clearinghouse and center to provide technical information and assistance to State and local agencies and, on a cost recovery basis, to others on control technology, health and ecological risk assessment, risk analysis, ambient monitoring and modeling, and emissions measurement and monitoring. The Administrator shall use the authority of section 103 to examine methods for preventing, measuring, and controlling emissions and evaluating associated health and ecological risks. Where appropriate, such activity shall be conducted with not-for-profit organizations.

"(j) PRESIDENTIAL EXEMPTION.—The President may exempt any stationary source from compliance with any standard or limitation under this section for a period of not more than 2 years if the President determines that the technology to implement such standard is not available and that it is in the national security interests of the United States to do so. An exemption under this paragraph may be extended for one or more additional periods, each period not to exceed 2 years. The President shall report to Congress with respect to each exemption (or extension thereof) made under this subsection.

"(k) SAVINGS PROVISION.—(1) Any standard under this section in effect before the date of the enactment of the Clean Air Act Amendments of 1990 shall remain in force and effect after such date unless modified as provided in this section before the date of the enactment of such Amendments or under such Amendments. Each such standard shall be reviewed and, if appropriate, revised, to comply with the requirements of subsection (d) within 10 years after the date of the enactment of the Clean Air Act Amendments of

*1990. If a timely petition for review of any such standard under section 307 is pending on such date of enactment, the standard shall be upheld if it complies with this section as in effect before that date. If any such standard is remanded to the Administrator, the Administrator may in the Administrator's discretion apply either the requirements of this section, or those of this section as in effect before the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(2) Notwithstanding paragraph (1), no standard shall be established under this section, as amended by the Clean Air Act Amendments of 1990, for radionuclide emissions from (A) elemental phosphorous plants, (B) grate calcination elemental phosphorous plants, (C) phosphogypsum stacks, or (D) any subcategory of the foregoing. This section, as in effect prior to the date of the enactment of the Clean Air Act Amendments of 1990, shall remain in effect for radionuclide emissions from such plants and stacks.*

*"(3) Notwithstanding section 307 of this Act, no action of the Administrator adding a pollutant to the list under subsection (b), listing or designating a source category or subcategory under subsection (c), or determining whether or not to promulgate a standard under subsection (f)(2), shall be final agency action subject to judicial review, except that any such action may be reviewed under such section 307, if otherwise final, when the Administrator issues emission standards for such pollutant or category.*

*"(l) ELECTRIC UTILITIES.—The Administrator shall perform a study of the hazards to public health reasonably anticipated to occur as a result of emissions by electric utility steam generating units of pollutants listed under subsection (b) after imposition of the requirements of this Act. The Administrator shall report the results of this study to the Congress within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall develop and describe in the Administrator's report to Congress alternative control strategies for emissions which may warrant regulation under this section. The Administrator shall regulate electric utility steam generating units under this section if the Administrator finds such regulation is appropriate and necessary after considering the results of the study required in this subsection.*

*"(m) ACCIDENT PREVENTION, DETECTION, AND RESPONSE.—*

*"(1) REGULATIONS AND GUIDANCE.—Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate, in consultation and coordination with the Secretaries of Transportation and Labor and the laws administered by the Secretaries, reasonable regulations and appropriate guidance to provide, to the greatest extent practicable, for the prevention and detection of accidental releases into the ambient air of an air pollutant listed under this subsection from a stationary source subject to standards promulgated under this section and for response to such releases by the owners or operators thereof. The Administrator shall utilize the expertise of such Secretaries and others in promulgating such regulations. As appropriate, such regulations shall cover the use, operation, repair, replacement, and maintenance of equipment to monitor, detect, inspect, and control such releases, including the training of persons in the use and maintenance of such equipment and in the conduct of periodic inspections. The regulations shall include procedures and measures for emergency response after an accidental release in order to protect public health and the environment. The regulations shall cover storage, as well as operations. To ensure effectiveness, reasonableness, and avoidance of duplication, such regulations shall be promulgated and implemented in a manner consistent with other applicable law, including the other provisions of this section, and consolidated to the maximum extent practicable with similar requirements under other law. The regulations shall, to the greatest extent possible, recognize differences in size, operations, processes, class and categories of sources, and the voluntary actions of such sources to prevent such releases and respond to such releases. The regulations shall take effect 3 years after the date of promulgation, or 3 years after the addition of a substance to the list under this subsection, whichever is later.*

*"(2) LIST.—As part of the regulations under paragraph (1), the Administrator shall promulgate an initial list of significant air pollutants which, in the case of an accidental release, are known to cause or may reasonably be anticipated to cause serious adverse effects to public health and the environment. For purposes of promulgating such list, the Administrator shall use the list of extremely hazardous substances published under the Superfund Amendments and Reauthorization Act of 1986, with such modifications as the Administrator deems appropriate. The list shall include ammonia (CAS Number 7664417) and hydrogen sulfide (CAS Number 7783064). The regulations shall include an explanation of the basis for establishing the list. The list may be revised from time to time by the Administrator and shall be reviewed at least every 5 years. No air pollutant for which a national primary ambient air quality standard has been established shall be included on any such list. No substance, practice, process, or activity regulated under part B shall be subject to regulation under this subsection. At the time any air pollutant is listed, the Administrator shall establish a reasonable minimum quantity for the pollutant, taking into account toxicity, dispersibility, combustibility, or flammability and the likelihood of an accidental release.*

*"(3) DEFINITIONS.—For purposes of this subsection:*

*"(A) RELEASE.—The term 'release' means the direct or indirect introduction of any substance into the ambient air.*

*"(B) ACCIDENTAL RELEASE.—The term 'accidental release' means a release which is not routine and which is not authorized pursuant to any permit or emission limitation or standard under this Act or any other provision of Federal or State law.*

*"(n) PROTECTION OF GREAT LAKES AND CHESAPEAKE BAY.—*

*"(1) STUDY AND REPORT TO CONGRESS.—The Administrator shall investigate the sources of atmospheric deposition of hazardous air pollutants (and their atmospheric transformation products) on the Great Lakes, the Chesapeake Bay, and their tributary waters and evaluate the adverse effects to human health and the adverse environmental effects, including the tendency to bioaccumulate and effects resulting from indirect exposure pathways, caused by such deposition. Such investigation and evaluation shall include monitoring of listed substances in the ambient air, biological sampling for such substances (or their organic forms) in fish and wildlife within the Great Lakes, the Chesapeake Bay, and their tributary waters, and an analysis to characterize the sources of such substances. The Administrator shall report to Congress on the results of the investigation and evalution within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall afford an opportunity for public review of the report before submitting it to Congress and shall include a summary of the public comments with the report.*

*"(2) ADDITIONAL REGULATION.—As part of the report to Congress, the Administrator shall determine whether the other provisions of this section are adequate to prevent serious adverse effects to human health and serious or widespread environmental effects, including such effects resulting from indirect exposure pathways, associated with atmospheric deposition on the Great Lakes, the Chesapeake Bay, and their tributary waters of hazardous air pollutants (and their atmospheric transformation products). The Administrator shall take into consideration the tendency of such pollutants to bioaccumulate. Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall, based on such report and determination, promulgate, in accordance with this section, such further emissions standards or control measures as may be necessary and appropriate to prevent such effects, including effects due to bioaccumulation and indirect exposure pathways.*

*"(o) TECHNICAL ASSISTANCE FOR SMALL SOURCES.—The Administrator (and States with permit programs) shall establish means and measures to supply technical assistance and information to area sources and stationary sources that are not major stationary sources to help carry out the requirements of this section, including meeting the applicable standards and obtaining needed permits. The assistance should cover information on availability and types of equipment, measures, methods, practices, processes, and techniques in reducing emissions of air pollutants and preventing and detecting accidents. The Administrator should establish and maintain a clearinghouse of such information.*

*"(p) HYDROFLUORIC ACID.—(1) Not later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall complete a study to determine if there is a net benefit to public safety, human health, and the environment from the use by oil refineries of any substance or process which is an alternative to hydrofluoric acid. The study shall include an analysis of the loss of human life or damage to human health in the event of a reasonable worst-case accidental release of hydrofluoric acid or sulfuric acid or other alternative substance, the customary air and water emissions associated with the use of hydrofluoric acid or sulfuric acid or other alternative, the production of waste from the customary use of hydrofluoric acid or sulfuric acid or other alternative, and the risk and consequences of accidents from the transportation of hydrofluoric acid or sulfuric acid or other alternative. In making the determination regarding net benefit, the Administrator shall not consider the financial costs associated with the use of any alternative accidental release mitigation systems which could be rendered inoperable in the event of an earthquake, or the cause of a worst-case accidental release. In making the determination regarding net benefit, if the Administrator considers the likelihood of the risk or danger to human health and the environment from a worst-case accidental hydrofluoric acid release, the Administrator*

shall also consider similar probabilities resulting from the use of any alternative. In the event that existing data on hydrofluoric acid or sulfuric acid or alternative proves inadequate for the study, the Environmental Protection Agency shall perform the necessary data collection or field tests. The study shall examine both acute and chronic risks.

"(2) If the Administrator determines there is an alternative that provides a net benefit to public safety, human health, and the environment, not later than 1 year and 3 months after the completion of the study under paragraph (1), the Administrator shall promulgate regulations requiring each oil refinery in the Nation to convert to such alternative within 10 years. The Administrator is authorized to make differing determinations on a site-specific basis.

"(3) Not later than 2 years after the completion of the study under paragraph (1), the Administrator shall make recommendations to Congress, and is authorized to promulgate regulations to implement, methods to mitigate or eliminate the danger of a worst-case accidental release of hydrofluoric acid at all other commercial facilities, including the use of alternative processes or substances which provide a net benefit to public safety, human health, and the environment, and relocation of facilities to unpopulated areas.

"(q) MICKEY LELAND URBAN AIR TOXICS RESEARCH CENTER.—

"(1) ESTABLISHMENT.—The Administrator shall oversee the establishment of a National Urban Air Toxics Research Center, to be located at a university, a hospital, or other facility capable of undertaking and maintaining similar research capabilities in the areas of epidemiology, oncology, toxicology, pulmonary medicine, pathology, and biostatistics. The center shall be known as the Mickey Leland National Urban Air Toxics Research Center. The geographic site of the National Urban Air Toxics Research Center should be further directed to Harris County, Texas, in order to take full advantage of the well developed scientific community presence currently on site at the Texas Medical Center as well as the extensive data previously compiled from the comprehensive monitoring system currently in place.

"(2) BOARD OF DIRECTORS.—The National Urban Air Toxics Research Center shall be governed by a Board of Directors to be comprised of 9 members, the appointment of which shall be allocated pro rata among the Speaker of the House, the majority leader of the Senate and the President. The members of the Board of Directors shall be selected based on their respective academic and professional backgrounds and expertise in matters relating to public health, environmental pollutions, and the industrial hygiene. The duties of the Board of Directors shall be to determine policy and research guidelines, submit views from center sponsors and the public and issue periodic reports of center fundings and activities.

"(3) SCIENTIFIC ADVISORY PANEL.—The Board of Directors shall be advised by a Scientific Advisory Panel, the 13 members of which shall be appointed by the Board, and to include eminent members of the scientific and medical communities. The Panel membership may include scientists with relevant experience from the National Institute of Environmental Health Sciences, the Center for Disease Control, the Environmental Protection Agency, the National Cancer Institute, and others, and the Panel shall conduct peer review and evaluate research results. The Panel shall assist the Board in developing the research agenda, reviewing proposals and applications, and advise on the awarding of research grants.

"(4) FINDINGS.—The center shall be established and funded with both Federal and private source funds.

"(r) OIL AND GAS WELLS.—(1) Notwithstanding the provisions of this section, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources, and in the case of any oil or gas exploration or production well (with its associated equipment), such emissions shall not be aggregated for any purpose under this section.

"(2) In the case of oil and gas wells listed under this section, in promulgating regulations under this section, the Administrator shall determine whether oil and gas wells present a risk greater than that referred to in subsection (g)(1)(A). If the Administrator determines that such wells do present a risk greater than the levels referred to in subsection (g)(1)(A) the Administrator shall promulgate standards under this section applicable to such wells.

"(s) COKE OVEN PRODUCTION TECHNOLOGY STUDY.—(1) The Secretary of Energy and the Administrator shall jointly undertake a 6-year study to assess coke oven production emission control technologies and to assist in the development and commercialization of technically practicable and economically viable control technologies which will have the potential to significantly reduce emissions of hazardous air pollutants from coke oven production facilities. In identifying control technologies, the Secretary and the Administrator shall consider the range of existing coke oven operations and battery design and the availability of sources of materials for such ovens as well as alternatives to existing coke oven production design.

"(2) The Secretary and the Administrator are authorized to enter into agreements with persons who propose to develop, install, and operate coke production emission control technologies which have the potential for significant emissions reductions of hazardous air pollutants provided that Federal funds shall not exceed 50 percent of the cost of any project assisted pursuant to this subsection.

"(3) The Secretary shall prepare annual reports to Congress on the status of the research program and at the completion of the study shall make recommendations to the Administrator identifying practicable and economically viable control technologies for coke oven production facilities to reduce residual risks remaining after implementation of the standard under subsection (d) (MACT).

"(4) There are authorized to be appropriated $5,000,000 for each of the fiscal years 1991 through 1996 to carry out the program authorized by this subsection.

"(t) REPORT ON COSTS AND BENEFITS.—Commencing on January 1, three years after the date of the enactment of the Clean Air Act Amendments of 1990 and annually thereafter, the Government Accounting Office, in consultation with other agencies, such as the Environmental Protection Agency, the Department of Labor, the Department of Commerce, the United States Trade Representative, the National Academy of Sciences, the National Academy of Engineering, the Council on Environmental Quality, and the Surgeon General, shall provide a report to Congress on the incremental human health and environmental benefits and incremental costs associated with compliance with the provisions of the Maximum Achievable Control Technologies prescribed by the Clean Air Act Amendments of 1990. The report shall include, for each source category and subcategory for which MACT is prescribed, the effects on human life, human health, the environment, and the economy (including both positive impacts and impacts detrimental to jobs and communities resulting from loss of employers and employment, etc.), energy security impacts, the actual emissions reductions as a result of the Clean Air Act Amendments of 1990, the effect on United States products and industrial competitiveness in national and international markets and any impacts on employment in the affected areas contributed to by the emission control requirements.".

TITLE IV—PERMITS

Sec. 401. Permits.

SEC. 401. PERMITS.

Add the following new title IV after title III:

"TITLE IV—PERMITS

"Sec. 401. Definitions.
"Sec. 402. Permit programs.
"Sec. 403. Permit applications.
"Sec. 404. Permit requirements and conditions.
"Sec. 405. Notification to Administrator and contiguous states.
"Sec. 406. Other authorities.
"Sec. 407. Small source and technical and environmental compliance assistance program.

"SEC. 401. DEFINITIONS.

As used in this title—

"(1) AFFECTED SOURCE.—The term 'affected source' shall have the meaning given such term in title V.

"(2) MAJOR SOURCE.—The term 'major source' means any stationary source (or any group of stationary sources located within a contiguous area and under common control) that is either of the following:

"(A) A major source as defined in section 112.

"(B) A major stationary source as defined in section 302 or part D of title I.

"(3) TERMS DEFINED IN SECTION 112.—For sources subject to standards under section 112, the terms 'new source', 'stationary source', and 'area source' shall have the meaning given such terms in that section.

"(4) TERMS DEFINED IN SECTION 111.—For sources subject to standards under section 111, the terms 'new source', 'modification', 'existing source', and 'stationary source' shall have the meaning given such terms in that section.

"(5) SCHEDULE OF COMPLIANCE.—The term 'schedule of compliance' means a schedule of remedial measures, including an enforceable sequence of actions or operations, leading to compliance with an applicable implementation plan, emission standard, emission limitation or emission prohibition.

"(6) PERMITTING AUTHORITY.—The term 'permitting authority' means the Administrator or the air pollution control agency authorized by the Administrator to carry out a permit program under this title.

"SEC. 402. PERMIT PROGRAMS.

"(a) VIOLATIONS.—After the effective date of any permit program approved or promulgated under this title, it shall be unlawful for any person to violate any requirement of a permit issued under this title, or to operate

an affected source (as provided in title V), a major source, any other source (including an area source) subject to standards or regulations under section 111 or 112, any source required to have a permit under parts C or D, or any other stationary source designated by regulations promulgated by the Administrator, except in compliance with a permit issued by a permitting authority under this title. Nothing in this subsection shall be construed to alter the requirements of sections 165, 172, and 173 regarding the requirement that a permit be obtained before construction. The Administrator may, in the Administrator's discretion, promulgate regulations to exempt one or more source categories from the requirements of this subsection if the Administrator finds that such an exemption would be consistent with the purposes of this Act.

"(b) REGULATIONS.—The Administrator shall promulgate within 12 months after the date of the enactment of the Clean Air Act Amendments of 1990 regulations establishing the minimum elements of a permit program to be administered by any air pollution control agency. These elements shall include each of the following:

"(1) Requirements for permit applications, including a standard application form and criteria for determining in a timely fashion the completeness of applications.

"(2) Monitoring and reporting requirements.

"(3)(A) A requirement under State law that the owner or operator of all sources subject to the requirement to obtain a permit under this title pay an annual fee, or the equivalent over some other period, sufficient to cover all reasonable costs of developing and administering the permit program, including the reasonable costs of—

"(i) reviewing and acting upon any application for such a permit,

"(ii) if the owner or operator receives a permit for such source, whether before or after the date of the enactment of the Clean Air Act Amendments of 1990, implementing and enforcing the terms and conditions of any such permit (not including any court costs or other costs associated with any enforcement action),

"(iii) emissions and ambient monitoring,

"(iv) preparing generally applicable regulations, or guidance,

"(v) modeling, analyses, and demonstrations, and

"(vi) preparing inventories and tracking emissions.

"(B) The total amount of fees collected by the permitting authority shall conform to the following requirements:

"(i) The Administrator shall not approve a program as meeting the requirements of this paragraph unless the State demonstrates that, except as otherwise provided in subparagraphs (ii) through (v) of this subparagraph, the program will result in the collection, in the aggregate, from all sources subject to subparagraph (A), of an amount not less than $25 per ton of each regulated pollutant, or such other amount as the Administrator may determine adequately reflects the reasonable costs of the permit program.

"(ii) As used in this subparagraph, the term 'regulated pollutant' shall mean (I) a volatile organic compound; (II) each pollutant regulated under section 111 or 112; and (III) each pollutant for which a national primary ambient air quality standard has been promulgated (except that carbon monoxide shall be excluded from this reference).

"(iii) In determining the amount under clause (i), the permitting authority is not required to include any amount of regulated pollutant emitted by any source in excess of 4,000 tons per year of that regulated pollutant.

"(iv) The requirements of clause (i) shall not apply if the permitting authority demonstrates that collecting an amount less than the amount specified under clause (i) will meet the requirements of subparagraph (A).

"(v) The fee calculated under clause (i) shall be increased (consistent with the need to cover reasonable costs) in each year beginning after the year of the enactment of the Clean Air Act Amendments of 1990 by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year exceeds the Consumer Price Index for the calendar year 1989. For purposes of this clause—

"(I) the Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the 12-month period ending on August 31 of each calendar year, and

"(II) the revision of the Consumer Price Index which is most consistent with the Consumer Price Index for calendar year 1989 shall be used.

"(C)(i) If the Administrator determines, under subsection (d), that the fee provisions of the operating permit program do not meet the requirements of this paragraph, or if the Administrator makes a determination, under subsection (i), that the permitting authority is not adequately administering or enforcing an approved fee program, the Administrator may, in addition to taking any other action authorized under this title, collect reasonable fees from the sources identified under subparagraph (A) without regard to the requirements of subparagraph (B).

"(ii) Any source that fails to pay fees lawfully imposed by the Administrator under this subparagraph shall pay a penalty of 50 percent of the fee amount, plus interest on the fee amount computed in accordance with section 6621(a)(2) of the Internal Revenue Code of 1986 (relating to computation of interest on underpayment of Federal taxes).

"(iii) Any fees, penalties, and interest collected under this subparagraph shall be deposited in a special fund in the United States Treasury for licensing and other services, which thereafter shall be available for appropriation, to remain available until expended, subject to appropriation, to carry out the Agency's activities for which the fees were collected. Any fee required to be collected by a State or interstate agency under this subsection shall be utilized solely to support the air pollution control permit program of such State or interstate agency as provided in this paragraph.

"(4) Requirements for adequate personnel and funding to administer the program.

"(5) A requirement that the permitting authority have adequate authority to:

"(A) issue permits and assure compliance by all sources required to have a permit under this title with each applicable standard, regulation or requirement under this Act;

"(B) issue permits for a fixed term, not to exceed 5 years;

"(C) assure that upon issuance or renewal permits incorporate emission limitations and other requirements in an applicable implementation plan;

"(D) terminate, modify, or revoke and reissue permits for cause; and

"(E) enforce permits, permit fee requirements, and the requirement to obtain a permit, including authority to recover civil penalties in an amount not less than $10,000 per day for each violation, and appropriate criminal penalties.

"(6) Adequate, streamlined, and reasonable procedures for expeditiously determining when applications are complete and for processing such applications for public notice, including offering an opportunity for public comment and a hearing, and for expeditious review of permit actions, including applications.

"(7) Authority to make available to the public any permit application, compliance plan, permit, and monitoring or compliance report under section 403(e), subject to the provisions of section 114(c) of this Act.

"(c) SINGLE PERMIT.—A single permit may be issued for a facility with multiple sources.

"(d) SUBMISSION AND APPROVAL.—Not later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Governor of each State shall develop and submit to the Administrator a permit program under State law or under an interstate compact meeting the requirements of this title. In addition, the Governor shall submit a legal opinion from the attorney general (or the attorney for those State air pollution control agencies that have independent legal counsel), or from the chief legal officer of an interstate agency, that the laws of the State, locality, or the interstate compact provide adequate authority to carry out the program. Not later than 1 year after receiving a program, and after notice and opportunity for public comment, the Administrator shall approve or disapprove such program, in whole or in part. The Administrator may approve a program to the extent that the program meets the requirements of this Act, including the regulations issued under subsection (b). If the program is disapproved, in whole or in part, the Administrator shall notify the Governor of any revisions or modifications necessary to obtain approval. The Governor shall revise and resubmit the program for review under this section within 180 days after receiving notification. If the Governor fails within such period to resubmit an approvable program, the Administrator—

"(1) shall, to the extent the permit program would implement an applicable implementation plan, withhold final action on plan revisions affecting one, or a small group of, major sources; and

"(2) may in the Administrator's discretion take either or both of the following actions:

"(A) apply any of the sanctions specified in section 179(b) of this Act other than the sanction specified in section 179(b)(2); or

"(B) promulgate a program, or partial program, under this title.

"(e) SUSPENSION.—The Administrator shall suspend the issuance of permits promptly upon publication of notice of approval of a permit program under this section, but may, in such notice, retain jurisdiction over permits that have been federally issued, but for which the administrative or judicial review process is not complete. The Administrator shall continue to administer and enforce federally issued permits under this title until they are replaced by a permit issued by a permitting program. Nothing in this subsection should be construed to limit the Administrator's ability to enforce permits issued by a State.

"(f) PARTIAL PERMIT PROGRAM.—The Governor of a State may submit, and the Adminis-

trator may approve, a partial permit program. No partial permit program shall be approved unless, at a minimum, it applies, and ensures compliance with, this title and each of the following:

"(1) All requirements established under title V applicable to 'affected sources'.

"(2) All requirements established under section 112 applicable to 'major sources', 'area sources,' and 'new sources'.

"(3) All requirements of title I (other than section 112) applicable to sources required to have a permit under this title.

Approval of a partial program shall not relieve the State of its obligation to submit a complete program, nor from the application of any sanctions under this Act for failure to submit an approvable permit program.

"(g) INTERIM APPROVAL.—If a program (including a partial permit program) submitted under this title substantially meets the requirements of this title, but is not fully approvable, the Administrator may by rule grant the program interim approval. In the notice of final rulemaking, the Administrator shall specify the changes that must be made before the program can receive full approval. An interim approval under this subsection shall expire on a date set by the Administrator not later than 2 years after such approval, and may not be renewed.

"(h) EFFECTIVE DATE.—The effective date of a permit program, or partial or interim program, approved under this title, shall be the effective date of approval by the Administrator.

"(i) ADMINISTRATION AND ENFORCEMENT.—Whenever the Administrator makes a preliminary determination that a permitting authority is not adequately administering and enforcing a program, or portion thereof, in accordance with the requirements of this title, the Administrator shall notify the permitting authority of such determination and the reasons therefor. Such notice shall be made public. If the permitting authority fails to take action to assure adequate administration and enforcement, the Administrator may in the Administrator's discretion, but not before 90 days after issuing such notice, take one or more of the following actions—

"(1) withdraw approval of the program or portion by rule;

"(2) propose to apply any of the sanctions specified in section 179(b) of this Act other than the sanction specified in section 179(b)(2); or

"(3) promulgate a program, or portion of a program, under this title.

"SEC. 403. PERMIT APPLICATIONS.

"(a) APPLICABLE DATE.—Any source specified in section 402(a) shall become subject to a permit program, and required to have a permit, on the later of the following dates—

"(1) the effective date of a permit program or partial or interim permit program applicable to the source; or

"(2) the date such source becomes subject to section 402(a).

"(b) COMPLIANCE PLAN.—(1) The regulations required by section 402(b)(1) shall include a requirement that there is submitted with the permit application a compliance plan describing how the source will comply with all applicable requirements under this Act. The compliance plan shall include a schedule of compliance, and a schedule under which the permittee will submit progress reports to the permitting authority no less frequently than every 6 months.

"(2) The regulations shall further require the permittee to periodically certify that the facility is in compliance with any applicable requirements of the permit, and to promptly report, consistent with provisions of the United States Constitution regarding self-incrimination, any violations of such requirements to the permitting authority.

"(c) DEADLINE.—Any person required to have a permit shall, not later than 12 months after the date on which the source becomes subject to a permit program approved or promulgated under this title, or such earlier date as the permitting authority may establish, submit to the permitting authority a compliance plan and an application for a permit signed by a responsible corporate official, who shall certify the accuracy of the information submitted.

"(d) TIMELY AND COMPLETE APPLICATIONS.—Except for sources required to have a permit before construction under sections 165, 172, or 173, if an applicant has submitted a timely and complete application for a permit required by this title, but final action has not been taken on such application, the source's failure to have a permit shall not be a violation of this Act, unless the delay in final action was due to the failure of the applicant timely to submit information required or requested to process the application. No source required to have a permit under this title shall be in violation of section 402(a) before the date on which the source is required to submit an application under subsection (c).

"(e) COPIES; AVAILABILITY.—A copy of each permit application, compliance plan, emissions or compliance monitoring report, certification, and each permit issued under this title, shall be available to the public. If an applicant or permittee is required to submit information entitled to protection from disclosure under section 114(c) of this Act, the applicant or permittee may submit such information separately. The requirements of section 114(c) shall apply to such information. The contents of a permit shall not be entitled to protection under section 114(c).

"SEC. 404. PERMIT REQUIREMENTS AND CONDITIONS.

"(a) CONDITIONS.—Each permit issued under this title shall include emission limitations and standards, a schedule of compliance, and such other conditions as are necessary to assure compliance with applicable requirements.

"(b) MONITORING AND ANALYSIS.—The Administrator may by rule prescribe procedures and methods for determining compliance and for monitoring and analysis of pollutants regulated under this Act.

"(c) INSPECTION ENTRY, MONITORING CERTIFICATION AND REPORTING.—Each permit issued under this title shall set forth inspection, entry, monitoring, compliance certification, and reporting requirements to assure compliance with the permit terms and conditions. Such monitoring and reporting requirements shall conform to any applicable regulation under subsection (b). Any report required to be submitted by a permit issued to a corporation under this title shall be signed by a responsible corporate official, who shall certify its accuracy.

"(d) GENERAL PERMITS.—The permitting authority may, after notice and opportunity for public hearing, issue a general permit covering numerous similar sources. Any general permit shall comply with all requirements applicable to permits under this title. No source covered by a general permit shall thereby be relieved from the obligation to file an application under section 403.

"(e) TEMPORARY SOURCES.—The permitting authority may issue a single permit authorizing emissions from similar operations at multiple temporary locations. No such permit shall be issued unless it includes conditions that will assure compliance with all the requirements of this Act at all authorized locations, including ambient standards and compliance with any applicable increment or visibility requirements under part C of title I. Any such permit shall in addition require the owner or operator to notify the permitting authority in advance of each change in location. The permitting authority may require a separate permit fee for operations at each location.

"(f) NO LESS STRINGENT REQUIREMENT.—(1) A permit may not be reissued or modified to contain emission limitations or other requirements that are less stringent than the comparable emission limitations or requirements in the previous permit or that applied to the source under an applicable implementation plan.

"(2) Notwithstanding paragraph (1) of this subsection, a permit may be reissued or modified, in accordance with section 405 of this title, to contain a less stringent emission limitation or other requirement (other than standards established under section 111 or 112) if the applicant shows that the revised emission limitation or requirement is consistent with any demonstration of attainment and any progress requirement in an approved implementation plan, the requirements of part C or section 173 of the Act, and will not otherwise interfere with attainment of the ambient air quality standards, progress requirements, and any other requirements of this Act and that—

"(A) the increased emissions authorized by the permit are compensated for by emissions reductions from another permitted facility, as determined under rules prescribed by the Administrator;

"(B) material and substantial alterations or additions to the permitted source occurred after permit issuance;

"(C) information is available that was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and that, if known, would have justified the application of a less stringent emission limitation or requirement at that time;

"(D) technical mistakes or mistaken interpretations of law were made in issuing the permit; or

"(E) the permittee demonstrates, in accordance with procedures prescribed by the Administrator, that it has installed the controls required to meet the emission limitations and requirements in the permit and has properly constructed and tested the facility, but has nevertheless been unable to achieve the emission limitations specified in the permit, in which case the limitations in the revised, reissued, or modified permit may reflect the level of emission control actually achieved.

"(3) No permit may be reissued to contain emission standards less stringent than those established under sections 111 or 112 and applicable to the source unless the applicable standard has been revised, or, for a standard under section 112, an alternative emission limitation has been established under section 112(g).

"(g) COMPLIANCE.—Compliance with a permit issued under this title shall be deemed compliance with section 402. Except as otherwise provided by the Administrator by rule, the permit may also provide that compliance with the permit shall be deemed compliance with other applicable provisions of this Act. The preceding sentence shall not apply in the case of a standard issued under

section 112(f). Compliance with a permit issued under a partial program under section 402(f) shall be deemed compliance only with those requirements for which the program was approved.

"SEC. 405. NOTIFICATION TO ADMINISTRATOR AND CONTIGUOUS STATES.

"(a) TRANSMISSION AND NOTICE.—(1) Each permitting authority shall transmit to the Administrator a copy of each permit application, including any compliance plan and any application for alternative emission limitations under section 112(g), or for a permit modification, submitted under this title, and shall provide notice, in accordance with regulations promulgated by the Administrator, of every action related to the consideration of the application, including each permit proposed to be issued by the authority.

"(2) The permitting authority shall notify all States contiguous to the State in which the emission originates of each permit application, and each draft permit or proposed permit forwarded to the Administrator under this section, and shall provide an opportunity for such States to submit written recommendations respecting the issuance of the permit and its terms and conditions. If any part of those recommendations are not accepted by the permitting authority, such authority shall notify the State submitting the recommendations and the Administrator in writing of its failure to accept those recommendations and the reasons therefor.

"(b) OBJECTION BY EPA.—The permitting authority shall respond in writing if the Administrator (1) within 45 days after receipt of the proposed permit under subsection (a)(1), or (2) within 45 days after receiving notification under subsection (a)(2), objects in writing to its issuance as not in compliance with the requirements of this Act, including the requirements of section 110(a)(2)(D). With the objection, the Administrator shall provide a statement of the reasons for the objection. A copy of the objection and statement shall be provided to the applicant.

"(c) ISSUANCE OR DENIAL.—If the permitting authority fails within 90 days after the date of an objection under subsection (b), to submit a permit revised to meet the objection, the Administrator shall issue or deny the permit in accordance with the requirements of this title. No objection shall be subject to judicial review until the Administrator takes final action to issue or deny a permit under this subsection.

"(d) WAIVER OF NOTIFICATION REQUIREMENT.—(1) The Administrator may waive the requirements of subsections (a) and (b) at the time of approval of a permit program under this title for any category (including any class, type, or size within such category) of sources covered by the program.

"(2) The Administrator may, by regulation, establish categories of sources (including any class, type, or size within such category) to which the requirements of subsections (a) and (b) shall not apply.

"(3) The Administrator may exclude from any waiver under this subsection notification under paragraph (a)(2). Any waiver granted under this subsection may be revoked or modified by the Administrator by rule.

"(e) REFUSAL OF PERMITTING AUTHORITY TO TERMINATE, MODIFY, OR REVOKE AND REISSUE.—If the Administrator finds that cause exists under section 402(b)(5)(D) to terminate, modify, or revoke and reissue a State permit under this title, the Administrator shall notify the permitting authority and the source of the Administrator's finding. The permitting authority shall, within 90 days after receipt of such notification, forward to the Administrator under this section a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend such 90 day period for an additional 90 days if the Administrator finds that a new or revised permit application is necessary, or that the permitting authority must require the permittee to submit additional information. The Administrator may review such proposed determination under the provisions of subsections (a) and (b). If the permitting authority fails to submit the required proposed determination, or if the Administrator objects and the permitting authority fails to resolve the objection within 90 days, the Administrator may, after notice and in accordance with fair and reasonable procedures, terminate, modify, or revoke and reissue the permit.

"SEC. 406. OTHER AUTHORITIES.

"(a) STATE OR INTERSTATE AUTHORITIES.—Nothing in this title shall prevent a State, or interstate permitting authority, from establishing additional permitting requirements not inconsistent with this Act.

"(b) ACID DEPOSITION PROGRAM.—Nothing in this title shall be construed to authorize the Administrator, or a State, to modify or revoke any allowance granted under title V.

"SEC. 407. SMALL SOURCE TECHNICAL AND ENVIRONMENTAL COMPLIANCE ASSISTANCE PROGRAM.

"(a) PLAN REVISIONS.—Consistent with sections 110 and 112, each State shall, after reasonable notice and public hearings, adopt and submit to the Administrator as part of the State implementation plan for such State or as a revision to such State implementation plan under this section, plans for establishing a small source technical and environmental compliance assistance program. Such submission shall be made within 24 months after the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall approve such program if it includes each of the following:

"(1) Adequate mechanisms for developing, collecting, evaluating, and coordinating information concerning compliance methods and technologies for small sources.

"(2) Adequate mechanisms for advising small sources on pollution prevention, including providing information concerning alternative technologies, process changes, products, and methods of operation that help reduce air pollution.

"(3) A designated State office within the relevant State agency to serve as ombudsman for small sources in connection with the implementation of this Act.

"(4) A program for permits that meets the requirements of subsection (c).

"(5) Adequate mechanisms to assure that small sources receive notice of their rights under this Act in such manner and form as to assure reasonably adequate time for such sources to evaluate compliance methods and any relevant or applicable proposed or final regulation or standard issued under this Act.

"(b) PROGRAM.—The Administrator shall establish within 9 months after the date of the enactment of the Clean Air Act Amendments of 1990 a small source technical assistance program. Such program shall—

"(1) assist the States in the development of the program required under subsection (a) and section 112(o) (relating to technical assistance for small sources);

"(2) issue technical guidance for the use of the States in the implementation of these programs that includes alternative control technologies and pollution prevention methods applicable to small sources; and

"(3) provide for implementation of the program required under subsection (c) in any State that fails to submit an applicable program under that paragraph.

"(c) STATE PERMIT PROGRAM.—The State shall establish a permit program for small sources located within a nonattainment area, ozone transport area, or subject to a standard under section 112 consistent with the other provisions of this title. Such program shall provide that—

"(1) a small source shall have the option of obtaining an individual permit under this subsection as a substitute for any general permit issued under this title;

"(2) such individual permit shall be developed after consultation with the small source or with duly authorized representatives of the small sources;

"(3) individual permits issued under this subsection to small sources shall require compliance with applicable standards, regulations, or requirements under this Act, including emission limitations, pollution control measures, and recordkeeping and reporting requirements under this Act, except that methods of and time for compliance with any such standard or requirement may be modified for a small source in such permit based on the technical and financial capability of the small source or group of sources and the availability of less burdensome alternatives, and, in particular, pollution prevention measures; any such modifications shall achieve equivalent emission reductions consistent with the public health, welfare, and environmental protection goals and deadlines of this Act;

"(4) any individual permit issued to a small source under this subsection shall be issued in accordance with the procedures of this title, and shall be subject to review by the Administrator, as provided in this title;

"(5) the State (or the Administrator) may reduce any fee required under this Act to take into account the financial resources of a small source; and

"(6) requirements for continuous emission monitoring will not be imposed on a small source (or sources) unless the State (or the Administrator) has determined that such requirements are necessary and appropriate.

"(d) ELIGIBILITY.—For purposes of this section, eligibility for participation in the program under this subsection shall be limited to small sources (as defined in this Act) which are small businesses (as defined in the Small Business Act). The Administrator, in consultation with the Administrator of the Small Business Administration and after providing notice and opportunity for public comment, may exclude from coverage any category or subcategory of sources that the Small Business Administrator determines to have sufficient technical and financial capabilities to meet the requirements of this Act without the application of this subsection.

"(e) MONITORING.—The Administrator shall direct the Agency's Office of Small and Disadvantaged Business Utilization through the Small Business Ombudsman (hereinafter in this section referred to as the 'Ombudsman') to monitor the Small Business Environmental Compliance Assistance Program under this subsection. In carrying out such monitoring activities, the Ombudsman shall—

"(1) render advisory opinions on the overall effectiveness of the Small Source Technical and Environmental Compliance Assistance Program, difficulties encountered, and degree and severity of enforcement;

"(2) make periodic reports to the Congress on the compliance of the Small Source Technical and Environmental Compliance Assistance Program with the requirements of the Paperwork Reduction Act, the Regulatory Flexibility Act, and the Equal Access to Justice Act;

"(3) review information to be issued by the Small Source Technical and Environmental Compliance Assistance Program for small business stationary sources to ensure that the information is understandable by the layperson; and

"(4) have the Small Source Technical and Environmental Compliance Assistance Program serve as the secretariat for the development and dissemination of such reports and advisory opinions.

"(f) COMPLIANCE ADVISORY PANEL.—(1) There shall be created a Compliance Advisory Panel (hereinafter referred to as the 'Panel') on the State level of not less than 7 small business owners. This Panel shall—

"(A) render advisory opinions concerning the effectiveness of the Small Source Technical and Compliance Assistance Program, difficulties encountered, and degree and severity of enforcement;

"(B) make periodic reports to the Administrator concerning the compliance of the State Small Source Technical and Environmental Compliance Assistance Program with the requirements of the Paperwork Reduction Act, the Regulatory Flexibility Act, and the Equal Access to Justice Act;

"(C) review information for small stationary sources to assure such information is understandable by the layperson; and

"(D) have the Small Source Technical and Environmental Compliance Assistance Program serve as the secretariat for the development and dissemination of such reports and advisory opinions.

"(2) The Panel shall consist of—

"(A) 2 members selected by the Governor;

"(B) 2 members selected by the State legislature (1 member each by the majority and minority leadership of the lower house, or in the case of a unicameral State legislature, 2 members each shall be selected by the majority leadership and the minority leadership, respectively, of such legislature, and subparagraph (C) shall not apply);

"(C) 2 members selected by the State legislature (1 member each by the majority and minority leadership of the upper house, or the equivalent State entity); and

"(D) 1 member selected by the head of the department or agency of the State responsible for air pollution permit programs.".

TITLE V—ACID DEPOSITION CONTROL

Sec. 501. Acid deposition control.
Sec. 502. New source performance standards.

SEC. 501. ACID DEPOSITION CONTROL.

Add the following new title after title IV:

"TITLE V—ACID DEPOSITION CONTROL

"Sec. 501. Findings and purposes.
"Sec. 502. Definitions; data.
"Sec. 503. Allowance program.
"Sec. 504. First Phase sulfur dioxide emission reduction program.
"Sec. 505. Second Phase sulfur dioxide emission reduction program.
"Sec. 506. Nitrogen oxides emission reduction program.
"Sec. 507. Permits and compliance plans.
"Sec. 508. Repowered sources.
"Sec. 509. Election for additional sources.
"Sec. 510. Excess emissions.
"Sec. 511. Monitoring, reporting, and recordkeeping requirements.
"Sec. 512. Compliance with other provisions.
"Sec. 513. Enforcement.
"Sec. 514. Report to Congress.
"Sec. 515. Clean coal technology incentives.
"Sec. 516. Severe energy supply interruptions and energy fuel supply shortages.
"Sec. 517. Protection of low-income households.
"Sec. 518. DOE units.
"Sec. 519. Auction.
"Sec. 520. Regulatory reforms to reduce air emissions.
"Sec. 521. Effect of provisions on certain Federal agencies.

"SEC. 501. FINDINGS AND PURPOSES.

"(a) FINDINGS.—The Congress finds that—

"(1) the presence of acidic compounds and their precursors in the atmosphere and in deposition from the atmosphere represents a threat to natural resources, ecosystems, materials, visibility, and public health;

"(2) the principal sources of the acidic compounds and their precursors in the atmosphere are emissions of sulfur and nitrogen oxides from the combustion of fossil fuels and other industrial processes;

"(3) the problem of acid deposition is of national and international significance and cannot be addressed adequately without effective State-Federal and international cooperation;

"(4) strategies and technologies for the control of precursors to acid deposition exist now that are economically feasible, and improved methods are expected to become increasingly available over the next decade;

"(5) current and future generations of Americans will be adversely affected by delaying measures to remedy the problem;

"(6) reduction of total atmospheric loading of sulfur dioxide and nitrogen oxides will enhance protection of the public health and welfare and the environment;

"(7) control measures to reduce acid deposition precursor emissions from steam-electric generating units should be initiated without delay.

"(b) PURPOSES.—The purpose of this title is to reduce the adverse effects of acid deposition through reductions in annual emissions of sulfur dioxide of approximately 10,000,000 tons from 1980 emission levels, and reductions in annual emissions of oxides of nitrogen of approximately 2,500,000 tons relative to their levels in the year 2000, in the 48 contiguous States and the District of Columbia, while providing for the continued use of all fossil fuels for electric generation and ensuring electric reliability. It is also the purpose of this title to encourage energy conservation and the use of renewable resources and to encourage pollution prevention as a long range strategy, consistent with the provisions of this title, for reducing air pollution and other adverse impacts of energy production and use and, to the greatest extent possible, to prevent or mitigate potential losses or shifts in employment and other socioeconomic impacts caused by such reductions and prevention.

"(c) COVERAGE.—This title shall apply only in the 48 contiguous States and the District of Columbia.

"SEC. 502. DEFINITIONS; DATA.

"(a) DEFINITIONS.—As used in this title—

"(1) AFFECTED SOURCE.—The term 'affected source' means a source that includes one or more affected units.

"(2) UNIT.—The term 'unit' means a fossil fuel-fired steam production device such as a boiler or furnace used to combust fuel to produce steam.

"(3) AFFECTED UNIT.—The term 'affected unit' means a unit for which annual allowances are allocated under this title.

"(4) ELECTRIC UTILITY STEAM GENERATING UNIT.—The term 'electric utility steam generating unit' has the meaning provided by section 112(a)(4), except that such term does not include any qualifying small power production facility or qualifying cogeneration facility (within the meaning of section 3(17)(C) or 3(18)(B) of the Federal Power Act) (A) that sells power pursuant to a long-term contract to supply electricity executed on or before December 31, 1989, or (B) with respect to which a State regulatory authority issued an order on or before December 31, 1989, directing the purchasing utility to execute such a contract with such a facility.

"(5) EXISTING ELECTRIC UTILITY STEAM GENERATING UNIT.—The term 'existing electric utility steam generating unit' means an electric utility steam generating unit that commenced commercial operation before the date of the enactment of the Clean Air Act Amendments of 1990. Any such unit which is modified, reconstructed or repowered after such date shall continue to be an existing electric utility steam generating unit for purposes of this title.

"(6) NEW ELECTRIC UTILITY STEAM GENERATING UNIT.—The term 'new electric utility steam generating unit' means any electric utility steam generating unit which is not an existing electric utility steam generating unit.

"(7) ALLOWANCE.—The term 'allowance' means an authorization, as described in section 503(f), issued by the Administrator under this title, to emit, during any single calendar year, a ton of sulfur dioxide (or nitrogen oxides in the case of nitrogen oxide allowances issued under section 509).

"(8) BASELINE.—Except as otherwise provided in this title, the term 'baseline' means the annual quantity of fossil fuel consumed, measured in millions of British thermal units ('mmBtu'), calculated as follows:

"(A) For each electric utility steam generating unit in commercial operation before January 1, 1985, the baseline shall be the average annual quantity of fuel (in mmBtu) consumed during calendar years 1985, 1986, and 1987, as recorded pursuant to Department of Energy Form 767. For any unit for which these forms were not filed, the baseline shall be the annual fuel consumption level specified for that unit in the 1985 National Acid Precipitation Assessment Program (NAPAP) Emissions Inventory, Version 2 (including where applicable, the National Utility Reference File (NURF)). The Administrator shall exclude periods during which a unit is shut down for a continuous period of 4 months or longer, and make appropriate adjustments under this paragraph. Upon petition of the owner or operator of any unit, the Administrator may make appropriate baseline adjustments for accidents that caused prolonged outages.

"(B) For each existing electric utility steam generating unit that commenced commercial operation on or after January 1, 1985, the baseline shall be the unit's average annual fuel consumption (in mmBtu) at a 65 percent capacity factor, except that upon petition of the owner or operator, the Administrator may establish as the baseline for any such unit—

"(i) the annual average fuel consumption (in mmBtu) for the first 3 full consecutive

calendar years beginning after the unit commenced commercial operation, or

"(ii) if it is not feasible to use such 3-calendar year period, the unit's annual average fuel consumption (in mmBtu) for a representative calendar year after 1985, as calculated pursuant to a method which the Administrator shall, by regulation, prescribe.

"(C) For any other unit, the baseline shall be the average annual quantity of fuel consumed (in mmBtu) by that unit, as established by the Administrator by rule.

"(9) COMPLIANCE PLAN.—The term 'compliance plan' means the compliance plan required under title IV.

"(10) CONTINUOUS EMISSION MONITORING SYSTEM.—The terms 'continuous emission monitoring system' and 'CEMS' mean the equipment used to sample, measure, analyze, and provide, on a continuous basis, a permanent record of emissions and flow (expressed in pounds per million British thermal units (lbs./mmBtu), pounds per hour (lbs./hr.)), or such other items as the Administrator may, by rule, prescribe under section 511(a).

"(11) FIRST AND SECOND PHASE.—The term 'First Phase' means the period after December 31, 1995, and before January 1, 2001, and the term 'Second Phase' means the period beginning January 1, 2001.

"(12) PERMITTING AUTHORITY.—The term 'permitting authority' has the meaning given that term in title IV.

"(13) CLEAN COAL TECHNOLOGY.—The term 'clean coal technology' means any technology, including any technology applied at the precombustion, combustion, or postcombustion stage, at a new or existing electric utility steam generating unit which will achieve significant reductions in air emissions of any pollutant or pollutants associated with the utilization of coal in the generation of electricity, process steam, or industrial products, which is not in widespread use as of the date of the enactment of the Clean Air Act Amendments of 1990.

"(14) REPOWERING.—The term 'repowering' means replacement of an existing coal-fired boiler with one of the following clean coal technologies: atmospheric or pressurized fluidized bed combustion, integrated gasification combined cycle, magnetohydrodynamics, direct and indirect coal-fired turbines, integrated gasification fuel cells, or a derivative of one or more of these technologies, or any other technology capable of controlling multiple combustion emissions simultaneously with improved boiler or generation efficiency and of achieving significantly greater waste reduction relative to the performance of technology in widespread commercial use as of the date of the enactment of the Clean Air Act Amendments of 1990, as determined by the Administrator, in consultation with the Secretary of Energy.

"(15) STATE.—The term 'State' means one of the 48 contiguous States or the District of Columbia.

"(16) ACTUAL 1985 EMISSION RATE.—For any unit, the term 'actual 1985 emission rate' means the lesser of the rate described in subparagraph (A) or (B), expressed in lbs./mmBtu—

"(A) The unit's average emission rate for sulfur dioxide or oxides of nitrogen for the calendar year 1985 as reported in the National Acid Precipitation Assessment Program (NAPAP) Emissions Inventory, Version 2 (National Utility Reference File (NURF), if applicable).

"(B) The emission rate (if any) applicable to the unit under the applicable implementation plan for the calendar year 1985, based on documentation in existence before January 1, 1990.

In the case of an existing unit that was not in commercial operation in calendar year 1985, the term 'actual 1985 emissions rate' means the unit's emissions rate for a representative calendar year after 1985, as determined by the Administrator. The Administrator shall select the representative calendar year to be used for such purposes within 1 year after the enactment of the Clean Air Act Amendments of 1990.

"(b) CORRECTION OF DATA.—The Administrator shall, upon application or on the Administrator's own motion, by December 31, 1991, correct any factual errors in data from which affected Second Phase units' baselines or actual 1985 emission rates have been calculated. Corrected data shall be used for purposes of issuing allowances under this title. The failure of the Administrator to correct any alleged factual error in such reports shall not be subject to judicial review.

"SEC. 503. ALLOWANCE PROGRAM.

"(a) ALLOCATION OF ANNUAL ALLOWANCES FOR EXISTING UNITS.—The Administrator shall allocate annual allowances to the owner or operator of the affected units at an affected source in the annual amounts calculated under this title. First Phase allowances may not be allocated or issued for the Second Phase. Nothing in the preceding sentence shall be construed to prohibit the banking of unused First Phase allowances to be carried forward and added to allowances allocated in subsequent years, including years in the Second Phase. Except as provided in section 508(d) and 509, the removal of an existing affected unit or source from commercial operation at any time after the date of the enactment of the Clean Air Act Amendments of 1990 (whether before or after commencement of the First Phase or Second Phase) shall not terminate or otherwise affect the allocation of allowances for the First Phase or for the Second Phase to which the unit is entitled. Allowances shall be allocated and issued by the Administrator without cost to the recipient.

"(b) EPA ALLOWANCE SYSTEM REGULATIONS.—

"(1) IN GENERAL.—(A) Not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate such regulations under this section as may be necessary to implement the allowance system established under this section.

"(B) The regulations under this section shall ensure that (i) allowances are issued and allocated in a timely manner, (ii) the allowance system functions effectively, efficiently, and competitively and without discrimination, (iii) allowances are reasonably transferable temporarily or permanently by purchase, lease, or otherwise, and (iv) allowances are not used to impede access to, or competition for, electric energy in any market.

"(C) The regulations under this section shall otherwise protect the integrity and value of such allowances and of the allowance system from fraud or misuse.

"(D) The regulations under this section shall be consistent with requirements for electric utility reliability, including central dispatch and the need to meet or cope with emergencies of any kind, and shall govern the issuance, transfer, holding, use, and banking of all allowances.

"(E) The regulations under this section shall provide that the allowances issued under this title may be transferred among the owners or operators of affected sources and other persons, including a multistate electric utility and new independent power producer units. Such regulations shall permit the transfer of the right to receive allowances prior to the issuance of such allowances. Such regulations shall permit transfers, including transfers by auction or through the mechanism of a reserve, only within each of the 2 major geographic regions of the country as defined by the Administrator in such regulations, except as provided in subsection (e) in the case of new units, and except that an owner or operator, as of the date of enactment of the Clean Air Act Amendments of 1990, of 2 or more affected units may transfer allowances among such units, irrespective of regional boundaries.

"(2) REVIEW AND REVISION.—The Administrator shall review the allowance program established under this section, and the regulations implementing such program, at intervals of at least every 4 years after promulgation of such regulations and shall make the results of such review public. Based on such review, the Administrator shall amend such regulations to the extent necessary, consistent with the purposes and provisions of this title.

"(3) CONSULTATION.—In the development and promulgation of regulations under this section and in the administration of the allowance program established under this section, the Administrator shall consult with, and utilize the expertise of, the Secretary of Energy and the Federal Energy Regulatory Commission. In the case of State regulated electric utilities, the Administrator shall also consult with, and obtain the advice of, the applicable electric utility ratemaking authority of the State. The Administrator shall also consult with, and obtain the advice of, representatives of regulated and nonregulated electric utilities. The Administrator shall also consult with the interested public. The Administrator shall particularly consult with the Commission and such ratemaking authorities concerning issues of operation and ownership of affected units under applicable laws, tariffs, regulations, and contractual arrangements to ensure that the allowances are properly issued and recorded and that the allowance system functions as provided by paragraph (1).

"(4) MULTIPLE OWNERSHIP.—(A) The Administrator shall include in the regulations under this section requirements under this paragraph regarding the issuance of allowances for an affected unit where the affected unit is owned by more than one person. Such regulations shall require that, unless the owners of the unit otherwise provide by contract, allowances for the affected unit shall be issued to each person owning a share in the unit in proportion to the ownership shares.

"(B) The regulations under this paragraph shall also require that, unless the owners of the unit otherwise provide by contract, whenever any owner is required by contract to contribute to the costs of control of emissions at the unit and the level of emissions control at such unit makes allowances issued to such unit available for transfer, the owners required to contribute to such costs of control shall share such transferable allowances in proportion to each owner's contribution to such costs.

"(C) The regulations under this paragraph shall also provide, for the purpose of this section, that—

"(i) the term 'owner' shall include the holder of a leasehold interest in an affected unit or any part thereof and shall not in-

clude a passive lessor, or a person who has an equitable interest through such passive lessor, whose rental payments are not based directly or indirectly upon the revenues or income from the affected unit; and

"(ii) where a utility purchases power from an affected unit under a life-of-the-unit, firm power contractual arrangement, such utility shall be considered an owner in proportion to its contractual share.

For the purposes of clause (ii) of this subparagraph, the term 'life-of-the-unit, firm power contractual arrangement' means a contractual arrangement under which a utility receives a specified amount or percentage of capacity and associated energy generated by a specified generating unit (or units) and pays its proportional amount of such unit's total costs for the life of the unit.

"(c) INTERPOLLUTANT TRADING.—The regulations under subsection (b) shall provide, subject to any applicable restrictions pursuant to section 520, for trading and banking of allowances for sulfur dioxide and oxides of nitrogen, including the establishment of a baseline under section 509 for emissions of oxides of nitrogen. Such regulations shall provide that, for trading purposes, 1.5 pounds of oxides of nitrogen shall be equivalent to 1.0 pound of sulfur dioxide. Interpollutant trades of allowances for use in areas failing to meet the applicable national primary ambient air quality standard for ozone, nitrogen dioxide, sulfur dioxide, or PM-10 shall be subject to approval by the Administrator in accordance with such regulations.

"(d) ALLOWANCE TRACKING SYSTEM.—(1) The Administrator shall establish a system for issuing, recording, and tracking allowances under this title, and shall specify by regulation, promulgated as provided in subsection (b), the procedures and requirements for that system.

"(2) All allowance allocations and transfers shall, upon recordation by the Administrator, be deemed a part of each unit's permit for purposes of section 507.

"(3) The Administrator shall take such steps as may be necessary to ensure that allowance transfers are recorded within 14 working days after receipt of a properly certified notice of such transfer and that persons receiving or transferring allowances file accurate annual reports regarding such transactions and that persons holding allowances during any year file accurate annual reports regarding the number of such allowances held. Transfers of allowances shall not be effective until written certification of the transfer on a proper form (signed by a responsible official of each party to the transfer) is received and recorded by the Administrator. All such transfers shall be consistent with the purposes and requirements of this title and shall not result in emissions of sulfur dioxide (or, if applicable, nitrogen oxides) in any year in excess of the total number of allowances authorizing such emissions in that year, including allowances carried forward from previous years.

"(4) In order to insure electric reliability, such regulations shall not prohibit or affect temporary increases and decreases in emissions within utility systems or power pools that result from their operations, including emergencies and central dispatch, and such temporary emissions increases and decreases shall not require transfer of allowances among units nor shall it require recordation. Notwithstanding the preceding sentence, the total tonnage of emissions in any calendar year (calculated at the end thereof) from each unit involved shall not exceed the allowances allocated to the unit for the calendar year concerned and issued to the owner or operator of the unit for that year, plus or minus allowances transferred to or from the unit for such calendar year or carried forward to that year from prior years.

"(5) Regulations under this section shall provide, consistent with the purposes of this title, for the identification of unused allowances and for such unused allowances to be carried forward and added to allowances allocated in subsequent years.

"(6) No allowance allocated to any unit for a subsequent year may be carried backward and added to allowances in an earlier year.

"(7) The provisions of section 1001 of title 18 of the United States Code shall apply to reports under this section and to the recordation of allowance transactions and holdings under this section.

"(e) NEW ELECTRIC UTILITY STEAM GENERATING UNITS.—In the Second Phase, the owner or operator of each new electric utility steam generating unit must hold allowances equal to the annual tonnage of sulfur dioxide emitted by the unit. Notwithstanding the geographic limitations referred to in subsection (b), such new units may obtain allowances from any person, consistent with the regulations issued under this section.

"(f) NATURE OF ALLOWANCES.—An allowance issued under this title is a limited authorization to emit sulfur dioxide or nitrogen oxides in accordance with the provisions of this title. Nothing in this title or in any other provision of law shall be construed to limit the authority of the United States to terminate or limit such authorization by Act of Congress. Consistent with section 512, nothing in this section relating to allowances shall be construed as affecting the application of, or compliance with, any other provision of this Act to an affected unit or source, including the provisions related to applicable National Ambient Air Quality Standards and State implementation plans. Allowances under this title may not be extinguished by the Administrator. Nothing in this section shall be construed as requiring a change of any kind in any State law regulating electric utility rates and charges or affecting any State law regarding such State regulation or as limiting State regulation (including any prudency review) under such a State law. Nothing in this section shall be construed as modifying the Federal Power Act or as affecting the authority of the Federal Energy Regulatory Commission under that Act. Nothing in this title shall be construed to interfere with or impair any program for competitive bidding for power supply in a State in which such program is established. Allowances, once issued to a person by the Administrator, may be received, held, and temporarily or permanently transferred in accordance with this title and the regulations of the Administrator without regard to whether or not a permit is in effect under title IV or section 507 with respect to the unit for which such allowance was originally issued and recorded. Each permit under this title and each permit issued under title IV for any affected unit shall provide that the affected unit may not emit an annual tonnage of sulfur dioxide in excess of the allowances allocated to that unit for the year concerned and issued to the owner or operator of the unit for that year, plus or minus the allowances transferred to or from the unit for that year or carried forward to that year from prior years. Nothing in title IV or section 507 shall be construed as affecting any allowances issued in accordance with this title or as authorizing a permitting authority to establish, in issuing a permit, conditions affecting allowances issued under this title.

"(g) PROHIBITION.—It shall be unlawful for any person to hold or transfer any allowance issued under this title, except in accordance with regulations issued by the Administrator.

"(h) ISSUANCE.—The Administrator shall issue First Phase allowances under this title promptly following the promulgation of regulations under this section. The Administrator shall issue Second Phase allowances under this title promptly following publication of the list and the making of any required adjustments under subsection (i), but no later than 6 months after publication of the final list under subsection (i).

"(i) 8,900,000 TONS OF SECOND PHASE ALLOWANCES.—

"(1) LIST OF ALLOWANCES TO BE ISSUED.—The Administrator shall publish, not later than December 31, 1991, but before issuing Second Phase allowances, a proposed list of all Second Phase allowances to be allocated and issued under this section based on this title (other than section 509). After notice and opportunity for public comment on such proposed list, but no later than December 31, 1995, the Administrator shall publish the final list of all Second Phase allowances.

"(2) 3,980,000 TONS FOR CLEAN UNITS AND SMALL UNITS.—If the Administrator determines that the total of Second Phase allowances to be issued under this title (other than under section 509) to units with an actual 1985 emissions rate below 1.2 lbs/mmBtu and to units with a nameplate capacity below 75 Mwe would be more or less than 3,980,000 tons per year, the Administrator shall adjust the number of allowances to be issued under this title for the Second Phase to those units to ensure that such tonnage will equal 3,980,000 tons per year. The Administrator shall reallocate any reduction or increase in allowances to each such affected unit on the basis of the ratio which the allowances which (but for the preceding sentence) would be issued to such unit bears to the total allowances which (but for the preceding sentence) would be issued to all of such units.

"(3) 4,920,000 TONS FOR LARGE UNITS EMITTING AT 1.2 OR ABOVE.—If the Administrator determines that the total tonnage of Second Phase allowances to be issued under this title (other than section 509) to units with an actual 1985 emissions rate of 1.2 lbs/mmBtu or greater and a nameplate capacity of 75 Mwe or greater would be more or less than 4,920,000 tons per year, the Administrator shall adjust the allowances to be issued under this title for the Second Phase to those units to ensure that such allowances will equal 4,920,000 tons per year. The Administrator shall reallocate any reduction or increase in allowances to each such affected unit on the basis of the ratio which the tonnage of allowances which (but for the preceding sentence) would be issued to such unit bears to the total allowances which (but for the preceding sentence) would be issued to all of such units.

"(4) TOTAL LIMIT.—In no event shall the Administrator issue Second Phase allowances in excess of 8,900,000 tons per year under this title (other than under section 509).

"(5) DEDUCTION AND RESERVE TO COMPENSATE FOR INTERRUPTIBLE GAS PROVISIONS.—In order to compensate for potential emissions of sulfur dioxide from interruptible gas units as described in section 505(h), in cal-

culating under this subsection the allowances to be issued under this title (other than section 509), the Administrator shall deduct from the total allowances which would otherwise be issued to all affected units referred to in paragraph (2) for the Second Phase allowances equal to 75,000 tons per year. The Administrator shall credit such allowances to a Reserve for Gas Supply Interruptions. Every 3 years after establishing such reserve the Administrator shall allocate the unused allowances to all affected units referred to in paragraph (2) on a pro rata basis. For purposes of this paragraph, for any such unit, the term 'pro rata basis' means the ratio which the allowances allocated under this title to that unit bears to the allowances allocated under this title to all such units.

"(j) ENERGY CONSERVATION AND RENEWABLE ENERGY.—

"(1) DEFINITIONS.—As used in this subsection:

"(A) The term 'qualified energy conservation measure' means a cost effective measure, as identified by the Administrator in consultation with the Secretary of Energy, that increases the efficiency of the use of electricity provided by an electric utility to its customers.

"(B) The term 'qualified renewable energy' means energy derived from biomass, solar, geothermal, or wind as identified by the Administrator in consultation with the Secretary of Energy.

"(C) The term 'electric utility' means any person, State agency, or Federal agency, which sells electric energy.

"(2) ALLOWANCES FOR EMISSIONS AVOIDED THROUGH ENERGY CONSERVATION AND RENEWABLE ENERGY.—

"(A) IN GENERAL.—The regulations under paragraph (4) of this subsection shall provide that for each ton of sulfur dioxide emissions avoided by an electric utility, during the applicable period, through the use of qualified energy conservation measures or qualified renewable energy, the Administrator shall allocate and issue a single allowance to such electric utility, on a first-come-first-served basis from the Conservation and Renewable Energy Reserve established under subsection (k), to the extent allowances are available for issuance from such Reserve.

"(B) REQUIREMENTS FOR ISSUANCE.—The Administrator shall issue allowances to an electric utility under this subsection only if all of the following requirements are met:

"(i) Such electric utility is paying for the qualified energy conservation measures or qualified renewable energy directly or through purchase from another person.

"(ii) The emissions of sulfur dioxide avoided through the use of qualified energy conservation measures or qualified renewable energy are quantified in accordance with regulations promulgated by the Administrator under this subsection.

"(iii)(I) Such electric utility has adopted and is implementing a least cost energy conservation and electric power plan which evaluates a range of resources, including new power supplies, energy conservation, and renewable energy resources, in order to meet expected future demand at the lowest system cost.

"(II) The qualified energy conservation measures or qualified renewable energy, or both, are consistent with that plan.

"(III) Electric utilities subject to the jurisdiction of a State regulatory authority must have such plan approved by such authority. For electric utilities not subject to the jurisdiction of a State regulatory authority such plan shall be approved by the entity with rate-making authority for such utility.

"(iv) In the case of a State regulated electric utility, the Secretary of Energy certifies that the State regulatory authority with jurisdiction over the electric rates of such electric utility has established rates and charges which ensure that the net income of such electric utility after implementation of specific cost effective energy conservation measures is at least as high as such net income would have been if the energy conservation measures had not been implemented. Upon the date of any such certification by the Secretary of Energy, all allowances which, but for this paragraph, would have been issued under subparagraph (A) before such date, shall be issued to the electric utility.

"(v) Such utility or any subsidiary of the utility's holding company owns or operates at least one affected unit.

"(C) USE OF ALLOWANCES.—The allowances issued under this subsection may be used to authorize emissions only at units owned or operated by an electric utility which is implementing a least cost energy plan meeting the requirements of subparagraph (B)(iii)(I) and approved as provided in subparagraph (B)(iii)(III).

"(D) PERIOD OF APPLICABILITY.—Allowances under this subsection shall be issued only with respect to kilowatt hours of electric energy saved by qualified energy conservation measures or generated by qualified renewable energy after January 1, 1992 and before the earlier of (i) December 31, 2000, or (ii) the date on which any electric utility steam generating unit owned or operated by the electric utility to which the allowances are issued becomes subject to this title (including those sources that elect to become affected by this title, pursuant to section 509).

"(E) DETERMINATION OF AVOIDED EMISSIONS.—

"(i) APPLICATION.—In order to receive allowances under this subsection, an electric utility shall make an application which—

"(I) designates the qualified energy conservation measures implemented and the qualified renewable energy sources used for purposes of avoiding emissions,

"(II) calculates, in accordance with subparagraphs (F) and (G), the number of tons of emissions avoided by reason of the implementation of such measures or the use of such renewable energy sources; and

"(III) demonstrates that the requirements of subparagraph (B) have been met.

Such application for allowances by a State-regulated electric utility shall require approval by the State regulatory authority with jurisdiction over such electric utility. The authority shall review the application for accuracy and compliance with this subsection and the rules under this subsection. Electric utilities whose retail rates are not subject to the jurisdiction of a State regulatory authority shall apply directly to the Administrator for such approval.

"(F) AVOIDED EMISSIONS FROM QUALIFIED ENERGY CONSERVATION MEASURES.—For the purposes of this subsection, the emission tonnage deemed avoided by reason of the implementation of qualified energy conservation measures for any calendar year shall be a tonnage equal to the product of multiplying—

"(i) the kilowatt hours that would otherwise have been supplied by the utility during such year in the absence of such qualified energy conservation measures, by

"(ii) 0.004,

and dividing by 2,000.

"(G) AVOIDED EMISSIONS FROM THE USE OF QUALIFIED RENEWABLE ENERGY.—The emissions tonnage deemed avoided by reason of the use of qualified renewable energy by an electric utility for any calendar year shall be a tonnage equal to the product of multiplying—

"(i) the actual kilowatt hours generated by, or purchased from, qualified renewable energy, by

"(ii) 0.004,

and dividing by 2,000.

"(H) PROHIBITIONS.—(i) No allowances shall be issued under this paragraph for the implementation of programs that are exclusively informational or educational in nature.

"(ii) No allowances shall be issued for energy conservation measures or renewable energy that were operational before January 1, 1992.

"(3) SAVINGS PROVISION.—Nothing in this subsection precludes a State or State regulatory authority from providing additional incentives to utilities to encourage investment in demand-side resources.

"(4) REGULATIONS.—Not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990 and in conjunction with the regulations required to be promulgated under subsections (b) and (c), the Administrator shall, in consultation with the Secretary of Energy, promulgate regulations under this subsection. Such regulations shall list energy conservation measures and renewable energy sources which may be treated as qualified energy conservation measures and qualified renewable energy for purposes of this subsection. Allowances shall only be issued if all requirements of this subsection and the rules promulgated to implement this subsection are complied with. The Administrator shall review the determinations of each State regulatory authority under this subsection to encourage consistency from electric utility to electric utility and from State to State in accordance with the Administrator's rules. The Administrator shall publish the findings of this review no less than annually.

"(k) CONSERVATION AND RENEWABLE ENERGY RESERVE.—The Administrator shall establish a Conservation and Renewable Energy Reserve under this subsection. The reserve shall contain total allowances equal to 400,000 tons which shall be available for issuance following promulgation by the Administrator of regulations under this section, 200,000 tons of which may be used to authorize emissions after January 1, 2001 and the remaining 200,000 tons of which may only be used to authorize emissions after January 1, 2006. The Administrator shall issue allowances which can be used to authorize emissions after January 1, 2001 before issuing allowances which can only be used to authorize emissions after January 1, 2006. In order to establish 300,000 tons of such reserve, the Administrator shall reduce—

"(A) the tonnage specified in subsection (i)(2) by 10,000 tons per year for the first 10 years of the Second Phase, and

"(B) the tonnage specified in subsection (i)(3) by 20,000 tons per year for the first 10 years of the Second Phase.

The remaining 100,000 tons of such 400,000 ton total in the reserve shall be credited to the reserve, without regard to any limitations set forth in subsection (i). If allowances remain in the reserve after January 2, 2011, the Administrator shall allocate and

issue 75 percent of such allowances to Second Phase affected units on a pro rata basis. For purposes of this paragraph, for any Second Phase unit, the term 'pro rata basis' refers to the ratio which the reductions made in such unit's allowances in order to establish the reserve under this paragraph bears to the total of such reductions for all Second Phase units.

"(l) CONTINGENCY GUARANTEE FOR CERTAIN NEW INDEPENDENT POWER PRODUCTION FACILITIES.—

"(1) DEFINITIONS.—For purposes of this subsection—

"(A) The term 'independent power producer' means any person who owns or operates, in whole or in part, one or more new independent power production facilities.

"(B) The term 'new independent power production facility' means a facility that—

"(i) is used for the generation of electric energy, 80 percent or more of which is sold at wholesale;

"(ii) is project-financed (as such term is defined by the Secretary of Energy within 3 months of the date of the enactment of the Clean Air Act Amendments of 1990);

"(iii) does not generate electric energy sold to any affiliate (as defined in section 2(a)(11) of the Public Utility Holding Company Act of 1935) of the facility's owner or operator; and

"(iv) is a new unit required to hold allowances under subsection (e).

"(C) The term 'required allowances' means the allowances required to operate such unit for so much of the unit's useful life as occurs after commencement of the Second Phase.

"(2) ENTITLEMENT TO WRITTEN GUARANTEE.—Any independent power producer that submits an application to the Administrator establishing that such independent power producer—

"(A) proposes to construct a new independent power production facility for which allowances are required under this title;

"(B) will apply for financing to construct such facility after January 1, 1990, and before the date of the early auction under section 519(a);

"(C) has submitted to each owner or operator of an affected unit listed in table A (in section 504) a written offer to purchase the required allowances for $750 per ton; and

"(D) has not received (within 180 days after submitting offers to purchase under subparagraph (C)) an acceptance of the offer to purchase the required allowances

shall, within 30 days after submission of such application, be entitled to receive the Administrator's written guarantee (subject to the eligibility requirements set forth in paragraph (3)) that such required allowances will be made available for purchase from the reserve established under section 519(c) and at a guaranteed price. The guaranteed price at which such allowances shall be made available for purchase shall be $1,500 per ton, adjusted by the percentage, if any, by which the Consumer Price Index (as determined under section 402(b)(3)(B)(v)) for the year in which the allowance is purchased exceeds the Consumer Price Index for the calendar year in which the auction takes place.

"(3) ELIGIBILITY REQUIREMENTS.—The guarantee issued by the Administrator under paragraph (2) shall be subject to a demonstration by the independent power producer, satisfactory to the Administrator, that—

"(A) the independent power producer has—

"(i) submitted a good faith bid in the auction under section 519(a);

"(ii) made good faith efforts (after the auction under section 519(a)) to purchase the required allowances from the owners or operators of affected units to which allowances will be allocated, including efforts to purchase at annual auctions under section 519(b), and from industrial sources that have volunteered to become affected units pursuant to section 509; and

"(iii) such bids and efforts were unsuccessful in obtaining the required allowances; and

"(B) the independent power producer will continue to make good faith efforts to purchase the required allowances from the owners or operators of affected units and from industrial sources.

"(4) ISSUANCE OF GUARANTEED ALLOWANCES FROM RESERVE UNDER SECTION 519(c).—From the reserve established under section 519(c)(2), upon payment of the guaranteed price, the Administrator shall issue to any person exercising the right to purchase allowances pursuant to a guarantee under this subsection the allowances covered by such guarantee. Persons to which guarantees under this subsection have been issued shall have the opportunity to purchase allowances pursuant to such guarantee from such reserve before the allowances in such reserve are offered for sale to any other person.

"(m) INCENTIVE ALLOWANCES FOR EARLY REDUCTIONS.—(1) The Administrator shall promulgate regulations under this subsection within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990. Following promulgation of such regulations, the Administrator shall allocate and issue allowances during the First Phase to the owner or operator of each unit which is a First Phase affected unit if the owner or operator of the unit establishes to the satisfaction of the Administrator that—

"(A) the unit has reduced sulfur dioxide emissions in any year after the such date of enactment, but before the First Phase (hereinafter in this subsection referred to as the 'prior year'),

"(B) such emission reductions are not otherwise required under this Act,

"(C) such emission reductions are obtained solely through the installation or additional use of a technological system of continuous emission reduction which achieves at least a 70 percent reduction from the potential combustion concentration; and

"(D) the unit complies with section 511 (relating to monitoring, reporting, and recordkeeping).

"(2) Each allowance issued as provided in this subsection shall authorize a single ton of sulfur dioxide emissions for a single year during the First or Second Phase. Except as provided below, the tonnage of allowances issued under this subsection for any unit shall be equal to the amount by which (A) the product of the unit's baseline multiplied by the unit's 1985 actual sulfur dioxide emissions rate (in lbs per mm Btu), divided by 2,000 lbs./ton exceeds (B) the unit's actual tonnage of sulfur dioxide emissions for the prior year concerned. No allowances shall be allocated as provided in this subsection for emission reductions resulting from reduced utilization. Allowances may be allocated under this subsection only for emission reductions achieved after the enactment of the Clean Air Act Amendments of 1990 as the result of the installation or additional use of a technological system of continuous reduction meeting the requirements of subparagraph (C) of paragraph (1).

"(n) ALTERNATIVE ALLOWANCE ALLOCATION FOR UNITS IN CERTAIN UTILITY SYSTEMS WITH OPTIONAL BASELINE.—

"(1) OPTIONAL BASELINE FOR UNITS IN CERTAIN SYSTEMS.—In the case of a First Phase unit which (as of the date of the enactment of the Clean Air Act Amendments of 1990)—

"(A) has an emission rate below 1.0 lbs mmBtu,

"(B) has decreased its emissions rate by 60 percent or greater since 1980, and

"(C) is part of a utility system which has a weighted average emission rate for all fossil fueled-fired units below 1.0 lbs/mmBtu,

at the option of the owner or operator of such unit, the unit's baseline may be calculated (i) as provided under section 502(a)(8), or (ii) by utilizing the unit's average annual fuel consumption at a 60 percent capacity factor. Such election shall be made no later than March 1, 1991.

"(2) ALLOWANCE ALLOCATION.—Whenever a unit referred to in paragraph (1) elects to calculate its baseline as provided in clause (ii) of paragraph (1), the Administrator shall allocate allowances to the unit for the First and Second Phase in an amount equal to the baseline selected multiplied by the lower of the average emission rate for such unit in 1989, or 1.0 lbs./mmBtu. Such allowance allocation shall be in lieu of any allocation of allowances under sections 504 and 505. For purposes of applying subsection (i), the units referred to in this subsection shall be treated as units with an actual 1985 emission rate of 1.20 lbs./mmBtu or greater, regardless of the option elected.

"SEC. 504. FIRST PHASE SULFUR DIOXIDE EMISSION REDUCTION PROGRAM.

"(a) FIRST PHASE AFFECTED UNITS.—(1) For the First Phase (beginning December 31, 1995) each unit listed in table A is a First Phase affected unit under this section. Each source that includes one or more of such affected units is an affected source under this section.

*"(2) For the First Phase, each existing electric utility steam generating unit with nameplate capacity of 100 MWe or greater, not included in Table A, that emits sulfur dioxide at an annual rate of 2.50 lbs./mmBtu or greater, for any calendar year after the date of the date of enactment of the Clean Air Act Amendments of 1990 and prior to the Second Phase is also a First Phase affected unit under this section. The Administrator shall promulgate regulations to prevent abuse of this paragraph, which shall*

provide that no unit shall be treated as a First Phase affected unit to which allowances are allocated under section 503 where the Administrator finds that the owner or operator of the unit has increased the unit's emissions rate for any calendar year after such date of enactment for the purpose of becoming a First Phase affected unit under this section eligible to receive such allowances.

"(3) After the commencement of the First Phase, no First Phase affected unit referred to in paragraph (1) or (2) shall emit sulfur dioxide in any calendar year in a tonnage amount which exceeds the annual First Phase allowances allocated for that unit and issued to the owner or operator of the unit, plus or minus the allowances transferred to or from the unit, or carried forward from prior years.

"(b) FIRST PHASE EMISSION TONNAGES.—For each affected unit listed in Table A, for the First Phase, the Administrator shall allocate to the unit and issue to the owner or operator of the unit the annual tonnage of sulfur dioxide allowances specified in Table A, reduced by 6 percent. For each affected unit described in subsection (a)(2), for the First Phase, the Administrator shall allocate to the unit and issue to the owner or operator of the unit annual tonnage of sulfur dioxide allowances equal to the product of such unit's baseline multiplied by an emission rate of 2.35 lbs/mmBtu, divided by 2,000 lbs/ton. The allowances calculated under this section shall apply only during the First Phase. Nothing in this subsection shall be construed to treat any unit which does not emit sulfur dioxide at a rate in excess of 2.50 lbs/mm Btu as a First Phase affected unit.

"(c) AUTHORITY TO SUBSTITUTE UNITS.—The owner or operator of an affected unit under subsection (a) may submit a proposal to substitute for any unit which is an affected unit under this section any other unit or units under the control of the same owner or operator. In order to make such substitution, the owner or operator shall submit an alternative proposal to the Administrator for approval in conjunction with submission of a permit application and compliance plan under section 507(c)(1). Any proposal must include—

"(1) designation of the substitute affected units to which the tonnage amounts under subsection (a) shall apply, in addition to, or in lieu of, the original affected units designated under that subsection;

"(2) specification of the baseline, the actual 1985 sulfur dioxide emission rate, and the authorized annual tonnage amount for the original affected unit;

"(3) calculation of the calendar year 1985 annual tonnage emitted by the substitute units, based on the baseline for each unit, as defined in section 502, multiplied by the unit's actual 1985 emission rate;

"(4) specification of the emission rates, and the annual tonnage amounts that would be applicable to the original and substitute affected units;

"(5) documentation, satisfactory to the Administrator, that the reassigned tonnage amounts will, in total, achieve the same or a greater reduction in emissions than the reduction that would have been achieved by the requirements of subsection (a); and

"(6) such other information as the Administrator may require.

The Administrator shall review and act on any proposal in accordance with subsection (d).

"(d) ADMINISTRATOR'S ACTION ON A PROPOSAL.—(1) The Administrator shall review and approve any proposal meeting the requirements of subsection (c). If a proposal does not meet the requirements of subsection (c), the Administrator shall disapprove it. The Administrator shall act on a proposal within 6 months after receipt of a complete submission.

"(2) For an approved proposal, each substitute unit and source shall be deemed affected under this title and the Administrator shall act on the submission in accordance with section 507(c). The Administrator shall allocate allowances to the affected units in accordance with the approved proposal. For a disapproved proposal, the Administrator shall issue allowances in accordance with subsection (a). The Administrator's action on any proposal submitted under subsection (c) shall not require a hearing or opportunity for public comment, and shall not be subject to judicial review.

"(e) COMPLIANCE EXTENSION FOR CERTAIN SOURCES USING CERTAIN TECHNOLOGICAL MEANS OF EMISSIONS REDUCTION.—No allowances shall be issued or required for calendar year 1996 for any affected unit which uses a technological means of continuous emission reduction (that commences operation after the enactment of the Clean Air Act Amendments of 1990 and achieves at least a 70 percent reduction from the potential combustion concentration) to control sulfur dioxide emissions for purposes of compliance with the requirements of this title during the First Phase. For any such unit, the allowances allocated to the unit for the last 4 years of the First Phase shall be reduced, under rules promulgated by the Administrator, by a total tonnage amount over such 4-year period equal to the amount by which the actual emissions of sulfur dioxide from the unit during the calendar year 1996 exceed the allowances which would (but for this subsection) be allocated to that unit for calendar year 1996. This subsection shall not apply to any unit for which allowances are allocated under subsection (m) (relating to incentive allowances for early reductions).

"(f) TWO FOR ONE ALLOWANCE PROGRAM.—

(1) RESERVE: TOTAL TONNAGE.—The Administrator shall establish a reserve of First Phase allowances to be allocated based on this subsection. The total tonnage of allowances in the reserve shall be equal to 6 percent of the total allowances specified (prior to the 6 percent reduction under section 504(b)) in Table A for the First Phase (other than the allowances specified in such table for the units referred to in section 518, relating to DOE units and any units which are not treated as First Phase affected units by reason of the last sentence of subsection (b)) multiplied by 5.

"(2) ADDITIONAL ALLOWANCES FOR CERTAIN UNITS.—In addition to allowances allocated to units described in this paragraph under other provisions of this section, the Administrator shall allocate First Phase allowances under this paragraph to each First Phase affected unit which—

"(A) uses a technological means of continuous emission reduction (achieving at least a 70 percent reduction from the potential combustion concentration) to control sulfur emissions for purposes of compliance with the requirements of this title during the First Phase, which technological means commences operation after the date of the enactment of the Clean Air Act Amendments of 1990; and

"(B) emits sulfur dioxide during the First Phase at an annual rate of 1.20 lbs/mmBtu or less.

"(3) ADDITIONAL ALLOWANCE ALLOCATIONS.—The tonnage of additional allowances allocated under paragraph (2) to each unit referred to in paragraph (2) shall be equal (to the extent adequate allowances are available in the reserve referred to in paragraph (1)) to the amount by which (A) the product of 1.2 lbs/mmBtu multiplied by the unit's baseline, divided by 2,000, exceeds (B) the projected actual annual tonnage emitted by the unit during the First Phase, as determined by the Administrator under regulations promulgated by the Administrator. Such regulations shall insure that such allowances are allocated equitably among the units referred to in paragraph (2) and that the projected emission reductions are achieved by the units to which such allowances are issued. If allowances remain in the reserve at the end of the First Phase, such remaining allowances shall be allocated and issued to all First Phase affected units on a pro rata basis. For purposes of the preceding sentence, for any First Phase unit, the term 'pro rata basis' refers to the ratio which the First Phase allowances allocated to that unit under this title (determined without regard to this subsection) bears to the total of all First Phase allowances allocated to all First Phase units under this title (determined without regard to this subsection).

"SEC. 505. SECOND PHASE SULFUR DIOXIDE EMISSIONS REDUCTION PROGRAM.

"(a) SECOND PHASE AFFECTED UNITS.—(1) During the Second Phase each unit for which an annual tonnage of Second Phase allowances is allocated as provided in this section shall be a Second Phase affected unit under this section. Each source that includes one or more Second Phase affected units under this section shall be an affected source for the Second Phase.

"(2) During the Second Phase, no Second Phase affected unit shall emit sulfur dioxide in an annual tonnage amount which exceeds the Second Phase allowances allocated for that unit and issued to the owner or operator of the unit under section 503, plus or minus the allowances transferred to or from the unit, or carried forward from prior years.

"(b) ELECTRIC UTILITY STEAM GENERATING UNITS 75 MWE OR ABOVE EMITTING 1.20 LBS MMBTU OR ABOVE.—For each year during the Second Phase, the Administrator shall allocate and issue allowances under section 503 for each existing electric utility steam generating unit with a nameplate capacity of 75 MWe or greater and an actual 1985 emissions rate of 1.20 lbs/mmBtu or greater (as certified by the owner or operator thereof) in an amount equal to the product of the unit's baseline, multiplied by an emissions rate equal to 1.20 lbs/mmBtu, divided by 2,000 lbs/ton.

"(c) ELECTRIC UTILITY STEAM GENERATING UNITS BELOW 75 MWE EMITTING 1.20 LBS MMBTU OR ABOVE.—

"(1) IN GENERAL.—For each year during the Second Phase, the Administrator shall allocate and issue allowances under section 503 for each existing electric utility steam generating unit with a nameplate capacity below 75 MWe and an actual 1985 emissions rate of 1.20 lbs/MMBtu or greater in accordance with the same rules as are applicable under subsection (b), except as otherwise provided in this subsection.

"(2) ELECTION FOR SMALL SYSTEMS.—(A) If a unit referred to in paragraph (1) is owned by an electric utility with, as of December 31, 1989, a total steam electric generating capacity of 500 megawatts or less, the owner

*or operator of the unit may make an election to be covered by this paragraph for the period January 1, 2001 to December 31, 2010 (or for such shorter period as adequate allowances are available in the Small System Account established under this paragraph). Such election shall be made by January 1, 1997, and may be revoked at any time after that date. During the period that any such election is in effect, the unit may emit sulfur dioxide in excess of the allowances allocated to the unit under paragraph (1) if the unit does not exceed an annual emissions rate equal to the unit's 1985 annual average emissions rate. The allowances allocated to the unit pursuant to paragraph (1) for such 10-year period shall be treated as used by the unit and may not be transferred or banked for as long as the election remains in effect.*

*"(B) No later than January 1, 1998, and before January 1 of each successive year through 2009, for each unit for which an election is in effect under this paragraph, the Administrator shall forecast or calculate, as appropriate, the annual tonnage of sulfur dioxide emissions from the unit in excess of the allowances allocated for that unit under paragraph (1). Such excess shall hereinafter in this paragraph be referred to as the 'excess tonnage'. Allowances equal to the excess tonnage shall be deducted from the Small System Account established under subparagraph (D) of this paragraph. On each of the dates referred to in the preceding sentence, the Administrator shall issue a public report specifying the number of allowances to be deducted from the Small System Account for units for which an election is in effect under this paragraph, the number of allowances previously deducted from the Account, the number of allowances remaining available in the Account, and the projected period for which allowances will be available in the Account under this paragraph.*

*"(C)(i) The Administrator is authorized, on petition of an owner or operator of a unit with a nameplate capacity below 75 Mwe that is part of an electric utility system as described to clause (ii) that is particularly well controlled and primarily dependent on units with a nameplate capacity below 75 Mwe, to treat any such unit as a unit owned by a utility referred to in subparagraph (A) for purposes of participation in the Small System Account so long as such units do not exceed a 2.5 lb/mmBtu emission rate for sulfur dioxide.*

*"(ii) The electric utility system referred to in clause (i) is any system (I) which, as of the date of the enactment of the Clean Air Act Amendments of 1990, had at least 20 percent of its fossil-fuel capacity controlled by flue gas desulfurization devices, (II) which has more than 10 percent of its fossil-fuel capacity consisting of coal-fired units of less than 75 Mwe, and (III) which has no large units (greater than 400 Mwe) with easy or modest FGD Retrofit Cost Factors (according to the Emissions and the FGD Retrofit Feasibility at the 200 Top Emitting Generating Stations, prepared for the United States Environmental Protection Agency on January 10, 1986).*

*"(D) For purposes of this paragraph, the Administrator shall establish a Small System Account which shall contain (prior to any deductions under this paragraph) total allowances equal to the difference between—*

*"(i) 2.5 lbs/mmBtu multiplied by the baseline of each of the units subject to section 518 (relating to DOE units), and*

*"(ii) 0.4 lbs/mmBtu multiplied by the baseline of each of such units,*

*multiplied by 5 and divided by 2,000 lbs per ton.*

*"(d) ELECTRIC UTILITY STEAM GENERATING UNITS EMITTING BELOW 1.20 LBS/MMBTU IN 1985.—*

*"(1) IN GENERAL.—Except as otherwise provided in this subsection, for each year during the Second Phase the Administrator shall allocate and issue allowances under section 503 for each existing electric utility steam generating unit with an actual 1985 sulfur dioxide emission rate below 1.20 lbs/mmBtu in an annual amount equal to the product of the unit's baseline multiplied by the unit's 1985 actual emissions rate, divided by 2,000 lbs/ton, unless the owner or operator of the unit elects an alternative allowance amount under subsection (e). Such election and any other election under subsection (e), shall be made no later than March 1, 1991.*

*"(2) 100 PERCENT GAS UNITS.—Allowances shall not be required during the Second Phase for, and the Administrator shall not allocate or issue Second Phase allowances for, an electric utility steam generating unit with an actual 1985 sulfur dioxide emission rate below 0.20 lbs/mmBtu which burns only natural gas as a fuel and which burned only natural gas as a fuel during the calendar years 1985 through 1987. If a unit covered by this paragraph exceeds any fuel or emissions requirement set forth in this subsection, this subsection shall not apply and the unit shall be treated as a new electric utility steam generating unit required to obtain allowances under this title.*

*"(3) CERTAIN ULTRA CLEAN UNITS WITH LOW CAPACITY FACTORS IN 1985.—For the purposes of this section, in the case of any unit operated by a utility that furnishes electricity, electric energy, steam, and natural gas within an area consisting of a city and 1 contiguous county, and in the case of any unit owned by a State authority, the output of which unit is furnished within that same area consisting of a city and 1 contiguous county, the Administrator shall allocate and issue under section 503 from the reserve under paragraph (5), to the extent allowances are available in such reserve, in addition to the allowances otherwise allocated to such units under this section, 7,000 allowances to the utility and 2,000 allowances to the State authority. Such allowances shall be hereinafter referred to in this subsection as 'additional allowances'.*

*"(4) UNITS WHICH CONVERTED TO COAL.—For each year during the Second Phase, the Administrator shall allocate and issue under section 503 from the reserve under paragraph (5), to the extent allowances are available in such reserve, allowances for each existing utility unit located east of the Mississippi that has completed conversion from predominantly gas fired operation to coal fired operation between January 1, 1985, and December 31, 1987, for which there has been issued a proposed or final prohibition order pursuant to section 301(b) of the Powerplant and Industrial Fuel Use Act of 1978 (42 U.S.C. 8301 et seq., repealed 1987) in an annual amount equal to the product of the unit's annual fuel consumption, on a Btu basis, at a 65 percent capacity factor multiplied by the lesser of 1.20 lbs/mmBtu or the unit's allowable sulfur dioxide emissions rate, divided by 2,000 lbs/ton, unless the owner or operator of such unit has obtained allowances equal to its actual emissions. Allowances allocated and issued under this paragraph to any such unit that are additional to the allowances which would otherwise be issued to the unit under this section shall be hereinafter in this subsection referred to as 'additional allowances'.*

*"(5) SPECIAL RESERVE FOR ADDITIONAL ALLOWANCES UNDER PARAGRAPHS (3) AND (4).—For purposes of allocating and issuing the additional allowances referred to in paragraphs (3) and (4), the Administrator shall reserve from the allowances allocated and issued during the Second Phase to units referred to in section 503(i)(3) allowances equal to 13,300 tons per year. For purposes of adjusting the allowances issued under this Act pursuant to section 503(i)—*

*"(A) the additional allowances allocated and issued to any unit under paragraph (3) and (4) shall be treated as allowances for units referred to in section 503(i)(3) and shall not be treated as allowances for units referred to in section 503(i)(2), but*

*"(B) such additional allowances shall not be subject to adjustment and reallocation under section 503(i).*

*Nothing in the preceding sentence shall be construed to affect the application of section 503(i) or any other provision of this title to allowances allocated and issued to units referred to in paragraph (3) or (4) which are not additional allowances within the meaning of paragraph (3) or (4).*

*"(e) ELECTION FOR CERTAIN UNITS EMITTING BELOW 1.20 LBS/MMBTU—*

*"(1) COAL UNITS EMITTING 0.6 OR LESS.—For the Second Phase, at the election of the owner or operator of an existing electric utility steam generating unit which is a coal-fired unit with an actual 1985 sulfur dioxide emission rate of 0.60 lbs/mmBtu or less, the Administrator shall allocate and issue allowances under section 503 to the unit in an annual amount equal to the product of the rate computed under subparagraph (A) multiplied by the fuel consumption computed under subparagraph (B), divided by 2,000 lbs/ton.*

*"(A) The rate computed under this paragraph shall be the most stringent of:*

*"(i) 0.60 lbs/mmBtu, or*

*"(ii) the most stringent emission rate (if any) (in lbs/mmBtu) applicable to the unit under the applicable implementation plan, as in effect on December 31, 1989, based on documentation in existence before January 1, 1990.*

*"(B) The fuel consumption computed under this subparagraph shall be one of the following (as elected by the owner or operator):*

*"(i) the unit's fuel consumption at a 60 percent capacity factor, or*

*"(ii) the unit's baseline multiplied by 120 percent.*

*An election to use either clause (i) or (ii) for purposes of this subparagraph for any unit owned by any owner or operator shall apply with respect to all other units owned or operated by the owner or operator which are subject to this paragraph.*

*"(2) COAL UNITS EMITTING 0.6 TO 1.2.—During the Second Phase, at the election of the owner or operator of an existing electric utility steam generating unit which is a coal-fired unit with an actual 1985 sulfur dioxide emission rate greater than 0.6 lbs/mmBtu (but less than 1.2 lbs/mmBtu), the Administrator shall allocate and issue allowances under section 503 to the unit in an annual amount equal to the product of the unit's 1985 actual emissions rate, multiplied by one of the following (as elected by the owner or operator), divided by 2,000 lbs/ton:*

*"(A) the unit's fuel consumption at a 60 percent capacity factor, or*

"(B) the unit's baseline multiplied by 120 percent.

An election to use either subparagraph (A) or (B) for purposes of this paragraph for any unit owned by any owner or operator shall apply with respect to all other units which are owned or operated by that owner or operator and which are subject to this paragraph.

"(3) CERTAIN OIL OR GAS UNITS EMITTING 0.6 OR LESS.—During the Second Phase, at the election of the owner or operator of an existing electric utility steam generating unit which is an oil- or gas-fired unit with an actual 1985 sulfur dioxide emission rate of 0.6 lbs/mmBtu or less, the Administrator shall allocate and issue allowances under section 503 to the unit in an annual amount equal to the product of 120 percent of the unit's baseline multiplied by the most stringent of the following, and divided by 2,000 lbs/ton:

"(A) 0.6 lbs/mmBtu.

"(B) The most stringent emission rate for fuel oil, if any, in lbs/mmBtu applicable to the unit under the applicable implementation plan in effect on December 31, 1989, based on documentation in existence before January 1, 1990.

No unit which burned as its fuel during the period 1980 through 1989 on average more than 90 percent natural gas may elect to have allowances allocated and issued as provided in this paragraph.

"(4) OIL OR GAS UNITS EMITTING 0.6 TO 1.2.—During the Second Phase, at the election of the owner or operator of an existing electric utility steam generating unit which is an oil- or gas-fired unit with an actual 1985 sulfur dioxide emission rate greater than 0.6 lbs/mmBtu (but less than 1.2 lbs/mmBtu), the Administrator shall allocate and issue allowances under section 503 to the unit in an annual amount equal to the product of 120 percent of the unit's baseline, multiplied by the unit's actual 1985 emissions rate, divided by 2,000 lbs/ton.

"(f) CERTAIN UNITS TREATED AS EXISTING UNITS.—For the Second Phase, the Administrator shall allocate and issue allowances under section 503 to each electric utility steam generating unit which is listed in Table B of this subsection in an annual amount equal to the amount specified in Table B.

TABLE B

| Unit | Allowances |
|---|---|
| Brandon Shores | 8,907 |
| Miller 4 | 9,197 |
| TNP One 2 | 2,507 |
| Zimmer 1 | 18,458 |
| Spruce 1 | 7,647 |
| Clover 1 | 2,796 |
| Clover 2 | 2,796 |
| TNP One 3 | 2,506 |
| Twin Oak 1 | 9,158 |
| Cross 1 | 6,401 |
| TNP One 4 | 2,506 |

For purposes of making adjustments under section 503(i), the units referred to in this subsection shall be treated as units described in section 503(i)(3). No allowances shall be allocated under this subsection to a unit listed in Table B that fails to commence commercial operation before December 31, 1995.

"(g) BASELINE FOR CERTAIN UNITS IN STATE EXPERIENCING 25 PERCENT POPULATION GROWTH.—(1) For each existing electric utility steam generating unit in commercial operation before January 1, 1985 and operating in a State which—

"(A) has experienced population growth in excess of 25 percent between 1980 and 1988 (according to State Population and Household Estimates, with Age, Sex, and Components of Change: 1981-1988, issued by the United States Department of Commerce), and

"(B) had an installed electric generation capacity of more than 30,000,000 kw in 1988,

the baseline for purposes of this section shall be the annual average fuel consumption (in mmBtu) during any 3 consecutive calendar years between 1980 and 1989 (as selected by the owner or operator) in lieu of the years otherwise applicable for such purposes under section 502(a)(8). Such election shall be made not later than March 1, 1991.

"(2) The Administrator shall calculate the amount by which annual allowances allocated to the units referred to in paragraph (1) exceeds the amount of annual allowances which would be allocated to such units in the absence of paragraph (1). The amount of such excess allowances (if any) issued to such units shall be adjusted pro rata to ensure that the total of such excess allowances allocated to all such units will equal 40,000. For such purposes, the term 'pro rata' refers to the ratio which the allowances which would be issued to each such unit (without regard to the 40,000 allowance limitation) bears to the allowances which would be issued to all such units (without regard to such 40,000 allowance limitation).

"(3) In order to allocate and issue allowances to the units referred to in paragraph (1), the Administrator shall reserve allowances in the amount of 40,000 each year from the Second Phase allowances withheld under section 519(b).

"(h) INTERRUPTIBLE GAS UNITS.—(1) This subsection shall apply only to electric utility steam generating units which burned as their fuel during the period 1980 through 1989 more than 90 percent natural gas, and which purchase natural gas under an interruptible contract. Each such unit shall be referred to in this subsection as an 'interruptible gas unit'.

"(2) So long as sufficient allowances are available in the Reserve for Gas Supply Interruptions established under section 503(i)(5), the Administrator shall issue to the owner or operator of any interruptible gas unit (and deduct from such reserve) allowances for emissions of sulfur dioxide for any year during the Second Phase at a tonnage level in excess of the allowances otherwise allocated and issued to the unit under this section if each of the following requirements are met:

"(A) The excess emissions referred to in this paragraph are temporary emissions during a period or periods in which natural gas supplies are interrupted (as certified by the owner or operator in such form as the Administrator may require) under—

"(i) an interruptible contract, or

"(ii) State law,

by reason of either weather or other unusual factors not under the control of the owner or operator of the unit. The total of the periods of such interruption in any calendar year may not exceed 25 percent of that calendar year (hereinafter in this paragraph referred to as the 'interruption period').

"(B) During the interruption period, emissions of sulfur dioxide from the unit shall not exceed the lower of—

"(i) 0.5 lbs per million Btu, or

"(ii) the most stringent rate applicable to the unit under the applicable implementation plan.

"(C) The unit burns as its fuel more than 90 percent natural gas during any period other than the interruption period.

"(3) If an interruptible gas unit fails to meet any requirement of this subsection, the owner or operator of the unit shall be required to obtain allowances under this title for the excess emissions referred to in paragraph (2).

"SEC. 506. NITROGEN OXIDES EMISSION REDUCTION PROGRAM.

"(a) PROGRAM.—Emission rate requirements for nitrogen oxides shall be met in the Second Phase by coal-fired electric utility steam generating units with a nameplate capacity of 75 MWe or greater. Emission rate requirements under this section shall not apply to cyclone or wet-bottom boilers unless the Administrator promulgates a rule under subsection (c), and includes in such rule the finding referred to in the last sentence of subsection (c). For cell burners, any such emission rate requirement shall be based on commercially available burner technology.

"(b) $NO_x$ EMISSION RATE LIMITATIONS.—The Administrator shall, by rule, within 3 years after the enactment of the Clean Air Act Amendments of 1990 establish a program under this section and section 111 to reduce total nitrogen oxide emissions by approximately 2,500,000 tons below 1989 projected emissions for calendar year 2000. Pursuant to such program, the Administrator shall establish emission rate limitations under this section, to take effect at the beginning of Second Phase based on the application of low nitrogen oxides burner technology for each type of boiler. In establishing such limitations the Administrator shall take into consideration boiler age and configuration, safety, efficiency, technology, and other relevant factors. In addition, if necessary for purposes of such program, the Administrator shall, consistent with the requirements of section 111, revise new source performance standards under section 111 for emissions of oxides of nitrogen from electric utility steam generating units to insure that such new source performance standards are no less stringent than the emission rate limitations required under this subsection. Any unit subject to an emission rate limitation under this section shall not be an affected unit for nitrogen oxides for purposes of this title, except as provided in section 509.

(c) ADJUSTMENT OF 2,500,000 TON REDUCTION.—The Administrator may promulgate a rule in calendar year 1996 or any time thereafter increasing the tonnage of reductions in oxides of nitrogen required to be achieved under this section from 2,500,000 tons up to not more than 4,000,000 tons if the Administrator finds, in such rule, that such reductions are—

(1) needed either for purposes of reducing acid deposition or for meeting the national primary ambient air quality standard for ozone, and

(2) cost effective, taking into consideration alternative means of reducing such deposition or achieving such standard under this Act, and the practicability of the necessary control technology.

In making any finding under item (1) above, the Administrator shall take into account (A) the reductions in oxides of nitrogen achieved or expected to be achieved under other provisions of this Act and (B) the findings of the study under section 185B. Such rule shall include an explanation of the basis for such findings. To provide such reductions, the Administrator (as part of such rule) may establish or revise new source performance standards under section 111 for nitrogen oxide control. Such rule

shall provide reasonable lead time, taking into consideration safety, costs, technology, and other relevant factors, including the requirements of subsection (b). Any such rule may apply to cyclone or wet-bottom boilers, or both, if the Administrator finds that methods are available for reducing emissions from such boilers that are as cost effective as the application of low nitrogen oxides burner technology in the case of wall-fired or tangentially-fired boilers.

"SEC. 507. PERMITS AND COMPLIANCE PLANS.

"(a) PERMIT PROGRAM.—The provisions of this title shall be implemented, subject to section 503, by permits issued to units subject to this title in accordance with the provisions of title IV, as modified by this title. Any such permit issued by the Administrator, or by a State with an approved permit program, shall prohibit—

"(1) annual emissions of sulfur dioxide or nitrogen oxides (if applicable) in excess of the allowances allocated to that unit for the year concerned and issued to the owner or operator of the unit for that year, plus or minus the allowances transferred to or from the unit for that year or carried forward to that year from prior years;

"(2) exceedances of applicable emissions rates, and

"(3) contravention of any other provision of the permit.

Permits issued to implement this title shall be issued for a period of 5 years, notwithstanding title IV.

"(b) COMPLIANCE PLAN.—Each initial permit application shall be accompanied by a compliance plan for the source to comply with its requirements under this title. Where an affected source consists of more than one affected unit, such plan shall cover all such units, and for purposes of section 402(c), such source shall be considered a 'facility'. Nothing in this section regarding compliance plans or in title IV shall be construed as affecting allowances. The compliance plan shall provide all necessary information on the schedule and means by which the source will achieve compliance with its First or Second Phase requirements, including specification of any additional allowances beyond the initial allocation that will be used to achieve compliance. The Administrator may also require—

"(1) for a source, a demonstration of attainment of national ambient air quality standards, and

"(2) from the owner or operator of two or more affected sources, an integrated compliance plan providing an overall plan for achieving compliance at the affected sources.

"(c) FIRST PHASE PERMITS.—The Administrator shall issue permits to First Phase affected sources under section 504.

"(1) PERMIT APPLICATION AND COMPLIANCE PLAN.—(A) Not later than 27 months after the date of the enactment of the Clean Air Act Amendments of 1990, the owner or operator of each First Phase affected source under section 504 shall submit a permit application and compliance plan for that source in accordance with regulations issued by the Administrator under paragraph (3). The permit application and the compliance plan shall be binding on the owner or operator for purposes of this title and section 402(a), and shall be enforceable in lieu of a permit until a permit is issued by the Administrator for the source.

"(B) In the case of a compliance plan for a First Phase affected source under section 504 for which the owner or operator proposes to meet the requirements of that section by reducing utilization of the unit by 20 percent or more, as compared with the baseline prescribed in section 502(8)(A), or by shutting down the unit, the owner or operator of the unit shall include in the compliance plan a specification of the means to compensate for the reduced output of the affected source, including a specification of (i) any other source of electric energy, (ii) any energy conservation or load management programs, and (iii) any imported energy or the other energy that will provide electrical generation. The affected source, and any unit to be used for such compensating generation, if not otherwise affected under section 504, shall be deemed affected under section 504 and subject to the Phase I requirements of this title, except that allowances shall be allocated to such unit in an amount equal to the product of the unit's baseline multiplied by the unit's actual 1985 emission rate, divided by 2000 lbs/ton.

"(2) EPA ACTION ON COMPLIANCE PLANS.—If the Administrator determines that a proposed compliance plan does not satisfy the requirements of this title or title IV, the plan shall be disapproved within 6 months after receipt of a complete submission. If a plan is disapproved, it may be resubmitted for approval with such changes as the Administrator shall require consistent with the requirements of this title and within such period as the Administrator prescribes as part of such disapproval.

"(3) REGULATIONS; ISSUANCE OF PERMITS.—Not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations, in accordance with title IV, to implement a Federal permit program to issue permits for affected sources under this title. Following promulgation, the Administrator shall issue a permit to implement the requirements of section 504 and the allowances provided under section 503 to the owner or operator of each affected source under section 504. Such a permit shall supersede any permit application and compliance plan submitted under paragraph (1).

"(4) FEES.—During the First Phase, no fee shall be required to be paid under section 402(b)(3) or under section 110(a)(2)(L) with respect to emissions from any unit which is a First Phase affected unit under section 504.

"(d) GOVERNOR'S APPROVAL.—Any owner or operator submitting a First Phase permit application and compliance plan under subsection (c) shall request an approval from the Governor of any State within which the source is located that the application and compliance plan are consistent with State law. Where required by State law, the Governor's approval may preclude the use of coal produced outside the State at the source. The Governor's approval shall be a condition of any permit issued by the Administrator to the source unless the Administrator, within 60 days after receipt, notifies the Governor that the approval is inconsistent with the provisions or purposes of the Act or with other compelling national interest. In the event that the Governor fails or refuses to act on a request for approval within 90 days after receipt of the request, the requirements of this subsection shall be waived with respect to such application and compliance plan.

"(e) SECOND PHASE PERMITS.—(1) To provide for permits for (A) new electric utility steam generating units required under section 503(e) to have allowances, (B) affected units or sources under section 505, and (C) existing coal-fired electric utility steam generating units subject to nitrogen oxide emission reductions under section 506, each State in which one or more such units or sources are located shall submit in accordance with title IV, a permit program for approval as provided by that title. Upon approval of such program, for the units or sources subject to such approved program the Administrator shall suspend the issuance of permits as provided in section 402(e) of title IV.

"(2) The owner or operator of each affected source under section 505 shall submit a permit application and compliance plan for that source to the permitting authority, not later than January 1, 1996.

"(3) Not later than December 31, 1997, each State with an approved permit program shall issue permits to the owners or operators of affected sources under section 505 (Second Phase affected sources) that satisfy the requirements of title IV and this title and that submitted to such State a permit application and compliance plan pursuant to paragraph (2). In the case of a State without an approved permit program by July 1, 1996, the Administrator shall, not later than January 1, 1998, issue a permit to the owner or operator of each such affected source. In the case of affected sources for which applications and plans are timely received under paragraph (2), the permit application and the compliance plan, including amendments thereto, shall be binding on the owner or operator and shall be enforceable as a permit for purposes of this title and section 402(a) until a permit is issued by the permitting authority for the affected source. The provisions of section 558(c) of title V of the United States Code (relating to renewals) shall apply to permits issued by a permitting authority under this title and title IV.

"(4) The permit issued in accordance with this subsection for an affected source shall provide that the affected units at the affected source may not emit an annual tonnage of sulfur dioxide in excess of the allowances allocated to each such unit and issued to the source for the year concerned, plus or minus the allowances transferred to or from such units for that year or carried forward from prior years. In the case of a unit referred to in section 505(c)(2), relating to election for small systems, the permit shall also provide that such unit may not exceed the annual emissions rate specified in that section.

"(f) UNITS SUBJECT TO CERTAIN OTHER LIMITS.—The owner or operator of any unit subject to an emission rate requirement under section 506 shall submit a permit application and compliance plan for such unit to the permitting authority, not later than January 1, 1998. The permitting authority shall issue a permit to the owner or operator that satisfies the requirements of title IV and this title, including any appropriate monitoring and reporting requirements. Unless designated under section 509, such a unit shall not receive, and is not obligated to emit oxides of nitrogen in conformance with, allowances issued for oxides of nitrogen under this title.

"(g) NEW UNITS.—The owner or operator of each source that includes a new electric utility steam generating unit shall submit a permit application and compliance plan to the permitting authority not later than 24 months before the later of (1) the date of the commencement of the Second Phase, or (2) the date on which the unit commences operation. The permitting authority shall issue a permit to the owner or operator of the unit

*that satisfies the requirements of title IV and this title.*

*"(h) AMENDMENT OF APPLICATION AND COMPLIANCE PLAN.—At any time after the submission of an application and compliance plan under this section, the applicant may submit a revised application and compliance plan, in accordance with the requirements of this section. In considering any permit application and compliance plan under this title, the permitting authority shall ensure coordination with the applicable electric ratemaking authority, in the case of regulated utilities, and with unregulated public utilities.*

*"(i) PROHIBITION.—(1) It shall be unlawful for an owner or operator required to submit a permit application or compliance plan under this title to fail to submit such application or plan in accordance with the deadlines specified in this section or to otherwise fail to comply with regulations implementing this section.*

*"(2) It shall be unlawful for any person to operate any source subject to this title except in compliance with the terms and requirements of a permit application and compliance plan (including amendments thereto) or permit issued by the Administrator or a State with an approved permit program. For purposes of this subsection, compliance, as provided in section 404(g), with a permit issued under title IV which complies with this title for sources subject to this title shall be deemed compliance with this subsection as well as section 402(a).*

*"(3) In order to ensure reliability of electric power, nothing in this title or title IV shall be construed as requiring termination of operations of an electric utility steam generating unit for failure to have an approved permit or compliance plan, except that any such unit may be subject to the applicable enforcement provisions of section 113.*

*"SEC. 508. REPOWERED UNITS.*

*"(a) AVAILABILITY.—Not later than January 1, 1998, the owner or operator of any Second Phase affected unit may demonstrate to the permitting authority that such unit will be repowered with a qualifying clean coal technology to comply with the requirements applicable to that unit pursuant to section 505 or 506. The owner or operator shall, as part of any such demonstration, provide, not later than December 31, 2000, satisfactory documentation of a preliminary design and engineering effort for such repowering, an executed contract for the majority of the equipment to repower such unit, and such other information as the Administrator may require by regulation. The replacement of an existing electric utility steam generating unit with a new electric utility steam generating unit using a repowering technology referred to in section 502(a)(14) which is located at a different site, shall be treated as repowering of the existing unit for purposes of this title and such replacement unit shall not be treated as a new electric utility steam generating unit within the meaning of section 502 if—*

*"(1) the replacement unit is designated by the owner or operator to replace such existing unit,*

*"(2) the existing unit is retired from service on or before the date on which the designated replacement unit enters commercial operation, and*

*"(3) the designated replacement unit is located in the same air quality control region as the existing unit.*

*"(b) EXTENSION.—(1) An owner or operator satisfying the requirements of subsection (a) for any unit shall be granted an extension of the date on which such unit is required to comply with Second Phase requirements. Such date shall be extended from December 31, 2000 to December 31, 2003. The extension shall be specified in the permit issued to the source under section 507, together with any compliance schedule and other requirements, consistent with this title, necessary to meet Second Phase requirements by the extended date. Any unit that is granted an extension under this section shall not be eligible for a waiver under section 111(j).*

*"(2) If (A) the owner or operator of an existing unit has been granted an extension under paragraph (1) in order to repower such unit with a clean coal unit, and (B) such owner or operator demonstrates to the satisfaction of the Administrator that the repowering technology to be utilized by such unit has been properly constructed and tested on such unit, but nevertheless has been unable to achieve the emission reduction limitations and is economically or technologically infeasible, such existing unit may be retrofitted or repowered with equipment or facilities utilizing another clean coal technology or other available control technology.*

*"(c) CONTROL REQUIREMENTS.—A repowered unit replacing an existing unit qualifying for an extension under this section shall not be required to meet any standard of performance under section 111. A repowered unit replacing an existing unit qualifying for an extension under this section shall not be subject to the requirements of part C or D of this Act if the projected emissions from the repowered unit will not result in an increase in emissions, relative to predemonstration actual emissions of the existing unit, as determined by the Administrator, of any pollutant regulated under this Act. For purposes of calculating projected emissions for purposes of this paragraph, a 70 percent capacity factor shall be used. Notwithstanding the provisions of this subsection, no new unit (1) designated as a replacement for an existing unit, (2) qualifying for the extension under subsection (b), and (3) located at a different site than the existing unit shall receive an exemption from the requirements imposed under section 111 and parts C and D of the Act.*

*"(d) ALLOWANCES.—(1) For the 3-year extension period granted to an affected unit under this section, the Administrator shall issue to the owner or operator of the affected unit, annual allowances for sulfur dioxide equal to the affected unit's baseline multiplied by the lesser of—*

*"(A) emissions limit for sulfur dioxide applicable to the unit under the applicable implementation plan, or*

*"(B) its actual emission rate for 1996.*

*Such allowances may not be transferred or used by any other source to meet requirements of this title.*

*"(2) The owner or operator of the affected unit for which an extension has been granted under this section shall notify the Administrator 60 days in advance of the date on which the affected unit is to be removed from operation to install the repowering technology. Effective on that date, allowances shall be issued for the unit in the tonnage calculated by multiplying 1.20 lbs/mmBtu times the units baseline, divided by 2,000 lbs/ton. Allowances for the year in which the source is removed from operation to install the repowering technology shall be prorated accordingly, and are transferable.*

*"(3) In the case of any unit for which an extension has been granted under this section, the allowances allocated and issued for calendar years after repowering is complete shall be equal to 1.20 lbs/mmBtu multiplied by the unit's baseline, divided by 2,000 lbs/ton.*

*"(4) Allowances shall be allocated and issued under this section for a designated replacement unit which replaces an existing unit (as provided in the last sentence of subsection (a)) in lieu of allocating and issuing allowances for the existing unit.*

*"(5) For the purpose of making adjustments under section 503(i), the units with an extension under this subsection shall be treated as having allowances allocated and issued under paragraph (3).*

*"(e) CERTAIN UNITS SELECTED FOR NEGOTIATIONS.—For purposes of allocating and issuing Second Phase allowances under this title, in the case of any oil and gas fired electric utility steam generating unit which has been selected for negotiations leading to award of clean coal demonstration funding by the Secretary of Energy before July 27, 1989, the Administrator shall allocate allowances to such unit in accordance with paragraph (3) of subsection (d), in lieu of allocating allowances to that unit pursuant to section 505, but no such unit shall be eligible for an extension under this section.*

*"(f) PROHIBITION.—It shall be unlawful for the owner or operator of a repowered source to fail to comply with the requirements of this section, and any regulations to implement this section.*

*"SEC. 509. ELECTION FOR ADDITIONAL SOURCES.*

*"(a) APPLICABILITY.—The owner or operator of any existing unit or process source that is not an affected unit for sulfur dioxide or oxides of nitrogen, or both as the case may be, may elect to designate that unit or process source as an affected unit under this section for such pollutant or pollutants. Such an election may be submitted to the Administrator for approval anytime after promulgation of regulations under this section. The Administrator shall approve a designation that meets the requirements of this section. Following approval, such designated unit or process source shall be treated as an affected unit for purposes of this title and shall receive allowances as provided in this section for periods following such approval.*

*"(b) ESTABLISHMENT OF BASELINE.—The baseline for a unit designated as an affected unit under this section shall be established by the Administrator by regulation, based on fuel consumption and operating data for the unit for calendar years 1985, 1986, and 1987, or if not available, the Administrator may prescribe a baseline based on alternative representative data.*

*"(c) ALLOWANCES FOR AFFECTED UNITS.—(1) Allowances allocated and issued under this title for sulfur dioxide or nitrogen oxides to a unit which is an affected unit under this section shall be equal to the product of the unit's baseline multiplied by the unit's actual 1985 emission rate in lbs/mmBtu, divided by 2,000 lbs/ton.*

*"(2) Beginning in the Second Phase, the allowances for oxides of nitrogen for a unit for which an election is in effect under this section for oxides of nitrogen shall be determined based on the rate prescribed under section 506 for any unit subject to that section and any such unit shall be required only to comply with such allowances and shall not also be subject to an emission rate requirement under section 506.*

*"(3) This subsection shall not apply to any process source.*

"(d) PROCESS SOURCES.—The Administrator shall establish, by regulation by 1995, a program for designation of process sources which commenced operation before the date of the enactment of the Clean Air Act Amendments of 1990 as affected units for purposes of this section. The Administrator shall define the sources that may be included (not including any unit as defined under this title), specify the emission baseline and other data requirements, prescribe CEMS or other monitoring requirements, and promulgate permit, reporting, and any other requirements necessary to implement such a program.

"(e) ALLOWANCES AND PERMITS.—The Administrator shall issue allowances to an affected unit under this section in an amount equal to the allowances calculated under subsection (c) or (d), in accordance with section 503. Section 503(i) shall not apply to the allowances issued under this section. Such allowances may be transferred and banked in accordance with the provisions of this title. The permitting authority shall issue a permit for units and process sources which are designated as affected units under this section in the same manner as provided in section 507.

"(f) LIMITATION.—Any unit or process source which is designated under this section as an affected unit shall not transfer or bank allowances produced as a result of emission reductions resulting from reduced utilization or shutdown or compliance with any other provisions of this Act (other than section 112 or this title) except that in the case of a reduced utilization or shutdown such allowances may be transferred or carried forward for use in subsequent years to the extent that—

"(1) any such reduced utilization or shutdown results from the replacement of thermal energy from the unit designated under this section with thermal energy generated by any other unit or units subject to the requirements of this title, and

"(2) the designated unit's allowances are transferred or carried forward for use only at such other replacement unit or units.

"(g) IMPLEMENTATION.—The Administrator shall issue regulations to implement this section not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990.

"SEC. 510. EXCESS EMISSIONS ENFORCEMENT FEE.

"(a) EXCESS EMISSIONS ENFORCEMENT FEE.—The owner or operator of any affected source that emits sulfur dioxide or nitrogen oxides for any calendar year in excess of the allowances it possesses for that calendar year (hereinafter referred to as 'excess emissions') shall be liable for the payment of an excess emission fee. That fee shall be equal to the excess emissions multiplied by $2,000. The fee shall be due and payable without demand to the Administrator as provided in regulations issued by the Administrator. Any such funds shall be deposited in the United States Treasury pursuant to 31 U.S.C. 3302 (the 'Miscellaneous Receipts Act'). Any fee due and payable under this section shall not diminish any fine, penalty or fee imposed on the same source under any other section of this Act.

"(b) EXCESS EMISSIONS OFFSET.—The owner or operator of any affected source liable for payment of a fee under subsection (a) shall also offset the excess emissions by reducing emissions of the air pollutant concerned by an equal tonnage amount in the following calendar year, or such longer period as the Administrator may prescribe. The owner or operator of the source shall, within 60 days after the end of the year in which such excess emissions occurred, submit to the Administrator, and the State, a plan to achieve the required offsets. The Administrator shall also deduct allowances equal to the excess emissions tonnage from those issued for the source for the calendar year, or succeeding years, following the year in which the excess emissions occurred.

"(c) FEE ADJUSTMENT.—The Administrator shall, by regulation, adjust the fee specified in subsection (a) for inflation, based on the Consumer Price Index, beginning in calendar year 1996 and annually thereafter.

"(d) PROHIBITION.—It shall be unlawful for the owner or operator of any source liable for a fee and offset under this section to fail to pay the fee under subsection (a) or to fail to provide, and thereafter comply with, a plan as required by subsection (b), or to fail to offset excess emissions as required by subsection (b).

"(e) SAVINGS PROVISION.—Nothing in this title shall limit or otherwise affect the application of section 113 or section 304.

"SEC. 511. MONITORING, REPORTING, AND RECORDKEEPING REQUIREMENTS.

"(a) APPLICABILITY.—All affected sources subject to this title shall be required to install and operate CEMS and quality assure the data for sulfur dioxide, nitrogen oxides, opacity and volumetric flow for each unit subject to this title. The Administrator shall, by regulations issued not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, specify the requirements for CEMS, for alternative methods that provide sufficiently reliable and timely information, and for recordkeeping and reporting of information from such systems. Where 2 or more units utilize a single stack, a separate CEMS shall not be required for each unit, and for such units the regulations shall require that the owner or operator collect sufficient information to permit reliable compliance determinations for each such unit.

"(b) FIRST PHASE REQUIREMENTS.—Within 36 months after the date of the enactment of the Clean Air Act Amendments of 1990, the owner or operator of each unit subject to section 504 shall install and operate CEMS, quality assure the data, and keep records and report in accordance with regulations issued under subsection (a).

"(c) SECOND PHASE REQUIREMENTS.—Not later than January 1, 1995, the owner or operator of each source subject to sections 505 or 506 which has not previously met the requirements of subsection (a) shall comply with those requirements. Upon commencement of commercial operation of each new electric utility steam generating unit, the unit shall comply with the requirements of subsection (a).

"(d) UNAVAILABILITY OF CEMS.—If CEMS data is not available for any affected unit during any period of a calendar year in which such data is required under this title, and the owner or operator cannot provide information, satisfactory to the Administrator, on emissions during that period, the Administrator shall deem the unit to be operating in an uncontrolled manner and, by regulation, prescribe means to calculate emissions for that period. The owner or operator shall be liable for excess emissions fees and offsets under section 510 in accordance with such regulation which shall be issued not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990.

"(e) PROHIBITION.—It shall be unlawful for the owner or operator of any source subject to this title to operate a source without complying with the requirements of this section, and any regulations implementing this section.

"SEC. 512. COMPLIANCE WITH OTHER PROVISIONS.

(a) GENERAL.—Except as otherwise expressly provided in this Act, compliance with the requirements of this title shall not exempt or exclude the owner or operator of any source subject to this title from compliance with any other applicable requirements of this Act.

"(b) NEW SOURCE REVIEW OF COMPLIANCE.—No physical change in, or change in the method of operation of, a stationary source for purposes of reducing emissions from such source in order to comply with this title shall be treated as a modification for purposes of section 111 or part C of title I of this Act if such change does not increase the potential emissions of any air pollutant from such source above the potential emissions before the change.

"SEC. 513. ENFORCEMENT.

"A violation by the owner or operator of a source subject to this title of the prohibitions of, requirements of, or regulations promulgated pursuant to, this title shall be a violation of this Act. Operation of an affected source to emit sulfur dioxide or nitrogen oxides in excess of its allowances shall be deemed a violation, with each ton emitted in excess of allowances held constituting a separate violation.

"SEC. 514. REPORT TO CONGRESS.

"Not later than January 1, 2003, the Administrator shall assess and submit a report to Congress on the environmental effects of the emission reductions under this title.

"SEC. 515. CLEAN COAL TECHNOLOGY INCENTIVES.

"(a) REVISED REGULATIONS FOR CLEAN COAL TECHNOLOGY DEMONSTRATIONS.—The Administrator shall promulgate regulations under this section to revise requirements under section 111 and parts C and D of title I, as appropriate, to facilitate temporary and permanent clean coal demonstration projects, consistent with the attainment and maintenance of national ambient air quality standards and prevention of significant deterioration as provided in subsections (b) and (c). Such regulations shall address physical or operational changes to existing facilities for the sole purpose of installation, operation, cessation, or removal of a clean coal technology demonstration project. For the purposes of this section, a clean coal technology demonstration means—

"(1) a project using funds appropriated under the heading 'Department of Energy—Clean Coal Technology', or

"(2) a similar project funded through appropriations for the Environmental Protection Agency.

"(b) TEMPORARY PROJECTS.—Installation, operation, cessation, or removal of a temporary clean coal technology demonstration project that is operated for a period of 5 years or less, and which complies with all State implementation plans and other requirements necessary to attain and maintain the national ambient air quality standards during and after the project is terminated, shall not subject such facility to the requirements of section 111 or parts C or D of title I.

"(c) PERMANENT PROJECTS.—Any permanent demonstration project that complies with all State implementation plans and other requirements necessary to attain and maintain the national ambient air quality standards shall not be subject to the requirements of part C or D of title I or section 111 if the

projected emissions from the project will not result in an increase in emissions, relative to its predemonstration actual emissions, as determined by the Administrator, of any pollutant regulated under this Act. For purposes of calculating projected emissions for purposes of this paragraph, a 70 percent capacity factor shall be used.

"(d) PREEXISTING REQUIREMENTS.—Any clean coal demonstration technology project shall be subject to its preexisting obligations under this Act until such time as it qualifies under regulations implementing this section for alternate requirements.

"(e) PHASE I AFFECTED SOURCES.—(1) A clean coal technology demonstration project defined in subsection (A)(1) of this section may use funds allocated to procurements issued subsequent to May 1, 1989, only if the project is installed at a facility owned or operated by the owner of an affected source subject to section 504(a) (relating to First Phase sulfur dioxide tonnage allowances).

"(2) A clean coal technology demonstration project defined in subsection (a)(2) of this section may be funded after enactment of the Clean Air Act amendments of 1990 only if the project is installed at a facility owned or operated by the owner or operator of an affected source subject to section 504(a) (relating to First Phase sulfur dioxide tonnage allowances).

"SEC. 516. SEVERE ENERGY SUPPLY INTERRUPTIONS AND ENERGY FUEL SUPPLY SHORTAGES.

"(a) EPA ORDER.—(1) The owner or operator of any unit or source required to have allowances under this title as a condition of operation may apply to the Administrator for an order under this subsection whenever, by reason of one or more of the conditions specified in subparagraph (A), (B), or (C) of paragraph (2), the total calendar year emissions of sulfur dioxide from such units and sources owned or operated by such owner or operator exceeds the allowances held by such owner or operator for that calendar year (including allowances held in reserve for contingencies). If, upon such an application, the Administrator finds, after consultation with the Secretary of Energy, that by reason of one or more of such conditions—

"(A) the ability of the owner or operator to comply with the requirements of this title has been significantly impaired,

"(B) the unit or source has emitted an amount of sulfur dioxide or oxides of nitrogen which exceeds the allowances held by the owner or operator (including allowances held in reserve for contingencies), and

"(C) the owner or operator had, before the occurrence of the condition referred to in subparagraph (A), (B), or (C) of paragraph (2), established a reasonable reserve for contingencies but that reserve did not contain sufficient allowances to cover such excess,

the Administrator shall promptly issue an order providing that allowances shall not be required to authorize such excess emissions. The Administrator shall act upon any application under this subsection in an expedited manner. Upon issuance of any such order, the emissions covered by such order in excess of the allowances held by the owner or operator shall not be treated as a violation for purposes of section 513 or for purposes of any other provision of this Act.

"(2) The conditions referred to in paragraph (1) are as follows:

"(A) A severe energy supply interruption (as defined in section 3(8) of the Energy Policy and Conservation Act) has been declared or a determination has been published by the President (including the basis of such determination) that there exists a national or regional fuel supply shortage which is, or is likely to be, of significant scope and duration and of an emergency nature and it causes or may cause a major adverse impact on public health or safety or welfare or on the economy and results, or is likely to result, from an interruption in the supply of fuel or from sabotage or an act of God.

"(B) A catastrophe has occurred that the President finds gives rise to an emergency (as defined in section 102(1) of the Disaster Relief and Emergency Assistance Act) in any part of the United States that requires an assured supply of electricity to save lives and protect property, public health and to avert or lessen the threat of a major disaster.

"(C) A catastrophe has occurred which the President finds gives rise to a major disaster (as defined in section 102(2) of the Disaster Relief and Emergency Assistance Act) in any part of the United States that requires an assured supply of electricity to alleviate the damage, loss, hardship, or suffering caused by such major disaster.

Any order under this subsection shall include such terms and conditions as the Administrator, in consultation with the Secretary of Energy, deems necessary to lessen or minimize the impact of the order consistent with the purposes of this title. The Administrator shall submit a report to Congress on all orders issued under this section. The authority of the President under this section may not be delegated to any other person.

"(b) GAS CURTAILMENTS.—Notwithstanding any emission limitation or allowance requirement applicable under this title, any electric utility steam generating unit that burned as its fuel during the period 1985 through 1987 more than 90 percent natural gas may emit during any natural gas supply emergency (as defined in title III of the Natural Gas Policy Act of 1978), sulfur dioxide at the lower of—

"(1) 0.5 lbs per million Btu, or

"(2) the most stringent rate applicable to the unit under the applicable implementation plan

if the unit burns oil during such curtailment. Notwithstanding section 505 no such unit shall be treated as a new unit required to obtain allowances under this title by reason of this subsection.

"SEC. 517. PROTECTION OF LOW-INCOME HOUSEHOLDS.

"(a) APPLICATION.—This section shall apply to each electric utility, subject to rate regulation by a State regulatory authority whose annual sales of electric energy exceed 500,000,000 kilowatt hours.

"(b) IDENTIFICATION OF EXPENDITURES.—Each State regulatory authority may, in accordance with the applicable procedures thereof, require each utility referred to in subsection (a) to identify, for purposes of this subsection, expenditures needed for purposes of compliance with First Phase or Second Phase of this title and to identify on an annual basis the expenditures made for such purposes within the past 12 months and the expenditures projected to be made for such purposes within the succeeding 24 months. These expenditures shall include both capitalized items and expensed items. Normal cost allocation principles shall apply where costs incurred may be related in part to other purposes or requirements. Such authority may make exceptions from the requirements of this section where the authority determines that the amount of such expenditures cannot be reasonably segregated and identified.

"(c) TREATMENT OF EXPENDITURES.—No utility which has identified expenditures under subsection (b) may, as determined by such authority, include in the rates and charges imposed on any income-eligible retail ratepayer any portion of the expenditures made by such utility to comply with this title. There shall be provision for notice and a public hearing on the sole issue of whether to exempt low-income residents. Any decision whether or not to exempt low-income residents and the reasons therefor must be provided to local officials. This subsection shall apply with respect to the first utility bill submitted by the utility to an income eligible ratepayer after the documentation referred to in subsection (d) is received by the utility (or after the ratepayer is found by the utility to be automatically eligible.)

"(d) INCOME-ELIGIBLE RETAIL RATEPAYER.—

"(1) IN GENERAL.—For purposes of this section, during any 12-month period an income-eligible retail ratepayer shall be any ratepayer of an electric utility subject to the provisions of subsection (b) who provides documentation to the utility (in such form and manner as the State regulatory authority shall, by rule, specify) satisfactory to establish that such ratepayer is an individual who is eligible at the commencement of such period for benefits under any of the following:

"(A) The Low-Income Home Energy Assistance Program (LIHEAP).

"(B) The supplemental security income program under title XVI of the Social Security Act.

"(C) Women, Infants and Children (WIC).

"(D) Food stamps.

"(E) Medical assistance under title XIX of the Social Security Act.

"(F) The Weatherization Assistance Program (WAP).

"(G) A State plan approved under section 402 of the Social Security Act (AFDC).

"(2) APARTMENTS.—Such term also includes any ratepayer who provides documentation to the utility (in such form and manner as the State regulatory authority shall, by rule, specify) satisfactory to establish that such ratepayer leases units in a multiple unit residential dwelling to individuals if ⅔ or more of the units are occupied by individuals who, at the commencement of such period, are eligible for any of the benefits referred to above.

"(3) AUTOMATIC ELIGIBILITY.—No documentation shall be required under this subsection in any case in which a ratepayer is known to the utility to be eligible for one of the types of assistance specified above.

"(4) STATE, LOCAL, PRIVATE NONPROFIT ORGANIZATIONS.—An electric utility shall accept documentation regarding any individual ratepayer under this subsection from any State, local, or private nonprofit organization which administers any of the programs referred to in paragraph (1).

"(e) OUTREACH.—Each utility subject to this section as provided in subsection (a) shall undertake measures, directly or through the services of low-income assistance organizations, to publicize the program under this section to the low-income community.

"(f) FALSE DOCUMENTATION.—Any person who is not an income-eligible ratepayer within the meaning of subsection (d) and who fraudulently provides false documentation to an electric utility purporting to establish that such person is an income-eligible ratepayer within the meaning of subsection (d) shall be liable to the utility for an amount equal to three times the full amount

of any reduction in rates obtained by reason of such false documentation.

"SEC. 518. DOE UNITS.

"(a) ALLOWANCE ALLOCATIONS FOR CERTAIN UNITS.—In lieu of allocating allowances to the units at the Joppa, Kyger Creek, and Clifty Creek powerplants as provided in section 504 and section 505, the Administrator shall allocate and issue First Phase and Second Phase allowances pursuant to section 503 to each such unit in an amount equal to 0.4 lbs/mmBtu multiplied by the unit's baseline, divided by 2,000.

"(b) COMPLIANCE.—The Secretary of Energy shall require that affected units at each powerplant listed in Table A of section 504(a) which provides, by contract with the Secretary of Energy, more than 75 percent of the energy generated to Federal facilities on a regular basis may only utilize, for purposes of compliance with this title, a technological system of continuous emission reduction or the purchase of allowances, or any combination of the foregoing. Subject to appropriation, the Secretary of Energy shall pay the costs of construction and installation of such system of continuous emission reduction and a share of the operating costs of such system proportional to the energy purchased by the Secretary of Energy.

"SEC. 519. AUCTION.

"(a) EARLY AUCTION.—

"(1) IN GENERAL.—The Administrator, in consultation with the Secretary of the Treasury, shall conduct an auction before March 31, 1992, at which owners or operators of affected units may offer allowances for sale (hereinafter referred to as the 'early auction').

"(2) DOCUMENTATION.—Before the early auction, the Administrator shall issue to affected units such documentation as may be necessary for the owner or operator of such units to legally transfer through such auction their rights to receive allowances and for the Administrator to record such transfers. If the Administrator fails to provide such documentation within such period, for purposes of the auction, Table A in section 504 (adjusted by the 6 percent amount referred to in section 504) shall be treated as entitling the owners or operators of the units specified in Table A to receive the allowances specified in Table A (as so adjusted) during the First Phase.

"(3) LIMIT ON SALE OF SECOND PHASE ALLOWANCES.—No owner or operator of a unit or units for which Second Phase allowances are to be issued may sell at the early auction more than 50 percent of the allowances to be allocated to those units, based on the list of Second Phase allowances to be published by the Administrator by December 31, 1991.

"(4) SEALED OFFER TO SELL.—Owners or operators of units that elect to participate in the early auction shall specify (by a date set by the Administrator) in a sealed offer to sell: (A) the number of allowances to be offered for sale at the early auction, and (B) the minimum price at which such allowances may be sold at such auction.

"(5) NOTICE.—The Administrator shall publish a notice of the total number of allowances to be offered for sale at the early auction under this section.

"(6) SEALED BID SCHEDULES.—Any person may submit (by a date set by the Administrator) to the Administrator (on a sealed bid schedule provided by the Administrator) offers to purchase specified numbers of allowances at specified prices.

"(7) SALES.—The Administrator shall match the lowest offers to sell under this subsection with the highest bids submitted in the bid schedules. All allowances for which the Administrator has established a match shall be sold at the bid price.

"(8) EFFECT OF SALE AT AUCTION.—Any sale of allowances completed through the auction under this section shall constitute—

"(A) an immediate obligation by the buyer to pay to the purchaser an amount equal to the matched bid price multiplied by the total number of allowances; and

"(B) an obligation of the seller to provide the allowances subject to such bid to the purchaser.

The failure of any person to comply with such obligations shall be considered a violation punishable by the Administrator as provided in section 113(c).

"(9) FUNDS TRANSFERRED.—No funds transferred from a purchaser to a seller of allowances under this subsection shall be held by any officer or employee of the United States or treated for any purpose as revenue to the United States or to the Administrator.

"(b) ANNUAL ALLOWANCE AUCTIONS.—

"(1) 5 PERCENT TAP.—The Administrator shall withhold 5 percent of the allocation of allowances for each year which would (but for this subsection) be issued for each affected unit at an affected source. The Administrator shall record such withholding for purposes of transferring the proceeds of the allowance sales under this subsection. Except for the allowances reserved for sale or other distribution under subsection (c) and section 505(g) (relating to States experiencing population growth in excess of 25 percent), all allowances withheld under this paragraph shall be offered for sale by the Administrator at auctions under paragraph (2).

"(2) ANNUAL AUCTIONS.—Commencing in June of 1993 and in June of each year thereafter, the Administrator shall conduct auctions at which the allowances referred to in paragraph (1) shall be offered for sale in accordance with regulations promulgated by the Administrator, in consultation with the Secretary of the Treasury. One-third of the allowances referred to in paragraph (1) which authorize emissions in calendar year 1996 shall be offered for sale at the auction held under this paragraph in 1993; one-third of such allowances shall be offered for sale at the auction held under this paragraph in 1994; and one-third of such allowances shall be offered for sale at the auction held under this paragraph in 1995. In 1996 and thereafter, all of the allowances referred to in paragraph (1) which authorize emissions in the next calendar year shall be offered for sale. The auction shall be open to any person. A person wishing to bid for such allowances shall submit (by a date set by the Administrator) to the Administrator (on a sealed bid schedule provided by the Administrator) offers to purchase specified numbers of allowances at specified prices. Such regulations shall allocate the auctioned allowances on the basis of bid price, starting with the highest-priced bid and continuing until all allowances for sale at such auction have been allocated. The regulations shall not permit that a minimum price be set for the purchase of withheld allowances. Allowances purchased at the auction may be used for any purpose and at any time after the auction, subject to the provisions of this title.

"(3)(A) Notwithstanding section 3302 of title 31 of the United States Code or any other provision of law, within 90 days of receipt, the Administrator shall transfer the proceeds from the auction under paragraph (2), on a pro rata basis, to the owners or operators of the affected units at an affected source from whom allowances were withheld. No funds transferred from a purchaser to a seller of allowances under this paragraph shall be held by any officer or employee of the United States or treated for any purpose as revenue to the United States or the Administrator.

"(B) At the end of each year, any withheld allowances not sold at the auction shall be returned, without charge, on a pro rata basis to the owners or operators of the affected units from whose allocation the allowances were withheld. For purposes of this paragraph, for any affected unit, the term 'pro rata basis' refers to the ratio which the allowances allocated to that unit bears to the allowances allocated to all affected units.

"(4) Any person holding allowances not withheld under paragraph (1) which authorize emissions of sulfur dioxide for the same year as the allowances being sold at any auction under this subsection may submit those allowances to the Administrator to be offered for sale at such auction. The proceeds of any such sale shall be transferred by the purchaser to the person submitting such allowances for sale. The holder of allowances offered for sale under this paragraph may specify a minimum sale price. Any person may purchase allowances offered for auction under this paragraph. Such allowances shall be allocated to purchasers on the basis of bid price after the auction under paragraph (2) is complete. No funds transferred from a purchaser to a seller of allowances under this paragraph shall be held by any officer or employee of the United States or treated for any purpose as revenue to the United States or the Administrator.

"(5) The Administrator shall record and publicly report the nature, prices and results of each auction under this subsection, including the prices of successful bids, and shall record the transfers of allowances as a result of each auction in accordance with the requirements of this section. The transfer of allowances at such auction shall be recorded in accordance with the regulations promulgated by the Administrator under this section.

"(c) SPECIAL RESERVATIONS OF ALLOWANCES WITHHELD UNDER SUBSECTION (b).—

"(1) RESERVES.—Within 36 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations establishing the reserves referred to in paragraphs (2), (3), (4) and section 505(g) (relating to States experiencing population growth in excess of 25 percent). A portion of the Second Phase allowances withheld under subsection (b) shall be placed in such reserves, as provided in such provisions.

"(2) RESERVE FOR DIRECT SALE AT $1,500 PER TON.—(A) In accordance with regulations under paragraph (1), the Administrator shall establish a Direct Sale Reserve containing allowances in the amount of 100,000 tons per year to be offered for sale as provided in this paragraph. Allowances in the Direct Sale Reserve shall be offered for sale at a price of $1,500 per allowance, adjusted by the Consumer Price Index.

"(B) Requests to purchase allowances from the Direct Sale Reserve under this paragraph shall be approved in the order of receipt until no allowances remain in such Reserve, except that an opportunity to purchase such allowances shall be provided to the independent power producers referred to in section 503(l) before such allowances are offered to any other person. Each applicant shall be required to pay 50 percent of the

total purchase price of the allowances within 6 months after the approval of the request to purchase. The remainder shall be paid on or before the transfer of the allowances.

"(C) If the Administrator determines that, during any period of 3 consecutive calendar years after 1997, less than 50 percent of the allowances available in the Direct Sale Reserve established under this paragraph have been purchased under this paragraph, the Administrator shall terminate the reserve and make such allowances available for auction under subsection (b)(2).

"(3) RESERVE FOR DIRECT SALE TO UNITS IN STATES WITH AVERAGE EMISSION RATES BELOW 0.9 MMBTU.—(A) In accordance with regulations under paragraph (1), the Administrator shall establish a Direct Sale Reserve containing allowances in the amount of 25,000 tons per year during the first 10 years of the Second Phase to be offered for sale as provided in this paragraph. Allowances in the Direct Sale Reserve shall be offered for sale at a price of $750 per allowance, adjusted by the Consumer Price Index.

"(B) Requests to purchase allowances from the Direct Sale Reserve under this paragraph shall be approved in the order of receipt until no allowances remain in such Reserve. Each applicant shall be required to pay 50 percent of the total purchase price of the allowances within 6 months after the approval of the request to purchase. The remainder shall be paid on or before the transfer of the allowances.

"(C) Only an owner or operator of a unit located in a State with a Statewide average sulfur dioxide emission for electric utility steam generating units of 0.9 lbs per mmBtu shall be eligible to purchase allowances under this paragraph.

"(D) If the Administrator determines that, during any period of 3 consecutive calendar years, less than 50 percent of the allowances available in the Direct Sale Reserve established under this paragraph have been purchased under this paragraph, the Administrator shall terminate the reserve and make such allowances available for auction under subsection (b)(2).

"(4) RESERVE FOR DISTRIBUTION TO CERTAIN UNITS.—The Administrator shall reserve allowances in the amount of 62,000 tons per year from the Second Phase allowances withheld under subsection (b) for distribution under this paragraph. The Administrator shall distribute such reserved allowances to coal fired electric utility steam generating units which have 1985 sulfur dioxide emission rates less than 1.75 lbs/mmBtu and greater than 1.2 lbs/mmBtu and which are part of a utility system with a 1985 system-wide average sulfur dioxide emission rate for coal fired units of 1.5 lbs/mmBtu or less. Each such unit shall receive such allowances in a tonnage amount equal to 50 percent of the amount computed as follows: multiply 1.2 lbs/mmBtu by the amount by which the unit's fuel consumption at a 60 percent capacity factor exceeds the unit's baseline. The allowances computed under the preceding sentence shall be adjusted to ensure that the total of the allowances distributed under this paragraph is equal to 62,000. The Administrator shall reallocate to each unit any reduction or increase in the allowances to be distributed based on such adjustment on the basis of the ratio which the allowances which would (but for such adjustment) have been distributed to such unit bears to the total allowances which would (but for such adjustment) have been distributed to such units.

"(5) PROCEEDS.—Notwithstanding section 3302 of title 31 of the United States Code or any other provision of law, the Administrator shall require that the proceeds of any sale under this subsection be transferred, within 90 days after the sale, without charge, on a pro rata basis to the owners or operators of the affected units from whom the allowances were withheld and that any unsold allowances be returned, without charge, on a pro rata basis, to such owners or operators. No proceeds of any sale under this subsection shall be held by any officer or employee of the United States or treated for any purpose as revenue to the United States or to the Administrator. For purposes of this paragraph, for any affected unit, the term 'pro rata basis' refers to the ratio which the allowances allocated to that unit bears to the allowances allocated to all affected units.

"SEC. 520. REGULATORY REFORMS TO REDUCE AIR EMISSIONS.

"(a) PROHIBITION.—No State regulated electric utility shall be eligible for interpollutant trading under section 503(c) unless the State regulatory authority exercising ratemaking authority over such utility has certified by January 1, 1995, to the Administrator that the State regulatory authority and such utility have complied with subsection (b) of this section.

"(b) STATE REGULATORY RULEMAKING—Not later than January 1, 1995—

"(1) each such utility shall undertake and complete a planning process and prepare a plan which evaluates a range of resources, including both new power supplies and energy conservation, in order to meet expected future demand at the lowest system cost and provide to such State regulatory authority such plan;

"(2) each such State regulatory authority shall review and consider each plan provided under paragraph (1) and identify and implement appropriate State regulatory mechanisms to ensure that implementation of the plan referred to in paragraph (1) is profitable to the utility; and

"(3) each such utility shall implement any plan approved by the State regulatory authority.

The State regulatory authority shall specifically identify under paragraph (2) regulatory mechanisms to ensure that utility investments in energy conservation and load management measures do not restrict or impair a utility's ability to earn its authorized rate of return.

"(c) UNREGULATED UTILITIES.—All owners or operators of affected units under Phase I whose wholesale rates are not subject to the jurisdiction of the Federal Energy Regulatory Commission or of a State regulatory authority, shall develop and implement, through a public hearing process, a least-cost plan as described in section 520(b)(1) by January 1, 1995. The plan shall be submitted to the Administrator, the Secretary of Energy, and Congress and shall be updated every 2 years.

"(d) STATES CHOOSING NOT TO ADOPT.—If a State regulatory authority chooses not to implement the regulatory reforms under subsection (b)(2), it shall submit by January 1, 1995, to the Administrator a written statement of its determination not to implement such proposed reforms together with its reasons for not doing so.

"(e) SAVINGS PROVISION.—Nothing in this section precludes a State or State regulatory authority from providing additional incentives to utilities to encourage investment in demand-side resources.

"(f) DEFINITIONS.—As used in this section:

"(1) The term 'State regulatory authority' means any State agency which has ratemaking authority with respect to the sale of electric energy or energy services by any electric utility (other than such State agency).

"(2) The term 'State regulated electric utility' means any electric utility with respect to which a State regulatory authority has ratemaking authority.

"SEC. 521. EFFECT OF TITLE ON CERTAIN FEDERAL AGENCIES.

"Nothing in this title shall be construed to prohibit the Tennessee Valley Authority from receiving, retaining, and using, in accordance with other applicable law, any funds received under this title from the sale of allowances.".

SEC. 502. NEW SOURCE PERFORMANCE STANDARDS.

(a) REPEAL.—Section 111(a)(1) (42 U.S.C. 7411(a)(1)) is amended to read as follows:

"(1) The term 'standard of performance' means a standard for emissions of air pollutants which reflects the degree of emission limitation achievable through application of the best system of emission reduction which (taking into account the cost of achieving such reduction and any nonair quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated.".

(b) REVISED REGULATIONS.—Not later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate revised regulations for standards of performance for new electric utility steam generating units commencing construction after the date on which such regulations are proposed that, at a minimum, require any source subject to such revised standards to emit any pollutants for which a standard has been promulgated pursuant to section 109 at a rate not greater than would have resulted from compliance by such source with the applicable standards of performance under this section before such revision.

(c) APPLICABILITY.—The provisions of subsections (a) and (b) apply only so long as section 503(e) of the Clean Air Act (relating to new electric utility steam generating units) remains in effect.

TITLE VI—PROVISIONS RELATING TO ENFORCEMENT

Sec. 601. Section 113 enforcement.
Sec. 602. Compliance certification.
Sec. 603. Administrative enforcement subpoenas.
Sec. 604. Enforcement of administrative orders.
Sec. 605. Scope of emergency orders.
Sec. 606. Contractor listings.
Sec. 607. Judicial review pending reconsideration of regulation.
Sec. 608. Citizen suits.
Sec. 609. Enhanced implementation and enforcement of new source review requirements.
Sec. 610. Movable stationary sources.
Sec. 611. Enforcement of new titles of the Act.

SEC. 601. SECTION 113 ENFORCEMENT.

Section 113 is amended to read as follows:

"SEC. 113. FEDERAL ENFORCEMENT.

"(a) IN GENERAL.—

"(1) ORDER TO COMPLY WITH SIP REQUIREMENTS.—Whenever, on the basis of any information available to him, the Administrator finds that any person has violated or is in violation of any requirement of an applicable implementation plan, the Administrator

shall notify the person and the State in which the plan applies of such finding. At any time after the expiration of 30 days following the date on which such notice of the violation is issued, the Administrator may, without regard to the period of violation (subject to section 2462 of title 28 of the United States Code)—

"(A) issue an order requiring such person to comply with the requirements of such plan,

"(B) issue an administrative penalty order in accordance with subsection (d), or

"(C) bring a civil action in accordance with subsection (b).

"(2) STATE FAILURE TO ENFORCE SIP OR PERMIT PROGRAM.—Whenever, on the basis of information available to him, the Administrator finds that violations of an applicable implementation plan or an approved permit program under title IV are so widespread that such violations appear to result from a failure of the State in which the plan or permit program applies to enforce the plan or permit program effectively, he shall so notify the State. In the case of a permit program, the notice shall be made in accordance with title IV. If the Administrator finds such failure extends beyond the 30th day after such notice (90 days in the case of such permit program), he shall give public notice of such finding. During the period beginning with such public notice and ending when such State satisfies the Administrator that it will enforce such plan or permit program (hereafter referred to in this section as 'period of federally assumed enforcement'), the Administrator may enforce any requirement of such plan or permit program with respect to any person by—

"(A) issuing an order requiring such person to comply with such requirement,

"(B) issuing an administrative penalty order in accordance with subsection (d), or

"(C) bringing a civil action in accordance with subsection (b).

"(3) EPA ENFORCEMENT OF OTHER REQUIREMENTS.—Except for a requirement enforceable under the preceding provisions of this subsection, whenever, on the basis of any information available to him, the Administrator finds that any person has violated, or is in violation of, any requirement of section 111(e) of this title (relating to new source performance standards), section 112 of this title (relating to standards for hazardous emissions), section 114 of this title (relating to inspections, etc.), section 402(a) or 403(c) of title IV (relating to permits), or any prohibition of title V (relating to acid deposition control) (including a requirement of any rule, order, waiver, or permit promulgated or approved under any provision of such sections or titles and including any requirement for the payment of any fee owed to the United States under this Act), the Administrator may—

"(A) issue an administrative penalty order in accordance with subsection (d),

"(B) issue an order requiring such person to comply with such requirement,

"(C) bring a civil action in accordance with subsection (b) or section 305, or

"(D) request the Attorney General to commence a criminal action in accordance with subsection (c).

"(4) REQUIREMENTS FOR ORDERS.—An order issued under this subsection (other than an order relating to a violation of section 112) shall not take effect until the person to whom it is issued has had an opportunity to confer with the Administrator concerning the alleged violation. A copy of any order issued under this subsection shall be sent to the State air pollution control agency of any State in which the violation occurs. Any order issued under this subsection shall state with reasonable specificity the nature of the violation, specify a time for compliance which the Administrator determines is reasonable, taking into account the seriousness of the violation and any good faith efforts to comply with applicable requirements. In any case in which an order under this subsection (or notice to a violator under paragraph (1)) is issued to a corporation, a copy of such order (or notice) shall be issued to appropriate corporate officers. An order issued under this subsection shall require the person to whom it was issued to comply with the requirement as expeditiously as practicable, but in no event longer than one year after the date the order was issued, and shall be nonrenewable. No order issued under this subsection shall prevent the State or the Administrator from assessing any penalties nor otherwise affect or limit the State or the United States' authority to enforce under other provisions of this Act, nor affect any person's obligations to comply with any section of this Act or with a term or condition of any permit or applicable implementation plan promulgated or approved under this Act.

"(5) FAILURE TO COMPLY WITH PART C OR PART D OF TITLE I.—Whenever, on the basis of information available to him, the Administrator finds that a State is not acting in compliance with any requirement of part C or part D of title I, he may—

"(A) issue an order prohibiting the construction or modification of any major stationary source in any area to which such requirement applies;

"(B) issue an administrative penalty order in accordance with subsection (d), or

"(C) bring a civil action under subsection (b)(5).

"(b) CIVIL JUDICIAL ENFORCEMENT.—The Administrator shall, as appropriate, in the case of any person which is the owner or operator of an affected source, a major emitting facility, or a major stationary source, and may, in the case of any other person, commence a civil action for a permanent or temporary injunction, or to assess and recover a civil penalty of not more than $25,000 per day for each violation, or both, in any of the following instances:

"(1) Whenever such person violates any requirement of an applicable implementation plan as provided in subsection (a). Such an action shall be commenced (A) during any period of federally assumed enforcement, or (B) more than 30 days following the date of the Administrator's notification under subsection (a)(1) that such person is violating such requirement.

"(2) Whenever such person violates any requirement of section 111(e) of this title (relating to new source performance standards), section 112 of this title (relating to standards for hazardous emissions), section 114 of this title (relating to inspections, etc.), section 165(a) of this title (relating to preconstruction requirements), an order under section 167 of this title (relating to preconstruction requirements), an order under section 303 of title III (relating to emergency orders), section 402(a) or 403(c) title IV (relating to permits), or any prohibition of title V (relating to acid deposition control) (including a requirement of any rule, order, waiver, or permit promulgated or approved under such sections or titles, and including any requirement for the payment of any fee owed the United States under any such provision.

"(3) Whenever such person attempts to construct or modify a major stationary source in any area with respect to which a finding under subsection (a)(5) has been made.

Any action under this subsection may be brought in the district court of the United States in which the violation is alleged to have occurred or in which the defendant resides or has his principal place of business, and such court shall have jurisdiction to restrain such violation, to require compliance, to assess such civil penalty, to collect any fees owed the United States and any noncompliance assessment and nonpayment penalty owed under section 120 and to award any other appropriate relief. Notice of the commencement of such action shall be given to the appropriate State air pollution control agency. In the case of any action brought by the Administrator under this subsection, the court may award costs of litigation (including reasonable attorney and expert witness fees) to the party or parties against whom such action was brought in any case where the court finds that such action was unreasonable.

"(c) CRIMINAL PENALTIES.—(1) Any person who knowingly violates any requirement of section 111(e) of this title (relating to new source performance standards), section 112(h) of this title (relating to standards for hazardous emissions), section 114 of this title (relating to inspections, etc.), section 165(a) of this title (relating to preconstruction requirements), an order under section 167 of this title (relating to preconstruction requirements), an order under section 303 of title III (relating to emergency orders), section 402(a) or 403(c) of title IV (relating to permits), or any prohibition of title V (relating to acid deposition control), (including a requirement of any rule, order, waiver, or permit promulgated or approved under such sections or titles, and including any requirement for the payment of any fee owed the United States under this Act) shall, upon conviction, be punished by a fine pursuant to title 18 of the United States Code, or by imprisonment for not to exceed 5 years, or both. If a conviction of any person under this paragraph is for a violation committed after a first conviction of such person under this paragraph, the maximum punishment shall be doubled with respect to both the fine and imprisonment.

"(2) Any person who knowingly—

"(A) makes any false statement, representation, or certification in, or omits material information from or knowingly alters, conceals, or fails to maintain or file, any notice, application, record, report, plan, or other document filed or required to be filed, maintained, or used for purposes of compliance with this Act (whether with respect to the requirements imposed by the Administrator or by a State);

"(B) fails to notify or report as required under this Act; or

"(C) falsifies, tampers with, or renders inaccurate, or fails to install any monitoring device or method required to be maintained or followed under this Act

shall, upon conviction, be punished by a fine pursuant to title 18 of the United States Code, or by imprisonment for not more than 2 years, or both.

"(3) Any person who knowingly fails to pay any fee owed the United States under title I, III, IV, or V shall, upon conviction, be punished by a fine pursuant to title 18 of the United States Code, or by imprisonment for not more than 1 year, or both. If a con-

*viction of any person under this paragraph is for a violation committed after a first conviction of such person under this paragraph, the maximum punishment shall be doubled with respect to both the fine and imprisonment.*

*"(4) Any person who negligently releases into the ambient air any hazardous air pollutant listed pursuant to section 112 or any extremely hazardous substance listed pursuant to section 302(a)(2) of the Superfund Amendments and Reauthorization Act of 1986 (42 U.S.C. 11002(a)(2)) that is not listed in section 112, and who at the time negligently places another person in imminent danger of death or serious bodily injury shall, upon conviction, be punished by a fine under title 18 of the United States Code, or by imprisonment for not more than 1 year, or both. If a conviction of any person under this paragraph is for a violation committed after a first conviction of such person under this paragraph, the maximum punishment shall be doubled with respect to both the fine and imprisonment.*

*"(5)(A) Any person who knowingly releases into the ambient air any hazardous air pollutant listed pursuant to section 112 or any extremely hazardous substance listed pursuant to section 302(a)(2) of the Superfund Amendments and Reauthorization Act of 1986 (42 U.S.C. 11002(a)(2)) that is not listed in section 112, and who knows at the time that he thereby places another person in imminent danger of death or serious bodily injury shall, upon conviction, be punished by a fine under title 18 of the United States Code, or by imprisonment of not more than 15 years, or both. Any person committing such violation which is an organization shall, upon conviction under this paragraph, be subject to a fine of not more than $1,000,000 for each violation. If a conviction of any person under this paragraph is for a violation committed after a first conviction of such person under this paragraph, the maximum punishment shall be doubled with respect to both the fine and imprisonment. For any air pollutant for which the Administrator has set an emissions standard or for any source for which a permit has been issued under title IV, a release of such pollutant in accordance with that standard or permit shall not constitute a violation of this paragraph or paragraph (4).*

*"(B) In determining whether a defendant who is an individual knew that the violation placed another person in imminent danger of death or serious bodily injury—*

*"(i) the defendant is responsible only for actual awareness or actual belief possessed; and*

*"(ii) knowledge possessed by a person other than the defendant, but not by the defendant, may not be attributed to the defendant;*

*except that in proving a defendant's possession of actual knowledge, circumstantial evidence may be used, including evidence that the defendant took affirmative steps to be shielded from relevant information.*

*"(C) It is an affirmative defense to a prosecution that the conduct charged was freely consented to by the person endangered and that the danger and conduct charged were reasonably foreseeable hazards of—*

*"(i) an occupation, a business, or a profession; or*

*"(ii) medical treatment or medical or scientific experimentation conducted by professionally approved methods and such other person had been made aware of the risks involved prior to giving consent.*

*The defendant may establish an affirmative defense under this subparagraph by a preponderance of the evidence.*

*"(D) The term 'organization' means a legal entity, other than a government, established or organized for any purpose, and such term includes a corporation, company, association, firm, partnership, joint stock company, foundation, institution, trust, society, union, or any other association of persons.*

*"(E) The term 'serious bodily injury' means bodily injury which involves a substantial risk of death, unconsciousness, extreme physical pain, protracted and obvious disfigurement or protracted loss or impairment of the function of a bodily member, organ, or mental faculty.*

*"(6) For the purpose of this subsection, the term 'person' includes, in addition to the entities referred to in section 302(e), any responsible corporate officer.*

*"(d) ADMINISTRATIVE ASSESSMENT OF CIVIL PENALTIES.—(1) The Administrator may issue an administrative order against any person assessing a civil administrative penalty of up to $25,000, per day of violation, whenever, on the basis of any available information, the Administrator finds that such person—*

*"(A) violates any requirement of an applicable implementation plan (such order shall be issued (i) during any period of federally assumed enforcement, or (ii) more than thirty days following the date of the Administrator's notification under subsection (a)(1) of this section of a finding that such person is violating such requirement); or*

*"(B) violates any other requirement of section 111(e) of this title (relating to new source performance standards), section 112 of this title (relating to standards for hazardous emissions), section 114 of this title (relating to inspections, etc.), section 165(a) of this title (relating to preconstruction requirements), an order under section 167 of this title (relating to preconstruction requirements), an order under section 303 of title III (relating to emergency orders), section 402(a) or 403(c) title IV (relating to permits), or any prohibition of title V (relating to acid deposition control) including a requirement of any rule, order, waiver, or permit promulgated or approved under such sections or titles, and including any requirement for the payment of any fee owed the United States under this Act; or*

*"(C) attempts to construct or modify a major stationary source in any area with respect to which a finding under subsection (a)(5) of this section has been made.*

*The Administrator's authority under this paragraph shall be limited to matters where the total penalty sought does not exceed $200,000 and the first alleged date of violation occurred no more than 12 months prior to the initiation of the administrative action, except where the Administrator and the Attorney General jointly determine that a matter involving a larger penalty amount or longer period of violation is appropriate for administrative penalty action. Any such determination by the Administrator and the Attorney General shall not be subject to judicial review.*

*"(2)(A) An administrative penalty assessed under paragraph (1) shall be assessed by the Administrator by an order made on the record after opportunity for a hearing in accordance with sections 554 and 556 of title 5 of the United States Code. The Administrator shall issue reasonable rules for discovery and other procedures for hearings under this paragraph. Before issuing such an order, the Administrator shall give written notice to the person to be assessed an administrative penalty of the Administrator's proposal to issue such order and provide such person an opportunity to request such a hearing on the order, within 30 days of the date the notice is received by such person.*

*"(B) The Administrator may compromise, modify, or remit, with or without conditions, any administrative penalty which may be imposed under this subsection.*

*"(3) The Administrator may implement, after consultation with the Attorney General and the States, a field citation program through regulations establishing appropriate minor violations for which field citations assessing civil penalties not to exceed $5,000 per day of violation may be issued by officers or employees designated by the Administrator. Any person to whom a field citation is assessed may, within a reasonable time as prescribed by the Administrator through regulation, elect to pay the penalty assessment or to request a hearing on the field citation. If a request for a hearing is not made within the time specified in the regulation, the penalty assessment in the field citation shall be final. Such hearing shall not be subject to section 554 or 556 of title 5 of the United States Code, but shall provide a reasonable opportunity to be heard and to present evidence. Payment of a civil penalty required by a field citation shall not be a defense to further enforcement by the United States or a State to correct a violation, or to assess the statutory maximum penalty pursuant to other authorities in the Act, if the violation continues.*

*"(4) Any person against whom a civil penalty is assessed by the Administrator under this subsection may seek review of such assessment in the United States District Court for the District of Columbia or for the district in which the violation is alleged to have occurred, in which such person resides, or where such person's principal place of business is located, within 30 days following the date the civil penalty order is issued under paragraph (2), or the final decision in a hearing under paragraph (3) is rendered, and by simultaneously sending a copy of the filing by certified mail to the Administrator and the Attorney General. The Administrator or Attorney General, as appropriate, shall promptly file in such court a certified copy, or certified index, as appropriate, of the record on which the order or final decision was issued within 30 days. Such court, in the case of an assessment under paragraph (2), shall not set aside or remand such order or final decision unless there is not substantial evidence in the record, taken as a whole, to support the finding of a violation or unless the Administrator's assessment of the penalty constitutes an abuse of discretion. In any such proceedings, the United States may seek to recover civil penalties assessed under this section.*

*"(5) If any person fails to pay an assessment of a civil penalty—*

*"(A) after the order making the assessment or field citation has become final, or*

*"(B) after a court in an action brought under paragraph (4) has entered a final judgment in favor of the Administrator,*

*the Administrator shall request the Attorney General to bring a civil action in an appropriate district court to recover the amount assessed (plus interest at rates established pursuant to section 6621(a)(2) of the Internal Revenue Code of 1986 from the date of the final order or decision or the date of the final judgment, as the case may be). In such*

an action, the validity, amount, and appropriateness of such penalty shall not be subject to review. Any person who fails to pay on a timely basis a civil penalty under this section shall be required to pay, in addition to such penalty and interest, the United States' enforcement expenses, including but not limited to attorneys fees and costs incurred by the United States for collection proceedings.

"(e) PENALTY ASSESSMENT CRITERIA.—(1) In determining the amount of any penalty to be assessed under this section or section 304(a), the Administrator or the court, as appropriate, shall take into consideration (in addition to such other factors as justice may require) the size of the business, the economic impact of the penalty on the business, the violator's full compliance history and good faith efforts to comply, the duration of the violation as established by any credible evidence (including evidence other than the applicable test method), payment by the violator of penalties previously assessed for the same violation, the economic benefit of noncompliance, and the seriousness of the violation.

"(2) A penalty may be assessed for each day of violation. For purposes of determining the number of days of violation for which a penalty may be assessed under this section or section 304(a), or an assessment may be made under section 120, the violation shall be deemed to commence on the first provable date of violation and to continue each and every day thereafter until the violator establishes that continuous compliance has been achieved, except to the extent that the violator can prove by a preponderance of the evidence that there were intervening days during which no violation occurred or that the violation was not continuing in nature.

"(f) REWARDS.—The Administrator may pay a reward, not to exceed $10,000, to any person who furnishes information or services which lead to a criminal conviction or a judicial or administrative civil penalty for any violation of titles I, III, IV, or V of this Act enforced under this section. Such payment is subject to available appropriations for such purposes as provided in annual appropriation Acts. Any officer, or employee of the United States or any State or local government who furnishes information or renders service in the performance of an official duty is ineligible for payment under this subsection. The Administrator may, by regulation, prescribe additional criteria for eligibility for such a reward.

"(g) SETTLEMENTS; PUBLIC PARTICIPATION.—At least 30 days before a consent order or settlement agreement of any kind under this Act (other than enforcement actions under section 113, 120, or title II, whether or not involving civil or criminal penalties, or judgments subject to Department of Justice policy on public participation) is final or filed with a court, the Administrator shall provide a reasonable opportunity by notice in the Federal Register to persons who are not named as parties or intervenors to the action or matter to comment in writing. The Administrator or the Attorney General, as appropriate, shall promptly consider any such written comments and may withdraw or withhold his consent to the proposed order or agreement if the comments disclose facts or considerations which indicate that is inappropriate, improper, inadequate, or inconsistent with the requirements of this Act. Nothing in this subsection shall apply to civil or criminal penalties under this Act.".

SEC. 602. COMPLIANCE CERTIFICATION.

(a) RECORDS, REPORTS, MONITORING, ETC.—Section 114(a)(1) is amended to read as follows:

"(1) the Administrator may require any person who owns or operates any emission source, who manufactures emission control equipment or process equipment, who the Administrator believes may have information necessary for the purposes set forth in this subsection, or who is subject to any requirement of this Act (other than a manufacturer subject to the provisions of section 206(c) or 208 with respect to a provision of title II) on a one-time, periodic or continuous basis to—

"(A) establish and maintain such records;

"(B) make such reports;

"(C) install, use, and maintain such monitoring equipment, and use such audit procedures, or methods;

"(D) sample such emissions (in accordance with such procedures or methods, at such locations, at such intervals, during such periods and in such manner as the Administrator shall prescribe);

"(E) keep records on control equipment parameters, production variables or other indirect data when direct monitoring of emissions is impractical;

"(F) submit compliance certifications in accordance with section 114(a)(3); and

"(G) provide such other information, as he may reasonably require; and".

(b) MONITORING AND COMPLIANCE CERTIFICATIONS.—Section 114(a) is amended by adding the following new paragraph at the end:

"(3) The Administrator shall in the case of any person which is the owner or operator of a major stationary source, and may, in the case of any other person, require enhanced monitoring and submission of compliance certifications. Compliance certifications shall include (A) identification of the applicable requirement that is the basis of the certification, (B) the method used for determining the compliance status of the source, (C) the compliance status, (D) whether compliance is continuous or intermittent, (E) such other facts as the Administrator may require. Compliance certifications and monitoring data shall be public information. Nothing in this paragraph shall be construed as requiring disclosure of information subject to exemption from disclosure under subsection (c) of this section as trade secrets or that is subject to applicable law concerning self-incrimination. Submission of a compliance certification shall in no way limit the Administrator's authorities to investigate or otherwise implement this Act.".

(c) JUDICIAL REVIEW.—Section 307(b)(1) is amended by inserting "or revising regulations for enhanced monitoring and compliance certification programs under section 114(a)(3) of this Act," immediately before "or any other final action of the Administrator".

SEC. 603. ADMINISTRATIVE ENFORCEMENT SUBPOENAS.

Section 307(a) is amended by striking out "(1)" after "(a)" and by striking "or section 202(b)(5)" and immediately after "section 202(b)(4) or 211(c)(3)" inserting ", any investigation, monitoring, reporting requirement, entry, compliance inspection, or administrative enforcement proceeding under section 113, section 114, section 120, section 205, section 206, section 208, section 303 or section 306".

SEC. 604. ENFORCEMENT OF ADMINISTRATIVE ORDERS.

Section 303 is amended by striking "(a)" and by striking out subsection (b).

SEC. 605. SCOPE OF EMERGENCY ORDERS.

Section 303 of the Clean Air Act, as amended by section 604 of this Act, is further amended as follows:

(1) Strike "the health of persons," and insert "public health or welfare, or the environment" and after the words "abate such sources" insert "or have not acted adequately to abate such sources".

(2) Amend the second sentence to read "If it is not practicable to assure prompt protection of public health or welfare or the environment by commencement of such a civil action, the Administrator may issue such orders as may be necessary to protect public health or welfare or the environment.".

(3) Strike the last 2 sentences in their entirety.

SEC. 606. CONTRACTOR LISTINGS.

Section 306(a) is amended as follows:

(1) Strike "113(c)(1)" and insert "113(c), 205(d), 211(d)(3), and 212(e)".

(2) Insert at the end thereof: "For convictions arising under section 113(c)(2), the condition giving rise to the conviction also shall be considered to include any substantive violation of this Act associated with the violation of 113(c)(2). The Administrator may extend this prohibition to other facilities owned or operated by the convicted person.".

SEC. 607. JUDICIAL REVIEW PENDING RECONSIDERATION OF REGULATION.

Section 307(b)(1) is amended by adding at the end thereof: "The filing of a petition for reconsideration by the Administrator of any otherwise final rule or action shall not affect the finality of such rule or action for purposes of judicial review nor extend the time within which a petition for judicial review of such rule or action under this section may be filed, and shall not postpone the effectiveness of such rule or action.".

SEC. 608. CITIZEN SUITS.

(a) CIVIL PENALTIES.—Section 304(a) is amended by inserting immediately before the period at the end thereof: ", and to apply any appropriate civil penalties (except for actions under paragraph (2))".

(b) PENALTY FUND.—Section 304 is amended by adding the following new subsection after subsection (f):

"(g) PENALTY FUND.—Penalties received under subsection (a) shall be deposited in a special fund in the United States Treasury for licensing and other services. Amounts in such fund and authorized to be appropriated shall remain available until expended, for use by the Administrator to finance air compliance and enforcement activities. The Administrator shall annually report to the Congress about the sums deposited into the fund, the sources thereof, and the actual and proposed uses thereof.".

(c) INTERVENTION BY EPA.—Paragraph (2) of section 304(c) is amended to read as follows:

"(2) In any action under this section, the Administrator, if not a party, may intervene as a matter of right at any time in the proceeding. A judgment in an action under this section to which the United States is not a party shall not, however, have any binding effect upon the United States.".

(d) SERVICE OF COMPLAINT; CONSENT JUDGMENTS.—Section 304(c) is amended by adding the following new paragraph after paragraph (2):

"(3) Whenever any action is brought under this section the plaintiff shall serve a copy of the complaint on the Attorney General of the United States and on the Administrator. No consent judgment shall be entered in an action brought under this section in which the United States is not a party prior to 45 days following the receipt of a copy of the proposed consent judgment by the Attorney General and the Administrator during which time the Government may submit its comments on the proposed consent judgment to the court and parties or may intervene as a matter of right.".

SEC. 609. ENHANCED IMPLEMENTATION AND ENFORCEMENT OF NEW SOURCE REVIEW REQUIREMENTS.

Section 167 is amended by striking "the construction of a major emitting facility" and inserting "the construction or modification of a major emitting facility".

SEC. 610. MOVABLE STATIONARY SOURCES.

Section 302 is amended by adding the following subsection at the end thereof:

"(z) STATIONARY SOURCE.—The term 'stationary source' means generally any source of an air pollutant except those emissions resulting directly from an internal combustion engine for transportation purposes or from a nonroad engine or nonroad vehicle as defined in section 216.".

SEC. 611. ENFORCEMENT OF NEW TITLES OF THE ACT.

Section 120(a)(2)(A) is amended as follows:

(1) Insert ", 167, 303," after "111" in clause (ii).

(2) Redesignate clause (iii) as (iv) and in new clause (iv) strike "clause (i) or (ii)", and insert "clause (i), (ii), or (iii)".

(3) Insert the following new clause after clause (ii)

"(iii) a stationary source which is not in compliance with any requirement of title IV, V or VII of this Act, or".

TITLE VII—MISCELLANEOUS PROVISIONS

Sec. 701. Grants for support of air pollution planning and control programs.
Sec. 702. Annual report repeal.
Sec. 703. Review and revision of criteria and standards.
Sec. 704. Air pollutant release investigation board.
Sec. 705. Emission factors.
Sec. 706. Land use authority.
Sec. 707. Virgin Islands.
Sec. 708. Authorization.

SEC. 701. GRANTS FOR SUPPORT OF AIR POLLUTION PLANNING AND CONTROL PROGRAMS.

(a) GRANTS.—Subparagraphs (A) and (B) of section 105(a)(1) are amended to read as follows:

"(A) The Administrator may make grants to air pollution control agencies, within the meaning of paragraph (1), (2), or (4), or (5) of section 302, in an amount up to three-fifths of the cost of implementing programs for the prevention and control of air pollution or implementation of national standards. For the purpose of this section, "implementation" primary and secondary ambient air quality means any activity related to the planning, developing, establishing, carrying-out, improving, or maintaining of such programs.

"(B) Subject to subsections (b) and (c) of this section, an air pollution control agency which receives a grant under subparagraph (A) in which contributions less than the required two-fifths minimum shall have 3 years following the date of the enactment of the Clean Air Act Amendments of 1990 in which to contribute such amount. If such an agency fails to meet and maintain this required level, the Administrator shall reduce the amount of the Federal contribution accordingly.".

(b) CONFORMING AMENDMENT.—Section 105(a)(1)(C) is amended by striking "(B)" and inserting "(A)".

(c) LIMITATION ON GRANTS.—Section 105(b) is amended by—

(1) inserting "(1)" immediately after "(b)"

(2) striking all that follows "(3) the financial need of the respective agencies."; and

(3) redesignating paragraphs (1), (2), and (3) as subparagraphs (A), (B), and (C) respectively.

(d) LIMITATION.—Section 105 is amended by redesignating subsection (c) as paragraph (2) of subsection (b) and by striking all that follows "into which such area extends." in the newly designated paragraph (2) and inserting "Subject to the provisions of paragraph (1) of this subsection, no State shall have made available to it for application less than one-half of 1 per centum of the annual appropriation for grants under this section for grants to agencies within such State.".

(e) MAINTENANCE OF EFFORT.—Section 105 is amended by inserting the following new subsection after subsection (b):

"(c) MAINTENANCE OF EFFORT.—(1) No agency shall receive any grant under this section during any fiscal year when its expenditures of non-Federal funds for recurrent expenditures for air pollution control programs will be less than its expenditures were for such programs during the preceding fiscal year. In order for the Administrator to award grants under this section in a timely manner each fiscal year, the Administrator shall compare an agency's prospective expenditure level to that of its second preceding fiscal year. The Administrator shall revise the current regulations which define applicable nonrecurrent and recurrent expenditures, and in so doing, give due consideration to exempting an agency from the limitations of this paragraph and subsection (a) due to periodic increases experienced by that agency from time to time in its annual expenditures for purposes acceptable to the Administrator for that fiscal year.

"(2) The Administrator may still award a grant to an agency not meeting the requirements of paragraph (l) of this subsection if the Administrator, after notice and opportunity for public hearing, determines that a reduction in expenditures is attributable to a non-selective reduction in the expenditures in the programs of all Executive branch agencies of the applicable unit of Government. No agency shall receive any grant under this section with respect to the maintenance of a program for the prevention and control of air pollution unless the Administrator is satisfied that such a grant will be so used to supplement and, to the extent practicable, increase the level of State, local, or other non-Federal funds. No grants shall be made under this section until the Administrator has consulted with the appropriate official as designated by the Governor or Governors of the State or States affected.".

(f) COSTS.—Section 106 is amended by striking "three-fourths of the air quality planning program costs of such agency" and inserting "three-fifths of the air quality implementation program costs of such agency".

SEC. 702. ANNUAL REPORT REPEAL.

Section 313 is repealed.

SEC. 703. REVIEW AND REVISION OF CRITERIA AND STANDARDS.

(a) REVIEW AND REVISION OF CRITERIA.—Section 109(d)(1) is amended to read as follows: "(1)(A) Not later than 5 years after enactment of the Clean Air Act Amendments of 1990 and thereafter as provided in subparagraph (C), the Administrator shall (i) complete a review of the criteria published under section 108 and the standards promulgated under this section (ii) make such revisions in the criteria as may be appropriate to reflect advances in scientific knowledge, and (iii) determine whether it is appropriate to propose revisions of the standards based on the applicable criteria. In making revisions or determinations under this subparagraph, the Administrator may use such procedures as the Administrator deems appropriate. Notice of revisions and determinations made under this subparagraph shall be published in the Federal Register not later than 30 days after the revisions or determinations, respectively, are made, and copies shall be made available to the general public.

"(B) If the Administrator determines under subparagraph (A) that it is appropriate to propose revision of a standard, the Administrator shall commence rulemaking proceedings under section 307(d) and make such revisions as are appropriate as expeditiously as practicable but not later than 3 years after such determination is made. The Administrator may elect to follow the same procedure with respect to a determination that it is inappropriate to propose a revision of a standard.

"(C) After the first review and (as appropriate) revision of a standard under this paragraph, the Administrator shall repeat the process specified in subparagraphs (A) and (B) from time to time for such standard. The review specified in subparagraph (A) shall be completed not later than 5 years after completion of the last review of the standard or, if the standard was revised as a result of such review (or judicial review), not later than 5 years after completion of such revision. For any new standard promulgated after the date of the enactment of the Clean Air Act Amendments of 1990, the first review under subparagraph (A) shall be completed not later than 5 years after the date of promulgation.

"(D) A determination under subparagraph (A) that it is inappropriate to propose a revision of a standard shall be reviewable as a final action under section 307(b). If the Administrator elects to commence rulemaking proceedings under subparagraph (B) with respect to such a determination, the determination shall be reviewable only upon completion of the rulemaking. A determination under subparagraph (A) that it is appropriate to propose revision of a standard shall not be subject to judicial review under section 307(b) or otherwise.

"(E) The Administrator may review and revise criteria or standards earlier or more frequently than required under this paragraph.".

(b) CONFORMING AMENDMENT.—Section 109(d)(2)(B) is amended by striking "January 1, 1980, and at five-year intervals thereafter," and inserting "5 years after the date of the enactment of of the Clean Air Act Amendments of 1990 and thereafter at intervals corresponding to the Administrator's review of criteria and standards under paragraph (1).".

(c) ISSUANCE OF AIR QUALITY CRITERIA.—Section 108(a)(2) is amended by striking "12 months" and inserting "3 years".

(d) CONFORMING AMENDMENT.—Section 108(c) is amended by striking "criteria or" in the first sentence.

(e) PROMULGATION.—Section 109(a)(2) is amended by striking "the Administrator shall' and all that follows down through the period at the end of such paragraphs and inserting; the Administrator shall promulgate proposed national primary and secondary ambient air quality standards as appropriate for such air pollutant not later than 3 years after such issuance. The procedure provided for in subsection (d) shall apply to the revision of such standards.".

(f) REVISION OF STANDARDS.—Section 109(b) is amended by striking the second sentence of paragraph (1) and the second sentence of paragraph (2).

SEC. 704. AIR POLLUTANT RELEASE INVESTIGATION BOARD.

Add the following new section after section 193:

"SEC. 194. AIR POLLUTANT RELEASE INVESTIGATION BOARD.

"(a) ESTABLISHMENT.—There is established within the Environmental Protection Agency an Air Pollutant Accidental Release Investigation Board to be appointed by the Administrator for the purpose of investigating major life-threatening releases of air pollutants. The Board shall consist of 3 members which serve at the pleasure of the Administrator. The Board shall establish reasonable rules of procedure.

"(b) MEMBERSHIP.—The Board shall establish panels to investigate such releases. Any panel of the Board shall consist of 4 employees of the United States Environmental Protection Agency and the Secretary of Labor selected jointly by the Administrator and the Secretary of Labor at the request of the Board. With the consent of the head of any other Federal agency, the Administrator may also select an employee of such agency as a member of a panel in place of an employee of the Environmental Protection Agency.

"(c) DUTIES.—(1) The Board shall investigate or cause to be investigated (in such detail as it shall prescribe), and independently determine the facts, conditions, and circumstances and the cause or probable cause or causes of, any major life-threatening release of an air pollutant, except:

"(A) any release of source, byproduct, or special nuclear material from a nuclear incident which the Nuclear Regulatory Commission is authorized to investigate, and

"(B) any transportation-related release, including marine oil spills, which the National Transportation Safety Board (NTSB) is authorized to investigate.

The Board should utilize the expertise and experience of other agencies, including the NTSB.

"(2) For any investigation performed under paragraph (1) of this subsection, the Board shall develop a written report on the facts, conditions, and circumstances of the release and include appropriate recommendations and shall make such reports available to the Administrator, the Secretary of Labor, and Congress and available to the public. No proposed or final report of the Board shall be subject to review of the Administrator or any agency or to judicial review in any court.

"(d) POWERS.—(1) The Board, or upon the authority of the Board, any member thereof, may, for the purpose of carrying out subsection (c), hold such hearings, sit and act at such times and places, and administer such oaths, as the Board or such officer or employee deems advisable.

"(2) In addition to that described in paragraph (1), the Board may use any information gathering authority of the Administrator under this Act, including the subpoena power provided in section 307(a)(1) of this Act.

"(e) EVIDENCE.—No part of the conclusions, findings, or recommendations of any report of the Board relating to any accidental release or the investigation thereof shall be admitted as evidence or used in any action or suit for damages in which the United States is a party arising out of any matter mentioned in such report.".

SEC. 705. EMISSION FACTORS.

Part A of title I, as amended by section 108(g) of the Act, is amended by adding the following new section at the end thereof:

"SEC. 130. EMISSION FACTORS.

"Within 6 months after enactment of the Clean Air Act Amendments of 1990, and at least every 3 years thereafter, the Administrator shall review and, if necessary, revise, the methods ('emission factors') used for purposes of this Act to estimate the quantity of emissions of carbon monoxide, volatile organic compounds, and oxides of nitrogen from sources of such air pollutants (including area sources and mobile sources). In addition, the Administrator shall establish emission factors for sources for which no such methods have previously been established by the Administrator. The Administrator shall permit any person to demonstrate improved emissions estimating techniques, and following approval of such techniques, the Administrator shall authorize the use of such techniques. Any such technique may be approved only after appropriate public participation. Until the Administrator has completed the revision required by this section, nothing in this section shall be construed to affect the validity of emission factors established by the Administrator before the date of the enactment of the Clean Air Act Amendments of 1990.".

SEC. 706. LAND USE AUTHORITY.

Part A of title I, is amended by section 706 of this Act, is amended by adding the following at the end thereof:

"SEC. 131. LAND USE AUTHORITY.

"Nothing in this Act constitutes an infringement on the existing authority of counties and cities to plan or control land use, and nothing in this Act provides or transfers authority over such land use.".

SEC. 707. VIRGIN ISLANDS.

Section 324(a)(1) (42 U.S.C. 7625-1 (a)(1)) is amended by inserting "the Virgin Islands," after "American Samoa,".

SEC. 708. AUTHORIZATION.

Section 327 is amended to read as follows:

"SEC. 327. AUTHORIZATION OF APPROPRIATIONS.

"There are authorized to be appropriated to carry out this Act such sums as may be necessary.".

TITLE VIII—OTHER PROVISIONS

Sec. 801. Establishment of program to monitor and improve air quality in regions along the border between the United States and the United States of Mexico.
Sec. 802. Equivalent air quality controls among trading nations.
Sec. 803. Report on costs and benefits.
Sec. 804. United States-Mexico office within EPA.

SEC. 801. ESTABLISHMENT OF PROGRAM TO MONITOR AND IMPROVE AIR QUALITY IN REGIONS ALONG THE BORDER BETWEEN THE UNITED STATES AND THE UNITED STATES OF MEXICO.

(a) IN GENERAL.—The Administrator of the Environmental Protection Agency (hereinafter referred to as the "Administrator") is authorized, in cooperation with the Department of State and the affected States, to negotiate with representatives of the United States of Mexico to establish a program to monitor and improve air quality in regions directly along the border between the United States and the United States of Mexico. The program established under this section shall be conducted for a period of 60 months beginning on July 1, 1990.

(b) MONITORING AND REMEDIATION.—

(1) MONITORING.—The monitoring component of the program conducted under this section shall identify and determine sources of pollutants for which National ambient air quality standards (hereinafter referred to as "NAAQS") and other air quality goals have been established in regions along the border between the United States and the United States of Mexico. Such monitoring component of the program shall include, but not be limited to, the collection of meteorological data, the measurement of air quality, the compilation of an emissions inventory, and shall be sufficient to the extent necessary to successfully support the use of a state-of-the-art mathematical air modeling analysis. Such monitoring component of the program shall collect and produce data projecting the level of emission reductions necessary in both the United States of Mexico and the United States to bring about attainment of both primary and secondary NAAQS, and other air quality goals, in regions along the border in the United States. Such monitoring component of the program shall include to the extent possible, data from monitoring programs undertaken by other parties.

(2) REMEDIATION.—The Administrator, in cooperation with the Department of State is authorized to negotiate with appropriate representatives of the United States of Mexico to develop joint remediation measures to reduce the level of airborne pollutants to achieve and maintain primary and secondary NAAQS, and other air quality goals, in regions along the border between the United States and the United States of Mexico. Such joint remediation measures may include, but not be limited to measures included in the Environmental Protection Agency's Control Techniques and Control Technology documents. Such remediation program shall also identify those control measures implementation of which in the United States of Mexico would be expedited by the use of material and financial assistance of the United States. With respect to those control measures identified as requiring funding of the United States for projects within the United States of Mexico, the Administrator shall attempt to the maximum extent practicable to utilize resources of the United States of Mexico that would offset costs of the United States in implementing joint remediation measures under this section. Such joint remediation measures shall be included as enforceable control strategies in the state implementation plan for the respective nonattainment area.

(c) STUDY AND REPORTS.—

(1) GAO STUDY.—The Comptroller General of the General Accounting Office shall, conduct a study and issue a report to Congress not later than January 1, 1994, on the pro-

*gram conducted under this section. Such study shall—*

*(A) summarize the project to date,*

*(B) make recommendations on ways to improve the program; and*

*(C) make recommendations on the advisability of continuing the program or expanding the program to include Canada and other nations.*

*(2) REPORT OF ADMINISTRATOR.—The Administrator shall, not later than July 1, 1991, and each year thereafter during the operation of the program described in this section, report to Congress on the progress of the program in bringing nonattainment areas along the border of the United States into attainment with primary and secondary NAAQS. The report issued by the Administrator under this paragraph shall include recommendations on funding mechanisms to assist in implementation of monitoring and remediation efforts.*

*(d) FUNDING AND PERSONNEL.—The Administrator shall, where necessary, make available, subject to appropriation Acts, such funds, personnel, and equipment as may be necessary to implement the provisions of this section. In those cases where direct financial assistance of the United States is provided to implement monitoring and remediation programs in the United States of Mexico, the Administrator shall develop grant agreements with appropriate representatives of the United States of Mexico to assure the accuracy and completeness of monitoring data and the performance of remediation measures which are financed by the United States. Such funding agreements, subject to appropriation Acts, shall include authorization for the Administrator to—*

*(1) review and agree to plans for monitoring and remediation;*

*(2) inspect premises, equipment and records to insure compliance with the agreements established under and the purposes set forth in this section; and*

*(3) where necessary, develop grant agreements with affected States to carry out the provisions of the section.*

*(e) CONSIDERATION OF FACTORS IN NONATTAINMENT AREAS.—When approving state implementation plans for nonattainment areas (as defined in section 171(2) (42 U.S.C. 7501(2)), the Administrator shall take into account the impacts of the sources of pollutants coming from the United States of Mexico and the role of the United States in developing monitoring and remediation plans with the United States of Mexico to bring about attainment of both primary and secondary NAAQS and other air quality goals in regions along the border in the United States.*

*SEC. 802. EQUIVALENT AIR QUALITY CONTROLS AMONG TRADING NATIONS.*

*(a) FINDINGS.—The Congress finds that—*

*(1) all nations have the responsibility to adopt and enforce effective air quality standards and requirements and the United States, in enacting this Act, is carrying out its responsibility in this regard;*

*(2) as a result of complying with this Act, businesses in the United States will make significant capital investments and incur incremental costs in implementing control technology standards;*

*(3) such compliance may impair the competitiveness of certain United States jobs, production, processes, and products if foreign goods are produced under less costly environmental standards and requirements than are United States goods; and*

*(4) mechanisms should be sought through which the United States and its trading partners can agree to eliminate or reduce competitive disadvantages.*

*(b) ACTION BY THE PRESIDENT.—*

*(1) IN GENERAL.—Within 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the President shall submit to the Congress a report—*

*(A) identifying and evaluating the economic effects of—*

*(i) the significant air quality standards and controls required under this Act, and*

*(ii) the differences between the significant standards and controls required under this Act and similar standards and controls adopted and enforced by the major trading partners of the United States,*

*on the international competitiveness of United States manufacturers; and*

*(B) containing a strategy for addressing such economic effects through trade consultations and negotiations.*

*(2) ADDITIONAL REPORTING REQUIREMENTS.—(A) The evaluation required under paragraph (1)(A) shall examine the extent to which the significant air quality standards and controls required under this Act are comparable to existing internationally-agreed norms.*

*(B) The strategy required to be developed under paragraph (1)(B) shall include recommended options (such as the harmonization of standards and trade adjustment measures) for reducing or eliminating competitive disadvantages caused by differences in standards and controls between the United States and each of its major trading partners.*

*(3) PUBLIC COMMENT.—Interested parties shall be given an opportunity to submit comments regarding the evaluations and strategy required in the report under paragraph (1). The President shall take any such comment into account in preparing the report.*

*(4) INTERIM REPORT.—Within 9 months after the date of the enactment of the Clean Air Act Amendments of 1990, the President shall submit to the Congress an interim report on the progress being made in complying with paragraph (1).*

*SEC. 803. REPORT ON COSTS AND BENEFITS.*

*Commencing on the second year after the date of the enactment of the Clean Air Act Amendments of 1990 and annually thereafter, the Comptroller General of the General Accounting Office, in consultation with other agencies, such as the Environmental Protection Agency, the Department of Labor, the Department of Commerce, the United States Trade Representative, the National Academy of Sciences, the Office of Technology Assessment, the National Academy of Engineering, the Council on Environmental Quality, and the Surgeon General, shall provide a report to the Congress on the incremental human health and environmental benefits, and incremental costs beyond current clean air requirements of the new control strategies and technologies required by this Act. The report shall include, for such strategies and technologies, an analysis of the actual emissions reductions beyond existing practice, the effects on human life, human health and the environment (including both positive impacts and those that may be detrimental to jobs and communities resulting from loss of employers and employment, etc.), the energy security impacts, and the effect on United States products and our industrial competitiveness in national and international markets.*

*SEC. 804. UNITED STATES-MEXICO OFFICE WITHIN EPA.*

*Title III is amended by inserting the following after section 325:*

*"SEC. 325A. UNITED STATES-MEXICO AIR QUALITY.*

*"(a) ESTABLISHMENT OF OFFICE.—In coordination with the Secretary of State, the Administrator shall establish in the Office of International Activities a United States-Mexico Air Quality Office to be under the direction of a Director for United States-Mexico Air Quality affairs (hereinafter in this section referred to as the Director).*

*"(b) DUTIES OF DIRECTOR.—In addition to such other air quality duties as may be delegated to the Director, the Director shall have the responsibility to carry out each of the following:*

*"(1) A binational study of the prospects in Mexico for clean fuel automobiles and clean fuels (especially natural gas given Mexico's competitive advantage in this area).*

*"(2) A study on the possibility of standardized regulations between the United States and Mexico on air quality to contribute to greater coordination between the two jurisdictions.*

The CHAIRMAN. No amendments are in order to said substitute except the amendments printed in the supplemental report accompanying House Resolution 399, which shall be considered in the order and manner specified in the report, shall be considered as having been read, and shall not be subject to amendment.

The amendments numbered 1 and 3 each shall be considered en bloc and shall not be subject to a demand for a division of the question.

If more than one amendment in any of the following topic areas: First, MACT; second, CFC; third, OCS; and fourth, clean cars are adopted, only the last amendment in each topic area which is adopted shall be considered as finally adopted and reported back to the House.

In each topic area, it shall be in order to consider an amendment offered only with the concurrence of Representatives DINGELL, LENT, WAXMAN, and MADIGAN in lieu of the amendments printed in the supplemental report accompanying House Resolution 399.

AMENDMENTS EN BLOC OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, I offer amendments en bloc.

The CHAIRMAN. The Clerk will designate the amendments en bloc.

The text of the amendments en bloc is as follows:

Amendments en bloc offered by Mr. DINGELL: Page 4, in the table of contents, strike the item relating to section 703, renumber the items relating to sections 704 through 707 accordingly, insert "707. Virgin Islands" after the item relating to section 706 as so renumbered.

Page 129, line 13, strike "in" and insert "air".

Page 133, insert closing quotation marks and a period at the end of line 11.

Page 410, line 5, strike "No allowances shall be" and all that follows down through line 8.

Page 439, line 9, strike "(A)" and insert "(a)".

PERMITS AND ENFORCEMENT

Page 23, line 14, insert "and" after the semicolon.

Page 24, line 3, strike "; and" and insert a period.

Page 24, strike lines 4 through 7.

Page 321, line 6, strike all after "parts C or D" through line 16 on page 321 and insert: "or any other stationary source category or subcategory designated (in whole or in part) by regulations promulgated by the Administrator which shall include a finding setting forth the basis for such designation, except in compliance with a permit issued by a permitting authority under this title. Nothing in this subsection shall be construed to alter the requirements of sections 165, 172, and 173 regarding the requirement that a permit be obtained before construction. The Administrator may, in the Administrator's discretion, promulgate regulations to exempt 1 or more source categories or subcategories (in whole or in part) from the requirements of this subsection if the Administrator finds that compliance with such requirements is impracticable, infeasible, or unnecessarily burdensome on such categories or subcategories, except that the Administrator may not exempt any major source from such requirements.".

Page 322, line 8, strike "costs of developing and administering the permit program" and insert "(direct and indirect) costs required to develop and administer the permit program requirements of this title, including section 407".

Page 324, line 12, strike the parenthetical and insert "(consistent with the need to cover the reasonable costs authorized by subparagraph (A))".

Page 327, line 8, after "complete" and after "applications" insert a comma and strike "and".

Page 327, line 11 before the period, insert ", renewals, or revisions, and including an opportunity for judicial review of the final permit action by the applicant or any person who participated in the public comment process".

Page 327, line 12, after "Authority" insert ", and reasonable procedures consistent with the need for expeditious action by the permitting authority on permit applications and related matters,".

Page 327, after line 15 insert:

"(8) A requirement that the permitting authority, in the case of permits with a term of 3 or more years for major sources, shall require revisions to the permit to incorporate applicable standards and regulations promulgated under this Act after the issuance of such permit. Such revisions shall occur as expeditiously as practicable and consistent with the procedures established under paragraph (6) but not later than 18 months after the promulgation of such standards and regulations. No such revision shall be required if the effective date of the standards or regulations is a date after the expiration of the permit term. Such permit revision shall be treated as a permit renewal if it complies with the requirements of this title regarding renewals.

"(9) Provisions to allow changes within a permitted facility (or one operating pursuant to section 403(d)) without requiring a permit revision, if the changes are not modifications under any provision of title I and the changes do not exceed the emissions allowable under the permit, provided that the facility provides the Administrator and the permitting authority with advance notification of the changes.".

Page 327, line 18, before "Not" insert "(1)".

Page 328, line 14, strike "If the Governor" and all that follows down through line 2 on page 329 and insert:

"(2) Except in the case of a program referred to in subparagraph (B), if the Governor does not submit a program as required under paragraph (1) or if the Administrator disapproves a program submitted by the Governor under paragraph (1), in whole or in part, the Administrator may, in the Administrator's discretion, apply any of the sanctions specified in section 179(b).

"(B) If the Governor does not submit a program as required under paragraph (1) which is applicable to each nonattainment area (as defined in part D of title I) in the State and which applies to all air pollutants for which national ambient air quality standards have been promulgated, or if the Administrator disapproves any such program submitted by the Governor under paragraph (1) in whole or in part, within 18 months after the date required for such submittal or the date of such disapproval, as the case may be, the Administrator shall apply such sanctions in the same manner and conditions as are applicable in the case of a determination, disapproval, or finding under section 179(a).

"(3) If a program meeting the requirements of this title has not been approved in whole for any State within 2 years after the date required for submission of such a program under paragraph (1), the Administrator shall promulgate a program under this title for that State.".

Page 330, after the period in line 21, insert "The effective date of a permit program, or partial permit program, promulgated by the Administrator shall be the date of promulgation.".

Page 330, line 22, insert "(1)" before "When-".

Page 330, line 23, strike "preliminary".

Page 331, line 1, strike "shall" and insert: "may, in the Administrator's discretion, apply any of the sanctions specified in section 179(b), except as provided in paragraph (2).

"(2) Whenever the Administrator makes a determination that a permitting authority is not adequately administering and enforcing a program, or portion thereof, in accordance with the requirements of this title in the case of a program applicable to a nonattainment area (as defined in part D of title I), within 18 months after the date of the notice under paragraph (1), the Administrator shall apply the sanctions under section 179(b) in the same manner and subject to the same deadlines and other conditions as are applicable in the case of a determination, disapproval, or finding under section 179(a).

"(3) Whenever the Administrator has made a finding under paragraph (1) with respect to any State, unless the State has corrected such deficiency within 18 months after the date of such finding, the Administrator shall, within 2 years after the date of such finding, promulgate a program under this title for that State. Nothing in this paragraph shall be construed to affect the validity of a program which has been approved under this title or the authority of any permitting authority acting under such program until such time as such program is promulgated by the Administrator under this paragraph.".

Page 332, in line 2, strike "section 402(b)(1)" and insert "section 402(b)".

"(A) makes any false statement, representation, or certification in, or omits material information from, or knowingly alters, conceals, or fails to file or maintain any notice, application, record, report, plan, or other document required to be filed or maintained under this Act (whether with respect to the requirements imposed by the Administrator, or the State pursuant to the requirements of this Act applicable to the State)".

Page 474, strike line 17 and all that follows down through line 6 on page 475 and insert: "violates any other requirement of title I, III, IV, or V, including a requirement of any rule, order, waiver or permit promulgated or approved under this Act or for the payment of any fee owed the United States under this Act.

Page 478, line 6, before the comma insert "as provided in this subsection".

Page 478, line 22, before the period, insert: "and a quarterly nonpayment penalty for each quarter during which such failure to pay persists. Such nonpayment penalty shall be 10 percent of the aggregate amount of such person's outstanding penalties and nonpayment penalties accrued as of the beginning of such quarter."

Page 480, line 24, strike the closing quotation marks.

Page 480, after line 24, insert:

"(h) OPERATOR.—For purposes of the provisions of this section and section 120 the term 'operator', as used in such provisions, shall include any person who is senior management personnel or a corporate officer. Such term shall not include any person who is a stationary engineer or technician responsible for the operation, maintenance, repair, or monitoring of equipment and facilities and who often has supervisory and training duties but who is not senior management personnel or a corporate officer. For purposes of subsection (c)(4) of this section, the term 'a person' shall not include an employee who is carrying out his normal activities and who is not a part of senior management personnel or a corporate officer. For purposes of paragraphs (1), (2), and (3) and (5) of subsection (c) of this section the term 'a person' shall not include an employee who is carrying out his normal activities and who is acting under orders from the employer."

Page 483, line 4, after the period insert: "The Administrator shall promulgate rules to provide guidance and to implement this paragraph within 2 years after the enactment of the Clean Air Amendments of 1990."

Page 486, after line 16, insert:

(e) OTHER REQUIREMENTS.—Section 304(f) is amended by striking the period at the end of paragraph (3), inserting "; or" and adding the following new paragraph at the end thereof:

"(4) any other standard, limitation, or schedule established under any permit issued pursuant to title IV or under any applicable State implementation plan approved by the Administrator, any permit term or condition, and any requirement to obtain a permit as a condition of operations.".

(f) UNREASONABLE DELAY.—Section 304(a) is amended by adding the following at the end thereof: "The district courts of the United States shall have jurisdiction to compel (consistent with paragraph (2) of this subsection) agency action unreasonably delayed, except that an action to compel agency action referred to in section 307(b) which is unreasonably delayed may only be filed in a United States District Court within the circuit in which such action would be reviewable under section 307(b). In any such action for unreasonable delay, notice to the entities referred to in subsection (b)(1)(A) shall be provided 180 days before commencing such action.".

(g) PAST VIOLATIONS.—Section 304(a) is amended by inserting immediately before "to be in violation" in paragraphs (1) and (3) "to have violated (if there is a prima facie demonstration that the alleged violation has been repeated or continuous) or". The amendment made by this subsection shall take effect with respect to actions brought after the date 2 years after the enactment of the Clean Air Act Amendments of 1990.

(h) DEFERRED ACTIONS.—Section 307(b)(2) is amended by adding the following at the end thereof: "Where a final decision by the Administrator defers performance of any nondiscretionary statutory action to a later time, any person may challenge the deferral pursuant to paragraph (1).".

Page 485, line 13, before "Penalties" insert "(1)".

Page 485, line 21, strike the closing quotation marks.

Page 485, after line 21, insert the following:

"(2) Notwithstanding paragraph (1) the court in any action under this subsection to apply civil penalties shall have discretion to order that such civil penalties, in lieu of being deposited in the fund referred to in paragraph (1), be used in beneficial mitigation projects which are consistent with this Act and enhance the public health or the environment. The court shall obtain the view of the Administrator in exercising such discretion and selecting any such projects. The amount of any such payment in any such action shall not exceed $100,000.".

MINERAL FIBERS

On page 286, delete "Mineral Fibers", and insert in lieu thereof "Fine Mineral Fibers"; also strike the text of footnote 3, and insert in lieu thereof "includes mineral fiber emissions from facilities manufacturing or processing glass, rock, or slag fibers (or other mineral derived fibers) of average diameter 1 micrometer or less."

SOLVENTS

Page 116, strike line 20 and all that follows down through line 23 on page 117 and insert:

"(A) IN GENERAL.—Upon submission of the final report under paragraph (2), the Administrator shall list those categories of consumer of commercial products that the Administrator determines, based on the study, account for at least 80 percent of the VOC emissions, on a reactivity-adjusted basis, from consumer or commercial products in areas that violate the NAAQS for ozone. Credit toward the 80 percent emissions calculation shall be given for emission reductions from consumer or commercial products made after the date of enactment of this section. At such time, the Administrator shall divide the list into 4 groups establishing priorities for regulation based on the criteria established in paragraph (2). Every 2 years after promulgating such list, the Administrator shall regulate one group of categories until all 4 groups are regulated. The regulations shall require best available controls as defined in this section. Such regulations may exempt health use products for which the Administrator determines there is no suitable substitute. In order to carry out this section, the Administrator may, by regulation, control or prohibit any activity, including the manufacture or introduction into commerce, offering for sale, or sale of any consumer or commercial product which results in emission of volatile organic compounds into the ambient air.

Page 115, line 12, strike "selecting" and inserting "regulating".

Page 118, strike line 14 though 24.

ASBESTOS

Page 498, after line 4, insert the following and make the necessary conforming changes in the table of contents:

SEC. 707B. PROVISIONS REGARDING ASBESTOS

(a) TRAINING.—The National Institute of Environmental Health Sciences is authorized to award one-time start-up grants under this section to joint labor-management trust funds and to nonprofit government employee organizations to establish and operate (for the duration of the period of authorized funds) programs for the training and education of workers who are or may be engaged in abatement, removal, and response with respect to friable asbestos containing material in nonschool public and commercial buildings. Applications for grants under this paragraph shall be submitted in such form and manner, and contain such information, as the National Institute for Environmental Health Sciences prescribes. There is authorized to be appropriated to carry out this paragraph the sum of $10,000,000 for fiscal years 1991, 1992, 1993, and 1994. For purposes of this subsection, the term "public and commercial buildings" has the meaning given such term by section 202 of the Toxic Substances Control Act (15 U.S.C. 2642).

(b) ASBESTOS ACCREDITATION REGULATIONS.—(1) For purposes of protecting human health from asbestos emissions during response actions carried out with respect to asbestos-containing materials in nonschool public and commercial buildings, the Administrator of the Environmental Protection Agency shall promulgate regulations to require accreditation for persons who—

(A) inspect for asbestos-containing material in nonschool public or commercial buildings; or

(B) design or conduct response actions with respect to friable asbestos-containing material in nonschool public or commercial buildings.

(2) The accreditation program contained in the regulations shall include requirements identical to those in the model contractor accreditation plan promulgated by the Administrator under section 206(b) of the Toxic Substances Control Act (15 U.S.C. 2646(b)), except that the requirements with respect to number of hours of training for workers conducting response actions shall be as follows:

(A) To become accredited, any worker conducting response actions in a nonschool public and commercial building shall undergo not fewer than 40 hours of training, at least 12 of which shall be nonclassroom, hands-on training.

(B) To maintain accreditation, such a worker shall complete an 8-hour refresher course annually.

(3) In exercising authority under this subsection, the Administrator shall not, for purposes of section 4(b)(1) of the Occupational Safety and Health Act (29 U.S.C. 653(b)(1)), be considered to be exercising statutory authority to prescribe or enforce standards or regulations affecting occupational safety or health.

(4) For purposes of this section, the terms "asbestos-containing material", "public and commercial building", "response action", and "friable asbestos-containing material" have the meaning given those terms by section 202 of the Toxic Substances Control Act (15 U.S.C. 2642).

(5) Regulations shall be promulgated under this section not later than 6 months after the date of the enactment of the Clean Air Act Amendments of 1990.

COMBUSTION OF CONTAMINATED USED OIL IN SHIPS

Page 507, after line 12, insert the following new section and make the necessary conforming changes in the table of contents:

SEC. 805. COMBUSTION OF CONTAMINATED USED OIL IN SHIPS.

Within 2 years after the enactment of the Clean Air Act Amendments of 1990, the Administrator of the Environmental Protection Agency shall complete a study and submit a report to Congress evaluating the health and environmental impacts of the combustion of contaminated used oil in ships, the reasons for using such oil for such purposes, the alternatives to such use, the costs of such alternatives, and other relevant factors and impacts. In preparing such study, the Administrator shall obtain the view and comments of all interested persons.

FEES AND PENALTIES

Page 105, line 19, strike ", import,".

Page 433, line 1, strike "FEE" and insert "PENALTY".

Page 433, line 2, strike "FEE" and insert "PENALTY".

Page 434, line 3, strike "FEE" and insert "PENALTY".

Page 434, lines 4, 8, and 9, strike "fee" each place it appears and insert "penalty".

Page 348, in the table below line 2, strike the item relating to section 510 and insert the following:

"SEC. 510. EXCESS EMISSIONS ENFORCEMENT PENALTY.

Page 436, line 4, strike "fees" and insert "penalties".

CONFORMITY AND SANCTIONS PROVISIONS

Page 29, beginning on line 1, strike "The Administrator shall" and all that follows down through line 5 and insert:

The Administrator shall, by rule, establish criteria for exercising his authority under the previous sentence with respect to any deficiency referred to in section 179(a) to ensure that, during the 24-month period following the finding, disapproval, or determination referred to in section 179(a), such sanctions are not applied on a statewide basis where one or more political subdivisions covered by the applicable implementation plan are principally responsible for such deficiency.

Page 33, strike line 22 and all that follows through line 2 on page 34 and insert the following:

"(2) In the case of a plan or program developed pursuant to the comprehensive planning process under section 134 of title 23 of the United States Code (hereinafter in this subsection referred to as a 'transportation plan') conformity to a plan approved or promulgated under section 110 (hereinafter in this subsection referred to as an 'applicable implementation plan') shall be determined for the transportation plan taken as a whole and shall not be determined for projects included in such plan, except as provided in paragraphs (3) and (4). In determining conformity in the case of any such transportation plan, subparagraphs (A) and (B) of paragraph (1) shall apply and in addition, the transportation plan shall provide for the implementation of the transportation provisions of the applicable implementation plan. In making a determination of conformity under subparagraph (A) of paragraph (1), emissions resulting from such plans and programs shall be required to be consistent with baseline emission inventories and emission reduction projections and schedules assigned to those plans and programs in the applicable implementation plan.

"(3) If a transportation plan has been found to conform to an applicable implementation plan as provided in paragraph (2), any project included in such conforming transportation plan shall be treated as conforming to the applicable implementation plan if—

"(A) it is a control measure from the applicable implementation plan; or

"(B) it comes from the conforming transportation plan and the design and scope of such project have not changed since the conformity finding regarding such transportation plan.

"(4) If a transportation plan has been found, within the previous 2-year period, to conform to an applicable implementation plan as provided in paragraph (2), any project not referred to in paragraph (3) shall be treated as conforming to the applicable implementation plan only if it is demonstrated—

"(A) that the projected emissions from such project would not cause the transportation plans and programs within the nonattainment area to exceed the emission reduction projections and schedules assigned to such plans and programs, or

"(B) that any emissions resulting from such project are, before such project is approved, taken into account (i) in a revised transportation plan which conforms as provided in paragraph (2), or (ii) in a revised applicable implementation plan.

"(5) No later than one year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate criteria and procedures for determining conformity (except in the case of transportation plans and projects) of, and for keeping the Administrator informed about, the activities referred to in paragraph (1). No later than one year after such date of enactment, the Administrator, with the concurrence of the Secretary of Transportation, shall promulgate criteria and procedures for demonstrating and assuring conformity in the case of transportation plans and projects.

Page 34, line 6, strike "18" and insert "24".

ALLOWANCES FOR EARLY REDUCTIONS

Page 384, after line 17, insert:

"(3)(A) For purposes of receiving allowances for early reductions under this subsection, the requirements of subparagraph (C) of paragraph (1) and the last sentence of paragraph (2) shall not apply in the case of a unit that receives authorization from the Governor of the State in which such unit is located to make early reductions and that is part of a utility system that meets the following requirements: (i) the total coal-fired generation within the utility system as a percentage of total system generation decreased by more than 20 percent between January 1, 1980, and December 31, 1985; and (ii) the weighted capacity factor of all coal-fired units within the utility system averaged over the period from January 1, 1985, through December 31, 1987, was below 50 percent. A unit that is a Second Phase affected unit (but not also a First Phase affected unit) and part of a utility system that includes 1 or more First Phase affected units shall receive allowances for early reductions made during the First Phase if the unit meets the requirements of this subsection (other than subparagraph (C) of paragraph (1) and the last sentence of paragraph (2)) and the requirements of the preceding sentence, except that for the purposes of applying this subsection to any such Second Phase affected unit, the prior year concerned shall be any year after the commencement of the First Phase but prior to the Second Phase.

"(B) In the case of a First Phase affected unit described in subparagraph (A), the allowances awarded under this subsection for early reductions in any prior year may not exceed the amount by which (i) the product of the unit's baseline multiplied by the unit's 1985 actual sulfur dioxide emission rate (in lbs. per mmBtu), divided by 2,000, exceeds (ii) the allowances specified for such unit in table A, reduced by 6 percent. In the case of a Second Phase affected unit described in subparagraph (A), the allowances awarded under this subsection for early reductions in any prior year may not exceed the amount by which (I) the product of the quantity of fossil fuel consumed by the unit (in mmBtu) in the prior year multiplied by the lesser of 2.35 or the most stringent emission rate (in lbs. per mmBtu) applicable to the unit under the applicable implementation plan, divided by 2,000, exceeds (II) the unit's actual tonnage of sulfur dioxide emission for the prior year concerned. Allowances allocated under this subsection to units referred to in subparagraph (A) may be allocated only for emission reductions achieved as a result of physical changes or changes in the method of operation made after the date of enactment of

the Clean Air Act Amendments of 1990, including changes in the type or quality of fossil fuel consumed.

"(C) In no event shall the provisions of this paragraph be interpreted as an event of force majure or a commercial impracticability or in any other way as a basis for excused nonperformance by any utility system under a coal sales contract in effect before the date of the enactment of the Clean Air Act Amendments of 1990.

BASIC RESEARCH ON HEALTH EFFECTS OF AIR POLLUTANTS

Page 494, after line 8, insert:

(g) Section 103 is amended by adding the following new subsection at the end thereof:

"(g) STUDIES.—(1) The Director of the National Institute of Environmental Health Sciences shall conduct a program of basic research to identify, characterize, and quantify risks to human health from air pollutants. Such research shall be conducted primarily through a combination of university and medical school-based grants, cooperative agreements, and contracts, as well as through intramural studies and contracts. The procedures applicable to grants and contracts under title IV of the Public Health Service Act shall be followed for purposes of this subsection.

"(2) The Director of the National Institute of Environmental Health Sciences shall conduct a program for the education and training of health care providers in environmental health.

"(3) The Director of the National Institute of Environmenal Health Sciences shall assure that programs under this subsection shall not duplicate other research undertaken by the Administration.

"(4) There is authorized to be appropriated to the National Institute of Environmental Health Sciences to carry out this subsection such sums as may be necessary, to remain available until expended.".

ROCKET ENGINE TESTING

Page 47, line 2, strike the closing quotation marks.

Page 47, after line 2, insert:

"(e) ROCKET ENGINES OR MOTORS.—The permitting authority of a State shall allow a source to offset by alternative or innovative means emission increases from rocket engine and motor firing, and cleaning related to such firing, at any existing or modified major source that tests rocket engines or motors under the following conditions:

"(1) Any modification proposed is solely for the purpose of expanding the testing of rocket engines or motors at an existing source that is permitted to test such engines on the date of enactment of this subsection.

"(2) The source demonstrates to the satisfaction of the permitting authority of the State that it has used all reasonable means to obtain and utilize offsets, as determined on an annual basis, for the emissions increases beyond allowable levels, that all available offsets are being used, and that sufficient offsets are not available to the source.

"(3) The source has obtained a written finding from the Department of Defense, Department of Transportation, National Aeronautics and Space Administration or other appropriate Federal agency, that the testing of rocket motors or engines at the facility is required for a program essential to the national security.

"(4) The source will comply with an alternative measure, imposed by the permitting authority, designed to offset any emission increases beyond permitted levels not directly offset by the source. In lieu of imposing any alternative offset measures, the permitting authority may impose an emissions fee to be paid to such authority of a State which shall be an amount no greater than 1.5 times the average cost of stationary source control measures adopted in that area during the previous 3 years. The permitting authority shall utilize the fees in a manner that maximizes the emissions reductions in that area.".

REID VAPOR PRESSURE

Page 257, strike lines 10 through 14 and insert: "Vapor Pressure standards in a nonattainment area as the Administrator finds necessary to generally achieve comparable evaporative emissions (on a per-vehicle basis) in nonattainment areas, taking into consideration the enforceability of such standards, the need of an area for emission control, and economic factors. Such regulations shall not make it unlawful for any person to sell, offer for supply, transport, or introduce into commerce gasoline with a Reid vapor pressure of 9.0 pounds per square inch (p.s.i.) or lower in any area designated under section 107 as an attainment area.".

HYDROGEN FUEL CELL VEHICLES

Page 498, after line 6, insert:

SEC. 708A. HYDROGEN FUEL CELL VEHICLE STUDY AND TEST PROGRAM.

The Administrator of the Environmental Protection Agency, in conjunction with National Aeronautics and Space Administration, and the Department of Energy shall conduct a study and test program on the development of a hydrogen fuel cell electric vehicle. The study and test program shall determine how best to transfer existing NASA hydrogen fuel cell technology into the form of a mass-producible, cost effective hydrogen fuel cell vehicle. Such study and test program shall include at a minimum a feasibility-design study, the construction of a prototype, and a demonstration. This study and test program should be completed and a report submitted to Congress within 3 years after the enactment of the Clean Air Act Amendments of 1990. This study and test program should be performed in the university or universities which are best exhibiting the facilities and expertise to develop such a fuel cell vehicle.

PIPELINE PUMP STATIONS

Page 316, line 10, after "compressor" insert "or pump".

PLANNING ASSISTANCE

Page 498, line 8, before "There" insert "(a) IN GENERAL".

Page 498, line 9, strike the closing quotation marks.

Page 498, after line 9, insert:

"(b) GRANTS FOR PLANNING.—There are authorized to be appropriated (1) not more than $50,000,000 to carry out section 175 beginning in fiscal year 1991, to be available until expended, to develop plan revisions required by subpart 2, 3, or 4 of part D of title I, and (2) not more than $15,000,000 for each of the fiscal years 1991, 1992, and 1993 to make grants to the States to prepare implementation plans as required by subpart 2, 3, or 4 of part D of title I.".

AIR EMISSIONS REGULATED UNDER RCRA

Page 319, line 5, strike the closing quotation marks.

Page 319, after line 5, add the following:

"(u) In the case of any category or subcategory of sources the air emissions of which are regulated under subtitle C of the Solid Waste Disposal Act, the Administrator shall take into account any regulations of such emissions which are promulgated under such subtitle and shall, to the maximum extent practicable and consistent with the provisions of this section, ensure that the requirements of such subtitle and this section are consistent.".

PM-10

On page 158, after the period in line 23 insert: "In issuing guidelines and making determinations under this section, the Administrator (in consultation with the State) shall take into account emission reductions achieved, or expected to be achieved, under title V and other provisions of this Act.".

ACCIDENTAL RELEASES

Page 307, line 15, strike all after "source" through "section" and insert "as defined in this subsection".

Page 308, line 19, after "promulgate" insert "not later than 24 months after enactment of this subsection".

Page 308, line 10, strike the comma after "shall" through "possible," and insert ", as appropriate," and on line 23 change "and" to "or".

Page 309, line 3, after the period insert "The initial list shall include chlorine, anhydrous ammonia, methyl chloride, ethylene oxide, vinyl chloride, methyl isocyanate, hydrogen cyanide, tetrachloroethylene, ammonia, hydrogen sulfide, phosgene, and bromine, anhydrous hydrogen chloride, hydrogen fluoride, anhydrous sulfur dioxide, sulfur trioxide. The initial list shall include at least the 100 air pollutants which the greatest risk of causing serious adverse effects to public health or the environment from accidental releases.

Page 309, line 8, after "Administrator" insert "on his own motion or by petition".

Page 309, line 18, after the period insert: "The Administrator shall establish procedures for the addition and deletion of substances from the list established under this subsection consistent with those applicable to the list in section 112(b).".

Page 309, strike line 19, and all that follows down through line 4 on page 310 and insert:

"(3) FACTORS TO BE CONSIDERED.—In listing substances under this subsection, the Administrator shall consider each of the following criteria:

"(A) The severity of any acute adverse health effects associated with accidental releases of the substance.

"(B) The likelihood of accidental releases of the substance.

"(C) The potential magnitude of human exposure to accidental release of the substance.

"(4) THRESHOLD QUANTITY.—At the time any substance is listed pursuant to this subsection, the Administrator shall establish by rule, a threshold quantity for the substance, taking into acount the amount of the substance which, as a result of an accidental release, is known to cause or may reasonably be anticipated to cause the serious acute adverse effects to human health for which the substance was listed. The Administrator shall exempt from the requirements of this subsection, a cargo tank (commonly known as a nurse tank and considered an implement of husbandry) transporting anhydrous ammonia, and operated by a private carrier exclusively for agricultural purposes, as described in the regulatons under 49 CFR 173.315(m), as in effect on the date immediately prceding the date of the enactment of the Clean Air Act Amendments of 1990 and used in agriculture.

"(5) RISK MANAGEMENT PLANS.—The regulations under this subsection shall require the owner or operator of stationary sources at which a substance listed under this section is present in quantities greater than a threshold quantity established pursuant to paragraph (4) to prepare and implement a risk management plan to detect and prevent or minimize accidental releases of substances listed under this subsection from the stationary source, and to provide a prompt emergency response to any such releases in order to protect human health and the environment. Such plan shall provide for compliance with the requirements of this subsection and shall also include each of the following:

"(A) HAZARD ASSESSMENT.—A hazard assessment to assess the potential effects of, an accidental release of any substance listed under this section from the stationary source. This assessment shall include an estimate of potential release quantities and a determination of downwind effects, including potential exposures to affected populations. Such assessment shall include a previous release history of the past 5 years, including the size, concentration, and duration of releases, and shall include an evaluation of worst case accidental releases.

"(B) PREVENTION PROGRAM.—A program for preventing accidental releases of substances listed under this section, including safety precautions and maintenance, monitoring and employee training measures to be used at the source.

"(C) RESPONSE PROGRAM.—A response program providing for specific actions to be taken in response to an accidental release of a listed substance so as to protect human health and the environment, including procedures for informing the public and local agencies responsible for responding to accidental releases, emergency health care, and employee training measures.

At the time regulations are promulgated under this section, the Administrator shall promulgate guidelines to assist stationary sources in the preparation of risk management plans. The guidelines shall, to the extent practicable, include model risk management plans.

"(6) COMPLIANCE WITH RISK MANAGEMENT PLAN.—The owner or operator of each stationary source covered by paragraph (5) shall register a risk management plan prepared under this section with the Administrator before the effective date of regulations under this section in such form and manner as the Administrator shall, by rule, require. Plans prepared pursuant to this subsection shall also be submitted to the Air Pollutant Release Investigation Board, to the State in which the facility is located, and to any local agency or entity having responsibility for planning for or responding to accidental releases which may occur at such source, and shall be available to the public under section 114(c). The Administrator shall establish, by rule, an auditing system to regularly review and, if necessary, require revisions in risk management plans to assure that the plans comply with this section. Each such plan shall be updated periodically as required by the Administrator, by rule.

"(7) CONSISTENCY WITH CERTAIN STANDARDS; SMALL BUSINESS CONCERNS.—Any regulations promulgated pursuant to this subsection shall, to the maximum extent practicable consistent with the purposes of this subsection, be consistent with the recommendations and standards established by the American Society of Mechanical Engineers (ASME), the American National Standards Institute (ANSI), the American Society of Testing Materials, and other similar organizations. The Administrator shall take into consideration the concerns of small businesses in promulgating regulations under this subsection.

"(8) ACCIDENTAL RELEASE INVESTIGATION BOARD.—(A) There is hereby established an independent board to be known as the 'Accidental Release Investigation Board'.

"(B) The Board shall consist of 5 members, including a Chairperson, who shall be appointed by the President, by and with the advice and consent of the Senate. Members of the Board shall be appointed on the basis of technical qualification, professional standing, and demonstrated knowledge in the fields of accident reconstruction, safety engineering, human factors, toxicology, or air pollution regulation. The terms of office of members of the Board shall be established by the President. Any member of the Board, including the Chairperson, may be removed for inefficiency, neglected duty, or malfeasance in office. The Chairperson shall be the Chief Executive Officer of the Board and shall exercise the executive and administrative functions of the Board.

"(C) The Board shall investigate or cause to be investigated (in such detail as it shall prescribe), and determine the facts, conditions, circumstances, and causes or probable causes of any significant accidental release of a regulated substance or a substance which is unregulated (but could reasonably satisfy the factors of paragraph (3)) into the ambient air from a stationary source resulting in a fatality or serious injury, except for the following:

"(i) Any release of source, byproduct, or special nuclear material from a nuclear incident which the Nuclear Regulatory Commission is authorized to investigate.

"(ii) Any transportation-related release, including marine oil spills, which the National Transportation Safety Board (NTSB) is authorized to investigate.

The board may utilize the expertise and experience of other agencies.

"(D) The Board shall coordinate its activities with investigations and studies conducted by other agencies of the United States having a responsibility to protect public health and safety. The Board shall enter into a memorandum of understanding with the National Transportation Safety Board to assure coordination of functions and to limit duplication of activities which shall designate the National Transportation Safety Board as the lead agency for the investigation of releases which are transportation related. The Board shall enter into a memorandum of understanding with the Occupational Safety and Health Administration so as to limit duplication of activities. In no event shall the Board forego an investigation where a sudden accidental release involving the production, processing, handling, or storage of a chemical substance causes a fatality or serious injury among the general public, or had the potential to cause substantial property damage or a number of deaths or injuries among the general public.

"(E) For any investigation performed under subparagrpah (A), the Board shall develop a written report on the facts, conditions, circumstances, cause or probable causes of the release. No report of the Board shall be subject to review by the Administrator or any Federal agency or to judicial review in any court. No part of the conclusions, findings, or recommendations of any report of the Board relating to any accidental release or the investigation thereof shall be admitted as evidence or used in any action or suit for damages arising out of any matter mentioned in such report.

"(F) Any report of the Board pursuant to paragraph (3)(B) may include recommendations to the Administrator or the Secretary of Labor for the adoption of regulations concerning the detection and prevention of accidental releases into the ambient air of regulated substances and for the mitigation of the potential effects of such releases under the authority of this section or under the Occupational Health and Safety Act. Any such recommendations shall be specified and shall identify the regulated substance or class of regulated substances to which the recommendations apply.

"(G) Within 2 years after enactment of this section and every 2 years thereafter, the Board shall issue reports to Congress, Federal, State, and local agencies, including the Environmental Protection Agency and the Occupational Safety and Health Administration, and other interested persons recommending the adoption of regulations for the prevention of accidental releases of regulated substances into the ambient air and for the mitigation of the potential adverse effect on human health or the environment as a result of accidental releases. The Board may include proposed rules or orders which should be issued by the Administrator under the authority of this section or by the Secretary of Labor under the Occupational Health and Safety Act. Any such recommendations shall be specific and shall identify the regulated substance or class of regulated substances to which the recommendations apply. The Administrator and the Administrator of the Occupational Safety and Health Administrator shall respond to the recommendations within 12 months after receipt thereof. If either the Administrator or the Administrator of the Occupational Safety and Health Administration fail to conform to the recommendations, such Administrator shall publish an explanation of the reasons for not conforming to such recommendations.

"(H) The Board shall establish by regulation requirements binding on persons for reporting accidental releases into the ambient air subject to the Board's investigatory jurisdiction. Reporting releases to the National Response Center, in lieu of the Board directly, shall satisfy such regulations. The National Response Center shall promptly notify the Board of any releases which are within the Board's jurisdiction.

"(I)(i) The Board, or upon the authority of the Board, any member thereof, may, for the purpose of carrying out this subsection, hold such hearings, sit and act at such times and places, and administer such oaths, as the Board or such officer or employee deems advisable.

"(ii) In addition to that described in paragraph (A), the Board may use any information gathering authority of the Administrator under this Act, including the subpoena power provided in section 307(a)(1) of this Act.

"(J) Any records, reports, or information obtained by the Board shall be available to the Administrator, the Secretary of Labor, the Congress and the public, except that upon a showing satisfactory to the Board by any person that records, reports, or information, or particular part thereof (other than release or emissions data) to which the Board has access, if made public, is likely to cause substantial harm to the person's competitive position, the Board shall consider

such record, report, or information, or particular portion thereof confidential in accordance with section 1905 of title 18, United States Code, except that such record, report, or information may be disclosed to other officers, employees, and authorized representatives of the United States concerned with carrying out this Act or when relevant under any proceeding under this Act. This paragraph does not constitute authority to withhold records, reports, or information from the Congress. Whenever the Board conducts an investigation of a facility pursuant to this subsection, employees and their representatives shall have the same rights to participate in such inspections as provided for in the Occupational Safety and Health Act.

"(10) DEFINITIONS.—For the purposes of this section—

"(A) The term 'accidental release' means an unanticipated emission of a regulated substance (except as provided in section 9(c)) into the ambient air from a stationary source.

"(B) The term 'regulated substance' means a substance listed pursuant to this subsection.

"(C) The term 'stationary source' means any buildings, structures, or installations (i) which belong to the same industrial grouping, (ii) which are located on one or more continguous properties, (iii) which are under the control of the same person (or persons under common control), and (iv) at which a regulated substance is present in excess of threshold quantities established by the Administrator.".

Page 494, strike line 9 through line 15 on page 496 and redesignate the succeeding sections accordingly.

Page 319, after line 5, insert:

SEC. 302. CHEMICAL PROCESS SAFETY MANAGEMENT.

(a) The Secretary of Labor shall act under the Occupational Safety and Health Act of 1970 (29 U.S.C. 653) to prevent accidental releases of chemicals which could pose a threat to employees. Not later than 12 months after the date of enactment of this section, the Secretary of Labor, in coordination with the Administrator, shall promulgate, pursuant to the Occupational Safety and Health Act, a chemical process safety standard designed to protect employees from hazards associated with accidental releases of highway hazardous chemicals in the workplace.

(b) The Secretary shall include as part of such standard a list of highly hazardous chemicals, which include toxic, flammable, highly reactive and explosive substances. The list of such chemicals may include those chemicals listed by the Administrator under section 302 of the Emergency Planning and Community Right to Know Act of 1986, title III of the Superfund Amendments and Reauthorization Act (SARA). The Secretary may make additions to such list when a substance is found to pose a threat of serious injury or fatality in the event of an accidental release in the workplace.

(c) Such standard shall, at minimum, require employers to:

(1) develop and maintain written safety information identifying workplace chemical and process hazards, equipment used in the processes, and technology used in the processes;

(2) perform a workplace hazard assessment, including, as appropriate, identification of potential sources of accidental releases, an identification of any previous release within the facility which had a likely potential for catastrophic consequences in the workplace, estimation of the workplace effects of a range of releases, estimation of the health and safety effects of such a range on employees;

(3) consult with employees on the development and conduct of hazard assessments and the development of chemical accident prevention plans and provide access to these and other records required under the standard;

(4) establish a system to respond to the workplace hazard assessment findings, which shall address prevention, mitigation, and emergency responses;

(5) periodically review the workplace hazards assessment and response system;

(6) develop and implement written operating procedures for the chemical process including procedures for each operating phase, operating limitations, and safety and health considerations;

(7) provide written safety and operating information to employees and train employees in operating procedures, emphasizing hazards and safe practices;

(8) ensure contractors and contract employees are provided appropriate information and training;

(9) train and educate employees and contractors in emergency response in a manner as comprehensive and effective as that required by the regulation promulgated pursuant to section 126(b) of SARA;

(10) establish a quality assurance program to ensure that initial process related equipment, maintenance materials, and spare parts are fabricated and installed consistent with design specifications;

(11) establish maintenance systems for critical process related equipment including written procedures, employee training, appropriate inspections, and testing of such equipment to ensure ongoing mechanical integrity;

(12) conduct pre-start-up safety reviews of all newly installed or modified equipment;

(13) establish and implement written procedures to manage change to process chemicals, technology, equipment and facilities; and

(14) investigate every incident which results in or could have resulted in a major accident in the workplace, with any findings to be reviewed by operating personnel and modifications made if appropriate.

(d) Nothing in this section may be construed to diminish the authority of the States and political subdivisions thereof.

(e) In exercising any authority under this subsection, the Administrator shall not, for the purposes of section 653(b)(1) of title 29, be deemed to be exercising statutory authority to prescribe or enforce standards or regulations affecting occupational safety and health.

VISIBILITY PROTECTION

Page 498, after line 4, insert the following new sections and make the necessary conforming changes in the table of contents:

SEC. 707A. CLASS I AREAS.

(a) CLASS I AND II AREAS.—Section 164(a)(1) is amended by adding after "seashore" the words ", regardless of the date on which established".

(b) NATIONAL PARK AND WILDERNESS AREAS.—Section 164(a)(2) is amended by striking out "ten thousand acres in size" and inserting "5,000 acres in size (in the case of a national wilderness area) or 6,000 acres in size (in the case of a national park)".

(c) PUBLIC HEARINGS.—Section 164(b)(1)(A) is amended by inserting in the first sentence after "redesignated" the phrase "(or as near as practicable to such area in the case of a wilderness area)".

(d) ADVERSE IMPACTS ON AIR QUALITY-RELATED VALUES.—Section 165(d)(2)(C) is amended by striking out clause (ii), by inserting "or air quality-related values" after "air quality" and by adding the following at the end of clause (i) "A permit shall also not be issued if the Federal Land Manager of such lands, or the Administrator, or the Governor of an adjacent State containing such an area, files a notice making a showing, together with documentation, that such emissions may cause or contribute to an adverse impact on the air quality-related values (including visibility) of such lands, unless the owner or operator of the facility demonstrates that such emissions will not cause or contribute to the alleged adverse impact on the air quality-related values (including visibility) identified in such showing.".

(e) NOTICE TO FEDERAL LAND MANAGERS.—Section 165(d)(2)(A) is amended to read as follows: "(A) At the same time as the State transmits a copy of a permit application and notice under paragraph (1) to the Administrator, the State shall also provide a copy thereof of the Federal land manager and the Federal official charged with direct responsibility for management of any lands within a class I area, or an area described in paragraph (1) or (2) of section 164(a), which may be affected by emissions from the proposed facility. The Administrator shall require applications submitted under paragraph (1) to contain sufficient information to enable the Federal land manager of such Federal lands to determine the effects of such facility on the air quality related values (including visibility) of such Federal lands. The permitting authority shall consult with the Federal land manager for each such area to determine if the application is complete.".

(f) POLLUTANTS COVERED.—Section 165(d)(2)(C)(i) is amended by striking out "particulate matter and sulfur dioxide" and inserting "any air pollutant for which maximum allowable increases or other measures are in effect under section 163 or 166".

(g) POSTCONSTRUCTION MONITORING.—Section 165(a)(7) is amended by adding the following before the "; and" the phrase "and on air quality related values, including visibility, in class I areas which may be affected by emissions from the proposed facility".

(h) ADVERSE IMPACTS.—Section 165(d)(2)(C) is amended by adding the following at the end thereof:

"(v) In determining under this subparagraph or subparagraph (B) whether emissions from a facility will have an adverse impact on air quality-related values (including visibility), allowable emissions from other existing and permitted sources shall also be taken into account."

(i) PRECONSTRUCTION MONITORING.—The first sentence of section 165(e)(2) is amended by inserting the following before the period at the end thereof: "and to determine the effect emissions from such facility may have on air quality related values, including visibility, in class I areas which may be affected by emissions from the proposed facility.".

(j) IDENTIFICATION OF POTENTIAL ADVERSE IMPACTS.—Section 165(d)(2)(B) is amended by adding the following at the end thereof: "In addition to the other authority provided by this section, the Federal land manager charged with the direct responsibility for management of such lands may, by rule,

identify the air quality related values of such lands and the potential adverse impacts of air pollution on such values.".

(k) CLASS I PARKS.—Section 162 is amended by adding the following at the end thereof:

(c) Upon enactment of this subsection all national parks which exceed 6,000 acres in size which were established after the enactment of the Clean Air Amendments of 1977 and before January 1, 1990, shall be class I areas and may not be redesignated.".

"(1) REGULATIONS.—Section 301(a)(1) is amended by adding the following at the end thereof: "Within 2 years after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall amend the regulations under part C of title I to assure that the requirements of the amendments made by section 707A of the such Amendments (relating to class I areas) are met.

SEC. 707B. REGIONAL HAZE IMPAIRING VISIBILITY IN CLASS I AREAS.

(a) DEFINITIONS.—(1) Section 169A(g) is amended by striking "and" at the end of paragraph (6), by striking the period at the end of paragraph (7) and inserting "; and" and by adding the following at the end thereof:

(8) the term 'regional haze' means widespread regionally homogeneous haze resulting from manmade air pollution."

(2) Section 169A(g) is amended by striking "nonair quality" in each place it appears in paragraph (1) and (2).

(b) ADDITIONAL REQUIREMENTS.—Section 169A of the Clean Air Act is amended by adding the following after subsection (g):

"(h) PROTECTING VISIBILITY AND AIR QUALITY RELATED VALUES IN CLASS I AREAS.—

"(1) EPA RULES.—Not later than 1 year after the date of enactment of the Clean Air Act Amendments of 1990, the Administrator shall propose rules, and within 2 years after such date of enactment, promulgate final rules, amending the regulations under subsection (a)(4) to assure that the requirements of this part are met with regard to visibility protection and the protection of air quality related values in areas protected under this part.

"(2) STATE PLAN REVISIONS.—The regulations under paragraph (1) shall require that revisions of the implementation plans for visibility protection under section 169A, and for the prevention of significant deterioration of air quality under this part, be submitted to the Administrator within one year after promulgation of such amendments. Such plan revisions shall comply with the requirements of this part.

"(3) REGIONAL HAZE PLANS.—The Administrator shall provide information to States regarding control measures for specific classes of sources for which guidance has not been provided under other provisions of this Act and which may reasonably be anticipated to cause or contribute to regional haze impairing visibility in an area identified under subsection (a)(2). In amending the regulations under subsection (a)(4), the Administrator shall provide guidelines for the identification by States of areas where sources may reasonably be anticipated to cause or contribute to regional haze. In addition the Administrator shall promulgate guidelines for the establishment of control strategies in those areas for use by the States if necessary to achieve reasonable progress toward the national goal specified in subsection (a).

"(4) REASONABLE PROGRESS.—The regulations under paragraph (1) shall establish criteria and procedures for determining whether reasonable progress toward the national goal specified in subsection (a) is being made in accordance with this section. The criteria shall include a method for determining baseline visibility in each Class I area identified under subsection (a)(2) and for determining whether reasonable progress toward the national goal is being achieved. In adopting such criteria, the Administrator shall consider both annual average visibility and shorter periods that may reflect seasonable patterns and the frequency of severe visibility impairment episodes. The regulations may allow the use of not more than 3 years as the baseline period, and shall require commencement of baseline monitoring within 6 months following promulgation.

"(i) REVIEW OF PROGRESS TOWARD NATIONAL GOAL.—(1) The Administrator, in consultation with the Federal land manager for each mandatory class I area referred to in subsection (a)(2), shall periodically review the status of visibility impairment in such areas and determine whether reasonable progress toward the national goal set forth in subsection (a) is being achieved. The first review under this subsection shall be completed 6 years after the date required for promulgation of the regulations required by subsection (h), and subsequent reviews shall be completed at 5-year intervals thereafter.

"(2) Whenever the Administrator determines that reasonable progress toward the national goal set forth in subsection (a) is not being achieved, the Administrator shall require such revisions of the applicable implementation plan or plans for such area as are necessary to make reasonable progress toward such national goal. The Administrator shall require that such plan revisions be submitted within one year after making any such determination. The Administrator shall not require plan revisions in any State if he determines that such state has adopted all feasible measures that can be expected to achieve reasonable progress. For the purpose of regional haze control, in determining best available retrofit technology, the Administrator may consider the estimated average contribution to visibility impairment from a source or group of sources located in an area identified under guidelines issued under subsection (h)(3). The determinations made by the Administrator under this subsection shall be after notice and an opportunity for public comment.

"(3) At a minimum, for any class I area to which this section applies, reasonable progress toward the national goal set forth in subsection (a) shall include each of the following:

"(A) Preservation of the frequency of days in which the visibility in the area is least impaired by manmade air pollution.

"(B) Over each review period, there shall be a perceptible improvement in average visibility in the area, as compared to the average visibility in the area during the prior review period or the baseline in the case of the first review period.

"(C) Over each review period, there shall be a perceptible improvement in frequency of days when the worst visibility attributable to manmade air pollution occurs, as compared to the frequency of days of the worst visibility attributable to manmade air pollution during the prior review period or the baseline in the case of the first review period.

"(4) The Administrator shall adopt numeric standards for measuring and modelling perceptible improvement, and a reference method specifying a technological method for measuring such improvement.

"(j) RELATIONSHIP TO OTHER PROVISIONS.—In promulgating regulations and amendments to regulations under this section, the Administrator shall take into account the reductions in air pollution obtained pursuant to other provisions of this Act, including the reductions obtained under title V (relating to acid deposition control). States may take credit for emission reductions required by other provisions of this Act (including provisions of an applicable implementation plan) in determining whether additional control strategies are needed to achieve reasonable progress toward the national goal. Nothing in this section shall be construed to require emission reductions of any air pollutant in any area designated as a nonattainment area for that air pollutant at a more rapid rate than required under part D.

"(k) IMPACT OF UNCONTROLLED SOURCES.—(1)(A) The Administrator shall undertake and complete, within 2 years after the date of enactment of the Clean Air Act Amendments of 1990, studies to measure the impact of any uncontrolled major stationary source emitting more than 7,000 tons/year of sulfur dioxide on the air quality-related values (including visibility) of class I areas listed under subsection (a)(2) located within 100 miles of the uncontrolled major stationary source. The Administrator shall conduct studies of such sources under this subsection in accordance with priorities established by the Administrator based on aggregate emissions, location in relation to the class I area, weather patterns and likelihood of impact on the air quality-related values (including visibility) of such area. Studies under this section shall be conducted in consultation with the Federal official charged with direct responsibility for the management of each such class I area and the Federal land manager of each such class I area. These studies may include, but are not limited to, tracer studies requiring the source to release continuously tracers in the source's emissions to enhance the studies' ability to attribute impacts to the source. As part of the studies, the Administrator may require the source to install continuous emission monitors for sulfur oxides and nitrogen oxides or for other air pollutants as he deems necessary or to conduct tracer studies. The study shall include the identification of alternative regulatory strategies that could achieve the goal of section 169A(a)(1) and the costs (economic, energy, and social) of each such alternative. Within 1 year following completion of the study of any source under this subsection, the Administrator shall, in consultation with the Federal land managers, make a determination under subsection (b)(2)(A) with respect to the uncontrolled major stationary source and determine whether the applicable State plan needs to be revised in accordance with such determination. Such determination shall be made after notice and opportunity for comment.

"(2) For purposes of this subsection, the term 'uncontrolled major stationary source' means a major stationary source which—

"(A) does not use a technological means of emission control achieving at least a 50 percent reduction in emissions of sulfur dioxide from the potential combustion concentration; and

"(B) had an actual 1985 emission rate for sulfur dioxide below 1.2 lbs./mmBtu.

"(l) SAVINGS PROVISION.—The requirements and authorities established pursuant to this section shall be in addition to, and not in lieu of any other requirement or au-

thority under any other provision of this Act or under any other authority of law.

"(m) AREAS COVERED.—The provisions of subsections (h) through (l) of this section shall not apply east of the 100th meridian.".

REFORMULATED GAS

Page 220, strike line 6 and all that follows down through line 4 on page 221. [all of section 212(n) of the Clean Air Act as added by section 201 of H.R. 3030]

Page 221, after line 14, [at the end of section 201 of H.R. 3030] insert:

(d) REFORMULATED GASOLINE.—Section 211 is amended by adding the following new subsection at the end thereof:

"(k) CLEAN FUELS FOR CONVENTIONAL VEHICLES.—(1) Within 1 year after the enactment of the Clean Air Act Amendments of 1990 the Administrator shall promulgate regulations under this section establishing requirements for cleaner gasoline to be used in gasoline-fueled vehicles. Such regulations shall require the greatest reduction in emissions of ozone forming volatile organic compounds (during the period referred to in subparagraph (B)(i)) and emissions of hazardous air pollutants achievable through the reformulation of conventional gasoline, taking into consideration the cost of achieving such emission reductions, any nonair-quality and other air-quality related health and environmental impacts, including reactivity and relative toxicity, and energy requirements. Such requirements shall comply with the more stringent of either the requirements set forth in subparagraph (A) or the requirements set forth in subparagraph (B), except that the requirements of subparagraph (A) (iii) and (iv) shall apply in all cases. For purposes of determining the more stringent provision, subparagraphs (B)(i) and (B)(ii) shall be considered independently. The requirements of subparagraph (C) shall apply in all cases.

"(A)(i) The benzene content of the fuel shall not exceed 0.8 percent by volume.

"(ii) The aromatic hydrocarbon content of the fuel shall not exceed the following limits: 30 percent by volume after January 1, 1992, 28 percent by volume after January 1, 1994, and 25 percent by volume after January 1, 1996.

"(iii) The fuel shall have no lead content.

"(iv) The fuel shall contain additives to prevent the accumulation of deposits in engine fuel supply systems.

"(v) the oxygen content of the fuel shall equal or exceed the following: 2.0 percent by weight as of January 1, 1992, 2.5 percent by weight by January 1, 1993, and 2.7 percent by weight by January 1, 1994, except as otherwise required by this Act.

"(B)(i) During the high ozone season (as defined by the Administrator), the total emissions of ozone forming volatile organic compounds from representative model year 1990 vehicles when using the fuel shall, in the aggregate, be at least 15 percent below the total emissions of ozone forming volatile organic compounds from such vehicles when using 1990 certification fuel. Effective in calendar year 1997 and thereafter, 20 percent shall be substituted for 15 percent in applying this subparagraph. Effective in calendar year 2000 and thereafter, 25 percent shall be substituted for 20 percent in applying this clause.

"(ii) During the entire year, the total emissions of hazardous air pollutants from representative model year 1990 vehicles when using the fuel shall, in the aggregate, be at least 15 percent below the total emissions of hazardous air pollutants from such vehicles when using 1990 certification fuel (or to such other levels as the Administrator determines will achieve at least as great a reduction in aggregate adverse health effects as such 15 percent reduction). Effective in calendar year 1997 and thereafter, 20 percent shall be substituted for 15 percent in applying this subparagraph. Effective in calendar year 2000 and thereafter, 25 percent shall be substituted for 20 percent in applying this clause. For purposes of this clause, within 1 year after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall, by rule, determine appropriate measures of and methodology for ascertaining the emissions of hazardous air pollutants (including calculations, equipment, and tolerances) and their aggregate health effects.

"(C) The total emissions of oxides of nitrogen from representative vehicles when using the fuel shall in the aggregate be no greater than the level of such emissions from such vehicles when using conventional gasoline (as defined by the Administrator) of the same grade which meets the requirements applicable under this section.

"(2) The regulations promulgated under this subsection shall include procedures under which the Administrator shall certify fuels as complying with the requirements established pursuant to paragraph (1). Under such regulations, the Administrator shall establish procedures for any person to petition the Administrator to certify an alternative fuel formulation, or slate of fuel formulations. The Administrator shall certify a fuel formulation or slate of fuel formulations if such fuel or fuels (A) achieves equivalent or greater reductions in emissions of ozone forming volatile organic compounds an emissions of hazardous air pollutants than are achieved by a fuel meeting the requirements of paragraph (1) and (B) complies with the requirements of subparagraph (C) of paragraph (1). Such procedures shall further require that the Administrator shall approve or deny such petition within 90 days of receipt, and failure to act within such time shall be deemed a denial of such petition. Within 1 year after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall determine the level of emissions of ozone forming volatile organic compounds and emissions of hazardous air pollutants emitted by representative model year 1990 motor vehicles when operating on 1990 certification fuel.

"(3)(A) Effective January 1, 1994, no person may sell or dispense to the ultimate consumer, and no fuel refiner or marketer may directly or indirectly sell or dispense to persons who sell or dispense to ultimate consumers, in any ozone nonattainment area classified under subpart 2 of part D of title I as Severe or Extreme any fuel for use in conventional gasoline-fueled vehicles that has not been certified by the Administrator under this subsection.

"(B) Effective January 1, 1992, until January 1, 1994, no person may sell or dispense to the ultimate consumer, and no fuel refiner or marketer may directly or indirectly sell or dispense to persons who sell or dispense to ultimate consumers, in any such area any fuel for use in conventional gasoline-fueled vehicle that has not been certified by the Administrator under this subsection as complying with subparagraph (A)(ii) and (v) and subparagraph (C) of paragraph (1).

"(4)(A) Upon the application of the Governor of a State, the Administrator shall apply the prohibition set forth in paragraph (3) in any area in the State classified under subpart 2 of part D of title I as a Marginal, Moderate, or Serious area, and in any such case, the Administrator shall establish an effective date for such prohibition as he deems appropriate, not later than January 1, 1994, or 1 year after such application is received, whichever is later. The Administrator shall publish such application in the Federal Register upon receipt.

"(B) If the Administrator determines, on his own motion or on petition of any person, after consultation with the Secretary of Energy, that there is insufficient domestic capacity to produce fuel certified under this subsection, the Administrator shall, by rule, extend the effective date of such prohibition in Marginal, Moderate, or Serious areas for one additional year, and may, by rule, renew such extension for 2 additional one-year periods. The Administrator shall act on any petition submitted under this paragraph within 6 months after receipt of the petition. The Administrator shall issue such extensions for areas with a lower ozone classification before issuing any such extension for areas with a higher classification.

"(5)(A) The regulations promulgated under this subsection shall provide for the granting of an appropriate amount of credits to a person who produces and certifies a fuel that—

"(i) has an oxygen content that exceeds the minimum oxygen content specified in paragraph (1); or

"(ii) has an aromatic hydrocarbon content that is less than the maximum aromatic hydrocarbon content specified in paragraph (1).

"(B) The regulations described in subparagraph (A) shall also provide that a person who is granted credits may use such credits, or transfer all or a portion of such credits to another person, for the purpose of complying with this subsection.

"(C) The regulations promulgated under subparagraphs (A) and (B) shall ensure the enforcement of the requirements for the issuance, application, and transfer of the credits. Such regulations shall prohibit the granting or transfer of such credits for use with respect to any fuel in a nonattainment area, if the use of such credits would result in—

"(i) an average fuel aromatic hydrocarbon content (taking into account all fuel used in all conventional gasoline-fueled vehicles in the nonattainment area) higher than the average fuel aromatic hydrocarbon content that would occur in the absence of such credits; and

"(ii) an average fuel oxygen content (taking into account all fuel used in all conventional gasoline-fueled vehicles in the nonattainment area) lower than the average fuel oxygen content that would occur in the absence of such credits.

"(6) Within 1 year after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations applicable to gasoline to ensure that gasoline (other than gasoline subject to the requirements of paragraph (1)) does not result in emissions of ozone forming volatile organic compounds, nitrogen oxides, or carbon monoxide, or aggregate emissions of hazardous air pollutants from representative motor vehicles in excess of the levels of emissions of such pollutants that would result if conventional gasoline of a similar grade sold in calendar year 1989 were used in such vehicles. Such regulations shall take effect no later than January 1, 1992.

"(7) For purposes of this subsection, the term '1990 certification fuel' means fuel

used in exhaust and evaporative emissions testing for 1990 model year vehicles.

Page 207, strike line 24 and all that follows down to "shall submit" in line 8 on page 208 and insert "(1) CO NONATTAINMENT AREAS.—Each State in which there is located all or part of an area classified under section 186 as a Moderate or Serious area for carbon monoxide".

In the third sentence of section 212(g)(1), page 208, line 15, after "commerce" insert: "in the larger of—

"(A) the Consolidated Metropolitan Statistical Area (CMSA) in which the area is located, or

"(B) if the area is not located in a CMSA, the Metropolitan Statistical Area in which the area is located,

Page 208, line 13, in the third sentence of section 212(g)(1) strike "supplied, offered for sale or supply, dispensed, transported, or introduced into commerce" and insert "or dispensed, to the ultimate consumer or sold or dispensed directly or indirectly by fuel refiners or marketers to persons who sell or dispense to ultimate consumers,".

Page 208, line 18, strike "2.0" and insert "2.7" in the third sentence of section 212(g)(1).

Page 208, line 20, in section 212(g)(1), strike "1993" and insert "1992".

Page 209, line 10, strike "Notwithstanding" and all that follows through line 3 on page 211 (the last sentence of section 212(g)(1) and all of paragraphs (2) and (3) of 212(g)).

Page 208, line 23, and page 209, line 6, [in section 212(g)(1)] strike "may" and insert "shall".

Page 212, after line 2 (after section 212(g)(7)), insert:

"(8) If the Administrator determines under section 186(b)(2) that the national primary ambient air quality standard for carbon monoxide has not been attained in a Serious Area by the applicable attainment date, the State shall submit a plan revision for the area within 9 months after the date of such determination. The plan revision shall provide that the minimum oxygen content of gasoline referred to in paragraph (1) shall be 3.1 percent by weight unless such requirement is waived in accordance with the provisions of this section.

LEAD POISONING CENTERS

Page 498, after line 4, insert:

SEC. 707A. CREATION OF CENTERS FOR PREVENTION OF LEAD POISONING.

The Toxic Substances Control Act is amended by inserting after section 31 the following:

"SEC. 32. CENTERS FOR PREVENTION OF LEAD POISONING.

"(a) ESTABLISHMENT.—The Administrator shall establish, and provide funding through grants, one or more centers for prevention of lead poisoning. The centers shall be established at institutions of higher education in the United States and shall assist the Administrator in carrying out this title.

"(b) APPLICATIONS.—An institution of higher education may apply for grants under subsection (a) by submitting an application to the Administrator in the form, at the time, and containing the information that the Administrator shall require.

"(c) SELECTION CRITERIA.—The Administrator shall award grants under subsection (a) to institutions of higher education pursuant to the following criteria:

"(1) The capability to provide leadership in making national contributions to the prevention of lead poisoning.

"(2) Demonstrated capacity to conduct research of lead poisoning prevention, including the development of innovative and safe methods for lead paint abatement.

"(3) The appropriateness of the projects proposed to be carried out by the grant recipient.

"(4) The recipient's commitment of at least $100,000 in budgeted institutional funds to research of lead poisoning prevention.

"(5) The presence at the institution of an interdisciplinary staff with demonstrated expertise in lead poisoning prevention.

"(6) The institution's demonstrated ability to disseminate results of it's research and educational programs through an interdisciplinary continuing education program.

"(d) FEDERAL SHARE.—The Federal share of a grant awarded under subsection (a) shall not exceed 80 percent of the cost of establishing and operating the center and related research activities carried out by the recipient.

"(e) DEFINITIONS.—As used in this section—

"(1) the term 'center' means a center for prevention of lead poisoning; and

"(2) the term 'institution of higher education' has the meaning given that term in section 481(a) of the Higher Education Act of 1965 (20 U.S.C. 1088(a).".

BUY AMERICA

Page 507, after line 12, insert:

SEC. 805. AMERICAN MADE PRODUCTS.

It is the sense of the Congress that—

(1) existing equipment and machinery retrofitted to comply with the Clean Air Act's "Best Available Control Technology" language and all other specifications within the Act be produced in the United States and purchased from American manufacturers.

(2) The construction of new industrial and utility facilities comply to the Act's specifications through the incorporation of American made equipment and technology.

(3) Individuals, groups, and organizations in the public sector strive to purchase and produce American made products that improve our nation's air quality.

The CHAIRMAN. The gentleman from Michigan [Mr. DINGELL] will be recognized for 15 minutes, and a Member in opposition will be recognized for 15 minutes.

The Chair recognizes the gentleman from Michigan [Mr. DINGELL].

Mr. DINGELL. Mr. Chairman, I yield myself 1 minute.

Mr. Chairman, under the rule I offer the Energy and Commerce Committee amendments en bloc. This amendment represents many hours of successful negotiations and discussions with committee members and others to resolve some of the issues remaining from the committee's markup. We have agreed on a comprehensive set of amendments to the Clean Air Act covering such matters as visibility, permits, enforcement, reformulated gasolines, accidental releases, and a number of other matters, including a number of technical and conforming changes to the reported bill.

In particular, I want to recognize the hard work and willingness to compromise of Mr. HALL, Mr. FIELDS, Mr. RICHARDSON and Mr. MADIGAN on reformulated gasolines. Their efforts resulted in a compromise which achieves greater environmental benefits than the original amendment while also providing the oil industry with needed flexibility. In addition, the compromise provides more benefits for farmers than the original amendment.

The reformulated gasoline amendment does not require the use of only those fuels which meet the specific chemical formulation such as benzene, aromatic and oxygen content outlined in subparagraph (A) of the amendment. It requires EPA to test the volatile organic compound and hazardous air pollutant emissions associated with that particular formula and compare those percentage reductions to the performance standards set out in subparagraph (B). The more styringent emissions reduction target of either subparagraph (A) or (B) will be required. It then allows the sale of a fuel which achieves comparable or greater emission reductions but which does not meet the specific formula outlined regarding aromatics and oxygen content, and does this through an EPA certification process. The certification authority for these equivalent fuels applies to all fuels required by this subsection in subparagraph 1, beginning in 1992.

Mr. Chairman, I believe this effort on the part of our committee and on the part of the Members will speed the passage of the legislation today and ensure its enactment. I strongly urge support of these amendments and I congratulate all of the Members on both sides of the aisle for their tireless efforts in resolving these matters.

The CHAIRMAN. Does any Member rise in opposition to the amendments?

Mr. LENT. Mr. Chairman, I rise in support of the amendments.

The CHAIRMAN. Without objection, the gentleman from New York [Mr. LENT] will be recognized for 15 minutes.

There was no objection.

Mr. LENT. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in strong support of the Energy and Commerce Committee amendments. These amendments reflect the tireless efforts of the committee to address several issues which were deferred during full committee markup.

First, the committee amendments include a compromise on the permits and enforcement provisions of the Clean Air Act.

Second, the committee amendment contains a compromise between the gentleman from Texas [Mr. BARTON] and the gentleman from New Mexico [Mr. RICHARDSON] on the provisions of the bill which deal with hazardous air pollutants, on the issue of how to handle accidental releases of hazardous substances.

Third, our colleagues on the committee most interested in visibility in and around our national parks worked together in splendid fashion to settle their differences.

Finally, the committee amendment includes provisions on so-called reformulated gasoline. Under the committee amendment, only reformulated gasoline will be allowed to be sold in the Nation's nine worst ozone nonattainment areas. While the original version of the Richardson-Madigan amendment would have had the Congress dictate a particular recipe for making cleaner gasoline, under the committee amendment, EPA will establish requirements for reformulated gasoline, based on the greatest reduction in emissions of ozone-forming compounds and hazardous substances that are technologically and economically feasible. A mechanism is established whereby our energy industry will be able to have EPA certify a fuel as complying with the act, even though it follows a gasoline formula different from that to be produced by EPA, so long as the proposed substitute achieves emission reductions equal to or greater than those from the formula set by EPA. This performance-based approach is better than a straight recipe-oriented one in which Congress would specify a specific gasoline formula.

I want to emphasize that this reformulated gasoline amendment, while not perfect in all of its many details, will, nonetheless, do a great deal to clean up the air, because reformulated gasoline can be used in existing vehicles without making modifications to the automobile.

I emphasize this point because later in our deliberations we will be asked to choose between the production mandate for clean fuel vehicles in the Waxman-Lewis amendment and the incentive-oriented approach in the Tauzin-Hall-Fields-Dingell-Lent amendment. The addition of this reformulated gasoline amendment will do more—and do it faster—than would mandating exotic alternative fuel vehicles, as would be the case under Waxman-Lewis.

□ 1210

Mr. DINGELL. Mr. Chairman, I yield 1 minute to the distinguished gentleman from California [Mr. WAXMAN].

Mr. WAXMAN. Mr. Chairman, the short time in which we are deliberating on this committee amendment really cannot do justice to a full explanation of the very significant compromises that have been reached on a whole range of issues. I do want to acknowledge the work of the gentleman from Oregon [Mr. WYDEN] and the gentleman from Massachusetts [Mr. CONTE] and their legislation dealing with the protection of the national parks, and the gentleman from New Mexico [Mr. RICHARDSON] on the reformulated gasoline provision.

We are not going to hear a long debate on the Richardson amendment, despite the full-page ads in almost every publication about how horrendous the Richardson proposal would be. We are not going to have a long debate because the reformulated gasoline amendment is reasonable. It has such a consensus behind it that it is wrapped in the committee amendment.

The legislation represented in this committee amendment is the result of many long hours of work by many people. It is an amendment that contains very good provisions, very strong provisions, and I urge all of the Members to support this committee amendment.

Mr. LENT. Mr. Chairman, I yield 2 minutes to the gentleman from Massachusetts [Mr. CONTE], the ranking minority member of the Committee on Appropriations.

Mr. CONTE. Mr. Chairman, I rise in support of the committee amendment, and I am pleased to join my colleague, Congressman WYDEN in sponsoring the national parks protection provision that is included in this committee package.

I want to first commend Congressman WYDEN for leadership on this issue. It is an important provision, with lasting affects and significant impacts.

The Wyden-Conte amendment is designed to strengthen protections for national parks and other special public lands, the crown jewels of the public trust.

The National Park Service estimates that the scenic vistas in the parks are affected by man-made pollution over 90 percent of the time. For example, the Grand Canyon, which has been extensively studied, can present a breathtaking view of up to 200 miles on a clear day. But on a bad day, visitors can barely see the other side of the canyon, only 10 miles away.

A similar threat can be documented at other parks in the system, and we have an obligation to protect the beauty and majesty of our parks, free from pollution and contamination. This protection is warranted if not for the beauty itself, then for the protection of a substantial investment by the Federal Government.

As a member of the Interior Appropriations Subcommittee, I have worked to provide hundreds of millions of dollars for the acquisition of sensitive park lands and the operation and maintenance of our national park system. In the last 10 years alone, the Congress has provided over $1 billion for land acquisition for the Park Service. That is no small amount. It is a substantial investment to protect.

This important role for the Federal Government—to preserve our national treasurers for future generations—is advanced by the Wyden-Conte amendment. In 1977, Congress addressed the problem of air pollution and regional haze in our parks and directed the EPA to control park visibility problems. However, 13 years later the EPA has still not completed these important regulations.

This provision, now a part of the committee package, is designed to provide special protections for parks in the West and to update protections for newer national parks and wilderness preserves, like those in Alaska.

Mr. Chairman, let me close with a few words from our first "Environmental President," the father of the national park system, the Rough Rider himself, Teddy Roosevelt. In a 1907 Message to the Congress, President Roosevelt said:

> To waste, to destroy our natural resources, to skin and exhaust the land instead of using it so as to increase its usefulness, will result in undermining in the days of our children the very property which we ought by right to hand down to them amplified and developed.

President Roosevelt's words are as relevant today as they were at the turn of the century. We have an obligation to pass on our environment, our natural resources protected and in tact, so that our children and grandchildren can use and enjoy these precious treasures. The Wyden-Conte amendment provides the roadmap for us to leave this lasting legacy.

I urge my colleagues to support this amendment through conference and support the committee amendment.

Mr. DINGELL. Mr. Chairman, I yield 1 minute to the gentleman from California [Mr. ANDERSON], chairman of the Committee on Public Works and Transportation.

Mr. ANDERSON. Mr. Chairman, I thank the gentleman for yielding time to me and I do have a question.

On Monday, the Committee on Public Works and Transportation reported an amendment to H.R. 3030. Is it the understanding of the gentleman from Michigan that the text of that amendment is included in the amendment now under consideration?

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. I am happy to yield to the gentleman from Michigan.

Mr. DINGELL. The gentleman is correct, and I want to commend him for his effort on this matter. I know that the gentleman's amendment, particularly the conformity review issue, is of great importance to State and local government associations, State departments of transportation and the transportation community as a whole. It is also good for the environment. Without the leadership and hard work of the gentleman from California, that

amendment would not have been possible.

Mr. ANDERSON. I thank the gentleman for his kind words and I rise in support of his amendment.

Mr. Chairman, in this amendment, the House will be approving important changes to the bill that will allow the orderly and efficient conduct of the Nation's transportation program. The Committee on Public Works and Transportation received a sequential referral and approved an amendment which will further the cause of clean air while recognizing the need for the upgrading of the Nation's infrastructure.

Now, more than ever before, we as a nation face a mounting array of challenges to our health and safety from worsening environmental conditions. Unless sweeping changes are made in the way we travel, the next decade will only bring increasing gridlock and traffic congestion, declining air quality and increasing dependence and reliance on foreign oil.

The Committee on Public Works and Transportation has recognized there is an environmental crisis. Our actions have demonstrated that we are no strangers to the needs of protecting our human health and irreplaceable natural resources. We believe they are a cornerstone in the building of a better and safer America.

At the same time, we also believe that infrastructure and its beneficial impact on economic development can coexist with the goal of a cleaner environment. We can improve our air quality as well as have an efficient and easily accessible transportation system. Through careful planning, we can reduce the emissions that pollute our air while meeting the vital transportation needs of our Nation.

Clean air and freedom of movement can mutually coexist, and I believe that the action which we are taking today will further that goal.

I appreciate the cooperation of Chairman DINGELL and Congressman WAXMAN on these amendments. We have reached an agreement that will help this Nation meet its critical clean air goals while minimizing the impact on efforts to assure a sound highway system.

The committee amendment addresses two issues: conformity review and sanctions.

On conformity review, the committee amendment would require that State transportation plans and programs, first, eliminate or reduce the severity and number of clean air violations, and second, not cause or contribute to a failure to meet clean air goals.

These are the same two requirements in H.R. 3030 are reported by the Committee on Energy and Commerce. The committee amendment would add a third requirement: That State transportation plans provide for the implementation of transportation provisions in accordance with a State's clean air plan.

The addition of this third requirement is an attempt to ensure that clean air transportation projects go forward. It also means, however, that the committee amendment imposes a tougher standard on State transportation plans than H.R. 3030 does.

In addition, on conformity review, the committee amendment guards against project-by-project review as provided in H.R. 3030.

It is my understanding that the language of H.R. 3030 assumes that individual highway projects must enhance air quality or they can't go ahead. The report accompanying H.R. 3030 states that "it many not always be necessary that each individual project fully meets the conformity criteria on its own merits." To me that says that there are times when it may be necessary.

The committee amendment addresses this by stating that if a transportation plan as a whole conforms to a State's clean air program, then any project in the plan is deemed to conform if it is a control measure or its design and scope have not changed.

The basis for conformity, therefore, is the plan taken as a whole and not each individual project in it. This approach is widely supported by State and local government associations, State transportation departments and transportation groups.

For new projects—projects not in the plan—the committee amendment provides that they would conform if, first, projected emissions from them would not cause the transportation plan as a whole to exceed the emission reduction requirements of the State implementation plan; or second, that any emissions from them are taken into account in a revised transportation or State clean air plan.

Lastly, and most importantly, the committee amendment would change the language in H.R. 3030 which for practical purposes gave the Environmental Protection Agency sole authority for determining criteria for compliance of highway projects. While we all recognize the expertise of EPA in determining air quality, I question the agency's knowledge of our Nation's transportation needs. Therefore, the amendment requires that EPA issue the regulations with the concurrence of DOT. Without DOT agreement, the regulations cannot be issued. I think that makes sense. Each agency should bring to the table its own area of expertise and the final resolution of policy should be a balance between the two.

On the issue of sanctions, the committee amendment provides that after 18 months, the sanction cannot be statewide if a political subdivision of a State is principally responsible for the noncompliance. In an additional 6 months, EPA may extend sanctions statewide. This gives a State, after the initial 18 months, 6 additional months to remedy the noncompliance of a locality or region before there is any threat of a statewide sanction.

The Public Works and Transportation Committee amendments are protransportation and proclean air. They are fully compatible with the clean air goals of this overall bill while allowing the continuation of many important transportation programs.

These amendments make H.R. 3030 a better bill, both from the goal of clean air and improved transportation. I look forward to our working as conferees with my colleagues from the Committee on Energy and Commerce to make sure the bill continues to recognize the Nation's clean air and transportation needs.

I have some additional comments, subparagraph (b) of paragaph (1) of section 176(c) of the Clean Air Act as added by 101(f) of H.R. 3030 refers to the "growth likely to result for such activities" subject to conformity review.

In addition to providing for the periodic emission reductions required in this act, each implementation plan is required to identify total emissions projected within the timeframe of the implementation plan in order to assure attainment of national standards within the timeframes allowed by the act. Accordingly, each implementation plan will define its attainment strategies in relation to the total emissions associated with population increases projected over the timeframe of the implementation plan.

Within this context, as the committee's report language clarifies, a transportation plan or program shall demonstrate that the total emissions from the regional population levels served by such plan or program are within the framework of total emissions for the population levels projected by the implementation plan.

Subparagraph (3)(b) in the proposed amendment refers to the "design and scope" of a transportation project. The terms "design and scope" are meant to refer to the transportation function(s) defined for a transportation project in the applicable transportation plan and to the transportation system capacity proposed for a transportation project in the applicable transportation plan and shall include the overall amounts of capacity from each type of transportation function, such as mixed flow and transit/HOV lanes, assigned to specific projects.

The amendment also refers to the "schedule set forth in such applicable implementation plan" and the "schedules assigned to those transportation plans and programs in the applicable implementation plan."

The capital funding required for such transportation plans and programs is substantial and is affected significantly by local, State, and Federal budgeting and revenue processes. Environmental review for large scale transportation plans, programs, and projects generally result in long lead times required for the implementation of programs and projects. Recognizing these constraints, the Federal Government requires environmental assessments for individual transportation projects to consider the projects in the context of the transportation system expected to be in place at the end of a 20-year timeframe. Each implementation plan's attainment schedule should similarly allow for the relatively long lead times required for transportation plan and program implementation and should further allow for long-term funding uncertainties that may affect the order in which transportation programs and projects are actually implemented within the 20-year timeframe.

Mr. LENT. Mr. Chairman, I yield 2 minutes to the gentleman from Virginia [Mr. BLILEY], a member of the Subcommittee on Health and the Environment.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. BLILEY. I am happy to yield to the gentleman from Illinois.

Mr. MICHEL. Mr. Chairman, I certainly applaud the members of the committee for the outstanding job they have done, particularly on this compromise.

I rise in support of the Richardson-Madigan amendment for reformulated gasoline and I do so for three reasons: First, it will reduce pollution levels in the nine most heavily polluted cities; second, it will lead to an estimated 100-percent increase in the production of ethanol, thus materially assisting American's corn farmers; and third, it will help to cut our budget deficit.

Ethanol and clean air go hand-in-hand. Utilization of ethanol means a cleaner fuel, and a cleaner fuel means cleaner air. So it makes sense to encourage the development of a reformulated gasoline that utilizes ethanol, as this amendment does.

But it should also be noted that the amendment does not mandate the use of ethanol. It allows the oil companies to use alternative combinations if they achieve the required emissions reductions.

Projections are that perhaps no more than 30 percent of the reformulated gasoline will contain ethanol. Even that level, however, will result in a doubling of ethanol production. That will add jobs in central Illinois, where much of the ethanol is produced, and will help to offset the possible loss of jobs due to other provisions of the clean air bill.

It will also provide additional markets for corn, thus benefiting our corn farmers in the Midwest. Estimates are that the price of corn could go up by some 12 cents a bushel as a result of doubled ethanol production.

Furthermore, the increased demand for corn will reduce Federal farm support payment costs by nearly $1 billion a year, according to a GAO study released earlier this year. About half of this savings will be offset by lower revenues on the tax side, but the net result will still be a lower deficit by nearly one-half billion dollars annually.

So, many good things will result from the enactment of this amendment, and I urge its adoption.

Mr. BLILEY. Mr. Chairman, I rise in support of the Committee on Energy and Commerce's en bloc amendment. This document includes many technical corrections that further refine this bill. More importantly, this amendment includes a number of substantial agreements on important aspects of the Clean Air Act that strengthen an already strong bill.

In particular, I am proud of my efforts to produce a provision that will enhance our pristine air in our magnificent national parks. This provision is finely tailored to the particular visibility problems that we are facing in our western national parks. It both strengthens current law regarding plume blight and also requires EPA to enact new regulations regarding regional haze.

Just as important, this provision recognizes the tremendous benefit that the current smog and acid rain titles of this bill will have on our eastern national parks. This provision recognizes the difference in the challenges faced by our eastern national parks as compared to our western parks. This provision is a clear statement that titles I, II, III, and V of this bill are going to go a long way to not only protecting our citizens' health but to cleaning up our national parks such as the lovely Shenandoah in my home State of Virginia.

I want to express my appreciation to the author of the amendment, my colleague Mr. WYDEN, for this commitment to the development of sound policy instead of press release politics. His cooperation and reasonableness are to be commended. I also want to recognize the outstanding efforts of my colleagues Mr. SYNAR, Mr. NIELSON, Mr. SCHAEFFER, and Mr. SWIFT for their invaluable aid in the fashioning of this compromise. I urge all of my colleagues to support this strong measure.

Mr. Chairman, one of my paramount interests with respect to the Clean Air Act Amendments of 1990 has been to try to encourage utilization of the principle of cost-effectiveness in this legislation. That has not always been easy or politically possible. However, if done in consonance with an appropriate level of protection for health and environment, the public will be better served by this ambitious bill. On the other hand, to the extent that H.R. 3030 departs from that principle, it justifiably can be accused of wasting precious resources without a commensurate benefit being bestowed upon society.

Title III of H.R. 3030, relating as it does to hazardous air pollutants, is a portion of this bill where the potential for control overkill is particularly great because the public values protected are especially fragile and sensitive, both in perception and reality. Nevertheless, proceeding with caution, with health and environmental protection being the objective, the principle of cost-effectivness can be employed here as well. To that end, I would like to speak to some language that I was able to get placed in title III in the set of committee amendments to be offered en bloc. The text of that language is as follows:

On page 319, after line 5, add a new subsection as follows:

"(u) In the case of any category or subcategory of sources the air emissions of which are required under subtitle C of the Solid Waste Disposal Act, the Administrator shall take into account any regulations of such emissions which are promulgated under such subtitle and shall, to the maximum extent practicable and consistent with the provisions of this section, ensure that the requirements of such subtitle and this section are consistent."

The purpose of my amendment language is to allow EPA to avoid imposing additional emission limitations on a source category or subcategory when such limitations would be unnecessary and duplicative. The amendment would not automatically exclude source categories that are subject to controls under another program, but would simply require the Administrator, to the maximum extent practicable and consistent with the provisions of section 301, to ensure the consistency of subtitle C of the Solid Waste Disposal Act [SWDA] and this section. After all, the purpose of the legislation is to place an appropriate level of control and is not to enshrine control for control's sake. This is particularly important in light of the ambitious schedule for regulation under title III and the strain it will place on both EPA resources and those of the regulated community.

EPA is currently well along in the process of promulgating stringent air emissions for several specific types of facilities for the same pollutants that are listed under title III of H.R. 3030, as reported. For industrial boilers and furnances that burn hazardous waste fuel, EPA has proposed both technology-based and health-based emissions limitations on potentially hazardous air pollutants that may be emitted by such sources. See 54 FR 43718, October 26, 1989; 52 FR 16982, May 6, 1987. These regulations, which are more stringent than the requirements that currently apply to hazardous waste incinerators, are being promulgated pursuant to RCRA, not the Clean Air Act, and are expected to be issued in final form within a year.

Compliance with these regulations will require many facilities to install expensive new control technology and to go through an elaborate and costly permitting process. To require EPA to impose an additional layer of regulation on sources that EPA may determine will be appropriately controlled by another regulatory program would yield no environmental benefits, but it could impose a large burden on both the regulated facilities and Federal and State permit writers. Even if the level of emissions control required under different regulations is essentially the same, the

costs of subjecting facilities to detailed monitoring and operating requirements that have been separately promulgated pursuant to different statutory authority, or by different offices within EPA and different State agencies, are likely to be high.

In my view, my language tries to rationalize the appropriate level of control under this legislation with that in a companion environmental statute. Indeed, section 1006(b) of the SWDA requires integration with the Clean Air Act of all provisions of SWDA for purposes of administration and enforcement and avoidance of duplication to the maximum extent practicable. To me this is nothing more than the exercise of common sense.

I would hope that the conference committee would also ensure internal consistency and cost effectiveness with respect to the various provisions of the clean air bill that we will send to the President and, indeed, with respect to the Clean Air Act that it amends. One example that comes to mind relates to municipal waste incineration. I am aware that we do not have in our bill a specific provision regulating municipal waste incineration. However, absent such a specific provision it could happen that such incinerators might find themselves regulated in an inappropriate way under generic provisions of title III of H.R. 3030. The bill passed by the other body, S. 1630, has a specific set of regulations applicable to municipal waste incinerators which largely builds on the ongoing rulemaking for those sources. Presumably, since the more specific will override the more general language, the municipal waste incinerators will not find themselves inappropriately regulated by the generic requirements of title III of S. 1630. It is important to remember when we proceed to conference that we must reconcile our absence of such specific provisions with the precise language of the other body in such a way as to provide the appropriate level of control and to avoid inconsistency. On December 20, 1989, EPA proposed stringent emissions limitations and compliance schedules for existing municipal waste combustors—see 54 FR 52209—and for new, modified or reconstructed municipal waste combustors, see 54 FR 52251. Hearings on those regulations, which have long been in the developmental stage and have been the subject of extensive comments, commenced in January 1990, and further comments for the record were filed by March 1, 1990.

Another example comes to mind with respect to the appropriate level of regulation of those substances which are on both the 301 list and the initial list of substances under those other provisions of title III regulating sudden and accidental releases. It is clear that, unless there is a commitment to avoid inconsistency, duplication, and inappropriate control, some of the sources of those chemicals will find themselves subjected to regulatory overkill. It is important that this matter be clarified. Proposed section 112(c)(4) provides discretionary authority to the Administrator to list categories or subcategories under section 112(c) that had been regulated under section 112 prior to enactment. No health benefit would flow from requiring EPA to promulgate new section 112 standards for sources that are meeting standards that provide an ample margin of safety under existing NESHAPS. Accordingly, because of this, section 112(c)(4) authority should be utilized only if the applicable standard needs to be revised. Of course, in some instances, the existence of new sudden and accidental requirements may make the lack of need for any additional title III regulation even more compelling.

Furthermore, it is apparent that if the title III MACT requirements are to work sensibly, it is important that the appropriate control measure be employed in light of the nature of the facility to be regulated. Some industries have processes which are central to given subcategories of the industry. In my view, the other body employed the proper approach and degree of flexibility wherein it recognized on pages 170 and 171 of Report 101-228 to accompany S. 1630 that "The Administrator may consider the type of process employed in making decisions on subcategories and standards." Of course, there is nothing in the language of H.R. 3030 that would prevent such an interpretation. Indeed, such an interpretation and use of subcategorization is vital to prevent the cost-ineffective application of a MACT which is inappropriate to the kind of process that is integral to a source.

Lastly, the bill designates on the list of regulated hazardous air pollutants 17 broad categories of pollutants without a CAS number. To ensure that substances are not unnecessarily regulated by emission standards based on the health risks posed by a very different toxic pollutants within the same broad pollutant category, the bill allows EPA to delete from regulation those unique chemical substances that do not meet the criteria for adding a pollutant to the list of toxic air pollutants. Also, to ensure that unique chemical substances that are only mildly toxic and noncarginogenic are regulated on the basis of the specific risks posed by the unique chemical substances and not on the basis of risks posed by a known human carcinogen or a severely toxic unique chemical substance in the same pollutant category, the Administrator should establish emission standards with respect to the health and environmental effects of the substances actually emitted by a source.

□ 1220

Mr. DINGELL. Mr. Chairman, I yield 1 minute to the distinguished gentleman from Indiana [Mr. SHARP], chairman of the Subcommittee on Energy and Power.

Mr. SHARP. Mr. Chairman, I rise in strong support of the committee amendment which represents some significant policy changes. Particularly, I want to support the Richardson amendment and the Wyden amendment.

The Richardson amendment, which only failed by one vote in the committee, will take us a long way to meeting auto pollution problems in this country, because it addresses the problem of older cars on the road. It will bring into the marketplace what we call reformulated gasoline. It will bring into the marketplace a fuel that has a higher oxygen content, which will help us in some communities meet the problems of ozone and in others to meet the problems of carbon dioxide.

This is a very important step forward. It will put pressure on our oil industry to meet it. It will bring into the marketplace additional additives. Especially ethanol will have a wider role to play in this. Most importantly, it will bring us a much improved health climate for our people.

We know our new cars are doing basically a very good job of meeting pollution requirements, and we are going to make those tougher in this legislation. One of our major concerns is what about that fleet of thousands and hundreds of thousands of cars out there on the road that are under older requirements and are deteriorating in their ability to meet the requirements.

The Wyden visibility amendment fills a gap in the committee-reported bill. While the air in the East will reap enormous visibility benefits from the acid rain provisions of the bill—reducing haze—more must be done to protect the beautiful vistas in the Western United States.

The regional haze program included in this compromise will finally—after 13 years of inaction by the Environmental Protection Agency—set national goals and requirements for cleaning up ubiquitous pollution.

The Wyden amendment also strengthens existing law regarding the protection of our national parks from visible pollution. Indiana Dunes and the Hoosier National Forest will be better protected because of this action.

Mr LENT. Mr. Chairman, I yield 2 minutes to the gentleman from Colorado [Mr. SCHAEFER], a member of the committee.

Mr. SCHAEFER. Mr. Chairman, I rise in strong support of the committee amendment.

Throughout this debate, a leading motivation of Members—and rightly so—has been to protect those industries critical to their home State. For me, and others whose State's primary industry is tourism, visibility in our national parks is of vital importance.

Predictably, numerous studies have shown that Americans place a high value on protection and preservation of our natural resources. Congress reflected this concern in its 1977 amendments to the Clean Air Act by establishing a national visibility goal—the prevention of any future, and the remedying of any existing, impairment of visibility in class I areas. Unfortunately, EPA has failed to carry out this important task.

As a result of this inaction, National Park Service monitoring indicates that in excess of 90 percent of the time, scenic vistas are affected by manmade pollution within the lower 48 States. As the West inevitably grows, so too will the problem. Even with enactment of H.R. 3030, perceptible deterioration of visibility will undoubtedly take place in the West. We must simply do more.

I am therefore pleased to join Congressman WYDEN in his effort to see the intent of the 1977 amendments carried out. By requiring that EPA issues long-awaited regional haze regulations, we can begin to make the improvements we pledged to ourselves and our constituents. And with the progress made over the last 12 years, a lack of technology is no longer an excuse.

Before closing, I would like to commend those who worked long and hard in bringing this compromise about. As with so many issues, committee members were able to put their differences aside and develop a responsible solution. Special recognition of course goes to Chairman DINGELL and Congressmen LENT and WAXMAN without whose efforts an agreement would not have been possible. But the same can likely be said of other committee members, Mr. BLILEY, Mr. SYNAR, Mr. SHARP, and Mr. NIELSEN whose commitment to protecting these valuable resources in an economically sensible fashion has brought us to this point. I commend especially my staff member David Eck and finally again I commend the gentleman from Oregon [Mr. WYDEN].

I urge my colleagues to join me in support of this amendment and endure that the national parks so important to my home State—and to all of us—are protected for many years to come.

Mr. DINGELL. Mr. Chairman, I yield such time as he may consume to the gentleman from Michigan [Mr. BONIOR].

Mr. BONIOR. Mr. Chairman, I would like to call the House's attention to a provision in the Energy and Commerce Committee amendment that addresses the issue of asbestos in nonschool public and commercial buildings. Everyday millions of Americans are potentially exposed to unsafe levels of asbestos in our Nation's buildings. In 1988 EPA estimated that there are over 700,000 buildings with asbestos-containing materials. Airborne asbestos poses a health risk to building occupants as well as construction and service workers.

My amendment provides for the training and accreditation of individuals who work with asbestos-containing materials in public and commercial buildings. The amendment requires accreditation and training for persons who inspect, design, or conduct response actions in nonschool public and commercial buildings. The regulations are to include requirements identical to those in the model contractor accreditation plan promulgated under section 206(b) of the Toxic Substances Control Act, except that workers conducting response actions shall undergo not fewer than 40 hours of training, and to maintain accreditation, such a worker shall complete an 8 hour refresher course annually. I intend that the 40-hour accredited training and the 8-hour refresher training to mean actual classroom training and hands-on training time, exclusive of breaks and meals.

In order to prevent further disease from asbestos, this amendment is designed to protect human health from airborne asbestos by establishing trianing and accreditation standards in order to protect workers and the public from asbestos hazards in buildings. In order to achieve this aim, the amendment also establishes training grants administered by the National Institute of Enviromental Health Sciences, the Government agency well qualified in this area, to further worker education and training. The grant program provides is targeted to joint labor-management trust funds and to nonprofit government employee organizations for establishing and operating programs for the duration of the period of authorized funds. The authorization provides for $10,000,000 a year in grant funds for fiscal years 1991, 1992, 1993, and 1994. The amendment provides for one-time startup grants and are renewable for the full 4 years. Many joint labor-management trust funds have ongoing programs under the Asbestos Hazard Emergency Response Act for asbestos in the Nation's schools. This amendment establishes a training program for nonschool public and commercial buildings and those trust funds with ongoing programs are eligible for these grants in order to establish and operate programs for training workers who will be accredited under this amendment.

Asbestos has been long recognized as a threat to human health. This amendment aims to protect human health and the environment through the training of a skilled work force to handle a known airborne health hazard.

Mr. DINGELL. Mr. Chairman, I yield 1 minute to the distinguished gentleman from California [Mr. MINETA].

Mr. MINETA. Mr. Chairman, I will vote in favor of enactment of H.R. 3030, Clean Air Act Amendments of 1990, with enthusiasm.

The Clean Air Act Amendments of 1990 have traversed a long and rocky road through both Houses of the Congress. Finally, we find ourselves in a position to enact legislation that will improve our health and environment. Passage of this legislation will end over a decade of ineffective clean air policies.

I commend the leadership of the House on both sides of the aisle, especially the Energy and Commerce Committee, Chairman DINGELL and Mr. LENT, for their efforts to bring the bill, H.R. 3030, Clean Air Act Amendments of 1990, to the floor for consideration.

Mr. Chairman, I must admit that when the Committee on Energy and Commerce reported this bill, I had serious concerns about the effect the legislation would have on the future of the Nation's surface transportation programs.

However, over the past few weeks, the Committee on Public Works and Transportation has worked in good faith with the Committee on Energy and Commerce to address concerns that directly affect the Nation's surface transportation programs. On Monday, the two committees reached an agreement on amendments for inclusion as part of the committee amendment supported by the Committee on Energy and Commerce. Our agreement takes a balanced approach to addressing the Nation's environmental problems while also addressing its transportation needs.

Also, on Monday, the Committee on Public Works and Transportation, ordered reported, the bill, H.R. 3030 with amendments that reflect the understanding of the agreement between the two committees.

At the Federal level, the responsibility for widespread failure to reduce mobile source pollution since 1977 rests with the Environmental Protection Agency [EPA] and the Department of Transportation [DOT]. For the future, both Departments must work together to reduce emissions. For that reason, the Energy and Commerce and Public Works and Transportation Committees agreed to include provisions in the Clean Air Act Amendments of 1990 to provide for an effort by both EPA and DOT to assure conformity of transportation plans and projects.

The amendments to the legislation agreed to by both committees are only intended to improve the implementation of the Clean Air Act without neglecting the need to move people and goods.

These amendments address two areas: Sanctions and conformity requirements.

Under the sanctions provisions, the EPA Administrator will be required to establish criteria for exercising his or her authority to impose sanctions on those political subdivisions that have adequate authority to correct air-quality deficiencies. The Public Works and Transportation Committee, in conjunction with the Energy and Commerce Committee, also support revising the conformity requirements in H.R. 3030, as reported, to permit EPA and DOT to work together to determine which transportation projects conform to the State implementation plan.

These are strengthening provisions to the Clean Air Amendments of 1990.

Over the last two decades, the Congress has struggled to develop solutions to improve air quality. Success has eluded us.

Now, we have an opportunity to enact legislation to clean up dirty air.

Americans are looking to us for leadership and we must provide that leadership by enacting strong and workable clean air legislation. Further, we can ensure that H.R. 3030 is workable by adopting these modest, but important adjustments to H.R. 3030 to strengthen the bill and facilitate its implementation.

Mr. Chairman, I urge passage of the Energy and Commerce Committee

amendment to this historic legislation, the Clean Air Amendments of 1990.

Mr. LENT. Mr. Chairman, I yield 2 minutes to the gentleman from Utah [Mr. NIELSON].

Mr. NIELSON of Utah. Mr. Chairman, I would like to commend the gentleman from Michigan [Mr. DINGELL], the gentleman from New York [Mr. LENT], the gentleman from California [Mr. WAXMAN], and the other members of the Energy and Commerce Committee for the great work they have done. We had good compromises in many areas. I am happy to have worked with the gentleman from Oregon [Mr. WYDEN], the gentleman from Virginia [Mr. BLILEY], the gentleman from Colorado [Mr. SCHAEFER], and the gentleman from Oklahoma [Mr. SYNAR], on the visibility over national parks amendment, which I think is fair, which meets the objectives of the National Parks Service and also does it in a way where we can preserve our national parks without destroying the current developments around them.

Mr. Chairman, I am also pleased that the amendment included the compromise of the Hall-Fields and Richardson-Synar alternative fuels amendments which were so closely contested.

I would also like to commend my colleagues for accepting into the committee amendments a technical amendment on controls for PM-10 precursors.

This amendment directs the Administrator to consult with the State when issuing guidelines and making determinations on PM-10 and PM-10 precursors. It also directs the Administrator to take into account emission reductions achieved, or expected to be achieved, under title V and other provisions of this act.

This is important so that sources that have emissions that may contribute to PM-10 nonattainment will not have to put on onerous unnecessary controls. It also allows the State, the body that does have the information on what is contributing to nonattainment to have a role in this process.

I am disappointed the rule did not provide for me to allow my National Acid Precipitation Assessment Program [NAPAP] amendment. I believe that study will show that we are overdoing on the acid rain aspects of this bill. The report may show that we have reduced sulphur dioxide by at least 800,000 to 1 million more tons than we are given credit for, and if we could take that into consideration we could have taken some of the pressure off the Midwest and also provide more growth in our Western and Southern States. So I am sorry that was not allowed. Perhaps we will be able to make that correction later.

Mr. Chairman, in spite of that deficiency, I do support the amendment and I congratulate all the Members who had a part in its drafting including the many dedicated members of the committee and personal staffs.

Mr. DINGELL. Mr. Chairman, I yield 30 seconds to the distinguished gentleman from Ohio [Mr. THOMAS A. LUKEN].

Mr. THOMAS A. LUKEN. Mr. Chairman, the committee amendment to title I of the bill includes important revisions to the section on consumer or commercial products.

The bill requires a comprehensive study on the ozone implications of these products. It is expected that the study will provide a much-needed data base and a better understanding of the relative net environmental impacts of these products. This will provide a sound basis for regulation.

At the conclusion of the study, the EPA Administrator is required to list those categories of products that the Administrator determines, based on the study, account for at least 80 percent of the VOC emissions, on a reactivity-adjusted basis, from consumer or commercial products in areas that violate the NAAQS for ozone.

Thereafter, the Administrator is to list four groups and promulgate regulations every 2 years for one group until all groups are subject to best available controls.

Mr. Chairman, I rise to compliment the chairman and my colleague Mr. WAXMAN on the long hours of hard work they put into the evolution of the consumer or commercial products section of the bill.

I think that the committee has reached a sensible approach to a very complicated subject. I am particularly pleased that the language now emphasizes the importance of photochemical reactivity as a key criterion to be used by the Administrator in determining the categories of emissions to be listed.

It is commendable that we are recognizing the fundamentals of atmospheric chemistry in this area by requiring that emissions be considered on a reactivity-adjusted basis before being considered for regulation. The term reactivity-adjusted basis requires a focus of regulatory controls on the more reactive VOC's by relating the amount of urban ozone formed to the weight of the VOC emitted to the ambient air, thereby achieving the most cost-effective control measures.

I am pleased that we have provided the Administrator very specific factors for determining the criteria for selecting product categories which are to be subject to control.

It is notable that, as the recent OTA report "Catching Our Breath" points out, some 25 percent of the national VOC emissions inventory may result from unregulated sources, of which OTA includes commercial and consumer products as one of a number of contributors, along with other sources such as surface coatings, degreasing, drycleaning, and asphalt paving.

The committee's definition of "consumer or commercial product" is, however, different from OTA's. The committee's definition of "consumer or commercial products" is much broader and is intended to encompass the universe of sources referenced in the OTA report as well as other sources.

I am especially gratified that we have not singled out any particular products or form of product for regulation, but, rather, we have focused on ambient air VOC emissions from the universe of consumer or commercial products as specifically defined in the bill, which includes VOC's that may result from the use, consumption, storage, disposal, destruction, or decomposition of such products.

The committee also recognizes that efforts to decrease VOC emissions from these products are ongoing and are expected to increase after enactment, even before the best available control regulations are promulgated. Accordingly, the bill recognizes these efforts and requires the Administrator to give credit for postenactment reductions when listing categories and promulgating regulations of the four product groups.

Mr. LENT. Mr. Chairman, I yield 1 minute to the gentleman from Arkansas [Mr. HAMMERSCHMIDT].

Mr. HAMMERSCHMIDT. Mr. Chairman, I rise in support of the portion of this amendment to H.R. 3030, the clean air act amendments of 1990 which embodies changes considered in depth by the Committee on Public Works and Transportation and which was unanimously reported out of our committee.

The Public Works and Transportation Committee is extremely concerned that without this amendment certain provisions of H.R. 3030 would severely hinder the attempts of State and local transportation officials across this country to address critical transportation needs.

Our committee has worked with the Energy and Commerce Committee over the course of the last week, and the committees have come to an agreement on changes to H.R. 3030 which will satisfactorily resolve our concerns. I want to thank Mr. DINGELL, Mr. LENT, and Mr. WAXMAN for their cooperation in focusing on these important matters and for their willingness to join us in support of these changes.

As it relates to transportation programs, this amendment makes three basic changes. First, it sets out in detail how transportation plans, programs, and projects will be evaluated for conformity with State clean air plans. The amendment ensures that conformity will be determined for a transportation plan or program as a

whole, not for individual projects within a transportation plan.

Mobile source air pollution is best evaluated at the regional planning level. Only at this level can the many interrelated influences of land use changes, cost increases, travel demand, modal choice, and other important factors be adequately assessed.

There may be projects, however, that for some reason are not included in a transportation plan, or projects that have changed substantially in design or scope. This amendment provides that these types of projects will be carefully analyzed to prevent evasion of clean air goals.

This amendment will also guarantee the full participation of the Department of Transportation in the process of promulgating criteria and procedures for determining the conformity of transportation plans.

The Department of Transportation has extensive experience with transportation control measures and a thorough understanding of factors which influence vehicle miles of travel and congestion reduction. The requirement in this amendment that the Environmental Protection Agency issue conformity guidelines only with the concurrence of the Department of Transportation is a change I strongly endorse.

H.R. 3030 provides substantial discretion to the Administrator of EPA to require that Federal highway funds be cut off for violations of the Clean Air Act. The amendment under consideration ensures that this sanction, if necessary, will be aimed to the level of Government responsible for taking the action necessary to come into compliance. Highway funds could not be cut off in the first instance for an entire State for a violation in just one part of the State if the local government has primary responsibility for correcting the violation.

The public works portion of this amendment will promote the clean air goals of H.R. 3030 while ensuring that Congress can move forward with a strong national transportation policy. I urge my colleagues to consider the transportation challenges facing them in their own districts and to vote for this extremely constructive change in H.R. 3030.

In closing, I wish to thank the distinguished chairman of the Public Works and Transportation Committee, Mr. ANDERSON; the chairman of the Surface Transportation Subcommittee, Mr. MINETA; and my colleague, Mr. SHUSTER, for their leadership on this matter. As the Public Works and Transportation Committee considers reauthorization of surface transportation programs in the coming months, the environmental impacts of our transportation systems will remain an important consideration. I am pleased that there is such strong commitment within the Public Works and Transportation Committee for a balanced approach to meeting the environmental and transportation challenges that confront us.

Mr. DINGELL. Mr. Chairman, I yield 1 minute to the distinguished gentleman from Oklahoma [Mr. SYNAR].

Mr. SYNAR. Mr. Chairman, let me take this opportunity to thank the gentleman from California [Mr. WAXMAN] and the gentleman from Michigan [Mr. DINGELL], as well as all other Members involved in getting to this point. I think it shows that compromise is the order of the day. I would particularly like to commend the gentleman from New Mexico [Mr. RICHARDSON] for his reformulated gasoline section. That section contains a key principle, that environmental performance and not congressional formula should control with respect to gasoline specifications.

Mr. Chairman, I would also like to commend the gentleman from Oregon [Mr. WYDEN] and the gentleman from Massachusetts [Mr. CONTE] for their excellent work on the parks amendment. It will do exactly what the gentleman from Massachusetts said, protect our crown jewels. It will protect more areas, cover more pollutants, and will require issuance of regional haze regulations within 2 years. This is good news for those who are concerned about these crown jewels. This amendment will go a long way in moving us forward toward clean air.

Mr. Chairman, I am pleased to join with my friend from Oregon in cosponsoring the visibility amendment. On March 9, 1990, my Subcommittee on Environment, Energy, and Natural Resources held an oversight hearing on air quality in our national parks and wilderness areas. We found that although Congress had directed the EPA to protect these areas in the 1977 Clean Air Act, many of these treasured places were still being seriously affected by air pollutants 13 years later.

The subcommittee released a GAO report at the hearing which detailed the many flaws in the program designed to protect our cleanest areas. The report showed that most of the pollution that enters our parks and wilderness areas comes from sources exempted from the current Prevention of Significant Deterioration Program, the program relied on to solve the problem. Even worse, a majority of these areas were left out of the program because they were too small or created after the 1977 amendments.

We heard testimony from the National Park Service that some visibility impairment exists at almost all western parks. In many cases the pollution was so bad that it was apparent even to tourists seeing these sights for the first time. Yet the current bill as reported does little to improve the situation.

We also heard EPA Assistant Administrator Rosenberg state that the impact of title V on visibility was unclear, and that sulfur emissions in the West might even increase up to 23 percent under its provisions. Despite these dire predictions, neither the bill submitted by the President nor the bill reported out by the Energy and Commerce Committee contains a visibility section.

Our hearing also showed that EPA was not using its statutory authority to protect parks and wilderness areas. While EPA has the power to go after distant sources of park pollution, it has ducked its responsibility and failed to issue the regulations to do the job. The Agency claimed it lacked the expertise and data to issue these regional haze regulations. But this position was directly contradicted by other Government witnesses.

Even worse, EPA has not gone after nearby sources of park pollution. Our hearing showed that the Agency has not required the studies which could trace this pollution to its source and required cleanup.

Finally, EPA has done nothing to protect currently clean areas from becoming degraded in the future. These "clean air" areas are the source of the best visibility days in the West. Without them, in some areas, there would never be clean air.

This amendment deals with most of these issues. It protects more areas, covers more pollutants, requires issuance of regional haze regulations within 2 years, and mandates tracer studies for large unregulated sources not covered by title V. Unfortunately, one big issue was dropped in negotiations—protection for clean air areas through the establishment of multi-State regional commissions. This idea, which orginated with the Alliance for Acid Rain Control, is still in the Senate bill.

I hope it will be adopted in conference. Our precious crown jewels deserve no less

REFORMULATED GASOLINE

Mr. Chairman, this bill requires us to balance the need for tough environmental standards with realistic challenges for American business. With this amendment we are asking the petroleum industry to do its fair share to help clean the air.

This amendment was produced after many hours of intense negotiation between representatives of producing States and agricultural States with input from JOHN DINGELL, HENRY WAXMAN, NORM LENT, and ED MADIGAN, as well as my producing State colleagues, RALPH HALL, BILLY TAUZIN, and JACK FIELDS. It is a substantial improvement over the amendment offered in committee. It lays out an important challenge: The development of reformulated gasoline with clean air benefits for the millions of vehicles currently on the road.

This is a tough amendment, Mr. Chairman. Indeed, it may be somewhat too ambitious. Beginning in 1992, only 19 months from now, we are requiring all of the gasoline in nine major urban areas, some 22 percent of the total U.S. supply, to be reformulated gasoline. This is a monumental task, and we should not minimize the amount of ingenuity and capital investment it will take for the American petroleum industry to comply with these requirements. Since the cost of any changes will be paid for by American consumers we must make sure that this new program contributes to progress on clean air.

But while this amendment is tough, I am encouraged that our negotiations have validated a key principle, environmental performance,

and not a congressional formula for gasoline specifications. While the amendment outlines one benchmark fuel, it also allows for an alternative certification procedure. The potentially tougher performance objectives permit technological innovation, economic efficiency, and some flexibility. In short, if an oil company can make a cleaner fuel by another combination of ingredients, it gets both the chance and the challenge to do so.

Mr. Chairman, although I think we have improved this amendment enough to send it to conference, it is far from perfect. Frankly, I am not confidant that the performance objectives set out are technologically feasible, whether the time frame for rulemaking and compliance are realistic and fair, and whether the base from which emissions performance will be judged is correctly established. I also question whether we have left enough room in this amendment for the regulators and the engineers to maneuver. These are issues which must be dealt with in conference.

It is often said about pollution control legislation that it must force technology to be effective. But when it comes to making gasoline for existing automobiles, we cannot ignore the laws of thermodynamics and chemistry. We also cannot and should not demand ever-incresing investment to produce gasoline that will fuel an ever-dwindling fleet of old cars.

The conferees will have to carefully weigh some adjustments to this measure to build in flexibility and safeguards. History has shown, Mr. Chairman, that energy supply disruptions, especially gasoline dislocations, can have a profound impact on our economy. Remember, the supply disruptions in 1973 and 1979 affected only about 1 million gallons per day of supply. Just that part of this amendment which deals with oxygenated fuels may affect 20 times that much gasoline.

The conferees will have to build in a process to determine whether the domestic supply of gasoline will be unduly disrupted. They should also build in a reality check to determine the overall feasibility of producing fuel without increasing $NO_x$ emissions and the need for, and feasibility of, the second and third phases of VOC and toxic reductions. Finally, and importantly, I believe the conferees should adjust the baseline for VOC and toxics reductions, as well as the $NO_x$ cap, to more clearly reflect the fleet of cars on the road that will actually use this fuel.

Mr. Chairman, I said at the outset that we should expect the oil industry to make a contribution to clean air. And although I will vote to send this amendment to conference, I am compelled to question whether this amendment asks the oil industry to go beyond its fair share. I look forward to improvements that the conferees will make.

□ 1230

Mr. LENT. Mr. Chairman, I yield 2 minutes to the gentleman from Texas [Mr. FIELDS], a member of both the Subcommittee on Health and the Environment and the Subcommittee on Energy and Power.

Mr. FIELDS. Mr. Chairman, before I proceed, I would like to address a statement made earlier in debate by my colleague from New Mexico, Mr. RICHARDSON. It is important to clarify that the petroleum industry is not opposed to Congress requiring the production of reformulated gasoline in our dirtiest cities. Even though some of us want to improve the reformulated section between final floor action and conference.

Moving to the provisions of the reformulated gasoline amendment, it would require significant reductions in hazardous air pollutants. It also would require reductions in volatile organic compounds [VOC's]. There are a number of substances that fall into both categories, significant examples include benzene, toluene, and xylene. In that case, you get to credit emissions reductions of such substances against the percentage reductions required for both VOC's and hazardous air pollutants. For example, reductions in benzene emissions would count as both a reduction in VOC's and in hazardous air pollutants. EPA's regulations regarding compliance with this program should reflect this.

This amendment also allows no increase in $NO_x$ emissions from vehicles using reformulated gasolines. When determining whether there is a $NO_x$ increase, emissions should be evaluated from a representative mix of vehicles on the road in 1990.

It would be misleading to consider only the newest vehicles. Newer vehicles are much cleaner due to more advanced emission control systems and are not representative of the existing vehicle fleet. A gasoline reformulation which includes more oxygen in the fuel will tend to increase $NO_x$. However, this effect will be understated in certain new vehicles with adaptive learning systems and oxygen sensors because they continually adjust the engine calibration to minimize emissions.

Finally, reformulated gasolines are required to be sold only in severe and extreme ozone nonattainment areas. Other areas can be included only if a State chooses to get in through the established procedures, and such requests must be approved by the Administrator.

Mr. DINGELL. Mr. Chairman, could the Chair inform me how much time remains on both sides?

The CHAIRMAN. The gentleman from New York [Mr. LENT] has 1 minute remaining and the gentleman from Michigan [Mr. DINGELL] has 8½ minutes remaining.

Mr. DINGELL. Mr. Chairman, I yield 1 minute to the distinguished gentleman from Oregon [Mr. WYDEN].

Mr. WYDEN. Mr. Chairman, I rise in support of the committee amendment.

Mr. Chairman, manmade pollutants have crept into our parks like a thief and a vandal. If a gang of hoods came into these national treasures and fouled the views, scarred the trees, and damaged the foilage and threatened our visitors' health, we would throw them in jail. But polluters are doing it every single day, and they have been able to do it with impunity for too long.

Now, as a result of the bipartisan efforts in the Energy and Commerce Committee, Mr. SCHAEFER, Mr. BLILEY, Mr. NIELSON, Mr. SYNAR, Mr. LENT, and Chairman DINGELL, the excellent work of the gentleman from Massachusetts [Mr. CONTE], and the gentleman from Minnesota [Mr. VENTO], who are not on the committee, we have a chance to set in place a legal timetable for reducing pollution at our national treasures. It is long overdue.

The National Park Service estimates that under this legislation, if we do not offer this amendment, we will see something like a 300-percent increase in visibility degradation at Grand Canyon, up to a 500-percent increase in visibility degradation at Glacier and Montana, and I urge my colleagues to support the amendment.

Included in this amendment are two sections, 707A and 707B, dealing with the Prevention of Significant Deterioration Program and, more specifically, protection of national parks and other federally owned protected areas.

These sections originated in an amendment prepared for committee consideration by myself with the help and considerable skills of the gentleman from Oklahoma [Mr. SYNAR], the gentleman from New Mexico [Mr. RICHARDSON], and the gentleman from Colorado [Mr. SCHAEFER]. With the additional guidance of two of the most knowledgeable members of this body on public lands issues, the gentleman from Minnesota [Mr. VENTO] and the gentleman from Massachusetts [Mr. CONTE], we prepared a version for floor consideration.

Through the extraordinary efforts of these Members, the gentleman from Virginia [Mr. BLILEY], the gentleman from California [Mr. WAXMAN], the gentleman from Utah [Mr. NIELSON], the gentleman from Washington [Mr. SWIFT], the gentleman from Indiana [Mr. SHARP], the gentleman from New York [Mr. LENT], and the gentleman from Michigan [Mr. DINGELL], the amendment has been shaped into one with broad support, and so is included in this package of committee-endorsed amendments.

Because these sections are somewhat complex and because no explanation of them appears in the committee report, I would like to take the time to explain parts of them here.

In the 1977 Clean Air Act amendments, Congress made a commitment to protect our national parks, wilderness areas, and other clean areas. That commitment has not been met.

The General Accounting Office, in a report requested by the gentleman from Oklahoma [Mr. SYNAR], evaluated the effectiveness of the Clean Air Act's Prevention of Significant Deterioration [PSD] Program in protecting parks and wilderness areas from air pollution. That report found that the PSD Program was failing. One reason was that Federal land

managers were not playing an effective role in the PSD permit process. GAO found that Federal land managers have limited notice and opportunity to comment on applications, limited data about the polluter, limited analysis of available data, and limited interaction with the permitting authority and applicant.

Several parts of section 707A of this amendment address these problems. Subsection (e) requires that the States transmit a copy of the PSD permit application for a new or modified source to the Federal land manager and the Federal official charged with direct responsibility for management of a class I area or mandatory class II area under section 164(a). This requirement replaces the requirement in current law that the State need only submit the application to the EPA Administrator, who would then forward copies to land managers. The new provision will assure that land managers get prompt, direct notice of potential new sources so the managers can effectively participate in the permit process.

States must forward notice to any class I or mandatory class II area "which may be affected by emissions from the proposed facility." Where appropriate, this should include areas in other States. At so early a stage in the permitting process, the State will not be able to determine with certainty what protected areas will be affected. Instead, the State should alert the managers of any protected area that may be affected so that the managers can carry out their obligations to protect their lands.

This may require notice to a land manager of an area beyond the 50-kilometer range of EPA-approved air quality models or even beyond the "significant impact" zone established in EPA guidance. EPA has approved the use of mesoscale models for midrange evaluations such as the impact analysis prepared for sources affecting Teddy Roosevelt National Park. Some Federal land management agencies have developed models for even longer range analyses. These land managers should get notice in order to preserve their opportunity to prepare such analyses. Failure to give early notice forecloses effective reviews such as these.

Notice should go out where emissions from a source may contribute to adverse impacts on air quality related values or represent a major portion of an area's increment, even if below the "significant impact" level in EPA's guidance. Otherwise, increased emissions may "contribute to" or exacerbate adverse impacts on air quality related values in protected areas without adequate review.

Identification of potentially affected Federal lands should happen very early in the permit process. In order to determine the appropriate preconstruction monitoring under amended section 165(e)(2), permitting authorities should consult with land managers even before a formal permit application is filed.

Under this provision, the permitting authority may require air quality monitoring to determine baseline concentrations, visibility measurements, resource surveys to identify species that may be affected, or analysis of impacts from existing pollution levels in class I areas. Since the results of such monitoring need to be submitted with the permit application, the monitoring protocol must be established well in advance. To make the monitoring relevant, the permitting authority should involve both the land managers and the applicant in its design.

The amendment also requires the Administrator to require applications to contain sufficient information to enable Federal land managers to determine the effects of emissions from the proposed facility on air quality related values—including visibility—of protected lands. This provision is central to ensuring that the land manager has adequate data to evaluate the impacts of the proposed source. Current law—section 165(e)—requires an air quality impact analysis that addresses the impact of emissions on numerous resources within the "air quality control region." Permitting authorities have often ignored this provision. It has rarely been used to obtain sufficient information about specific resources in protected federal lands that may be adversely affected.

As part of the rulemaking implementing this section, the Administrator should reconsider the requirements for analyses under existing rules. In order to meet the needs of land managers, these analyses should identify soils, vegetation, wildlife, watersheds, and other resources in protected national lands that may be affected by increased emissions. The Administrator should also require analysis of such impacts in class I areas beyond the boundaries of the air quality control region where the proposed source is located.

At a minimum, the Administrator should adopt procedures that give the Federal land manager a major role in selecting the monitoring for air quality related values required under amended section 165(e)(2) and to ensure effective consultation regarding the completeness of the application under this section.

Another provision designed to overcome the Federal land manager's lack of adequate information and analytic capability, as well as to remedy the failure of some States to respond to land manager concerns, is the amendment to section 165(d)(2)(C). It requires the permit applicant to respond once the land manager of a class I area has made a "showing, together with documentation, that such emissions may cause or contribute to an adverse impact on the air quality related values of such lands."

The purpose of this amendment is to require the Federal land manager to define the issues regarding air quality related values by making a specific showing that adverse impacts to the identified resources may occur. The burden then shifts to the applicant to demonstrate that emissions will not cause or contribute to adverse impacts.

Three aspects of this amendment deserve note. First, it relieves the permit applicant of any obligation to address impacts of air quality related values in a class I area unless the land manager makes the initial showing of possible harm. The land manager may make this showing on a case-by-case basis by timely submission of documentation to the permitting authority. In making such showings, the land manager may rely on rules issued in accordance with 5 U.S.C. section 553 under the authority of amended section 165(d)(2)(B).

Second, in order to trigger the applicant's duty to respond, the land manager must: first identify resources—including visibility—that may be affected by pollutants expected to be emitted from the project; and second, show that such pollutants have the potential to cause or contribute to impacts on such resources that are known to be adverse or may reasonably be anticipated to be adverse. The land manager does not have to establish that the pollutants will cause or contribute to concentrations that are known to be harmful, nor does he have to establish the level of pollution known to cause harm. He need only go so far as to show, based on scientific research conducted on or off-site or the opinion of generally recognized experts in the field, that there is a reasonable basis for concern that pollutants of the type proposed to be emitted may have adverse impacts on resources—including visibility—known to be present in the protected area.

Third, once the land manager makes the initial showing required to trigger a response from the applicant, the permit may not be issued until the applicant demonstrates that emissions from the facility will not cause or contribute to the specified potential adverse impacts identified by the Federal land manager.

When the Administrator revises the regulations under section 161 to implement this revision to section 165(d)(2)(C), he should clarify the procedures that will apply when a land manager makes an initial showing. Once a land manager makes the threshold showing, the application should be deemed incomplete until the applicant responds with the necessary demonstration. This will serve to toll the 1-year deadline—section 165(c)—for agency action on an application until after all the information necessary for the permitting authority to make a decision has been submitted. It will also protect the applicant's opportunity to make an adequate demonstration by ensuring that a State is not forced to act on the application under shorter State deadlines before there has been time to obtain relevant data or prepare analyses. This approach will also protect the public's right to effective participation in the permit decision by making sure that all the relevant information, including the applicant's revised application—which may include new data regarding impacts or more stringent emission limitations, or both—is available as part of the public record before a new comment period opens and the permit hearing required by section 165(a)(2) is scheduled.

Section 707A also redesignates by operation of law all national parks created after the enactment of the Clean Air Act Amendments of 1977 but before January 1, 1990, as mandatory Federal class I areas—subsection (k)—and many other Federal lands as mandatory class II areas—subsections (a) and (b). The redesignation of these lands does not affect the baseline date or baseline concentration for any pollutant established for such areas. Any baseline already established is retained. As mandatory class I Federal areas, the national parks redesignated by this amendment are included within the areas subject to the visibility protection program under section 169A of the act. I encourage the Administrator to add them to the list of important visibility areas under section 169A(a)(2).

Section 707B supplements the visibility protection requirements enacted in section 169A by the 1977 amendments and the visibility regulations promulgated by the Administrator at 51 CFR subpart P. The provisions added by this amendment are intended to require the Administrator to complete the regulatory program partially adopted in 1980 (45 Fed. Reg. 80084, Dec. 2, 1980), but never completed.

This amendment is necessary because EPA has refused to promulgate regulations addressing regional haze. EPA's 1980 "Phase I" visibility regulations only address the visibility impairment that EPA described as "plume blight." These regulations were limited to "control the impairment that can be traced to a single existing stationary facility or small group of stationary facilities * * * control of new sources to prevent future impairment, and require States to adopt strategies such as review of other existing sources not meeting the more stringent source-size requirements for existing stationary facilities in order to remedy existing and prevent future visibility impairment." (45 Fed. Reg. 80085). At that time, EPA promised to adopt "future phases [to] extend the visibility program by addressing more complex problems such as regional haze and urban plumes." 45 Fed. Reg. 80086. That promise has not been kept.

The State of Vermont attempted to adopt a regional haze plan to implement all of the visibility program requirements, but was rebuffed by EPA on the ground that EPA could not act on the Vermont plan without first having adopted regional haze regulations. EPA's decision was affirmed by the Second Circuit Court of Appeals in State of Vermont versus EPA. Subsequently, seven States sued EPA to compel the issuance of the missing visibility program regulations. That case, State of Maine versus EPA, was dismissed by the First Circuit Court of Appeals on the ground that the district court lacked jurisdiction to compel EPA to perform the remainder of its rulemaking duties under the 1977 amendments. As a result, efforts to compel EPA action by the courts have been stymied.

And so we start again. Research by the National Park Service [NPS] and others has given us a much better understanding of the causes and composition of regional haze. In his April 5, 1990, letter to Chairman DINGELL, Secretary Lujan summarized the findings of the NPS research:

Interior has certified to EPA that regional haze impairs scenic views at all 60 NPS monitoring locations at 60 sites in excess of 90 percent of the time. Fine particles less than 2.5 microns in diameter cause most of the visibility impairment in most park units except in parts of the Pacific Northwest, where carbonaceous materials dominate the fine particulate mass. In the Colorado Plateau area sulfates cause 40 to 60 percent of the manmade visibility impairment on the average, with organics also contributing significantly to the impairment.

The NPS has studied visibility in the Grand Canyon more intensively than in any other park. The addition of relatively small amounts of fine particle pollution can have a significantly greater impact on visibility in a relatively clean area like the Grand Canyon, than in an area like Shenandoah National Park. Thus, although the Grand Canyon is blessed with some of the cleanest air in the National Park System, the views are perceptibly degraded to various degrees by manmade pollutants on most days and are significantly obscured during multiday visibility eposides. Sulfates are responsible for 40 to 60 percent of the manmade impairment at Grand Canyon on the average, and for virtually all of the impairment during these episodes.

At the Government Operations oversight hearing in March 1990, convened by the gentleman from Oklahoma [Mr. SYNAR], EPA presented the results of the expected impact of the administration acid rain bill on sulfur dioxide emissions in the 11 Western States and concluded that regional emissions could increase by 23 percent by 2010. At the same hearing, the National Park Service witnesses reported the results of their analysis of the likely visability impacts of these increases. They showed that the increases from powerplants alone would cause a 200- to 300-percent deterioration of visibility in the Grand Canyon, and up to a 500-percent deterioration of Glacier National Park. In short, our country would lose still more of the pristine clear days of these parks.

Such deterioration of air quality in the Nation's most spectacular national parks is unacceptable. The purpose of this amendment is to require EPA to develop a regional haze program that will prevent such harm to visibility in mandatory class I area. This will require EPA to go beyond its current PSD Program, which entails a case-by-case analysis of impacts form individual sources, and develop a regional approach to reduce emissions of pollutants known to cause regional haze. Such a program must provide integrated regulation of both existing and new sources to achieve effective visibility improvements.

This mandate is incorporated into the definition of "reasonable progress," which requires perceptible improvement in both average visibility and worst case episodes with maintaining the clearest days. In issuing guidance to implement this requirement for reasonable progress, EPA should consider all reasonable options, including but not limited to requiring offsets from new sources.

This amendment establishes new deadlines for the Administrator to complete promulgation of regulations to address regional haze. These regulations supplement elements of EPA's existing visibility protection regulations with regard to monitoring visibility, establishing visibility baselines for mandatory class I Federal areas, measuring progress toward the national visibility goal and achieving reasonable progress toward the national goal. Such regulations are to be issued within 2 years of enactment. Failure to promulgate timely regulations will constitute a failure to perform a nondiscretionary duty under section 304.

The States are required within 1 year thereafter to submit revisions to their existing State implementation plans for visibility protection to implement EPA's new regulations. If a State fails to submit a timely plan, the Administrator will have an obligation to promulgate a Federal plan for the State.

The amendment requires EPA to build the visibility program regulations around a phased approach designed to achieve "reasonable progress toward the national goal" contained in subsection 179A(a)(1). "Reasonable progress" is defined in the amendment to require a "perceptible improvement" in visibility during each review period, starting 6 years after the promulgation of EPA's new visibility regulations, and continuing each 5-year period thereafter.

Visibility improvements during the first review period are expected from two provisions of the amendment. The first requires the States to adopt regional haze plans—paragraph (h)(3)1. The second requires the Administrator to study the visibility impact of plumes from the large uncontrolled sources of sulfur dioxide that are within 100 miles of mandatory class I areas—subsection (k)—and require the installation of emission controls in accordance with the requirements of section 169A(b)(2)(A) and EPA's revised regulations for achieving reasonable progress.

State regional haze plans are to be based on guidelines issued by the Administrator for the identification by the States of areas around each mandatory class I area where pollution sources may be reasonably anticipated to cause or contribute to regional haze. The Administrator's guidance will include criteria for identifying the States in proximity to a class I area that must submit such plans. The state plans are also required to adopt control strategies for the sources located in such areas to reduce emissions to the extent needed to achieve reasonable progress toward the national goal. The Administrator is required to provide information regarding control measures for classes of sources likely to be contributing to regional haze in such areas. If control techniques guidance has already been published for such source, the Administrator may rely on previously published guidance.

The plume studies required by subsection (k) are to be based on the experience derived from the plume study performed at the Navajo Powerplant in Arizona. The Navajo plant study demonstrates that emissions from a large source can be distinguished from the mass of pollution comprising regional haze. Once the plume from an individual source can be distinguished, its impact on visibility impairment at a class I area can be isolated and a decision made regarding the installation of best available retrofit technology. Subsection (k) requires the Administrator to conduct such studies on units emitting more than 7,000 tons per year of sulfur dioxide which are located within 100 miles of a mandatory class I federal area, do not use a technological means of emission control that achieves at least 50 percent reduction in emissions of sulfur dioxide and which emitted less than 1.2 lbs./mmBtu during 1985.

Within 1 year following the completion of each of such studies, the Administrator shall make a determination regarding whether each such source "emits any air pollutant which may reasonably be anticipated to cause or contribute to any impairment of visibility in any such area" as provided in section 169A(b)(2)(A). Unless the Adminstrator finds that the source qualifies for an exemption under section 169A(c), he shall require the revision of the applicable implementation plan for the source to require the installation of the controls on accordance with subsection

(b)(2)(A). Studies to be performed under this section are in addition to any requirement under current law and should not provide a basis for delaying action on plume studies already conducted, or any agency actions that are subject to court-ordered deadlines under current law or that have already been submitted to the Office of Management and Budget to review.

The Administrator's final determination under subsection (k) regarding the need for a revision of an applicable implementation plan under subsection (b)(2)(A) is to be made within 3 years of enactment, or approximately at the time for submission of a regional haze plan by each State. It is important that the Administrator adhere as closely as possible to this schedule so that the States will know what control measures will be required for such sources, if any, thus providing a basis for determining whether the control of sources other than those studied under subsection (k) will be needed to achieve reasonable progress. At the time the Administrator makes a determination under subsection (k), he shall not assume that controls will be required on other sources to achieve reasonable progress, but shall rely exclusively on the criteria contained in subsection (b)(2)(A).

The savings clause added as section 169A(1) clarifies that the remedies provided for the protection of visibility in class I areas are not exclusive. Although the savings clause does not apply to the east, it should not be read to imply a limit on actions available in the east under existing law. Also, nothing in this amendment should be read to prevent the Administrator from applying current "plume blight" rules in the east or adopting a national regional haze program at some point.

The East was exempted from the provisions in section 707B in recognition of the tremendous improvement in visibility that should result there from acid rain controls and other provisions in H.R. 3030. In those few areas of the west where emissions will decrease under the acid rain program, those reductions should naturally be counted toward achieving reasonable progress. Conversely, if the Acid Rain Program proves to allow localized increases in emissions near eastern class I areas, EPA should use its existing powers to address the problems and to achieve the national goal Congress set in 1977: "prevention of any future and remedying of any existing impairment of visibility in mandatory class I Federal areas which impairment results from man-made air pollution."

Mr. DINGELL. Mr. Chairman, I yield 1 minute to the gentleman from New Mexico [Mr. RICHARDSON].

Mr. RICHARDSON. Mr. Chairman, as the sponsor of the accidental air toxic releases provision with my colleagues Mr. BRYANT, Mr. SLATTERY, and Mr. BARTON, I am pleased that a bipartisan committee agreement was reached on this critical issue so that it could be included in the committee amendment.

STATISTICS

There have been more than 11,000 accidental releases of toxic chemicals in the United States between 1980 and 1987. As a result, more than 300 people have died and more than 10,000 were injured. Just last year, a tragic accidental chemical leak in Texas led to an explosion that killed as many as 22 people.

CURRENT LAW DOES NOT ADDRESS ACCIDENTAL AIR TOXIC RELEASES

Many of you may recall the 1984 catastrophic accidental release in Bhopal, India, which killed over 2,000 people and caused more than 200,000 injuries. It would be reassuring to think that we had avoided such a disaster here because of careful planning and thorough government oversight. Sadly, that is not at all the case. Nothing in current law requires chemical or other industrial facilities handling toxic chemicals to take steps to avoid the accidental release of dangerous chemicals into the air.

In fact, an EPA study concluded that since 1980, 17 different chemical accidents in the United States had the potential to create disasters as great as the one in Bhopal. According to EPA, were it not for fortuitous circumstances such as wind blowing away from population centers, and accidents occurring at remote rather than heavily populated locations any one of these 17 accidents could have produced results as deadly as those in Bhopal.

WHAT THE PROVISION DOES: RISK MANAGEMENT PLANS

The Richardson-Bryant-Slattery-Barton provision will help detect and stop air toxic accidents from occurring, and help minimize the consequences of those accidents that do occur. EPA would be required to establish a list of 100 dangerous chemicals to be regulated under these provisions. More importantly, facilities handling air toxics would be required to evaluate their risk of accidental toxic releases, and prepare risk management plans.

Risk management plans would include: a hazard assessment of the potential effects and exposures to surrounding communities; a prevention program including employee training; and a response program providing the specific actions to be taken in response to an accidental release.

ACCIDENTAL RELEASE INVESTIGATION BOARD

The provision would also establish an independent Accidental Release Investigation Board to investigate air toxic accidental releases and recommend changes to reduce the risk of future accidents. This Board is modeled after the extremely successful National Transportation Safety Board.

In addition, a number of provisions are included to address concerns raised by small businesses and small farmers.

SENATE LANGUAGE: OSHA

Finally, the Richardson-Bryant-Slattery-Barton provision also includes language that was passed in the Senate. This language clarifies the roles of the various Federal agencies involved in the prevention of accidental chemical releases, in particular, that of the Occupational Safety and Health Administration.

OSHA MUST PROMULGATE CHEMICAL PROCESS SAFETY STANDARDS

First, it would require OSHA to promulgate a chemical process safety standard requiring employers to take steps to prevent accidental air toxic releases, and set up procedures to mitigate and respond to releases should they occur. This includes training workers in emergency response.

Second, EPA is required to review the OSHA standard as part of its coordination function. Third, workers would be granted so-called walkaround rights when EPA or the Accident Release Board conducts an investigation. And, last, it requires the Board and OSHA, which have overlapping authorities, to set up a memorandum of understanding to avoid duplication.

Mr. Chairman, as the sponsor of the reformulated gasoline provision with my colleague, Mr. MADIGAN, I am pleased that a bipartisan committee agreement was reached on this critical issue so that it could be included in the committee amendment.

DESCRIPTION OF TODAY'S GASOLINE

The gasoline that we burn today is a complex mixture of toxic compounds and is responsible for over half of the Nation's toxic air pollution and much of our urban smog. In fact, today's gasoline is significantly more harmful than gasoline of a decade ago, containing more aromatic compounds and more volatile chemicals than ever before. The result is more fuel evaporation, more air pollution, and greater toxic exposure to the American public.

Currently, no meaningful standards govern the composition of gasoline. However, it does not have to be this way. Gasoline can be changed to a far more benign formulation while improving engine performance. Toxic and aromatic compounds can be replaced with much cleaner alcohols or alcohol derivatives such as methanol, ethanol, ethyl tertiary butyl ether [ETBE] and methyl tertiary butyl ether [MTBE] made by oil and chemical companies.

DESCRIPTION OF AMENDMENT: OZONE NONATTAINMENT

The Richardson-Madigan provision will require the nine worst ozone nonattainment cities to sell "clean" gasoline that has been reformulated to remove ozone forming and toxic air pollutants. Other cities may opt in as the program gets underway, however, EPA may delay the implementation dates to ensure that there is an ample domestic supply of reformulated gasoline.

DOES NOT MANDATE A RECIPE OR SO-CALLED GOVERNMENT GAS

The Richardson-Madigan provision does not mandate a recipe or so-called government gas, nor does it mandate ethanol. Instead the amendment establishes minimum basic standards to reduce ozone forming and toxic air pollutants in gasoline. So long as equivalent or greater emissions reductions are achieved,

oil companies are free to formulate their gasoline any way they choose.

In fact, ARCO is already marketing a cleaner formulation of gasoline for the same price as regular gas in southern California. Shell, Marathon, Phillips, Conoco, and others are also reformulating gasoline at this time.

CARBON MONOXIDE NONATTAINMENT

The Richardson-Madigan provision would also require all 44 carbon monoxide nonattainment cities to sell gasoline containing a minimum of 2.7 percent oxygen to reduce carbon monoxide to acceptable levels. Those serious CO areas that fail to reduce CO to acceptable levels by the deadline would be required to sell oxygenated fuels containing 3.1 percent oxygen.

SIGNIFICANT HEALTH AND ENVIRONMENTAL BENEFITS

There are significant health and environmental benefits to be gained from reformulated gasoline. For example, during refueling or in stop and go traffic, gas station employees, motorists and pedestrians are exposed to dangerous levels of cancer causing toxics found in gasoline.

In fact, the American Lung Association estimates the annual health costs of automobile pollution range from $4.4 to $93.4 billion. The Richardson-Madigan provision requires a 15-percent reduction in toxic compound by 1994, and prohibits the "dumping" of these toxics in gasoline sold in attainment cities.

The Richardson-Madigan provision also requires a 15-percent reduction in ozone forming precursors by 1994. It is estimated that 20 percent of New York City's air pollution problems can be solved simply by cleaning up its gasoline. Additionally, by increasing the oxygen content of gasoline to 2.7 percent in CO nonattainment cities, it is estimated that carbon monoxide emissions can be reduced from between 15 and 34 percent.

SIGNIFICANT ENERGY, AGRICULTURAL, AND TRADE POLICY BENEFITS

The Richardson-Madigan provision also has significant energy, agricultural, and trade policy benefits. Energy policy analysts have been concerned for years about our increasing reliance on OPEC—$60 billion of foreign oil and hundreds of millions of dollars of aromatic compounds are imported annually.

By replacing imported aromatics with domestically produced alcohols made from corn, wheat, or other crops, we provide an important boost to our midwestern farmers and reduce the need for farm price supports. According to the GAO, this new market could save the U.S. Treasury more than $1.2 billion now spent on farm price supports annually.

To ensure that we don't rely more heavily on foreign imports, the Richardson-Madigan provision provides waivers if there is insufficient domestic supply. In short, by reducing our reliance on imported oil and aromatic compounds, our balance of trade is sure to improve.

SIGNIFICANT CONSUMER AND AUTOMOTIVE BENEFITS

I would also highlight the consumer and automotive benefits of the Richardson-Madigan provision. The high levels of aromatics and olefins found in today's gasoline fouls engines, and creates deposits which lead to engine knocking.

By limiting the aromatic content of gasoline and requiring additives to prevent accumulation of deposits, the Richardson-Madigan provision will lead to longer and more satisfactory car performance. In fact, oxygenated fuels are recommended by General Motors to improve air quality, a policy Ford and Chrysler will soon endorse as well.

I would also point out that the Richardson-Madigan provision will discourage the purchase of unneeded octane. The recent GAO report on octane fraud indicated that despite hyping of high octane fuels, only a small percentage of new cars require fuels above 87 octane. The Richardson-Madigan provision will reduce the emphasis on octane rating and focus on producing cleaner gasoline to improve engine performance, the public health and the environment.

SIGNIFICANT ECONOMIC AND ENVIRONMENTAL BENEFITS

In closing, the Richardson-Madigan reformulated gasoline provision is environmentally and economically cost effective. Older, precatalytic cars are a significant portion of the emissions inventory, yet they cannot be retrofitted with pollution controls.

By cleaning up gasoline, our provision helps reduce pollution from all vehicles, including the oldest and dirtiest cars. Needed emission reductions can be achieved for only a few pennies per gallon, rather than ratcheting down on small stationary sources like bakeries, dry cleaners, and other small business with minimal environmental benefits.

REBUTTALS TO OIL COMPANY ARGUMENTS AGAINST THE RICHARDSON-MADIGAN AMENDMENT

*Argument.* The amendment mandates a recipe for reformulated gasoline.

Rebuttal. The Richardson-Madigan amendment establishes minimum stardards to reduce ozone forming and toxic compounds. So long as equivalent or greater emissions reductions are achieved, oil companies are free to formulate their fuels any way they choose.

*Argument.* The amendment is tantamount to an ethanol mandate.

Rebuttal. There are seven alcohol and ether blends or oxygenates that can provide the oxygen required in the Richardson-Madigan amendment, including methyl tertiary butyl ether [MTBE] made from oil and chemical companies.

*Argument.* The amendment will decrease some pollution but increase others.

Rebuttal. The Richardson-Madigan amendment expressly prohibits a fuel from being certified for sale if it results in increased nitrogen oxide emissions.

*Argument.* There will not be enough capacity to meet demand.

Rebuttal. If there is insufficient domestic capacity to meet demand, the Richardson-Madigan amendment provides for a series of waivers.

*Argument.* Consumers won't buy reformulated gasoline.

Rebuttal. Consumers prefer the Richardson-Madigan reformulated gasoline amendment because it reduces the aromatic content of gasoline which fouls engines, creates engine deposits, and causes engine "knocking."

*Argument.* The amendment will cost billions.

Rebuttal. The Congressional Research Service, and other independent analysts estimate that gasoline can be reformulated for only a few pennies per gallon.

COMPARISON OF RICHARDSON AMENDMENT AND S. 1630

| Reformulated gasoline | Richardson | S. 1630 |
|---|---|---|
| Timeframe | Administrator shall promulgate standards effective Jan. 1, 1994. | Administrator shall promulgate standards effective Jan. 1, 1992. |
| Scope | 1989 design value greater than 0.18 ppm (9 cities). | 1989 design value greater than 0.18 ppm (9 cities). |
| Opt-in | Other ozone areas may implement standards if EPA and DOE certify adequate supplies. | Other ozone areas may implement reformulated fuels standards. |
| Opt-out | EPA shall certify other fuel fomulations which demonstrate equal or greater benefits. | EPA may certify other fuel formulations but oxygen standard must be maintained. |
| Specifications | | |
| Benzene | Not more than 0.8 percent vol. | Not more than 1 percent vol. |
| Aromatic content: (maximum). | 30 percent vol. in 1992, 28 percent vol. in 1994, 25 percent vol. in 1996. | 30 percent vol. in 1992, 28 percent vol. in 1994, 25 percent vol. in 1996. |
| Ozone-forming emissions | Reduced 15 percent by 1995, 20 percent in 1997; and 25 percent in 2000. (No $NO_x$ increase). | 15 percent reduction in VOC's (No $NO_x$ increase). |
| Oxygen content: (minimum). | 2.0 percent wt. in 1992, 2.5 percent wt. in 1993, 2.7 percent wt. in 1994. | 2.0 percent wt. in 1992, 2.5 percent wt. in 1993, 2.7 percent wt. in 1994. |
| Lead | No lead content. Effective: Jan. 1, 1994. | No lead content. Effective Jan. 1, 1992. |
| Additives | Additives to prevent deposits by Jan. 1, 1994. | Additives to prevent deposits by Jan. 1, 1994. |
| Hazardous air pollutants | Reduced 15 percent by 1995, 20 percent in 1997, and 25 percent in 2000. | No similar provision. |
| Trading credits | Yes (oxygenates and aromatics). | Yes (oxygenates only). |
| Carbon Monoxide Non-attainment | | |
| Classification | Moderate $\leq$ 14 ppm, Serious $>$ 14 ppm, (44 cities). | Moderate $\leq$ 14 ppm, Serious $>$ 14 ppm, (44 cities). |
| Oxy-fuel program | All non-attainment areas must sell fuel containing 2.7 percent wt. oxygen, if area does not reach attainment, a 3.1 percent standard must be implemented. | All nonattainment areas must sell fuel containing 3.1 percent oxygen. |
| Labeling | Oxygenated fuels would be labeled at retail. | Oxygenated fuels would be labeled at retail. |
| Date of enactment | Not later than Oct. 1, 1992. | Not later Oct. 1, 1991. |

THE RICHARDSON-MADIGAN REFORMULATED FUELS AMENDMENT

The Richardson-Madigan Amendment will substantially reduce fuel-source pollution while being cost-effective for refiners and providing consumers with the high performance fuels we expect.

Moreover, it provides the proper balance between establishing sound environmental standards for gasoline while assuring appropriate industry flexibility in producing gasoline. Specifically, the Richardson-Madigan amendment will: Reduce toxic aromatic compounds to no more than 25% in gasoline sold in the most polluted cities; require 2.7% oxygen as a means of safely, economically and effectively reducing CO pollution and replacing the lost octane volume represented by reduced aromatics; and reduce ozone-forming toxic emissions by 15 percent.

Today's gasoline may contain as many as 200 different hydrocarbon chemicals. In general, unleaded gasoline contains 40-60 percent paraffins, 30-50 percent aromatics and about 10 percent olefins.

Over the past several years, in response to the lead-phasedown mandated by EPA and

in order to maximize gasoline octane, the major oil refineries have dramatically increased the severity of the catalytic reformers, which while increasing octane also dramatically increases the level of aromatic compounds found in the finished gasoline.

Aromatics are highly toxic, particularly benzene, a known carcinogen. Other aromatics, such as xylene, are also highly reactive which exacerbates ozone pollution.

According to some recent studies, exposure to benzene in gasoline refueling operations, evaporative emissions in automobiles and tailpipe emissions result in 200 additional cancer cases every year in the Los Angeles basin alone. In addition, the higher aromatic levels of today's gasoline have dramatically increased ozone formation in our nation's cities.

Aromatics can be easily reduced and economically replaced, however, by operating catalytic converters less severely and adding oxygenates to replace lost octane value. No capital costs are required to lower reformer severity.

As refiners lower reformer severity, oxygenates such as MTBE, ETBE and ethanol blends can make up for and improve the lower octane gasoline produced at the refinery. There is adequate oxygenate supply to meet the oxygen content standards.

EPA has determinated the environmental benefit of oxygenated fuel use is directly related to the amount of oxygen in the fuel. The higher the oxygen percentage content, the more effective oxygenated fuels would be in reducing pollution.

BTX—BENZENE, TOLUENE AND XYLENE

Aromatic hydrocarbons, obtained from the heavier petroleum distillates found in crude oil that are not suitable for use as gasoline, are manufactured in a petroleum refinery by such processes as catalytic reforming and catalytic cracking.

The aromatic content of gasoline has grown significantly since lead phasedown was implemented nearly 15 years ago—from 22 percent of the total gasoline pool to more than 33 percent today.

In 1990, as the country's motor gasoline pool reaches almost 110 billion gallons, aromatic hydrocarbons comprise more than one-third of the amount—almost 40 billion gallons!

Each of the aromatic hydrocarbon constituents of BTX—benzene, toluene, and the mixed xylenes—are unquestionably toxic at certain dosage levels causing a serious public health concern.

According to Dick Wilson, the Director of EPA's Office of Mobile Sources, "over half of the cancer incidence [due to toxic chemcials] is caused by pollution coming from cars."

Aromatic hydrocarbons in gasoline have also exacerbated urban ozone formation in our nation's cities.

According to recent EPA estimates, almost 19 million metric tons of VOC's are emitted into the atmosphere each year in this country, and more than one-third of them, 6.5 million metric tons, are attributable to highly photo-reactive components in today's gasoline.

For improved public health and clean air, gasoline must be made cleaner, aromatic levels must be reduced, and clean octane alternatives must be utilized.

The increased use of high octane-oxygenated blending components such as ethanol, MTBE and ETBE can go a long way toward reformulating gasoline to improve public health and reduce ozone pollution while assuring the continued availability of high performance motor fuels which American consumers have come to expect.

The clear conclusion is that for both public safety and the environment the Congress should require the sale of cleaner gasolines; i.e. reduced levels of dangerous aromatics—Benzene, Toluene and Xylene, and increased levels of cleanburning, high octane/oxygen alternatives.

GOVERNMENT GAS

Statement: The major oil companies complaint that the Congress is requiring refiners to meet a gasoline recipe when setting performance standards would make more sense.

Response: In fact, the Amendment sets standards for chemical components of gasoline and not a specific fuel formulation. Target levels for hydrocarbon aromatics, benzene, air toxics and oxygenates are included, but specific fuel formulations are left to the discretion of the oil companies.

In addition, the Amendment contains a provision that allows the oil industry to produce fuels of equal or greater environmental benefit without meeting specific targets in the Amendment.

Over the last 20 years as cars have gotten cleaner, gasoline has gotten dirtier.

Gasoline today is responsible for over half the air toxics and nearly two-thirds of the urban smog (ozone).

The last time Congress reformulated gasoline (lead phasedown) the oil companies took out the lead, but replaced the lost octane with a 50% increase in toxic aromatic chemicals.

The reformulated gasoline specifications in the Amendment are the result of many months of working with petroleum experts, auto industry executives and environmentalists.

The Co-Chairman of the Auto-Oil Industry Fuels Testing Program is Joe Colucci of General Motors. On April 25, 1990, during an Oil Industry Forum, he put forward specifications for the "ideal reformulated gasoline" from the auto industry's standpoint. Specifically, General Motors recommends: 25% cap on aromatics; 0.8% maximum of benzene; and 2.5% minimum oxygenates.

General Motors' "ideal" fuel formulation is virtually identical to the fuel standards called for in the Amendment.

COST OF REFORMULATED GASOLINE

Statement: The Amendment will cost the oil refiners in excess of $30-50 billion. In addition, gasoline prices for consumers will increase by 30 cents per gallon.

Response: Recognizing that oxygenates will displace a portion of the octane market currently dominated by hydrocarbon aromatics, oil companies have sought to exaggerate the cost of replacing aromatics with safe octane enhancers.

During consideration of the Senate reformulated gasoline amendment, the API stated reformulated gasoline would cost refiners more than $100 billion! Today, API says the cost is closer to $20-25 billion.

The Federal EPA and Department of Energy have prepared a cost assessment of reformulated gasoline which states that the reformulated gasoline amendment will cost an estimated $1 billion a year. This amounts to an increase in gasoline prices of less than 4 cents per gallon.

In addition, because the EPA reformulated gasoline cost calculation is based on refinery modeling, offsets such as alternative markets for chemicals produced and octane values from alternative fuels that are used are likely to substantially reduce the cost to refiners.

Finally, it is important to note that reducing ozone and carbon monoxide levels through the production and use of reformulated gasoline is by a factor of five the least expensive option available to any nonattainment area.

There will be no price increase in gasoline to the consumers if the oil companies produce and offer for sale gasolines that contain only that level of octane necessary for the vast majority (over 98%) of the automobiles in America. Automobiles do not need 90-plus octane gasolines.

AUTOMOBILE PERFORMANCE

Statement: Major oil companies have made the claim that automobile warranties do not cover the use of oxygenated fuels such as ethanol blends. Thus, the Amendment threatens the consumer with fuel related performance problems and costly repair bills.

Response: Every auto manufacturer in the world, selling cars in the United States, fully warranties the use of 10% ethanol blends in their automobiles.

Since 1978, when General Motors took out full page newspaper advertisements in support of the use of ethanol, every model year has been fully covered for safe and dependable operation on ethanol blends.

With their 1990 Auto Warranty language, General Motors recommends the use of ethanol for air pollution reasons. The 1990 GM warranty language reads as follows:

"Gasolines for Cleaner Air:

"The fuel that you use can contribute to cleaner air. General Motors recommends that you use only gasoline treated with detergent additives that prevent deposit formation in your engine. These gasolines will help keep your engine in tune and your emission control system working properly.

"The use of oxygenated materials in gasoline can also contribute to cleaner air, especially in those parts of the country where carbon monoxide and ozone levels are high. Where available, General Motors recommends use of oxygenated fuels such as MTBE and ethanol in gasoline."

ETHANOL TAX SUBSIDY

Statement: Ethanol receives a tax subsidy in the form of a six cent reduction off the nine cent federal excise tax in gasoline. This amounts to a $.60 per gallon subsidy for ethanol. The passage of the clean air bill with the reformulated fuels amendment could require a billion dollar subsidy for ethanol.

Response: The oil companies who purchase the ethanol for blending with gasoline to make "gasohol" are the only corporate entities that are eligible to claim the tax incentive for ethanol.

No ethanol producer or manufacturer can claim the excise tax exemption for ethanol blended fuels.

The ethanol tax incentive is scheduled to expire in September 1993. The clean air legislation has no metion of an extension to the ethanol incentive.

In 1989, 840 million gallons of ethanol were produced in the U.S.: 8.4 billion gallons of ethanol blended fuels; $500 million in gasoline excise taxes was not collected; $170 million in increased business income tax payments; and $330 million in gasoline taxes not collected.

In 1990, a General Accounting Office Report stated that ethanol fuels, produced from surplus grain would save taxpayers between $480 and $560 million after the lost

revenue in gasoline excise taxes was reimbursed.

ARCHER DANIELS MIDLAND (ADM)

Statement: The largest U.S. producer of ethanol is ADM, which controls over 75% of the U.S. production. The ethanol incentive and the oxygenated fuels programs are benefiting just one huge grain processor.

Response: ADM control less than 53 percent of the annual ethanol production capacity. ADM owns four separate ethanol production facilities.

The total annually domestic ethanol industry production capacity stands at over 1.1 billion gallons. While ADM's market share has remained relatively stable over the past several years, other plants have contributed to the total production capacity, thus shrinking ADM's size in the market.

ADM produces a number of food, feed and fuel products at its grain milling and processing facilities. When sweeteners are being made in the summer months from starch, the ethanol production capacity is essentially shut down.

The ethanol subsidy or incentive is not available to ADM or any other ethanol producer. While the ethanol marketing incentive does not make ethanol cheaper to manufacture or more profitable to sell in the market, it does make ethanol competitive in the gasoline octane market.

Since ADM started producing ethanol, not a single nickle of the federal incentive has gone to ADM.

AN EXPANDED ETHANOL PROGRAM WILL RAISE FOOD PRICES

Statement: Major oil companies have made the statement that the Amendment could inadvertently cause a tremendous "run-up" in food prices due to shortages for grain for feed and food supplies.

Response: Ethanol is produced from the most abundant and least cost feedstock in the world, starch. Starch is available from a host of feedstocks which could eventually be converted into ethanol, including beet and cane sugar, potatoes, corn or sorghum, and cassava.

In the U.S. much of the supply management programs in place have been concerned with over-production, not shortages. This means that there is ample feedstock to expand ethanol production without impacting the supply/demand equations and therefore price.

What ethanol does offer is the opportunity for the farmer to produce for a domestic market, to expand production and generate economies of scale to keep prices stable. It also offers the government to free itself from farm program costs for production would be for the marketplace and not the government programs.

25% of the consumer cost of food is the farm price. Thus, the consumer absorbs only 25% of a commodity price increase.

87% of total corn usage is for feed. Expanding ethanol production produces more feed in the form of high protein gluten feed and meal.

Since only the starch is used in the ethanol production, the high protein feeds remain in the poultry and livestock cycle. Ethanol production merely compacts the nutrient feed value of a corn kernel. In fact, an expanded ethanol program would probably result in lower poultry and meat prices.

Expanded ethanol production would make more corn oil available to the food chain.

A buffer against rising food prices is the Acreage Reduction Program. In the past it has been used to curtail over production. But it can also be used to offset shortages. Today, 10 million acres of corn are in the ARP . . . a 1.15 billion bushel reserve against shortfalls in supply.

OZONE

Statement: According to a recent Sierra Research Report, ethanol increases the formation of ozone.

Response: While Sierra Research did release a report which concluded that ethanol exacerbates ozone formation, it is important to note that the Report was commissioned by the American Petroleum Industry to undermine Congressional efforts to enact reformulated fuels standards—the API report contradicts the proven conclusions of numerous environmental studies conducted by the U.S. EPA and other scientific examiners over the past several years.

In fact, one EPA official has been quoted as saying that the API Report is a "cannon shell of misinformation."

In general, the Sierra Research/API Study is flawed in that it used a prototype vehicle not representative of in-use vehicles; used a motor fuel not representative of commercial gasoline; used reactivity factors that are obsolete and inaccurate, failed to take into account the automotive emissions advantages attributable to older model cars.

A February 1988 study prepared by Systems Applications, Inc. (SAI), of San Raphael, California, documents that reductions in carbon monoxide caused by ethanol blends can offset increases in ozone formation attributable to the increased volatility of ethanol blends, and, in fact, at RVP's of 9.0 psi and lower, ethanol blends can slightly reduce ozone formation.

Based on their review of SAI's initial study, EPA agreed that reductions in carbon monoxide should be considered with regard to ozone abatement efforts. In a January 1988 document transmitted to all 50 state air quality planning agencies, the EPA stated:

"States receiving ozone SIP calls and considering adoption of an alternative fuels program should account for its impact on both hydrocarbon and CO emission inventories, since both are inputs to the latest model for predicting future ozone attainment. Directionally, CO emission reductions from alternative fuels will assist in attaining the ozone NAAOS, but the strength of this effect has not yet been documented for the range of local conditions which affect ozone formation." (Guidance On Estimating Motor Vehicle Emission Reductions From the Use of Alternative Fuels and Fuel Blends, January 1988)

CARBON MONOXIDE

Statement: Levels of oxygen above 2.0 percent do not yield additional CO reductions.

Response: The addition of molecular oxygen contained in ethyl alcohol causes more air to be available in the fuel, thus the air/fuel ratio in the internal combustion engine is altered to the extent that the engine is more efficient and dramatically reduces CO emissions.

Since 1987, EPA has recognized that the use of ethanol blends can reduce fleetwide carbon monoxide exhaust emissions by 25 percent.

EPA published a technical document to be used by the States in revising their SIP's in the post-1987 era, "Guidance on Estimating Motor Vehicle Emissions Reductions From the Use of Alternative Fuels and Fuel Blends." This document lists the following exhaust emissions reductions that can be achieved by using ethanol blends:

| | Percent |
|---|---|
| Non-catalyst (pre-1974 vehicles) | −22.8 |
| Open-loop catalyst (1975–1981 vehicles) | −33.4 |
| Closed-loop catalyst (post-1981 vehicles) | −17.2 |

Moreover, EPA has also stated that there is a linear relationship between oxygen and CO reduction, i.e. the higher percentage of oxygen by weight in the fuel, the "leaner" the effective fuel-to-air ratio will be and the more oxygen is available to enhance the combustion process. As the fuel-to-air ratio becomes leaner, CO emissions are reduced.

As EPA has concluded that the percentage of oxygen by weight in the automobile's final fuel determines the amount of CO emissions reduction, there is no question that gasohol substantially reduces CO emissions. This occurs because of the high oxygen content of ethanol. The oxygen content of gasohol is 3.7 percent by weight.

NITROGEN OXIDES NOX

Statement: Ethanol increases NOx emissins which exacerbates ozone pollution.

Response: There have been numerous tests done on ethanol blended gasolines to determine the impact on NOx emissions. For example:

A Report prepared by the Department of Energy revealed that nitrogen oxides exhaust emissions from 53 test vehicles operating on 10-percent ethanol blends were reduced an average of 5.7 percent when compared to non-alcohol base gasoline exhaust emissions.

A Report prepared by engineers from General Motors Research Laboratories revealed that GM production vehicles with closed-loop catalytic converters operating on 10 percent ethanol blends had "significantly lower" exhaust nitrogen oxides emissions (22 percent) when compared to non-alcohol gasolines.

A Report prepared by the Southwest Research Institute for the EPA revealed that the use of 10 percent ethanol blends in 1975–1980 test vehicles exhibited "little or no effect" on nitrogen oxides exhaust emissions.

Moreover, reformulating gasolines to remove the more dangerous gasoline components and replacing them with clean-burning ethanol will provide even greater NOx reductions:

A recent report by Systems Applications Inc. concluded that if ethanol were used in a one-for-one replacement of the xylene fraction in unleaded gasoline in 100 percent of the motor vehicles in the City of Los Angeles that nitrogen oxide levels would be reduced by 8.8 percent.

These results of ethanol's impact on NOx emissions (or lack thereof) are consistent with EPA's conclusions that the use of ethanol blends will not exacerbate ozone formation.

EXHAUST HYDROCARBON (HC) EMISSIONS

Statement: The use of ethanol blends increases the emission of HC.

Response: In fact, EPA has definitively stated that the use of ethanol will substantial *reduce* exhaust HC emissions.

In the EPA's "Guidance on Estimating Motor Vehicle Emissions Reductions From the Use of Alternative Fuels and Fuel Blends", the Agency concludes that the following HC exhaust emissions reductions can be achieved by using ethanol blends:

| | Percent |
|---|---|
| Noncatalyst (pre-1974 vehicles) | −4.2 |
| Open-loop catalyst (1975-1981 vehicles) | −14.5 |
| Closed-loop catalyst (post-1981 vehicles) | −2.4 |

EPA has stated that if all cars used 10-percent ethanol blended gasolines, an average per vehicle HC exhaust emission of volatile organic compounds (VOC's) would be reduced from 1.043 grams per mile to 0.961 grams per mile—an 8.5 percent reduction!

IMPACT TO THE HIGHWAY TRUST FUND

Statement: The tremendous market being created for ethanol will dramatically reduce monies available to the Highway Trust Fund—curtailing much needed infrastructure projects and causing employment losses in the road construction industry.

Response: Because the proposed clean fuels amendments may result in the increased use of ethanol as an oxygenate, however, oil companies have suggested that this "ethanol mandate" will dramatically reduce federal highway dollars. This is incorrect.

First, the Richardson-Madigan proposal does not require the use of ethanol. In fact, there are as many as seven EPA-approved fuels additives which will compete in the oxygenate market, including the most widely used oxygenate—MTBE, a methanol-based fuel additive produced by the major oil companies. None of these other oxygenates will impact the HTF at all.

To the extent that ethanol may be used, however, a recently released study by the Government Accounting Office concluded that while HTF revenues are reduced by the use of ethanol, because of decreased federal farm program costs, the government will actually continue to realize a net savings of between $460 and $580 million annually.

Even without these budget savings, however, it is important to note that any decrease in HTF dollars would not effect the level of funding available for road construction projects. The HTF currently has a $9 billion surplus. Appropriations to any individual state, and the resulting employment, are not effected by the excise tax exemption for ethanol blended gasolines.

While I would agree that the Congress should find a way to reimburse the HTF from the significant budget savings attributable to reduced farm program costs—the fact is the federal ethanol marketing incentive has been an extremely successful and cost-effective program, providing renewable domestic sources of energy while reducing pollution in our nation's cities—we should not sacrifice the tremendous environmental benefits this fuel can provide while we await the resolution of an accounting adjustment.

GASOHOL MANDATE

Statement: The 2.7 percent oxygen standard contained in the Richardson-Madigan amendment effectively mandates the use of only one fuel—ethanol.

Response: The requirement for 2.7 percent oxygen contained in the Richardson-Madigan Clean Octane/Reformulated Fuels Amendment is a "fuel neutral", environmentally sound fuel performance standard which will greatly reduce carbon monoxide and ozone pollution while not favoring any particular oxygenated fuel.

In fact, there are several oxygenated fuels which could meet the 2.7 percent standard today, including:

1. ARCONOL.—Tertiary Butyl Alcohol (3.7 percent oxygen)

2. Dupont Waiver.—5 percent methanol, 2.5 percent ethanol (3.7 percent oxygen)

3. Ethanol.—any blend more than 6 percent by volume (up to 3.5 percent oxygen)

4. Ethanol with MTBE.—2 percent methyl tertiary butyl ether and up to 10 percent by volume ethanol and cosolvent alcohols (3.7 percent oxygen)

5. Methanol with MTBE.—2 percent methyl tertiary butyl ether and up to 5 percent by volume methanol and minimum 2.5 percent by volume cosolvent alcohols (3.7 percent oxygen)

6. MTBE.— 15 percent methyl tertiary butyl ether by volume (2.7 percent oxygen)

7. OCTAMIX.—5 percent methanol, with other alcohol cosolvents (3.7 percent oxygen)

8. OXINOL 50.—4.75 percent methanol, 4.75 percent TBA (3.5 percent oxygen)

There are other fuels which may soon receive specific fuel waivers from EPA which will allow them to blend at the 2.7 percent oxygen standard or higher including ETBE and OTBE.

The Amendment also establishes an oxygen credits trading program which will allow all fuels—regardless of oxygen content—to compete in the marketplace. The oxygen credits trading program will allow fuel marketers choosing to sell gasoline with an oxygen content of less than 2.7 percent, including regular gasoline which has no oxygen content, to purchase oxygen credits from fuel marketers selling gasoline blended with any of the above oxygenates.

CORN/FOOD PRICE IMPACT

Statement: An increased demand for ethanol will increase the price of corn, which will be reflected in higher food prices paid by the consumer.

Response: According to a study just completed for the National Corn Growers Association (NCGA), called "Corn 2000: The Future of Ethanol", the relationship an expanded ethanol market would have to the price of corn and food would be as follows:

Increased demand for corn to produce ethanol would result in a modest increase in corn plantings over the 1993-2000 period of about 1.8 million acres per year. Producer flexibility would permit farmers to shift planting of other crops to corn in order to accommodate this demand without necessarily increasing total area planted to all crops.

A feed grain set-aside program would *not* be required beginning in 1996. This would result in a significant savings to taxpayers in government spending for farm programs.

Increased demand for ethanol would cause corn prices to increase an average of 4.5 percent over baseline levels during the 1993-2000 period.

Increased ethanol demand will have a small impact on consumer food prices and the overall rate of inflation. The Consumer Price Index for food would increase less than 2 percent over baseline levels and the overall CPI would increase about 0.3 percentage points.

These slight increases in food prices to consumers should be viewed in light of increased income and employment that are also expected to result from higher ethanol use. Despite these changes American consumers will still spend a smaller share of their disposable income on food than consumers in any other developed country in the world.

RURAL IMPACT

Statement: The economic impact on rural America will be limited relating to the production of reformulated gasoline.

Responses: Recent studies clearly indicate that reformulated gasolines which contain oxygenates such as ethanol will have a significant impact on rural economic development.

The U.S. can increase domestic capacity to produce ethanol to meet a demand of 3.3 billion gallons by the year 2000. The estimated cost of plant and equipment investment would total $3.4 billion.

The combination of increased agricultural output and investment for new ethanol facilities will add $14.4 billion to total U.S. Gross National Product (GNP). In addition, household income will increase almost $5.5 billion dollars.

Investments in new plant construction and the upgrading of capacity in existing plants would create investments in excess of $3.4 billion. In total, according to the "Corn 2000" study, over 461,000 new jobs would be created by the year 2000.

The economies of the states where new ethanol facilities will be constructed would also benefit. Of the 17 states covered in "Corn 2000" a $14 billion increase in Gross State Product (GSP) is projected, from 1993-2000. It is anticipated for example that Texas would increase it's GSP by over $860 million while creating over 27,000 new jobs within the state during this seven year period.

Increased demand for ethanol is expected to result in increased aggregate output, higher consumer incomes, and more jobs. These gains will come from at least two major areas: increased agricultural output and larger investment in plant and equipment required to produce the additional required 1.6 billion gallons of ethanol needed by the year 2000.

POTENTIAL ETHANOL PRODUCTION

Statement: In an expanded oxygenated fuels market it is doubtful that the ethanol industry could meet the increased demand created by the oil industry.

Response: The ethanol industry now has 60 producing plants in this country, with an overall capacity of 1.2 billion gallons annually. The potential for increasing production to 1.8 billion gallons in a short term span utilizing existing non-producing facilities is excellent.

There are a number of plants that are currently shut down that could be reactivated on very short notice. The combined capacity of these plants is over 600 million gallons annually.

New plant construction already on the drawing board has a total projected capacity of over 500 million gallons annually.

According to the NCGA "Corn 2000" study, it is not unrealistic to expect the ethanol industry to be able to produce in excess of 3.3 billion gallons of ethanol annually by the year 2000.

This production would be created with only a slight increase in corn production and would create new jobs for over 460,000 people while generating over $14 million in additional Gross State Product.

The production of 3.3 billion gallons of ethanol would be the equivalent of 30.3 billion gallons of 10 percent blended gasoline, or nearly one-third of Americas total annual gasoline sales.

While it is true that ethanol cannot totally replace gasoline, it is also true that for every 42 gallons of ethanol used, the need for 84 gallons of imported oil is displaced. A production level of 3.3 billion gallons would diplace 6.6 billion gallons of imported oil or roughly 12 percent of our import needs. At an average of $20 per barrel, that equates to

a potential reduction of over $3 billion dollars annually.

ALDEHYDES

Statement: The burning of oxygenated fuels creates increased emissions of formaldehyde.

Response: The combustion of ethanol in gasoline engines does not produce formaldehyde. Formaldehyde, is produced from the combustion of methanol not ethanol.

Ethanol, when utilized in an internal combustion engine produces aldehydes. Aldehydes are significantly less toxic than formaldehyde.

However, automotive engineers have proven that the aldehyde and formaldehyde emissions can be effectively controlled through the use of a catalytic converter.

Gasoline produces both formaldehyde and other aldehydes. The increase of aldehyde emissions from the use of oxygenated fuels over regular unleaded gasoline, are relatively small.

WHAT THE OIL COMPANIES HAVE SAID ABOUT ETHANOL

Given the negative advertising campaign launched against ethanol blended gasolines upon the introduction of the Richardson-Madigan Reformulated fuels amendment, it is revealing to look at what oil companies have said in the past about this fuel:

Chevron: "Chevron, as a longtime marketer of gasolines with ethanol in Kentucky and Tennessee, certainly does not share any view that ethanol is somehow an undesirable additive. We know from our marketing of Chevron gasolines with ethanol, and our consumer response, that Chevron gasolines with ethanol provide consistent high performance in customer cars . . . We are proud of the quality of our Chevron gasolines with ethanol."—July 10, 1986.

Amoco: "While a number of fuel suppliers do not offer any alcohol-blended products, *Amoco has been and continues to be a major purchaser and marketer of ethanol.* We would not continue to offer our customers an alcohol blend if that fuel had caused performance problems."—August 15, 1986.

Texaco: "Since the inception of our ethanol marketing program in 1979, Texaco has sold more than one billion gallons of ethanol blended fuels. We have found that these products provide customer satisfaction equivalent to that provided by gasolines without ethanol and that they have been readily accepted as a motor fuel."—July 10, 1986.

ARCO: "ARCO Chemical has been a strong supporter of the use of alcohols in gasoline."—July 25, 1986.

Mobil: "Mobil continues to believe that ethanol blends present no special quality control problems as long as the fuels are properly blended and handled."—July 24, 1986.

WHAT THE AUTO INDUSTRY SAYS ABOUT ETHANOL

All 19 domestic and foreign automobile manufacturers marketing vehicles in the U.S. fully warranty the use of 10-percent ethanol in their vehicles.

In fact, last year, Roger B. Smith, Chairman of General Motors, announced that beginning with 1990 model cars and trucks, GM would begin recommending the use of oxygenated fuels. In making the announcement, Smith stated, "The advantage here is that the oxygen from the ether or alcohol portion of these special fuel blends can act to make the engine's air-to-fuel ratio leaner, (and) the result is less carbon monoxide."

The 1990 GM warranty language reads:

Gasolines for Cleaner Air: "The fuel that you use can contribute to cleaner air. General Motors recommends that you use only gasolines treated with detergent additives that prevent deposit formation in your engine. These gasolines will help keep your engine in tune and your emission control system working properly.

The use of oxygenated materials in gasoline can also contribute to cleaner air, especially in those parts of the country where carbon monoxide and ozone levels are high. Where available, General Motors recommends use of oxygenated fuels such as MTBE and ethanol in gasoline."

Moreover, representatives of the auto industry have suggested fuel formulations virtually identical to the standards established in the Richardson-Madigan amendment.

Joseph Colucci, GM's Fuels and Lubricants Department, recently published his recommendation for a reformulated fuels standard. That formulation included a 25 percent cap on aromatics, a 0.8 percent cap on benzene, 9 psi vapor pressure, deposit control additives and a 2.5 percent minimum oxygen requirement.

Apparently, the auto industry is extremely comfortable with both the use of ethanol blended gasolines and the fuel formulation established in this amendment.

Mr. DINGELL. Mr. Chairman, I yield 30 seconds to the distinguished gentleman from Maryland [Mr. MCMILLEN].

Mr. MCMILLEN of Maryland. Mr. Chairman, I rise in support of the compromise amendment.

Mr. Chairman, congratulations are in order for Chairman DINGELL and Chairman WAXMAN, who have worked ardently to bring together various factions in working out a viable compromise on the outstanding issues. Few issues in this compromise package are more important to the well-being of our urban areas than reformulated gas. It is at the gas pump, and at the tailpipe, that we can achieve some of our greatest air pollution reductions. I have special interest in the passage of this reformulated gas amendment, as Baltimore would be one of the cities covered by the legislation. Persistently in the top 10 ozone non-attainment areas of the country, Baltimore needs this special treatment. Importantly, the measure has a much needed degree of flexibility in it—specifically, cities in the future that fall below their ambient air quality requirements can opt into the system, provided that the EPA judges that doing so would not create a dramatic gas supply problem. And contention about gasoline formulation requirements have been mollified to a large extent. The proposal allows for deviation from the guidelines of the law if no discernable benefit is proven to come from the reformulation plan. I am particularly pleased about the scope of the plan—by marketing reformulated gas in nine cities initially, we are approaching the solution in a cost-effective manner, one that allows refiners time to make the necessary adjustments for the coming new gasoline market.

From national parks haze problems to the issues surrounding accidental release of toxic chemicals, Representatives DINGELL, WAXMAN, and LENT, plus a whole host of others, have proven that compromise can be achieved. No doubt exists—we are well on the way to achieving our goal of better air quality for all Americans in the coming century.

Mr. DINGELL. Mr. Chairman, I yield 1 minute to the gentleman from Minnesota [Mr. VENTO].

Mr. VENTO. Mr. Chairman, I rise in support of the committee amendment. I especially want to give credit to the gentleman from Oregon [Mr. WYDEN] and others who worked on the aspects dealing with parks and public lands. I would like to point out this does affect parks and wilderness areas.

Ironically, some of the special areas, our national heritage, are among the most sensitive and fragile areas with regard to pollution. We designated and conserved such areas because of their visual qualities, and of course because of their natural qualities, their cultural and historic qualities. But obviously if we cannot see them we cannot enjoy them, and the damage doesn't end with the ability to view such resources.

The administration failed in the mid-1980's to come up with protections envisioned and put in place in the Clean Air Act of 1977. Hopefully that will not happen again when these new provisions are enacted into law.

Mr. Chairman, most important is the overall effect of air quality and air pollution to our public lands and parks improvement embraced in this bill H.R. 3030. As we march through the consideration of the amendments and the passage of this final bill, we will be doing much more to protect the parks and other fragile public lands and their ecosystems.

This amendment, importantly, puts the land manager in a enhanced position, that individual will be notified so that he or she can stand up and protect those important public lands and parks that may be affected by air quality changes. This amendment is really an important step, but it obviously needs the spirit, the guidance, and the resources behind it to accomplish the goals it espouses.

Mr. DINGELL. Mr. Chairman, I yield 1 minute to the distinguished gentleman from Texas [Mr. FIELDS].

Mr. FIELDS. Mr. Chairman, I thank the distinguished gentleman for yielding time to me.

Mr. Chairman, I have a statement that I offer on behalf of the gentleman from Oklahoma [Mr. EDWARDS]. The National Institute for Petroleum and Energy Research, a DOE research facility in Bartlesville, OK, is already well equipped and fully staffed for research on and testing of fossil fuels. So I would hope, Mr. Chairman, that EPA and others would take full advantage of this distinguished facility already equipped to help us move into this new area of reformulated fuels.

Mr. SYNAR. Mr. Chairman, will the gentleman yield?

Mr. FIELDS. I am glad to yield to the gentleman from Oklahoma.

Mr. SYNAR. Mr. Chairman, I would like to thank the gentleman from Oklahoma and the gentleman from Texas for their support of this compromise and join them in commending the work of an eminent research center. This DOE facility, formerly known as the Bartlesville Energy Research Center—and formerly a part of my own district—is world renowned for its fossil energy research work. It has also been widely used for research in this particular area for a decade. For example, NIPER has performed fleet test evaluations for industrial clients and done contract work for EPA and the California Air Resources Board on evaporative fuels. I understand that EPA's own lab is 2 or 3 years away from duplicating what NIPER can do.

So I wholeheartedly agree with my friend from Oklahoma that we should take advantage of NIPER's expertise in this area, rather than attempting to duplicate it at other government laboratories.

Mr. EDWARDS of Oklahoma. Mr. Chairman, I rise in support of the committee compromise amendment on reformulated gasoline. It is a vast improvement over the original Richardson proposal which would have dictated the precise formula for this fuel.

I also rise, Mr. Chairman, to remind my colleagues of a renowned institution in my district which may be able to play an important role in the testing of these new fuels. The National Institute for Petroleum and Energy Research [NIPER], a DOE research facility in Bartlesville, OK, is already well-equipped and fully staffed for research on and testing of fossil fuels.

While the Environmental Protection Agency's laboratory may be equipped for some of the research and testing that will be required, its facilities may not be entirely adequate. For instance, in the area of controlled temperature chassis dynamometer tests, which measure different kinds of auto emissions, NIPER has a dynamometer equipped to operate at temperatures ranging from 20° F to 110° F. I understand that EPA's lab does not have this temperature capability at this time.

Moreover, NIPER already has extensive experience in this area. In fact, just last year, Arco selected NIPER as one its two labs to test EC–1 reformulated gasoline—the product under discussion here. So I would hope, Mr. Chairman, that EPA and others would take full advantage of this distinguished facility already equipped to help move us into this new era of reformulated fuels.

Mr. DINGELL. Mr. Chairman, I yield 30 seconds to the gentleman from Arkansas [Mr. ALEXANDER].

Mr. ALEXANDER. Mr. Chairman, I thank the gentleman for yielding time to me.

Mr. Chairman, I rise in support of the committee amendment and note that this is a historic day because the bill, when it is passed into law, will open up the vast automotive fuels business to the American farmer who produces ethanol that will be blended with gasoline in order to clean the hydrocarbons from the automotive emissions.

Mr. LENT. Mr. Chairman, I yield 30 seconds to the gentleman from California [Mr. LAGOMARSINO].

Mr. LAGOMARSINO. Mr. Chairman, I thank the gentleman for yielding time to me.

Mr. Chairman, I want to commend the leadership of the committee as well as others who have worked to bring this compromise about. Who would have imagined even a week ago that many of these very difficult issues could have been settled in this very progressive and advantageous way.

I especially want to compliment them on the provision regarding our national parks and public lands. That is a great step forward.

Mr. LENT. Mr. Chairman, I have no further requests for time, and I yield back the balance of my time.

Mr. DINGELL. Mr. Chairman, I have no further requests for time, and I yield back the balance of my time.

Mr. YOUNG of Alaska. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, this is the most troubling amendment I have seen in quite some time. At a time that we are rebuilding American industry and towns and States are competing for new industries to replace older more polluting industries, we are moving to give Eastern States a competitive advantage over the Western States. And we are doing this in the name of environmental protection. It is wrong and it is unconstitutional to discriminate against States located on one side of a man-made line on a map.

Further, we allow a Governor of a neighboring State to file a notice to deny a permit in another State based on a showing that the plant emissions may cause an impact on air quality related values. Any one familiar with State rivalries knows that States will compete for industries. To allow a neighboring Governor to veto a plant in a State is wrong and misguided. If we have a problem with air pollution in an individual park, we should deal with that on a park-by-park basis. To adopt this approach instead is to hit small communities near our national parks and Western States with a sledge hammer.

Finally, I ask if anyone here can explain why the 100th meridian allows discrimination among States.

I oppose the amendment.

Mr. DURBIN. Mr. Chairman, I rise in strong support of the reformulated gasoline and oxygenated fuel provisions that will be included in the Clean Air Act. These provisions will strengthen our effort to clean up the air in our Nation's cities, and will give the citizens of those cities the opportunity to use a highly beneficial clean fuel—ethanol—that my constitutents are prepared to provide in abundance.

Despite what the American Petroleum Institute has been saying, the bill will not mandate the use of ethanol. It sets a standard requiring an oxygen content of 2.7 percent for reformulated gasoline used in ozone nonattainment areas and for oxygenated fuels used in carbon monoxide nonattainment areas. This standard can be met by a variety of fuels, including MTBE, an oil-company produced fuel additive that is already used in approximately 16 percent of our Nation's fuel.

But many gasoline marketers and consumers will prefer to use gasoline containing ethanol, because of ethanol's environmental benefits. Ethanol is a high-octane fuel that can help to reduce ozone pollution, because it can replace the aromatic compounds in gasoline that exacerbate ozone formation. In addition, ethanol can reduce carbon monoxide [CO] emission by up to 25 percent.

Currently, ethanol is used in approximately 8 percent of our Nation's gasoline supply. In cities that have established strong oxygenated fuel programs, consumers have embraced the use of ethanol as a means of cleaning up the air they breathe. Now, the citizens of many more cities will have the option of using ethanol for environmental reasons.

Mr. Chairman, the Clean Air Act will encourage the use of clean fuels such as ethanol because of their environmental benefits, but when consumers use ethanol they actually help to solve several other national problems as well.

Since ethanol is produced domestically, it reduces our Nation's trade deficit and increases our energy security.

Since it is produced from renewable feedstocks, it reduces the formation of carbon dioxide, which is a contributor to global warming.

Since it is produced from American grain, it provides an outlet for our abundant agricultural production, which cuts the budget deficit by reducing the cost of our farm programs.

And since it is produced in rural areas, it provides jobs and generates additional economic activity in the rural parts of our country that have faced years of economic struggle.

In short, the use of ethanol is a good idea for economic, environmental, trade, energy, security, and budgetary reasons.

Mr. Chairman, the Clean Air Act does not mandate ethanol use, but it provides an incentive for oil companies to do so. I know that many more gasoline marketers will use ethanol as a result of this bill. I hope the oil industry as a whole will recognize ethanol's benefits and make the choice to use ethanol in large quantities. If they do so, it will benefit not only their consumers, but our entire Nation.

Mrs. COLLINS. Mr. Chairman, I rise in support of the committee en bloc amendment sponsored by Chairman DINGELL. It contains language resulting from compromises on a broad array of issues. It is an exemplary product that showcases the potential of negotiation and working together for common goals. The result is a well balanced agreement that equitably takes care of everyone's needs. I commend each and every member of the Energy and Commerce Committee for the effort that went into this amendment as I have enjoyed working together toward this admirable product.

One part of this amendment that I would like to highlight concerns the "citizen suit" provisions of the Clean Air Act, as addressed in title VI of the bill. It is based on an amend-

ment that I have been developing since September of last year and its bottom line is: Strong enforcement.

Over a decade ago, Congress enacted sweeping amendments to the Clean Air Act designed to assure that the Nation would make real progress toward improved air quality. Unfortunately, many of these congressional directives were never carried out by the EPA or were disregarded by particular polluters.

The Clean Air Act contained a remedy for such inaction by the EPA. Among other things, the "citizen suit" provision established the principle that citizens could hold the EPA accountable for a failure to do its job. It did so by allowing citizens to bring suit against the EPA Administrator in Federal court. This principle was restated in 1973 by the court in NRDC versus EPA: "The public suit seems particularly instrumental to the statutory scheme when against the EPA itself; for only the public—certainly not the polluter—has the incentive to complain if the EPA falls short * * *."

Unfortunately, the EPA has managed to blunt the effectiveness of the citizen suit as a toll for enforcing Congress' mandates. In case after case—especially throughout the 1980's—the EPA has successfully fought citizen cases on procedural grounds, never even reaching the merits of the cases. The EPA argued that it was irrelevant whether it was blatantly violating a clear congressional directive because the citizen suit provision, as written, simply did not permit the court to hold the agency responsible. As was observed in a 1986 case, Bethlehem Steel Corp. versus EPA in my home State of Illinois: "It seems apparent from the EPA's conduct that its main objective is to preclude—or at least delay as long as possible—judicial review of these claims."

We cannot and should not guarantee that any particular citizen suit will be victorious. That depends on the statute giving rise to the suit and the EPA's—or private polluter's—conduct in fulfilling its obligations under that statute. However, we can—and we must—guarantee that the courts will have power to at least hear the merits of citizen's claims. The courts must also have the power to determine whether the EPA is violating the law by failing to act.

The amendment which I prepared, and the resulting compromise agreed to by the committee, is narrowly tailored to redress the more important jurisdictional problems that have arisen under the Clean Air Act and ensure that private polluters are subject to the law.

First, it makes clear that if the EPA unreasonably delays action, the EPA cannot defend itself on procedural grounds that the court has no jurisdiction. In recent years, big problems have resulted from the Administrator unreasonably delaying action. Often, individuals affected by the EPA's stalling techniques have not been allowed to bring lawsuits because the Administrator claimed the issue was still being reviewed by the EPA. The committee amendment will ensure that Federal courts can compel action by the EPA that has been unreasonably delayed.

Second, the amendment clarifies that a deferral of performance by the EPA can also be challenged in court. Thus, when action is taken, but the action in effect defers performance of a statutory duty to a later time, the Federal courts will have jurisdiction to compel prompt performance of that duty.

Third, the amendment would clarify that citizens are able to bring suits against particular polluters stemming from past violations of the act in addition to present violations. In almost all of our laws across the country, a past violation is treated as a sufficient wrong to give rise to legal action. There is no reasonable justification for treating violations of the Clean Air Act differently. Similarly, there is no reason to suggest that certain portions of H.R. 3030 are enforceable through "citizen suits" while other parts may be disregarded without repercussion.

Fourth, the language expands and enumerates areas of the Clean Air Act that absolutely can be challenged in Federal court by private citizens. The expansion inlcudes: Any aspect of a State implementation plan; any aspect of a permit; and the failure to obtain a permit.

Finally, the provision offers an additional option to a court that chooses to impose civil penalties on a polluter, as enabled by H.R. 3030. While the penalty could accrue to the Federal Treasury, the court would be given discretion to direct that up to $100,000 of the penalty payments be committed to "beneficial mitigation projects" which enhance public health or the environment. These payments will help to ameliorate air quality problems rather than merely assess responsibility for their occurrence.

In short, Mr. Chairman, anyone who believes in enforcement will be pleased with the citizen suit provisions of the en bloc committee amendment. We have devoted much time and effort toward clean air. Without strong enforcement provisions, however, our efforts are only hot air. I urge my colleagues to support the committee's en bloc amendment.

Mr. MRAZEK. Mr. Chairman, I am pleased this important clean air reauthorization bill has finally reached the House floor and I am happy to support it. While H.R. 3030 addresses many of the most pressing clean air issues, I am disappointed that the Energy and Commerce Committee did not address the issue of emissions limitations from solid-waste incineration plants.

The Senate clean air bill, S. 1630, addresses this problem and I certainly support its provisions on emissions standards.

Many States, including New York, have viewed incineration as almost a panacea to their waste-disposal problems. The EPA estimates that by the year 2000, there will be 400 incinerators nationwide, disposing 33 percent of the country's waste. Communities in my congressional district on Long Island have also considered this technology.

Unfortunately, the reality of incineration is that, unless it is well managed and controlled, it may very well solve one environmental problem only to be responsible for another. This is because the process of incineration emits tons upon tons of toxic chemicals into the air to spread over wide areas. Even a quick inspection of the sorts of garbage which are incinerated could show why incinerators must be strictly controlled. Batteries, plastics and the like are burned, sending a poisonous chemical "cocktail" into the air and then into our environment. Among these toxic chemicals are dioxins, one of the most dangerous known to man.

Despite the fact that the environmental and health risks from proliferation of dioxins are considerable, few States have taken action to regulate emissions to set limits on dioxins and other dangerous chemicals.

If incineration is to be the wave of the future, as it seems to be, it is vital that strict limits be set which will prevent incinerators from endangering the health and welfare of us all. Dioxins are considered one of most toxic chemicals known. Small concentrations have been known to kill laboratory animals. Human exposure to dioxins can affect liver function, the renal system, lipid metabolism and can promote neurological damage. The human health effects of emitted dioxins are not well documented; however, virtually every municipal incinerator tested has shown traces of these substances in its emissions.

I have addressed this problem in legislation (H.R. 2052) I introduced in the last two Congresses that would control emissions of dioxins from resource-recovery plants and municipal-waste incinerators. I am disappointed that the House is not addressing standards such as this one in H.R. 3030, and hope when the House takes up solid waste issues under Resource Conservation and Recovery Act [RCRA], the issue of the regulation of incineration plants will be addressed. I will consider offering H.R. 2052 as an amendment at that time.

H.R. 2052 mandates that each new and modified plant must adhere to strict emissions standards for dioxins—does not permit emissions of more than 0.1 nanograms per normal cubic meter at 10 percent carbon dioxide. I chose this particular standard because it is the figure that has been adopted by Sweden, the country that has done the most research into the topic. In 1985, Sweden's environmental protection agency halted construction of all new plants when it felt that an important evaluation of the health and evironmental side effects of incineration was necessary. Dioxins were the primary concern. The Swedish Government had become concerned about the implications of incineration after high levels of dioxin had been found in Baltic Sea fish and mother's milk.

After the extensive study, Sweden determined new facilities could be built, but only if serious measures were taken to meet new, more stringent standards. These are the exact standards my bill would mandate.

Sweden also determined that these standards could be met with current technology. The study concluded that with today's technology, emissions of dioxin could be reduced by up to 90 percent from present levels. Sweden has resumed construction of new incinerators with the standards in place. These new, stringent standards can be met with current technology. For example, reduction in emissions can be made by increasing combustion efficiency and installing plants with more advanced flue gas cleaning.

I believe this is a long-overdue and responsible approach to the problem of dioxin emissions. In light of the risks that incinerators pose to our health and environment, swift action must be taken. For too long, the Federal Government has failed to deal effectively with airborne pollution. While EPA estimates that 15,000 airborne chemicals should be assessed for their toxicity, they have only actually regulated seven. And dioxin—one of the most dangerous of all—is still not regulated by the Federal Government. While EPA has done little to protect America's air, Congress can and must take measures to prevent our air from becoming a dump for toxic chemcials.

If incinerators are part of our solid waste sollution, we need to ensure that incinerators only operate with strict emissions standards. This is the only way we can prevent a solution to one environmental problem from becoming the cause for another. Therefore, I strongly encourage House conferees to accept the Senate language on emissions standards for incinerators.

□ 1240

The CHAIRMAN. The question is on the amendments en bloc offered by the gentleman from Michigan [Mr. DINGELL].

The amendments en bloc were agreed to.

AMENDMENT OFFERED BY MR. ROE

Mr. ROE. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will designate the amendment.

The text of the amendment is as follows:

Amendment offered by Mr. Roe: Page 507, after line 12, insert the following new titles:

TITLE IX—CLEAN AIR RESEARCH

SEC. 901. CLEAN AIR RESEARCH.

(a) REFERENCES IN TEXT.—Unless otherwise specified, references in the text of this section to sections or other provisions are references to sections or other provisions of the Clean Air Act (42 U.S.C. 7401 et seq.).

(b) RESEARCH AND DEVELOPMENT PROGRAM.—Section 103(b) is amended—

(1) in paragraph (6) by striking "and" after "control thereof;";

(2) in paragraph (7) by striking the period and inserting in lieu thereof "; and"; and

(3) by adding at the end the following new paragraph:

"(8) construct such facilities and employ staff as are necessary to carry out this Act.".

(c) AIR POLLUTANT MONITORING AND EMISSIONS INVENTORIES.—Section 103(c) is amended to read as follows:

"(c) AIR POLLUTANT MONITORING AND INVENTORIES.—In carrying out subsection (a), the Administrator shall conduct a program of research, testing, and development of methods for sampling, measurement, monitoring, analysis, and modeling of air pollutants, including precursors of acid deposition. Such program shall include the following elements:

"(1) Consideration of individual, as well as complex mixtures of, air pollutants and their chemical transformations in the atmosphere.

"(2) Development of improved monitoring and modeling techniques to increase understanding of the sources of acid aerosols and the precursors of acid deposition.

"(3) Establishment of a national network to monitor, collect, and compile data with quantification of certainty in the status and trends of air emissions, deposition, air quality, surface water quality, forest condition, and visibility impairment, and to ensure the comparability of air quality data collected in different States and obtained from different nations.

"(4) Development of necessary instrumentation and quality assurance protocols for continuous monitoring of precursors of acid deposition.

"(5) The Administrator, in consultation with the Federal Coordinating Council for Science, Engineering, and Technology, shall oversee an experimental and analytical research effort, with the experimental research to be carried out at the Liquefied Gaseous Fuels Spill Test Facility. In consultation with scientists at Lawrence Livermore National Laboratories, the Administrator shall develop a list of chemicals and a schedule for field testing. Analysis of a minimum of 10 chemicals per year shall be carried out, with the selection of a minimum of one chemical for field testing each year. Highest priority shall be given to those chemicals that would present the greatest potential risk to human health as a result of an accidental release from a fixed site or related to the transport of such chemicals. The purpose of such research shall be to—

"(A) develop improved predictive models for atmospheric dispersion which at a minimum—

"(i) describe dense gas releases in complex terrain with variable winds;

"(ii) improve understanding of the effects of turbulence on dispersion patterns; and

"(iii) consider realistic behavior of aerosols by including physicochemical reactions with water vapor, ground deposition, and removal by water spray;

"(B) evaluate existing and future atmospheric dispersion models by—

"(i) the development of a rigorous, standardized methodology for dense gas models; and

"(ii) the application of such methodology to current dense gas dispersion models using data generated from field experiments; and

"(C) evaluate the effectiveness of hazard mitigation and emergency response technology for fixed site and transportation related accidental releases of toxic chemicals.

Models pertaining to accidental release shall be evaluated and improved periodically for their utility in planning and implementing evacuation procedures and other mitigative strategies designed to minimize human exposure to hazardous air pollutants released accidentally.

"(6) Development of improved monitoring and modeling techniques to increase understanding of the sources of ozone precursors, ozone formation, ozone transport, regional influences on urban ozone, regional ozone trends, and interactions of ozone with other pollutants. Emphasis shall be placed on those techniques which—

"(A) improve the ability to inventory emissions of volatile organic compounds and nitrogen oxides that contribute to urban air pollution, including anthropogenic and natural sources;

"(B) improve the understanding of the mechanism through which anthropogenic and biogenic volatile organic compounds react to form ozone and other oxidants; and

"(C) improve the ability to identify and evaluate region-specific prevention and control options for ozone pollution.

"(7) Periodic reports to the Congress which evaluate and assess the effectiveness of air pollution control regulations and programs using monitoring and modeling data collected pursuant to this subsection.

"(8) Opportunities for participation by industry, public interest groups, scientists, and other interested parties on the development of air pollution models under this subsection.".

(d) HEALTH EFFECTS.—Section 103(d) is amended to read as follows:

"(d) HEALTH EFFECTS.—(1) The Administrator shall conduct a research program on the short- and long-term effects of air pollutants on human health, includng the effects of acid deposition and acid aerosols. In conducting such research program the Administrator—

"(A) shall conduct studies, including epidemiological, clinical, and laboratory studies, as necessary to identify and evaluate effects of air pollutants on human health;

"(B) may utilize, on a reimbursable basis, the facilities of existing Federal scientific laboratories and research centers; and

"(C) shall consult with other appropriate Federal agencies to ensure that similar research being conducted in other agencies is coordinated and is not duplicative.

"(2) In conducting the research program under this subsection, the Administrator shall develop methods and techniques necessary to identify and assess the risks to human health from both routine and accidental exposures to individual air pollutants and combinations thereof. Such research program shall include the following elements:

"(A) The creation of an Interagency Task Force to coordinate such program. The Task Force shall include representatives of the National Institute for Environmental Health Sciences, the Environmental Protection Agency, the Agency for Toxic Substances and Disease Registry, the National Toxicology Program, the National Institute of Standards and Technology, the National Science Foundation, and the Department of Energy. This Interagency Task Force shall be chaired by a representative of the Environmental Protection Agency and shall convene its first meeting within 60 days after the date of enactment of this subparagraph.

"(B) An evaluation, within 12 months after the date of enactment of this paragraph, of each of the hazardous air pollutants listed under section 112(b) of this Act, to decide, on the basis of available information, their relative priority for preparation of environmental health assessments pursuant to subparagraph (C). The evaluation shall be based on reasonably anticipated toxicity to humans and exposure factors such as frequency of occurrence as an air pollutant and volume of emissions in populated areas. Such evaluation shall be reviewed by the Interagency Task Force established pursuant to subparagraph (A).

"(C) Preparation of environmental health assessments for each of the hazardous air pollutants referred to in subparagraph (B), beginning 6 months after the first meeting of the Interagency Task Force and to be completed within 60 months thereafter. No fewer than 38 assessments shall be published annually. The assessments shall be prepared in accordance with guidelines developed by the Administrator in consultation with the Interagency Task Force and the Science Advisory Board of the Environmental Protection Agency. Each such assessment shall include—

"(i) an examination, summary, and evaluation of available toxicological and epidemiological information for the pollutant to ascertain the levels of human exposure which pose a significant threat to human health and the associated acute, subacute, and chronic adverse health effects;

"(ii) a determination of gaps in available information related to human health effects and exposure levels; and

"(iii) where appropriate, an identification of additional activities, including toxicological testing, needed to identify the types or levels of exposure which may present significant risk of adverse health effects in humans.".

(e) ECOSYSTEM STUDIES.—Section 103(f) is amended to read as follows:

"(f) ECOSYSTEM STUDIES.—In carrying out subsection (a), the Administrator shall conduct a research program to improve understanding of the cause, effects, and trends of ecosystems damage from air pollutants, including acid deposition. Such program shall include the following elements:

"(1) Identification of regionally representative and critical ecosystems for research.

"(2) Evaluation of risks to ecosystems exposed to air pollutants, including characterization of the causes and effects of chronic and episodic exposures to air pollutants and determination of the reversibility of those effects.

"(3) Development of improved atmospheric dispersion models and monitoring systems and networks for evaluating and quantifying exposure to and effects of multiple environmental stresses associated with air pollution.

"(4) Evaluation of the effects of air pollution on water quality, including assessments of the short- and long-term ecological effects of acid deposition and other atmospherically derived pollutants on surface water (including wetlands and estuaries) and groundwater.

"(5) Evaluation of the effects of air pollution, including acid deposition, on forests, materials, crops, and other terrestrial and aquatic systems exposed to air pollutants.

"(6) Estimation of the ecological damages and their associated costs which have occurred as a result of exposure to air pollutants.".

(f) POLLUTION PREVENTION AND EMISSIONS CONTROL; COORDINATION OF RESEARCH; AND ACID DEPOSITION RESPONSE.—Section 103 is amended by inserting after subsection (f), the following:

"(g) POLLUTION PREVENTION AND EMISSIONS CONTROL.—In carrying out subsection (a), the Administrator shall conduct a basic engineering research and technology program to develop, evaluate, and demonstrate strategies and technologies for air pollution prevention, including the prevention of acid deposition. Such strategies and technologies shall be developed especially for those pollutants which pose a significant risk to human health and the environment, and may include nontechnological strategies for pollution prevention. Such program shall include the following elements:

"(1) Improvements in strategies and technologies for simultaneously reducing multiple air pollutants from fossil fuel power plants and other combustion facilities including sulfur oxides, nitrogen, oxides, heavy metals, PM-10 (particulate matter), carbon monoxide, and carbon dioxide. Such strategies and technologies shall include—

"(A) improvements in the relative cost-effectiveness and long range implications of various air pollutant reduction and control strategies such as flue gas desulfurization, clean coal technologies (including retrofit control technologies for sulfur oxides and nitrogen oxides such as in-duct injection, LIMB, and spray-dry scrubbing processes), energy conservation including end-use efficiency, and fuel-switching to cleaner fuels such as natural gas; and

"(B) improvements in methods for training personnel employed by fossil fuel power plants and other combustion facilities.

"(2) Improvements in air pollution prevention strategies and technologies, especially those which simultaneously prevent multiple air pollutant emissions, for stationary sources other than fossil fuel power plants. Such strategies and technologies shall be considered for existing and new facilities, and shall to the extent possible be considered as part of the design process for new facilities.

"(3) Improvements in strategies and technologies for preventing air emissions from mobile sources, including development of, and evaluation of the relative cost effectiveness of, methods for reducing emissions of carbon dioxide from mobile sources.

"(4) Improvements in strategies and technologies for preventing air emissions from nonpoint pollution sources.

"(5) Improvements in strategies and technologies for preventing, detecting, and correcting accidental releases of hazardous air pollutants.

"(6) An analysis of the relative costs and benefits of tire disposal methods, including a comparison of waste-to-energy methods to alternatives such as asphalt-rubber and polymer treatment of ground rubber, and the promotion of improvements in strategies and technologies that dispose of tires in ways that avoid adverse air quality impacts.

Nothing in this subsection shall be construed to authorize the imposition on any person of air pollution control requirements. The Administrator shall consult with other appropriate Federal agencies to ensure coordination and to avoid duplication of activities authorized under this subsection.

"(h) COORDINATION OF RESEARCH.—The Administrator shall develop and implement a plan for identifying areas in which activities authorized under subsections (c), (d), (f), and (g) can be carried out in conjunction with other Federal ecological and air pollution research efforts. The plan, which shall be submitted to Congress within 6 months after the date of enactment of this subsection, shall include—

"(1) an assessment of ambient monitoring stations and networks to determine cost effective ways to expand monitoring capabilities in both urban and rural environments, including monitoring of air pollutants and other airborne chemicals of concern;

"(2) a consideration of the extent of the feasibility and scientific value of conducting the research program under subsection (e) to include consideration of the effects of atmospheric processes and air pollution effects; and

"(3) a methodology for evaluating and ranking pollution prevention technologies, such as those developed under subsection (f), in terms of their ability to reduce cost effectively the emissions of air pollutants and other airborne chemicals of concern.

Not later than 2 years after the date of enactment of this subsection, and every 2 years thereafter, the Administrator shall report to Congress on the progress made in implementing the plan developed under this subsection, and shall include in such report any revisions of the plan.

"(i) ACID DEPOSITION RESPONSE ACTION.—(1) The President shall submit to the Congress, within 6 months after the date of enactment of this subsection, a plan describing activities and assigning responsibilities for Federal research on acid deposition, and including coordination of the activities of the Administrator under this subsection.

"(2) The President shall develop, and submit to the Congress within 1 year after the date of enactment of this subsection, an assessment framework for reporting complicated technical information about acid deposition in a manner useful to policymakers and the public to assist in formulating a response. Such framework should include guidelines for the reporting of—

"(A) actual and projected annual emissions trends;

"(B) actual and projected acid deposition trends;

"(C) effects of such depositions, including changes in the chemistry of surface water quality and forest conditions related to acid deposition;

"(D) average ambient concentrations of acid deposition precursors and their transformation products;

"(E) descriptions of the confidence level associated with each conclusion to aid policymakers in using the information.

"(3) The President shall provide Congress with a report that delineates research activities and results in accordance with the framework provided for in paragraph (2), two years after the date of enactment of this subsection, with updates biennially thereafter.

"(4) On the basis of the information provided in the updated assessments, the President shall report to Congress on the reduction in deposition rates that must be achieved in order to prevent adverse ecological effects.".

(g) MISCELLANEOUS.—(1) Section 104 is amended by striking "low-cost" each place it appears and inserting in lieu thereof "cost-effective".

(2) Section 104(c) is amended to read as follows:

"(c) CLEAN ALTERNATIVE FUELS.—The Administrator shall conduct a research program to identify, characterize, and predict air emissions and other potential environmental effects related to the production, distribution, storage, and use of clean alternative fuels to determine the risks and benefits to human health and the environment relative to those from using gasoline and diesel fuels. The Administrator shall consult with other appropriate Federal agencies to ensure coordination and to avoid duplication of activities authorized under this subsection.".

(h) ASSESSMENT OF INTERNATIONAL AIR POLLUTION CONTROL TECHNOLOGIES.—The Administrator of the Environmental Protection Agency shall conduct a study that compares international air pollution control technologies of selected industrialized countries to determine if there exist air pollution control technologies in countries outside the United States that may have beneficial applications to this Nation's air pollution control efforts. With respect to each country studied, the study shall include the topics of urban air quality, motor vehicle emissions, toxic air emissions, and acid deposition. The Administrator shall, within 2 years after the date of enactment of this Act, submit to the Congress a report detailing the results of such study.

(i) ADIRONDACK DESTRUCTION ASSESSMENT.—The Administrator of the Environmental Protection Agency shall establish a program to research the effects of acid deposition on waters where acid deposition have been most acute. The Administrator shall enter into a multi-year contract for such purposes with an independent university which has a year-round field analytical laboratory on a body of water of not less than 25,000 acres nor greater than 75,000 acres, which lies within a geographic region designated as a Biosphere Reserve by the Department of State. The facility must have demonstrated the capability to analyze relevant data on said body of water over a period of 20 years as well as extensive ecosystem modeling capabilities. There is authorized to be appropriated to carry out this subsection not less than $6,000,000.

TITLE X—DISADVANTAGED BUSINESS CONCERNS

SEC. 1001. DISADVANTAGED BUSINESS CONCERNS.

(a) IN GENERAL.—In providing for any research relating to the requirements of the amendments made by the Clean Air Act Amendments of 1990 which uses funds of the Environmental Protection Agency, the Administrator of the Environmental Protection Agency shall require that each contract which is to be entered into for such research provides that not less than 10 percent of such research will be conducted by a disadvantaged business concern.

(b) DEFINITION.—

(1)(A) For purposes of subsection (a), the term "disadvantaged business concern" means a concern—

(i) which is at least 51 percent owned by one or more socially and economically disadvantaged individuals or, in the case of a publicly traded company, at least 51 percent of the stock of which is owned by one or more socially and economically disadvantaged individuals; and

(ii) the management and daily business operations of which are controlled by such individuals.

(B)(i) A for-profit business concern is presumed to be a disadvantaged business concern for purposes of subsection (a) if it is at least 51 percent owned by, or in the case of a concern which is a publicly traded company at least 51 percent of the stock of the company is owned by, one or more individuals who are members of the following groups:

(I) Black Americans.

(II) Hispanic Americans.

(III) Native Americans.

(ii) The presumption established by clause (i) may be rebutted with respect to a particular business concern if it is reasonably established that the individual or individuals referred to in that clause with respect to that business concern are not experiencing impediments to establishing or developing such concern as a result of the individual's identification as a member of a group specified in that clause.

(C) The following institutions are presumed to be disadvantaged business concerns for purposes of subsection (a):

(i) Historically Black colleges and universities, and colleges and universities having a student body in which 40 percent of the students are Hispanic.

(ii) Minority institutions (as that term is defined by the Secretary of Education pursuant to the General Education Provision Act (20 U.S.C. 1221 et seq.)).

(iii) Private and voluntary organizations controlled by individuals who are socially and economically disadvantaged.

(D) A joint venture may be considered to be a disadvantaged business concern under subsection (a), notwithstanding the size of such joint venture, if—

(i) a party to the joint venture is a disadvantaged business concern; and

(ii) that party owns at least 51 percent of the joint venture.

A person who is not an economically disadvantaged individual or a disadvantaged business concern, as a party to a joint venture, may not be a party to more than 2 awarded contracts in a fiscal year solely by reason of this subparagraph.

(E) Nothing in this paragraph shall prohibit any member of a racial or ethnic group that is not listed in subparagraph (B)(i) from establishing that they have been impeded in establishing or developing a business concern as a result of racial ethnic discrimination.

The CHAIRMAN. The gentleman from New Jersey [Mr. ROE] will be recognized for 15 minutes.

Is there a Member in opposition to adoption of the amendment?

Mr. WALKER. Mr. Chairman, I claim the time on behalf of the minority.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. WALKER] will be recognized for 15 minutes.

The Chair recognizes the gentleman from New Jersey [Mr. ROE].

Mr. ROE. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, over the past two decades, the Clean Air Act has been amended several times, but the research and development provisions of the bill have remained essentially untouched. When one contemplates the overwhelming changes that have transpired during those 20 years, one is left wondering why such an essential part of the Clean Air Act has been virtually ignored.

Since passage of the original Clean Air Act, the nature of environmental air problems has changed dramatically. When we first set up an air pollution research program at EPA, we were mostly concerned with dirty, visible smokestack emissions.

Today, that problem has largely diminished. Instead, we are facing a new multitude of complex air pollution problems, such as air toxics, ozone and carbon monoxide nonattainment, acid rain, and global atmospheric changes.

Yet EPA's research mandate has not changed.

Mr. Chairman, when the Environmental Protection Agency was established in 1970, its single most important mandate was to approach the environment as a complex yet singular and interrelated whole. Research was envisioned as a critical part of that strategy.

Yet, where EPA's regulatory responsibilities have been increasing, the Agency's budget for environmental research has been shrinking. In real dollars the budget has decreased 20 percent in just the last 10 years. As a result EPA's emphasis on the basic research and development has suffered.

We can no longer accept the status quo when it comes to air pollution problems.

A research and development program driven by existing policy conserations will be incapable of anticipating the future.

Mr. Chairman, today I am offering an amendment which substantially incorporates H.R. 4197, the Clean Air Act research Amendments of 1990, which was reported by the Committee on Science, Space, and Technology unanimously on March 14, 1990.

The amendments reflects a number of changes developed with the Energy and Commerce Committee that recognize the need for EPA to coordinate its air pollution research activities with other Federal agencies, such as the Department of Energy, that have related research programs.

I would also like to take this opportunity to thank my colleagues on the Energy and Commerce Committee, particularly the chairman, Mr. DINGELL, and two subcommittee chairmen, Mr. WAXMAN and Mr. SHARP, for their support and cooperation in bringing this amendment to the floor.

I would also like to commend the chairman of the Science Subcommittee who was a major leader in the development of this bill, Mr. SCHEUER, as well as Ms. SCHNEIDER, the ranking republican member of that subcommittee, and Mr. WALKER, the ranking republican member of the full committee, for the bipartisan spirit in which they supported this amendment.

Mr. Chairman, the amendment reauthorizes sections 103 and 104 of the Clean Air Act, provisions which direct EPA to carry out a research, development, and demonstration program in support of the Clean Air Act.

This amendment represents the first major overhaul of the Clean Air Act's research provisions in over 20 years.

Under the existing Clean Air Act, EPA has broad authority to conduct research. In practice, however, most of EPA's research has been narrowly focused on efforts to support specific regulatory requirements, not on understanding the broad effects of air pollution.

The amendment I am offering today will reinvigorate EPA's long-term air pollution research while maintaining the technical support that is necessary to carry out regulatory responsibilities.

It will enable EPA to evaluate the control technologies that we are adopting today and generate tomorrow's solutions to complex air pollution problems.

The amendment will provide direction and emphasis on monitoring and modeling of pollutants, health and ecological effects, pollution prevention

and control technologies and alternative fuels.

Research directed in these areas will enhance EPA's ability to predict the need for future action.

Mr. Chairman, we have learned over the last 20 years that air pollution problems are complex and that easy answers are not readily forthcoming. We know that we face a daunting challenge to provide clean air for future generations of Americans. We also face daunting challenges to protect the Earth's atmosphere.

But this amendment is premised on the belief that without a sound scientific foundation, even our most well intentioned efforts to improve air quality are doomed to failure. The time has come to recognize that air pollution research is just as important in fighting air pollution as regulations.

Mr. Chairman, I urge my colleagues to support the Science Committee clean air research amendment as a the critical first step in rehabilitating our environmental research.

Mr. WALKER. Mr. Chairman, I yield 3 minutes to the gentleman from New Hampshire [Mr. SMITH].

Mr. SMITH of New Hampshire. Mr. Chairman, I rise in support of the Science Committee amendment offered by Mr. ROE. This noncontroversial amendment would update the research title of the Clean Air Act. Most of its provisions derive from H.R. 4197, the Scheuer-Smith Clean Air Act Research Amendments and H.R. 3816, acid rain research legislation I introduced last November.

This amendment calls for broad research and development efforts on air pollution and its health effects, as well as monitoring and control methods. It targets acid rain, and air toxics for continued monitoring, thereby giving us a way of evaluating the future effectiveness of the Clean Air Act in combatting these pollutants. It expands research on pollution prevention methods. It supports improvements in air pollution monitoring equipment.

The addition of our language to the clean air act amendments would strengthen the proposal significantly from an environmental standpoint. As you know, the existing research title of the Clean Air Act is 20 years old. Most of its provisions, which have not even been seriously overhauled since the mid-1960's, were developed when problems like acid rain, air toxics and global warming were little more than obscure scientific phenomena. These provisions need updating and refocusing in order to respond to today's environmental problems. Passage of this amendment would be an essential part of such an effort.

The amendment calls for the continued detection of damage from acid rain after the National Acid Precipitation Assessment Program [NAPAP] expires in 1990. Without passage of the Roe amendment, the Environmental Protection Agency will lack the statutory authority to continue this nationwide research on acid rain.

Finally, the amendment is considered noncontroversial and has drawn bipartisan support, especially from members of the House Science, Space, and Technology Committee. H.R. 4197, the bill from which this amendment derives, cleared the Science Committee in March by unanimous voice vote.

Mr. Chairman, It makes no sense to pass clean air legislation without continuing the research and monitoring on air pollution that will enable us to evaluate its future effectiveness. Support the Roe amendment.

Mr. ROE. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from New York [Mr. SCHEUER].

Mr. SCHEUER. Mr. Chairman, I rise in strong support of the amendment offered by the distinguished chairman of the Committee on Science, Space, and Technology, the gentleman from New Jersey [Mr. ROE].

Twenty-five years ago, when the Clean Air Act first focused on the smokestacks that were belching black clouds of pollutants, we thought that the answer to pollution was dilution.

So we had the brilliant idea of building smokestacks 1,000, 1,200 feet high, in order to spread it around, to spread around the goodies. Indeed now we know that air currents carry these pollutants hundreds and sometimes thousands of miles. Canada is the beneficiary, the unhappy beneficiary of our largesse in this matter.

Two-thirds of Canada's acid rain comes from—courtesy of—the Ohio River basin and all those polluting smokestacks and stationary energy users in the Middle West.

□ 1240

At that time the concept, a quarter of a century ago, of acid rain was little more than a theory. A number of scientists detected increased acidity or precipitation and associated it with the lakes in the Adirondacks, but we had very little information about that program. We had to develop a crash rescue program to begin to get the answers to these problems.

Twenty-five years ago the idea that we might be fundamentally changing our atmosphere was of concern only to an esoteric coterie of atmospheric scientists. Today the hole in the stratospheric ozone area over Antarctica is vivid proof of the problem. Again, we are launching a crash program to get the answers.

Mr. Chairman, we have lurched over the last decade or so from one environmental crisis to the next. Each day we seem to experience some new environmental surprise, and then we throw money at it in a desperate last-minute frantic attempt to do something about it. In part, this is a product of our failure to invest adequately in environmental research. We did not know about acid rain because we did not have a system of monitors that could have told Members about these trends and these effects. We did not know about lead because our health research was limited. We did not know about the stratospheric ozone layer, the hole in the stratosphere, because our computer models were not sophisticated enough and advanced enough to predict this awful phenomenon. In short, we did not have a scientific infrastructure in place to help Members understand better the problems of air pollution.

Mr. WALKER. Mr. Chairman, I yield 2 minutes to the gentleman from New York [Mr. LENT].

Mr. LENT. Mr. Chairman, I rise in support of the amendment offered by the gentleman from New Jersey. This amendment would establish a comprehensive set of research and development initiatives relating to air pollution monitoring and emissions inventories, pollution prevention, and the health effects of air pollution. It would also focus new research and development efforts on control measures, such as energy conservation, clean coal technologies, and other control systems.

Mr. Chairman, I know that some question arose that there may be some overlap of research responsibilities between DOE and EPA resulting from this amendment. I also understand that since this question arose, the amendment has been changed to require the EPA administrator to consult with other Federal agencies to insure coordination and to avoid duplication. Furthermore, Mr. Chairman, I understand that the authors of the amendment have committed to working with administration officials to assure that the respective agencies fulfill their proper roles in this research. Both agencies have significant ongoing research efforts and I am very pleased that the gentleman from New Jersey has expressed a willingness to build on these existing programs.

With this understanding in mind, I support the amendment.

Mr. ROE. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from North Carolina [Mr. VALENTINE].

Mr. VALENTINE. Mr. Chairman, we have a historic opportunity before us today. We have allowed the air above cities, towns, farms, and even above our national parks and wilderness areas to become gray with air pollution. We must recognize that we have failed to a large extent in our stewardship of this planet.

But today we have a chance to reverse past mistakes and start on the

road to a cleaner, healthier environment. The Clean Air Act has not been revised since 1977. It is past time to face difficult problems squarely and stop postponing the decisions that are required to clean up the Earth and our atmosphere.

There has been much debate about the cost of this bill. Those who know my record are aware that I have consistently opposed legislation that would impose unnecessary costs and burdens on consumers or businesses.

Cleaning up the air will be costly. But the long-term costs of not cleaning up the air will be far greater.

To cite just one example, the Environmental Protection Agency has estimated that by reducing the amount of CFC's in the air it may be possible to achieve up to $41 billion in savings from increased agricultural yields.

Perhaps more important, cleaning up the air will have a profound effect on health costs. The EPA has also estimated that reducing CFC's would produce a significant reduction in the incidence of skin cancer and cataracts and the number of cancer deaths caused by increased ultraviolet radiation penetrating our weakened atmosphere.

To those who question whether we can afford this legislation, I say that we cannot afford not to clean up the atmosphere. We cannot afford the respiratory problems, the cancers, the birth defects, the damage to agricultural products, effects of air pollution on fish and wildlife populations and the natural environment. We cannot afford to let these problems continue.

The Roe amendment deserves support. This amendment will expand EPA research programs on air pollution and acid rain.

Someone is diagnosed with cancer every 30 seconds and someone dies of cancer every 60 seconds. This expanded EPA reseach program is essential if we are to conquer this and other health problems. We need to know more about the effects of air pollution on human health and our natural environment before we can take effective action. I urge my colleagues to support Mr. ROE's amendment.

Mr. Chairman, this is among the most important bills we will consider this year. I urge my colleagues to take this first step toward a safer and healthier planet.

Mr. WALKER. Mr. Chairman, I yield myself 3 minutes.

First of all, I rise in favor of the overall bill. A lot of people worked on this particular amendment, and I think we have a good research title to bring to the floor. I discussed it here during the general debate. I do not need to go into it in any detail, but I did want to give some credit to the ranking member of the Subcommittee on Natural Resources, Agricultural Research and Environment, the gentlewoman from Rhode Island [Ms. SCHNEIDER], for the work that she did on crafting this legislation, and the gentleman from New Hampshire [Mr. SMITH], who was also instrumental in helping Members develop language that is in this particular amendment. They worked particularly hard.

Now, we have had a situation up to the last minute that we will deal with here in a few moments, but I want to clarify just where we are. There will be an amendment offered to this title in a few minutes by the gentleman from California [Mr. DYMALLY], relating to disadvantage business. We have been trying to clear up some problems with that amendment, at least problems from my perspective, in the last few minutes. If I understand correctly, the gentleman has now agreed to include in his amendment, individuals who would be disadvantaged under the terms "Asian Americans, women, and disabled." Is that correct?

Mr. DYMALLY. Will the gentleman yield?

Mr. WALKER. I yield to the gentleman from California.

Mr. DYMALLY. That is correct.

Mr. WALKER. My suggestion was that you include those. I will tell the gentleman there are also some other things I find in the amendment that are somewhat troubling. For example, the historically black colleges and universities is defined, but having student bodies of 40 percent which are Hispanic, it seems to me we may also want to include women, Asian Americans, the disabled, and some of those in that group. Can I get a commitment out of the gentleman that we can clean up this particular amendment and try to make all of these things workable when we get into conference, and try to get the language which is closer to the language that we have traditionally had along those lines?

Mr. DYMALLY. If the gentleman will yield, I want to commit to the gentleman from Pennsylvania that I am indeed supportive of his effort. I thank the gentleman for his willingness to take this amendment at the last minute, and I do commit to working with the gentleman to clean up whatever questions he may have.

Mr. WALKER. Mr. Chairman, I thank the gentleman. That does, I think, clarify a situation, and we will work it out in terms of a dialog here in a moment that will, I think, help to make the situation better.

I do want to go on the RECORD as supporting the product of the Committee on Science, Space, and Technology. I think we have a very good bill on the floor. The gentleman from New Jersey [Mr. ROE] is to be congratulated for the committee work that went into crafting this particular piece of legislation.

Mr. Chairman, I reserve the balance of my time.

Mr. ROE. Mr. Chairman, in view of the discussion by our distinguished colleague, the gentleman from Pennsylvania [Mr. WALKER], I ask unanimous consent that title X of the amendment under consideration be deleted from the amendment and made in order as a separate amendment to the Roe amendment, the separate amendment to be offered by the gentleman from California [Mr. DYMALLY].

The CHAIRMAN. The unanimous-consent request needs to be that title X of the amendment be a separate amendment to the bill. Under the rule, it cannot be a separate amendment to the Roe amendment.

Mr. ROE. That was the intent, but I see that the Chair's language is much clearer.

Mr. WALKER. Mr. Chairman, reserving the right to object, just to clarify where we are, as I understand the situation, we are going to take the Dymally amendment out of the overall committee amendment, as it was agreed to in the rule, and we are now going to have the Dymally amendment as a separate amendment to our title; is that correct?

The CHAIRMAN. The Chair understands that that is the unanimous-consent request.

The Chair would also observe in light of the fact that the Roe amendment would be subject to a division of the question on title X, if requested, and therefore to a separate vote, the unanimous-consent request can be entertained in Committee of the Whole since not altering the rule adopted by the House it is a proper unanimous-consent request.

Mr. WALKER. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

The CHAIRMAN. The pending amendment is so modified by the deletion of title X. Title X under the unanimous-consent request will come up subsequent to the adoption of the first nine titles of the amendment, but there will be no debate on the Dymally amendment at that point in time.

The text of the amendment, as modified, is as follows:

Page 507, after line 12, insert the following new titles:

TITLE IX—CLEAN AIR RESEARCH

SEC. 901. CLEAN AIR RESEARCH.

(a) REFERENCES IN TEXT.—Unless otherwise specified, references in the text of this section to sections or other provisions are references to sections or other provisions of the Clean Air Act (42 U.S.C. 7401 et seq.).

(b) RESEARCH AND DEVELOPMENT PROGRAM.—Section 103(b) is amended—

(1) in paragraph (6) by striking "and" after "control thereof;";

(2) in paragraph (7) by sriking the period and inserting in lieu thereof "; and"; and

(3) by adding at the end the following new paragraph:

"(8) construct such facilities and employ staff as are necessary to carry out this Act.".

(c) AIR POLLUTANT MONITORING AND EMISSIONS INVENTORIES.—Section 103(c) is amended to read as follows:

"(c) AIR POLLUTANT MONITORING AND INVENTORIES.—In carrying out subsection (a), the Administrator shall conduct a program of research, testing, and development of methods for sampling, measurement, monitoring, analysis, and modeling of air pollutants, including precursors of acid deposition. Such program shall include the following elements:

"(1) Consideration of individual, as well as complex mixtures of, air pollutants and their chemical transformations in the atmosphere.

"(2) Development of improved monitoring and modeling techniques to increase understanding of the sources of acid aerosols and the precursors of acid deposition.

"(3) Establishment of a national network to monitor, collect, and compile data with quantification of certainty in the status and trends of air emissions, deposition, air quality, surface water quality, forest condition, and visibility impairment, and to ensure the comparability of air quality data collected in different States and obtained from different nations.

"(4) Development of necessary instrumentation and quality assurance protocols for continuous monitoring of precursors of acid deposition.

"(5) The Administrator, in consultation with the Federal Coordinating Council for Science, Engineering, and Technology, shall oversee an experimental and analytical research effort, with the experimental research to be carried out at the Liquefied Gaseous Fuels Spill Test Facility. In consultation with scientists at Lawrence Livermore National Laboratories, the Administrator shall develop a list of chemicals and a schedule for field testing. Analysis of a minimum of 10 chemicals per year shall be carried out, with the selection of a minimum of one chemical for field testing each year. Highest priority shall be given to those chemicals that would present the greatest potential risk to human health as a result of an accidental release from a field site or related to the transport of such chemicals. The purpose of such research shall be to—

"(A) develop improved predictive models for atmospheric dispersion which at a minimum—

"(i) describe dense gas releases in complex terrain with variable winds;

"(ii) improve understanding of the effects of turbulence on dispersion patterns; and

"(iii) consider realistic behavior of aerosols by including physicochemical reactions with water vapor, ground deposition, and removal by water spray;

"(B) evaluate existing and future atmospheric dispersion models by—

"(i) the development of a rigorous, standardized methodology for dense gas models; and

"(ii) the application of such methodology to current dense gas dispersion models using data generated from field experiments; and

"(C) evaluate the effectiveness of hazard mitigation and emergency response technology for fixed site and transportation related accidental releases of toxic chemicals.

Models pertaining to accidental release shall be evaluated and improved periodically for their utility in planning and implementing evacuation procedures and other mitigative strategies designed to minimize human exposure to hazardous air pollutants released accidentally.

"(6) Development of improved monitoring and modeling techniques to increase understanding of the sources of ozone precursors, ozone formation, ozone transport, regional influences on urban ozone, regional ozone trends, and interactions of ozone with other pollutants. Emphasis shall be placed on those techniques which—

"(A) improve the ability to inventory emissions of volatile organic compounds and nitrogen oxides that contribute to urban air pollution, including anthropogenic and natural sources;

"(B) improve the understanding of the mechanism through which anthropogenic and biogenic volatile organic compounds react to form ozone and other oxidants; and

"(C) improve the ability to identify and evaluate region-specific prevention and control options for ozone pollution.

"(7) Periodic reports to the Congress which evaluate and assess the effectiveness of air pollution control regulations and programs using monitoring and modeling data collected pursuant to this subsection.

"(8) Opportunities for participation by industry, public interest groups, scientists, and other interested parties on the development of air pollution models under this subsection.".

(d) HEALTH EFFECTS.—Section 103(d) is amended to read as follows:

"(d) HEALTH EFFECTS.—(1) The Administrator shall conduct a research program on the short- and long-term effects of air pollutants on human health, including the effects of acid deposition and acid aerosols. In conducting such research program the Administrator—

"(A) shall conduct studies, including epidemiological, clinical, and laboratory studies, as necessary to identify and evaluate effects of air pollutants on human health;

"(B) may utilize, on a reimbursable basis, the facilities of existing Federal scientific laboratories and research centers; and

"(C) shall consult with other appropriate Federal agencies to ensure that similar research being conducted in other agencies is coordinated and is not duplicative.

"(2) In conducting the research program under this subsection, the Administrator shall develop methods and techniques necessary to identify and assess the risks to human health from both routine and accidental exposures to individual air pollutants and combinations thereof. Such research program shall include the following elements:

"(A) The creation of an Interagency Task Force to coordinate such program. The Task Force shall include representatives of the National Institute for Environmental Health Sciences, the Environmental Protection Agency, the Agency for Toxic Substances and Disease Registry, the National Toxicology Program, the National Institute of Standards and Technology, the National Science Foundation, and the Department of Energy. This Interagency Task Force shall be chaired by a representative of the Environmental Protection Agency and shall convene its first meeting within 60 days after the date of enactment of this subparagraph.

"(B) An evaluation, within 12 months after the date of enactment of this paragraph, of each of the hazardous air pollutants listed under section 112(b) of this Act, to decide, on the basis of available information, their relative priority for preparation of environmental health assessments pursuant to subparagraph (C). The evaluation shall be based on reasonably anticipated toxicity to humans and exposure factors such as frequency of occurrence as an air pollutant and volume of emissions in populated areas. Such evaluation shall be reviewed by the Interagency Task Force established pursuant to subparagraph (A).

"(C) Preparation of environmental health assessments for each of the hazardous air pollutants referred to in subparagraph (B), beginning 6 months after the first meeting of the Interagency Task Force and to be completed within 60 months thereafter. No fewer than 38 assessments shall be published annually. The assessments shall be prepared in accordance with guidelines developed by the Administrator in consultation with the Interagency Task Force and the Science Advisory Board of the Environmental Protection Agency. Each such assessment shall include—

"(i) an examination, summary, and evaluation of available toxicological and epidemiological information for the pollutant to ascertain the levels of human exposure which pose a significant threat to human health and the associated acute, subacute, and chronic adverse health effects;

"(ii) a determination of gaps in available information related to human health effects and exposure levels; and

"(iii) where appropriate, an identification of additional activities, including toxicological testing, needed to identify the types or levels of exposure which may present significant risk of adverse health effects in humans.".

(e) ECOSYSTEM STUDIES.—Section 103(f) is amended to read as follows:

"(f) ECOSYSTEM STUDIES.—In carrying out subsection (a), the Administrator shall conduct a research program to improve understanding of the causes, effects, and trends of ecosystems damage from air pollutants, including acid deposition. Such program shall include the following elements:

"(1) Identification of regionally representative and critical ecosystems for research.

"(2) Evaluation of risks to ecosystems exposed to air pollutants, including characterization of the causes and effects of chronic and episodic exposures to air pollutants and determination of the reversibility of those effects.

"(3) Development of improved atmospheric dispersion models and monitoring systems and networks for evaluating and quantifying exposure to and effects of multiple environmental stresses assocated with air pollution

"(4) Evaluation of the effects of air pollution on water quality, including assessments of the short-and long-term ecological effects of acid deposition and other atmospherically derived pollutants on surface water (including wetlands and estuaries) and groundwater.

"(5) Evaluation of the effects of air pollution, including acid deposition, on forests, materials, crops, and other terrestrial and aquatic systems exposed to air pollutants.

"(6) Estimation of the ecological damages and their associated costs which have occurred as a result of exposure to air pollutants.".

(f) POLLUTION PREVENTION AND EMISSIONS CONTROL; COORDINATION OF RESEARCH; AND ACID DEPOSITION RESPONSE.—Section 103 is amended by inserting after subsection (f), the following:

"(g) POLLUTION PREVENTION AND EMISSIONS CONTROL.—In carring out subsection (a), the Administrator shall conduct a basic

engineering research and technology program to develop, evaluate, and demonstrate stretegies and technologies for air pollution prevention, including the prevention of acid deposition. Such strategies and technologies shall be developed especially for those pollutants which pose a signficant risk to human health and the environment, and may include nontechnological strategies for pollution prevention. Such program shall include the following elements:

"(1) Improvements in strategies and technologies for simultaneously reducing multiple air pollutants from fossil fuel power plants and other combustion facilities including sulfur oxides, nitrogen oxides, heavy metals, PM-10 (particulate matter), carbon monoxide and carbon dioxide. Such strategies and technologies shall include—

"(A) improvements in the relative cost-effectiveness and long range implications of various air pollutant reduction and control strategies such as flue gas desulfurization, clean coal technologies (including retrofit control technologies for sulfur oxides and nitrogen oxides such as in-duct injection, LIMB, and spray-dry scrubbing processes), energy conservation including end-use efficiency, and fuel-switching to cleaner fuels such as natural gas; and

"(B) improvements in methods for training personnel employed by fossil fuel power plants and other combustion facilities.

"(2) Improvements in air pollution prevention strategies and technologies, especially those which simultaneously prevent multiple air pollutant emissions, for stationary sources other than fossil fuel power plants. Such strategies and technologies shall be considered for existing and new facilities, and shall to the extent possible be considered as part of the design process for new facilities.

"(3) Improvements in strategies and technologies for preventing air emissions from mobile sources, including development of, and evaluation of the relative cost effectiveness of, methods for reducing emissions of carbon dioxide from mobile sources.

"(4) Improvements in strategies and technologies for preventing air emissions from nonpoint pollution sources.

"(5) Improvements in strategies and technologies for preventing, detecting, and correcting accidental releases of hazardous air pollutants.

"(6) An analysis of the relative costs and benefits of tire disposal methods, including a comparison of waste-to-energy methods to alternatives such as asphalt-rubber and polymer treatment of ground rubber, and the promotion of improvements in strategies and technologies that dispose of tires in ways that avoid adverse air quality impacts. Nothing in this subsection shall be construed to authorize the imposition on any person of air pollution control requirements. The Administrator shall consult with other appropriate Federal agencies to ensure coordination and to avoid duplication of activities authorized under this subsection.

"(h) COORDINATION OF RESEARCH.—The Administrator shall develop and implement a plan for identifying areas in which activities authorized under subsections (c), (d), (f), and (g) can be carried out in conjunction with other Federal ecological and air pollution research efforts. The plan, which shall be submitted to Congress within 6 months after the date of enactment of this subsection, shall include—

"(1) an assessment of ambient monitoring stations and networks to determine cost effective ways to expand monitoring capabilities in both urban and rural environments, including monitoring of air pollutants and other airborne chemicals of concern;

"(2) a consideration of the extent of the feasibility and scientific value of conducting the research program under subsection (e) to include consideration of the effects of atmospheric processes and air pollution effects; and

"(3) a methodology for evaluating and ranking pollution prevention technologies, such as those developed under subsection (f), in terms of their ability to reduce cost effectively the emissions of air pollutants and other airborne chemicals of concern.

Not later than 2 years after the date of enactment of this subsection, and every 2 years thereafter, the Administrator shall report to Congress on the progress made in implementing the plan developed under this subsection, and shall include in such report any revisions of the plan.

"(i) DEPOSITION RESPONSE ACTION.—(1) The President shall submit to the Congress, within 6 months after the date of enactment of this subsection, a plan describing activities and assigning responsibilities for Federal research on acid deposition, and including coordination of the activities of the Administrator under this subsection.

"(2) The President shall develop, and submit to the Congress within 1 year after the date of enactment of this subsection, an assessment framework for reporting complicated technical information about acid deposition in a manner useful to policymakers and the public to assist in formulating a response. Such framework should include guidelines for the reporting of—

"(A) actual and projected annual emissions trends;

"(B) actual and projected acid deposition trends;

"(C) effects of such deposition, including changes in the chemistry of surface water quality and forest conditions related to acid deposition;

"(D) average ambient concentrations of acid deposition precursors and their transformation products;

"(E) descriptions of the confidence level associated with each conclusion to aid policymakers in using the information.

"(3) The President shall provide Congress with a report that delineates research activities and results in accordance with the framework provided for in paragraph (2), two years after the date of enactment of this subsection, with updates biennially thereafter.

"(4) On the basis of the information provided in the updated assessments, the President shall report to Congress on the reduction in deposition rates that must be achieved in order to prevent adverse ecological effects.".

(g) MISCELLANEOUS.—(1) Section 104 is amended by striking "low-cost" each place it appears and inserting in lieu thereof "cost-effective".

(2) Section 104(c) is amended to read as follows:

"(c) CLEAN ALTERNATIVE FUELS.—The Administrator shall conduct a research program to identify, characterized, and predict air emissions and other potential environmental effects related to the production, distribution, storage, and use of clean alternative fuels to determine the risks and benefits to human health and the environment relative to those from using gasoline and diesel fuels. The Administrator shall consult with other appropriated Federal agencies to ensure coordination and to avoid duplication of activities authorized under this subsection.".

(h) ASSESSMENT OF INTERNATIONAL AIR POLLUTION CONTROL TECHNOLOGIES.—The Administrator of the Environmental Protection Agency shall conduct a study that compares international air pollution control technologies of selected industrialized countries to determine if there exist air pollution control technologies in countries outside the United States that may have beneficial applications to this Nation's air pollution control efforts. With respect to each country studied, the study shall include the topics of urban air quality, motor vehicle emissions, toxic air emissions, and acid deposition. The Administrator shall, within 2 years after the date of enactment of this Act, submit to the Congress a report detailing the results of such study.

(i) ADIRONDACK DESTRUCTION ASSESSMENT.—The Administrator of the Environment Protection Agency shall establish a program to research the effects of acid deposition on waters where acid deposition has been most acute. The Administrator shall enter into a multi-year contract for such purposes with an independent university which has a year-round field analytical laboratory on a body of water of not less than 25,000 acres nor greater than 75,000 acres, which lies within a geographic region designated as a Biosphere Reserve by the Department of State. The facility must have demonstrated the capability to analyze relevant data on said body of water over a period of 20 years as well as extensive ecosystem modeling capabilities. There is authorized to be appropriated to carry out this subsection not less than $6,000,000.

□ 1300

PARLIAMENTARY INQUIRIES

Mr. ROE. Mr. Chairman, I have a parliamentary inquiry.

I would like to yield 3 minutes to the distinguished gentleman from California [Mr. DYMALLY]. Is that proper at this point?

The CHAIRMAN. Absolutely.

Mr. ROE. That time would be yielded to the gentleman to speak on behalf of the amendment.

The CHAIRMAN. Yes.

Mr. ROE. Mr. Chairman, I yield 3 minutes to the gentleman from California [Mr. DYMALLY].

Mr. DYMALLY. Mr. Chairman, first I have a parliamentary inquiry. Is it appropriate for me to offer the amendment now?

The CHAIRMAN. No. We will have to vote on the Roe amendment first. The Roe amendment will be disposed of, and then under the unanimous-consent request, the Dymally amendment will be the pending order of business.

Mr. DYMALLY. I thank the Chair.

Mr. Chairman, I want to thank the gentleman from New Jersey [Mr. ROE] for his commitment to this concept of providing opportunities for minorities, for women and the disabled, to get an opportunity to participate in the research for this very significant issue before us today.

I also want to thank the gentleman from Pennsylvania [Mr. WALKER] for accommodating me in presenting this amendment at the last minute, and I do make the commitment to him that we will work between now and the time of the conference committee in an effort to work on any differences he may have and to bring about a consensus amendment. I thank the gentleman from New Jersey and the gentleman from Pennsylvania for giving me this opportunity to speak on the measure and a subsequent opportunity to present the amendment.

Mr. WALKER. Mr. Chairman, I yield 3 minutes to the gentlewoman from Rhode Island [Ms. SCHNEIDER].

Ms. SCHNEIDER. Mr. Chairman, as the ranking Republican on the Subcommittee on Natural Resources, Agriculture Research and Environment, I want to state my strong support for the amendment by Chairman ROBERT ROE on behalf of the Science, Space, and Technology Committee. This amendment is based on a bill, H.R. 4197, passed unanimously by our committee.

The proposed amendment by the committee would revise the old research section of the Clean Air Act, giving greater emphasis to expanded monitoring, ongoing effects research, and pollution prevention. This is a balanced amendment that has the support of environmentalists, researchers, States, and industry.

It has been 13 years since Congress last reauthorized the Clean Air Act. One of the reasons it has taken so long to move this legislation is because of the scientific uncertainty surrounding the debate. The passage of this amendment will help ensure that we will never again need to take so long to respond to air pollution problems because of a lack of information.

In addition, great concerns have been expressed about the potential expenses of the new Clean Air Act. Approving the Science Committee amendment could help to reduce those costs by promoting the development of more cost-effective control technologies, especially by giving greater emphasis to pollution prevention strategies.

I believe that accepting this amendment and passing the Clean Air Act will bring long-awaited benefits to the Nation as a whole. However, I would like to take a moment to note a few issues of particular importance to New England States, such as my home State of Rhode Island, that are addressed in this amendment.

First, many New England States have cities that suffer from unacceptably high levels of ozone or smog despite having enacted strict ozone attainment plans approved by EPA.

In many cases, these plans failed because they were based on EPA models that failed to take into account the transport of ozone from other States.

This amendment would help to correct the errors in these models and therefore greatly assist pollution control planning.

In addition the amendment recommends funding for the critically important northeast Regional Planning Commission that can take an interstate approach to this pollution problem.

Second, the amendment would put into place an acid rain monitoring network following enactment of this bill so that we can determine the effectiveness of this control program as it is put into place.

This provision is based on a bill that I support, H.R. 3816, introduced by BOB SMITH of New Hampshire, and he is to be commended for his hard work and leadership.

Acid rain has damaged lakes, forests, and even coastal areas throughout New England; it is time to adopt policies that we can be sure are working.

Finally, dealing with used tires is a growing problem for State and local officials.

Already there are estimated to be between 2.5 and 3 billion tires in stockpiles around the United States, with another 280 million tires being discarded annually. Over 30 million tires are stored in Rhode Island alone.

Yet, tire disposal methods are limited. Land disposal is undesirable because of space constraints, threats to public health and from disease bearing mosquitoes, and fire hazards. The siting of incinerators raised questions about air emissions and other environmental concerns.

That is why I am very glad that a provision of mine has been included in this amendment that will develop and promote alternatives to tire incineration that avoid pollution.

The proposed Clean Air Act reauthorization is hundreds of pages long and will result in thousands of regulatory actions. If Congress is going to enact such a complex piece of legislation, the least we can do is provide the necessary research so that industry and policymakers can have the best available information for its implementation.

The intention of the Science Committee amendment is to guarantee that this information is available. I want to applaud the work of the leadership of this committee, especially Chairman ROBERT ROE, ranking minority member ROBERT WALKER, and subcommittee Chairman JAMES SCHEUER. They have all contributed to a valuable and forward-looking proposal, and are to be congratulated for their efforts.

I urge my colleagues to support it.

Mr. ROE. Mr. Chairman, I reserve the balance of my time.

Mr. WALKER. Mr. Chairman, I yield 3 minutes to the gentleman from Florida [Mr. LEWIS].

Mr. LEWIS of Florida. Mr. Chairman, too often this body and this Government is accused of using studies to cover up problems or delay making a decision on important issues. There has even been a phrase invented for this procedure, paralysis by analysis.

However, that is not the case with this legislation. We must have the scientific tools to make important decisions impacting our environmental future.

This legislation before the House regulates not only the quality of air that we breathe but that of our children and grandchildren.

In short, it takes action.

At the same time, this amendment will ensure that these regulations will be scientifically sound and that any future changes will be based on research, not on the whim of politics.

My own State of Florida, which increase population at the rate of approximately 5,000 per week, has a growing air-pollution problem. In the past, we have seen attempts to clean the air through inadequate measuring and monitoring.

This amendment directs EPA to conduct research on understanding causes and effects and trends of damages to allow us to take the appropriate action, rather than guessing at solutions and hoping for benefits.

I thank and congratulate Chairman ROE and ranking member WALKER for their leadership in bringing this important amendment before the House, and commend subcommittee Chairman SCHEUER and ranking member SCHNEIDER for their hard work in preparing this wise amendment.

Mr. WALKER. Mr. Chairman, I yield 1 minute to the gentleman from Utah [Mr. NIELSON].

Mr. NIELSON of Utah. First, Mr. Chairman, I would like to engage the chairman of the Science, Space, and Technology Committee, Mr. ROE of New Jersey, in a colloquy.

Mr. ROE. Yes. I will respond, if the gentleman will yield.

Mr. NIELSON of Utah. First, Mr. Chairman, I would like to congratulate you as chairman of the committee and also the ranking member, the gentleman from Pennsylvania [Mr. WALKER], for this fine amendment. I would like to congratulate the gentleman from New Hampshire [Mr. SMITH] for the acid deposition response action part of this amendment. And that relates to my question.

On page 13 of this amendment, it mentions that we are going to develop data for actual and projected acid deposition trends. Among other things, it says this:

On the basis of the information provided in the updated assessments, the President

shall report to Congress on the reduction in deposition rates that must be achieved in order to prevent adverse ecological effects.

Does the gentleman believe that is broad enough to include an analysis of the NAPAP data which will be available next February?

Mr. ROE. Mr. Chairman, will the gentleman yield?

Mr. NIELSON of Utah. I yield to the gentleman from New Jersey.

Mr. ROE. Yes, we have thoroughly revealed the gentleman's concern on this issue, and we interpret the language exactly as he does, that it does accommodate the gentleman's request.

Mr. NIELSON of Utah. I thank the gentleman. As I stated earlier, I believe we have had more reduction in sulfur dioxide than the Department of Energy has given us credit for and I believe that difference could relax the requirements on middle America and perhaps allow for more growth; is that also true?

The CHAIRMAN. The time of the gentleman from Utah [Mr. NIELSON] has expired.

Mr. ROE. Mr. Chairman, I yield 1 additional minute to the gentleman from Utah [Mr. NIELSON].

Mr. Chairman, let me state that I am not sure I can give the gentleman that answer, but I would say the basic fundamental premise he is working on is covered. But where that will lead to, I am not sure.

Mr. NIELSON of Utah. Mr. Chairman, I thank the gentleman.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. WALKER] has 2½ minutes remaining, and the gentleman from New Jersey [Mr. ROE] has 3½ minutes remaining.

The Chair recognizes the gentleman from Pennsylvania [Mr. WALKER].

Mr. WALKER. Mr. Chairman, I yield myself 30 seconds.

Mr. Chairman, as I understand it, the Dymally amendment has to come out of our time yet. Is the gentleman going to yield time for that purpose?

The CHAIRMAN. No. The Chair would advise the gentleman from Pennsylvania that the gentleman from California [Mr. DYMALLY] has spoken on his amendment.

Mr. WALKER. With that, Mr. Chairman, having no further requests for time, I yield back the balance of my time.

Mr. ROE. Mr. Chairman, I have no further requests for time, and I yield back the balance of my time.

The CHAIRMAN. The question is on the amendment, as modified, offered by the gentleman from New Jersey [Mr. ROE].

The amendment, as modified, was agreed to.

AMENDMENT OFFERED BY MR. DYMALLY

Mr. DYMALLY. Mr. Chairman, I offer an amendment.

Mr. CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. DYMALLY:

On page 507, after line 12, insert the following:

TITLE X—DISADVANTAGED BUSINESS CONCERNS

SEC. 1001. DISADVANTAGED BUSINESS CONCERNS.

(a) IN GENERAL.—In providing for any research relating to the requirements of the amendments made by the Clean Air Act Amendments of 1990 which uses funds of the Environmental Protection Agency, the Administrator of the Environmental Protection Agency shall require that each contract which is to be entered into for such research provides that not less than 10 percent of such research will be conducted by a disadvantaged business concern.

(b) DEFINITION.—

(1)(A) For purposes of subsection (a), the term "disadvantaged business concern" means a concern—

(i) which is at least 51 percent owned by one or more socially and economically disadvantaged individuals or, in the case of a publicly traded company, at least 51 percent of the stock of which is owned by one or more socially and economically disadvantaged individuals; and

(ii) the management and daily business operations of which are controlled by such individuals.

(B)(i) A for-profit business concern is presumed to be a disadvantaged business concern for purposes of subsection (a) if it is at least 51 percent owned by, or in the case of a concern which is a publicly traded company at least 51 percent of the stock of the company is owned by, one or more individuals who are members of the following groups:

(I) Black Americans.

(II) Hispanic Americans.

(III) Native Americans.

(ii) The presumption established by clause (i) may be rebutted with respect to a particular business concern if it is reasonably established that the individual or individuals referred to in that clause with respect to that business concern are not experiencing impediments to establishing or developing such concern as a result of the individual's identification as a member of a group specified in that clause.

(C) The following institutions are presumed to be disadvantaged business concerns for purposes of subsection (a):

(i) Historically Black colleges and universities, and colleges and universities having a student body in which 40 percent of the students are Hispanic.

(ii) Minority institutions (as that term is defined by the Secretary of Education pursuant to the General Education Provision Act (20 U.S.C. 1221 et seq.)).

(iii) Private and voluntary organizations controlled by individuals who are socially and economically disadvantaged.

(D) A joint venture may be considered to be a disadvantaged business concern under subsection (a), notwithstanding the size of such joint venture, if—

(i) a party to the joint venture is a disadvantaged business concern; and

(ii) that party owns at least 51 percent of the joint venture.

A person who is not an economically disadvantaged individual or a disadvantaged business concern, as a party to a joint venture, may not be a party to more than 2 awarded contracts in a fiscal year solely by reason of this subparagraph.

(E) Nothing in this paragraph shall prohibit any member of a racial or ethnic group that is not listed in subparagraph (B)(i) from establishing that they have been impeded in establishing or developing a business concern as a result of racial ethnic discrimination.

Mr. DYMALLY (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. ROE. Mr. Chairman, reserving the right to object, we have received this amendment on this side, and we have no objection to it.

Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. WALKER. Mr. Chairman, reserving the right to object, I, too, have no objection to the consideration of this amendment. As we specified before, we will seek some modifications of it in order to bring it in line with present civil rights laws, but that can be done in conference.

Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

MODIFICATION OF AMENDMENT OFFERED BY MR. DYMALLY

Mr. DYMALLY. Mr. Chairman, I ask unanimous consent to modify the amendment.

The CHAIRMAN. The Clerk will report the modification.

The Clerk read as follows:

Modification of amendment offered by Mr. DYMALLY:

In section 1001(b)(1)(B)(i) of the Dymally amendment add:

"IV Asian.

"V Women.

"VI Disabled."

After "III Native Americans." And add a new section 1002 (at the end of the amendment) as follows:

"SEC. 1002. USE OF QUOTAS PROHIBITED.—Nothing in this title shall permit or require the use of quotas or a requirement that has the effect of a quota in determining eligibility under section 1001.".

The CHAIRMAN. Is there objection to the request of the gentleman from California that the amendment be modified?

Mr. WALKER. Mr. Chairman, reserving the right to object, did the amendment at the desk include the antiquota language originally?

Mr. DYMALLY. Mr. Chairman, if the gentleman will yield, the answer is yes.

Mr. WALKER. So that does not take a modification?

Mr. DYMALLY. It is the last page.

The CHAIRMAN. The response is, yes.

Mr. WALKER. Mr. Chairman, I thank the gentleman, and I withdraw my reservation of objection.

The CHAIRMAN. Without objection, the modification is accepted.

There was no objection.

The text of the amendment, as modified, is as follows:

On page 507, after line 12, insert the following:

TITLE X—DISADVANTAGED BUSINESS CONCERNS

SEC. 1001. DISADVANTAGED BUSINESS CONCERNS.

(a) IN GENERAL.—In providing for any research relating to the requirements of the amendments made by the Clean Air Act Amendments of 1990 which uses funds of the Environmental Protection Agency, the Administrator of the Environmental Protection Agency shall require that each contract which is to be entered into for such research provides that not less than 10 percent of such research will be conducted by a disadvantaged business concern.

(b) DEFINITION.—

(1)(A) For purposes of subsection (a), the term "disadvantaged business concern" means a concern—

(i) which is at least 51 percent owned by one or more socially and economically disadvantaged individuals or, in the case of a publicly traded company, at least 51 percent of the stock of which is owned by one or more socially and economically disadvantaged individuals; and

(ii) the management and daily business operations of which are controlled by such individuals.

(B)(i) A for-profit business concern is presumed to be a disadvantaged business concern for purposes of subsection (a) if it is at least 51 percent owned by, or in the case of a concern which is a publicly traded company at least 51 percent of the stock of the company is owned by, one or more individuals who are members of the following groups:

(I) Black Americans.

(II) Hispanic Americans.

(III) Native Americans.

(IV) Asian.

(V) Women.

(VI) Disabled.

(ii) The presumption established by clause (i) may be rebutted with respect to a particular business concern if it is reasonably established that the individual or individuals referred to in that clause with respect to that business concern are not experiencing impediments to establishing or developing such concern as a result of the individual's identification as a member of a group specified in the clause.

(C) The following institutions are presumed to be disadvantaged business concerns for purposes of subsection (a):

(i) Historically Black colleges and universities, and colleges and universities having a student body in which 40 percent of the students are Hispanic.

(ii) Minority institutions (as that term is defined by the Secretary of Education pursuant to the General Education Provision Act (20 U.S.C. 1221 *et seq.*)).

(iii) Private and voluntary organizations controlled by individuals who are socially and economically disadvantaged.

(D) A joint venture may be considered to be a disadvantaged business concern under subsection (a), notwithstanding the size of such joint venture, if—

(i) a party to the joint venture is a disadvantaged business concern; and

(ii) that party owns at least 51 percent of the joint venture.

A person who is not an economically disadvantaged individual or a disadvantaged business concern, as a party to a joint venture, may not be a party to more than 2 awarded contracts in a fiscal year solely by reason of this subparagraph.

(E) Nothing in this paragraph shall prohibit any member of a racial or ethnic group that is not listed in subparagraph (B)(i) from establishing that they have been impeded in establishing or developing a business concern as a result of racial ethnic discrimination.

SEC. 1002. USE OF QUOTAS PROHIBITED.—Nothing in this title shall permit or require the use of quotas or a requirement that has the effect of a quota in determining eligibility under Section 1001.

The CHAIRMAN. The question is on the amendment, as modified, offered by the gentleman from California [Mr. DYMALLY].

The amendment, as modified, was agreed to.

□ 1310

AMENDMENTS EN BLOC OFFERED BY MR. ROSTENKOWSKI

Mr. ROSTENKOWSKI. Mr. Chairman, pursuant to the rule, I offer amendments en bloc.

The CHAIRMAN. The clerk will designate the amendments en bloc.

The text of the amendments en bloc is as follows:

Amendments en bloc offered by Mr. ROSTENKOWSKI: Page 64, beginning on line 7, strike "the fee provisions under section 185 shall apply within the area,".

Page 64, line 11, strike out the comma after "area".

Page 119, beginning on line 6, strike "or reasonable fees, charges, and other economic incentives (including" and insert "or economic incentives (which shall not include any fee or charge but which may include".

Page 119, strike lines 11 and 12 and insert the following:

"(6) COLLECTIONS.—Amounts collected by the Administrator.

Page 119, line 18, strike "such fees, charges, or collections" and insert "such collections".

Page 129, strike line 5 and all that follows through line 8 on page 132, redesignate the following sections accordingly and make the necessary conforming changes in the table of contents on page 59.

Page 171, beginning on line 14, strike ", such as fees, marketable permits," and insert "which shall not include any fee or charge but which may include marketable permits".

Page 325, strike line 5 and all that follows through line 8 on page 326.

The CHAIRMAN pro tempore. (Mr. HEFNER). Pursuant to the rule, the gentleman from Illinois [Mr. ROSTENKOWSKI] will be recognized for 30 minutes and the gentleman from Indiana [Mr. SHARP] will be recognized in opposition for 30 minutes.

The Chair recognizes the gentleman from Illinois [Mr. ROSTENKOWSKI].

Mr. ROSTENKOWSKI. Mr. Chairman, I ask unanimous consent to yield 15 minutes of my time to the gentleman from Texas [Mr. ARCHER].

The CHAIRMAN pro tempore. Is there objection to the request of the gentlemen from Illinois?

There was no objection.

Mr. ROSTENKOWSKI. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in strong support of the amendments of the Committee on Ways and Means which would delete from H.R. 3030 certain fees which are, in reality, taxes.

Never in my 31 years of service in this body have I seen a bill that so blatantly disregards the prerogatives of the House of Representatives as H.R. 3030 does. Never have I seen the officers of this House, whose duty it is to protect our constitutional prerogatives, walk away from that fundamental responsibility.

Much more is at stake today than just a jurisdictional dispute between two House committees. Nothing less is at stake than the constitutional prerogative of the House of Representatives to originate revenue legislation. For 200 years, that constitutional prerogative has been jealously guarded by the House and reluctantly respected by the Senate.

If, however, the clean air bill is passed in its current form, the House of Representatives and its officers will present the other body an open invitation to originate revenue legislation in the future under the guise of "fees."

I fully concede that the definitional issue of what is a fee and what is a tax is very difficult to resolve. But much more than a simple definitional issue or jurisdictional issue is involved. Beyond our constitutional authority to originate revenue legislation, the particular "fees" contained in the clean air bill would delegate to the executive branch the taxing authority of the U.S. Congress. All the more reason to support Ways and Means Committee amendments.

I am particularly offended by the procedure surrounding the reporting of the clean air bill. The Energy and Commerce Committee approved the clean air bill on April 5. The bill was not officially reported, however, until May 17—a full 6 weeks later. The bill was then referred sequentially to the Committee on Ways and Means and the Committee on Public Works and Transportation for only 2 days. A 2-day sequential referral of an important bill of this magnitude is patently unfair.

What is particularly offensive to me is the fact that the other body itself, appears to have a higher regard and deeper respect for constitutional prerogatives of the House of Representatives than our own officers. During

the Senate's consideration of the clean air bill, "fees" very similar to those contained in the House bill were struck on the Senate floor. The chairman of the Senate Finance Committee gave assurances that his committee would consider raising revenues to fund the enforcement of the clean air bill in an appropriate revenue vehicle later this year. Based on those assurances, the proposed "fees" were struck.

It is the height of irony that the full U.S. Senate respected the House's constitutional prerogative more than the officers of this House. If these "fees" are determined by our own officers and by this House as not being "revenue measures," we will see a flood of such "fees" originated by the Senate in the future, with our action today on these amendments and on the clean air bill cited as a precedent.

And one other thing, if you do not act to support the Ways and Means Committee amendments and remove these fees, those of you who do not want President Bush to change his "no new taxes" stand, will not have to wait for a budget summit agreement. You will have voted for taxes by another name right here.

I want to be absolutely clear in my position. As far as this chairman is concerned, if these amendments are not adopted and the bill is passed in its current form, the issue of what is a "tax" and what is a "fee" will have been decided. I will no longer try to protect the prerogatives of the House singlehandedly. If the House and its officers have so little regard and concern for our constitutional prerogatives under the origination clause, I will not ever object again to the Senate's origination of such "fees" in the future. The other body will be able to originate such "fees" with impunity, and 200 years of constitutional prerogative and pride of the House of Representatives will go out the window. But if that's what the House wants—if that's what its officers want—so be it. But count me out—I won't be party to it.

I urge a "yes" vote on the Ways and Means Committee amendments.

The CHAIRMAN pro tempore. Without objection, the gentleman from California [Mr. WAXMAN] will control the 30 minutes in opposition to the amendment, and the gentleman from California is recognized.

There was no objection.

Mr. WAXMAN. Mr. Chairman, I yield 3 minutes to the gentleman from Indiana [Mr. SHARP].

Mr. SHARP. Mr. Chairman, I thank the gentleman from California [Mr. WAXMAN] for yielding this time to me.

Mr. Chairman, I simply oppose the amendment because it will strip from the bill extremely important provisions to see to it that we have the regulation paid for. We have in here a number of provisions that relate to cost of regulation, which historically has been done on several pieces of legislation to see to it that the regulatory apparatus is paid for. Several of the fees in question are clearly user fees because of the necessary costs involved in this legislation, and third, of course, a number of them are penalties designed to get compliance, which historically again is something that has appeared in many pieces of legislation.

So, the issues between the House and the Senate on this question I think do not come to bear on this particular amendment in the way in which it is being presented. Whether they come to bear as a result of a vote yes is simply to take out of the bill extremely important provisions that get compliance, without which we really might as well not waste our time trying to clean up the air.

Mr. ARCHER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in strong support for the amendment offered by the gentleman from Illinois [Mr. ROSTENKOWSKI], chairman of the Committee on Ways and Means. If we pass H.R. 3030 with its revenue provisions called euphemistically user fees, we will be setting a dangerous precedent in regard to the constitutional prerogatives of the House of Representatives to initiate revenue measures.

Mr. Chairman, the Committee on Ways and Means amendment strikes revenue provisions of the bill which are disguised as fees. For example, H.R. 3030 requires major stationary sources of volatile organic compounds to pay a $5,000 fee if they are located in an area which fails to meet certain ozone attainment standards even though the particular company is not in violation of any rule or regulation.

In addition, Mr. Chairman, one of these so-called fees empowers the EPA to levy without limitation as a quote, disincentive any fee that they decide is appropriate. This is not a penalty imposed for violating standards. This is not a user fee. This is simply a method to raise revenue making an end run around the legislative branch and permitting the executive branch to levy taxes and revenue raising requirements at its own discretion.

□ 1320

It is purely a revenue provision. The Ways and Means Committee amendment preserves the constitutional prerogative of the House to originate revenue legislation. If this House rejects the Ways and Means Committee amendment, we will be saying that the so-called fees are not revenue measures and you can be certain that the Senate will take notice and will act accordingly in time to come. They will simply point to our own precedent.

The Ways and Means Committee amendment does not in any way weaken the bill. The Senate struck similar fees from their bill with the concurrence of all parties involved.

Mr. Chairman, I must say that the administration in testimony before our committee is opposed to the type of fee that I just described that is in this bill.

The Senate action plainly shows that these so-called fees are not necessary to have a strong clean air bill. The fees levied by the States are adequate.

There was a recognition on the part of the Senate that these were revenue measures when they struck them out of their bill.

The Ways and Means Committee amendment also avoids a constitutional challenge of the bill. The fees may be an unconstitutional delegation to the executive branch of the taxing authority of the Congress.

Actually, the Ways and Means Committee amendment strengthens H.R. 3030 by reducing the possibility that it will be attacked as unconstitutional.

It is regrettable that today we are in the position of having the House vote whether to protect its constitutional prerogatives or not, but it is an opportunity for the House to rid this bill of areas that were even unknown to members of the Committee on Energy and Commerce until just this morning, to rid it of enormous potential levies of revenue-raising characteristics from our society at large.

Mr. Chairman, I urge adoption of the amendment.

Mr. JACOBS. Mr. Chairman, will the gentleman yield?

Mr. ARCHER. I am happy to yield to the gentleman from Indiana.

Mr. JACOBS. Mr. Chairman, I commend the gentleman for his typically clear thinking and concise statement and rise in support of the amendment.

I believe, as the gentleman has implied, that we can clean up the environment without dirtying up the Constitution.

"Read my lips, no bureaucratic taxation without representation."

Mr. WAXMAN. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. LENT].

Mr. LENT. Mr. Chairman, I thank the gentleman for yielding me this time.

I just wanted to say in response to something my colleague, the gentleman from Texas [Mr. ARCHER] said earlier, he said the administration is opposed to the type of fee that is included in this bill. I think that is a direct quote.

I would just like to point out to my colleague and to all others here that the fees and the penalties and the sanctions that are in this bill were in this bill when it came to the House from the White House. They were in the original H.R. 3030, so that when

the Committee on Energy and Commerce took this bill up, as I recall, we did not change any of these fees or this fee structure one iota.

Perhaps it is unfortunate that when the bill came and was referred, there was not some provision in there for referral to the Committee on Ways and Means, but the provisions that are under dispute in H.R. 3030 were carefully crafted in the original Bush bill to be either user fees to support the cost of the permitting program, or sanctions, such as the $5,000 per ton sanction for sources in the worst nonattainment areas that fail to attain the ozone standard.

They are not—and I repeat—not revenue enhancing provisions. H.R. 3030 allows the EPA to use reasonable fees, charges, and other economic incentives, including marketable permits and auctions of admission rights as a means to reduce emissions from these many different products. These fees will allow the EPA to maximize the use of market-based principles and minimize the cost of regulations.

These fees also have the advantage of increasing private sector innovation in reducing emissions and of minimizing Government micromanagement. Despite these potential benefits, the Ways and Means Committee amendment would eliminate the use of fees to control emissions from these products and this could in fact seriously cripple the workability of the Clean Air Act which we are now deliberating.

I would just like to respond to one other point, when someone here said this amendment or this bill would dirty up the Constitution, and after all, the Senate had stricken these fees from the Bush bill. If the fees are permitted to stand in the House bill, the Constitution is satisfied, because whether it is a tax or a fee, and we would challenge that it is a tax, we say it is a fee; but even if you are right and it is a tax, it would in effect be originating in H.R. 3030 in the House, so the Constitution is satisfied.

Mr. MOODY. Mr. Chairman, will the gentleman yield?

Mr. LENT. I am happy to yield to the gentleman from Wisconsin.

Mr. MOODY. Mr. Chairman, I would like to make two points. No. 1: The gentleman extensively mentioned support from the administration. The administration came to our committee and testified that they prefer the Ways and Means version, rather than the Energy and Commerce version. So the administration is on the side of the amendment offered now by the Committee on Ways and Means. That's No. 1.

No. 2: If charges that are in fact taxes are deemed to be merely fees by this House, then what is to stop the Senate from beginning to originate bills that have fees in them that we used to call revenues?

The gentleman from New York [Mr. LENT] is right when he says that it is the House which is initiating the charges this time, but the precedent will then be set that these kinds of charges do not fall under the revenue origination clause of the Constitution. Then the Senate will be absolutely free to begin to originate these types of charges into Senate bills in the future.

Mr. LENT. Mr. Chairman, the only thing I can say to the gentleman is that we made some inquiries of the White House. They say they are opposed and want Members to vote against the Rostenkowski amendment.

When the bill came to us, it had this language in it.

Mr. ARCHER. Mr. Chairman, will the gentleman yield?

Mr. LENT. I am happy to yield to my colleague, the gentleman from Texas.

Mr. ARCHER. Mr. Chairman, I thank the gentleman for yielding to me. I know the gentleman is in good faith.

I was just back in the Cloakroom having a discussion with the White House. They are sending up a notice to confirm what they testified to before the Committee on Ways and Means, that they want these fees knocked out and that they support the Ways and Means Committee amendment. That is the current position of the White House as of the last 15 seconds.

It is a matter of record when they testified before our committee on these euphemistically called fees, which are nothing but tax increases, that they were opposed to them. They participated in knocking them out in the Senate.

For those who care about the position of the administration, they are in favor of the Ways and Means Committee amendment.

Mr. ROSTENKOWSKI. Mr. Chairman, I yield 2 minutes to the gentleman from Georgia [Mr. JENKINS].

Mr. JENKINS. Mr. Chairman, I rise in support of the chairman of my committee, the gentleman from Illinois.

I want to make two or three points. This is not a fight between committees. We are attempting to say that the House of Representatives is trying to preserve the constitutional prerogative that we originate revenue measures. That is the entire fight as far as the Constitution is concerned.

Second, of all, I want you to remember now that we are delegating by these so-called fees and revenues, we are delegating to an executive branch, the EPA, the full authority to impose some kind to taxes, we do not know how much, upon your little dry cleaning plants, upon all these small businesses, and at some point you are going to come back and say, "How did they get all that authority?"

Where did they get that from?"

□ 1330

We are now being asked, as the House of Representatives, to delegate this, which we will be doing, and no one will know how much the revenues, the taxes, are going to be. No one will know what businesses will be impacted, and yet Members, going back to their districts, are going to be asked by small business after small business, "How did we ever get to this point?" We are getting to that point today.

If we are going to preserve the right of the Congress to impose taxes, if we are going to reject the right of the executive branch to impose whatever taxes they want, now is our opportunity. Vote for this position of the House of Representatives as the chairman of the Committee on Ways and Means has asked us to do.

I ask the support of the Member of this amendment.

Mr. WAXMAN. Mr. Chairman, I yield 5 minutes to the gentleman from Ohio [Mr. ECKART].

Mr. ECKART. Mr. Chairman, my fellow colleagues, let us put this amendment in its simplest and plainest context: A vote for the Committee on Ways and Means amendment is a vote to gut the bill.

Very simply what this amendment does is strike from the carefully crafted enforcement provisions financial disincentives to pollute.

Let me give the Members an example: Section 185 of the bill provides a fee of $5,000 per ton to be paid by those who break the Nation's clean air laws by emitting volatile organic compounds into the atmosphere, known as human carcinogens. This amendment strikes that penalty. The reason? The reason we are going to give to that poor mother whose deformed baby is not going to make it through school is that the House rules "kind of got in the way" maybe. That baby is no better because this amendment passes.

The Committee on Ways and Means amendment strikes the provision in the bill which allows the EPA the authority to issue fees to assure that States comply with Federal environmental law.

If a Member is from the New England area, they have a vested interest in the strong, and vigorous acid rain title. This amendment would strike the authority of the State and the Federal Government to enforce that authority to put in place fees to make sure that the States meet their emissions reduction requirements.

If Members like acid rain and want business as usual, vote for this amendment, for the fact of the matter is absolutely clear. This amendment strikes from the bill the ability of the EPA through the State or Federal level to penalize polluters. If Members like polluters to be able to emit volatile organic compounds into the air, if they

like the prospect of more lead in their drinking water, if they think we should have more acid rain, not less, then vote to strike the penalties, fees, and enforcement provisions of this bill.

Mr. WAXMAN. Mr. Chairman, will the gentleman yield?

Mr. ECKART. I am happy to yield to the gentleman from California.

Mr. WAXMAN. Mr. Chairman, I know this is a controversy over jurisdiction between committees. The Committee on Rules did not see fit to grant a self-executing rule as was requested by the Committee on Ways and Means and instead gave them this opportunity for this amendment.

But I do want to concur with the concerns about the impact of this amendment on the substance of this clean air bill. Should this amendment carry, it would do a great deal of harm to the environmental cause for which the bill is before us. The fees in the bill serve as the basis for pushing forward the incentives for the States and the industries to do the cleanup that is necessary to achieve the clean air standards.

I do want to stress this substantive point, and it is a very important point, because the bill before us is the Clean Air Act, and I would want to see, as the gentleman is addressing, the ability of the Clean Air Act to succeed in its objective.

Mr. ECKART. Mr. Chairman, I thank my colleague.

I would conclude in my remarks by saying that if Members want a bill that is all bark and no bite, vote for the Committee on Ways and Means amendment. If they want more comprehensive and integrated State implementation and planning, vote against the amendment. If they want to achieve maximum available control technology and give the rights to the States and the attorneys general and the EPA to enforce the clean air law, vote against the Ways and Means amendment.

This amendment for no defensible reason, strikes all of the important enforcement regulatory programs upon which compliance is based, and make no mistake about it, fees are an important part of following this Nation's environmental laws.

If Members believe that the polluters should pay, then do not vote for the Ways and Means amendment.

Mr. STARK. Mr. Chairman, will the gentleman yield?

Mr. ECKART. I am happy to yield to the gentleman from California.

Mr. STARK. Mr. Chairman, the gentleman mentioned the EPA and enforcing the laws in New England, but what he neglected to suggest, I think, is that the EPA could enforce an import oil fee under this bill the way it is written unless the Committee on Ways and Means amendment were to pass.

Mr. ECKART. That is not true. The import oil fee is not subject to the provisions of the bill, and it has no relative relationship to the EPA's enforcement of the Clean Air Act.

I urge a "no" vote. Do not coddle polluters. Vote against Ways and Means.

Mr. ROSTENKOWSKI. Mr. Chairman, I yield 2 minutes to the gentleman from Wisconsin [Mr. MOODY].

Mr. WAXMAN. Mr. Chairman, I yield 2 minutes to the gentleman from Oklahoma [Mr. SYNAR].

Mr. SYNAR. Mr. Chairman, ladies and gentlemen, this is a very important amendment, and I hope that our colleagues who are in their offices and those who are on the floor will give it the attention it deserves.

What this amendment is about, very frankly, is whether or not we are going to enforce the law that we will pass later today or sometime tomorrow.

This is not an issue about taxes. In fact, many of the provisions within this bill do not even relate to Federal taxes. They relate to the State fees which will be charged.

Striking this portion of the bill will not affect the Senate provisions, unlike what has been said before. What we are talking about here is really just two things.

User fees, very similar to what we charge when FERC operates its agency. User fees, very similar to what we do with the Nuclear Regulatory Commission. But, more importantly, what we are talking about here are penalties, penalties which will put polluters on notice that they cannot pollute without fear of having to pay a fine.

□ 1340

So those who are concerned about whether or not we are going to enforce this clean air bill will have an opportunity in a few minutes to say yes. Not only do we want to have a good bill and move forward on clean air, but we also want to make sure that those who pollute are going to pay for it.

It has been said that the President is opposed to these new taxes, but the President's original bill as introduced, H.R. 3030, had these exact same or similar fees within it. This is very consistent with White House and congressional thinking. If you are going to have a clean air bill, you need to put teeth in it by paying for the cost of its application and implementation, and also paying for it through penalties so polluters will know they must stop polluting.

So do not be confused. This is not an issue of jurisdiction between the Senate and the House, between the Committee on Ways and Means and the Committee on Energy and Commerce. This is an issue of whether or not we are going to enforce the law we are about to pass and whether or not polluters will pay for the damage that they have caused.

Mr. ARCHER. Mr. Chairman, I yield 2 minutes to the gentleman from Minnesota [Mr. FRENZEL].

Mr. FRENZEL. Mr. Chairman, one speaker on the floor said that babies will feel better after they got into some cancer difficulties if fees were collected. I am not sure we would all agree to that.

Another speaker said the fees really were not taxes at all, they were penalties. The Committee on Ways and Means and the House should have no objection to the assessment of real fees or real penalties by any other committee of the House that has jurisdiction to create such fees or penalties.

What we are complaining about is that no committee of the House, save one, should have the opportunity to levy taxes.

We have very few rules in this House. Sometimes we forget about them because we waive them so frequently. There would be no reason for us to be making this amendment had not all rules be waived on the amendment of the Committee on Commerce and Energy.

Some of our few fules are that the Committee on Rules makes rules. Another of our rules is that only appropriators can appropriate. We also tell the appropriators they cannot authorize. The Tax Committee should be the committee to authorize the taxes.

The Constitution is important in this case because, as our chairman has pointed out, this will give the Senate unlimited opportunities to send us taxes in the guise of fees and thereby get around the Constitution. This will create unlimited opportunity for those in the legal fraternity to indulge in what they in this litigious society, do best, to challenge in court whether these fees will stand up.

Please observe one of the very few rules that the House still has. Vote for the amendment of the gentleman from Illinois [Mr. ROSTENKOWSKI].

Mr. WAXMAN. Mr. Chairman, I yield 2 minutes to the gentleman from Ohio [Mr. THOMAS A. LUKEN].

Mr. THOMAS A. LUKEN. Mr. Chairman, I believe the Constitution states that bills raising revenue must originate in the House of Representatives. We all subscribe to that. But this bill we are considering is a House bill. It is passed through committees in the House. So if there is any contest here, it is between committees of the House, not between the House and the Senate as has been suggested.

But the issues as have been very clearly proclaimed at this juncture, where we are now, transcend any parochial considerations of whether it is one committee or another committee

of this House. As has been very clearly stated, passage of this amendment would gut the bill. A vote for such an amendment would be an antienvironmental vote.

The provisions of this bill allow the EPA to impose fees to include marketable permits. These are provisions which have been in countless provisions before various environmental issues before this House. They have been enacted and they have not been considered revenue.

There is no decision, there is no ruling by the Parliamentarian that says that there are revenue matters. To pass this environmental issue at this particular time transcends the considerations which have been put before us. The argument that this bill originated in the Senate is a bogus argument. It bootstraps the argument that we made to the Senate by the Committee on Ways and Means, which many have been valid at that particular time. But we are now dealing with a House bill from committees in the House which will improve the environment. There is no way to enforce this bill without these provisions coming from the committees.

Mr. ARCHER. Mr. Chairman, I yield 1½ minutes to the gentleman from Pennsylvania [Mr. RITTER].

Mr. RITTER. Mr. Chairman, I want to make it very clear there is more to this issue than just the jurisdictional differences. There is a substantive difference between the two sides, and that is in the Committee on Energy and Commerce virtually no one is aware that this bill was also a major new tax bill. If it looks like a duck, it walks like a duck, it quacks like a duck, quoting our most distinguished chairman, it is a duck. It is a tax.

The bill will allow EPA to levy new taxes on industry, on manufacturing industry, in areas hardest hit by foreign imports.

Mr. Chairman, let me just quote from the language of the bill because the gentleman from Oklahoma [Mr. SYNAR] said this was not really a Federal tax. I quote, "the EPA would be authorized to promulgate regulations designed to decrease the emission of volatile organic compounds from consumer"—read housewives—"or commercial products"—read soaps and detergents.

I continue, "these regulations could include the imposition of fees as well as other economic incentives. Any fees collected under these regulations would be deposited in a special fund of the United States Treasury to be used by the EPA."

This is the Federal Government, Washington, DC, who owns that Treasury, not Harrisburg, not Albany. This is a new Federal tax, a new EPA taxing authority that has slipped through almost unnoticed for the Environmental Protection Agency, the new industrial manufacturing tax man in America.

Mr. ROSTENKOWSKI. Mr. Chairman, I yield 2 minutes to the gentleman from Texas [Mr. PICKLE].

Mr. PICKLE. Mr. Chairman, it is unfortunate that this amendment must be offered. Had our committee had the opportunity to address this problem in the normal course of legislation, we could have corrected it.

We are not doing this to cause damage to the bill. The members on the Committee on Ways and Means are just as committed to protecting the environment as anybody on the other committees. We would not be protesting today except this is a serious constitutional question. I do not think any Member in the House would disagree with that.

The change has been made that if you remove this fee language, you gut the bill. That is not correct. It does not do substantive damage to the bill. It does require the Committee on Ways and Means and in the other body the Finance Committee to meet and from the proper legislation to raise the funds necessary to carry out the legislation.

That would be done. That was offered by the other body. We will do that. But if you proceed under the present language, you are really going to say that tax bills do not have to originate in the House. That is not intended.

Mr. Chairman, I would hope that Members do not believe this is just a squabble between two different committees. It is a serious constitutional question. If you just accept this amendment, we can meet and address it properly.

This should have been done. You kept this bill in mothballs up until about 36 hours before we had to vote on it, and that was not proper. You give us a chance to correct it and we will do it right and all will be proud of the change.

□ 1350

Mr. MOODY. Mr. Chairman, will the gentleman yield?

Mr. PICKLE. I yield to the gentleman from Wisconsin.

Mr. MOODY. Mr. Chairman, I think the gentleman from Texas makes an excellent point, that this conflict is not between committees. It is between the House and the Senate, because if we define these charges as not being revenues, which in fact they are because they go in the General Treasury, then what is to stop the Senate from initiating new measures in the future that reflect these same types of charging activities, and calling them fees instead of revenues?

Mr. WAXMAN. Mr. Chairman, I yield 2 minutes to the gentleman from Oregon [Mr. WYDEN].

Mr. WYDEN. Mr. Chairman, under the reported bill the EPA would be required to issue a Federal implementation plan for any State that fails to submit a required State plan or submits a State plan that fails to meet EPA's minimum criteria.

The fact of the matter is the amendment we are considering now, the Ways and Means Committee amendment, would strip EPA of this authority to include these cost of regulation fees and user fees as part of a Federal implementation plan. I think this is extremely important because the heart of a strong clean air program in this country is to make sure that the Federal Government, through the Environmental Protection Agency, can move when the States fail to act.

If we pass this amendment, particularly as it relates to the State plans, we will not have that Federal hammer that will push the States to act and to get tough with polluters. So I hope my colleagues will reject the amendments, and I thank the gentleman from California for the time.

Mr. ROSTENKOWSKI. Mr. Chairman, I yield 1 minute to the gentleman from New Jersey [Mr. GUARINI].

Mr. GUARINI. Mr. Chairman, this amendment involves an issue of paramount importance and establishes a very dangerous precedent.

This is not a debate about the environment and clean air, or about politics or about policies, nor a debate between two committees. The bill was originally assigned to the Ways and Means Committee.

There is a larger question. What is at stake is the constitutional authority of the House. What is at stake is the constitutional principle, devised very carefully and crafted by our forefathers some 200 years ago.

This principle has served our country well for these past two centuries, and the principle is in jeopardy today. I urge support of the amendment.

Mr. ARCHER. Mr. Chairman, I yield 2 minutes to the gentleman from New York [Mr. MCGRATH].

Mr. MCGRATH. Mr. Chairman, I thank the gentleman for yielding time to me.

Mr. Chairman, I rise in support of the Rostenkowski-Archer amendment, a measure to preserve the constitutional prerogatives of the House to raise revenues.

There have been an awful lot of questions regarding this bill. We have heard a lot of rhetoric about this particular amendment gutting the bill. This amendment does just a couple of things.

One, the Ways and Means Committee strikes the revenue provisions of the bill which are disguised as fees. There is no relationship between these fees, or what I call taxes, and the service provided for these fees. So, there-

fore, it is not a fee, it is a tax. It is a new tax.

In fact, there is no relationship between those who are the polluters and who have to pay these fees and those who are not polluters who also have to pay these fees. Therefore, it is a tax.

The Ways and Means Committee avoids a constitutional challenge to the bill. How would we be serving our constituents and our environment by having this law struck down by a constitutional challenge to it because it imposes reveneus and taxes that were not started by the Ways and Means Committee in the House of Representatives?

Then there is the question of whether or not this provision actually weakens the bill, and I say no. The four sections that we strike are striking the fee component of that section, not the permit, not the permit component of that section, so that is a bogus argument.

The Senate struck similar fees from the bill in concurrence with everybody, all parties involved on both sides of the aisle, and I think that tells the story.

Mr. WAXMAN. Mr. Chairman, I yield 2 minutes to the gentleman from Pennsylvania [Mr. WALGREN].

Mr. WALGREN. Mr. Chairman, I thank the gentleman from California for yielding this time.

Mr. Chairman, I just want to say that I am amazed that we come to this point, and then with the country waiting for the House of Representatives to pass a bill in this week before the Memorial Day recess that we get into this kind of a squabble between two committees. The truth of the matter is it is much more than a squabble between these committees.

The Ways and Means Committee provision would fundamentally strike the enforcement provisions of this bill. These are fees and penalties that have traditionally been used to enforce measures that the Congress enacts. It would be a tragedy if the whole effort to develop a Clean Air Act in this session of Congress were to be derailed by the kind of hiatus that would occur if this amendment were enacted.

So I hope all Members will think hard about this and its implications and support the Energy and Commerce Committee provisions in this bill.

Mr. ARCHER. Mr. Chairman, I yield 2 minutes to the gentleman from Illinois [Mr. CRANE].

Mr. CRANE. Mr. Chairman, I had the privilege back in 1983, of introducing the bill to create the Bicentennial on the Constitution that was subsequently passed by this body and the other, and that produced an entity, the Bicentennial Commission, to honor the workings of the Founding Fathers that were consummated back there in 1787, and finally ratified and implemented in 1789. And here we are still in the bicentennial observances.

We have before us today, I think, the most important constitutional question that I can think of in the 20-odd years that I have served in this body. And it has to do with article I, section 7: All revenues shall be originated by the House of Representatives.

This is not a committee battle. It is a battle to preserve those most vital ingredients of our Constitution, and those go back to the Magna Carta, whether the king can impose taxes. I do not care who sits down there at EPA. Whether it is a Republican or whether it is a Democrat administration is really irrelevant. What is vital is to preserve the integrity of this body.

There is a fundamental distinction between a fee and a tax. I just referred to the dictionary. A fee is to pay for services rendered, a charge fixed for services, a gratuity. A tax, by contrast, is a pecuniary charge levied by government for the public purposes.

We are talking about transferring that authority to the Executive Branch, and also opening up a Pandora's Box to let the other body, in violation of article I, section 7, initiate fees, a euphemism in this instance for the imposition of taxes.

I would urge all Members to recognize this is not an either/or conflict. There are alternatives, as the chairman has already recommended. The committee of jurisdiction here on tax questions and the House as the body that has the original jurisdiction can remedy any shortfall. That can be accomplished.

And I would remind Members also of that oath they all took, the very first act when you got elected and you swore to uphold that Constitution, so help you God.

Mr. WAXMAN. Mr. Chairman, I yield 2 minutes to the gentleman from Louisiana [Mr. TAUZIN].

□ 1400

Mr. TAUZIN. Mr. Chairman, the adoption of the Committee on Ways and Means amendment will have one singular effect upon this excellent, I think, package of bills that have been combined into one massive attempt to do something about the Nation's air.

It will take from it the fuel that makes it work. The fuel that makes it work, like any other regulatory scheme, is the fees that are collected to make sure that the agency can carry out its obligations under the act. The fuel that makes it work is the penalties that encouarge those who would violate the act not to violate it. The fuel that makes this system work is the dedication of those monies in special funds for those purposes, not to be used for other general revenue purposes.

Now, you may not like the way this bill has come down. You may not like the rule. You may not like the fact that we have not had 8 weeks of debate on this floor as we had in the E&C committee. I understand that. I wish we had more time to get it done in the way, in the form, in the process that everybody liked. But let me assure you, you take the fuel out of this bill because you do not like the procedure and you just as soon not have the bill.

For this bill to succeed, it must be fueled right, it must be carried out right, and we must carry this function to its conclusion as rapidly as we can.

Clean air will not wait, clean air decisions on this House floor cannot wait for us to find a better procedure, a better day, a better time to act. Clean air demands that we act now.

I ask you please to put aside jurisdictional battles, to put aside your concerns about how you might prefer we were doing things today, and consider the fact that without the fuel, this mechanism that is driving us toward clean air for America and for the world eventually will have been deprived of the engine performance that will take us to that goal, I think, as rapidly as this bill demands that we do it.

Remember when we started this process, clean air was our goal. Clean air has got to be our goal in this amendment.

Mr. ROSTENKOWSKI. Mr. Chairman, I yield 1 minute to the gentlewoman from Connecticut [Mrs. KENNELLY].

Mrs. KENNELLY. Mr. Chairman, it is so important that we keep the facts straight in this debate when both sides feel so strongly. The fact of the matter is this amendment does not weaken the bill, the very important bill before us, at all.

The second thing: Have we not stopped playing games with whether it is a license or a user fee or what we call it that is important? All these things that we are talking about are taxpayers' dollars, revenues raised, revenues that should be raised by the Committee on Ways and Means.

But the main reason I am standing is, as the gentleman before me said, we should put aside jurisdictional questions. We are talking about the Constitution of the United States, about article 1, section 7, that these fees are an unconstitutional delegation to the executive branch.

EPA gets taxing ability. We really should not do it. The piece of legislation is too important that is in front of us to do something we do not have to do.

Mr. ARCHER. Mr. Chairman, I yield 1 minute to the gentleman from Tennessee [Mr. SUNDQUIST].

Mr. SUNDQUIST. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I would like to address two issues, the issue of taxes and the issue of the prerogatives of the House and the Senate.

Mr. Chairman, I rise in strong support of the amendment of the gentleman from Illinois, who is submitting that on a bipartisan basis.

H.R. 3030 needs this amendment. It contains fees that are taxes, it is a duck by anybody's measure. So I would say to my colleagues, the issue is not about enforcement, it is about the constitutional prerogative of the House of Representatives.

Calling a tax a fee does not alter the fact that it is still a tax.

So I would say to my friends from the Northeast, if this occurs and this amendment is defeated and the Senate originates an oil import fee, is that a tax or not a tax? Of course it is a tax. We are giving them that opoortunity to introduce taxes into this body. Calling that an oil import fee does not make any difference, it is still a tax.

This is not about teeth, it is not the teeth, it is about the dentist. Do you want the House to do that, or the Senate?

Let us not give up our constitutional prerogatives.

Mr. ROSTENKOWSKI. Mr. Chairman, I yield 1 minute to the gentleman from Michigan [Mr. LEVIN].

Mr. LEVIN of Michigan. Mr. Chairman, this is an unfortunate and unnecessary battle.

Mr. Chairman, I intend to vote for the bill. I also intend to vote for this amendment.

It has been said here by several speakers that fees are involved, not taxes. Fees, not taxes.

But then why was the bill sent to the Committee on Ways and Means? There clearly are taxes in this bill within the jurisdiction of the committee.

The Senate deleted these provisions. What is done is to not only avoid the jurisdiction of the Committee on Ways and Means, but to give taxing authority to EPA.

When you read the authority given to it, it is very broad, indeed carte blanche; it seems to me an unwise measure.

We ought to uphold the traditions and rules of this House and vote for the amendment of the gentleman from Illinois [Mr. ROSTENKOWSKI] and the gentleman from Texas [Mr. ARCHER].

Mr. ARCHER. Mr. Chairman, I yield 1 minute to the gentlewoman from Connecticut [Mrs. JOHNSON].

Mrs. JOHNSON of Connecticut. Mr. Chairman, I rise in strong support of the committee amendment. Where was the outcry when this very same action was taken in the Senate, if in fact this guts the clean air bill? This was done because it does not gut the clean air bill.

We are united in support of a strong clean air bill, but these provisions set a terrible precedent. They are dangerous to our own future, to deficit reduction, to sensible legislating, to fiscal responsibility, to the structure our Constitution create to enable us to control the future destiny of our Nation.

Mr. Chairman, these are not penalties. They are not user fee. They are general revenue raisers, and that is why the bill was referred to the Committee on Ways and Means to begin with.

If we do not support the committee here today, we set the precedent of literally inviting every committee of the House, as well as the Senate, to meet their tough obligations under our budget resolution by creating general fees rather than constraining spending.

Mr. ARCHER. Mr. Chairman, I yield 1 minute to the gentleman from Illinois [Mr. RUSSO].

Mr. RUSSO. Mr. Chairman, let us make no mistake about this: This is a tax that we are going to allow a bureaucratic agency, the EPA, to impose on small businesses around this country.

Congress is not going to have any input into this tax. So what we are going to say here today, "It is all right if we shirk our responsibilities, it is all right if we let the bureaucrats at EPA set the tax rates on businesses in this country."

You know what else is horrible about this provision? We are going to guarantee that small businesss in their country that live within their permits, that do not add pollution to the air, are going to have to pay this tax regardless.

Is that the kind of authority we want to give to the EPA? If that is what you want to do, then you vote against this amendment. But if you want responsible tax legislation, if you want the agencies to be responsible to the Congress and not to the executive, you vote for this amendment and make sure that the bureaucratic tax is kicked out of this bill.

Mr. WAXMAN. Mr. Chairman, I yield 1 minute to the gentleman from Tennessee [Mr. COOPER].

Mr. COOPER. Mr. Chairman, I would like to urge my colleagues to oppose the Committee on Ways and Means amendment to this legislation.

As a member of the Committee on Energy and Commerce, you might expect me to say something like that. But I have worked firsthand with the authors of this legislation. We have a fine product here. It is important to keep it on track and reject the Committee on Ways and Means' advice.

It is also important to realize that the fee structure set up by this legislation is integral to its working. Despite the good intentions of the Committee on Ways and Means, it is vital to keep this fee structure together.

□ 1410

We have tried to strike a fair and equitable balance. I understand some of the jurisdictional concerns of my colleagues, but remember above all we need cleaner air in this country. The best way to get that cleaner air is to stick with the committee version.

Mr. WAXMAN. Mr. Chairman, will the gentleman yield?

Mr. COOPER. I yield to the gentleman from California.

Mr. WAXMAN. Mr. Chairman, I want to underscore again that many Members have told me how pleased they are that we have carefully crafted this bill and avoided a lot of contention we have seen even on the Senate side, as they deliberated for weeks.

The Committee on Ways and Means amendment would take out the fees that the States would impose and be available for EPA to make sure that the law works. So I hope the people who care about this clean air bill and care about its environmental consequences will oppose the amendment.

The CHAIRMAN. The Chair will inform the gentleman from Illinois [Mr. ROSTENKOWSKI] that he has 2½ minutes remaining.

Mr. ROSTENKOWSKI. Mr. Chairman, I yield 1 minute to the gentleman from New York [Mr. RANGEL].

Mr. RANGEL. Mr. Chairman, some people would like to look at this as just a turf dispute for jurisdiction between committees. However, it is really a question as to what is a fee and what is a tax.

Clearly, the Parliamentarian decided that question when the bill was referred to the Committee on Ways and Means, but as I see the Congress passing more and more of its authority to the President, really running away from its own, as I see our legislation now through summit, rather than through congressional leadership, it seems to me that maybe we ought to let the Committee on Energy and Commerce decide the issues by having the President of the United States not ask Members to read his lips, but to decide what fees he would need in order to close the deficit.

Clearly, if Members think it is the Committee on Ways and Means losing, I suggest to Members that it is the House of Representatives that is losing. It is the Senate that will be losing, and it is the executive branch that is the winner.

The CHAIRMAN. The gentleman from California [Mr. WAXMAN] has 5 minutes remaining.

Mr. WAXMAN. Mr. Chairman, I yield the remaining 5 minutes to the gentleman from Michigan [Mr. DIN-

GELL], the chairman of the Committee on Energy and Commerce.

Mr. DINGELL. Mr. Chairman, the quarrel on the floor today was not of my seeking, nor was it of the seeking of the Committee on Energy and Commerce. We were presented with a bill which was delivered to Members by the administration. That bill is now before us. It is a proposal which has been received well by all Members, the Members of this body, the administration, environmentalists, and others.

My good friends from the Committee on Ways and Means have said that the subject of this amendment are taxes. They have said the fact it was referred sequentially to the Committee on Ways and Means means that in fact it was taxes. That is sort of curious ad hoc reasoning, and I think it should be addressed.

The hard fact of the matter is that this bill was not referred jointly to the Committee on Ways and Means, nor was it referred for more than a brief period by the Speaker to the Committee on Ways and Means. I have indicated to the Speaker that it was my feeling that the Committee on Ways and Means needed a substantial amount of time, and that we needed a significant amount of time, to address the jurisdictional concerns of the Committee on Ways and Means. I have talked to the chairman of the Committee on Ways and Means about negotiating out our differences. I have sought to do so in a spirit of good will and friendship. Regrettably, we have not been able to come to an agreement on the question of substance. However, the question of whether or not these are taxes can be addressed fairly easily by the Members here.

First of all, they are called penalties and fees. Second of all, the Speaker referred this matter to the Committee on Ways and Means for only a brief period of time. If the Committee on Ways and Means has a quarrel, that quarrel is with the Speaker. It must be observed that the Committee on Rules has not ruled that these are tax matters. They have afforded, in good part at my suggestion, the chairman of the Committee on Ways and Means and that committee, the opportunity to address these via amendment to strike. I believe that is a fair way in which this matter should be handled, and the House can then decide both the substantive, the jurisdictional, and procedural issues on this particular point.

I have told the chairman of the Committee on Ways and Means that if these are taxes I will join him in an amendment to strike. However, that has not been the ruling as of this time. Indeed, it is the judgment of the Speaker, as nearly as I can read it, that these are, in fact, penalties and fees, not taxes.

Now, having dealt with those matters, let me address the question: What do the amendments that are offered by the Committee on Ways and Means do? They first strike from the ozone reduction title EPA's authority to include user fees and cost of regulation fees in its regulatory scheme, an essential part of the regulatory scheme. And if Members are ready for clean air, Members should look with sympathy on this language of the bill and oppose the amendment.

The amendment strikes the provision in the bill calling for these fees to be deposited in a special Treasury account, to be used by EPA solely for its ozone control activities. Again, a user fee, a cost imposed upon the regulated individual for benefit conferred by regulation. The amendment strikes from the legislation the provision in our permit program allowing EPA to assess fees when a State has failed to do its duty. This is essential, not only as a sanction upon the State, but as a device to procure compliance with the law. Clearly, that is not a tax. The amendment strikes from the bill an entire section that would assess penalties against polluters in severe and extreme nonattainment areas, if those areas fail to reach compliance. Now, this compliance does not have to be reached today or tomorrow, but in the year 2005 and in the year 2010.

Now, why does the Committee on Ways and Means seek to do this? They say that it is on a procedural and jurisdictional ground, that these are taxes. I would point out, as I already have, that this issue has already been addressed by the Parliamentarian, by the Speaker, by the Committee on Rules. There is nothing in any of the actions of any of those individuals that would indicate in any fashion whatsoever that these are, in fact, taxes and not fees or penalties, as has been asserted.

Let Members just take a look at the consequences of this. The Committee on Rules, the Speaker, the Parliamentarian have not ruled with my good friend on the Committee on Ways and Means, but the practical effect of the amendment that is offered by the Committee on Ways and Means is to strike not only fees but to strike sanctions. If Members oppose pollution, if Members believe in clean air, if Members to do something about it, if Members want to see to it that there are teeth in this law, then I believe as a matter of conscience Members have no choice but to oppose the amendment that is offered by the gentleman from Illinois. I say that with affection to the gentleman because we are old friends and have been here a long time. However, I believe that clearly at stake here is clean air and provisions of a bill offered in good faith, ruled upon by the Speaker, ruled upon by the Committee on Rules, which impose fees upon wrongdoing, and which impose fees which deal with the cost of providing an essential government service. They are essential to the enforcement of the law. They are essential to clean air. They assure that what we are addressing here will give Members clean air and will do so in an expeditious and a wholesome fashion.

I urge that this amendment, which is mostly mischievous in character, be rejected by my colleagues.

Mr. ROSTENKOWSKI. Mr. Chairman, I yield myself the remainder of my time.

It has been suggested here that the Committee on Ways and Means amendment has an effect on the way States are taxed. The Committee on Ways and Means amendment has no effect at all on the manner in which States can tax. It has also been suggested here that the amendment eliminates sanctions needed to clean up the environment. None of this is true at all.

I agree with the chairman of the Committee on Energy and Commerce on at least one thing. The Committee on Ways and Means only had this bill for 48 hours, and I think that that is very, very impractical—if fact impossible way to legislate.

Let me point out, too, that the leadership sequentially referred that bill to the Committee on Ways and Means which, in itself, indicates that it is a revenue measure under House rules. Let me also point out that the administration testified before our committee in support of the committee amendment. This Senate has already struck similar fees from its bill in light of our constitutional concerns, acknowledging that these are not fees but these are taxes that should originate in the House of Representatives. In addition these fees involve an unconstitutional delegation of our authority to impose taxes, from the House of Representatives and the Congress to executive branch.

□ 1420

If the executive branch is going to be able to impose fees, what sense is there in having the revenue-raising authority in the House of Representatives?

Mr. Chairman, this is a constitutional issue, not for the Committee on Ways and Means, but for the prerogatives of the House of Representatives. If we announce today to the Senate that we are surrendering our authority to originate revenue legislation, you can bet your life we will see a great deal of that occurring in the Senate.

The CHAIRMAN. All time has expired.

The question is on the amendments en bloc offered by the gentleman from Illinois [Mr. ROSTENKOWSKI].

The question was taken; and the Chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. WAXMAN. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 170, noes 253, not voting 9, as follows:

NOT VOTING—9

| | | |
|---|---|---|
| Alexander | Flippo | Ridge |
| Barton | Lukens, Donald | Robinson |
| Craig | Nelson | Thomas (CA) |

□ 1439

The Clerk announced the following pair:

On this vote:

Mr. Thomas of California for, with Mr. Nelson against.

Messrs. HAWKINS, SMITH of Vermont, BROWDER, and GILLMOR changed their vote from "aye" to "no."

Messrs. BARTLETT, HUGHES, DERRICK, SAVAGE, COX, DYSON, PENNY, ERDREICH, and DENNY SMITH, Mrs. BOXER, Mrs. LOWEY, of New York, Mr. AuCOIN, and Mr. HAYES of Illinois changed their vote from "no" to "aye."

So the amendments en bloc were rejected.

The result of the vote was announced as above recorded.

□ 1440

AMENDMENT OFFERED BY MR. WISE

Mr. WISE. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will designate the amendment.

The text of the amendment is as follows:

Amendment offered by Mr. WISE: Page 178, after line 20, insert the following:

Subtitle B—Clean Air Employment Transition Assistance

SEC. 111. TRANSITION ASSISTANCE.

The Federal-State Extended Unemployment Compensation Act of 1970 is amended by adding at the end thereof the following new subtitle:

"Subtitle B—Clean Air Employment Transition Assistance

"SEC. 210. SHORT TITLE; ETC.

"(a) GENERAL RULE.—This subtitle may be cited as the "Clean Air Employment Transition Act".

"(b) COORDINATION.—Except as otherwise specifically provided—

"(1) the provisions of this title which precede this subtitle shall not apply for purposes of this subtitle, and

"(2) any reference to the Federal-State Extended Unemployment Compensation Act of 1970 shall be treated as referring only to the provisions of this Act which precede this subtitle.

"PART I—PETITIONS AND DETERMINATIONS

"SEC. 211. PETITIONS.

"(a) IN GENERAL.—A petition for certification of eligibility to apply for clean air employment transition assistance under this subtitle may be filed with the Secretary of Labor (hereinafter in this subtitle referred to as the "Secretary") by a group of workers or by their certified or recognized union or other duly authorized representative. Upon receipt of the petition, the Secretary shall promptly publish notice in the Federal Register that he has received the petition and initiated an investigation.

"(b) PUBLIC HEARING.—If the petitioner, or any other person found by the Secretary to have a substantial interest in the proceedings, submits not later than 10 days after the date of the Secretary's publication under subsection (a) a request for a hearing, the Secretary shall provide for a public hearing and afford such interested persons an opportunity to be present, to produce evidence, and to be heard.

"SEC. 212. GROUP ELIGIBILITY REQUIREMENTS.

"(a) IN GENERAL.—The Secretary shall certify a group of workers as eligible to apply for clean air employment transition assistance under this subtitle if the Secretary determines—

"(1) that a significant number or proportion of the workers in such workers' firm or an appropriate subdivision of the firm have become totally or partially separated, or are threatened to become totally or partially separated;

"(2) that sales or production, or both, of such firm or subdivision have decreased absolutely; and

"(3) that compliance by such firm or subdivision with the Clean Air Act contributed importantly to such total or partial separation, or threat thereof, and to such decline in sales or production.

"(b) DEFINITIONS.—For purposes of subsection (a)—

"(1) The term 'contributed importantly' means a cause which is important but not necessarily more important than any other cause.

"(2) The term 'production' includes the provision of services.

"SEC. 213. DETERMINATIONS BY SECRETARY OF LABOR.

"(a) IN GENERAL.—As soon as possible after the date on which a petition is filed under section 211, but in any event not later than 60 days after that date, the Secretary shall determine whether the petitioning group meets the requirements of section 212 and shall issue a certification of eligibility to apply for assistance under this subtitle covering workers in any group which meets such requirements. Each certification shall specify the date on which the total or partial separation began or threatened to begin.

"(b) TIME LIMITATION ON SEPARATIONS BEFORE CERTIFICATION.—A certification under this section shall not apply to any worker whose last total or partial separation from the firm or appropriate subdivision of the firm before his application under section 211 occurred——

"(1) more than one year before the date of the petition on which such certification was granted; or

"(2) more than 6 months before the effective date of this subtitle.

"(c) NOTICE OF DETERMINATION.—Upon reaching his determination on a petition, the Secretary shall promptly publish a summary of the determination in the Federal Register together with his reasons for making such determination.

"(d) TERMINATION OF CERTIFICATION.—Whenever the Secretary determines, with respect to any certification of eligibility of the workers of a firm or subdivision of the firm, that total or partial separations from such firm or subdivision are no longer attributable to the conditions specified in section 212, he shall terminate such certification and promptly have notice of such termination published in the Federal Register together with his reasons for making such determination. Such termination shall apply only with respect to total or partial separations occuring after the termination date specified by the Secretary.

"SEC. 214. BENEFIT INFORMATION TO WORKERS.

"(a) IN GENERAL.—The Secretary shall provide full information to workers about the benefit allowances available to under this subtitle and the training and other employment services available under section 325 of the Job Training Partnership Act and about the petition and application procedures, and the appropriate filing dates, for such allowances, training and services. The Secretary shall provide whatever assistance is necessary to enable groups of workers to prepare petitions or applications for program benefits. The Secretary shall make every effort to ensure that cooperating State agencies fully comply with the agreements entered into under section 231(a) and shall periodically review such compliance. The Secretary shall inform the Council established under section 122 of the Job Training Partnership Act or equivalent agency and other public or private agencies, institutions, and employers, as appropriate, of each certification issued under section 213 and of projections, if available, of the needs for training under section 325 of the Job Training Partnership Act as a result of such certification.

"(b) WRITTEN NOTICE OF BENEFITS.—(1) The Secretary shall provide written notice through the mail of he benefits available under this subtitle 325 of the Job Training Partnership Act to each worker whom the Secretary has reason to believe is covered by a certification made under this part——

"(A) at the time of such certification is made, if the worker was partially or totally separated from the adversely affected employment before such certification; or

"(B) at the time of the total or partial separation of the worker from the adversely affected employment, if subparagraph (A) does not apply.

"(2) The Secretary shall publish notice of the benefits available under this subtitle or section 325 of the Job Training Partnership Act to workers covered by each certification made under this subtitle in newspapers of general circulation in the areas in which such workers reside.

PART II—CLEAN AIR EMPLOYMENT TRANSITION ALLOWANCES

SEC. 221. QUALIFYING REQUIREMENTS FOR WORKERS.

"(a) IN GENERAL.—Payment of a clean air employment transition allowance shall be made to an adversely affected worker covered by a certification under part I who files an application for such allowance for any week of unemployment which begins more than 60 days after the date on which the petition that resulted in such certification was filed under section 211, if the following conditions are met:

"(1) Such worker's total or partial separation before his application under this subtitle occurred—

"(A) on or after the date, as specified in the certification under which he is covered, on which total or partial separation began or threatened to begin in the adversely affected employment;

"(B) before the expiration of the 2-year period beginning on the date on which the determination under section 213 was made; and

"(C) before the termination date (if any) determined pursuant to section 213(d).

"(2) Such worker had, in the 52-week period ending with the week in which such total or partial separation occurred, at least 26 weeks of employment at wages of $30 or more a week in adversely affected employment with a single firm or subdivision of a firm, or, if data with respect to weeks of employment with a firm are not available, equivalent amounts of employment computed under regulations prescribed by the Secretary. For the purpose of this paragraph, any week in which such worker——

"(A) is on the employer-authorized leave for purposes of vacation, sickness, injury, maternity, or inactive duty or active duty military service for training;

"(B) does not work because of a disability that is compensable under a workmen's compensation law or plan of a State or the United States; or

"(C) had his employment interrupted in order to serve as a full-time representative of a labor organization in such firm or subdivision,

shall be treated as a week of employment at wages of $30 or more, but not more than 7 weeks, in case of weeks described in subparagraph (A) or (C), or both, may be treated as weeks of employment under this sentence.

"(3) Such worker——

"(A) was entitled to (or would be entitled to if he applied therefor) unemployment insurance for a week within the benefit period——

"(i) in which such total or partial separation took place, or

"(ii) which began (or would have begun) by reason of the filing of a claim for unemployment insurance by such worker after such total or partial separation;

"(B) has exhausted all rights to any unemployment insurance to which he was entitled (or would be entitled if he applied therefor); and

"(C) does not have an unexpired waiting period applicable to him for any such unemployment insurance.

"(4) Such worker, with respect to such week of unemployment, would not be disqualified for extended compensation payable under this title by reason of the work acceptance and job search requirements in section 202(a)(3) of this title.

"(5) Such worker——

"(A) is enrolled in a training program approved by the Secretary under section 325(b) of the Job Training Partnership Act; or

"(B) has, after the date on which the worker became totally separated, or partially separated, from the adversely affected employment, completed a training program approved by the Secretary under section 325(b) of the Job Training Partnership Act; or

"(C) has received a written statement certified under subsection (c)(1) after the date described in subparagraph (B).

"(b) FAILURE TO MEET TRAINING REQUIREMENTS.—(1) If——

"(A) the Secretary determines that——

"(i) the adversely affected workers——

"(I) has failed to begin participation in the training program the enrollment in which meets the requirement of subsection (a)(5), or

"(II) has ceased to participate in such training program before completing such training program; and

"(ii) there is no justifiable cause for such failure or cessation; or

"(B) the certification made with respect to such worker under subsection (c)(1) is revoked under subsection (c)(2),

no clean air employment transition allowance may be paid to the adversely affected worker under this part for the week in which such failure, cessation, or revocation occurred, or any succeeding week, until the adversely affected worker begins or resumes participation in a training program approved under section 325(b) of the Job Training Partnership Act.

"(2) The provisions of subsection (a)(5) and paragraph (1) shall not apply with respect to any week of unemployment which begins——

"(A) after the date that is 60 days after the date on which the petition that results in the certification that covers the worker is filed under section 211; and

"(B) before the first week following the week in which such certification is made under part I.

"(c) TRAINING NOT FEASIBLE OR INAPPROPRIATE.—(1)(A) If the Secretary finds that it is not feasible or appropriate to approve a training program for a worker under section 325(b) of the Job Training Partnership Act, the Secretary shall submit to such worker a written statement certifying such finding.

"(B) If a State or State agency has an agreement with the Secretary under section 231 and the State or State agency finds that it is not feasible or appropriate to approve a

training program for a worker pursuant to the requirements of section 325(b) of the Job Training Partnership Act, the State or State agency shall——

"(i) submit to such worker a written statement certifying such finding; and

"(ii) submit to the Secretary a written statement certifying such finding and the reasons for such finding.

"(2) The Secretary shall submit to the appropriate committees of the Congress an annual report on the number of workers who received certifications under paragraph (1) during the preceding year and the number of certifications made under paragraph (1) that were revoked during the preceding year.

"SEC. 222. WEEKLY AMOUNTS.

"(a) IN GENERAL.—Subject to subsections (b) and (c), the clean air employment transition allowance payable to an adversely affected worker for a week of total unemployment shall be an amount equal to the most recent weekly benefit amount of the unemployment insurance payable to the worker for a week of total unemployment preceding the worker's first exhaustion of unemployment insurance (as determined for purposes of section 221(a)(3)(B)) reduced (but not below zero) by——

"(1) any training allowance deductible under subsection (c); and

"(2) income that is deductible from unemployment insurance under the disqualifying income provisions of the applicable State law or Federal unemployment insurance law.

"(b) PAYMENT DURING APPROVED TRAINING.—Any adversely affected worker who is entitled to clean air employment transition allowances and who is undergoing training approved by the Secretary shall receive for each week in which he is undergoing any such training, a clean air employment transition allowance in an amount (computed for such week) equal to the amount computed under subsection (a) or (if greater) the amount of any weekly allowance for such training to which he would be entitled under any other Federal law for the training of workers, if he applied for such allowance. Such clean air employment transition allowance shall be paid in lieu of any training allowance to which the worker would be entitled under such other Federal law.

"(c) OFFSETS IF TRAINING ALLOWANCE PAYABLE UNDER OTHER FEDERAL LAW.—If a training allowance under any Federal law is paid to an adversely affected worker for any week of unemployment with respect to which he would be entitled (determined without regard to any disqualification under section 221(b)) or to a clean air employment transition allowance if he applied for such allowance, each such week shall be deducted from the total number of weeks of clean air employment transition allowance otherwise payable to him under section 223(a) when he applies for a clean air employment transition allowance and is determined to be entitled to such allowance. If such training allowance paid to such worker for any week of unemployment is less than the amount of the clean air employment transition allowance to which he would be entitled if he applied for such allowance, he shall receive, when he applies for a clean air employment transition allowance and is determined to be entitled to such allowance, a clean air employment transition allowance for such week equal to such difference.

"SEC. 223. LIMITATIONS ON CLEAN AIR EMPLOYMENT TRANSITION ALLOWANCES.

"(a) MAXIMUM AMOUNT PAYABLE.—(1) The maximum amount of clean air employment transition allowances payable with respect to the period covered by any certification to an adversely affected worker shall be the amount which is the product of 52 multiplied by the clean air employment transition allowance payable to the worker for a week of total unemployment (as determined under section 222(a)), but such product shall be reduced by the total sum of the unemployment insurance to which the worker was entitled (or would have been entitled if he had applied therefor) in the worker's first benefit period described in section 221(a)(3)(A).

"(2) A clean air employment transition allowance shall not be paid for any week occurring after the close of the 104-week period that begins with the first week following the week in which the adversely affected worker was most recently totally separated from adversely affected employment—

"(A) within the period which is described in section 221(a)(1); and

"(B) with respect to which the worker meets the requirements of section 221(a)(2).

"(3) Notwithstanding paragraph (1), in order to assist the adversely affected worker to complete training approved for him under section 325 of the Job Training Partnership Act, and in accordance with regulations prescribed by the Secretary, payments may be made as clean air employment transition allowances for up to 26 additional weeks in the 26-week period that——

"(A) follows the last week of entitlement to clean air employment transition allowances otherwise payable under this subtitle; or

"(B) begins with the first week of such training, if such training begins after the last week described in subparagraph (A).

Payments for such additional weeks may be made only for weeks in such 26-week period during which the individual is participating in such training.

"(b) APPLICATION FOR TRAINING.—No clean air employment trnsition allowance may be paid for an additiona! week specified in subsection (a)(3) if the adversely affected worker who would receive such allowance did not make a bona fide application to a training program approved by the Secretary under section 325 of the Job Training Partnership Act within 210 days after the date of the worker's first certification of eligibility to apply for transition assistance issued by the Secretary, or, if later, within 210 days after the date of the worker's total or partial separation referred to in section 221(a)(1).

"(c) ADJUSTMENT OF AMOUNTS.—Amounts payable to an adversely affected worker under this subtitle shall be subject to such adjustment on a week-to-week basis as may be required by section 222(b).

"(d) OFFSET FOR EXTENDED BENEFITS.—Notwithstanding any other provision of this title or other Federal law, if the benefit year of a worker ends within an extended benefit period, the number of weeks of extended benefits that such worker would, but for this subsection, be entitled to in that extended benefit period shall be reduced (but not below zero) by the number of weeks for which the worker was entitled, during such benefit year, to clean air employment transition allowances under this part. For purposes of this subsection, the terms 'benefit year' and 'extended benefit period' shall have the same respective meanings given to them by sections 203 and 205 of this title.

"(e) ON-JOB-TRAINING EXCLUSION.—No clean air employment transition allowance shall be paid to a worker under this part for any week during which the worker is receiving on-the-job training in employment for which compensation is paid.

"(f) PARTICIPATION IN TRAINING.—For purposes of this title, a worker shall be treated as participating in training during any week which is part of a break in training that does not exceed 14 days if—

"(1) the worker was participating in a training program approved under section 325(b) of the Job Training Partnership Act before the beginning of such break in training; and

"(2) the break is provided under such training program.

"SEC. 224. EFFECT ON OTHER BENEFITS.

"(a) LIMITATION ON DETERMINING INELIGIBILITY OR DISQUALIFICATION FOR BENEFITS.—A worker may not be determined to be ineligible or disqualified for unemployment insurance or progrm benefits under this subtitle because—

"(1) the individual is in training approved under section 325 of the Job Training Partnership Act,

"(2) of leaving work which is not suitable employment to enter such training, or

"(3) of the application to any such week in training of provisions of State law or Federal unemployment insurance law relating to availability for work, active search for work, or refusal to accept work.

The Secretary shall submit to the Congress a quarterly report regarding the amount of funds expended during the quarter concerned to provide training under such section 325(a) and the anticipated demand for such funds for any remaining quarters in the fiscal year concerned.

"(b) DEFINITION OF SUITABLE EMPLOYMENT.—For purposes of this section, the term 'suitable employment' means, with respect to a worker, work of a substantially equal or higher skill level than the worker's past adversely affected employment, and wages for such work at not less than 80 percent of the worker's average weekly wage.

"SEC. 225. APPLICATION OF STATE LAWS.

"Except where inconsistent with the provisions of this subtitle and subject to such regulations as the Secretary may prescribe, the availability and disqualification provisions of the State law—

"(1) under which an adversely affected worker is entitled to unemployment insurance (whether or not he has filed a claim for such insurance); or

"(2) if he is not so entitled to unemployment insurance, of the State in which he was totally or partially separated,

shall apply to any such worker who files a claim for clean air employment transition allowances. The State law so determined with respect to a separation of a worker shall remain applicable, for purposes of the preceding sentence, with respect to such separation until such worker becomes entitled to unemployment insurance under another State law (whether or not he has filed a claim for such insurance).

"PART III—GENERAL PROVISIONS

"SEC. 231. AGREEMENTS WITH STATES.

"(a) IN GENERAL.—The Secretary is authorized on behalf of the United States to enter into an agreement with any State, or with any State agency (referred to in this part as 'cooperating States' and 'cooperating

State agencies', respectively). Under such an agreement, the cooperating State agency—

"(1) as agent of the United States, will receive applications for, and will provide, payments on the basis provided in this subtitle,

"(2) will make any certification required under section 221(c)(2), and

"(3) will otherwise cooperate with the Secretary and with other State and Federal agencies in providing payments and services under this title.

"(b) AGREEMENT TERMS AND CONDITIONS.—Each agreement under this part shall provide the terms and conditions upon which the agreement may be amended, suspended, or terminated.

"(c) UNEMPLOYMENT INSURANCE.—Each agreement under this part shall provide that unemployment insurance otherwise payable to any adversely affected worker will not be denied or reduced for any week by reason of right to payments under this subtitle.

"(d) REVIEW.—A determination by a cooperating State agency with respect to entitlement to program benefits under an agreement is subject to review in the same manner and to the same extent as determinations under the applicable State law only in that manner and to that extent.

"(e) COORDINATION OF ADMINISTRATION OF EMPLOYMENT SERVICES, TRAINING, AND ADMINISTRATION.—Any agreement entered into under this section shall provide for the coordination with the administration of the provisions for employment services, training, and supplemental assistance under title III of the Job Training Partnership Act upon such terms and conditions as are established by the Secretary in consultation with the States and set forth in such agreement. Any agency of the State jointly administering such provisions under such agreement shall be considered to be a cooperating State agency for purposes of this title.

"(f) STATE AGENCY FUNCTIONS.—Each cooperating State agency shall, in carrying out subsection (a)(2)—

"(1) advise each worker who applies for unemployment insurance of the benefits under this subtitle and the procedures and deadlines for applying such benefits,

"(2) facilitate the early filing of petitions under section 211 for any workers that the agency considers are likely to be eligible for benefits under this subtitle, and

"(3) advise each adversely affected worker to apply for training under section 325(b) of the Job Training Partnership Act before, or at the same time, the worker applies for clean air employment transition allowances under part III.

"SEC. 232. ADMINISTRATION ABSENT STATE AGREEMENT.

"(a) IN GENERAL.—In any State where there is no agreement in force between a State or its agency under section 231, the Secretary shall arrange under regulations prescribed by him for performance of all necessary functions under part II of this subtitle, including provision for a fair hearing for any worker whose application for payments is denied.

"(b) JUDICIAL REVIEW.—A final determination under subsection (a) with respect to eligibility for program benefits under part II of this subtitle is subject to review by the courts in the same manner and to the same extent as is provided by section 205(g) of the Social Security Act.

"SEC. 233. PAYMENTS TO STATES.

"(a) CERTIFICATION OF PAYMENTS.—The Secretary shall from time to time certify to the Secretary of the Treasury for payment to each cooperating State the sums necessary to enable such State as agent of the United States to make payments provided for by this subtitle.

"(b) APPLICATION OF PAYMENTS.—All money paid a State under this section shall be used solely for the purposes for which it is paid; and money so paid which is not used for such purposes shall be returned, at the time specified in the agreement under this part to the Secretary of the Treasury.

"(c) SURETY BONDS.—Any agreement under this part may require any officer or employee of the State certifying payments or disbursing funds under the agreement or otherwise participating in the performance of the agreement, to give surety bond to the United States in such amount as the Secretary may deem necessary, and may provide for the payment of the cost of such bond from funds for carrying out the purposes of this subtitle.

"SEC. 234. LIABILITIES OF CERTIFYING AND DISBURSING OFFICERS.

"(a) CERTIFYING OFFICERS.—No person designated by the Secretary, or designated pursuant to an agreement under this part, as a certifying officer, shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment certified by him under this subtitle.

"(b) DISBURSING OFFICERS.—No disbursing officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment by him under this subtitle if it was based upon a voucher signed by a certifying officer designated as provided in subsection (a).

"SEC. 235. FRAUD AND RECOVERY OF OVERPAYMENTS.

"(a) LIABILITY FOR REPAYMENT.—(1) If a cooperating State agency, the Secretary, or a court of competent jurisdiction determines that any person has received any payment under this subtitle for which the person was not eligible, including a payment referred to in subsection (b), such person shall be liable to repay such amount to the State agency or the Secretary, as the case may be, except that the State agency or the Secretary may waive such repayment if such agency or the Secretary determines, in accordance with guidelines by the Secretary, that—

"(A) the payment was made without fault on the part of such individual, and

"(B) requiring such repayment would be contrary to equity and good conscience.

"(2) Unless an overpayment is otherwise recovered, or waived under paragraph (1), the State agency or the Secretary shall recover the overpayment by deductions from any sums payable to such person under this subtitle, under any Federal unemployment compensation law administered by the State agency or the Secretary, or under any other Federal law administered by the State agency or the Secretary which provides for the payment of assistance or an allowance with respect to unemployment, and, notwithstanding any other provisions of State law or Federal law to the contrary, the Secretary may require the State agency to recover any overpayment under this subtitle by deduction from any unemployment insurance payable to such person under the State law, except that no single deduction under this paragraph shall exceed 50 percent of the amount otherwise payable.

"(b) FRAUD.—If a cooperating State agency, the Secretary, or a court of competent jurisdiction determines that an individual—

"(1) knowingly has made, or caused another to make, a false statement or representation of a material fact, or

"(2) knowingly has failed, or caused another to fail, to disclose a material fact,

and as a result of such false statement of representation, or of such nondisclosure, such individual has received any payment under this subtitle to which the individual was not entitled, such individual shall, in addition to any other penalty provided by law, be ineligible for any further payments under this subtitle.

"(c) NOTICE AND HEARING.—Except for overpayments determined by a court of competent jurisdiction, no repayment may be required, and no deduction may be made, under this section until a determination under subsection (a)(1) by the State agency or the Secretary, as the case may be, has been made, notice of the determination and an opportunity for a fair hearing thereon has been given to the individual concerned, and the determination has become final.

"(d) DISPOSITION OF RECOVERED AMOUNTS.—Any amount recovered under this section shall be returned to the Treasury of the United States.

"SEC. 236. PENALTIES.

"Whoever makes a false statement of material fact knowing it to be false,

or knowingly fails to disclose a material fact, for the purpose of obtaining or increasing for himself or for any other person any payment authorized to be furnished under this subtitle or pursuant to an agreement under section 231 shall be fined not more than $1,000 or imprisoned for not more than one year, or both.

"SEC. 237. AUTHORIZATION OF APPROPRIATIONS.

"(a) TRANSITION ALLOWANCES.—There are authorized to be appropriated to the Department of Labor to pay transition allowances under this subtitle—

"(1) $30,000,000 for fiscal year 1992,

"(2) $34,000,000 for fiscal year 1993,

"(3) $36,000,000 for fiscal year 1994,

"(4) $37,000,000 for fiscal year 1995, and

"(5) $38,000,000 for fiscal year 1996.

Sums appropriated under this subsection shall remain available until expended.

"(b) APPROPRIATIONS REQUIRED.—Notwithstanding any other provision of this subtitle, the authority to make payments under this subtitle is subject to the availability of funds appropriated therefor.

"SEC. 238. DEFINITIONS.

"For purposes of this title—

"(1) The term 'adversely affected employment' means employment in a firm or appropriate subdivision of a firm, if workers of such firm or subdivision are eligible to apply for clean air employment transition assistance under this subtitle.

"(2) The term 'adversely affected worker' means an individual who, because of lack of work in adversely affected employment—

"(A) has been totally or partially separated from such employment, or

"(B) has been totally separated from employment with the firm in a subdivision of which such adversely affected employment exists.

"(3) The term 'average weekly wage' means one-thirteenth of the total wages paid to an individual in the high quarter. For purposes of this computation, the high quarter shall be that quarter in which the individual's total wages were highest among the first 4 of the last 5 completed calendar

quarters immediately before the quarter in which occurs the week with respect to which the computation is made. Such week shall be the week in which total separation occurred, or, in cases where partial separation is claimed, an appropriate week, as defined in regulations prescribed by the Secretary.

"(4) The term 'average weekly hours' means the average hours worked by the indivdual (excluding overtime) in the employment from which he has been or claims to have been separated in the 52 weeks (excluding weeks during which the individual was sick or on vacation) preceding the week specified in the last sentence of paragraph (3).

"(5) The term 'partial separation' means, with respect to an individual who has not been totally separated, that he has had—

"(A) his hours of work reduced to 80 percent or less of his average weekly hours in adversely affected employment, and

"(B) his wages reduced to 80 percent or less of his average weekly wage in such adversely affected employment.

"(6) The term 'State' includes the District of Columbia and the Commonwealth of Puerto Rico; and the term 'United States' when used in the geographical sense includes such Commonwealth.

"(7) The term 'State agency' means the agency of the State which administers the State law.

"(8) The term 'State law' means the unemployment insurance law of the State approved by the Secretary of Labor under section 3304 of the International Revenue Code of 1986.

"(9) The term 'total separation' means the layoff or severance of an individual from employment with a firm in which, or in a subdivision of which, adversely affected employment exists.

"(10) The term 'unemployment insurance' means the unemployment compensation payable to an individual under any State law or Federal unemployment compensation law, including chapter 85 of title 5, United States Code, and the Railroad Unemployment Insurance Act. The terms 'regular compensation', 'additional compensation', and 'extended compensation' have the same respective meanings that are given them in section 205 (2), (3), and (4) of this Act.

"(11) The term 'week' means a week as defined in the applicable State law.

"(12) The term 'week of unemployment' means a week of total, part-total, or partial unemployment as determined under the applicable State law or Federal unemployment insurance law.

"(13) The term 'benefit period' means, with respect to an individual—

"(A) the benefit year and any ensuing period, as determined under applicable State law, during which the individual is eligible for regular compensation, additional compensation, or extended compensation, or

"(B) the equivalent to such a benefit year or ensuing period provided for under the applicable Federal unemployment insurance law.

"(14) The term 'on-the-job training' means training provided by an employer to an individual who is employed by the employer.

"SEC. 239. REGULATIONS.

"The Secretary shall prescribe such regulations as may be necessary to carry out the provisions of this subtitle.

"SEC. 240. SUBPOENA POWER.

(a) IN GENERAL.—The Secretary may require by subpoena the attendance of witnesses and the production of evidence necessary for him to make a determination under the provisions of this subtitle.

"(b) COMPLIANCE.—If a person refuses to obey a subpoena issued under subsection (a), a United States district court within the jurisdiction of which the relevant proceeding under this title is conducted may, upon petition by the Secretary, issue an order requiring compliance with such subpoena.".

SEC. 112. AMENDMENT TO JOB TRAINING PARTNERSHIP ACT.

(a) TRAINING PROGRAMS AUTHORIZED.—Title III of the Job Training Partnership Act is amended by adding at the end thereof the following new section:

"TRAINING FOR WORKERS ADVERSELY AFFECTED BY CLEAN AIR ACT COMPLIANCE

"SEC. 325. (a) EMPLOYMENT SERVICES.—The Secretary shall ensure that adversely affected workers covered by a certification under part I of the Clean Air Employment Transition Act receive the counseling, testing, and placement services, and supportive and other services, provided for under this Act or any other Federal law. The Secretary shall, whenever appropriate, procure such services through agreements with the States.

"(b) TRAINING.—If the Secretary determines that—

"(A) there is no suitable employment (which may include technical and professional employment) available for an adversely affected worker,

"(B) the worker would benefit from appropriate training,

"(C) there is a reasonable expectation of employment following completion of such training,

"(D) training approved by the Secretary is reasonably available to the worker from either governmental agencies or private sources (which may include area vocational education schools, as defined in section 195(2) of the Vocational Education Act of 1963, and employers),

"(E) the worker is qualified to undertake and complete such training, and

"(F) such training is suitable for the worker and available at a reasonable cost.

the Secretary shall approve such training for the worker. Upon such approval, the worker shall be eligible to have payment of the costs of such training (subject to the limitations imposed by this section) paid on his behalf by the Secretary directly or though a certificate system. Insofar as possible, the Secretary shall provide or assure the provision of such training on the job, which shall include related education necessary for the acquisition of skills needed for a position within a particular occupation.

"(2) For purposes of applying paragraph (1)(C), a reasonable expectation of employment does not require that employment opportunities for a worker be available, or offered, immediately upon the completion of training approved under paragraph (1).

"(3)(A) If the costs of training an adversely affected worker are paid by the Secretary under paragraph (1), no other payment for such costs may be made under any other provision of Federal law.

"(B) No payment may be made under paragraph (1) of the costs of training an adversely affected worker if such costs—

"(i) have already been paid under any other provision of Federal law, or

"(ii) are reimbursable under any other provision of Federal law and a portion of such costs have aleady been paid under such other provision of Federal law.

"(C) The provisions of this paragraph shall not apply to, or take into account, any funds provided under any other provision of Federal law which are used for any purpose other than the direct payment of the costs incurred in training a particular adversely affected worker, even if such use has the effect of indirectly paying or reducing any portion of the costs involved in training the adversely affected worker.

"(4) The training programs and activities that may be approved under paragraph (1) include, but are not limited to—

"(A) on-the-job training,

"(B) any program or activities under this title,

"(C) any other program or activity under this Act for which the individual is eligible,

"(D) any program of remedial education,

"(E) any training program (other than a training program described in paragraph (6)) for which all, or any portion, of the costs of training the worker are paid—

"(i) under any Federal or State program other than this section, or

"(ii) from any source other than this section, and

"(F) any other training program approved by the Secretary.

"(5)(A) The Secretary is not required under paragraph (1) to pay the costs of any training approved under paragraph (1) to the extent that such costs are paid—

"(i) under any Federal or State program other than this subtitle, or

"(ii) from any source other than this section.

"(B) Before approving any training to which subparagraph (A) may apply, the Secretary may require that the adversely affected worker enter into an agreement with the Secretary under which the Secretary will not be required to pay under this section the portion of the costs of such training that the worker has reason to believe will be paid under the program, or by the source, described in clause (i) or (ii) of subparagraph (A).

"(6) The Secretary shall not approve a training program if—

"(A) all or a portion of the costs of such training program are paid under any nongovernmental plan or program,

"(B) the adversely affected worker has a right to obtain training or funds for training under such plan or program, and

"(C) such plan or program requires the worker to reimburse the plan or program from funds provided under this subtitle or from wages paid under such training program, for any portion of the costs of such training program paid under the plan or program.

"(7) The Secretary may approve training for any adversely affected worker who is a member of a group certified under part I of the Clean Air Employment Transition Act at any time after the date on which the group is certified under part I of such Act, without regard to whether such worker has exhausted all rights to any unemployment insurance to which the worker is entitled.

"(8) The Secretary shall prescribe regulations which set forth the criteria under each of the subparagraphs of paragraph (1) that will be used as the basis for making determinations under paragraph (1).

"(c) SUPPLEMENTAL ASSISTANCE.—The Secretary may, where appropriate, authorize supplemental assistance necessary to defray reasonable transportation and subsistence expenses for separate maintenance when training is provided in facilities which are not within commuting distance of a work-

er's regular place of residence. The Secretary may not authorize—

"(1) payments for subsistence that exceed whichever is the lesser of (A) the actual per diem expenses for subsistence, or (B) payments at 50 percent of the prevailing per diem allowance rate authorized under the Federal travel regulations, or

"(2) payments for travel expenses exceeding the prevailing mileage rate authorized under the Federal travel regulations.

"(d) ON-THE-JOB-TRAINING COSTS.—The Secretary shall pay the costs of any on-the-job training of an adversely affected worker that is approved under subsection (b)(1) in equal monthly installments, but the Secretary may pay such costs, notwithstanding any other provision of this section, only if—

"(1) no currently employed worker is displaced by such adversely affected worker (including partial displacement such as a reduction in the hours of nonovertime work, wages, or employment benefits),

"(2) such training does not impair existing contracts for services or collective bargaining agreements,

"(3) in the case of training which would be inconsistent with the terms of a collective bargaining agreement, the written concurrence of the labor organization concerned has been obtained,

"(4) no other individual is on layoff from the same, or any substantially equivalent, job for which such adversely affected worker is being trained,

"(5) the employer has not terminated the employment of any regular employee or otherwise reduced the workforce of the employer with the intention of filling the vacancy so created by hiring such adversely affected worker,

"(6) the job for which such adversely affected worker is being trained is not created in a promotional line that will infringe in any way upon the promotional opportunities of currently employed individuals,

"(7) such training is not for the same occupation from which the worker was separated and with respect to which such worker's group was certified pursuant to section 212 of the Clean Air Employment Transition Act,

"(8) the employer certifies to the Secretary that the employer will continue to employ such worker for at least 26 weeks after completion of such training if the worker desires to continue such employment and the employer does not have due cause to terminate such employment,

"(9) the employer has not received payment under subsection (b)(1) with respect to any other on-the-job training provided by such employer which failed to meet the requirements of paragraphs (1), (2), (3), (4), (5), and (6), and

"(10) the employer has not taken, at any time, any action which violated the terms of any certification described in paragraph (8) made by such employer with respect to any other on-the-job training provided by such employer for which the Secretary has made a payment under subsection (b)(1).

"(e) JOB SEARCH ALLOWANCES.—Any adversely affected worker covered by a certification under part I of the Clean Air Employment Transition Act may file an application with the Secretary for a job search allowance. Such allowance, if granted, shall provide reimbursement to the worker of 90 percent of the cost of necessary job search expenses as prescribed by regulations of the Secretary; except that—

"(1) such reimbursement may not exceed $800 for any worker, and

"(2) reimbursement may not be made for subsistence and transportation expenses at levels exceeding those allowable under subsection (c) (1) and (2).

"(f) CRITERIA FOR GRANTING ALLOWANCES.—A job search allowance may be granted only—

"(1) to assist an adversely affected worker who has been totally separated in securing a job within the United States;

"(2) where the Secretary determines that such worker cannot reasonably be expected to secure suitable employment in the commuting area in which he resides; and

"(3) where the worker has filed an application for such allowance with the Secretary before—

"(A) the later of—

"(i) the 365th day after the date of the certification under which the worker is eligible, or

"(ii) the 365th day after the date of the worker's last total separation; or

"(B) the 182nd day after the concluding date of any training received by the worker, if the worker was referred to such training by the Secretary.

"(g) REIMBURSEMENT FOR NECESSARY EXPENSES.—The Secretary shall reimburse any adversely affected worker for necessary expenses incurred by such worker in participating in a job search program approved by the Secretary.

"(h) RELOCATION ALLOWANCES.—(1) Any adversely affected worker covered by a certification under part I of the Clean Air Employment Transition Act may file an application with the Secretary for a relocation allowance, subject to the terms and conditions of this section, if such worker files such application before—

"(A) the later of—

"(i) the 425th day after the date of the certification, or

"(ii) the 425th day after the date of the worker's last total separation; or

"(B) the 182nd day after the concluding date of any training received by such worker, if the worker was referred to such training by the Secretary.

"(2) A relocation allowance may be granted only to assist an adversely affected worker in relocating within the United States and only if the Secretary determines that such worker cannot reasonably be expected to secure suitable employment in the commuting area in which the worker resides and that such worker—

"(A) has obtained suitable employment affording a reasonable expectation of long-term duration in the area in which the worker wishes to relocate, or

"(B) has obtained a bona fide offer of such employment, and

"(C) is totally separated from employment at the time relocation commences.

"(3) A relocation allowance shall not be granted to such worker unless his relocation occurs within 182 days after the filing of the application therefor or (in the case of a worker who has been referred to training by the Secretary) within 182 days after the conclusion of such training.

"(i) DEFINITIONS.—for the purposes of this section—

"(1) The term 'relocation allowance' means—

"(A) 90 percent of the reasonable and necessary expenses (including, but not limited to, subsistence and transportation expenses at levels not exceeding those allowable under subsection (c) (1) and (2)) specified in regulations prescribed by the Secretary, incurred in transporting a worker and his family, if any, and household effects, and

"(B) a lump sum equivalent to 3 times the worker's average weekly wage, up to a maximum payment of $800.

"(2) The term 'adversely affected worker' means an individual who is determined to be eligible for a transition allowance under section 221 of the Clean Air Employment Transition Act.".

(b) AUTHORIZATION OF APPROPRIATIONS.—section 3(c) of the Job Training Partnership Act is amended—

(1) by redesignating paragraphs (1) and (2) as subparagraphs (A) and (B), respectively,

(2) by inserting "(1)" after "(c)", and

(3) by inserting "(other than section 325)" after "title III",

(4) by adding at the end thereof the following new paragraph:

"(2) There are authorized to be appropriated to carry out section 325—

"(A) $15,000,000 for fiscal year 1991, and

"(B) such sums as may be necessary for each of fiscal years 1992, 1993, 1994, and 1995,

except that the total amount appropriated for all five such fiscal years shall not exceed $75,000,000. Sums appropriated pursuant to this paragraph are authorized to remain available until expended.".

SEC. 113. GAO ASSESSMENTS OF EFFECTS OF CLEAN AIR ACT COMPLIANCE ON EMPLOYMENT.

The Comptroller General of the United States shall—

(1) identify and assess, on a continuing basis, the effects on employment that are attributable to compliance with the provisions of Clean Air Act; and

(2) submit to the Congress on the 3rd anniversary of the date of the enactment of this subtitle a written report on the assessments required under paragraph (1).

After submission of the report required on the 3rd anniversary of such date of enactment, the Comptroller General shall submit to the appropriate committees of the Congress such periodic updates regarding the assessments as are considered necessary or appropriate by the Comptroller General or such committees.

SEC. 114 APPROPRIATIONS REQUIRED

Notwithstanding any other provision of this subtitle or any amendment made by this subtitle, the authority to make payments under this subtitle (or under any such amendment) is subject to the availability of funds appropriated therefor.

Page 5, after line 4, insert the following:

"Subtitle A—In General.".

Conform the tables of contents accordingly.

The CHAIRMAN. Pursuant to the rule, the gentleman from West Virginia [Mr. WISE] will be recognized for 30 minutes, and a Member opposed to the amendment will be recognized for 30 minutes.

Mr. LENT. Mr. Chairman, I am opposed to the amendment

The CHAIRMAN. The gentleman from New York [Mr. LENT] will be recognized for 30 minutes.

Mr. WISE. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, this is a very simple straightforward amendment, the worker transition amendment.

The Wise-Ridge-Downey amendment says very simply that workers who lose

their jobs due to implementation of the Clean Air Act may apply to the Department of Labor for a program of limited benefits, patterned exactly after the already existing Trade Adjustment Assistance Act, and that they can then receive these limited benefits, which would be 6 months of unemployment compensation, for a total of 1 year and up to 2 years of training.

I would like to talk for just a minute about what this amendment is and what it is not. This amendment is a transition program. It is not a protection program.

This amendment applies to all workers in this country in all industries; auto workers, chemical workers, coal miners, utility workers, aluminum workers, steel workers, you name it, it applies to all workers. It is not limited to one group of workers.

This amendment applies to all regions of the country. It is not limited to one region of the country.

This amendment is a limited amendment in that it is capped at the spending level of $250 million over a 5-year period, averaging $50 million a year.

It is not an unlimited entitlement. It is not an uncapped entitlement. Indeed, there is specific language in the amendment that says all spending is subject to the appropriations process.

This amendment does not create any new programs in that it provides the same level of benefits, namely, 6 months of unemployment compensation and up to 2 years of training that already exists under the Trade Adjustment Assistance Act.

It has the same process of applying for these benefits as in the Trade Adjustment Assistance Act.

This amendment is supported by representatives of organized labor, by the business community through the Clean Air Working Group, and by the environmental community through the National Clean Air Coalition.

There is one significant opponent to this amendment. It is the White House.

I would like to read to you a quote by a distinguished American: "I want to be known as the environmental President."

□ 1450

"I want to be known as the environmental President. I also want to be concerned about a person's ability to hold a job and have a job. The jobs of many thousands of people, it is a human equation, and whole communities are at stake." It could not have been said better. It was said on Monday by President George Bush in Oregon, and that is what this amendment is about, helping make the transition for the jobs of many thousands of people.

Unfortunately the White House has sent us a letter saying that Mr. Sununu is recommending a veto of the bill if the Wise-Ridge-Downey amendment passes. I question their reasoning. For instance, they talk about spending, new spending, and yet the White House estimates that this clean air bill in toto will cost something like $19 billion to $20 billion a year, and we are talking about on the average $50 million for worker transition, less than about one-fourth of 1 percent of the total cost of this package.

The White House fears new programs, they say. Of course, there is a check on that, the check of the veto and the check of congressional passage.

The White House, interestingly enough, is not saying in its letter what is said in the CONGRESSIONAL RECORD dating from the debate, and, indeed, in the proceedings in the other body in March, it is interesting to note that the package that was being proposed by the joint leadership and the White House was made part of the record of the proceedings and, indeed, its benefit package exceeded our benefit package. If they are concerned about the camel's nose under the tent, they just about let the whole first hump in.

Once again, I do not think that that is a relevant argument.

Finally, Mr. Chairman, I would say that if it is not done here today in this bill, where is it going to get done? Because we know that no other major piece of legislation is going to be able to incorporate a worker transition bill or amendment such as the one that I am offering. That is a prime reason why it is germane and must be included in today's legislation.

We have taken care of energy interests, we have taken care of environmental interests, we must now take care of the people's interest.

Mr. Chairman, I reserve the balance of my time.

Mr. LENT. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in opposition to the Wise amendment. A vote for the Wise amendment is a vote against clean air. It is a vote against the improved health and labor productivity that will result from enactment of the Clean Air Act amendments. It is a vote against the hard work and compromise that went into bringing this bill to the floor. It is a vote against a speedy House-Senate conference.

The issue of labor protection was bitterly divisive in the Senate, with the distinguished majority leader in that body leading the opposition to labor protection, and ultimately it is a vote against the President's oft-stated desire to have a bill which is balanced, reasonable, and achieves the greatest pollution reduction for the least cost.

The precedents set by enactment of the Wise amendment are enormous. For the first time, environmental benefits will be held hostage to labor protection. In the future, how will we, in the Congress, be able to pass environmental legislation and not include labor-protection provisions for industries adversely affected by that legislation? In the future, how will we choose which industries deserve protection? Do any of us want to be in the position, for example, of saying that workers in the steel industry can have labor protection, but workers in the oil industry cannot?

Mr. Chairman, that is what the Wise amendment will do to us. What will we do when we pass defense cutbacks which are in the offing? Will we do less for the unemployed aircraft worker than we do for the unemployed auto worker?

The Wise amendment has many technical flaws. The $250 million ceiling on the program is illusory. There is really no cap. The amendment would create, in effect, an open-ended liability for the Federal Government.

The cost of compensating coal miners in phase 1 alone could be $475 million. Job losses in other industries have ranged as high as 250,000. The amendment could add $3.9 billion to the cost of this bill, and be veto bait.

At a time when environmental protection is at the top of many Americans' lists of things to be done and at a time when our congressional leadership is even now striving to resolve a severe deficit problem, passage of the Wise amendment is an unnecessary shot in the congressional foot. Why do we do these things to ourselves in the midst of a budget crisis passing a new entitlement program?

The amendment is not workable. It will be very difficult to separate workers who are displaced by acid rain legislation from those displaced for other reasons.

Let me give the Members one example: the administration projects that high-sulfur mining employment will drop by 12,800 slots between 1987 and 2000.

Mr. Chairman, in closing then, I encourage all Members to resist the temptation to vote for the Wise amendment. An amendment similar to the Wise amendment, the Byrd amendment, was very bitterly fought and defeated in the Senate. The leading opponent of that amendment was Senator MITCHELL.

Why did the majority leader of that body oppose a labor-protection amendment similar to the Wise amendment? Because he supports enactment of clean air legislation this year. So do I.

I would urge all of my colleagues to vote against this very unwise amendment.

Mr. WISE. Mr. Chairman, I yield 2 minutes to the gentleman from New York [Mr. DOWNEY].

Mr. DOWNEY. Mr. Chairman, first of all, let me say that I am honored to join the gentleman from West Virginia [Mr. WISE] and the gentleman from Pennsylvania [Mr. RIDGE] as a sponsor of this amendment.

I do not know if many of the Members saw Mr. Seidman's testimony the other day. He suggested to us that it would be upward of $500 billion to bail out the bonded savings and loans in this country, an astonishing figure.

We are going to protect the deposits of people who have $100,000 or more in those institutions, but we are, in the same breath, going to say that we cannot spend $250 million over 5 years to protect some workers who are going to be displaced by a policy that benefits us all? Shame on us, my colleagues, shame on us.

If we want to have a productive economy, it means that we need to have educated workers who are nurtured and respected. They need to be nurtured and respected by the National Government, and when the National Government changes policy, as we are doing with clean air and, that is going to jeoplardize their jobs, it is part of the National Government's responsibility to help these workers.

We are not being lavish here. We are not providing an open-ended entitlement. It is a capped amount of money, $50 million a year. The Secretary of Labor must determine who is eligible and who is not, these workers will be allowed to receive 6 months' extended unemployment benefits while they look for other work they must also get retrained, and they will be given an opportunity for job placement. This is eminently reasonable.

On Long Island, as in other parts of the country, we may not have workers who will be displaced, but we will materially benefit by the clean air that we breathe and the better environment that we have. We will live longer and be happier because of this bill.

We owe a responsibility to the people who are going to be put out of work not to neglect them.

If this Congress can appropriate hundreds of billions of dollars to protect property, in the savings and loan bail out, we can spend a couple of hundred million to protect hard working men and women.

Mr. LENT. Mr. Chairman, I yield 3 minutes to the gentleman from California [Mr. MOORHEAD], a member of the committee.

Mr. CLINGER. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD. I am happy to yield to the gentleman from Pennsylvania.

Mr. CLINGER. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I rise in support of the amendment offered by Congressman WISE of West Virginia.

I want to clear the air about some of the misconceptions surrounding the Wise amendment that I have heard over the past few days.

First of all, Wise amendment is not a budget buster. At $250 million the Wise amendment is a modest, arguably too modest, authorization.

The Wise amendment has been characterized as costing the Federal Government $250 million per year. That is simply not true. The Wise amendment is a 5-year program that will cost a total of $250 million. That averages out to a cost of $50 million per year.

What I find so amazing is that with enactment of this reauthorization, compliance with the Clean Air Act is expected to exceed $50 billion—annually. At an average cost of one-tenth of 1 percent of the compliance cost $50 million—this employment transition program is a drop in the bucket.

Another commonly held misconception is that the Wise amendment is almost identical to the Byrd amendment offered in the Senate. Again, not true.

The Wise amendment would offer benefits not only to coal miners, who are displaced because of reauthorization of the Clean Air Act, but also to textile workers, to utility workers, to steelworkers, to petrochemical workers, to all of those workers who are certifiably displaced because of passage of the bill.

In order to receive the additional benefits, eligible workers would be required to enter a retraining program, the program is not a giveaway.

I strongly urge my colleagues to assist those Americans who will lose their jobs because of enactment of the Clean Air Act amendments.

It is this group of American workers that we are asking to bear the greatest burden.

The least we can do is offer these individuals an opportunity to be retrained so that they may once again be gainfully employed.

In closing, let me remind the Members of this body, when a company is forced to close its doors, it is not just the workers who lose out. There will be a ripple effect and entire communities dependent upon those displaced workers will suffer. I know because I have watched this happen to coal mining communities in my very district.

By passing the Wise amendment, displaced workers can be retrained for other jobs that may be available in the community, thus averting a community destroying exodus.

Support American workers, support communities—vote for the Wise amendment.

□ 1500

Mr. MOORHEAD. Mr. Speaker, I rise to speak in opposition to the Wise amendment. I think it is unfortunate that we are being asked to vote today on an amendment that pits labor against the environment. Indeed, I do not understand why the Committee on Rules thought it was a good policy to make this amendment in order.

The amendment is clearly not germane to the Clean Air Act amendments. If introduced as a bill, the Wise amendment would be referred to the Committee on Education and Labor and probably to the Committee on Ways and Means.

In our area we are losing 10,000 workers as Lockheed Aircraft closes down in Burbank. All displaced people should be considered in one piece of legislation if we are going to consider this kind of legislation. It should not be included in an important bill such as the one we are considering today.

I certainly would speak on behalf of my constituents who are losing their jobs because of cutbacks in the aerospace industry. I think to single out any particular group certainly is wrong.

The Wise amendment is very similar to the Byrd amendment which was bitterly fought and defeated in the Senate. The leading opponent of the Byrd amendment was Senator MITCHELL. Why we in the House have to go through a fight comparable to that suffered by the Senate is a mystery, especially as House passage of the Wise amendment raises questions about the scope and speed of the House-Senate conference on clean air.

My biggest complaint about the Wise amendment, however, is that it interferes with the enactment of the Clean Air Act amendments this year. At a time when the Committee on Commerce and the House should feel proud that we are on the verge of fulfilling the desires of many Americans for cleaner air, we are instead voting on an amendment, which, if adopted, could well end our progress toward this achievement. Moreover, every Member of the House knows that if we adopt labor protection for workers adversely affected by the Clean Air Act, we will have to justify not adopting similar labor protections every time we pass environmental legislation in the future.

Rather than fall into that trap, I urge all my colleagues to vote against the Wise amendment.

Mr. DREIER of California. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD. I yield to the gentleman from California.

Mr. DREIER of California. Mr. Chairman, I would like to compliment my friend from Glendale, the gentleman from California [Mr. MOORHEAD] for his fine statement, and I would like to underscore a very important point he made, Mr. Chairman, that being that we in California are beginning to suffer from some of the cutbacks in a number of industries, specifically defense and aerospace.

What kind of package are we going to be putting together to deal with that? I think the statement of the gentleman is right on target, and I join him in opposition to the amendment.

Mr. WISE. Mr. Chairman, I yield 2 minutes to the gentleman from Michigan [Mr. FORD].

Mr. FORD of Michigan. Mr. Chairman, I rise in strong support of the Wise amendment and am proud to say that I consulted with the authors of the amendment, as did the staff of the Committee on Education and Labor. I am shocked to hear the gentleman from New York, my friend, use inflammatory language like, "You have got a choice between clean air and workers."

Mr. Chairman, that is not what is involved here at all. This in no way could be imagined to be holding clean air as a hostage for workers' benefits.

As to the question of how it will work, do we know how it will work? Can it be done? Yes, because we have been doing it for years. Under the Trade Adjustment Assistance Program, the Department of Labor makes a determination that a particular group of jobs are lost because of the impact of foreign imports. That was the tradeoff that we made during the Reagan administration years for very generous free trade provisions in trade legislation.

The tradeoff was we understood that those policies were going to result inevitably in the loss of jobs. We said that there ought to be a transitional effort made for the people who lost their jobs. Not to put them on the dole permanently. This does not do that. As a matter of fact, one of the salient points of this is the experience we have had before which dictated this. No transition allowance may be paid to a worker who is not enrolled in a training program for a new job unless the Secretary of Labor certifies that no program is available. So you cannot just go down and apply for this and say, "My job is gone."

In the first place, nobody is considered for this transitional assistance unless the Department of Labor makes a determination that as a direct effect of the implementation of any of the provisions of this act the jobs are lost, and therefore the people should be relocated into new jobs and retrained in many instances.

The need for this amendment is so obvious that I find it really surprising that anybody is opposing it. To suggest that it creates a conflict between labor and clean air is absolute nonsense.

We are not talking about labor here, we are talking about people here. We are talking about people who may have a job in almost anything.

The gentleman from California [Mr. MOORHEAD] who just spoke is arguing against the Byrd amendment which addresses itself to a simple compensation program for coal miners. This bears no resemblance to that at all.

Mr. Chairman, I rise in strong support of the Wise amendment, which creates a Clean Air Employment Transition Assistance Program to help the thousands of employees who may lose their jobs if the Clean Air Act is enacted.

The policy behind this amendment is so obviously just that I hope no one will oppose it. The Congress and the President, on behalf of the American people, are about to order drastic changes in the way many industries in our country operate. We are making those changes for the benefit of the American people and even for the benefit of the entire Earth. But these changes entail costs in addition to their benefits, and one of the costs is the loss of jobs in certain industries.

In effect, Congress and the President are choosing to destroy the jobs of certain coal miners, certain auto workers, certain steel workers, and others for the benefit of the rest of us. We are taking from those workers and their families their most valuable property—their jobs, their ability to earn an income and support themselves. In good conscience, we can't take their property without compensating them.

The Environmental and Energy Study Conference described the Wise amendment as "Cash benefits for displaced workers." I think that that shorthand was unfortunate. It does authorize up to 6 months of additional weekly unemployment compensation benefits, on the same terms as the Trade Adjustment Assistance Program. But its principal benefit is the offer of retraining, job search assistance, and relocation assistance to help get the dislocation workers back into productive jobs.

In fact, no transition allowance may be paid to a worker who has not enrolled in a training program, unless the Secretary of Labor certifies that no program is available. The amendment makes it the Secretary's duty to see that training is available.

The need for this amendment is obvious in the case of high sulfur coal miners in West Virginia, Tennessee, and Kentucky. There are no other jobs in many of their communities. If no one buys their coal they will have to be retrained and helped to relocate if they are to continue to be productive contributors to the economy.

But auto, steel, chemical, and paper workers are at risk, too, and many of them will not be able to find jobs that pay wages that will support their families if they do not get the help this amendment will provide. JTPA title III, which this amendment amends, has not been funded at a level to provide help to even half of the workers dislocated in the normal course of events. Defense cutbacks have already begun, and the budget resolution has taken account of them by recommending another $300 million in fiscal year 1991 beyond the baseline of $464 million.

But we cannot predict the extent of the additional dislocation the Clean Air Act will cause. So, wisely, this amendment provides an additional cushion of $75 million over 5 years—a separate line item that can be appropriated as needed.

I urge my colleagues to support this very modest, obviously just amendment. Ultimately, we all will benefit by being fair and humane to the people whose jobs will be sacrificed in the fight to achieve clean air.

Mr. HENRY. Mr. Chairman, will the gentleman yield?

Mr. FORD of Michigan. I yield to the gentleman from Michigan [Mr. HENRY].

Mr. HENRY. Mr. Chairman, I would simply like to identify with the remarks of the gentleman from Michigan [Mr. FORD], and indicate when government removes a job, we ought to protect that worker.

Mr. LENT. Mr. Chairman, I yield 3 minutes to the gentleman from Virginia [Mr. BLILEY], a member of the committee.

Mr. BLILEY. Mr. Chairman, I rise in strong opposition to this amendment, for several reasons. First of all, it is an entitlement program. We have been advised, language in the amendment notwithstanding, that court rulings would be against us and we would be in effect creating a new entitlement.

In addition to that, it reopens this issue in conference, because it is not in the Senate bill. This will reopen the issue in conference and there is no telling where it will go.

The third reason, there have been no hearings on this. Now, you remember the last time we brought a measure to the floor without the benefit of any hearings? It was the catastrophic health insurance bill. What a catastrophe that turned out to be.

My friends, what about other industries? There are a number of Members in this body who would like to put my tobacco workers and my tobacco farmers out of business. Are they going to get special labor protection? I do not think so.

What about the military? We are apt to adopt numbers for the defense budget this year that will force the forced retirement and furlough of many young men and women who have signed up for a career in the military. Are we going to give the same benefits to them? I think not.

Mr. Chairman, this is a dangerous precedent, one that should not be adopted on the floor of this House without proper hearings and proper referral to the proper committees. I urge Members to resist this temptation and to vote no on the amendment.

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from West Virginia [Mr. STAGGERS].

Mr. STAGGERS. Mr. Chairman, I rise in support of the amendment offered by my friend and colleague from West Virginia, and I would like to offer my thanks to the gentleman from Michigan [Mr. DINGELL] for his extraordinary leadership and his dedication to this body.

Mr. Chairman, we are preparing to vote for an amendment to provide a transitional period of relief and retraining for thousands of working men and women who will lose their jobs because of the Clean Air Act. And in some cases, it will mean not just the end of a particular job, but of a way of life.

In the time that I have served in this body, the administration has never

had a national energy policy and it still doesn't. The progress that we have made in energy has come through the enormous character and leadership abilities of Senator BYRD. And I would submit to you that had all of Senator BYRD's proposals for clean coal technology been followed over those years, there would be little disagreement over the provisions of title V of this act, because we would not have an acid rain problem.

But here we are today, on the one hand we must do something to protect the environment for our children, and on the other hand we have to throw thousands of their mothers and fathers out of work to do it. For every side that wins something in this legislation, there are other sides that lose. I have a thousand letters from my constituents who ask that I vote for amendment X or Y to strengthen the bill, and I have a thousand letters from my constituents who say if you vote for amendment X or Y, I won't be able to feed my family or educate my children. This bill will raise electric rates, but it will cut health care costs. For every positive there is a negative.

This amendment is an intelligent and compassionate attempt to bring some balance to these choices. Those who oppose this amendment do so because it dramatically underscores the cost this bill will have. This amendment not only acknowledges the cost, but it does something about it. The procedure is workable, because it has been done before.

This is a vote, Mr. Chairman, for the little guys. And let us be clear on who these little guys are and who they are not. These are not the S&L crooks whose dirty dealing are bleeding our economy of billions of tax dollars that could be better spent on education. These are coal miners by whose blood and sweat our industrial base has been built.

These are not foreign countries to which the administration is always so eager to send our tax dollars, when they could be better spent at home fighting the war on drugs. These are steel and iron workers who ask nothing from their government but that they be allowed to do a day's work for a day's pay.

These are not white collar criminals that the Justice Department want to go easy on in sentencing. These are blue collar workers who live paycheck to paycheck, and whose days are filled with worrying about putting enough food on the supper table.

These are America's working families. They are our past, our present and, if we allow them, they will be our future. Mr. Chairman, my wife and I had our second child this past weekend, and like all my colleagues and like all Americans, I want our children to have clean air to breathe, clean water to drink, and green parks to play in.

There are times when in our haste to join a good cause we don't always consider the effect. Clean air is a good cause but it comes with dramatic effects, and this is one time when we must not only consider those effects, but we must act to protect those who will be hurt through no fault of their own.

Mr. Chairman, a vote for the Wise amendment is a vote for the American worker. I urge passage of the amendment.

Mr. LENT. Mr. Chairman, I yield 2 minutes to the gentleman from Texas [Mr. FIELDS], a member of the committee.

Mr. FIELDS. Mr. Chairman, the Wise amendment, while well-intentioned, is bad public policy. Adoption of the Wise amendment would create an open ended liability for the Federal Government, making it impossible to distinguish between displacements caused by the bill and other economic factors. Workers who lose their jobs due to the Clean Air Act already qualify for unemployment insurance and job-training assistance. Providing additional benefits to these workers is unfair to workers who lose their jobs for other reasons.

Mr. Chairman, no hearings have been held on this proposal. We have no idea what the budgetary implications would be while the sponsors of this amendment argue that its fiscal impact is moderated by the authorization language, we all know that authorization language cannot provide real assurances against future Federal spending.

Finally, Mr. Chairman, the Wise amendment jeopardizes enactment of the Clean Air Act. It violates the principles of balance which President Bush has indicated will be the basis for his decision on whether ultimately to sign clean air legislation.

I urge my colleagues to vote "No" on the Wise amendment.

□ 1510

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from Kentucky [Mr. HUBBARD].

Mr. HUBBARD. Mr. Chairman, as the Congressman for nine high-sulfur coal producing counties in western Kentucky, I speak in support of the Wise amendment.

Moments ago, my colleagues from California and Texas were emphasizing that we haven't had proper hearings on the Wise amendment. Surely, we all realize that almost every day the House meets we vote on amendments which haven't been the subjects of hearings.

Earlier today, a colleague was asking that I support protecting the spotted owls. I then learned he doesn't give a hoot about the Wise amendment which will help people who may lose their jobs. I now know that Congressman's priorities.

Also, just yesterday, some of my colleagues who oppose the Wise amendment, which will help American coal miners and others, were urging Members of Congress to vote more Federal dollars for foreign aid. I hope there is a majority of us who believes that American people should also be considered for Federal dollars along with people who live in Egypt, Israel, Nicaragua, Panama, and El Salvador.

Some of us represent coal districts where already depressed economies face further economic devastation. For us, this amendment spells relief.

The Wise amendment offers those individuals whose families have mined for generations an opportunity to be retrained so that they may again compete in the work force.

Falsely accused of being another entitlement program or of creating a new regulatory framework, in reality this amendment does neither. In fact, it actually establishes a program which is only authorized for 5 years and requires that workers demonstrate that their group was displaced as a direct result of the Clean Air Act. Furthermore, this amendment requires a GAO study to assess effects on employment attributable to compliance with the Clean Air Act and it amends two existing statutes. Needless to say, this amendment is well written, fair, and comprehensive in nature.

Provide wise relief to those who may otherwise become an economic drain, who could just collect welfare instead of being retrained and become assets to the work force. Support the Wise amendment and give the workers you displace a fighting chance.

Mr. LENT. Mr. Chairman, I yield 3 minutes to the gentleman from Pennsylvania [Mr. GEKAS].

Mr. GEKAS. Mr. Chairman, I thank the gentleman from New York for yielding time to me.

Mr. Chairman, every single Member of this House does support or will support programs to help the person who loses his job because of circumstances of the economy. All of us do that, and we are doing it this moment whether or not we pass this legislation, because there are dozens of programs already in place which do exactly that.

I would go to the wall, as anybody in this House would, to support and help a displaced coal miner who comes to my office and says: "I just lost my job because my mine has closed down for good," and so would all of the Members here. There are dozens of programs that will help us help that coal miner right here and now.

That alone gives us reason not to support this particular amendment, but there is another basic reason, the cost.

We can throw $250 million around like nothing these days, and I understand that, but I still refuse to throw it around wantonly. Second, this is to me an acknowledgment, a sad acknowledgment, the offering of this amendment, that the coal industry of this country is dead, or dying, or moribund, or absent from the future of this country. That is what this bill does.

I feel badly for the coal miner at this moment because the proponents of this legislation say you are going to lose your job, this clean air bill in the name of clean air is going to wipe out king coal forever. It is the coal industry for whom this bill tolls.

Mr. MURPHY. Mr. Chairman, will the gentleman yield?

Mr. GEKAS. I yield to the gentleman from Pennsylvania.

Mr. MURPHY. Mr. Chairman, I thank the gentleman for yielding and for his evenhanded approach. Even though we differ on our opinions on this measure, he has sacrificed me a few seconds to express mine.

The corporations that are affected by this will decide between their profit and loss column what to do. The automobile companies will add $100 to the price of an automobile. The utility companies will go before the utility commissions and seek a rate increase.

But what will the unemployed coal miner or utility worker receive? Unless this amendment is passed he will have no recourse.

We merely urge that if the proponents of this legislation are correct, that there will be no job loss, then there will be no cost; but if there is a job loss, let us protect the one who is least able to protect himself, and that is the unemployed worker.

I urge Members to support the Wise amendment, and thank my colleague from Pennsylvania for yielding me part of his time.

Mr. GEKAS. Seeking back my time, I hope the gentleman from Pennsylvania recognizes even if this bill should fail that he and I and others can help the displaced worker of any type with the existing programs.

Mr. MURPHY. We would like that assurance now, and I thank the gentleman.

Mr. Chairman, I rise in strong support of the Wise amendment to H.R. 3030 which provides for environmental adjustment assistance.

With so much attention directed towards CFC's VOC's, MACT's stationary sources, et cetera, it is easy to lose sight of those workers who will inevitably be affected by the passage of this clean air bill.

Clean air has a cost. We have been hearing this over and over throughout this debate. But this bill is not a budget buster. It is projected to cost about $250 million and will benefit only those who have no recourse. The automobile manufacturers can raise their prices to meet any cost increases. The utilities will turn to their regulatory bodies for the necessary rate adjustments. Major industries will be permitted to pass along every added cost of this legislation. They do not need our help today.

Where can the displaced worker turn? Who can he or she turn to for a cushion? If we are successful here today, they will be able to turn to the protections contained in this amendment. It is only fair that we provide some assistance to those who will be caught up in the changes that our legislation mandates.

Some argue that the Wise amendment is unnecessary. That it will not be needed because the impact will not be as great as some predict. I hope and I pray that they are right but I am not quite as optimistic. If they are right, the amendment will have not cost, no loss to the Treasury. But if they are wrong, and I believe that they are, this amendment will be needed and needed badly. We should and we must provide this protection. Those least able to adjust should be given the extra boost that they will need to face the uncertain future.

A Congress which can approve an open ended appropriation of some $300 billion to bail out the failing savings and loan industry, can certainly put aside partisan differences to approve an amendment which will cost just a fraction of 1 percent of the banking scandal's ultimate impact.

I urge all of my colleagues to join me and vote for the Wise amendment. It is right. It is fair. It is just.

Mr. WISE. Mr. Chairman, I yield 1½ minutes to the gentlewoman from Illinois [Mrs. MARTIN].

Mrs. MARTIN of Illinois. Mr. Chairman, I rise today in support of the job protection amendment offered to H.R. 3030 by the gentleman from West Virginia.

The debate over acid rain has shifted. We're no longer arguing about whether the problem exists. Now, we're trying to work out ways to solve it. We're no longer arguing about who will pay the cost. Now, we're trying to work out ways to help those paying the bill.

Mr. Chairman, it has been estimated that in my own home State of Illinois, provisions of H.R. 3030 would mean the loss of 19,000 jobs and cause coal production to plummet from 60 million to 30 million tons a year.

Five thousand out of fifteen thousand coal miners in Illinois are already out of work because of reduced demand for our high-sulfur coal. For those who remain—and for the thousands of other workers whose livelihoods will be affected by this legislation—we must provide an opportunity for retraining and temporary support while they prepare for a new life.

Americans are a fair people, Mr. Chairman. We have a tradition of helping each other achieve common goals. Whether it is maintaining the solvency of our banking institutions, recovering from natural disasters—be it earthquakes or hurricanes—or providing a helping hand to drought-stricken farmers, we work together.

This legislation is an extension of that fair, cooperative spirit that makes America great. It is not a worst example of regionalism, Mr. Chairman. Rather, it is the best example of federalism.

I urge my colleagues to vote for the Wise amendment.

Mr. LENT. Mr. Chairman, I yield 3 minutes to the gentleman from Minnesota [Mr. FRENZEL].

Mr. FRENZEL. Mr. Chairman, I oppose the Wise amendment to H.R. 3030. It is, of course, simply the Byrd amendment in sheep's clothing. That was the amendment that failed in the other body.

I oppose this because, as someone has already suggested, it does not follow our appropriate procedures. We do not know what criteria we should use in trying to determine exactly what put these people out of their jobs. The coal industry has lost 100,000 people in the last few years already. For the next person who is unemployed, is it because the industry is on a downgrade, or is it because of the Clean Air Act? The Department of Labor is going to have to figure that out, and, on the record, it is not very good at figuring that out.

Since no committee has had hearings, the Department of Labor will not have the advantage of any of our thoughts on this matter.

It establishes a new program strikingly similar to the Trade Adjustment Assistance Program which has been such a spectacular failure since 1970. The definition of workers who could seek certification is very broad, not limited to any industry and including services as well.

It provides up to 2 years of retraining as well as the extra unemployment compensation. Let me tell Members the huge amount of compensation they are going to get to protect workers here.

We are going to give them $30 million a year. The one estimate available is that 350,000 workers will be displaced. That means we are going to have no more than $86 per worker in additional unemployment compensation, not a very handsome purse. That amount is hardly worth filing for. If only the people mentioned by the gentlewoman from Illinois [Mrs. MARTIN] are to be unemployed, there will still be only a tiny amount, $1,500 of unemployment compensation for her 19,000 workers.

The wonderful training benefits, if there are 350,000 displaced workers, will be spread on the basis of $43 per worker—$43 a year won't buy much training. Obviously we are not talking real money here. We are talking about a program which somebody expects to expand into a multibillion dollar program.

We already have a well developed Jobs Partnership Training Program and Displaced Workers Program and a full-blown Unemployment Compensation Program. All of this amendment is extra, and it is unnecessary.

If this amendment is enacted, unrealizable expectations will be raised; applications will flood in; lawsuits will follow; and chaos will prevail. We can prevent all that by saying "no."

Mr. Chairman, I will read briefly from a letter from John Sununu, Chief of Staff, and William Reilly, Administrator of the EPA to the Speaker of the House on this amendment. It says:

*Washington, DC, May 22, 1990.*

Hon. THOMAS S. FOLEY,
*Speaker, U.S. House of Representatives, Washington, DC.*

DEAR MR. SPEAKER: As the full House prepares to consider H.R. 3030, the clean air bill which has been reported by the Committee on Energy and Commerce, we would like to offer the Administration's views on both the bill as reported by the Committee and several likely amendments.

The Administration's goal is to secure passage of clean air legislation which obtains the urgently needed environmental benefits called for in the President's original bill in the most efficient and cost-effective manner possible. We are pleased that the bill incorporates many of the features which were included in the President's proposal for the purpose of achieving this goal.

We are particularly pleased that the bill contains the following central features:

An acid rain control program, built on the principles which the President put forward, which will achieve a permanent reduction in sulfur dioxide emissions of 10 million tons below 1980 levels by the year 2000; which will allow utilities the freedom to choose how to achieve the required reductions; and which incorporates the concept of emissions trading in order to reduce the impact on the nation's electric ratepayers;

A program to reduce air toxics emissions by 75 to 90 percent in the first phase by adopting a technology standard, Maximum Available Control Technology (MACT), similar to that proposed by the President; and

Provisions designed to bring the overwhelming majority of America's cities into attainment with standards for ozone, carbon monoxide, and particulate matter within 10 years; and provisions suggested by the President to ensure steady progress toward attainment by requiring annual percentage reductions in ozone-forming emissions.

We do, however, have several concerns with the Committee bill and with several amendments that may be offered on the House floor.

On January 19th, the President sent a letter to the leadership of the Senate outlining five minimum tests of balance and reasonableness that must be met in any Clear Air legislation which he would sign. Specifically, the President believes that:

The environmental protections in the Administration's bill must be maintained and preserved over time;

The bill should not impose aggregate costs on the economy which exceed those embodied in the Administration's bill by more than 10 percent;

Controls in the bill should achieve reductions in the most cost effective way;

The system of acid rain emissions trading must be preserved and allowed to work; and

The legislation must not include a national electricity tax to pay for controls.

The estimated cost of the Committee bill is already at or slightly above the cost threshold outlined in the President's letter. Certain amendments could, if adopted, cause the bill to violate this and several other of the President's tests. These amendments are discussed below. Several additional concerns that the Administration has with the Committee bill as reported are discussed in the attachment.

TERMINATED WORKER ASSISTANCE

Representative Wise is planning to offer an amendment which is similar to the Byrd Amendment that was defeated in the Senate, and which the Administration opposes for similar reasons. The amendment would provide additional unemployment insurance benefits to workers who are deemed to have lost their jobs as a result of implementation of the Act.

This amendment would create a potentially open-ended liability for the Federal government because it contains no effective means of distinguishing whether workers lose their jobs because of the Clean Air Act or because of other factors. Employment in the coal industry, for example, has declined by over 100,000 in the last ten years for reasons totally unrelated to clean air.

As worded, it is not clear that the "cap" on Federal outlays would be enforceable or effective. This amendment sets an undesirable precedent that would have massive budget implications if similarly applied to workers affected by job shifts as a result of any other environmental initiatives or, for that matter, other Federal actions. It would open a multi-billion dollar deficit-increasing door that may never be closed. Unless the various adverse characteristics of the amendment are addressed, the President's senior advisers would recommend that the bill be vetoed.

PERMITTING AND ENFORCEMENT

The Administration believes that the permitting and enforcement provisions in the final bill must be both effective and efficient. Provisions that are unduly cumbersome, that allow counterproductive and inappropriate citizen lawsuits, or that impose unnecessary regulatory burdens on the economy will only result in frustrating the goal of a workable permitting and enforcement system.

We are especially concerned about provisions which would:

Expand judicial micromanagement far beyond that authorized in current law;

Inappropriately expand the power of the courts to collect fines and distribute them;

Fail to make a distinction between modifying and codifying permits;

Fail to provide the flexibility needed for industrial innovation.

ALTERNATIVE FUELS AND VEHICLE PRODUCTION REQUIREMENTS

Representative Waxman is planning an amendment with automobile production mandate requirements which go far beyond those proposed in either the Administration's original bill or the Senate-Administration compromise. The amendment effectively dictates certain types of fuels and violates the "fuel neutrality" principle on which both the Administration and Senate-passed bills were based.

The Administration has consistently favored any combination of vehicles and fuels which achieves needed environmental benefits, with an option provided to the states to increase the contribution of alternative fuels toward cleaner air if this is needed to come into attainment.

UNILATERAL CFC PRODUCTION RESTRICTIONS

Representative Bates is planning an amendment which contains phaseout and other requirements for chlorofluorocarbons (CFCs), hydrochlorofluorocarbons (HCFCs), halons, and methyl chloroform that go far beyond what is likely to be agreed to under the Montreal Protocol negotiations. This amendment may not be technically feasible, and in any event ties the hands of U.S. negotiators who are now seeking multilateral agreement on a worldwide phaseout of CFCs.

A unilateral phaseout will have little environmental effect, and if pursued on the schedule required in the amendment, could actually impede the development of safe substitutes. The Administration believes that any unilateral provisions adopted in the bill should not supersede or undo the terms of the ongoing Montreal Protocol negotiations if a successful outcome is achieved.

OTHER AMENDMENTS

The Administration is aware that Committee amendments are likely to be offered on the floor concerning accidental releases of air toxics, "visibility" provisions in the acid rain title, and requirements for reformulated gasoline and oxygenated fuels. While the Committee compromises on these subjects represent substantial improvements over the original versions of the amendments, the Administration remains concerned that their adoption would result in few additional environmental benefits while causing the aggregate cost of the bill to exceed the levels which the Administration would support. The Administration will therefore be working in conference to modify these provisions.

CONCLUSION

The Administration, the House, and the Senate have all devoted a remarkable amount of time to consideration of clean air legislation during the current Congress. We believe that the outlines of a consensus bill that affords significantly increased environmental protection in a cost-effective manner are clear.

We now have an opportunity to break a decade-long logjam on clean air. The Administration believes that the House should seize this unique opportunity, and avoid the adoption of any unnecessarily costly amendments which provide little incremental environmental benefit.

We urge Members of the House to support a bill which meets the President's five tests of balance and reasonableness so that clean air legislation can be signed at the earliest opportunity this year.

Thank you very much for your consideration.

Sincerely,

WILLIAM K. REILLY,
*Administrator, Environmental Protection Agency.*
JOHN H. SUNUNU,
*Chief of Staff.*

---

ATTACHMENT—KEY ADMINISTRATION CONCERNS WITH COMMITTEE BILL AS REPORTED

FIP's.—The House has delegated language that relieved EPA of its current obligations to complete federal implementation plans (FIP's). If current FIP obligations are not

relieved, EPA must impose acoss-the-board, draconian measures devastating the country's largest industrial area. In light of the new regime for state plan submissions, it makes no sense for EPA to impose FIPs before the states have had a chance to meet their new obligations. For these reasons, the Administration strongly objects to the Committee's approach.

In addition to current FIP obligations, the House Committee bill requires EPA to promulgate comprehensive FIPs in the future, regardless of how unworkable such federal measures would be or how impracticable it would be for EPA to implement the FIP. This requirement ignores the dismal history of the current attainment-FIP requirement, including the public uproar and virtual collapse of Title I of the Act that resulted from previous FIPs. It would be counterproductive to signal in this new law that states can avoid their new obligations by simply delaying and waiting for EPA to impose the necessary controls. As in the past, attainment FIPs would be an excuse for state inaction and an albatross around EPA's neck. It would be more responsible for the law to recognize the limitations EPA faces in this area and either allow partial FIPs on a discretionary basis or, as in the Senate bill, mandate only partial FIPs that would assure progress toward attainment.

Controls on small businesses in non-attainment areas.—The Committee bill extends controls on small businesses much further than under current law. By altering the definition of a "major source" from the current 100 tons per year of VOC emissions to 50, 25, and even 10 tons per year in many cities, the bill will extend controls to thousands of small businesses, greatly expanding both technology and paperwork requirements on small businesses and further restricting economic growth.

Offsets and netting.—The Committee bill requires any plant wishing to expand in most of America's largest cities to offset new VOC emissions by more than 1 to 1. The higher offset ratios will restrict economic growth in these cities more than either the Senate or Administration proposals. Since progress toward attainment is guaranteed by the annual percent reduction requirements already in the bill, these restrictions reduce flexibility and drive up the cost of the bill needlessly.

Permitting veto.—H.R. 3030 no longer includes authority for EPA to veto state permits, which was in the Administration's proposal to enhance the EPA's ability to enforce the Clean Air Act. Without this authority, violations of the Clean Air Act will occur more often and for up to a year before concluding the time-consuming revocation proceeding. Additionally, H.R. 3030 does not include the numerous enhancements made to the operating permits program through recent Administration changes. The key Committee omission is the so-called "codifying/modifying" permits scheme, which greatly simplifies the permits title, while maintaining necessary federal oversight.

Enforcement.—H.R. 3030 should include provisions that were in the Administrations bill authorizing EPA to stop the operation of new sources which are violating new source review requirements. Additionally, H.R. 3030 should provide a process for challenging administrative compliance orders under Sections 113(a), 167, and 303 of the Act. The appropriate balance between swift enforcement and opportunities to challenge these orders is to provide administrative hearings, with such decisions appealable to federal district court for review on the administrative record.

Clean coal technologies.—by restricting the use of Federal Clean Coal Technology (CCT) Demonstration funds to companies which own Phase I plants, the full benefits of the CCT program will not be realized. It is short-sighted and detrimental to the national interest to prevent projects which could provide long-term economic and environmental benefits from competing for these funds simply because they are not owned by one of 62 companies affected by Phase I, and located in one of the 21 states.

Acid rain implementation.—The committee amendments of Title V confuse the trading system and will drive the industry toward more conservative and costlier responses. Because of the numerous reserves, special allowance allocations, alternative allocation elections, and ratchet provisions, no company can be sure of its emission reduction obligations until all other companies have selected their control actions and EPA has recalculated and reallocated allowances. Under such uncertainty, companies are more likely to overcontrol and/or hoard allowances, and less likely to use innovative pollution reduction technologies. Litigation with its attendant uncertainty is likely to be greater, and the economic benefits of the market/based approach are likely to be lost.

Progress waiver.—There are no provisions to allow waivers from the 3 percent requirement after the first 6 years for high cost controls or where lesser reductions are needed to attain. By adopting relevant provisions from the Administration bill that allow less than 3 percent after the first 6 years on the basis of feasibility (including costs) or attainment, more fair and realistic expectations will be placed on local agencies. For example, this provision could result in controls in many areas equivalent to those required in Los Angeles, despite the dramatic differences between the nonattainment problems in Los Angeles and those experienced elsewhere.

Mobile source toxics.—The Administration opposes the requirement that EPA regulate emissions of formaldehyde and benzene, regardless of the results of a mobile source study on regulating mobile source toxic air emissions. The original Administration proposal required EPA to conduct such a study, but enabled the Administrator to determine whether regulations were appropriate. That discretion should be restored.

$NO_x$ requirements.—The Committee bill encourages EPA to promulgate regulations to control $NO_x$ from power plants which go far beyond the cost-effective of low $NO_x$ burners by requiring a 2.5 million ton reduction. The additional cost of such measures would be far out of proposition to the additional benefits which they would provide.

Mr. Chairman, the administration has the same objections to this particular feature that I do. If it indeed is necessary, it is a matter that should be determined through the regular committee process at the proper time. I urge a vote against the Wise amendment.

Mr. WISE. Mr. Chairman, I yield such time as he may consume to the gentleman from Pennsylvania [Mr. MURTHA].

Mr. MURTHA. Mr. Chairman, I rise as a consponsor of the amendment offered by the gentleman from West Virginia [Mr. WISE], and in very strong support of his proposal.

I rise as a cosponsor of the amendment offered by Congressman WISE, and in very strong support of this proposal.

The area I represent in Pennsylvania knows all too well about displaced workers. With steel, with coal, with textiles, we've seen our workers have to restart a career. It's tough on the workers, it's tough on the family, it's tough on the community.

The proposal we are offering today is reasonable. More to the point: it is needed.

If we are going to pass a law to continue our progress on clean air—and let me add that we should pass such a law, and should continue the progress—then we are also going to have to protect the workers affected by that law.

This amendment does that, and it's why it deseves to be passed.

I believe that overall we have crafted a solid clean air bill, a bill that minimizes the economic and job impact of continued clean air progress. But where industries are affected, we must protect those jobs and those lives. That's why we need this amendment.

In too many cases, that basic American worker that is the backbone of our economy has become the forgotten American. Let us not forget him today; let us pass this amendment and make sure he is protected.

□ 1520

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from Indiana [Mr. SHARP].

Mr. SHARP. Mr. Chairman, I rise in strong support of this amendment. First of all, it should be noted that the Clean Air Act has created in this country many jobs, and the bill before us will create some additional jobs, whether it is for canisters, catalytic converters, or technology to burn coal. But the fact is we know there are also prices to pay for this legislation. Most of us will pay that price at slight increases on the products we buy. But some people in this country will pay with their jobs, and their families will be disrupted.

It is for those people that I think we have an obligation to try to do something to help them in short transition—what we hope will be short—for them to get another job.

So we are only asking for some additional weeks of unemployment compensation and training for them to find another way to provide for their families. That is only fair.

This bill is important to our public health. It will add jobs to our economy in many ways, but it will take some jobs away. Let us remember those people; let us be sensitive to their needs.

Mr. LENT. Mr. Chairman, I yield 2 minutes to the gentleman from Utah [Mr. NIELSON ], a member of the committee.

Mr. NIELSON of Utah. Mr. Chairman, I rise in opposition to the amend-

ment offered by Mr. WISE. I do not feel that this amendment would be in the best interest of the American people.

It could create an open-ended liability for the Federal Government because there is no effective means of determining whether workers lost jobs because of the this act.

In my opinion this amendment is too ambiguous with regards to the cap placed on Federal outlays. I am not sure whether such a cap would be enforceable or effective. Because of this ambiguity there is no way to determine the effect on our already overburdened Federal budget.

This amendment could also set a dangerous precedent on making the Federal Government responsible for job losses due to environmental initiatives or other Federal actions.

This amendment could have a severe impact on future actions by this body as well as the current legislation under consideration. May I remind my colleagues of the five tests of balance and reasonableness that our President will apply to the final package.

I would ask that as you consider this amendment you review it through those five tests. It is my opinion that it doesn't pass the tests. Therefore, I urge my colleagues to vote against it.

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from Pennsylvania [Mr. WALGREN], the newest subcommittee chairman of the Committee on Energy and Commerce.

Mr. WALGREN. I thank the gentleman for yielding me this time.

Mr. Chairman, I rise in support of the Wise amendment to the Clean Air Act Amendments of 1989 for one simple reason: Its fairness. If anything, this amendment falls under the department "This is the least we can do."

It is only fair that there be some compensation when people are hurt by steps we as Government take to protect others.

The Wise amendment provides limited steps, a limited level of assistance to those who may be dislocated as a result of this bill.

This amendment reflects the spirit of the Congress that has been reflected in so many other areas where American workers have been disadvantaged through forces beyond their control.

The Congress has a record of support for trade adjustment assistance, unemployment compensation, job training, and skills development programs. I would only like to ask: Where is a kinder and gentler America now?

The President hangs his hat on the excuse that you cannot tell who lost their work because of the Clean Air Act. Those who lose their jobs in high-sulfur coal areas, that will be clear.

Mr. LENT. Mr. Chairman, I yield 2 minutes to the gentleman from Pennsylvania [Mr. WALKER].

Mr. WALKER. Mr Chairman, I thank the gentleman for yielding.

Mr Chairman, this is not a Wise amendment. This bird did not fly in the Senate and it should not fly here. We could jeopardize, literally, months of work—we could literally jeopardize months of work on the environment because of the tremendous cost that this particular amendment may bring about. That is what the White House is worried about. If you do not think the cost is a problem and you consider the amounts of money that are in this amendment, consider this: All of these things that you are hearing will be done for these workers are going to be done for $7 a month? Come on, get serious. You people do not intend for this to be $7 per month per worker. And that is what you are talking about if you accept those limits.

So, in fact, either this is an unlimited bill where we intend to spend vastly more money, or you intend to do all these good things for $7 a month. And I do not believe that you intend to do everything for $7 a month.

The fact is we have passed a number of bills with costs in terms of labor. We have done so this year. Have we provided the labor exemptions on this that we want here? No, because we said the costs are too high.

We said it on bills like the minimum wage bill. Now what has changed?

I hope it is not a desire to render this bill unsignable by the President, because we could have a real environmental disaster if that is what you are intending to do here.

I have to tell you that the one thing we have go to look at when we consider this kind of legislation is a new ethic developing in this country and in the world.

One of the parts of the new ethic is the environmental ethic. What it says is that you are going to have job shifts. You are going to have job shifts away from the old way of doing things to the new way of doing things.

There are going to be people that will in fact be hurt by this particular bill. But those people may be reemployed in businesses like mine—for instance, like one in my district. We have a business in my district that is going to build scrubber technology. They are going to want all kinds of new workers.

Now, true, people may have to move. They have had to shift in times past when we moved from an agrarian economy to an industrial economy. But I think we ought to be in line with the new ethic, not in line with the status quo.

Mr. WISE. Mr Chairman, I yield 1½ minutes to the gentleman from Ohio [Mr. APPLEGATE].

Mr. APPLEGATE. Mr. Chairman, you know, as I stand here I support the Wise amendment. But it is a shame, it is a shame to have this amendment in front of us, but it is a result of a bad bill.

All economic impact studies show that between 400,000 and 4 million jobs are going to be lost. I think that is bad.

I have a copy here of a letter from John Sununu, chief of staff of George Bush, to our Speaker, which is devoid of sympathy for American workers and which absolutely distorts the truth. And I want the Republicans here who read this to listen to what I have to say.

First of all, he says that it is similar to the Byrd amendment. Absolutely wrong.

The Byrd amendment says $500 million and only to coal workers. Our bill says $250 million for all workers. And there is no comparison.

It sets a precedent, he says, and it is wrong. We have a precedent in TRA, trade adjustment assistance, which we are still funding.

Mr. Sununu says there is no way to distinguish if a job is lost because of clean air or anything else. Wrong.

It is the direct effect of the clean air bill just as it is in TRA. He says 100,000 coal jobs were lost in the last 10 years not because of the Clean Air Act. He is absolutely wrong. They are a result of the Clean Air Act of 1977.

He says it is a multibillion dollar deficit door, and he should know about deficits. He is wrong there. It is only $250 million for 5 years.

Calling it anything else is wrong, it is a massive job loss bill.

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from Pennsylvania [Mr. GAYDOS].

Mr. GAYDOS. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, every responsible legislative body has an obligation to take care of that which it causes. The steel workers in my district—and I can speak with some authenticity—I had 30,000 to 35,000, and I now have 4,000.

□ 1530

That is the result of a bad trade policy. This body passed legislation which provided exactly what this amendment has provided. While the gentleman raised a question as to cost, I raise a question as to what this foreign aid costs? Fifteen, twenty billion a year? What has the savings and loan, as brought up by one of my colleagues earlier, cost Members? We are in to hundreds of billions of dollars.

I am suggesting to my colleagues that we have done this before. I know from practical experience of seeing this program work as a result of the GRA, as a result of the trade policy, and telling Members this is a good leg-

islation. It is necessary legislation. I stand in full 100 percent support of my colleague on this amendment.

Mr. Chairman, Throughout this week, we have been debating H.R. 3030, the Clean Air Act Amendments of 1990, a bill that could have a vast impact on us and many of our constituents.

In these few moments, I would like to focus on just one portion of this legislation, that part that deals with the manufacture of coke, a vital element in the steelmaking process.

Mr. Chairman, no one can be absolutely positive that what we are attempting to do in this bill will work exactly as we hope it will, but I think it is incumbent on each of us to consider how it might affect those whom we represent.

Some 10 or so years ago, I represented about 30,000 steelworkers who were employed in several steel facilities on the Monogahela River.

Today, Mr. Chairman, I represent about 4,000 steelworkes in just three plants and, of those, one, the Clairton Works, is solely devoted to the production of coke.

I must, in all fairness, speak out for my constituents who are still working in the Clairton Works and who have told me that they want to continue working there.

I am concerned that in our haste to achieve perfection, we may be guestinating too much about the future, especially about the future of steel demand.

Yes, the steel industry has changed. Steel products have changed. A number of smaller steel plants, the so-called minimills, use electric furnaces which don't require coke.

But that is not the whole story. Much of the American steel industry still needs coke, and a lot of that coke is made in my district.

No one among us can predict with certainty what steel demand will be 15 or 20 years down the road. There have been indications that the demand we experienced over the past 2 or 3 years may ease, but that is not to say that demand might not increase again in the very near future. In fact, there are some indications that demand will remain steady over the next year and may even pick up.

What that means is that we must maintain our steel making capability. We must ensure that we can produce sufficient coke for that production.

H.R. 3030 provided for a 6-year study to assess emission control technologies for coke ovens and to assist in the development of new technologies for reducing emissions from those coke ovens.

That study is important. It will give us the opportunity to find ways to reduce any harmful emissions that might pose risks for the general public living around or near coke oven operations as well as to the employees working in those facilities.

That last point is especially necessary, Mr. Chairman, from my perspective as chairman of the Subcommittee on Health and Safety, which deals with occupational health and safety issues.

I have spoken to both industry representatives and to the representatives of the men and women who work in the Clairton Coke Oven Works. They are unanimous in their support for the coke oven emissions study.

But I must tell you all that they are also unanimously opposed to portions of H.R. 3030 that could force the shutdown of those coke oven batteries before the study is even completed.

I think it is in the wrong interests of my constituents, the men and women whose livelihoods depend on the continued operation of these and other coke oven batteries, to put their jobs in jeopardy.

As long as we are going forward with this important study on which we will spend some $30 million—$5 million a year for 6 years, then isn't it logical to wait before imposing the stringent coke oven standards suggested in this legislation?

Aren't we defeating the purpose of the study? The idea is to find out where we are in terms of coke oven emissions and then to develop technologies for controlling those emissions.

If we insist that current technologies be put into use now, during the course of that study, then how can the study be valid?

Mr. Chairman, the people who worked on this bill deserve a lot of credit for bringing together many diverse interests in an attempt to craft legislation that will work and will improve our lives.

It is hard for me to believe that they don't understand the potential tragedy they are creating by suggesting that the Administrator of the Environmental Protection Agency go forward with rulemaking to restrict emissions from coke ovens without waiting for the 6-year, $30 million study.

I urge my colleagues to consider this portion of H.R. 3030 carefully. It is almost as if we were preparing to play a game of Russian roulette—except that today, we are pointing the gun at several thousand American workers.

Mr. Chairman, I rise in support of the Clean Air Employment Transition Program amendment, and I want to commend the gentleman from West Virginia [Mr. WISE] for offering it.

President Ronald Reagan once said:

When it comes to the bottom line, all of us are striving for the same thing—a strong and healthy America, and a fair shake for the working people.

H.R. 3030, the Clean Air Act Amendments of 1990, could lead to a stronger and healthier America, but it also carries a heavy price—potentially stripping many Americans of their present livelihoods.

This amendment by Mr. WISE which creates the Clean Air Employment Transition Program will help those workers who are displaced because of the effects of H.R. 3030.

This 5-year program would provide $15 million for retraining activities and $34 million for cash benefits to displaced workers each year—a modest sum to help soften the pain and suffering that usually follow such widespread employment and economic depression.

In order to be eligible for the program, which includes 6 extra months of unemployment benefits, workers would have to enter a retraining program operating under current job training partnership guidelines.

What Mr. WISE is proposing is more than feasible. I have seen the benefits of similar programs in my congressional district and those adjacent to mine.

In 1979, more than 26,000 people worked at United States Steel, a major employer in the Mon Valley, the heart of my district. Today, 11 years later, only about 4,000 workers are employed at the three remaining USX plants there.

The region around this steel valley lost more than 100,000 manufacturing jobs and 30 percent of its population in the worst industrial dislocation of the decade.

Despite a 1985 Department of Labor study showing that steelworkers are among the hardest workers to retrain, many are working in other fields because they were trained by already existing job training programs.

In the last 3 years, nearly 35,000 displaced workers in Pennsylvania alone have been retrained under title III of the Job Training Partnership Act [JTPA]. Roughly two-thirds of these workers were placed immediately after finishing their retraining.

Many companies like the Anchor Hocking Packaging Co. of Connellsville will hire only those new workers who have participated in JTPA programs.

Another 5,000 Pennsylvania workers displaced by unfair foreign competition have likewise been trained under the Trade Adjustment Assistance Program. Some of the intensive training programs offered can last up to 2 years, and workers are also eligible for financial benefits for that time, as long as they are in retraining.

These are people who received help after they lost the only careers they knew. These successful programs enabled them to regain their self-dignity and support themselves and their families.

The workers who will be displaced by H.R. 3030 are no different. They also need a fair shake. I am not just talking about Pennsylvania workers, but also about workers across the country.

This amendment is not only for steelworkers or coal miners. It would cover workers in the aluminum, textile, chemical, aerospace, and utility industries, who could be left jobless because of H.R. 3030.

They need somewhere to turn. This amendment will ease the pain of areas hardest hit, perhaps helping to train between 40,000 and 50,000 displaced workers for new careers.

It will give them hope for the future.

Yes, a sounder environment means we have to make sacrifices, but it does not mean that we have to destroy the lives of our working men and women.

I urge my colleagues to vote for the Wise amendment.

Mr. WISE. Mr. Chairman, I yield 1½ minutes to the gentleman from Indiana [Mr. MCCLOSKEY].

Mr. RAHALL. Mr. Chairman, will the gentleman yield?

Mr. MCCLOSKEY. I yield to the gentleman from West Virginia.

Mr. RAHALL. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I rise in support of the Wise amendment.

This legislation deals with more than environmental issues. It is, in fact, as much an

economic matter for thousands of working men and women and their families.

The question we are faced with is this: Are we going to compensate those workers who lose their jobs as a result of this legislation or not?

If we are honest with ourselves and with the American people, we will say yes, there are adverse employment impacts associated with obtaining cleaner air. We will vote for the pending amendment

Now, some of you may be saying, oh, there's NICK RAHALL, from West Virginia.

They have high-sulfur coal mining jobs that may be displaced under the acid rain control provisions of this bill.

You may also be thinking that this is a parochial issue for those Members who represent the coalfields of West Virginia, Pennsylvania, Ohio, Kentucky, Indiana, and Illinois and that you do not need to concern yourself with it.

This gentleman from West Virginia is here to tell you that the coal in his congressional district is extremely low in sulfur content.

Not all Appalachian region coal is high-sulfur, as many of you may think. In southern West Virginia, southeastern Virginia, and eastern Kentucky we have vast reserves of premium quality low-sulfur coal.

My constituents will not be adversely affected by the acid rain provisions of this bill. In fact, we will gain job opportunities in our southern West Virginia coalfields as a result of this legislation.

But that does not mean we will turn our backs on those hard-working individuals who may very well lose their jobs because of this bill.

So I would ask that you closely examine your conscience.

Think about the massive dislocation, the fear, the agony this legislation may bring to those who mine this country's high-sulfur coal. Those honest and hard-working individuals who engage in the dangerous occupation of coal mining so as to provide you with electricity, with comfort from the cold and the heat.

We owe these people. Do not turn your backs on them. I urge a "yes" vote on this amendment.

Mr. McCLOSKEY. Mr. Chairman, we have heard a lot of misguided criticism from the other side of the aisle today as to problems with this bill. I think all of this has basically totally missed the mark, but particularly this bill has been called unhealthy, unproductive, and indeed unwise and detrimental to the health of workers.

I think nothing could be further from the truth. Really, other than a very few specific problems in life, what is more unhealthy or detrimental or depressing and debilitating than to be without a job?

There is a lot of talk that this bill does not do it for everybody, so let's not do anything. That is a spurious argument. We should be helping the people in the defense industries that will be facing layoffs and the end of their careers.

I would make a bipartisan call for all Members on both sides of the aisle to get together, to work, so that the working people of America, the taxpayers of this country who put Members here, have basic jobs for the good of their families and for the good of this country.

As has been mentioned, the President campaigned for a "kinder, gentler" America, and the people in my district believed. My workers and others probably voted for him to the tune of almost 60 percent, but Mr. President, where is your "kinder, gentler" with the warning of a veto of this very reasonable legislation.

In these days of $5 billion S&L bailouts and an outrageous request for 132 B-2 bombers, why not invest one-quarter of one B-2 bomber in the working people of the United States? Vote yes on the Wise amendment.

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from Pennsylvania [Mr. RITTER].

Mr. RITTER. Mr. Chairman, I rise in support of the Wise amendment. I think it is disingenuous to impose a potentially $200 billion price tab on the American worker, motorist, and consumer over the next 5 years, and then to balk at a $250 million attempt to help workers who are thrown out of their jobs.

Perhaps if we knew how much environmental and health benefits we were getting, if we knew they were really worthwhile, we could justify the sacrifices of our workers, but there are too many scientific studies which indicate what we are doing here is marginal. We are not just talking about coal workers, we are talking about steelworkers. We are talking about workers in all American industries. Yes, all of American manufacturers use chemicals.

Given the intensity of this powerful regulatory instrument over manufacturers, energy, and transportation, and its uncertainty regarding environmental and health benefits, it is only basic fairness to take care of some of the workers. Mark my words, because far more workers than would be covered by the $250 million in the Wise amendment are at stake here. Far more than coal miners.

The CHAIRMAN. The gentleman from West Virginia [Mr. WISE] has 10½ minutes remaining, the gentleman from New York [Mr. LENT] has 8 minutes remaining, and the gentleman from West Virginia [Mr. WISE] has the right to close.

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from Illinois [Mr. POSHARD] who has been a leader in this effort.

Mr. POSHARD. Mr. Chairman, I rise in support of the Wise amendment and congratulate its sponsors for helping people who are certainly going to need it.

It is fair. It applies to all workers who lose their jobs because of this bill, including miners, truckers, electricians, and others. The benefits are meaningful, but not indefinite. An additional 6 months of unemployment insurance benefits, providing the worker is willing to enter into job retraining.

There are plenty of good reasons for me to support this amendment. As a matter of fact, there are about 10 to 19,000 of them. That is the number of people from Illinois, mostly in my district, who could be put out of work by this bill. It is a good amendment. It will help. It is the minimum that we can do to assist the working people of this country. It gives them a little more time and at least one additional opportunity to provide for their families.

Surely, we can help in this one small act to show the miners and others that we still care. Clean air is a worthy goal, but we could and should have done much more for the miners and other working people of this Nation.

Mr. Chairman, I rise in support of the Wise-Ridge-Downey amendment to the Clean Air Act.

The sponsors deserve great credit for being willing to help people who are really going to need it.

The amendment is a measure of fairness for working men and women who are about to be put out of work by this bill.

It is very reasonable. It applies to all workers, the benefits are helpful but do not run indefinitely, and there is retraining available for new job searches.

There are plenty of good reasons for me to support this amendment. In fact there are between 10 to 19,000 reasons. That's the number of people in Illinois, most of them in my district, who are going to be put out of work by this bill.

This is not easy for me to do.

Not that I don't think this is a good amendment. I do. And not that I don't think it will do some good for the people who are put out of work. It will.

But it's very tough for me to come here and accept that we're willing to pass this clean air bill, knowing that it will disrupt thousands and thousands of lives.

It reminds me of the old line "here's your hat, what's your hurry?"

We say this is an environmentally sound bill that's good for our environment and economy, while at the very same time we offer benefits for people we expect to put out of work.

I know we labored long and hard to come to this point. And clean air is as worthy a goal as any we can aim for. But I just can't get rid of this feeling that we could have—should have—done better for the workers who have no individual responsibility for what's about to be done.

Over the past year I've talked a lot about approaching this with a sense of balance. I've been before you with 1 minute and special orders on numerous aspects of this bill. Unfortunately, my district and other high-sulfur coal States ended up on the light end of the scales. And now we're left hanging.

Let me identify just a few of the most gross inequities.

First, the bill requires the Midwest and some Southern States to shoulder almost all of the cleanup burden. That's where the high-sulfur coal is mined, that's where the utilities that burn that coal are located. So it might seem logical to seek the emission reductions there, since that's what acid rain is traditionally blamed on.

But what about the industrial polluters who play a nearly equal role in putting sulfur dioxide and nitrogen oxides into the air? They are left untouched by the emission reduction requirements in this bill. That's hardly a polluter pays principle. If we can identify other potential sources that are blamed for acid rain, then we can surely ask them to take on some of the cleanup burden. That's what you would think. But that's not what we're doing.

Emission or generation fees on utilities and industries that would help pay for control technology were also rejected. I suppose we didn't want to tread in the no new taxes minefield—although more and more we see that ground's already been broken. Up-front assistance for installing scrubbers and other forms of technology control would have helped clean the air while at the same time saved thousands of jobs in the coal industry.

I introduced a bill last year (H.R. 3316) to reach the same clean air goals we all support but to do it in a more just way. My bill relied on a cost-sharing approach by imposing a fee on domestic and imported electricity. It would have spread the burden of compliance and asked for a little from everyone, instead of gouging particular areas of the country. I was willing to accept some changes, to work with other parts of the country to modify my bill to meet some of their needs, so long as we recognized the absolute necessity of sharing the load. But the climate for this kind of approach just does not exist. That's unfortunate, and I think we'll regret it in the long run.

And to add insult to injury, some States will even be allowed to increase the amount of pollution they send up in the air. The list of inequities just goes on and on.

When the hurricane hit South Carolina, or the earthquake rocked the California bay, or when the floods that are still a problem swept into the mid-South and West, we immediately rallied to help those people with Federal assistance.

I think that's a great idea. That's what we're all about here in Congress. We identify needs and problems that demand national solutions, and we find a way to take a little from all of us to help our neighbor who can't quite find the means to take care of it himself. We have done that all through history. When the Western States needed help getting water, we've provided subsidies for them. When farmers, many in my State, were hit so hard by the drought a few years ago, we helped, and that was greatly appreciated.

And we can't forget the savings and loan bailout. What a fiasco. The administration now says the estimates on paying for this disaster of fraud and contempt is up to $61 billion, and we all know it will probably go higher. That problem was most severe in a few States, Texas and California most notably, and lax State regulation was a contributing factor. But we didn't tell those States to go it alone, we came through with Federal money to help bail out the whole system, because it has some value for each of us. I wish the same was being said for the coal mines and utilities of southern Illinois and the rest of the Midwest.

But the best we can do for these working men and women, the bedrock of our society, the middleclass that buys the cars and houses and appliances that keep our economy moving, we can't do more than offer extra unemployment benefits.

The generations of workers in the coal fields and factories who have paid their taxes to keep the schools open, to run the local governments and maybe they've made just enough to send their kids to college, now we're turning our back on them.

This despite the $400 million study we launched to figure out the mysteries of acid rain that now we're more than willing to ignore, even before all the facts are in.

I brought the Small Business Subcommittee on Labor and the Environment to my district for a hearing on clean air legislation. The testimony was unanimous. The people in my district, coal miners, coal companies, utilities, and the business community in general, all recognized their obligation to help improve the Nation's air quality. Even in an area that's about to be pulverized by this legislation, we supported it, because it's the right thing to do.

And we probably did that because we thought in return we would be treated with similar fairness.

The subcommittee heard at length the impact the jobs losses in the coal fields will have on my district. Schools, local governments, small businesses, hardly anyone escapes untouched the way some polluters do in this clean air bill. We might as well have an earthquake or hurricane hit for all the damage that's going to be done, because at least then we might get some help. But instead of a purely natural disaster, this one has a human partner.

It's not the fault of the miners in my area that they live on top of and work with high-sulfur coal. But because we've assigned them the villain's role in this drama, the curtain is about to come down on a way of life that has sustained generations of people in my area.

I've met with groups of miners and the businessmen who depend on their paychecks as well on numerous occasions. One weekend I went back to my district and visited at fish frys, dinners, dances, a whole weekend of activities where the United Mine Workers celebrated their jobs and a way of llfe. Make no mistake. These people enjoy their work and want very much to keep their jobs.

I told them what kind of odds we were up against. And although they were realistic about what was going on, they never once lost faith in this Congress, in our Government, that in the end we would do the right thing for all of our citizens. I wish I could bring them here to the floor right now to tell their story, and to look you in the eye and describe what will happen under this bill. They don't want anything more than opportunity to compete for a piece of the American dream and the way of life they hold so dear.

If we were completely unwilling to accept any change, or recognize any need for sacrifice, we would not deserve special consideration. We are only asking to be met halfway.

I also sought an amendment to the bill to fund an economic impact study, a study that just might disprove the popular theory that utilities now have no option but to switch from high-sulfur coal to low-sulfur coal to meet their emission requirements.

When you factor in the job losses, the increased costs to bring that coal to the utilities, and the extra amount of low-sulfur coal you have to buy to get the same amount of power, it just might be that staying with the high-sulfur coal and toughing out the emission reductions makes the most sense.

We need a way to explain that to the utilities and coal companies, to help them analyze all of the economic factors involved in this decision. I suggested bringing in the expertise of a university in a high-sulfur coal area to provide that study. I asked for a 4-year program at $1 million a year, to help keep some high-sulfur coal contracts intact and some people on their jobs.

That amendment will not be heard in this debate. It is disappointing that we won't even have the chance to ask for a vote on this important idea.

I'm still hopeful that an expanded version of the amendment I sought to offer will be given consideration. The National Coal Institute which I have introduced (H.R. 4776) would be a valuable tool for economic and environmental impact studies and analysis under the requirements of this clean air bill.

And what about our national energy policy? Are we so confident of our energy future that we are willing to forsake such a plentiful and important natural resource? I hope we are able to convince the utilities to stay with the high-sulfur coal, but if for some reason they decide not to, and those mines do shut down, it will be awfully hard to open them up again. Once these contracts are lost, when the people are displaced, and the equipment is allowed to fall into disrepair, it will take a pretty big battery to jump start them again.

Have we already forgotten the long lines at the gas station back in the 1970's? Are we so eager to achieve clean air improvements that we look at this solution with tunnel vision?

We are heading down an uncertain path. In the end, the utilities may stay with their contracts and the job loss may be minimized. Hope and pray that is so. I wish I could believe it right now.

Behind the facade of clean air, there lurks a real monster of economic ruin. I hope we remember that 2 and 5 and 10 years down the road, when people look at this and wonder "What were they thinking when they passed that one?" Southern Illinois is already asking that very question.

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from Washington [Mr. SWIFT].

Mr. SWIFT. Mr. Chairman, protecting the environment is not cheap. The two sides of this issue have really failed to face up to the twin aspects of environmental protection: Industry and sometimes labor have used economic cost as a weapon to fight environmental initiatives.

Many in the environmental movement find those costs very inconvenient to their cause, and they try to hide behind anticorporate rhetoric, because corporations do not have to put food on the table or pay the mortgage.

But the fact is, there are costs, and the real tragic costs are those that are shouldered by individuals and families and small communities. I support this bill as essential for our citizens if they are to be able to breathe air which is by medical definition healthy. However, I also support the Wise amendment as a responsible acknowledgment that these health gains cost, and that those costs must be addressed, too. To do otherwise is to bury part of the truth: that this good bill has some ill effects. To be responsible, we must address those.

Mr. LENT. Mr. Chairman, I yield 2 minutes to the gentleman from Tennessee [Mr. COOPER], a member of the committee.

Mr. COOPER. Mr. Chairman, I rise in reluctant opposition to the Wise amendment. That amendment seems to be very popular on the House floor right now, but I feel it is a very misguided policy for this body to undertake.

Let me give Members the reasons. The Wise amendment is basically a form of cost sharing. Cost sharing, when thoughtfully and carefully considered, has been rejected this year by every subcommittee and every committee in the House and the Senate. This is the last chance for the cost sharing idea to be promoted. Cost sharing will increase the cost of the bill dramatically. Cost sharing is an open-ended liability that knows no bounds.

Although it is promoted as only $250 million right now, that cost is completely unrealistic. We are talking here today about a new entitlement program, a multibillion-dollar liability that could be a permanent one. Are Members only going to help workers who are caught out by phase I of the bill, and deny workers caught out by phase II? We are talking about a gigantic program whose authors are not willing to talk about the size of the program. Wait until conference and Senator BYRD get another crack. The size could grow exponentially, especially when we consider the precedent on the House floor.

Are we to have trade adjustment assistance for every piece of legislation that goes on this floor? Is this going to be a continual practice? I would suggest even my colleagues in organized labor would not like to see legislation like this appended to minimum wage bills or double-breasting bills or other pieces of labor legislation that are near and dear to their hearts.

This sets a terrible precedent, and one that I hope this House will reject. It is tempting now because it seems small, it seems harmless, it seems appropriate, but I would suggest to my colleagues that that is an illusion, and an illusion that we must be aware of. This House must reject the Wise amendment.

□ 1540

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from Pennsylvania [Mr. RIDGE], one of the real stalwarts among the supporters of the amendment.

Mr. RIDGE Mr. Chairman, this amendment highlights the fact that there is truly a human cost to this massive environmental undertaking involved in the clear air bill.

We know there are going to be some predictable consequences of this legislation. We know there will be enormous environmental benefits. We want that, we desire it. That is why so many of us support this legislation.

We know there are going to be increased costs for utility companies and consumers, and, unfortunately, Government can only give as much environmental protection as the people out there are willing to pay for.

We also know that people are going to lose their jobs as a direct result of this legislation, and, oh, indeed what a bitter irony that is. The good news for the people is that they are going to have cleaner air to breathe. The bad news is that they probably will have a little more time to enjoy the outdoors, to hunt and fish and generally enjoy this clean air, because they are going to be out of work as a result of this particular piece of legislation.

Mr. Chairman, this is a simply a transitional period, and this would provide some transitional aid. These men and women who will lose their jobs as a direct consequence of this legislation are certainly entitled to it.

Mr. Chairman, I rise today in support of the Wise/Ridge/Downey amendment to H.R. 3030. This amendment would establish a Clean Air Employment Transition Program to address the unfortunate side-effects of passing this clean air legislation. I would just like to take this opportunity to commend Mr. WISE for this far-sighted amendment that will aid workers displaced by provisions of this act. Establishing a program to effectively deal with such individuals is good, sound policy that I believe is necessary to help workers adjust to conditions presented by passage of clean air legislation. And I emphasize the word adjust, because that is exactly what this amendment is intended to do. It is intended to help workers in the transition period between losing their jobs and finding new work. It is not an effort to give excessive benefits to workers in a way that has never been done before. One of most important aspects of this program is that it is modeled after the Trade Adjustment Assistance Program which helps workers who have been displaced as a result of our foreign trade practices.

This program would provide retraining opportunities and discretionary benefits to displaced workers by extending 6 extra months of unemployment benefits beyond the 6 months of Federal benefits to which workers are currently entitled. However, as I mentioned, these benefits are discretionary. Let me stress that workers must demonstrate eligibility for these benefits so that members do not incorrectly assume that we are attemping to create an entitlement program.

Another important aspect of this amendment is the cost. This program would be authorized for 5 years at $250 million. This is a modest cost in terms of the benefits that our economy can reap from helping displaced workers get back on their feet to play productive roles in our economy.

Most importantly, I believe that this program is equitable. No worker will receive preferential treatment under this program but rather it will provide benefits similar to unemployment benefits to all workers who can demonstrate that Clean Air Act was an important contributing factor in causing job loss. This is a particularly important point to remember when you vote on this amendment, since I think we are all concerned with the after effects of this legislation. Why not take a necessary step now to make sure that we have a safety net in place to help workers who will be faced with a very unfortunate situation.

In addition, this legislation is not intended to help only workers in Pennsylvania. Let us think about the utility plant employee in New York, the chemical manufacturing employee in Texas, the coal miner in Illinois or any employee in the aerospace, aluminum, automobile, steel, or textile industry. This amendment provides the needed insurance to these workers that can enable each and every Member to support this amendment, and also final passage of the Clean Air Act.

This amendment is a thoughful solution to one of the many unfortunate side effects of providing the Nation with cleaner air. While I intend to support passage of this legislation, I believe that this amendment is needed if we are to help explain to the many workers who will be affected why they are suddenly out of work. We must let them know that Congress did not blindly craft legislation that allow them to breathe clean air but does not allow them to pay their bills or feed their families. Let us not do this to the American worker.

You vote for this amendment does not weaken the clean air bill. On the contrary, this amendment only serves to strengthen what we are about to pass by providing the long-term vision that we so often lack when passing comprehensive legislation such as this. I urge you, Mr. Speaker, and Members of the House to vote in favor of the Wise/Ridge/Downey amendment.

Mr. WISE. Mr. Chairman, I yield 1 minute to the distinguished gentleman from Minnesota [Mr. SIKORSKI], a real advocate of the Clean Air Act.

Mr. SIKORSKI. Mr. Chairman, I rise in support of the Wise amendment. It is a matter of simple justice, compassion, and humanity.

The America I love has always stood for a fair shake and a helping hand for working families. Today, here and now, it is the Wise amendment. It

helps the working man or woman who has been temporarily knocked down to get back up on his or her feet. It gives them job training, it gets them back to work.

I am here today and I have been proud to have been here all along, for many years, working for clean air and for working Americans. I carried acid rain bill after acid rain bill that went further than this bill goes, further than this proposal goes in protecting workers and their families and the environment. I did it against intense opposition from some in my home State, from the special interests, and even from some of my friends, because for me it is a matter of common sense and compassion.

I come from a working family. All their lives my parents worked hard. My dad was a railroad worker. Next to coal mining, that is the most dangerous occupation in America. He was a union man for over 40 years. My mom gutted turkeys in a processing plant. They did not ask for a handout, just a fair shake.

The committee tried hard to give working families some job protection. But we can do better. All the studies tell us that clean air legislation and acid rain legislation will create more jobs than they eliminate. That is good. But for those who will be displaced, America should not turn a cold shoulder; it should extend a helping hand.

The Wise amendment extends a helping hand. It gets workers back on their feet and back to work, no more and no less. It deserves our support.

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from Pennsylvania [Mr. KOLTER].

Mr. KOLTER. Mr. Chairman, I rise today to express strong support for my esteemed colleague's amendment. This amendment, modeled after the Trade Adjustment Assistance Program of the Trade Act, is a prudent and realistic approach to any job loss that this legislation may cause.

Mr. Chairman, we should keep in mind that there is a form of pollution just as insidious, just as devastating, as anything coming out of a smokestack. It is the pollution of the spirit, the pollution of diminished self worth, in short, the pollution of unemployment, of out of work, dispirited parents, and their hungry children.

I assure you that if this type of pollution goes unchecked, it will be as devastating as any toxic substance we are attempting to control in our debate here today.

We speak about America's role in an increasingly challenging age. The latest buzzword—competitiveness—is on everyone's lips. Well, my colleagues, if we want to adopt the soundest environmental course, let us do so while maintaining our competitive edge in the process. It is time to put up, or shut up.

Let us not abandon the thousands of miners, steel workers, and other employees who will bear the brunt of this legislation.

If we realistically expect them to be part of a competitive work force which will compete globally, let us, at a minimum provide them with the fruits of this amendment, instead of simply providing them with a bunch of pink slips to accompany their final paychecks.

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from Illinois [Mr. DURBIN] who has also been one of the real innovators on this legislation.

Mr. DURBIN. Mr. Chairman, they go to work with lanterns on their helmets and their canteens in hand. They descend hundreds of feet into the earth. They work in dungeon-like darkness, with danger at every turn. They labor at the most dangerous jobs in America. They are coal miners in my district and around this Nation who risk their lives to feed their families and make our lives a little easier.

And President Bush and some of the authors of the Clean Air Act who would put thousands of these coal miners out of work tell us we cannot afford to help these men and women find another job. Is it really too expensive for this Nation to retrain the thousands of men and women who will be unemployed by this bill?

It is disgraceful that those of us who stand up for working families in this Nation have to beg for a few dollars to help these people who want to find work. It is shameful that so-called fiscal conservatives would rather see workers on a dole than on a job.

The gentleman from West Virginia offers this House a chance to vote for a sensible and economical transition from job loss to job opportunity. And now we hear that the White House opposes the Wise amendment. This is the same White House that tells a mother who is fired because she needs to stay home with a critically ill child to take another job, and now this White House tells the coal miners who are out of work to take a hike.

Mr. Chairman, I ask the Members of the House to support this compassionate and sensible amendment offered by the gentleman from West Virginia [Mr. WISE].

Mr. LENT. Mr. Chairman, I yield 2 minutes to the gentleman from California [Mr. DANNEMEYER], a member of the committee.

Mr. MILLER of Ohio. Mr. Chairman, will the gentleman yield?

Mr. DANNEMEYER. I yield to my colleague, the gentleman from Ohio.

Mr. MILLER of Ohio. Mr. Chairman, I thank the gentleman from California for yielding.

Mr. Chairman, as a cosponsor of similar legislation, I rise in support of the Wise amendment.

This amendment forces us to look at the human side of this bill, the human costs in terms of job losses and its impact on families and communities dependent on coal mining and coal related production. It is predicted that hundreds of thousands of jobs will be lost as a result of this bill, a high percentage of these job losses are targeted in a direct fashion at the miners in high-sulfur coal areas but other groups especially those in energy intense industries such as aluminum and steel will also feel the devastating economic impact of this legislation.

When a Federal law such as this one severely affects the economic viability of a given area of the country and the major industries within that area, the bill in the interest of equity should make provisions for those job losses especially so when the region targeted has at best limited employment alternatives. We must make every possible effort to provide them with adequate, well targeted job readjustment assistance. For those that say there is no precedence for such benefits, I say not so.

This is not new ground. In fact, the history of congressional support for those displaced by new laws and regulations reflects a true interest in, and support for, those thrown out of work. Trade adjustment assistance has been made available to those affected by job losses to foreign competition. Job retraining is on the books for workers in industries which have been forced to reduce employment rolls. Approval of this amendment would not be out of step with the Clean Air Act. In fact, it would simply be extending the assistance Congress has traditionally given those most in need and most deserving.

If this truly is a bill for our children and future generations, we must address the human side of the equation in a very real manner as well and pass this amendment.

I trust my colleagues will support the Wise amendment when it comes time to vote in the House.

Mr. DANNEMEYER. Mr. Chairman, after listening to this debate, I am almost of a mind to believe that we have the money. I remind my colleagues that this year we are increasing the national debt by about a quarter of a trillion dollars. This is all academic again. We do not have the money even if we wanted to support it.

I am tempted to vote for the amendment offered by the gentleman from West Virginia [Mr. WISE] because he is going in the right direction. I have just one little modification I would ask the Members to accept. In the last 18 months we have lost 5,000 workers from Hughes' ground system located in hometown in Fullerton, CA, because of a decline in defense and aerospace business in America. Will the Member bring those 5,000 workers into this bill? My suspicion is, no.

What Members should do is go home and tell their constituents why they voted no for this bill that is not needed. This bill we are debating is not needed, and let me tell the Members why.

The preliminary report produced by $600 million of Federal taxpayers' money called the NAPAP study concluded that 2 percent of our lakes are acidic, and most of the acidic lakes in the Northeast have been that way since preindustrial times. NAPAP concluded that even if we do nothing, the number of acidic lakes in the Northeast will decrease over the next 20 years and increase only marginally over the next 50 years.

Similarly, the NAPAP scientists found no evidence of widespread forest decline in North America related to acidic deposition.

So I say to the gentleman from West Virginia [Mr. WISE], when you go home and tell your constituents you voted for this bill and they read this document that reflects the conclusions of the best scientists we Americans can produce that there is no casual connection between the emission of $SO_2$ and what they find in acidic deposition, they are going to ask, "What are you people doing? Are you legislating on the basis of perception or reality?"

Mr. Chairman, I submit that the responsible thing is just to vote this turkey down, because it ain't broke, and we do not need this Clean Air Act.

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from West Virginia [Mr. MOLLOHAN], who is well versed in this area.

Mr. MOLLOHAN. Mr. Chairman, I rise in support of my West Virginia colleague's amendment to provide retraining and unemployment compensation to workers whose jobs are lost as a direct result of the Clean Air Act amendments.

I am not, frankly, happy that we are debating this amendment today, because its very introduction, in a sense, reflects the deep flaws in the acid deposition title of the bill. The acid deposition legislation on the floor today should be based on good science and technology. It should be based on sound economics. It should be reasoned and it should be reasonable. Unfortunately, this legislation is none of those things. It is the triumph of politics over policy, it is the abandonment of reasoned deliberation to shallow posturing.

Over this past decade, the environmental lobby has screamed about the need for a 10-million-ton acid rain bill so loudly and so often that its validity has become a part of our political culture. The debate, in the press and all too often in this body, has degenerated into a caricatured white hat-black hat argument between, on the one side, the selfless defenders of trees, fish-filled streams, and little babies' health, and, on the other side, those dirty, greedy industrialists whose only concern is making an extra buck.

This is, of course, utterly ridiculous. We have heard a great deal of talk this week about the NAPAP study, the National Acid Precipitation Assessment Program, which, after 10 years and over half a billion dollars, is going to issue its final report later this year. Those on my side of this debate wonder about drafting, let alone enacting, an acid deposition bill before we get the results of the NAPAP study. We ask why are we doing this? We ask it loudly and we ask it often, but we don't get much of a response from the bill's proponents.

The reason, of course, is simple: The more we know about the NAPAP study, the more obvious it becomes that the need for this acid rain bill is—putting it as politely as I can on the floor of the House—unnecessary.

The NAPAP study shows that only 4 percent or so of all potentially vulnerable lakes have, in fact become acidic. The premise of this bill today was that thousands or even tens of thousands of lakes would lie dead across the land because of acid rain.

The NAPAP study shows that there is no evidence—I repeat, no evidence—that acid rain has caused a general decline in forests. And yet, the bill we consider today was designed to save us from the sort of severe forest damage that plagued Germany and other European countries and that alarmists pointed to as the threat acid rain poses to the Adirondacks.

I could go on, Mr. Chairman, but we are beyond all of that. Rather than suffer the embarrassment of having the truth undermine their decade-long litmus test, the environmentalists have convinced us to ignore the NAPAP study and to get this bill passed quickly so that they can turn to the next great issue.

The benefits of this acid deposition legislation are marginal and speculative, Mr. Chairman, but the costs are large and definite. This bill is going to put a lot of people out of work. The most conservative estimate is that 3,000 to 5,000 high-sulfur coal miners will lose their jobs because of this bill. Other estimates go much higher.

Equally important, Mr. Chairman, is the nature of this job loss. These jobs are not spread evenly throughout the economy and the country. They are localized and they are localized largely in small communities that are already economically depressed. This country's economy could absorb the loss of 5,000 jobs, or even the loss of 10,000, 15,000, or 30,000 jobs. The communities of West Virginia cannot. The towns of Kentucky and Pennsylvania and Ohio cannot absorb them. This bill, however, demands that they do so. The least—the very least—that this House can do is help these towns shoulder this burden.

That simple request has ample precedent in the law. Aside from the More Generic Trade Adjustment Assistance Program, the Congress has enacted specific relief measures for workers displaced by the 1970 Amtrak legislation, the 1973 Conrail legislation, and the 1978 expansion of the Redwood National Park. Each of these relief measures provided benefits much more generous than what we are asking the House to adopt today.

The amendment—in contrast, I might add, to the bill itself—is a reasonable and reasoned proposal to help our areas. It is modeled on the Trade Adjustment Assistance Program and would provide up to 6 months unemployment compensation and 2 years retraining benefits. It will give our towns a chance to survive—and I choose that word carefully—the costs of this bill, and I urge my colleagues to support it.

□ 1550

Mr. WISE. Mr. Chairman, I yield such time as he may consume to the gentleman from Alabama [Mr. HARRIS].

Mr. HARRIS. Mr. Chairman, my constituents, like people all over the United States, are becoming increasingly concerned about the environment and favor strengthening the Clean Air Act. As an original cosponsor of H.R. 3030, I also support reasonable efforts to reauthorize and amend the Clean Air Act.

However, many of the people who live and work in Alabama's Seventh District are also concerned for their own employment. Job loss estimates vary, but it stands to reason that H.R. 3030 will have some negative effect on employment in certain fields. Coal miners, steel workers, people who work in the automotive industry, and many others have expressed their deep concern to me that this bill could put them out of work.

I would never argue that public health and other benefits of H.R. 3030 should be sacrificed in order to prevent job loss in some sectors of the economy. But, I think it is fair that we try and compensate the people who do lose their jobs as a result of this bill, so that they may be retrained and continue to be productive members of society. Congress has already done something like this with the Worker Readjustment Program under the Trade Act.

As you will recall, the Worker Readjustment Program was set up to provide comprehensive assistance for workers displaced as a result of unfair trade practices. Similarly, the Wise amendment would provide benefits and compensation to workers displaced as a result of the Clean Air Act.

In my home State of Alabama, there are thousands of hard working men and women whose livelihood may be adversely affected by enactment of this bill. The Wise amendment would help retrain them and tide them over with additional unemployment benefits until they could become reemployed.

Mr. Chairman, we all want clean air. But let us do what we can to soften the blow to those who will lose their jobs as a result of these tighter clean air regulations. I urge my colleagues to vote "yes" on the Wise amendment.

Mr. WISE. Mr. Chairman, I yield I minute to the gentleman from Kentucky [Mr. PERKINS].

Mr. PERKINS. Mr. Chairman, what we have in this legislation before us today is a landmark piece of legislation that reaches out and will try to change the environment of this country in a very positive fashion. That is something that we should all be proud of and think that this is a good piece of legislation that we are looking at.

At the same time, Mr. Chairman, we must realize that while we are doing good in a broad sweep of the brush, that someone is there that will have to pay the costs for what is occurring, and the people that are going to be paying the costs are those people in high sulfur coal mine areas across this country.

Mr. Chairman, I have low-sulfur coal in my district. My district will actually gain jobs. But what about the miner; what about the people's families that are going to be bearing our benefits on their shoulders? That is what this legislation is dealing with.

Mr. Chairman, we are dealing here with the lives of people, and the gentleman from West Virginia [Mr. WISE] is only asking that they have some small recompense and some assistance in their time of need.

I urge my colleagues' support for the amendment of the gentleman from West Virginia [Mr. WISE].

Mr. WISE. Mr. Chairman, I yield 1 minute to the gentleman from Oregon [Mr. WYDEN] who is well known for his environmental efforts.

Mr. WYDEN. Mr. Chairman, I want to commend my colleague, the gentleman from West Virginia [Mr. WISE]. Environmental reforms do not come free. They can carry a heavy price tag for working families who do not have the resources to prepare for the changes forced by new environmental laws.

It just does not seem fair to this Member to come to the floor and vote for those issues that show up on the environmental score cares while ignoring the families who can be hurt by one of those votes. Maybe it is a miner. Maybe it is a timberworker who is affected by the spotted owl. But, as public support for environmental policy grows, as our society becomes more urbanized, we are going to face this issue again and again.

My colleagues vote for the Wise amendment and let us take the first steps toward a government that puts a human face on environmental reform.

Mr. LENT. Mr. Chairman, I yield 4 minutes to the gentleman from Louisiana [Mr. TAUZIN] to close debate on behalf of this side.

Mr. TAUZIN. Mr. Chairman, a rose is still a rose is still a rose, and cost sharing, no matter how one glosses it up, and makes it look pretty and puts a nice-smelling aroma around it, is still cost sharing, and we are debating today cost sharing. Make no mistakes about it.

Now, if there is a single Member of this Chamber who understands the impact upon workers and families of Federal environmental and energy policy, it is the Member who speaks today. Mr. Chairman, I represent a part of this country that is big in energy. It is big in oil and gas. Mr. Chairman, we watched as this body, the Congress of the United States, in the 1970's decided on energy policy. They placed a price on our product, natural gas, an artificially low price, and then forced us to sell it at prices below market value in the world. We watched as this Congress decided that our best product, natural gas, could not even be used in plants or in utilities in America. We could not sell it to whom we wanted. We could not use it for the purposes we wanted. We were told in our part of the country that we had to import coal. We were told we had to build nuclear plants on top of gas fields, if that made any sense. We were told that was good energy policy, and it did not matter that our utility bills doubled and tripled. It did not matter that workers by the thousands lost their jobs in the oil and gas fields. It did not matter that we suffered the worst depression that I ever witnessed in my life.

Mr. Chairman, when all that energy policy was passed, and our utilities were being charged those enormous sums, and we looked to Congress for help, we looked at weatherization funds and energy assistance funds, and we saw they were all tilted in favor of cold weather days, not the hot weather days like we experience in Louisiana. We watched people die of heat prostration without the help of Federal assistance to families who needed to pay for high energy bills in the summer. We watched, in fact, as over 200,000 jobs left my State alone, and we went from the middle income levels to the lowest in the Nation. We watched depression sink into the hearts, and minds and soul of our people until we were robbed, robbed indeed, of the very essence of our humanity in Louisiana. We watched our children leave in droves.

Mr. Chairman, this Congress did not provide us relief. We asked for foreign trade adjustment assistance. We could not get it from this Congress. No bleeding heart stood in this well and said, "Ah, it's time for oil field workers to get this kind of relief." It didn't happen.

So, Mr. Chairman, I understand the impacts of Federal legislation which impacts upon the lives of working families. My colleagues should ask me, "Why then won't you support the Wise amendment here today?

Mr. Chairman, I am here to tell my colleagues that I would have a hard time looking those oil field workers in the eye if I told them we were going to take care of coal mine workers, but we could not take care of oil field workers. But more importantly I am here to tell my colleagues this is a ruse. This is cost sharing, and, if my colleagues have any doubt about it, just check what happened on the Senate side and what this is all about. If my colleagues have any doubt about who pays for this cost sharing, go back to the families devastated in Louisiana and ask them.

The cost sharing is an effort to ask States like ours who have borne the burden of cleaning up already, who have borne the burden of accepting nuclear in a State that should never have a nuclear plant to now pay someone else's cleanup. And we ended up paying enormous taxes on a product as a consequence of Federal energy tax policy. Ninety percent of the profits we made off of the sale of our oil products are taxed away by this Congress in a windfall profits tax. This amendment would be asking that part of the country now to bear the burden of cleanup in other parts of America. That is wrong.

Mr. Chairman, this is not a wise amendment. This is an unwise amendment. This is cost sharing, and we ought to defeat it.

The CHAIRMAN. The gentleman from West Virginia [Mr. WISE] has 1½ minutes remaining, and he has the right to close.

Mr. WISE. Mr. Chairman, I yield myself the balance of my time.

Mr. Chairman, let us talk about cost sharing, what is and is not. That issue was decided in the Committee on Energy and Commerce many months ago. This, I reiterate, is all workers in all regions. It is the auto worker in Detroit, or the auto worker in California or Georgia. It is a chemical worker, yes, in Louisiana, the chemical worker in West Virginia, the chemical worker in California or Texas City. It is the steel workers across this country. It is the dry cleaning employee anywhere in small town America who may lose their jobs due to implementation of the Clean Air Act.

□ 1600

It is a universal bill, so those who would try to wave the red herring of its being an isolated bill dedicated to one small group, that is wrong.

Also, please remember that the Bush administration was over in the other body offering a bigger package to try to stave off that amendment several months ago.

I just want to point out one thing, Mr. Chairman. You know, when you build a house and then the highway department says, "We want this house for a public purpose," they have got to

move you and relocate you and help you make a transition.

It just seems to me if you are going to run a highway through a house and you think you ought to give people a transition, that when you run a law through their livelihood, you have to help them make the same transition. That is why we urge a yes vote for the Wise-Ridge-Downey worker transition amendment.

Mr. COSTELLO. Mr. Chairman, I rise in strong support of the amendment offered today by Mr. WISE. This clean air legislation will have a devastating effect on the Illinois economy and on those in the coal industry in my State, an effect that can be softened through efforts such as this amendment.

By establishing a program of trade adjustment assistance for those displaced by clean air legislation, we can provide workers who lose their jobs the opportunity to seek retraining assistance and find other employment, to care for their families and be a productive part of our economy.

The President's approach to this entire issue has been a philosophy where the polluter pays, so that just a few Midwestern States will be more harshly penalized than those without a strong coal industry. The result of this legislation could be a 15- to 25-percent increase in Illinois utility rates, and the loss of thousands of coal-related jobs. Retraining assistance is the least we can offer to those who will suffer under this bill.

Mr. Chairman, we all want to pass legislation to clean up our air. It must be done. However, I would like to remind my colleagues that under the savings and loan bailout, we shared the cost of the rescue nationwide. Why can't this same principle be applied to clean air? Why does the President apply this standard only to financial institutions, and not to the working people of this country?

This is a fair amendment which will provide our Nation with a stronger, more skilled work force after implementation of this clean air bill. This small step will make an enormous difference to an industry and its employees that have been the backbone of American economic strength and energy for over 200 years. I urge my colleagues to support the Wise amendment.

Mr. SCHEUER. Mr. Chairman, today we have an opportunity to help the working men and women of America make the change to a cleaner, healthier Nation. The people who have built America should be protected when America's priority for a safe environment could result in a loss of jobs.

In the past 50 years, this Nation's largest industries, steel, textile, auto, and coal have undergone major shifts, often adversely affecting the workers. Painful market adjustments from North to South, union to nonunion, labor to capital intensive, export of jobs, competition from abroad have required workers to cinch their belts in another notch.

The fair and just congressional response is assistance for retraining, relocation, and education. These workers lose their jobs through no fault of their own. They need our support to adjust and reenter the working world. This amendment would provide up to $250 million over a 5-year period for retraining and income maintenance.

Not only should we support this amendment, but when appropriation time rolls around we should fully fund this program. Too often we have made a commitment to the people who are the backbone of our society and then pulled the rug from under their feet by reducing or eliminating authorized amounts of money for retraining. That's no money for retraining, no money for education, no money for relocation and no chance for workers to find new jobs. This zero sum formula would equal zero sum gain for the Clean Air Act. We may have cleaner air, but we would have more poverty; and poverty is the biggest polluter.

Labor is not condoning dirty air, denuded forests and illness caused by pollution. We should not condone poverty created by a national mandate for a better environment. Please support American workers and vote for this amendment.

Mr. FRENZEL. Mr. Chairman, I rise in opposition to the Wise amendment to H.R. 3030, the Clean Air Act Amendments of 1990. I oppose the Wise amendment because it establishes a new program right at the time that budget negotiations are attempting to reduce the enormous deficits now facing our country. This is not the time to be voting on creation of a new program.

I further oppose the Wise amendment because it is not following the appropriate House procedure. It has not been considered by the committees of jurisdiction—no committee hearings have been held and we are not yet certain what impact these clean air amendments will have on businesses and employment. I do not believe that it is appropriate to rush this proposal through the House with limited debate at this time.

This amendment establishes a new program strikingly similar to the Trade Adjustment Assistance Program created in 1970, providing extended unemployment benefits to eligible persons displaced due to effects of the Clean Air Act Amendments. The definition of workers who could seek certification by the Secretary of Labor is very broad—it is not limited to any particular industry and includes services as well as production. The Secretary of Labor is required to certify groups of workers that meet the requirements of this amendment. Certified workers would then be eligible for the extended unemployment benefits.

The amendment also provides up to 2 years of retraining assistance under the Job Training Partnership Act to workers in industries who lose their jobs due to the Clean Air Act amendments.

The amendment states that payments for extended unemployment benefits may only be made from funds appropriated and authorizes $30 million for fiscal year 1992 and $175 million over 5 years for such purpose. It is my understanding that the parliamentarian has determined that this general appropriation language is sufficient to assure that this amendment does not create a new entitlement program.

In addition, the amendment authorizes $15 million for worker retraining in fiscal year 1991—$75 million over 5 years. Therefore, the total authorization for extended benefits and retraining is $250 million over 5 years.

My concern arises from the fact the amendment is very broad in scope and does not provide a mechanism to reduce the extended unemployment benefits proportionately to comply with the spending limits. My fear is that a large number of groups will be certified, resulting in persons applying for benefits far in excess of the $30 million limit in fiscal year 1992 and $175 million over 5 years. If that is the case, I am certain that litigation will ensue. The courts may then look more to the specifics of law requiring the certifications to be made if criteria are met, resulting in benefit payments, rather than to the general spending limitation.

I believe that this issue must be studied and that this proposal should proceed through the proper House procedure. Therefore, I urge my colleagues to vote "no" on the Wise amendment.

Mr. McCLOSKEY. Mr. Chairman, we have heard a lot of misguided criticism from the other side of the aisle today as to the problems with this bill, and I think that all of them basically totally miss the mark. In particular, this bill has been called unhealthy, unproductive, and indeed unwise and detrimental to the health of workers. I think nothing could be further from the truth. Really, other than a very few specific problems in life, what is more unhealthy and detrimental, or depressing and debilitating than to be without job?

And there's a lot of talk about "Well, this bill doesn't do it for everyobdy, so let's not do anything." Let me say, that's also a spurious argument. We should be helping the people in the defense industries that are going to be facing layoffs and the end of their careers. I would make a bipartisan call for all of us on both sides of the aisle to get together to work so that the working people of America, the taxpayers of this country who put us here, have adequate jobs and basic futures for the good of this country.

The President campaigned for a "kinder, gentler" America, and the people of my district believed him. And the people, the mine workers and others, voted for him to the tune of 60 percent. But, Mr. President, where is your "kinder, gentler" with the warning of a veto of this very reasonable legislation? In these days of $500 billion S&L bailouts and outrageous requests for 132 B-2 bombers, why not invest one quarter of one B-2 bomber in the working people of the United States? Vote "yes"on Wise.

Mr. BRUCE. Mr. Chairman, there are nearly 19,000 people in my State who could loose their jobs as a result of the clean air bill; 19,000 families who will have their lives dislocated, who will face rent and grocery bills and car payments with nothing but an uncertain future.

If these people had lost their jobs because of the action of a foreign government, the

U.S. Government would be there to help, with extended unemployment insurance and retraining assistance to help these families get back on their feet leading productive, working lives. But because it's our own Government that will put them out of work, they will have nothing from us. Is that right? I say no.

I say that these people have not been responsible for pollution, yet the clean air act bill cleans up the Nation's air at the cost of their jobs. Mr. Chairman, I urge my colleagues to ask themselves, isn't it fair that we extend the same benefits to workers affected by actions of the Federal Government that we would to those who fall victim to the actions of a foreign government?

We need cleaner air, no one is arguing that. But what about the human cost of the legislation? What about the lost jobs and the dislocated lives that this bill will cause? The wise amendment will help us get cleaner air without forgetting the average working family—not just in Illinois or the midwest, but across the country.

The CHAIRMAN. All time has expired.

The question is on the amendment offered by the gentleman from West Virginia [Mr. WISE].

The question was taken; and the Chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. LENT. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 274, noes 146, not voting 12, as follows:

[Roll No. 132]

NOT VOTING—12

| | | |
|---|---|---|
| Alexander | Flippo | Robinson |
| Barton | Holloway | Stallings |
| Clinger | Lukens, Donald | Thomas (CA) |
| Craig | Nelson | Williams |

□ 1617

The Clerk announced the following pairs:

On this vote:

Mr. Nelson of Florida for, with Mr. Craig against.

Mr. Williams for, with Mr. Thomas of California against.

Mr. CRANE changed his vote from "aye" to "no."

MR. LEHMAN of Florida, Mr. SPRATT, and Mrs. BYRON changed their vote from "no" to "aye."

So the amendment was agreed to.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. SIKORSKI

Mr. SIKORSKI. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will designate the amendment.

The text of the amendment is as follows:

Amendment offered by Mr. SIKORSKI: Page 241, in lines 17 and 18, and page 242, in line 1, strike "5 years or 50,000 miles" in both places such phrase appears and insert in lieu thereof in both such places "8 years or 80,000 miles".

Page 241, before the period in line 21, insert ", except that the Administrator may designate any other pollution control device or component as a specified major emission control component if—

"(A) the device or component (except in the case of onboard emission control diagnostic equipment required by section 216) was not in general use on vehicles and engines manufactured prior to the model year 1990; and

"(B) the Administrator determines that the retail cost (exclusive of installation costs) of such device or component exceeds $200 (in 1989 dollars, adjusted for inflation or deflation as calculated by the Administrator at the time of such determination".

The CHAIRMAN. Pursuant to the rule, the gentleman from Minnesota [Mr. SIKORSKI] will be recognized for 15 minutes, and a Member in opposition will be recognized for 15 minutes.

Is there any Member in opposition to the amendment?

Mr. DANNEMEYER. Mr. Chairman, I rise in opposition to the amendment.

The CHAIRMAN. Pursuant to the rule, the gentleman from California [Mr. DANNEMEYER] will be recognized for 15 minutes in opposition to the amendment.

□ 1620

The Chair recognizes the gentleman from Minnesota [Mr. SIKORSKI].

Mr. SIKORSKI. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, cleaning up America's air requires making new cars clean and keeping the cars on our roads clean. That is why the gentleman from New York [Mr. GREEN] and I brought this amendment to you.

What does it do? It requires the free replacement of the two big and expensive pollution control parts, the catalytic converter and the electronic control unit [ECU], if they fail in the first 8 years or the first 80,000 miles. It preserves the new 2-year 24,000-mile warranty on all the other emission-related parts.

Who supports this amendment? Small businesses, in a big way, support the amendment.

Which ones? There have been a lot of small businesses all over the place on this warranty issue. But the five big associations, trade associations representing over 15,000 small businesses affected by this bill support this amendment.

The real mom and pop auto repair businesses represented by the Automotive Service Association, the largest and oldest organization with average employees of its members 4.2 employees, support my amendment.

The auto parts manufacturers, distributors, retailers—people like Crown, Champion, Pep Boys—support this amendment.

So Mr. Chairman, we have got the mom and pop repair shops and the auto parts manufacturers and affiliates and the manufacturers of specialty parts for the vans, the trucks, the RVs, all supporting this amendment.

Why are they supporting this? For business reasons. The repair shops want to be able to repair your car and repair your auto parts, including the pollution controlling parts. The manufacturers, the distributors, the retailers, want to sell those parts to you.

Right now they lose, they believe, tens of millions of dollars because consumers are confused about the warranties and automatically go to the big auto dealerships. Mom and pop small businesses are locked out, especially when the bolts, the hoses, the batteries and other things are being replaced, because they are replaced without warranties anyway and without competition from the little guys.

So what did they do? Last August, they negotiated an agreement with the consumers, the environmentalists, and the local government groups to provide an enforcible, useable warranty to the consumers.

They believe their agreement now reflected in this amendment is balanced. They believe it protects the consumer and the environment and the small businesses who hope to compete against the big boys. And they are sticking with their agreement. That is why they asked for this amendment.

Consumer groups also support it. Why? Because the consumers get freedom of choice as to where to repair, and they get a usable, valuable, enforcible warranty on the big ticket items. And they get cost savings and cost competition on the small ticket items.

Environmental and health groups support it because these longer warranties, combined with durable pollution control equipment, could reduce emissions by 25 percent. That is a big deal. Think of the vandalized national monuments, the human misery, the fractured lives, the coughed up lungs that will be saved with a 25-percent cut.

Let me make four points and sit down. Without this amendment, H.R. 3030, the clean air bill before us, will actually weaken existing clean air law, actually weaken clean air without this amendment.

Second, this amendment is identical to the language that the Senate produced from the very beginning—in subcommittee, committee, and on the floor.

Third, this amendment is identical to the language the Bush administration embraced in their Senate agreement.

Fourth and finally, this restores the balanced agreement on warranties reached last August and is supported by the environmental, the consumer, the small business, and the local government groups.

Now, it is not every day in this Chamber you get to vote for small business and environmental groups and consumers and make your counties and your Governors and your local cities happy. You get to do that today by voting "yes" on Sikorski-Green.

Mr. Chairman, I reserve the balance of my time.

Mr. DANNEMEYER. Mr. Chairman, I yield 2 minutes to the gentleman from Virginia [Mr. BLILEY].

Mr. BLILEY. Mr. Chairman, for years I have been a member of the Energy and Commerce Committee and have been present for both sides of the debate on numerous occasions on the warranty issues. During committee consideration of this issue there was extensive discussion, both in and out of the hearing room, and by a major bipartisan 29 to 14 vote we rejected the amendment being offered today to increase the warranties to 8 years/80,000 miles. We did increase emissions system durability protection and EPA recall authority without having the adverse impacts that would be generated by the longer warranties in the amendment. There has never been one shred of evidence produced to show that the warranties in the act have had any beneficial impact on the environment or on system durability. The committee believed that the extension of the system durability testing and recall authority more than adequately protected the consumer and readily agreed to those provisions.

I urge my colleagues to vote for consumer choice and against Sikorski-Green.

□ 1630

Who opposes this amendment? The Automotive Parts Rebuilders Association, the Automotive Service Industry Association, the Automotive Wholesaler Association Executives, the Clean Air Working Group, Motor and Equipment Manufacturers Association, the National Federation of Independent Business, the Service Station Dealers of America, and the U.S. Chamber of Commerce.

This is a bad amendment. I urge my colleagues to vote it down.

Mr. SIKORSKI. Mr. Chairman, I yield 4 minutes to the gentleman from New York [Mr. GREEN].

Mr. GREEN. Mr. Chairman, I rise in support of the Sikorski-Green amendment and I urge my colleagues to adopt it. The amendment is good for small business, and that is why the Automotive International Association, the Automotive Parts and Accessories Association, the Automotive Service Association, the Automotive Warehouse Distributors Association and the Speciality Equipment Market Association all are endorsing it.

The amendment is good for the environment because it is absolutely essential that cars be kept in good condition if the pollution control requirements of this act are going to be effective. That is why such groups as the American Lung Association, the National Clean Air Coalition, the National Wildlife Federation and the Sierra Club are endorsing this amendment.

Local governments feel that the amendment is essential if they are going to meet the requirements that are imposed on them by this legislation, and that is why the National Association of Counties and the National League of Cities have endorsed it.

But most of all, this is a consumer protection measure, and that is why it has been endorsed by the Consumer Federation of America, the Center for Auto Safety, Public Citizen, and the U.S. Public Interest Research Group.

Members should understand very clearly what they are doing to their constituents if they vote against the Sikorski-Green amendment. At the present time, under the existing law, your constituents have protection for 5 years or 50,000 miles on all of the pollution control equipment on their cars. As the bill now stands, they will have taken away from their protection on the smaller parts for 3 years. That will be reduced from 5/50 to 2/24, and there is nothing in the bill before us

which compensates our constituents for that loss of warranty protection.

The Sikorski-Green amendment gives them a tradeoff. It gives them a tradeoff of having 8 years or 80,000 mile protection on the two big-ticket items, the electronic control unit and the catalytic converter. Those are the things for which a used car owner in the sixth year to the eighth year of operation is going to have a hard time ponying up the money if they go bad and he has to fix them. So we give that tradeoff to the consumer.

The bill without our amendment simply takes away from your constituents and gives them nothing back in return. I do not think I should want to go back to my automobile-owning constituents and tell them that I had taken away important protections they have under existing law and given them nothing in return for it.

So if Members vote "no," that is what they are doing, they are taking away consumer protection, they are taking away warranty protection from automobile owners and giving them nothing back in return.

If Members vote for Sikorski-Green, they are giving consumers something in return, something that is extremely valuable to them, something that the administration endorsed, something that the Senate endorsed. At the same time we shall be helping to protect the environment and satisfying the needs and economic requirements of the mom and pop service station industry and the parts industry.

I cannot think of any amendment we are going to see on this bill which has such a broad base of endorsement as the Sikorski-Green amendment, and I urge Members to vote for it.

Mr. DANNEMEYER. Mr. Chairman, I yield 2 minutes to my colleagues, the gentlemam from Alabama [Mr. CALLAHAN].

Mr. CALLAHAN. Mr. Chairman, I rise in opposition to the amendment offered by Representatives SIKORSKI, GREEN, and WAXMAN. This issue was fully addressed by our committee and rejected 29 to 14.

The attempt being made to indicate that extension of the warranties under the amendment are proconsumer and proenvironment, flies in the face of the facts.

H.R. 3030 as adopted by the committee increases the emission system durability testing to 100,000 miles and EPA recall authority to 7 years/75,000 miles. That gives us what we were looking for. Increased emission system durability and the consumer protection without the anticonsumer and anticompetitive impacts of the longer warranties.

The House Small Business Committee unanimously determined that the warranties in the act were anticonsumer in that they eliminate the consumer's freedom of choice as to where he can have his car serviced, or work on it himself, without voiding the warranty and that they mandate a monopoly to the franchised dealer on all parts and service for the length of the warranty.

Extension of the warranties is totally unnecessary and would have no benefit to the environment as claimed by its proponents. There's never been any evidence produced that the warranties have had any impact on clean air. This is simply an economic issue which has the unfortunate effect of severe dislocation in the marketplace. The independent automotive aftermarket industry has done 75 to 80 percent service work in this country for well over 75 years by consumer choice. Consumers voted with their pocketbook and to force them back for emission service only to the franchised dealer for the life of the warranty, only eliminates the consumer's prerogative regarding the servicing of his vehicle, for fear of voiding the warranty he paid for in the price of the car.

This is the only federally mandated warranty on the books and it has an already severe competitive disadvantage built in for the independent service industry and consumers. If consumers can't shop around for service prices and are forced only to the dealer, the likelihood is monopoly pricing.

H.R. 3030 contains warranty coverage for the catalytic convertor and electronic control module for 5 years or 50,000 miles. Along with the expanded initial testing certification and EPA recall authority, this is a strong proconsumer provision of the bill and one that should be retained as adopted by the committee.

I urge my colleagues to oppose the Sikorski-Green-Waxman amendment and support H.R. 3030 as adopted by the House Energy and Commerce Committee.

Mr. SIKORSKI. Mr. Chairman, could the Chair advise how much time remains on each side?

The CHAIRMAN. The gentleman from Minnesota [Mr. SIKORSKI] has 6 minutes remaining and the gentleman from California [Mr. DANNEMEYER] has 11 minutes remaining.

Mr. DANNEMEYER. Mr. Chairman, I yield 2 minutes to the gentleman from Michigan [Mr. DINGELL], the chairman of the committee.

Mr. DINGELL. Mr. Chairman, this is a bad amendment which appears to be good. It is of no environmental value and confers no environmental benefit. But the amendment has the practical effect of stripping independent garagemen and little businessmen of the ability to do business involving parts which would otherwise be covered by the extended warranty which is included in this amendment.

The amendment is not needed. It ensures that hundreds of parts that are not now subject to the manufacturer warranty of 5 years and 50,000 miles will become subject to a warranty. This strips them of business and moves it to the dealers who really do not solicit the business and do not greatly care.

The question here is whether or not the Congress should cavalierly increase the warranty on certain named parts. Many people in the aftermarket industry have told the Congress that this will cut them out entirely of the business. If Members are interested in the small businessman and they want to vote with him in an environmentally neutral fashion, my suggestion is to vote strongly and speak against, oppose, vote against this particular amendment.

It looks good; it sounds good. It is illusory in the extreme. It confers no environmental benefit, but it is going to hurt hundreds of thousands of small businessmen by denying them access to business which will be moved under warranty.

If Members want to favor the dealerships, the big businessmen and that sort of folks, then by all means vote for the amendment.

I have worked on this legislation for years. The little businessmen, the small independent garagemen have consistently opposed this legislation, and I urge the House to do likewise.

Mr. Chairman, I rise in opposition to this amendment. This has been a long-standing battle inside the Energy and Commerce Committee. The amendment is opposed by the small operators in the aftermarket industry and by others. That is because it is not needed and it ensures that hundreds of parts are not subject to the manufacturer warranty of 5 years and 50,000 miles. The basic and most important—the catalytic converter and the electronic emissions control unit—are already subject to the 5-year, 50,000 miles warranty for the consumer.

The question is whether or not the Congress should cavalierly increase the warranty for certain named parts. Many people in the aftermarket industry believe that this will cut them out entirely if it is done—cut them out of both repair and sales of parts. This is extremely important to the small businessman who exists in large part on the repair of automobiles after the warranty on those automobiles have expired.

It is also unfair to the manufacturing companies. I think that if we are interested in being fair to the small business people of this country who operate independently, who manufacture parts independently, who are not major manufacturers for automobiles or of automobiles or for automobile companies, we should reject this amendment being offered.

I would point out that if we go the other route and extend the warranty periods for these and all of the other parts, particularly the small parts, we will be robbing the small businessman, both manufacturers and the small installers and repairmen of a major part of the business that they do now and you will

be compelling them to cease their functions either as manufacturers or as repairers of automobiles.

I urge my colleagues to vote against the amendment.

Mr. DANNEMEYER. Mr. Chairman, I yield 2 minutes to my colleague, the gentleman from Ohio [Mr. OXLEY].

Mr. OXLEY. Mr. Chairman, I thank the gentleman for yielding time to me, and would only reiterate a couple of points that the chairman of the full committee made. There is no free lunch here.

□ 1640

I saw a dear colleague coming around somehow talking about free warranties and extended warranties. Believe me, there is no free lunch, there are no freebies, when the individual owner is deprived of his freedom of choice as to where he is going to have the particular work on his automobile completed. That is exactly what we are talking of here, is the opportunity for that owner of that vehicle to decide where he is going to have that work completed.

There is certainly no environmental benefit, no one who supports the amendment in any way can stand up and say that somehow we are going to have cleaner air as a result of these extended warranties under the Sikorski-Green amendment.

The full committee debated this issue long and hard. It has been an issue that has been before our committee on more than one occasion, and in fact the vote was 29 to 14, better than 2 to 1 against the Sikorski-Green amendment.

The National Federation of Independent Business, the U.S. Chamber of Commerce, both are on record as opposed to this amendment. Let us work toward clean air and at the same time give our constituents the right of free choice in this matter.

I urge you to reject the Sikorski-Green-Waxman amendment.

Mr. SIKORSKI. Mr. Chairman, I yield 3 minutes to the gentleman from California [Mr. WAXMAN], a cosponsor of the amendment.

Mr. WAXMAN. Mr. Chairman, this issue has been with us for some time in the following form: Existing law says that there has to be a warranty for the antipollution devices for 5 years, 50,000 miles. Some of the service station owners were concerned about the anticompetitive aspect of that.

So an overall agreement was reached, which is embodied in the Sikorski amendment, to have parts of the warranties extended for 8 years and 80,000 miles, but other parts shortened so more service options were available.

Now, establishing the 8-year/80,000 mile warranty on major pollution devices is a significant environmental issue and it is a significant consumer question. It is a significant environmental issue because if the antipollution control devices are not going to be covered under warranty for an adequate period of at least 5 years. 50,000 miles or, more preferably, 8 years, 80,000 miles, but instead covered as in the bill for only 2 years or 24,000 miles, then that means that if after that limited period of time the devices are not working as they should, then either the consumer is going to be faced with a large out-of-pocket expense or pollution is going to start increasing from those very cars.

If people don't want to spend the dollars to fix the devices then pollution will increase. That is the first problem. That is an environmental problem.

The consumer aspect of it is also significant because in order to fix the devices, the consumer will have to pay directly—the warranty will have run out. In many areas there are going to be inspection and maintenance programs to make sure that these antipollution control devices are working, so the repairs will have to be made.

If there is only a warranty for 2 years, 24,000 miles, as in the committee bill, then after that time the dealer and manufacturer will have no further responsibility. Who has the responsibility to make sure that the devices are working? Who pays the bill? The consumer.

The consumer is going to have to come up with $450 out of their own pockets to pay to repair and restore what should have been warranted to begin with.

The committee provision is not good enough. We ought to replace it with the Sikorski-Green provision. It will have an important environmental consequence, it will have an important consumer consequence. That is why the environmental groups and the consumer groups are supporting the Sikorski-Green amendment.

This amendment reflects a balance, a compromise, between the people who run the independent garages and those consumer and environmental groups. The garages are for this amendment because it given them a chance for business from people bringing their cars in for repairs rather than taking them exclusively to the dealers. And it encourages keeping pollution devices in order.

So it is a good compromise amendment. It is good for the consumer, it is good for the environment.

I would strongly urge Members of this House to vote "yes" for the Sikorski-Green amendment.

Mr. DANNEMEYER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I am really puzzled in my mind why this amendment is being offered. The reason I say that is because we all know it is a Clean Air Act to which it is being offered. But there is no evidence that I have been able to find that by extending the warranty in the manner that the amendment describes from what is in the bill, 5 years and 50,000 miles to 8 years and 80,000 miles, that we are going to improve air quality. There is no evidence to establish that, that I have been able to find. What this fight is about is over turf, who gets the repair business. If you vote for the amendment by my colleague from Minnesota, the price of this extended warranty will be reflected in what we consumers pay for the car.

We will be paying for that repair work up front.

Now, I do not know what that cost could be. I have seen estimates varying anywhere from $80 to several hundred dollars additional for the additional warranty in the manner that my colleague from Minnesota suggests.

If you vote for the version of the bill before the House, 5 years and 50,000 miles, when the warranty work period has expired, the consumer is going to go to his or her own source for repair work. That means the local gas station, the local garage or whatever.

So that local service operator gets the business. That is the difference is: Pay the cost up front, or pay it later if the warranty has expired and repair work is necessary.

This amendment is opposed by a wide range of organizations that speak for their constituencies: Service Station Dealers of America, National Federation of Independent Business, National Automotive Parts Association, Motor and Equipment Manufacturers Association, Clean Air Working Group, Automotive Wholesaler Association Executives, Automotive Service Industry Association, Automotive Parts Rebuilders Association, and the U.S. Chamber of Commerce.

That is an impressive list of organizations opposing this amendment.

Finally, let me add we argued this in committee extensively. By a vote of 29 to 14 the amendment failed.

Now, it was a bipartisan list of members of the Committee on Energy and Commerce who voted to keep the bill the way it is, 5 years and 50,000 miles. I would submit that that is fairly indicative of how the committee looked at it.

I would hope the members of the Committee of the House will look at it the same way and reject this change. It is actually going to result, as I say, in not increasing the price that we consumers pay for the car, and it is going to protect the small businessmen located in our communities. And for these reasons I ask for a vote against this amendment.

Mr. Chairman, I reserve the balance of my time.

The CHAIRMAN. The gentleman from California [Mr. DANNEMEYER] has consumed 3½ minutes and has 3½ minutes remaining. The gentleman from Minnesota [Mr. SIKORSKI] has 3 minutes remaining. The gentleman from Minnesota has the right to close, and the Chair understands he is going to use the balance of his time to close.

Mr. DANNEMEYER. Mr. Chairman, I have no further requests for time, and I yield back the balance of my time.

The CHAIRMAN. The gentleman from Minnesota [Mr. SIKORSKI] is recognized for the purpose of closing.

Mr. SIKORSKI. I thank the chairman. Mr. Chairman, I will not take a lot of time.

We have heard a lot of arguments in opposition to the Sikorski-Green-Waxman amendment.

□ 1640

All of them are curious. It seems to me if Members are concerned about the impact on small businesses, we should ask the small businesses, the ones that really are affected by this amendment. The members of the Automotive Service Association have an average of 4.2 employees. They are the largest and are the oldest of the mom-and-pop repair shops. The small businesses we like to brag about protecting, and they are supporting this amendment. It is their amendment. Ask them. Not the big boys—not the big automakers or the big businesses that are funding the campaign in opposition to this amendment. If we are concerned about consumers and their freedom of choice—the ability to take their car here or there, to the big boys or to the neighborhood garage—ask the consumer groups. They are unamimously in support of the this Green-Sikorski amendment. If we are concerned about the environment, ask the environmental groups. They say we get a 25-percent reduction in auto emissions with this amendment and the other usable life durability provisions of the legislation.

Finally, if Members are concerned about how this will have an impact on clean air enforcement, ask the Governors' Association. They are in favor of it. The counties; they are in favor of it. The League of Cities; they are in favor of it. And if none of those groups interest a Member, ask the League of Women Voters, they are in favor of it, too.

Mr. Chairman, I yield back the balance of my time.

Mr. SKAGGS. Mr. Chairman. I strongly support the Sikorski-Green amendment. This amendment will require automobile manufacturers to provide 8-year or 80,000-mile warranties for the two most important auto emissions control devices—catalytic converters and electronic control units.

As we all know, the largest single source of urban air pollution is cars and trucks. H.R. 3030 includes many important new requirements for manufacturers to produce cars meeting tougher emission standards. However, unless we also ensure that those standards are met in real life—during a vehicle's actual use, and not just when it is being certified in an EPA laboratory—we will have lost much of the advantage of tightening the standards in the first place.

Sadly, under a compromise reached in 1977, when Congress last amended the Clean Air Act, we have hobbled our ability to ensure that cars meet emission standards for the entire time they are in use. Because of that compromise, when a manufacturer warrants emission controls, the period of that warranty is only for 5 years or 50,000 miles, whichever comes first. I think everyone here knows that most people drive their cars for more than 5 years of 50,000 miles. But under current law, the manufacturers need to design and build emission control systems that only have to last for that artificially short period. After that, if they fail, regardless of the reason, the manufacturer has no responsibility, and the burden of making the necessary repairs falls entirely on the car owner.

Because of this problem, last year I introduced a clean air bill that, among other things, would have changed the statutory definition of a car's useful life to reflect reality, by setting it at 10 years of 100,000 miles, whichever comes first. One of the consequences of making this change would be to extend the warranty period for major emission control items. I know that many of my colleagues here have also indicated that they would support such a change.

The Sikorski-Green amendment would not go that far, but it would help to remedy part of this problem. It would specify a longer warranty period of 8 years of 80,000 miles for the two most important pieces of emission control equipment—the catalytic converter and the engine's electronic controls. These pieces of equipment can and should be designed and built to last that long. The longer warranty period would, for the first time, give manufacturers an incentive—a very strong incentive—to make these parts so they last through at least most of a vehicle's real life.

The longer warranty would also mean that when one of these devices does malfunction, it will be more likely to be fixed, because in more cases the replacement or repair will be made at no expense to the care buyer. And, of course, when defective emission control systems are fixed more often, and quicker, the air will be cleaner for all of us.

This amendment makes good sense for the consumer and good sense for the environment. I urge my colleagues to join me in voting for it.

Mr. HALL of Texas. Mr. Chairman, I rise in opposition to the amendment by Representatives SIKORSKI, GREEN, and WAXMAN to increase the warranties in H.R. 3030 to 8 years/80,000 miles.

As a long-time member of the House Energy and Commerce Committee, this is an issue we have debated extensively on a number of occasions over the past several years.

Our committee, after exhaustive consideration, defeated this amendment in a decisive 29 to 14 bipartisan vote.

Chairman DINGELL and Mr. WAXMAN, during consideration of H.R. 3030, agreed to increase the emission system durability testing to 100,000 miles and to increase EPA's recall authority for emissions systems failure to 7 years/75,000 miles. There is no doubt in my mind that this gives the consumer major durability protection for the emissions system without the well acknowledged anticompetitive and anticonsumer impacts carried by the warranties. To increase the warranties to 8 years/80,000 miles in light of our committee debate the issue is just not necessary, based on the facts.

There has never been any evidence produced that the warranties have had any impact on clean air. There has been a great deal of evidence regarding their negative impact on consumers and small business as evidenced by the findings of the House Small Business Committee.

I would urge rejection of the Sikorski-Green-Waxman amendment and support of the warranty provisions as adopted after long deliberation and debate by the committee contained in H.R. 3030.

Mr. MCMILLEN of Maryland. Mr. Chairman, the merits of this issue have been bandied about for some time now—it boils down to the fact that this warranty vote will not affect the quality of the Nation's air. It is simply a business/consumer issue, the decision being who should have access to servicing onboard catalytic converters and other emission control devices. Consumers are already protected by the durability requirements and recall liability protections previously added to the bill—Mr. DINGELL and Mr. WAXMAN expanded emission system durability testing requirements to the 100,000 mile/10-year mark, and extended the EPA's recall authority to 75,000 miles or 7 years. So consumers have nothing to fear. The question then becomes—are we going to deny small businesses the right to service people's emissions control systems? The House Small Business Committee ruled earlier this year that federally mandated extended warranties are inherently antismall business, discriminating against independent aftermarket servicers. Is that the kind of system that we want to create?—one that endangers the livelihood of somewhere between 1.5 to 2 million Americans? I think not—a vote for Sikorski-Green takes away from good environmental policy and moves us toward an anticompetitive policy. Looking at it from another tangent, this amendment is anticonsumer—the extension of a parts warranty is assuredly going to be passed onto the consumer in the way of a higher price tag for the vehicle.

I urge a vote against the Sikorski-Green amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota [Mr. SIKORSKI].

The question was taken; and the Chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. SIKORSKI. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device; and there were—ayes 239, noes 180, not voting 13, as follows:

[Roll No. 133]

□ 1710

The Clerk announced the following pairs:

On this vote:

Mr. Nelson of Florida for, with Mr. Craig against.

Mr. Williams for, with Mr. Barton of Texas against.

Mr. Robinson for, with Mr. Thomas of California against.

Mr. ANDREWS, Ms. KAPTUR, and Mr. SERRANO changed their vote from "no" to "aye."

So the amendment was agreed to.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, pursuant to the rule, I offer a compromise amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: Page 281, line 17, after "reconstruction" insert "or modification" and on line 20 after the period insert: "For purposes of the section, the term 'modification' means any physical change in, or change in the method of operation of, a major source which increases the amount of any hazardous air pollutant emitted by such source by more than a de minimus amount or which results in the emission of any hazardous air pollutant not previously emitted by more than a de minimus amount.".

Page 293, line 13, strike "be at least" and all that follows through "similar sources." on page 293, line 24, and insert:

"not be less stringent, and may be more stringent than—

"(A) the average emissions limitation achieved by the best performing 15 percent of the existing sources (for which the Administrator has emissions information and excluding those sources that have achieved, within 12 months prior to promulgation of such standards, a level of emissions rate or emissions reduction which complies, or would comply if the source is not subject to such standard, with lowest achievable emission rate (as defined by section 171) applicable to the source category and prevailing at the time) in the category or subcategory for categories or subcategories with 30 or more sources, or

"(B) the average emissions limitation achieved by the best performing 5 sources (for which the Administrator has or could reasonably obtain emissions information) in the category or subcategory for categories or subcategories with fewer than 30 sources.

Mr. DINGELL (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. DINGELL. Mr. Chairman, I yield 5 minutes to the gentlewoman from Illinois [Mrs. COLLINS] for purposes of explaining the amendment.

Mrs. COLLINS. Mr. Chairman, first of all, I would like to compliment my colleagues on the Energy and Commerce Committee for their determined efforts toward compromise on the important issue of control standards for toxic air emissions from major, existing, stationary sources. This is an issue with which I have been intimately involved since last year. I planned to offer an amendment today on this exact issue that would set a floor for Maximum Achievable Control Technology or MACT. Not only would it have provided concrete certainty but it also would have done so in an extremely stringent way, along the lines of the Senate's provisions on the issue. Under my amendment, the average of emissions from the 10 percent cleanest sources would be the MACT standard. In cases where there are less than 30 sources in a category or subcategory, the average of the 3 cleanest sources would determine the standard. Additionally, it established that a modification must conform to the standard for new sources. In essence, it was the most environmentally—oriented language.

However, certain legitimate concerns about my amendment were raised and had to be acknowledged. Consequently, I was willing to compromise a bit in order to have strong environmental language which is also fair, workable and balanced. The result is the committee amendment on the MACT standard which is, in essence, the Collins amendment with a few modifications. It remains a solid, definite, stringent floor for the MACT standard and it continues to hold a modification to the standard for new sources.

The problem addressed by this amendment is caused by major stationary sources which litter our air with a wide variety of poisons. During 1988, in the Chicago area alone, 46 million pounds of toxic chemicals were spewed into the air by Chicago-area industries, up from 38 million pounds the year before. Equally troubling is that 1.4 million pounds of 1988's toxic emissions were cancer-causing carcinogens. State-wide, Illinois industries coughed 92 million pounds of toxics into the air in 1987. Nationwide, 2.7 billion pounds of toxic air pollutants were pumped into our air during 1987, according to EPA estimates. Obviously, this crisis compels prompt concrete action.

Presently, H.R. 3030, at subsection 112(d)(3), allows economic and other impacts to be considered in interpreting the MACT standard that determines which emission control technologies are acceptable. It is feared that such factors would, in effect, gut the standards. While costs are by no means irrelevant, they should by no means be the determining factors. There needs to be a minimum degree of control in relation to the control technologies that have already been attained by the best existing sources. EPA's past interpretation of provisions containing the word "best" or "maximum" shows how essential it is to specify a floor for control levels.

For example, under current law, EPA was supposed to set standards for diesel trucks that represented the maximum degree of control. The House report on the issue in 1977 said that EPA should base the standards on the best performing engines. When the standard was finally set, EPA defined best performing to mean every engine except the very worst. In effect, EPA neutralized any meaning in the word maximum.

Additionally, it is not clear what constitutes the "best controlled similar sources", mentioned in that same provision. There is so much play in the meaning of the word sources that EPA could again define the best to mean anything except the very worst. In the Clean Air Act, a variety of "new source performance standards" established under section 111 have never required even new sources to perform as well as the best existing sources in spite of the statutory mandate.

The committee amendment would replace H.R. 3030's language with language based on the Senate bill that would plug the holes. It draws a clear line between what is "maximum achievable control technology" [MACT] and what is not. MACT for existing stationary sources would be the average of the best 15 of technologies within each category or subcategory. For categories or subcategories where there are less than 30 sources, the standard is based on the average emissions from the best performing 5 sources.

Under the amendment I was going to offer, MACT for existing stationery sources would be the average of the best 10 percent of technologies within each category or subcategory and where there are less than 30 sources, the best performing 3 sources. I can live with the approach in this amendment because the standard would still be based on the cleanest sources.

The amendment would also clarify that a substantially modified existing source would be expected to comply with the standard for new sources rather than existing sources. This is because, in the course of a substantial modification, for example, a facility that emits hazardous air pollutants has the opportunity to install new emission control technology. That opportunity should be utilized to install technology that conforms to the higher standard. This would not apply to minor repairs, for example, as they generally would not constitute a modification for purposes of title III. But a change which substantially increases the source's emissions of a hazardous pollutant certainly would be subject to this provision.

Mr. Chairman, I believe that this amendment offers both sound public policy and sound environmental policy. In essence, a House-passed Clean Air bill without this language would be a Clean Air bill with a defective MACT standard, replete with holes. I encourage my colleagues to support this amendment for the sake of both the environment and public health.

Mr. WOLPE. Mr. Chairman, I rise in support of the amendment to title III, concerning hazardous air pollutants, introduced by Chairman DINGELL and my colleague from Illinois, Congresswoman COLLINS. There is no more important title of these Clean Air Act amendments than the air toxics provisions. Although these pollutants are not the most voluminous in the atmosphere, they are certainly the most deadly.

That is why we need the toughest air toxic provisions we can reasonably require. We can't have those living next to chemical plants exposed to risks of cancer as high as 1 in 100. There are some toxic pollutants whose true risks are still unknown. We must ensure that as future risks become known they are properly regulated. These air toxics provisions will help give us these assurances.

In my judgment, this legislation is critical in two respects. First it will provide direct protection for the public against hazardous emissions. And second, it will significantly advance the cause of pollution prevention. The air toxic standards established in this legislation will provide important incentives for companies to seek ways to reduce or eliminate chemicals from their production processes. An ounce of prevention is worth a pound of cure. If companies developed methods that eliminated their toxic pollutants, they would not have to spend millions to control them. Pollution prevention makes both environmental and economic sense.

For two decades, we have regulated at the end-of-the-pipe. This bill contains that tradition, but H.R. 3030 begins to recognize the importance of pollution prevention and source reduction.

I applaud the alternative emissions limits provisions which reward those who have made and will continue to make voluntary reductions in their toxic chemical emissions. These provisions give companies incentive to reduce their toxic emissions before the mandatory features of the law would be triggered.

But I still fear that some companies will not receive adequate credit for impressive reductions in the toxic pollutants they made before the baseline year of 1987. I only hope we are not punishing those who were the first to recognize the importance of pollution prevention.

In 1985, for example, Dow Chemical embarked on a voluntary emissions program with a goal of 95 percent reductions by 1992. Although Dow has reduced its toxic emissions by 82 percent since 1985, under this bill they would not get credit for the 54 percent reduction made between 1985 and 1987. My only point here is that we must be careful not to intentionally penalize companies who were ahead of their time. We run a risk, if we are not careful, of creating disincentives for more aggressive pollution prevention efforts in the future. My hope is that the provision which, in any event, must be reconciled with the Senate legislation, will be revisited in the conference committee.

We have made major strides in pushing pollution prevention approaches to environmental protection. Tough air toxics standards will nudge industry a little further. I urge this House to support the amendment before us.

□ 1720

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan [Mr. DINGELL].

The amendment was agreed to.

AMENDMENT OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: Page 498, after line 4, insert:

SEC. 707A. STRATOSPHERIC OZONE.

Part B of title I is amended by striking sections 150 through 155, by redesignating 156 as section 159E, by striking section 156, 158, and 159, and by inserting after the heading for such part the following:

"TABLE OF CONTENTS

"Sec. 150. Definitions.
"Sec. 151. Listing of ozone depleting substances.
"Sec. 152. Monitoring and reporting requirements.
"Sec. 153. Production phaseout for class I substances.
"Sec. 154. Phase out of class II substances.
"Sec. 155. Accelerated schedule.
"Sec. 156. Alternatives.
"Sec. 157. National recycling and disposal program.
"Sec. 158. Servicing of motor vehicle air conditioners.
"Sec. 159. Labeling.
"Sec. 159A. Nonessential products containing chlorofluorocarbons.
"Sec. 159B. Federal procurement.
"Sec. 159C. Federal enforcement.
"Sec. 159D. International cooperation.
"Sec. 159E. Regulations.
"Sec. 159F. International cooperation.

"SEC. 150. DEFINITIONS.

"As used in this part:

"(1) The terms 'ozone-depleting substance' and 'substance covered by this part' means any substance which is known, or may reasonably be anticipated, to cause or contribute to stratospheric ozone depletion. Such term includes, at a minimum, all class I and class II substances.

"(2) The term 'class I substance' means each of the substances listed as provided in section 151(a).

"(3) The term 'class II substance' means each of the substances listed as provided in section 151(b).

"(4) The term 'ozone-depletion factor' means a factor established by the Administrator to reflect the ozone depletion potential of a substance, on a mass per kilogram basis, as compared to tricholorofluoromethane (CFC-11). Such factor shall be based upon the substance's atmospheric lifetime, the molecular weight of bromine and chlorine, and the substance's ability to be photolytically disassociated, and upon other factors determined to be an accurate measure of relative ozone-depletion potential.

"(5) The term 'medical device' means any device used for medical purposes, any diagnostic product, any drug (as defined in the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321)) and any drug delivery system—

"(A) which utilizes a class I or class II substance for which no safe and effective alternative has been developed, and where necessary, approved by the Commissioner, and

"(B) which, after notice and opportunity for public comment, has been approved and determined to be essential by the Commissioner in consultation with the Administrator.

"(6) The term 'Commissioner' means the Commissioner of the Food and Drug Administration.

"(7) The term 'to produce' means—

"(A) to manufacture in the United States a substance or item from any raw material or feedback chemical; or

"(B) to supply any raw material or feedstock chemical for consumption which has not been domestically manufactured, recycled, or reused.

Such terms does not include the manufacture of substances that are used and entirely consumed in the manufacture of other chemicals.

"(8) The term 'household and commercial applicance' means any appliance used for households or commercial purposes, including any air conditioner, refrigerator, chiller, and freezer.

"(9) The term 'baseline year' means the calender year 1986 (1989 in the case of tetrachloromethane (carbon tetrachloride) and methyl chloroform), except that in the case of any substance added to the list of class I substances after the enactment of this section, and in the case of class II substances, such term shall mean a representative calendar year selected by the Administrator.

"(10) The term 'Montreal Protocol' means the Montreal Protocol to the Vienna Convention for the Protection of the Ozone Layer.

"SEC. 151. LISTING OF OZONE DEPLETING SUBSTANCES.

"(a) LIST OF CLASS I SUBSTANCES.—Within 90 days after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall publish a list of Class I Substances. The list shall contain, at a minimum, the following substances.:

"Trichlorofluoromethane (CFC-11),
"Dichlorodifluoromethane (CFC-12),
"Trichlorotrifluoromethane (CFC-113),
"Dichlorotetrafluoroethane (CFC-114),
"(Mono)chloropentafluoroethane (CFC-115),
"Bromotrifluoromethane (Halon-1301),
"Bromochlorodifluoromethane (Halon-1211),
"Tetrachloromethane (carbon tetrachloride),
"Methyl chloroform (1,1,1 trichlorocthane),
"Dibromotetrafluoroethane (Halon-2402).

Pursuant to subsection (c), the Administrator shall add to the list of class I substances any other ozone-depleting substance that causes or contributes significantly to depletion of the stratospheric ozone layer, including, at a minimum, all ozone-depleting substances having an ozone depletion factor of 0.15 or greater.

"(b) LIST OF CLASS II SUBSTANCES.—Within 90 days after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall publish a list of Class II Substances. Such list shall contain, at a minimum, the following substances:

"Hydrochlorodifluoromethane (HCFC-22)
"Hydrochlorofluorocarbon-123
"Hydrochlorofluorocarbon-124
"Hydrochlorofluorocarbon-141(b)
"Hydrochlorofluorocarbon-142(b)

Pursuant to subsection (c) the Administrator shall add to the list of class II substances any other ozone-depleting substances that has a potentially significant ozone depletion potential.

"(c) ADDITIONS TO THE LISTS.—(1) The Administrator may add, in accordance with the criteria set forth in subsection (a) or (b), as the case may be, any substance to the list of class I or class II substances under subsection (a) or (b).

"(2) Periodically, but not less frequently than every 3 years after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall list as additional class I or class II substances those substances which he finds meet the criteria of subsection (a) or (b), as the case may be.

"(3) At any time, any person may petition the Administrator to add a substance to the list of class I or class II substances. Within 180 days after receiving such a petition, the Administrator shall either add the chemical to such list or publish an explanation of the petition denial.

"(4) Only a class II substance which is added to the list of class I substances may be removed from the list of class II substances. No substance referred to in subsection (a) may be removed from the list of class I substances.

"(d) OZONE-DEPLETION FACTORS.—Simultaneously with publication of the lists under this section and simultaneously with any addition to either of such lists, the Administrator shall assign to each listed substance a numerical value representing the substance's ozone depletion potential. In addition the Administrator shall publish the chlorine loading potential and the atmospheric lifetime of each listed substance. In the case of the substances referred to in Table 1, the ozone-depletion factor shall be as specified in Table 1, unless the Administrator adjusts any such factor based on criteria referred to in section 150(4):

"TABLE 1

| Substance | Ozone depletion factor |
|---|---|
| Trichlorofluoromethane (CFC-11) | 1.00 |
| Dichlorodifluoromethane (CFC-12) | 1.00 |
| Trichlorotrifluoroethane (CFC-113) | 0.80 |
| Bromotrifluoromethane (Halon-1301) | 10.00 |
| Bromochlorodifluoromethane (Halon-1211) | 3.0 |
| Tetrachloromethane (carbon tetrachloride) | 1.06 |
| Dichlorotetrafluoroethane (CFC-114) | 1.0 |
| (Mono)chloropentafluoroethane (CFC-115) | 0.60 |
| Methyl chloroform | 0.15 |
| Dibromotetrafluoroethane (Halon-2402) | 6.0 |
| Chlorodifluoromethane (CFC-22) | 0.05 |
| Chlorofluorocarbon-123 | 0.02 |
| Chlorofluorocarbon-124 | 0.02 |
| Chlorofluorocarbon-141(b) | 0.1 |
| Chlorofluorocarbon-142(b) | 0.06 |

"SEC. 152. MONITORING AND REPORTING REQUIREMENTS.

"(a) REGULATONS.—Within 180 days after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall amend the regulations of the Administrator in effect on such date regarding monitoring and reporting of class I and class II substances. Such amendments shall conform to the requirements of this section. The amended regulations shall include requirements with respect to the time and manner of monitoring and reporting as required under this section.

"(b) ANNUAL PRODUCTION LEVEL REPORTS.—On July 1 of each year beginning after the enactment of the Clean Air Act Amendments of 1990 (or after the date on which a substance is added to the list of class I or class II substances by the Administrator) each person producing a class I or class II substance shall file a report with the Administrator setting forth the amount of the substance that such person produced in the preceding calendar year. No such report shall be required after such person permanently ceases production of the substance. Each such report shall be signed and attested by a responsible corporate officer.

"(c) BASELINE REPORTS FOR CLASS I SUBSTANCES—Unless such information has previously been reported to the Administrator, on the date on which the first annual report under subsection (b) is required to be filed, each person producing a class I substance

(other than a substance added to the list after the enactment of the Clean Air Act Amendments of 1990) shall file a report with the Administrator setting forth the amount of such substance that such person produced during baseline year. In the case of a substance added to the list of class I substances after the Clean Air Act Amendments of 1990, the regulations shall require that each person producing such substance shall file a report with the Administrator within 180 days after the date on which such substance is added to the list, setting forth the amount of the substance that such person produced in the baseline year.

"(a) MONITORING AND REPORTS TO CONGRESS.—(1) The Administrator shall monitor and, not less often than every 2 years following enactment of the Clean Air Act Amendments of 1990, submit a report to Congress on the production and use of class I and class II substances. Such report shall include data on domestic production and use, and an estimate of worldwide production and use of such substances.

"(2) The Administrators of the National Aeronautics and Space Administration and the National Oceanic and Atmospheric Administration shall monitor, and not less often than every 2 years following enactment of the Clean Air Act Amendments of 1990, submit a report to Congress on the current average tropospheric concentration of chlorine and bromine in the atmosphere, the level of depletion of the stratospheric ozone layer. Not less frequently than every 2 years the Administrator shall report to Congress on the environmental and economic effects of any depletion of the stratospheric ozone layer.

"SEC. 153. PRODUCTION PHASEOUT FOR CLASS I SUBSTANCES.

"(a) REGULATIONS.—The Administrator shall promulgate regulations within 1 year after the enactment of the Clean Air Act Amendments of 1990 phasing out the production of class I substances in accordance with this section, subject to acceleration of the phase out under section 155. The phase out shall provide for equal annual percentage reductions in each of the following periods: July 1, 1991 to July 1, 1993; July 1, 1993 to July 1, 1995; and July 1, 1995 to July 1, 2000.

"(b) 1993 AND 1995 LIMITS.—Effective July 1, 1993, it shall be unlawful for any person to produce any class I substance in an annual quantity greater than 80 percent of the quantity produced by such person in the baseline year. Effective July 1, 1995, it shall be unlawful for any person to produce any class I substance in an annual quantity greater than 50 percent of the quantity produced by such person in the baseline year.

"(c) 2000 LIMIT.—Effective July 1, 2000, it shall be unlawful for any person to produce any amount of a class I substance, except as provided in subsection (e).

"(d) METHYL CHLOROFORM.—In the class of methyl chloroform, the phase-out schedule under subsections (b) and (c) shall not apply but effective July 1, 1993, it shall be unlawful for any person to produce methyl chloroform in annual quantities greater than 80 percent of the baseline amount; effective July 1, 1994, it shall be unlawful for any person to produce methyl chloroform in annual quantities greater than 70 percent of the baseline amount; effective July 1, 1995, it shall be unlawful for any person to produce methyl chloroform in annual quantities greater than 60 percent of the baseline amount; effective July 1, 1996, it shall be unlawful for any person to produce methyl chloroform in annual quantities greater than 50 percent of the baseline amount; and effective July 1, 2005, it shall be unlawful for any person to produce any amount of methyl chloroform, except as provided in subsection (e).

"(e) EXCEPTIONS.—

"(1) MEDICAL PURPOSES.—Notwithstanding the prohibitions set forth in subsection (c) and (d), the Administrator, after notice and opportunity for public comment, shall authorize the production of limited quantities of class I substances solely for use in medical devices if such authorization is determined by the Commissioner, in consultation with the Administrator, to be necessary for such purposes.

"(2) AVIATION SAFETY.—Notwithstanding the prohibitions set forth in subsection (c) and (d), the Administrator, after notice and opportunity for public comment, may authorize the production of limited quantities of bromochlorodifluoromethane (halon-1211), bromotrifluoromethane (halon-1301), and dibromotetrafluoroethane (halon-2402) solely for purposes of aviation safety if the Administrator of the Federal Aviation Administration, in consultation with the Administrator, determines that no safe and effective substitute has been developed and that such authorization is necessary for aviation safety purposes.

"(3) CAP ON EXCEPTIONS.—Under no circumstances may the authority set forth in paragraphs (1) and (2) of this subsection be applied to authorize any person to produce a class I substance in annual quantities greater than 10 percent of that produced by such person during the baseline year.

"(4) FIRE SUPPRESSION.—Notwithstanding the prohibition set forth in subsection (c), the Administrator, after notice and opportunity for public comment, may authorize the production of limited quantities of bromochlorodifluoromethane (halon-1211), bromotrifluoromethane (halon-1301), and dibromotetrafluoroethane (halon-2402) solely for purposes of fire suppression if the Administrator, in consultation with the Administrator of the United States Fire Administration, determines that no safe and effective substitute has been developed and that such authorization is necessary for fire suppression purposes. The Administrator shall not authorize production under this paragraph for purposes of fire safety training or testing of fire suppression equipment. In no event, shall the Administrator grant an exception under this paragraph that permits production after December 1, 1999.

"(f) NEW CLASS I SUBSTANCES.—In the case of substances added to the list of class I substances after the enactment of the Clean Air Act Amendments of 1990, the Administrator may extend the compliance deadlines in subsections (b) and (c) if the deadlines are unattainable. No such extension may extend the compliance deadline in subsection (b) to a date more than 4 years after the addition of the substance to the Class I list, and no such extension may extend the compliance deadline under subsection (c) to a date more than 7 years after the date of addition of the substance to such list.

"(g) EXCHANGES.—The Administrator shall, within 18 months after the enactment of the Clean Air Act Amendments of 1990, promulgate rules under this part pursuant to which any person may produce a class I or class II substance in annual quantities greater than those specified pursuant to this section, section 154, or section 155 if such person acquires production allowances, directly or indirectly, from another person who will be subject, under such rules, to an enforceable and quantifiable reduction in the annual production of such substance which—

"(1) exceeds the reduction otherwise applicable to such other person under this part,

"(2) exceeds the production allowance transferred by such other person, and

"(3) would not have occurred in the absence of such transaction.

Such rules shall insure that the transactions under the authority of this subsection will result in greater total reductions in the annual production of substances covered by this part than would occur in the absence of such transactions.

"(h) EXCEPTION FOR EXPORT TO DEVELOPING COUNTRIES.—Notwithstanding the prohibition set forth in this section, the Administrator, after notice and opportunity for public comment, may authorize the production of limited quantities of a substance listed under subsection (a) of section 504 solely for export to and use in developing countries that are parties to the Montreal Protocol and are operating under Article 5 of such Protocol. Any production authorized under this subsection shall be solely for purposes of satisfying the basic domestic needs of such countries.

"SEC. 154. PHASE OUT OF CLASS II SUBSTANCES.

"(a) REGULATIONS.—By December 31, 1999, the Administrator shall promulgate regulations phasing out the production and use of class II substances in accordance with this section, subject to any acceleration of the phase out under section 155.

"(b) PHASE-OUT OF USE.—Effective January 1, 2015, it shall be unlawful for any person to produce or use any class II substance unless such substance—

"(1) has been used, recovered, and recycled;

"(2) is used and entirely consumed in the production of other chemicals; or

"(3) is used to maintain and service household and commercial appliances manufactured prior to January 1, 2015.

In the case of any class II substance with an atmospheric lifetime equal to or shorter than hydrochlorofluorocarbon-123, in applying this subsection, the date January 1, 2020 shall be substituted for the date January 1, 2015.

"(c) PRODUCTION PHASE-OUT.—(1) Effective January 1, 2015, it shall be unlawful for any person to produce any class II substance in an annual quantity greater than the average annual quantity of such substance produced by such person during the baseline year.

"(2) Effective January 1, 2030, it shall be unlawful for any person to produce any class II substance. In the case of any class II substance with an atmospheric lifetime equal to or shorter than hydrochlorofluorocarbon-123, in applying this subsection, the date January 1, 2020 shall be substituted for the date January 1, 2035 and the date January 1, 2020 shall be substituted for the date January 1, 2030.

"(d) EXCEPTION.—

"(1) MEDICAL PURPOSES.—Notwithstanding the prohibitions set forth in subsections (b) and (c), the Administrator, after notice and opportunity for public comment, shall authorize the production and use of limited quantities of class II substances solely for purposes of use in medical devices if such authorization is determined by the Commissioner, in consultation with the Administrator, to be necessary for such purposes.

"(2) CAP ON EXCEPTIONS.—Under no circumstances may the authority set forth in paragraph (1) of this subsection be applied to authorize any person to produce a class II substance in annual quantities greater than 10 percent of that produced by such person during the baseline year.

"SEC. 155. ACCELERATED SCHEDULE.

"The Administrator shall promulgate regulations, after notice and opportunity for public comment, which establish a schedule for phasing out the production and use of substances covered by this part that is more stringent than set forth in section 153 or 154, or both, if—

"(1) based on the latest assessment of information regarding the harmful effects on the stratosphere which may be associated with a class I or class II substance, the Administrator determines that such more stringent schedule may be necessary to protect human health and the environment.

"(2) based on the availability of substitutes for a listed substance, the Administrator determines that such more stringent schedule is attainable, or

"(3) the Montreal Protocol is modified to include a schedule to control or reduce production or use of any substance more rapidly than the applicable schedule set forth in this part.

Any person may petition the Administrator to promulgate regulations under this section. The Administrator shall grant or deny the petition within 180 days after receipt of any such petition. If the Administrator denies the petition, he shall publish an explanation of why the petition was denied. If the Administrator grants such petition, such final regulations shall be promulgated within 1 year.

"SEC. 156. ALTERNATIVES.

"(a) REVIEWS AND REPORT.—(1) The Administrator shall initiate, not less than 30 days after enactment of the Clean Air Act Amendments of 1990, a review of relevant professional, technical, and scientific sources that may contain information concerning potential chemicals or product substitutes and alternative manufacturing processes that are potential replacements for class I substances. The Administrator shall report interim findings to the Congress no later than 12 months after enactment of the Clean Air Act Amendments of 1990. A final report shall be issued no later than 2 years after enactment of the Clean Air Act Amendments of 1990.

"(2) The report required under this section shall include the Administrator's findings with regard to each of the following:

"(A) The identify of potential replacement chemicals, product substitutes, or alternative production processes.

"(B) A chemical profile or an abstract that describes each replacement chemical and alternative production process identified in subparagraph (A) and any health or environmental hazards, including ozone depletion potential associated with each.

"(C) The earliest date upon which each chemical and production process identified pursuant to subparagraph (A) can be available for commercial use.

"(3) The Administrator shall require any person who produces a chemical substitute to provide the Administrator with their unpublished health and safety studies on chemical substitutes for class I substances and require producers to notify the Administrator before existing chemicals are introduced into interstate commerce for significant new uses as substitutes for such substances.

"(4) The Administrator shall update the review required by this subsection every 2 years. Effective no more than 4 years after enactment of the Clean Air Act Amendments of 1990, potential alternatives to class II substances shall be included in the Administrator's annual review under this subsection.

"(b) REPLACEMENT.—Within 2 years after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate rules under this section applicable to the replacement of class I and class II ozone-depleting substances. Such rules shall require that replacement chemicals, product substitutes, and alternative production processes, products, and raw materials that reduce overall risks to human health and the environment are used, to the maximum extent practicable, for the replacement of such substances.

"(c) ALTERNATIVES FOR CLASS I SUBSTANCES.—The rules under this section shall provide that, not more than 2 years after enactment of the Clean Air Act Amendments of 1990, it shall be unlawful to replace any class I substance with any substitute substance which the Administrator determines may present adverse effects to human health or the environment, where the Administrator has identified an alternative to such replacement that—

"(1) reduces the overall risk to human health and the environment; and

"(2) is currently or potentially available.

The Administrator shall publish a list of (A) the substitutes prohibited under this subsection for specific uses and (B) the safe alternatives identified under this subsection for specific uses.

"(d) RIGHT TO PETITION.—Any person may petition the Administrator to add a substance to the lists under subsection (c) or to remove a substance from either of such lists. The Administrator shall grant or deny the petition within 90 days after receipt of any such petition. If the Administrator denies the petition, he shall publish an explanation of why the petition was denied. If the Administrator grants such petition the Administrator shall publish such revised list within 6 months thereafter.

"SEC. 157. NATIONAL RECYCLING AND DISPOSAL PROGRAM.

"(a) IN GENERAL.—The Administrator shall, within 2 years after the enactment of the Clean Air Amendments of 1990, promulgate regulations establishing standards and requirements regarding the use and disposal of class I and II substances. Such standards and requirements shall become effective not later than 12 months after promulgation of the regulations. Such regulations shall include requirements that—

"(1) reduce the use and emission of such substances to the lowest achievable level, and

"(2) maximize the recapture and recycling of such substances. Such regulations may include requirements to use alternative substances (including substances which are not class I or class II substances) or to minimize use of class I or class II substances, or to promote the use of safe alternatives pursuant to section 156, or any combination of the foregoing.

"(b) SAFE DISPOSAL.—The regulations under subsection (a) shall establish standards and requirements for the safe disposal of class I and II substances. Such regulations shall include each of the following—

"(1) Requirements that class I or class II substances contained in bulk in appliances, machines or other goods (including but not limited to refrigerators and air-conditioners) shall be removed from each such appliance, machine or other good prior to the disposal of such items or their delivery for recycling.

"(2) Requirements that any appliance, machine or other good containing a class I or class II substances in bulk shall not be manufactured, sold, or distributed in interstate commerce or offered for sale or distribution in interstate commerce unless it is equipped with a servicing aperture or an equally effective design feature which will facilitate the recapture of such substance during service and repair or disposal of such item.

"(3) Requirements that any product in which a class I or class II substances is incorporated so as to constitute an inherent element of such product shall be disposed of in a manner that reduces, to the maximum extent practicable, the release of such substance into the environment. If the Administrator determines that the application of this paragraph to any product would result in producing only insignificant environmental benefits, the Administrator shall include in such regulations an exception for such product.

"(d) PROHIBITION.—Effective 2 years after the enactment of the Clean Air Act Amendments of 1990, it shall be unlawful for any person, in the course of maintaining, servicing, repairing, or disposing of a household or commercial appliance, to knowingly vent or otherwise knowingly release or dispose of any class I or class II substance used as a refrigerant in such appliance in a manner which permits such substance to enter the environment. De minimis releases associated with good faith attempts to recapture and recycle or safely dispose of any such substance shall not be subject to the prohibition set forth in the preceding sentence.

"SEC. 158. SERVICING OF MOTOR VEHICLE AIR CONDITIONERS.

"(a) REGULATIONS.—Within 1 year after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations in accordance with this section establishing standards and requirements regarding the servicing of motor vehicle air conditioners.

"(b) DEFINITIONS.—As used in this section—

"(1) The term 'refrigerant' means any class I or class II substance used in a motor vehicle air conditioner.

"(2)(A) The term 'approved refrigerant recycling equipment' means equipment certified by the Administrator (or an independent standards testing organization approved by the Administrator) to meet the standards established by the Administrator and applicable to equipment for the extraction and reclamation of refrigerant from motor vehicle air conditioners. Such standards shall, at a minimum, be at least as stringent as the standards of the Society of Automotive Engineers in effect as of the date of the enactment of the Clean Air Act Amendments of 1990 and applicable to such equipment (SAE standard J-1990).

"(B) Equipment purchased before the proposal of regulations under this section shall be considered certified if it is substantially identical to equipment certified as provided in subparagraph (A).

"(3) The term 'properly using' approved refrigerant recycling equipment means using such equipment in conformity with standards established by the Administrator and applicable to the use of such equipment. Such standards shall, at a minimum,

be at least as stringent as the standards of the Society of Automotive Engineers in effect as of the date of the enactment of the Clean Air Act Amendments of 1990 and applicable to the use of such equipment (SAE standard J-1989).

"(4) The term 'properly trained and certified' means training and certification in the proper use of approved refrigerant recycling equipment for motor vehicle air conditions in conformity with standards established by the Administrator and applicable to the performance of service on motor vehicle air conditioners. Such standards shall, at a minimum, be at least as stringent as specified, as of the date of the enactment of the Clean Air Act Amendments of 1990 in SAE standard J-1989 under the certification program of National Institute for Automotive Service Excellence (ASE) or under a similar program such as the training and certification program of the Mobile Air Conditioning Society (MACS).

"(b) SERVICING MOTOR VEHICLE AIR CONDITIONERS.—Effective 2 years after the enactment of the Clean Air Act Amendments of 1990, no person repairing or servicing motor vehicles for consideration may perform any service on a motor vehicle air conditioner involving the refrigerant for such air conditioner without properly using approved refrigerant recycling equipment and no such person may perform such service unless such person has been properly trained and certified. The requirements of the previous sentence shall not apply until the date 3 years after the enactment of the Clean Air Act Amendments of 1990 in the case of a person repairing or servicing motor vehicles for consideration at an entity which performed service on fewer than 100 motor vehicle air conditioners during calendar year 1990 and if such person so certifies, pursuant to subsection (c)(2), to the Administrator by the date 2 years after the enactment of the Clean Air Act Amendments of 1990.

"(c) CERTIFICATION.—Effective 2 years after the enactment of the Clean Air Act Amendments of 1990, each person performing service on motor vehicle air conditioners shall certify to the Administrator either—

"(1) that such person has acquired, and is properly using, approved refrigerant recycling equipment in service on motor vehicle air conditioners involving refrigerant and that each individual authorized by such person to perform such service is properly trained and certified; or

"(2) that such person is performing such service at an entity which serviced fewer than 100 motor vehicle air conditioners in 1990.

Each certification under this subsection shall contain the name and address of the person and the serial number of each unit of approved recycling equipment acquired by such person and shall be signed by the owner or another responsible corporate officer. Certifications under paragraph (1) may be made by submitting the required information to the Administrator on a standard form provided by the manufacturer of certified refrigerant recycling equipment.

"SEC. 159. LABELING.

"(a) REGULATIONS.—The Administrator shall promulgate regulations to implement the labeling requirements of this section within 12 months after enactment of the Clean Air Act Amendments of 1990, after notice and opportunity for public comment.

"(b) CLASS I SUBSTANCES.—Effective 2 years after the enactment of the Clean Air Act Amendments of 1990, no container in which a class I substance is stored or transported, no product containing such substance, and no product manufactured with a process that uses a Class I substance shall be introduced or reintroduced into interstate commerce unless it bears a clearly legible and conspicious label stating either of the following, as appropriate:

"(1) 'Warning: Contains [insert name of substance] a substance which harms public health and environment by destroying ozone in the upper atmosphere.

"(2) 'Warning: Manufactured with [insert name of substance], a substance which harms public health and environment by destroying ozone in the upper atmosphere.

For purposes of any provision of law which requires the labeling of commodities, such a container shall be treated as lawfully labeled only if it complies with this subsection.

"(c) CLASS II SUBSTANCES.—(1) The requirements of this section shall also apply to any container in which a class II substance is stored or transported, any product containing a class II substance, and any product manufactured with a process that uses a class II substance if the Administrator finds that there is an alternative for such substance or for the use of such substance (in the case of products containing, or manufactured with, the substance) and that such alternative—

"(A) reduces the overall risk to human health and the environment; and

"(B) is currently or potentially available.

"(2) Effective January 1, 2015, the requirements of this section shall apply to containers in which a class II substance is stored or transported, products containing a class II substance, and products manufactured with a process that uses a class II substance.

"(d) RELATIONSHIP TO OTHER LAW.—Neither the labeling requirement nor any other provision of this part, shall constitute, in whole or in part, a defense to liability or a cause for reduction in damages in any suit, whether civil or criminal, brought under the law, whether Federal or State, other than a suit for failure to comply with the labeling requirements of this section.

"SEC. 159A. NONESSENTIAL CONTAINING CHLOROFLUOROCARBONS.

"(a) REGULATIONS.—The Administrator shall promulgate regulations to carry out the requirements of this section within 1 year after the enactment of the Clean Air Act Amendments of 1990.

"(b) NONESSENTIAL PRODUCTS.—The regulations under this section shall identify nonessential products that release class I substances into the environment (including any release occurring during manufacture, use, storage, or disposal) and prohibit any person from selling or distributing any such product, or offering any such product for sale or distribution, in interstate commerce. At a minimum such regulations shall apply to chlorofluorocarbon-propelled plastic party streamers and noise horns, chlorofluorocarbon-containing cleaning fluids for noncommercial electronic and photographic equipment, and other consumer products that—

"(1) release class I substances into the environment (including any release occurring during manufacture, use, store, or disposal), and

"(2) are determined by the Administrator not to be essential.

"(b) EFFECTIVE DATE.—Effective 24 months after the enactment of the Clean Air Act Amendments of 1990, it shall be unlawful for any person to sell or distribute, or offer for sale or distribution, in interstate commerce any nonessential product to which regulations under subsection (a) are applicable.

"(c) OTHER PRODUCTS.—Effective January 1, 1994, it shall be unlawful for any person to sell or distribute, or offer for sale or distribution, in interstate commerce—

"(1) any aerosol product or other pressurized dispenser which contains a class II substance; or

"(2) any plastic foam product (other than a foam insulation product) which contains, or is manufactured with, a class II substance.

"(d) SMALL CONTAINERS OF CLASS I OR CLASS II SUBSTANCES.—Effective 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, it shall be unlawful for any person to sell or distribute, or offer for sale or distribution, in interstate commerce to any person (other than a person performing service for consideration on motor vehicle air-conditioning systems in compliance with section 158) any class I or class II substance that is suitable for use as a refrigerant in a motor vehicle air-conditioning system and that is in a container which contains less than 20 pounds of such refrigerant.

"(e) MEDICAL DEVICES.—Nothing in this section shall apply to any medical device as defined in section 150.

"SEC. 159B. FEDERAL PROCUREMENT.

"Not later than 1 year after the enactment of the Clean Air Act Amendments of 1990, the Administrator, in consultation with the Administrator of the General Services Administration, shall promulgate regulations requiring each department, agency, and instrumentality of the United States to conform its procurement regulations to the policies and requirements of this part and to maximize the substitution of safe alternatives identified in section 156 for class I and class II substances.

"SEC. 159C. FEDERAL ENFORCEMENT.

"The provisions of sections 113, 114, 116, and 304 shall apply for purposes of this part in the same manner and to the same extent as such provisions apply for purposes of enforcement of a standard under section 111, and for purposes of such provisions a violation of any requirement of this part (or of any regulation under this part) shall be treated as a violation of section 11(e). For purposes of sections 116 and 118, the requirements of this part shall be treated as requirements for the control and abatement of air pollution.

"SEC. 159D INTERNATIONAL COOPERATION.

"The Administrator, in consultation with the Secretary of State, shall support global participation in the Montreal Protocol by providing technical and financial assistance to developing countries that are parties to the Montreal Protocol and operating under Article 5 of the Protocol. There are authorized to be appropriated not more than $30,000,000 to carry out this section in fiscal years 1991, 1992 and 1993.

"SEC. 159E STATE LAWS CONCERNING HOUSEHOLD AND COMMERCIAL APPLIANCE DESIGN

"During the 2-year period beginning on the enactment of the Clean Air Act Amendments of 1990, no State or local government may enforce any requirement concerning the design of any new or recalled household and commercial appliance for the purpose of protecting the stratospheric ozone layer.".

(b) CONFORMING AMENDMENTS.—Section 157 is amended by striking subsection (b),

striking in subsection (a) the words "any time prior to the submission of the final report referred to in section 155", and by redesignating such section as section 159E.

Mr. DINGELL. Mr. Chairman, I yield myself 1 minute.

Mr. Chairman, the amendment which has just been offered has been offered with the concurrence of the gentleman from New York [Mr. LENT], the gentleman from California [Mr. WAXMAN], and the gentleman from Illinois [Mr. MADIGAN].

It is offered by us on behalf of the gentleman from California [Mr. BATES], the gentleman from New York [Mr. BOEHLERT], the gentleman from Illinois [Mr. BRUCE], and the gentleman from Ohio [Mr. OXLEY].

It is an amendment, as I have indicated, dealing with chlorinated fluorocarbons.

Mr. Chairman, each of the gentlemen I have mentioned has worked very hard on this matter, and each has played a significant role and has made major efforts to bring us to the point of an acceptable compromise.

Mr. Chairman, I ask unanimous consent that I now be permitted to yield control of the time on this side to the gentleman from Illinois [Mr. BRUCE] for purposes of managing this particular amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. BRUCE].

Mr. BRUCE. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in support of the Bates-Boehlert-Bruce-Oxley compromise amendment on CFC's.

As many of you know, the Bruce-Oxley amendment, for which a rule had been provided today, was originally intended to be similar to the phaseout dates for ozone depletion contained in the Montreal protocol. Just prior to the Rules Committee deadline for amendment submission, however, we all made tremendous changes in our proposals in hopes that our bottom line approach would spur an agreement on this issue.

The gentleman from California [Mr. BATES] and the gentleman from New York [Mr. BOEHLERT] changed their amendments in a similar fashion, trying to effectuate a compromise. All-night negotiations did not lead to a compromise by 5:45 this morning, when there seemed to be little light at the end of the short tunnel separating Bruce-Oxley from Bates-Boehlert.

Later this morning, however, working with Chairman WAXMAN and his excellent staff, we were able to come together on what can be termed as a tough ozone protection amendment.

The amendment combines a rapid phaseout for CFC's, halons, and carbon tetrachloride with a tough outyear standard on methyl chloroform and HCFC's. This compromise does not represent exactly what I believe should be contained in this agreement, but that is always the nature of a compromise. Not everyone gets what they want.

It was our intent that tough early reductions of CFC's be implemented to reduce the peak chlorine concentration in the atmosphere.

At the same time, we wanted to encourage U.S. users and countries which are not signatories to the Montreal protocol to convert from use of CFC's to much less harmful HCFC's.

This amendment takes strong steps to encourage countries like India and China to limit their uses of ozone-depleting substances. This Congress must continue to make international compliance with the Montreal protocol a key item on our legislative agenda.

Without encouraging these countries to get out of the ozone depletion business, we will be doing nothing to protect our ozone layer from developing a hole that expands beyond the Antarctic region. Only through complete cooperation of all countries with the protocol can we protect the stratospheric ozone layer.

The process of reaching an agreement on this amendment has been difficult, and I appreciate the thoughtful input that my good friend, the gentleman from Ohio [Mr. OXLEY], as well as the gentleman from Georgia [Mr. ROWLAND], the gentleman from Texas [Mr. HALL], the gentleman from Ohio [Mr. THOMAS A. LUKEN], the gentleman from Louisiana [Mr. TAUZIN], and many other members of the committee.

I want to particularly thank Chairman DINGELL, Chairman WAXMAN, the gentleman from New York [Mr. LENT], and the gentleman from Illinois [Mr. MADIGAN] for their work, and single out for particular praise the gentleman from New York [Mr. BOEHLERT] and the gentleman from California [Mr. BATES], with whom we have worked over these last weeks trying to get a compromise, and although last night at 5:45 in the morning it did not seem like one was possible, we have in fact brought this compromise to the floor.

Finally, on behalf of my own excellent staff, Jay Hawkins last year who started this process, and to Mike Bushman of my staff who spent many an hour trying to get this compromise to the floor, I congratulate them, and I urge adoption of this amendment to protect the atmosphere of our country.

Mr. BRUCE. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. BOEHLERT].

Mr. BOEHLERT. Mr. Chairman, early debate over this amendment reminded me of the classic Jack Benny sketch. You know the one—a robber accosts Jack Benny and tells him, "Your money or your life." No answer. "Your money or your life." No answer. "Mister, I said, your money or your life." Finally, the exasperated response, "I'm thinking, I'm thinking."

"Your money or your life?" is the question science has put before us today. We can invest in safer chemicals or we can suffer the health and economic consequences of increased ultraviolet radiation. "I'm thinking it over" is an absurd answer to such a choice.

Scientists have produced incontrovertible evidence that the ozone layer has been damaged, imperiling human health. Scientists have come to a solid consensus that this damage results largely from chlorofluorocarbons [CFC's] which also contribute greatly to the greenhouse effect. And scientists have come up with widely accepted targets for the reductions in CFC use that must—must—occur for the damage to the ozone layer to be repaired.

This is not some numbers game like the budget. We cannot say, we will shift CFC production to some earlier or some later fiscal year, and the problem will appear to vanish. We may be able to fool ourselves, but we will not be able to fool Mother Nature.

Scientific evidence indicates that the real reductions required by this bill are the only way—I repeat, the only way—to shield the planet from ultraviolet radiation. If we try to do less, we will succeed in doing nothing.

We have compromised to the fullest extend possible. We have pushed the ban on CFC and halon production back to the year 2000—a target almost everyone seems to agree is reasonable. We have permitted the production of methyl chloroform—an early CFC substitute for the electronics industry and some others—we have permitted that chemical to be phased out more slowly, with production ending in 2005. We have pushed back the HCFC production ban—HCFC's are the first generation of CFC substitutes—we have pushed back that ban to the year 2030, and in some cases, to 2035.

So what we have here is not exactly a radical measure. The Senate approved tougher provisions on methyl chloroform and HCFC's by overwhelming margins. And this measure has the backing of such hotbeds of radicalism as the National Conference of State Legislatures and the National Association of Counties. We are not talking about anything more than reasonable steps that are firmly rooted in scientific data.

So what is the complaint? Is it that clean air is bad for business? Is it a fear that American industry is suddenly incapable of innovation? I hope not.

This amendment promises nothing more than what the chemical industry has always promised us—"better living through chemistry."

And I have no doubt that American industry is up to this challenge—and will benefit from this challenge. Finding CFC replacements early is good business. CFC replacements are without question the wave of the future, and whoever designs them first will corner the market.

You know, the American auto industry thought that fuel efficient cars were bad business, and have ceded enormous market share because they did not recognize that sound environmental policy was also sound economic policy. We cannot allow the same mistakes to occur in the chemical industry.

This is a view that is held by some of industry's strongest supporters. An expert on halon research, for example, said to me that a phase out before the year 2000 would be very difficult, but setting no date or a distant date would be worse because industry would then just put off the inevitable research and investment.

We also need tough but reasonable deadlines to prod Federal agencies. The American Electronics Association reports, for example, that it has tried for 3 years to get the Department of Defense to remove CFC requirements from just a single military specification. Here is a case where industry is ahead of the Government in recognizing the need for progressive action.

American industry will find the CFC substitutes we need, if we ensure that the necessary investment is made. If we fail to take this step, we risk damaging our economy as well as our ecology.

Mr. Chairman, I have put a lot of stress this afternoon on how closely we have worked with the scientific community and how we have come up with an amendment that is firmly grounded in scientific understanding of atmospheric chemistry.

But the imperative to pass this amendment is also grounded in evolutionary theory. It is evolutionary theory that concludes that humans have progressed to the point where the survival of our species will be determined by how we use our brains rather than our bodies.

Scientists have given us the information we need to survive. Let us use our brains and guarantee our survival. I urge you to support the Bates-Boehlert-Waxman amendment.

□ 1730

If Members believe that we need to improve our quality of life with cleaner air, a cleaner environment, not just for us but for future generations, support the Bates-Boehlert-Oxley-Bruce amendment. If Members believe in and have confidence in the American industrial ability to be competitive in the international marketplace, support this amendment. If they believe, as I do, in the American scientific and technological genius, they will support this amendment.

I would like to compliment my cosponsors for this amendment, and I would like to thank the chairman of the Committee on Energy and Commerce for his diligent effort to work with us to fashion a compromise to get this important section included in this bill.

Finally, let me say, in addition to complimenting the gentleman from California [Mr. WAXMAN], who has been so magnificent during all of these deliberations, we have accomplished what we set out to accomplish. One last word of praise, and that goes for a dedicated member of my staff, my legislative assistant, Dean D'Amore, who worked countless hours to make this day a reality. He can stand tall as we all can as this amendment passes.

Mr. BRUCE. Mr. Chairman, may I inquire how much time I have remaining?

The CHAIRMAN. The gentleman from Illinois [Mr. BRUCE] has 19 minutes remaining.

Mr. BRUCE. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. BATES].

Mr. BATES. Mr. Chairman, for 8 years, I have served in this body. For 6 years, I have hoped to bring this floor the resolve and the issue that will mean healthier, longer lives for our children.

The Clean Air Act itself offers us a far healthier world to live in, with reduced carbon monoxide from cars, less toxic emissions from factories and better regulation of dangerous chemical processes.

But, what good is clean air, without a strong and rapid phase-out of chemicals that deplete the threatened Earth's protective ozone layer?

If we deplete our ozone layer in the upper atmosphere, we leave half of the equation unsolved and the Earth unprotected from radiation that can cause a deadly increase in skin cancer, melanoma and cataracts.

Soon, we will be voting on a historic piece of legislation—legislation that offers us the opportunity give our children and future generations the gift of clean air and a strong ozone layer. I can think of nothing more important.

This amendment will phase-out chlorofluorocarbons and other ozone depleting chemicals. Our amendment exponentially increases the value of the clean air by looking forward, using foresight—for once—and facing one of the greatest environmental threats facing the earth to date: ozone layer depletion.

Chlorofluorocarbons or CFC's and other related chemicals cause significant depletions of the Earth's stratospheric ozone layer.

A 3-percent decrease in the ozone layer will result in 4,000 additional cases and 1,000 additional deaths per year from malignant melanoma.

A 3-percent depletion by CFC's and hydrochlorofluorocarbons or HCFC's will also result in approximately 200,000 additional cases of other forms of skin cancer and 400,000 additional cases of cataracts annually. The Northern Hemisphere is currently experiencing an average annual ozone depletion of 2.5 percent.

Our amendment will protect the stratospheric ozone layer by eliminating potent ozone depleters and by requiring the CFC's be recycled, thereby prohibiting preventable releases of these chemicals when they are in use.

This amendment is the result of months of staff work and years of research which has proven that ozone depletion is a reality caused by man!

We must act now to save the ozone layer. Researchers are now concerned that massive chunks of ozone depleting air could begin drifting over the United States and other Northern Hemisphere countries beginning around 2000. These massive patches of air—roughly the size of Texas—could allow large amounts of ultraviolet radiation to reach highly populated areas.

Our amendment is similar to the Stratospheric Ozone Protection Act, which has 158 cosponsors in the House of Representatives. Our amendment also has the support of the National Clean Air Coalition, the Sierra Club, the U.S. Public Interest Research Group, the National Wildlife Federation, the American Lung Association, the National League of Cities, the National Association of Counties, and the Northeast States for Coordinated Air Use Management.

This is an opportunity for Congress to take a positive step toward solving the serious problems associated with depletion of the ozone layer. It is an opportunity that should not be missed. I urge you to vote in favor of this amendment.

□ 1740

This amendment is the result of months of staff work, and I want to thank in particular the staff on the committee, and on the subcommittee of the gentleman from California [Mr. WAXMAN], my own staff, Kris Edmunds and others, who have been invovled in the producing of this final compromise amendment.

Mr. BRUCE. Mr. Chairman, I yield 3 minutes to the gentleman from Ohio [Mr. OXLEY].

Mr. OXLEY. Mr. Chairman, crafting national policy on ozone depletion is no easy task. At the beginning of this process I sought to protect the strato-

spheric ozone layer without unnecessary burdens to our economy. I sought to begin phaseouts of ozone depleting chemicals in the United States and to allow sufficient time for the reduction of CFC substitutes so as not to encourage developing countries to continue using CFC's.

The compromise before us includes phaseout dates that are more stringent than I believe is needed environmentally, but I reluctantly support this agreement because we have struck a compromise on HCFC phaseout dates that provide for better policy than did the Senate.

Our amendment allows more time for industry to use some of the interim substitutes. It is my hope that it will also allow sufficient time for the development of safe, energy efficient, and environmentally sound third generation equipment.

Mr. Chairman, if we are to be the world leader in the effort to phase down the uses of chloroflourocarbons and other ozone-depleting chemicals, we must allow adequate time for CFC alternatives to be used. I would hope that in conference with the Senate we can combine environmental protection with our need to encourage countries like India and China to sign on to the Montreal protocol. We must not pursue a policy on ozone-depleting chemicals which encourages other countries to continue using CFC's until the time third generation substitutes can be found.

The stratosphere is global, as are the production and use of CFC's. Therefore the United States must act both domestically and internationally. We have made a significant effort to reduce the use of CFC's at home and internationally, we have been a major contributor to the international regulation of CFC's.

Mr. Chairman, I would hope that in our zeal to be the world leader we do not infact lead other nations away from the use of CFC substitutes.

Mr. Chairman, this amendment is a good starting place and I intend to continue my efforts to further protect the stratospheric ozone layer without unduly burdening the U.S. economy.

Mr. BRUCE. Mr. Chairman, I yield 2 minutes to the gentleman from Washington [Mr. McDERMOTT].

Mr. McDERMOTT. Mr. Chairman, I would like to focus our attention on the benefits to human health that will result from an accelerated phaseout in the production of ozone depleting chemicals. I believe this is the central issue in this debate.

The Bruce-Oxley-Bates amendment is the only amendment before us today that offers a complete and rapid phaseout of all ozone-depleting chemicals. This action will prevent tens of millions of cases of skin cancer, millions of deaths by cancer, and millions of cases of cataracts in our country alone. It is a simple choice for me—any delay in the phaseout of these chemicals means millions of additional and preventable deaths and diseases.

In addition, many communities across this world are struggling to install refrigeration systems as a means of combating chronic under nourishment and disease. The refrigeration systems will allow them to diversify their diets and preserve vaccines. This bill will accelerate the development of safe and affordable alternatives to the ozone depleting systems currently available.

Finally, passing this amendment will not adversely affect the followup negotiations to the Montreal protocol as critics claim. To the contrary, I believe it will strengthen our hand in leading the world community to the correct decision. I urge my colleagues to vote for this important amendment.

Mr. BRUCE. Mr. Chairman, I yield 2 minutes to the gentleman from North Carolina [Mr. McMILLAN].

Mr. McMILLAN of North Carolina. Mr. Chairman, I rise in support of the compromise amendment combining the efforts of the gentleman from Illinois [Mr. BRUCE], the gentleman from Ohio [Mr. OXLEY], the gentleman from New York [Mr. BOEHLERT], and the gentleman from California [Mr. BATES]. It sounds like we are merging two law firms. But I want to congratulate the gentleman on coming together on this important issue, which I think all of us agree that we must address this problem and eliminate further deterioration of the stratospheric ozone layer in the shortest practical time.

However, I think we must bear in mind that the American people have more than 135 billion dollars' worth of equipment relying upon CFC compounds. They are used in refrigerators and freezers, automobile air conditioners, sterilants for medical instruments, and cleaning agents for electronic equipment, and many others. We take these things for granted.

It is important that we phase out CFC's in a fashion that assures ultimate success. Less harmful substitutes can be used while manufacturers are developing safe alternatives. Otherwise, the change could do so abrupt that public resistance could well develop and undermine our constructive efforts to resolve this problem.

Mr. Chairman, I think industry has demonstrated that it is prepared to address this problem. The Du Pont Co. has already unilaterally decided to cease production of this chemical by the year 2000.

Any legislation that Congress passes should ultimately be consistent with the Montreal protocol, which I am sure that we will undertake through the negotiating process, and hopefully bring our trading partners to the same standards that we are willing to adhere to ourselves. The 54 signatories to the protocol will meet as I understand in June to agree to strengthening provisions.

Mr. Chairman, I urge my colleagues to support this responsible CFC amendment to H.R. 3030.

PARLIAMENTARY INQUIRY

Mr. BRUCE. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BRUCE. Mr. Chairman, might I inquire how much time I have remaining?

The CHAIRMAN. The gentleman has 7 minutes remaining.

Mr. BRUCE. Mr. Chairman, under the rule for debate of this amendment there were 60 minutes allowed. I was allocated 30 minutes. My request for time exceeded that 30 minutes.

The CHAIRMAN. The Chair would advise the gentleman from Illinois [Mr. BRUCE] that there were 30 minutes allocated to a proponent and 30 minutes allocated to an opponent. No one has risen in opposition. The Chair would entertain a request for unanimous consent that the 30 minutes be allotted to a proponent.

Mr. BRUCE. Mr. Chairman, I ask unanimous consent that I be allotted the additional 30 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois.

There was no objection.

The CHAIRMAN. The gentleman from Illinois [Mr. BRUCE] now has 37 minutes.

Mr. BRUCE. Mr. Chairman, I yield 2 minutes to the gentleman from Texas [Mr. HALL].

Mr. HALL of Texas. Mr. Chairman, with reservations, I am going to support the CFC compromise. We are all aware of the need to phase out these CFC's and HCFC's, but I am not certain that we know enough at this point to make these decisions.

The new technology we hear of is not yet proven to be capable of providing an adequate substitute. I would hate to see the phase out date come and have no way of meeting the needs of our country that are currently met by HCFC's. I feel we need to reserve the right to make adjustments in this phasing-out program if we need to in the future.

This amendment really pushes for the phaseout of HCFC's, which I have some knowledge about, but it will establish the United States as a positive leader in the Montreal protocol—the aggressive, affective, international effort to phase out these compounds.

This bill is more positive than the Senate version in that it allows more time for technology to come up with a substitute for important HCFC's before we phase them out. This is vital if we intend help the global situation

in this matter—allowing all countries to participate in the pursuit of an environmentally sound and technologically feasible alternative.

With these reservations, I support the amendment offered by Mr. BATES.

Mr. BRUCE. Mr. Chairman, I yield 4 minutes to the gentleman from Pennsylvania [Mr. WELDON].

Mr. WELDON. Mr. Chairman, let me begin by complimenting the members of the Energy and Commerce Committee for their work on this critical legislation. I join a chorus of my colleagues in commending the gentleman from Michigan [Mr. DINGELL], the gentleman from New York [Mr. LENT], the gentleman from California [Mr. WAXMAN], and the gentleman from Illinois [Mr. MADIGAN] for their tireless work on this very complex subject.

I rise today in support of the compromise amendment. Like most of us in this Chamber, I am concerned about the effect of CFC's on the ozone layer. I am pleased to support the compromise which takes strong and substantive action to help protect the atmosphere. However, I rise today as the chairman of the congressional fire services caucus to explain a very important provision of this amendment that will limit the loss of life and property to fire.

This amendment has been carefully crafted to provide a narrow exemption for chemicals known as halons. Halons are the most advanced fire suppressant in use today. They are nontoxic, nonconductive, and noncorrosive. In other words, they can be used in close proximity to people without affecting sensitive electrical wiring, electronic equipment, and computers.

For that reason, halons are the agent of choice for many specialized fire suppression applications. The Nuclear Regulatory Commission requires that powerplant control rooms be protected by halons. The Federal Aviation Administration requires halon extinguishers on every airplane. Oil production facilities on the North Slope of Alaska are similarly protected. The military is the single largest user of halons, consuming 30 percent of the domestic production. Even priceless historical objects, such as the bill of rights, are guarded by halons. The computer center in the Senate is protected by these chemicals. Some of us may doubt the value of the work produced in the Senate computer center, but none will question the need to provide it with adequate fire protection.

Halons were not included in the original draft of the CFC amendment because they can contribute to the depletion of the ozone layer. But halon production is insignificant compared to other CFC's, 18 million pounds versus 700 million pounds last year. Most of the halons produced are not used, but are held in reserve tanks. Most importantly, however, when halons are actually used to extinguish a fire, their chemical structure is altered so that they no longer post a threat to the atmosphere. I hope that this exemption can be expanded to permit limited use of halons beyond the year 2000 for purposes of protecting national security interests, especially our military and energy production facilities.

The halon industry, both producers and consumers, has recognized the ozone depletion threat and has diligently worked to prevent any unnecessary discharges. In addition, the manufacturers are working to develop an environmentally safe alternative. Last week, one of the halon producers announced that it has developed a possible replacement and is submitting it to the EPA for limited production and further testing.

This compromise amendment does not leave the halon industry unregulated. Instead, it permits halon production and use through the year 2000 for fire suppression only. And it eliminates discharge testing and training which do pose a real threat to the environment.

This amendment strikes a balance. Is it better to protect oil production facilities from fire or should we risk a major environmental incident? I submit to you that it is better that we continue to produce and use halons for fire suppression so that we may prevent a greater tragedy.

I would like to commend my colleagues, Mr. DINGELL, Mr. WAXMAN, Mr. BATES, Mr. BRUCE, Mr. OXLEY, and particularly Mr. BOEHLERT for their work in crafting this bipartisan compromise. Passage of this amendment will protect the ozone layer without risking the greater environmental damage which could result from a fire or explosion. I urge my colleagues, and especially the 300 House Members of the congressional fire services caucus, to support the compromise amendment.

□ 1750

Mr. BOEHLERT. Mr. Chairman, will the gentleman yield?

Mr. WELDON. I am happy to yield to the gentleman from New York.

Mr. BOEHLERT. Mr. Chairman, my colleague has hit upon a very important point.

We were mindful of the special need for halons for fire suppressant and the congressional fire services caucus played an outstanding role in making certain that need was recognized in the compromise that we were able to fashion. So we have moved in the right direction. The firefighters of America are protected, and I am so very pleased to be identified as a cochair of the congressional Fire Services Caucus.

Mr. Chairman, I particularly want to commend my colleague from Pennsylvania [Mr. WELDON] for his leadership in this area.

Mr. WELDON. I thank the gentleman, and thank the leader of this compromise for his tremendous work in reaching this compromise on a very important component of it.

Mr. BRUCE. Mr. Chairman, I would like to echo the comments of the gentleman from New York about the work of the gentleman from Pennsylvania [Mr. WELDON] in the fire safety area of this particular compromise.

Mr. Chairman, I yield 3 minutes to the gentleman from Oregon [Mr. WYDEN].

Mr. WYDEN. Mr. Chairman, first I want to commend my colleague, the gentleman from Illinois [Mr. BRUCE) for all of the efforts that he has made to put this compromise together. Also the gentleman from southern California [Mr. BATES] has spent an enormous amount of time working on this, and in my view has done an excellent job. I know that SHERRY BOEHLERT from New York has put a tremendous amount of effort into the compromise, as well as MIKE OXLEY of Ohio. It is a bipartisan compromise, and I am very pleased to be supportive of it.

This is a particularly important issue in the Pacific Northwest because it has special impacts on a very fast growing segment of our economy, the electronics industry. CFC's are of special concern to the electronics industry because of its heavy reliance on certain CFC compounds in the manufacturing of virtually every electronic product that is on the market today. We see CFC's used in virtually everything from aircraft control equipment to computer environmental tracking and testing equipment, and this compromise attempts to address the concerns of those industries while at the same time moving aggressively to protect our environment from these particular chemicals. So I am pleased to support it.

I think it is also worth noting that the gentleman from Michigan [Mr. DINGELL] has had a longstanding interest in this particular issue. The chairman joined with a number of our colleagues in cosponsoring a joint resolution several years ago in support of the administration's adoption of an international protocol that ultimately became the Montreal protocol on ozone depleting substances of September 1987. The chairman has followed the issue for a long time and is particularly interested that the Oversight and Investigations Subcommittee monitor this particular issue in a very careful fashion.

This is both an international environmental issue and one that we have to face within our own national borders.

As a result of the excellent work of the gentleman from Illinois [Mr. BRUCE], our colleague, the gentleman from Southern California [Mr. BATES], the gentleman from Ohio [Mr. OXLEY], the gentleman from New York [Mr. BOEHLERT], and others, we move forward with this compromise. I commend our colleagues for their effort. It does give the United States an opportunity to take the lead based on the latest scientific information to deal with CFC's, and I commend my colleagues for their effort.

Mr. BRUCE. Mr. Chairman, I yield 3 minutes to the gentleman from Ohio [Mr. THOMAS A. LUKEN].

Mr. THOMAS A. LUKEN. Mr. Chairman, I rise to recognize the accomplishments and contributions of the gentleman from Illinois [Mr. BRUCE], the gentleman from California [Mr. BATES], the gentleman from New York [Mr. BOEHLERT], and the gentleman from New York [Mr. LENT].

HCFC's are the principal alternative that is scheduled to be used as a replacement for more damaging CFC's. I am leery of some of the legislative proposals that were made which were inconsistent with the international cooperative efforts of the Montreal Protocol which has been signed and ratified by 47 countries, including the United States.

But we are looking for and I hope finding in this bill reasonable regulation. After all, premature adoption of an accelerated, unilateral phaseout schedule might have little positive effect on the stratospheric ozone layer and, in fact, could cause maintenance of devices using substances with higher ozone depleting factors than HCFC-22. The potential outcome of legislative proposals is regulated obsolescence. Consumers will have no choice but to replace their CFC-12 systems with HCFC-22, and them to replace those systems with an unknown substance since there are no current replacements for HCFC-22 that have passed toxicity testing and have the needed lubricants.

Without effective replacements for HCFC-12, consumers are likely to opt for the system that has the longest likelihood of being available, which may promote the use of gas absorption or ammonia driven systems.

□ 1800

This bill, this amendment, however, requires the rapid closeout of the substance with the highest ozone depleting potential. That is the good news. The highest ozone depleting potential, first, and provides additional time for the phaseout of less harmful substitutes, all bringing time for the acknowledged development of new alternatives.

The compromise include a critical provision which would allow appliance manufacturers to make a smooth, less costly transition to CFC substitutes. This provision would provide for a 2-year moratorium of enforcement of State or local laws which control household appliance design. Without this amendment, the one we are considering, the costs of instant bans on certain appliances would be prohibitive to everyone.

In addition, let me finally mention one additional factor, halons, a very important subject. This compromise allows for the production of certain halons for the purposes of fire suppression if no safe and effective substitute is available. This recognizes the critically important use of these halons for which there are currently no substitutes to suppress fires.

Halon is the only substitute which can suppress fires and explosions while not at the same time causing harmful effects on human health even with the halon released in enclose environment with workers present.

I am very pleased that environmental regulation is not given precedence over human life.

I think we have a blend of the two here. I commend my colleagues, the gentleman from Illinois [Mr. BRUCE], the gentleman from California [Mr. BATES], and others for accomplishing this purpose.

Mr. BRUCE. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. WAXMAN].

Mr. WAXMAN. Mr. Chairman and colleagues, in 1977 I heard about chlorofluorocarbons for the very first time. People talked about this theory that these pollutants caused a hole in the ozone layer. Many of us who heard about the claims of dire consequences—and threats to the world's atmosphere, and all of that looked with some skepticism upon that notion. But science has moved very, very rapidly on this question.

We held hearing as recently as last year on this issue. While sometimes your hear about scientific theories that are unproven, in this short period of time we have now a scientific consensus in this Nation and internationally that chlorofluorocarbons cause a deterioration of the upper ozone layer.

Sometime when we talk about clean air, we talk about the problem of ozone, which is a problem in our cities. And people say, "Why can't we just take the ozone that we have too much of from our cities and move it up to the upper ozone layer?" If only we could.

But that upper ozone layer is being depleted. We know that it is causing excess skin cancers, cancers occurring because of ultraviolet light that is getting through.

Experts tell us we have much more to fear than that, that in fact changes are going on in our ecosystem that are very, very subtle but very, very dangerous.

This scientific consensus brought together a number of nations to reach the Montreal protocol. Obviously we need international cooperation on these threats to our planet.

But no sooner had they reached an agreement in Montreal than they realized that that protocol was too weak, that not enough was going to be done to reduce the chemicals that cause the depletion of the ozone layer.

Many of us who have labored on clean air, have dealt with the ozone carbon monoxide problem smog; we have known about acid rain since 1970; we have had the toxic air pollutant issues. We have been struggling to deal with each of them, then suddenly this new environmental danger came on the horizon and came at us very fast.

I am delighted that this amendment is now before us and that we have a consensus behind us. When the consensus is reached and everybody is on board, it is easy for all of us to congratulate each other.

But I want to single out the people who were the pioneers in making sure we got this legislation.

JIM BATES, from San Diego, authored the legislation to reduce the chlorofluorocarbons that are causing this damage. He went to Members of the House, and I think he got over 160 cosponsors. SHERRY BOEHLERT has been a leading environmentalist for his whole political life; he became concerned about this problem as well. The two of them got together to propose this amendment to this bill.

Some people have suggested we wait, deal with it another time, wait until we get international agreements together, "don't act unilaterally here at home." But that notion has fallen by the wayside. We recognize the United States must be the leader, not only to reach international agreements but to act responsibly ourselves so that other nations can see that we have confidence that there are going to be alternatives, that we are working to develop these alternatives, and that we are acting responsibly to try to protect life on this planet.

Mr. BRUCE and Mr. OXLEY made an enormous contribution to the proposal that is before us. They have given suggestions for changes that have made this proposal before us one that is obviously going to reach a unanimous vote of the House. We can move forward into the conference on this question with a strong consensus behind us.

When I talk about the pioneers on this issue, I have to recognize Senator CHAFEE, who authored the legislation on the Senate side calling for the reductions in chlorofluorocarbons. We will meet with Senator CHAFEE and the leaders in the Senate on this question

with two strong provisions from the two houses.

I am confident that, with the adoption of the Bates-Boehlert-Bruce-Oxley amendment, we will make an enormous step forward.

We need that step forward so that the next international meeting can have before it our work product, our recommendations and our leadership.

Some people asked, "Well, is this the same thing as global warming?" Well, let us relate it. We hear about the threat of global warming and what that is going to do to this planet. But this is a different issue with equally severe global consequences. There may be some who dispute global warming, although the consensus is certainly developing on that as well, but there is very little doubt about the dangers of the depletion of the ozone layer.

We need to act, we need to act responsibly. I congratulate JIM BATES, SHERRY BOEHLERT, TERRY BRUCE, and MIKE OXLEY, Chairman DINGELL, Congressman LENT, Mr. MADIGAN, all of us who have been involved with this issue and who have tried to fashion a responsible proposal to be part of this legislation.

I am pleased that we have it before us. I urge all Members to support the Bates amendment and send it on into law.

Mr. BRUCE. Mr. Chairman, I yield 3 minutes to the gentleman from Minnesota [Mr. SIKORSKI].

Mr. SIKORSKI. I thank the gentleman for yielding.

Mr. Chairman, I rise in support of the CFC compromise agreement.

No recent environmental problem is more troubling than the discovery of the hole in the ozone layer over Antarctica. While human life has existed on Earth for millions of years, this may be the first instance where humans have permanently altered the planet and its atmosphere.

Mr. Chairman, 6 to 30 miles above our heads a fragile, invisible layer of ozone shields the Earth's surface against dangerous ultraviolet [UV] radiation from the Sun. Man-made chemicals are now causing massive depletion of this protective shield.

Once released during production and use, ozone-depleting chemicals remain in the atmosphere for decades, some even for centuries. Within a few years of their release, they begin to reach the stratosphere. There they are broken down by UV radiation, releasing chlorine or bromine compounds that destroy ozone by converting it to ordinary oxygen, which is useless for screening out dangerous UV radiation.

□ 1810

As ozone is depleted, more UV radiation reaches the Earth's surface.

Unless ozone depletion is rapidly checked, we will suffer global health and enviromental consequences on a genuinely catastrophic scale. The EPA has predicted increased UV radiation due to ozone depletion would cause between 163 million and 308 million extra cases of skin cancer among people alive today and born by 2075. This is the United States alone.

At a minimum, harm from reduction in the ozone layer can increase the incidence of skin cancer. At its worst, the change in the ozone layer may be the first sign we have created problems we cannot completely fix. Thus, we can all understand the urgency of producing a sensible cost-effective appoach to phasing out CFCs, and eventually the other ozone damaging chemicals which will follow.

The authors of this compromise, the gentleman from Illinois [Mr. BRUCE], the gentleman from Ohio [Mr. OXLEY], the gentleman from New York [Mr. BOEHLERT], the gentleman from California [Mr. BATES], as well as the gentleman from Michigan [Mr. DINGELL], and the gentleman from California [Mr. WAXMAN], should be commended for all their hard work.

Mr. BRUCE. Mr. Chairman, I yield 3 minutes to the gentleman from Georgia [Mr. ROWLAND].

Mr. ROWLAND of Georgia. Mr. Chairman, I am very pleased with this compromise, and I want to commend the gentlemen who are responsible for it. We have seen a good bit of compromise take place in working on this clean air bill on the subcommittee and on the full committee. We have seen compromises even when we have gotten to the floor.

Therefore, this CFC compromise, I think, is very good indeed. So I compliment the gentleman from California [Mr. BATES], and the gentleman from New York [Mr. BOEHLERT], the gentleman from Illinois [Mr. BRUCE], and the gentleman from Ohio [Mr. OXLEY] for the hard work they have done and for the compromise that they have reached here.

I was concerned particularly about the methyl chloroform, and I am very pleased there has been an extension of the time that methyl chloroform will be phased out. I was particularly concerned about it because of the use in the textile industry. The textile industry is very important in the district that I represent, and since there is no other substitute that can be used for methyl chloroform in the textile industry, extending this period of time that we will be phased out gives an opportunity to develop some other method to be used in the process. It is also used in the cleaning of metal surfaces, particularly in aircraft, and it is used in detecting flaws, also in the metal of engines. No other substance can be used other than methyl chloroform to do so.

Mr. BRUCE. Mr. Chairman, I yield 2 minutes to the gentleman from California [Mr. BATES].

Mr. BATES. Mr. Chairman, I think it is important for those Members who have heralded the compromise and wondered what actually is in the compromise, I think it is important to state for those Members who are looking for an amendment which would begin the rapid phaseout of these chemical depleters of the ozone layer.

The Stratospheric Ozone Protection Act is still intact in this amendment. The Bates-Boehlert amendment is still essentially intact in the compromise. That compromise is still the strongest legislative proposal exceeding both the Senate and the Montreal protocol. For example, with the phaseout of the CFC's, it begins with approximately 6⅓ percent phaseout in 1991. The Senate does not begin until 1993, the protocol in 1993. The same is true with methyl chloroform, in 1993, a 20-percent reduction, while the Senate version is 30 percent in 1996, and the protocol 50 percent by the year 2000.

In addition, I think this is important that this amendment does include the comprehensive recycling labels disposal, and safe alternatives. These programs are still intact in this amendment, and I think will allow Members to move forward as quickly as possible to solve this problem.

Mr. BOEHLERT. Mr. Chairman, will the gentleman yield?

Mr. BATES. I yield to the gentleman from New York.

Mr. BOEHLERT. Mr. Chairman, I think it is very important to emphasize here that scientific consensus is with Members. We are phasing out CFC's by the year 2000. The scientific community says that is a realistic attainable goal. Methyl chloroform, the EPA says the scientific consensus says, we could probably achieve a year 2000 phaseout, but we have extended it to 2005. The HCFC's, the phaseout is extended from the year 2015 to the year 2030.

I have confidence that a technological and scientific genius in America will find substitutes there in the next generation, and more importantly, I think we should do it before the other guys do at distant points of the globe.

Mr. BRUCE. Mr. Chairman, I yield 3 minutes to the gentleman from Louisiana [Mr. TAUZIN].

Mr. TAUZIN. Mr. Chairman, the previous statement is correct: Science is now clear on the point that CFC, HFC, and also methyl chloroform clearly now has been identified in their migration upward to the destruction of the ozone layer. Clearly, the destruction of the ozone layer is not good for mankind. Clearly, we ought to be on a track that leads the rest of the world in not only the reduction but the elimination of these chemicals in use in the world.

For those Members who have followed the science and scientific jour-

nals and watched the hole in the ozone develop over Antarctica and the Arctic, there are some other interesting implications of changes in the ozone protection for our planet. I am not sure Members are aware of it, but if all the ice melted in the Antarctic tonight, the seas would rise not 5 feet, not 10 feet, not 20, not 50, but 187 feet. That is how much ice is contained in the Antarctic itself.

Is that ice melting? I can only tell Members a chunk the size of New Jersey recently broke away and melted from the Antarctic pack. As that ice melts, we can expect the oceans to rise, in fact, now the EPA estimate is that in the next 40 years, the oceans will probably rise somewhere between 3 and 4 feet. Now, if Members live in a nice high-rise in New York, I guess they would not worry about that. If Members live in the coastal marshlands where most of my Cajun brothers live, we have to worry about 3 or 4 feet more of water. Most of our land is at or near seawater, and 3 or 4 feet more of water means we will be inundated in the next 40 years, and the accelerated land loss we are experiencing on the coast will be incredible, and valuable acres will be lost. Not only home lands, but ways of life will be destroyed.

Am I dramatic? No, the destruction of the ozone layer is part and parcel of conseqences to our planet and our lives. We cannot even begin to understand or predict. We can only guess at it. We can only worry. We can only now try to take some action to prevent this. This compromise, and I do want to compliment the gentleman from Illinois [Mr. BRUCE] for the excellent effort he has made in working with the gentleman from California [Mr. BATES] and others on this issue of compromise, is a fair one. It says to those products now in some cases that are irreplaceable, they will be replaced, so get busy finding the alternatives. It says to those that need time to be replaced, that we are extending a little bit in the compromise a time to be replaced, but we are clearly saying they must be replaced. They have to find better solutions than the chemical products that clearly threaten not only the health and safety of the world but, indeed, provide consequences that science has not yet even been able to determine.

I compliment all those who have worked on this particular issue. I represent an area that produces some of these chemicals, and so we can see that for those Members who represent the jobs in the production from which these chemicals come, that it is with mixed feelings that we come to a conclusion that produces compromise.

□ 1820

Mr. Chairman, I can only tell the Members that those of us who represent those areas and those chemical plants are all in agreement that these chemicals must be phased out. These chemicals must be phased out soon. We must show leadership. We must be ahead of the curve of the Montreal protocol. We must encourage all the nations of this Earth to join us in making sure that something so precious to this nation and this globe as our ozone protective layer must indeed be protected from these chemicals.

The science is there. It is time for us to make good policy. The science is still developing. It is time for us to make sure that as the science develops, the awful and catastrophic consequences that could befall our planet are avoided by good policy this year. I believe the compromise makes good sense, and I believe it leads the world. I believe it says to the rest of the nations who will join us in the Montreal protocols that we mean business in America, that we intend to see to it that products that threaten the rest of our brethren on Earth are going to be phased out in America, as we expect them to be phased out across the world.

Again, Mr. Chairman, I extend my compliments to those who have worked out the compromise. I think when we go to the conference committee, we will find a receptive group on the Senate side and we will eventually settle this problem in advance of the protocols.

Mr. BRUCE. Mr. Chairman, I yield myself 4 minutes.

Mr. Chairman, just in closing, let me say that this is an incredibly complex but far-reaching compromise. It says that for CFC's and carbon tetrachloride and halons, we will start immediately on ramping down the use of these chemicals and phase them out by the year 2000.

When it comes to methyl chloroform, we will start ramping down immediately so that we will only, by 1996, be using 50 percent of methyl chloroform, and staying with that through the remainder of the century and phasing out completely its usage by the year 2005.

On HCFC's, we make sure there is a ban on new equipment, that there is a production freeze in the year 2015 and that we phase it out completely by the year 2030. For HCFC's, the less harmful low-ozone depletion potential HCFC's, 123 and 124, we stop the production of new equipment by 2020 and stop the use of it by 2035.

At the suggestion of the gentleman from New York [Mr. BOEHLERT] and members of our compromise group, we have a Committee on International Cooperation that authorizes $30 million to support global participation in the Montreal protocol process. That is extremely necessary so that we encourage others like India and China to reduce harmful CFC emissions and then come into compliance with the Montreal protocol.

Because of the work of the gentleman from Pennsylvania [Mr. WELDON] and others, there are exceptions given for medical practices and for aviation safety, as stated by the gentleman from Georgia [Mr. ROWLAND] and other Members who came to us and said for safety reasons and inspection of aircraft wings and engines, this is an important, critical need and also for fire suppression. We made sure that both in aviation and for all kinds of fire suppression, halon was available in limited quantities for that safety purpose. And also on exports to developing countries, we made sure we would be out of business by the year 2010, though countries that are using it now have an exception, and that is crucial to take care of the problem of industrial needs in other countries. But we say they cannot receive from this country critical CFC production technology. That continues to be banned.

This also contains important provisions on recycling and on the recapture of ozone-depleting substances and mandates that within 12 months after the passage of this legislation rules and regulations are in effect.

Finally, Mr. Chairman, it sets standards for car air-conditioning servicing.

This is a broad-ranging agreement. It is a broad-ranging compromise that needs to be passed by this House, and I ask that there be favorable consideration of this compromise amendment.

Mr. BRENNAN. Mr. Chairman, I would like to take this opportunity to thank the Energy and Commerce Committee for their long hours of hard work crafting the compromise bill we have before us today, and for the compromise amendment currently before us, which is a giant step forward in protection of our stratospheric ozone layer.

Mr. Chairman, Congress passed the Clean Air Act in 1970. But in the 30 years since that historic bill's passage, our Nation's air has suffered: Many of our country's largest cities are choking on air pollution, and even the relatively untouched skies of Maine are beginning to suffer the ravages of acid rain and ozone pollution.

In my home State of Maine, in the city of Presque Isle, rain fell in 1987, that was 126 times more acidic than normal rainfall. That same city of Presque Isle has a particulate matter pollution problem that the EPA deems serious. Our cities of Portland and Lewiston suffer from ozone pollution, as do four of our counties.

And according to EPA figures, 121 million Americans live in areas where air-pollution levels exceed at least one of our health-based air-quality standards.

These figures tell me that the time has come to act, before our health is seriously threatened.

We have before us today a comprehensive bill, one which tackles the pressing problems of acid rain, automobile pollution, industrial

emissions, and hazardous chemicals in the air we breathe.

This bill is a compromise which promises our Nation's best hope for clean air in the years to come. Based on the principle of "polluter pays," it carefully balances economic and environmental concerns, and curbs automobile and industry emissions while allowing for future economic growth.

The 42 to 1 vote in the Energy and Commerce Committee dramatically illustrates the bipartisan support behind this bill, and the amendments we have approved today substantially strengthen the measure. I strongly believe that passage of H.R. 3030 will result in a significant improvement in our Nation's air quality, and in the health of our citizens.

I have always believed that we have strong responsibility to leave a clean Earth for our children. H.R. 3030 will help fulfill this duty that we owe future generations.

I strongly urge my colleagues to support this historic bill.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan [Mr. DINGELL].

The question was taken; and the Chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. BOEHLERT. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 416, noes 0, not voting 16 as follows:

□ 1842

So the amendment was agreed to.

The result of the vote was announced as above recorded.

## PERSONAL EXPLANATION

Mr. COX. Mr. Speaker, on rollcall 133, the Sikorsky-Green amendment to the Clean Air Act Amendments of 1990, I was unavoidably absent, due to my participation in a panel discussion of budget reform in connection with the White House-Congress budget summit, which took place off Capitol Hill.

Had I been present, I would have voted "Aye."

## PERSONAL EXPLANATION

Mr. HUTTO. Mr. Speaker, earlier this evening I was unavoidably detained at a meeting and was not able to vote on rollcall No. 134, the compromise amendment on CFC's of the Clean Air Act.

Had I been here, I would have voted "aye."

AMENDMENT OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, pursuant to the rule, I offer an amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: Page 498, after line 4, insert:

SEC. 708A. OCS AIR POLLUTION.

Title III of the Clean Air Act is amended by adding the following new section after section 327:

"SEC. 328. AIR POLLUTION FROM OUTER CONTINENTAL SHELF ACTIVITIES.

"(a)(1) APPLICABLE REQUIREMENTS FOR CERTAIN AREAS.—Not later than 12 months after the enactment of the Clean Air Act Amendments of 1990, following consultation with the Secretary of the Interior, and the Commandant of the U.S. Coast Guard, the Administrator, by rule, shall establish requirements to control air pollution from Outer Continental Shelf sources located offshore of the States along the Pacific, Arctic, and Atlantic Coasts, and along the U.S. gulf coast off the State of Florida eastward of longitude 87 degrees and 30 minutes ('OCS sources') to attain and maintain Federal and State ambient air quality standards and to comply with the provisions of part C of title I. For such sources located within 25 miles of the seaward boundary of such States, such requirements shall be the same as would be applicable if the source were located in the corresponding onshore area, and shall include, but not be limited to, State and local requirements for emission controls, emission limitations, offsets, permitting, monitoring, testing, and reporting. New OCS sources shall comply with such requirements on the date of promulgation and

existing OCS sources shall comply on the date 12 months thereafter. The Administrator shall update such requirements as necessary to maintain consistency with onshore regulations. The authority of this subsection shall supersede section 5(a)(8) of the Outer Continental Shelf Lands Act but shall not repeal or modify any other Federal, State, or local authorities with respect to air quality. Each requirement established under this section shall be treated, for purposes of sections 113, 114, 116, 120, and 304, as a standard under section 111 and a violation of any such requirement shall be considered a violation of section 111(e).

"(2) EXEMPTIONS.—The Administrator may exempt an OCS source from a specific requirement in effect under regulations under this subsection if the Administrator finds that compliance with a pollution control technology requirement is technically infeasible or will cause an unreasonable threat to health and safety. The Administrator shall make written findings explaining the basis of any exemption issued pursuant to this subsection and shall impose another requirement equal to or as close in stringency to the original requirement as possible. The Administrator shall ensure that any increase in emissions due to the granting of an exemption is offset by reductions in actual emissions, not otherwise required by this Act, from the same source or other sources in the area or in the corresponding onshore area. The Administrator shall establish procedures to provide for public notice and comment on exemptions proposed pursuant to this subsection.

"(3) STATE PROCEDURES.—Each State adjacent to an OCS source included under this subsection may promulgate and submit to the Administrator regulations for implementing and enforcing the requirements of this subsection. If the Administrator finds that the State regulations are adequate he shall delegate to that State any authority he has under this Act to implement and enforce such requirements. Nothing in this subsection shall prohibit the Administrator from enforcing any requirement of this section.

"(4) DEFINITIONS.—For purposes of subsections (a) and (b)—

"(A) OUTER CONTINENTAL SHELF.—The term 'Outer Continental Shelf' has the meaning provided by section 2 of the Outer Continental Shelf Lands Act (43 U.S.C. 1331).

"(B) CORRESPONDING ONSHORE AREA.—The term 'corresponding onshore area' means, with respect to any OCS source, the onshore attainment or nonattainment area that is closest to the source, unless the Administrator determines that another area with more stringent requirements with respect to the control and abatement of air pollution may reasonably be expected to be affected by such emissions. Such determination shall be based on the potential for air pollutants from the OCS source to reach the other onshore area and the potential of such air pollutants to affect the efforts of the other onshore area to attain or maintain any Federal or State ambient air quality standard or to comply with the provisions of part C of title I.

"(C) OUTER CONTINENTAL SHELF SOURCE.—The terms 'Outer Continental Shelf source' and 'OCS source' include any equipment, activity, or facility which—

"(i) emits or has the potential to emit any air pollutant,

"(ii) is regulated or authorized under the Outer Continental Shelf Lands Act, and

"(iii) is located on the Outer Continental Shelf or in or on waters above the Outer Continental Shelf.

Such activities include, but are not limited to, platform and drill ship exploration, construction, development, production, processing, and transportation. For purposes of this subsection, emissions from any vessel servicing or associated with an OCS source, including emissions while at the OCS source or en route to or from the OCS source within 25 miles of the OCS source, shall be considered direct emissions from that OCS source.

"(D) NEW AND EXISTING OCS SOURCES.—The term 'new OCS source' means an OCS source which is a new source within the meaning of section 111(a). The term 'existing OCS source' means any OCS source other than a new OCS source.

"(b) REQUIREMENTS FOR OTHER OFFSHORE AREAS.—For portions of the U.S. gulf coast Outer Continental Shelf that are adjacent to the States not covered by subsection (a), which are Texas, Louisiana, Mississippi, and Alabama, the Secretary shall consult with the Administrator to assure coordination of air pollution control regulation for Outer Continental Shelf emissions and emissions in adjacent onshore areas. Concurrently with this obligation, the Secretary shall complete within 3 years of enactment of this section a research study examining the impacts of emissions from Outer Continental Shelf activities in such areas that fail to meet the national ambient air quality standards for either ozone or nitrogen dioxide. Based on the results of this study, the Secretary shall, consult with the Administrator, and determine if any additional actions are necessary. There are authorized to be appropriated such sums as may be necessary to provide funding for the study required under this section.

"(c)(1) COASTAL WATERS.—The study report of section 112(n) of the Clean Air Act shall apply to the coastal waters of the United States to the same extent and in the same manner as such requirements apply to the Great Lakes, the Chesapeake Bay, and their tributary waters.

(2) The regulatory requirements of section 112(n) of the Clean Air Act shall apply to the coastal waters of the States which are subject to subsection (a) of this section, to the same extent and in the same manner as such requirements apply to the Great Lakes, the Chesapeake Bay, and their tributary waters.".

Mr. DINGELL (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. DINGELL. Mr. Chairman, I ask unanimous consent that the gentleman from Louisiana [Mr. TAUZIN] be permitted to control the time in support of the amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

The CHAIRMAN. The gentleman from Louisiana [Mr. TAUZIN] will be recognized for 30 minutes.

The Chair will inquire, is there any Member in opposition to the amendment?

Mr. LENT. Mr. Chairman, if the gentleman will yield, so far as I know, there is no opposition, but I do have a number of Members who would like time.

Mr. Chairman, I ask unanimous consent that I be given 30 minutes, not in opposition, but in lieu of opposition, so that speakers can be recognized.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

The CHAIRMAN. The gentleman from Louisiana [Mr. TAUZIN] will be recognized for 30 minutes, and the gentleman from New York [Mr. LENT] will be recognized for 30 minutes.

The Chair recognizes the gentleman from Louisiana [Mr. TAUZIN].

Mr. TAUZIN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I am pleased to announce that a compromise has been reached on the so-called OCS amendments to the Clean Air Act. These amendments, in fact, will represent a compromise between those who proposed the amendment and those who had an amendment to offer in the alternative.

This compromise reflects both the author's intent to extend clean air protections to OCS developments adjacent to onshore air attainment problems, as well as the concerns of some of us who represent areas of OCS development that are conducted in distant parts away from onshore attainment air problems. As a consequence, those differences have been ironed out, and the compromise amendment before the House at this time is one to which I think all parties are in accord.

In regard to explaining the author's intent on the amendment, I now yield to the gentleman from California [Mr. LEVINE] such time as he may consume for that purpose.

□ 1850

Mr. LEVINE of California. Mr. Chairman, I want to commend the leadership of the committee on a bipartisan basis, first, for bringing this important bill before us today, and for moving us in the direction that for many years we should be moving with regard to significant clean air legislation.

Second, I would like to commend the leadership of the committee on a bipartisan basis for their help and their support with regard to this amendment. This is an amendment that is offered by myself, by the gentleman from California [Mr. LAGOMARSINO], by the gentleman from California [Mr. LOWERY], and by the gentleman from Florida [Mr. BILIRAKIS].

Mr. Chairman, the four of us have brought this bipartisan amendment before the House to plug one of the most gaping loopholes in the Clean Air Act.

Before describing the content of the amendment, let me mention that we had, the authors, had extensive conversations with Members who had some concerns with certain aspects of this amendment, particularly as it originally affected the gulf coast, the western gulf coast of the United States. Those concerns have been compromised, and the Members, particularly my good friend, the gentleman from Louisiana [Mr. TAUZIN], and my good friend, the gentleman from North Carolina [Mr. JONES], are pleased, I believe, with the compromise result that has been achieved. I believe that has eliminated the opposition that existed among the membership to the legislation.

Mr. Chairman, as I indicated, this amendment closes one of the most gaping loopholes in the Clean Air Act, that of the oil and gas platforms in Federal waters which escape any regulation under the Clean Air Act. The failure of the Federal Government to regulate offshore oil operations has given the oil companies a license to pollute our air, our oceans, and perhaps even our food.

One platform off the coast of California produces daily emissions equal to 15,000 to 100,000 automobiles. Yet, half of the 20 or so active platforms in California's Federal waters are currently uncontrolled for all emissions.

Under the 1978 Outer Continental Shelf Lands Act, the Department of the Interior is to regulate emissions from the platforms and their service vessels. Unfortunately, Mr. Chairman, 12 years after the enactment of that legislation the Department of the Interior has yet to promulgate a satisfactory rule for California.

As recently as last year, the Department of the Interior published a draft rule for California which was so inadequate that it was soundly denounced by the EPA, by the State of California, and by the local air districts which would have been affected by that promulgation. The result has been that offshore development has contributed to the violation of Federal and State clean air standards along the California coastline.

Because of the uncontrolled offshore emissions, local onshore businesses must, therefore, shoulder a greater burden of emission reductions. Offshore platforms are the only major industrial source in the Nation which are currently exempt from regulation under the Clean Air Act. Even platforms in State waters are regulated under the Clean Air Act by the environmental Protection Agency.

Mr. Chairman, this must change, and by virtue of this amendment to the Clean Air Act, it will change. Only the EPA has the technical expertise and resources appropriately to regulate offshore platforms, and perhaps more importantly, Mr. Chairman, EPA has the legal mandate and the internal commitment to regulate these platforms.

Time and again DOI's Minerals Management Service has demonstrated its willingness to seriously compromise the environment. In just the last 2 years, we have learned of three instances in which the Department of the Interior or the Minerals Management Service has persuaded the Fish and Wildlife Service, the Coast Guard, and NOAA to alter findings or actions in such a way as to adversely impact the environment.

Mr. Chairman, let me say that the authors of this amendment do not all agree on the future of offshore oil development. For example, I oppose any new development along the California coastline, although others of the authors of this amendment do not. However, we all agree, wherever we stand on the issue of offshore development off of our coastline, we all agree that this loophole in the Clean Air Act must be closed. Our amendment would resolve much of the conflict. It would require the EPA to regulate platforms and their service vessels along the Pacific, Atlantic, Arctic, and eastern gulf coasts.

For sources in these areas within 25 miles of State waters, regulations would be the same as that of similar onshore sources. Our amendment also addresses another key air pollution issue for coastal communities, that of airborne toxics which may adversely affect the marine environment.

In recent years, there has been growing concern that toxic air pollutants end up in the Nation's great bodies of water. We are very concerned that a range of toxics may be bioaccumulating in the food chain. Such toxic bioaccumulation would present a direct threat to human health, and it would clearly impair the integrity of our coastal waters.

In the Committee on Energy and Commerce, Members agreed to address this problem in the Great Lakes and in the Chesapeake Bay. Our amendment will extend the same protection to the coastal waters of the Pacific, Arctic, Atlantic, and eastern gulf. The EPA would be required to monitor and complete a study of the sources of atmospheric deposition of toxics in coastal waters, and this study would apply to the entire coast of the United States of America. This study would review any tendency of toxics to bioaccumulate in the environment and the adverse effects the deposition might have on human health.

In the event that the EPA found that other provisions of the Clean Air Act did not adequately prevent serious adverse impacts, the EPA would be required to develop regulations to prevent such adverse impacts with regard to the Pacific, Arctic, Atlantic, and eastern gulf coasts.

Mr. Chairman, this amendment will provide much of our Nation's coastline with extremely important protection against sources of air pollution which are not currently regulated.

Again, I want to thank the leadership of the committee and of the subcommittee, particularly my coauthors, the gentleman from California [Mr. LAGOMARSINO], the gentleman from California [Mr. LOWERY], the gentleman from Florida [Mr. BILIRAKIS], and I would also like to thank the bipartisan membership and leadership from the Florida delegation, particularly the gentleman from Florida [Mr. FASCELL] and the gentleman from Florida [Mr. IRELAND], with whom I have worked very closely in developing this legislation.

Mr. Chairman, I believe that this coalition which has developed has been important to the protection of our coastline in both the Pacific and the Atlantic coasts of this country, and I strongly urge my colleagues to support this amendment.

Mr. LENT. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the rule made in order two amendments on the Outer Continental Shelf, the Levine amendment and the Tauzin amendment. Had they been called up separately, I would have supported the amendment offered by the gentleman from Louisiana [Mr. TAUZIN].

However, I want to add my congratulations to all of the Members, the gentleman from California [Mr. LEVINE], the gentleman from California [Mr. LAGOMARSINO], the gentleman from California [Mr. LOWERY], the gentleman from Florida [Mr. BILIRAKIS], the gentleman from Louisiana [Mr. TAUZIN], who worked so hard.

I was part of that deliberation last night and then earlier today in working out this compromise. The compromise proposal applies everywhere but the gulf coast of Texas, Louisiana, Alabama, and Mississippi. I think that is a reasonable exception, a reasonable cutout, because it is off the coasts of those States and our gulf coast where most of the oil and gas production that is so important to our Nation comes from.

I heartily support this compromise, and I would hope my colleagues would also support it.

Mr. Chairman, I reserve the balance of my time.

Mr. TAUZIN. Mr. Chairman, I yield 5 minutes to my friend, the gentlewoman from New York [Mrs. LOWEY].

Mrs. LOWEY of New York. Mr. Chairman, I rise in support of the

Levine-Lagomarsino amendment to H.R. 3030.

Mr. Chairman, at a time when population growth along our coasts is straining the capacity of coastal waters to support aquatic life, when oilspills, nonpoint source pollution, sewage, and other forms of waste threaten to convert our once pristine coastlines into enormous dumpsites, we must ensure that efforts to combat these problems are not diminished by a failure to address the threat of toxic air pollution.

The amendment offered by Mr. LEVINE and Mr. LAGOMARSINO would extend to coastal areas requirements to study and respond to the impact of toxic air pollution on the Nation's coastal waters. Under the committee bill, EPA would be required to conduct a study of the impact of air toxic deposition on water quality in the Great Lakes and Chesapeake Bay and promulgate new air toxics regulations in response to the study's findings.

This provision was prompted by EPA estimates that up to 50 percent of the toxic loading of the Great Lakes comes from air toxics. The evidence also indicates that toxic air pollutants threaten severe damage to the Nation's coastal waters.

Over the last 20 years, the United States has spent billions of dollars to clean up sewage and industrial discharges entering coastal waters. In the Great Lakes and some coastal areas, however, that's only half the battle. It just doesn't make sense to leave out coastal waters in this important study of air toxic deposition.

The Levine-Lagomarsino amendment would extend to coastal waters the scope of provisions which the House Energy and Commerce Committee unanimously agreed to for the Great Lakes and Chesapeake Bay. The amendment would require EPA to complete a study to analyze sources of air toxics deposition, any tendency of toxics to accumulate in the environment, and the adverse effects toxic deposition may have on human health.

Under the amendment, if EPA finds that the Clean Air Act does not adequately minimize dangers to human health and the environment from toxic depositions, EPA is authorized to develop regulations to prevent such adverse effects. The closer we look at the threat of air toxics to our waters and to human health, the more serious the danger appears.

With more and more people moving to coastal areas, coastal waters will be subjected to ever increasing ecological pressure. People in coastal areas are exposed to a double dose of danger in the air they breathe and the fish they eat. Population growth in coastal areas means that more Americans lives will be affected by the fate of our coastal waters.

The Great Lakes and the Chesapeake Bay are indeed national treasures. But so is Long Island Sound, Buzzard's Bay, Puget Sound, and the Florida Keys. We must not overlook these areas and other coastal resources. I urge my colleagues to support the Levine-Lagomarsino amendment so that H.R. 3030's response to the threat of air toxic deposition doesn't neglect the needs of coastal waters.

□ 1900

Mr. LENT. Mr. Chairman, I yield 6 minutes to the gentleman from Florida [Mr. BILIRAKIS], a member of the committee.

Mr. BILIRAKIS. Mr. Chairman, I rise in support of the amendment offered by myself and my colleagues, Mr. DINGELL, Mr. LEVINE, Mr. LAGOMARSINO, Mr. TAUZIN, and Mr. LOWERY.

This amendment is the product of general agreement on a basic principle: That it should not matter whether sources contributing to air pollution are located on land or on platforms rising above the sea.

The air we breathe on land is the same whether or not it is the product of an onshore or an offshore breeze. It is only logical that the regulatory framework for controlling air emissions from oil and gas drilling activities be identical.

The amendment would subject OCS sources—whether from platforms or ancilliary activities including transportation—to Clean Air Act requirements. Moreover, States and localities would be given a direct say in the air that sourrounds their citizens. EPA would be required to adopt State and local requirements to attain and maintain air quality standards.

This latter facet on the amendment is important. Not only does the amendment transfer authority from the Department of the Interior to the EPA over this matter—it grants States and localities express authority to incorporate OCS facilities into their plans to secure clean air. No longer will we have the situation where onshore gains in air quality by towns and cities can be negated by offshore activities out of their jurisdiction and control.

In this regard, for many years, I, and my Florida colleagues, have been unanimous in opposing plans for oil and gas exploration activities proposed by the Department of the Interior. We have stood united in the sentiment that fragile ecological areas off our coast should not be put at risk while other domestic drilling rigs stand idle across the country.

In the case of OCS emissions, obviously Florida has not been subject to the air quality impact felt by other States, most notably California. However, my State maintains an intense and abiding interest in all matters affecting OCS drilling.

In brief, we are concerned about our future and the future of Florida's environment. We do not want our future jeopardized by activities over which we literally have no direct control. The present structure of the Outer Continental Shelf Lands Act has made it difficult for our State to effectively express its concerns over offshore drilling plans. We do not want to repeat this situation in the context of clean air.

Therefore, I believe we must settle this question before air emissions ever present a threat. We need to act before a potential problem becomes a real problem. We should make certain that the body of Federal law controlling air pollution is responsive to the citizens who live beneath the moving sea of Florida air.

In addition, I should make reference to another important section of this amendment. The amendment incorporates the so-called Great Lakes provisions we approved in the Energy and Commerce Committee during our markup of H.R. 3030 and extends this provision to all coastal areas.

Very briefly, EPA will be required to study toxic substances which might "bioaccumulate" in the environment and ultimately pose a threat to human health. The amendment further grants authority to EPA to regulate such substances should it find that the amended Clean Air Act is inadequate to prevent serious adverse effects on human health and the environment.

The basic intent of this provision is to address the concern that toxic substances are building up in the food chain and can ultimately end up in fish and waterfowl that people eat. While not explicitly related to OCS activities, I think it is clear that the EPA should assess whether the new bill we reported and hopefully will pass tonight is adequate to the task of protecting our citizens in this matter.

Altogether, I was pleased to work over the past few days with the chairman of the Energy and Commerce Committee, Mr. DINGELL, and with Messrs. LEVINE, LAGOMARSINO, TAUZIN, and LOWERY on this important amendment. I know my California colleagues have long been concerned with coastal emissions and I was pleased to be able to join them in this bicoastal and bipartisan effort.

Although we discussed OCS activities at length during our Energy and Commerce Committee markup, jurisdictional limitations prevented amendment at that stage. Therefore, I was pleased that language could be worked out to resolve the concerns of the four amendments filed on this subject, including an amendment I authored. What we have in this amendment may not be perfect from all perspectives—

but it is far stronger and more comprehensive than the language contained in S. 1630.

The amendment grants more complete protection to coastal areas from airborne toxics and pollutants formerly out of jurisdictional control. It allows energy production to continue in the western gulf, while seeking to provide full protection to the coastal areas of Florida and the Nation. In brief, the amendment will produce a 25-mile wide atmospheric buffer to allow States and communities to implement their clean air plans.

Again, I want to thank Chairman DINGELL and Mr. LEVINE for their commitment to this effort. I urge my colleagues to support this amendment and to grant the citizens of coastal areas more comprehensive authority to preserve and protect their environment and their quality of life.

Mr. TAUZIN. Mr. Chairman, I yield 6 minutes to my good friend, the French gentleman from the State of Oregon [Mr. AUCOIN].

Mr. AUCOIN. Mr. Chairman, I thank my Cajun friend, the gentleman from Louisiana [Mr. TAUZIN], for yielding me this time.

Mr. Chairman, I want to join with those who have spoken in support of the Levine provision in this bill before us dealing with the Outer Continental Shelf, and particularly want to associate myself with the remarks of the immediate previous speaker.

I have had some familiarity with the Outer Continental Shelf since the beginning of my service here in the Congress 16 years ago. I served on the Committee on Merchant Marine and Fisheries upon my arrival. I was appointed as a freshman Member of the House to the Joint Committee on the Outer Continental Shelf. I helped fashion the law that now exists governing activities on the Outer Continental Shelf, and now serve as a member of the Committee on Appropriations on the Subcommittee on the Interior, where we handle the budget of the Minerals and Management Service, and, of course, within the jurisdiction watch the activities of oil drilling operations on the Outer Continental Shelf.

□ 1910

I come from the State of Oregon where we have no offshore oil drilling. I want to make it very clear that we are very pleased to be in that position. We want to keep that condition in the Outer Continental Shelf of Oregon.

But I am very sensitive to those who are concerned not only with oil drilling off their States and the potential for new, unstable oil drilling off their continental shelf off their States, but I am also concerned and sensitive to the concerns of those who have existing oil drilling rigs which do emit pollutants, and who are concerned about making sure that Federal law is sufficient and in place with teeth in that law to adequately deal with emissions from this offshore pollution.

It is crucial I think to make sure that these operations are in the spirit of the clean air amendments that we are considering today. I think it is crucial that we do that.

I think it is also crucial that we go forward very carefully, I might say, on additional offshore oil drilling which is another fight, but related to this.

I can say to Members that serving on the Interior Appropriations Subcommittee where we have reviewed the budgets of the Minerals and Management Service and the Department of the Interior that I think it is a better proposition to have the regulatory authority over emissions on existing oil drilling operations, oil rigs that are currently in operation under the jurisdiction of the EPA rather than under the jurisdiction of the Minerals and Management Service or the Department of the Interior. I am certain that there are well-meaning people in MMS and in the Department of the Interior, but I really must tell my colleagues that I do not believe that either MMS or the Department of Interior is up to the task, at least to my comfort level, in ensuring that as we go forward into the future in monitoring and enforcing a standard of emissions controls on offshore oil drilling operations, that they are up to the task for this regulatory effort. I think EPA is better suited.

I would just share with my colleagues this observation. After being on the Interior Appropriations Subcommittee for 10 years, I really do believe that the industry has a very strong presence and a very strong influence, historically in the Minerals and Management Service. That should not be a great revelation to Members of Congress who have watched the issue on this floor for a number of years, and it is for that reason that I make the recommendation that Members support this amendment before us today.

Mr. WYDEN. Mr. Chairman, will the gentleman yield?

Mr. AUCOIN. I yield to my colleague and friend from Oregon.

Mr. WYDEN. Mr. Chairman, I thank my colleague for yielding. I think he has summed it up very well. I know he is very experienced in this area, serving on the committee.

As I understand it, what it really comes down to is the question of making sure that emissions off shore are regulated like emissions on shore, and that this important jurisdiction be handled, as my colleague from Oregon suggests, through the EPA.

So I think the gentleman has summed it up very well, and I want to associate myself with his remarks and urge our colleagues to support this strong bipartisan effort.

Mr. AUCOIN. I would say to my friend from Oregon that I cannot tell him how pleased I am that he took this time to express how much he agrees with my remarks.

I would also make this point. We have watched the bureau, the Department of the Interior working with its own task force on the OCS for the States of Oregon and Washington. They have a task force to report to them, to tell them, to set policy on new oil drilling in an area that is a frontier area where almost nothing is known about the marine environment, almost nothing. It is amazing to me that the task force that has been formed off the coast of Oregon and Washington by the Department of the Interior to report to the Secretary of the Interior, where the Secretary of the Interior has had a representative of his own department on that task force involving the citizens of Oregon and Washington and officials of Oregon and Washington, appointees of the Governors of those two States, where that task force, with representation from the Federal Department of the Interior has unanimously recommended no drilling for the foreseeable future, until we can get basic ecological information, that in the face of that kind of a recommendation, with the Department of the Interior's own representation, I am offended that in the face of that the Secretary of the Interior has refused to act on the unanimous report of the Task Force on the Outer Continental Shelf of Oregon and Washington where his own representative voted as a part of that unanimous recommendation to say no new drilling.

So I think it shows that with regard to emissions on those oil drilling rigs where they do exist that we need to have this regulatory authority vested where it belongs, which is in the EPA, and that is why this provision of this act must pass.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from Louisiana [Mr. LIVINGSTON].

Mr. LIVINGSTON. Mr. Chairman, I thank my friend for yielding time to me.

Mr. Chairman, as a former member of the Select Committee on the Outer Continental Shelf, I applaud the agreement prompted by my colleague, the gentleman from Louisiana [Mr. TAUZIN], and reached between the various members of the committee on this amendment affecting air standards for off- and on-shore drilling. It is a compromise that accounts for substantial differences existing between the well-defined California coastline and that of Louisiana, which as Members are aware, includes hundreds of thousands of acres of swamp and wetlands, and is

an area that does not easily lend itself to a precise boundary.

It is important that we emphasize rational, sensible regulation of OCS emissions in the Gulf of Mexico, accepting its unique and distinct physical and ecological characteristics.

However, Mr. Chairman, despite these advantages of this amendment and this compromise, though well meaning, it is really intended overall as nothing more than one more assault on the drilling in the Outer Continental Shelf as a whole throughout the continental United States. Opponents of a prudent OCS program have already loaded down Interior Department appropriation bills over the last several years with moratoria restrictions, and that trend has virtually shut down Outer Continental Shelf activity outside the central and western Gulf of Mexico. And even that does not seem to be enough for some folks, for in spite of the fact that the Untied States now imports over 50 percent of our oil from foreign countries, in spite of the fact that this adds tens of billions of dollars to America's trade deficit because we are importing oil, in spite of the fact that the Department of the Interior's Minerals and Management Service is the only agency which understands the problem of OCS emissions after dealing with the problem for many years, in spite of all of this, proponents of the Levine amendment want to really strip the Department of the Interior of its local jurisdiction and turn it over to the inexperienced regulators at EPA. That could easily mean the virtual end of oil production on the Outer Continental Shelf.

This, Mr. Chairman, mark my words, would be a catastrophe to America's long-range energy independence, because our resources are already stretched too thin.

□ 1920

We have shut down nuclear energy in the last 10 years, and we are right now, with this bill, pretty well shutting down coal. Now we are making it almost impossible to drill for oil on the Outer Continental Shelf. You shut down OCS drilling, and those gas lines that we saw in 1973 and again in 1978—only a distant memory for many of us—will return with a vengeance. I hope every Member participating in this activity will recall this moment.

You shut down the OCS drilling, and those gas lines will come back and your people will start complaining about the higher prices that they are paying for utilities just like the people in the northeastern section of this country started talking about high prices of gasoline in December of last year when we got hit with a hard freeze, only this time it is going to be multifold, many times worse than what we saw last December.

You start raising the prices of the gas that goes into our cars and the natural gas that heats homes—and of course we are not going to have coal or nuclear energy—and you are going to start paying tremendous prices for all of that energy that moves this Nation.

Believe me, when you start realizing that you are mortgaging your automobiles, your homes and your lives in favor of the OPEC nations, you will remember this moment and you will wish that we really had not shut down the Outer Continental Shelf.

Mr. Chairman, that is the real issue that is before us. If we do not start drilling again, if we don't start getting an understandable, acceptable rationale for an energy policy in this Nation, then we are going to close this Nation down.

Mr. TAUZIN. Mr. Chairman, what time remains on this side?

The CHAIRMAN. The gentleman from Louisiana [Mr. TAUZIN] has 11 minutes remaining, and the gentleman from New York [Mr. LENT] has 18 minutes remaining.

Mr. TAUZIN. Mr. Chairman, I yield 3 minutes to the gentleman from California [Mr. TORRES].

Mr. TORRES. Mr. Chairman, I thank the gentleman for yielding this time to me.

I want to take the floor at this moment to commend the great bipartisan effort that has ensued here in bringing about this very important legislation that would require EPA to establish regulations to control air pollution from offshore and gas platforms on the Outer Continental Shelf.

This is very important legislation, especially the amendment here that would also expand the scope of the bill's requirements for an EPA study of the health and environmental effects of atmospheric deposition of toxins in the coastal waters and, of course, in our air.

The chairman knows that I submitted similar language in an amendment that would also have established a study by EPA, that would have required the study of ships, coastal ships beyond the 3-mile limit that burn used motor oil, used motor oil that is disposed of from automobiles, vehicles, industrial machinery, that is now being sold through a black-market system to cargo ships that sail up and down the west coast, the Gulf of Mexico and the Great Lakes and burn this used motor oil as fuel.

It is called bunker fuel.

Now, the great problem here is that when you burn this contaminated used motor oil, you are emitting lead, benzene, cadmium, any number of dangerous toxins into the air. Certainly the people in California, especially in southern California, but, as I said, not only limited to California but the Gulf of Mexico, the Great Lakes, would be subjected to this. I believe that it is important the EPA regulate and study the effects of this burning beyond the 3-mile limit.

I am happy to note that the language would be contained in the bill. I am glad to know this other similar action that has been taken by our good colleagues on both sides of the aisle. Certainly it is time for our Nation to begin to realize that we are affected by great dangers of burning of contaminated used motor oil, used industrial oil, these dangerous chemicals spewing into our atmosphere, into our waters, into our agricultural fields and on to our urban and rural areas.

The time has come to stop this insidious habit that is being perpetrated by unscrupulous individuals across the country.

The CHAIRMAN. The gentleman from New York [Mr. LENT] has 18 minutes remaining.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. LAGOMARSINO].

Mr. LAGOMARSINO. Mr. Chairman, as a key sponsor of the Levine-Lagomarsino-Lowery amendment and as a Member who has worked very hard to see that OCS facilities come under strict clean air regulations under the Clean Air Act, I rise in support of this compromise amendment and urge my colleagues to support it.

I am glad that we were able to work with Chairman DINGELL to obtain compromise language on this important issue without weakening any of the original language contained in the Levine-Lagomarsino-Lowery amendment as it pertained to protection of Santa Barbara and Ventura Counties, in my district, and for the entire California coast. Hence, there is no longer any need for me to offer a separate amendment on this critical issue.

I have continually worked hard to see that my district is not unfairly penalized for air pollution from OCS activities it can't control. By requiring the Environmental Protection Agency to regulate platforms on the Federal OCS and the vessels that service them, and requiring sources within 25 miles of the seaward State boundary to meet the same regulation as that of similar onshore sources and sources in State waters, the Levine-Lagomarsino-Lowery amendment, and now the Dingell compromise, ensures that OCS facilities meet their fair share of air pollution reductions.

As I have stated before, I have been a supporter of limited OCS development as long as it was conducted in an environmentally acceptable manner, and in environmentally acceptable areas. Therefore, it is not my inclination to support legislation which needlessly attacks OCS facilities or development. Rather than attack an industry, the amendment before us addresses a major source of air pollution ef-

fecting a number of coastal areas and would, in my opinion, remove one of the most serious objection to OCS progress.

The district I represent has one of the most serious ozone problems in the country. This problem remains despite extensive air pollution control efforts implemented by both Santa Barbara and Ventura Counties. A major reason the counties of my district still exceed the health standards set by Federal and State law is the lack of adequate controls on ozone transport from OCS facilities.

Because of the possibility of misinformation, I feel the need also to indicate what the amendment does not do. The amendment does not allow for excessive, burdensome regulation. In fact, it contains language which exempts pollution control technology requirements which are technically infeasible or are an unreasonable threat to health and safety. Also, the amendment does not mandate that all OCS facilities meet the same requirements as facilities off the coast of California. For example, facilities off Florida would only have to meet the same requirements as the corresponding onshore areas in Florida. If onshore facilities are loosely regulated, or not regulated, the OCS facility would also be loosely regulated or not regulated. In addition, the amendment would not mandate that OCS facilities in Federal waters implement pollution controls that have yet to be tested. In reality, OCS facilities located in State waters already come under EPA jurisdiction, already meet the requirements of State and local jurisdictions, and have implemented cost-effective pollution control techniques. Those facilities have continued to run with significant reductions in air emissions.

Truly, the current situation must change. The few projects which were recenty allowed to move forward in California did so only after extensive disputes, delays and litigation. In fact, one project was delayed by over 15 years in large part due to uncertainty over air quality regulations. Once the oil company involved agreed to air pollution regulations consistent with State and local requirements, the entire project was permitted and under construction in less than 1 year.

By exempting offshore oil facilities in Federal waters from clean air requirements, the burden of mitigating offshore pollution has shifted to onshore industries and other emission sources including the defense industry and defense installations like Vandenberg Air Force Base. Continued failure to control pollution from offshore oil facilities will force coastal industries, including onshore and State water oil production, to incur great costs compensating for unnecessary offshore air pollution.

Currently, offshore oil and gas platforms in Federal waters are the only major industrial source in the Nation that are not regulated by the EPA under the Clean Air Act. This remains despite the fact that offshore platforms are already regulated by the EPA under the Clean Water Act with little objection from the industry.

The amendment also covers another serious problem facing our coastal waters. To address the growing problem of air toxics in coastal waters, the amendment would require the EPA to monitor and complete a study of the sources of atmospheric deposition of toxics in coastal waters, their tendency to bioaccumulate, and their effects on human health. If the EPA finds that other provisions of the Clean Air Act do not adequately prevent depositions, the EPA would be authorized to develop regulations to prevent such adverse effects.

The concern is that these toxics are bioaccumulating in the food chain, including fish and waterfowl, which are taken for human consumption, and thus present a direct threat to human health. Our amendment extends the same protection to all coastal waters which the energy and commerce committee agreed to for the Great Lakes and the Chesapeake Bay.

In the future, the EPA is to become the Department of Environmental Protection. I believe that the Federal agency with proven historical experience and necessary staff should be given full jurisdiction over all the clean air problems facing our country. We must not allow one industrial source of air pollution to be exempted from the Clean Air Act for no viable reason.

I urge all Members to vote for the Dingell compromise amendment.

□ 1930

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. LOWERY]

Mr. LOWERY of California. Mr. Chairman, I rise in support of the coastal protection amendment which I have worked for the past year to adopt into law, and I urge my colleagues to support this much needed reform to the Clean Air Act. I would like to thank Chairman DINGELL for his efforts in bringing this measure to the floor.

Presently, the Department of the Interior has jurisdiction over the oil and gas leasing on the Outer Continental Shelf [OCS] in Federal waters. However, the Department also is responsible for regulating pollution from the rigs. Theoretically, the Department of the Interior could balance environmental and developmental concerns. Historically, this had not been the case. While Interior has been working for more than 10 years to come up with acceptable regulations to address the OCS drilling pollution problem in California, they have been unsuccessful.

The Department of the Interior, the Environmental Protection Agency, and certainly the citizens of southern California have for years acknowledged the air pollution problem OCS facilities contribute to the area. As Congress begins to take the first concrete steps in over a decade toward cleaning the Nation's air, now is not the time to continue to exclude a known specific source of air pollution.

As my colleagues have stated, this amendment would require the Environmental Protection Agency in specified areas to regulate oil and gas drilling platforms on the Outer Continental Shelf. Logic would tell you, the regulation of known pollution-causing emissions from a known specified source would be under the direction of the EPA. While we are all well aware that Federal law is not always logical, we are being presented with a rare opportunity here to correct one of these inconsistencies.

Why are offshore platforms within the 3-mile limit required to meet on shore standards under EPA regulation but those 3 miles and beyond are not and are under a separate reviewing agency? This amendment will correct this inconsistent and illogical process and put all regulation of air quality under EPA.

In addition, the amendment would address the mounting concern with respect to toxics bioaccumulating in our Nation's waters. The measure reported by committee, already contains a provision requiring the EPA to monitor and complete a study of the sources of atmospheric deposition of toxics, of any tendency of toxics to bioaccumulate in the environment, and of the adverse affects the deposition might have on human health in the waters of the Great Lakes and Chesapeake Bay. This amendment would simply extend this same protection to the specified coastal waters.

Mr. Chairman, this is a sound amendment which moves to strengthen the bill, not dilute it, and I urge my colleagues to support it.

Mr. TAUZIN. Mr. Chairman, I yield 2 minutes to my friend, the gentleman from Florida [Mr. SMITH].

Mr. SMITH of Florida. Mr. Chairman, I want to commend the gentleman for the excellent way he is running this debate, and measuring this time out, drop by drop.

The pithy statements made by the gentleman from Oregon who preceding me in the well a few moments ago should be taken as part of the real reason that this amendment is so important, and in fact needs to be passed. I commend the gentleman from California, Mr. LEVINE, and some of my colleagues from Florida, includ-

ing Mr. BILIRAKIS, Mr. IRELAND, and Mr. FASCELL, for all of the work that they have put together.

There is no doubt that the EPA really has become the one agency which should have the mandated responsibility for control over this kind of reality, the emissions, for a reason that most people have not yet discussed. We in California and Florida and other States have been engaged in a major battle to prevent any further leasing of offshore oil areas for further exploration because of the major environmental damage. If we are not successful in securing a permanent ban, a moratorium permanently on such leasing, what will happen is that there will be an enormous proliferation of rigs running on the Outer Continental Shelf area, producing the kinds of pollutants again that this amendment will, in fact, try to reduce or prevent, and will provide the framework for policing of.

We cannot afford, at this juncture in our country's environmental history, with the fragility of the system in question, the fragility of the shelf, the fragility of the atmosphere, we cannot afford to have scattered responsibility, scattered through agencies of the government. It has to reside in one place. We have to look to a small group of bureaucrats to be responsible, the ones with the most expertise. And importantly, we have to make sure that if we do not, in fact, succeed in limiting the future growth of these rigs, that the ones that are established subsequently, together with the ones that exist currently, are safe as possible for the future of our environment. The toxic waste and other things must be controlled.

This amendment will do that. I commend the gentlemen who have worked on it.

Mr. TAUZIN. Mr. Chairman, I yield 2 minutes to the gentleman from Texas [Mr. HALL].

Mr. HALL of Texas. Mr. Chairman, this amendment once again highlights energy as a very valuable national asset and once again highlights the leadership of the gentleman from Louisiana in the energy field.

While I want to reserve some judgment on this provision until we get a conference report, I do want to support this agreement on OCS air quality as it stands now. This amendment addresses the concerns of those in California and Florida, while at the same time allowing OCS operations adjacent to Texas, Louisiana, Mississippi, and Alabama to continue unhampered while the Interior Department conducts a 3-year study of emissions in that area.

Mr. Chairman, the gulf is currently this country's most productive offshore petroleum area, and OCS drilling operations are already heavily regulated under Federal and State laws. We desperately need the oil and natural gas from the gulf in order to lessen our dependence on foreign imports—which, foreign imports, as my colleagues know, now account for one-half of the oil we consume. This agreement ensures the continued usage of this valuable national resource while we study the impact of drilling operations on ambient air quality in the OCS. While I do harbor some reservations about the manner in which this agreement is structured, it is an important compromise, and hopefully we can move toward further refinement in conference.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from Texas [Mr. FIELDS], a member of the committee.

Mr. FIELDS. Mr. Chairman, I was not going to say anything tonight. I was going to sit and let this just go by, and then I heard all of the misleading statements on the real purpose of this amendment. I want to get up and call this for what it is. The purpose of this amendment is to make future offshore exploration and production off the coast of California and off the coast of Florida more difficult, if not impossible.

I think that is sad. I think it is very sad for our country because the safest energy extraction program is offshore oil and gas activity. Let me just give Members a few facts, Mr. Chairman.

First of all, 37,000 exploratory wells have been drilled in our Nation's waters without one blowout. To give Members another fact, of the 60 major oilspills of crude oil in our Nation's waters, only one has come about because of OCS activity. Fifty-nine spills have been because of tankers. The majority of those tankers have been foreign owned. The majority of those tankers have been carrying foreign oil. In fact, this year, we pierced the 50-percent level for the first time in terms of oil imports. The largest portion of our Nation's foreign trade deficit is linked to the importation of foreign oil.

Another fact, of 5 billion barrels that have been produced in the last 15 years in our Nation's waters, less than 90 barrels have been spilled in our Nation's waters. Another fact, 18,000 to 300,000 barrels a year seep from the floor of the ocean off California. If Members want to do something about oil pollution, go out and do something about those seeps.

I think it is sad, and I have a letter from both Administrator Reilly and also Secretary Lujan, who oppose the transfer that this amendment brings about.

□ 1940

We are transferring to an agency with no enthusiasm and no experience, and I think if we want to become more energy independent, we have to look offshore, and we have to recognize that the issue is not the environment; the issue is view. People do not want to see platforms.

Mr. Chairman, I think it is sad because we are going to have to look forward in this Nation, and the way we do it to become more energy independent is to look offshore.

Mr. TAUZIN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, for years now there has been a raging debate among those of us who represent the part of America that is contributing the most in offshore development to this Nation's oil supplies, that is, those of us who represent the gulf coast located between Mississippi and Alabama and Texas and Louisiana, and those who represent areas of the country such as Florida and California and the Eastern Seaboard who have been less willing to accept offshore drilling.

For many years we have battled over moratoria, and we have battled over offshore leasing plans of the Interior Department, and this probably represents the first time our two conflicting views have come together in compromise. We have come together, I think, in this compromise on the basis of a single fundamental principle, and that is that when it comes to regulating that offshore industry, those who represent those portions of the country who have more problems with offshore drilling than we have in the Gulf of Mexico should have a greater say, and, therefore, through this amendment, they can determine it for themselves if they wish, and in fact they will have, if this amendment is adopted in conference, EPA oversight over that regulatory process.

At the same time those Members representing those parts of America who are not so favorable to offshore drilling have, in compromise with us, recognized our right in representing the Gulf Coast States to be satisfied with the mineral management system regulation and in fact to adopt in this compromise a study by mineral management of what emissions are affecting our gulf region and to accept in compromise provisions that will allow a study to go forward in our area regarding the bioaccumulation of hazardous materials in the seafood products of our region. In essence we have compromised, understanding each other's peculiar and personal concerns about the regions we represent.

Perhaps this is the basis for new understandings, and perhaps it can mean for us in future energy debates more chances for such compromises. In short, we have come to respect one another, however much we disagree with the opinions of those who represent other coastal areas, and I think in this compromise those who represent those coastal areas have come to respect us,

however much they may disagree with our particular view of how our coast and our regulations should be implemented on that coast.

So, Mr. Chairman, I thank the gentleman from California for what I believe is somewhat of a historic compromise and for his patience and generosity in reaching this compromise.

Mr. LEVINE of California. Mr. Chairman, will the gentleman yield?

Mr. TAUZIN. I yield to the gentleman from California.

Mr. LEVINE of California. Mr. Chairman, I thank the gentleman for yielding, and I would like to commend the gentleman for the comments he just made. I believe they are significant, and I believe they indicate as he frames them a substantial change, both in the substance and in the process of the OCS debate that has occurred for the past decade in the Congress.

As the gentleman indicates, those of us who have been working on this legislation now for some time worked with the gentleman from Louisiana and some of his colleagues. As much as we disagree with each other on the issue of OCS development, we have accepted a compromise that will allow the people and the residents of the western Gulf States to make their own judgments with regard to this regulatory scheme, whereas the rest of us from the Pacific Coast and the Florida Coast and the Atlantic Coast want to pursue a different and, I believe, more stringent and more appropriate regulatory scheme for our coastlines.

Mr. Chairman, I hope that the membership will look to this compromise in the future, as the gentleman from Louisiana indicates he is willing to do, to demonstrate the same type of sensitivity that the different regions of the country can illustrate to the unique concerns and the unique interests of the particular parts of the country that look at these issues differently, one from the other.

Mr. TAUZIN. Mr. Chairman, I thank the gentleman for his comments, and I would only add, as we wrap up this debate, that we will continue, I am sure, to debate future energy policy for America in the same spirit we have always debated it.

It is simply, I think, an important step that we take today in understanding the sensitivities we each have in the development of our own particular regions. I thank the gentleman for recognizing them, as I have today, and I think the others who are part of this compromise are to be congratulated for coming to a similar framework for discussion that may indeed serve us well in the future.

There will be indeed more debate and more disagreeements, but if we can continue to recognize that we each have an economy and a sensitivity that may be different, one region from the other, that we may have different environmental concerns from one region to the other, and that in fact our topography and our geography may be considerably different, as it is in our case in Louisiana where the oil rigs are located far from our cities and where they are located in California closer to cities, those differences might be taken into account as we form national policy that is at the same time flexible to those differences.

Mr. Chairman, I thank the gentleman for those efforts, and I yield again to the gentleman from California.

Mr. LEVINE of California. Mr. Chairman, I thank the gentleman for yielding.

Just briefly on this point, I think the specific distinctions that he outlines are distinctions a number of us in California have tried to make in the course of other aspects of the OCS debate.

The fact that these distinctions have been explicitly recognized in this debate and lead to different results in different parts of the country can hopefully provide a precedent and a beginning for demonstrating that those distinctions should apply to other aspects of the OCS debate as well.

Mr. Chairman, I thank the gentleman for his sensitivity and his leadership on that aspect of the issue.

The CHAIRMAN. All time of the gentleman from Louisiana [Mr. TAUZIN] has expired.

The gentleman from New York [Mr. LENT] has 7 minutes remaining.

Mr. LENT. Mr. Chairman, I yield 2 minutes to the gentleman from California [Mr. LAGOMARSINO].

Mr. LAGOMARSINO. Mr. Chairman, I just want to say, as I said in my remarks earlier, that I do not oppose offshore oil drilling, providing it is done in an acceptable environmental way and in an acceptable environmental area. However, from two standpoints, I strongly support this amendment.

One is the fairness of it. I think it is very unfair to burden onshore communities with increase air pollution from offshore when indeed some of those very communities have been the strongest supporters of offshore oil drilling. But they have to account for that. They have to reduce the use of their industry and so on, including, ironically, oil rigs in State waters, to say nothing of defense plants and defense bases.

The other reason that I support this amendment and do support some offshore drilling is that as a practical matter there is no offshore oil drilling taking place in California today where there has not been an agreement worked out on air quality. That is just a fact.

So I think if we are going to get on with a rational debate on that, we have to solve that problem as well as the other environmental problems.

Mr. TAUZIN. Mr. Chairman, will the gentleman yield?

Mr. LAGOMARSINO. I yield to the gentleman from Louisiana.

Mr. TAUZIN. Mr. Chairman, I thank the gentleman for yielding.

Let me simply say that we could in fact, I think, take a parochial view and say that if in fact oil drilling is not occurring off the western coast of the United States or off the eastern coast of the United States, then perhaps more jobs will flow to the depressed economy in Louisiana. But that is not the purpose of this compromise.

The compromise is, as the gentleman said, in fact to create an environment where oil drilling may be conducted in environmentally safe areas wherever it may be appropriate to do so and at the same time to respect the legitimate concerns of those who represent different regions of the country.

Mr. Chairman, I thank the gentleman for coming to that very same conclusion that I have reached as we came to this compromise.

The CHAIRMAN. The time of the gentleman from California [Mr. LAGOMARSINO] has expired.

Mr. LENT. Mr. Chairman, I yield 2 minutes to the gentleman from California [Mr. LEVINE].

Mr. LEVINE of California. Mr. Chairman, I thank the gentleman for yielding time to me.

I think, as the gentleman from California aptly indicated in his opening remarks and as I tried to indicate in my own statement, the two of us have been working closely on this amendment for some time. The gentleman from California and I have different positions for each other on the subject of further OCS development along the California coastline.

□ 1950

Mr. Chairman, we do come together on the appropriateness and the need for this particular amendment. I think it is unfortunate that the gentleman from Texas characterized this amendment as one which is designed to slow or stop OCS development. Frankly, this gentleman would be very happy to try to slow or stop additional OCS development off the California coast line, and I intend to use whatever means I can at my disposal to accomplish that result.

However, Mr. Chairman, in fairness to the gentleman from California [Mr. LAGOMARSINO], my colleague, and our other colleagues who have been working with us on this issue, who do not share our point of view, and who do support additional development, this is an issue in which those of us on both

sides of the issue of additional development agree that appropriate regulation is necessary because of the clean air aspects of this concern.

The CHAIRMAN. The gentleman from New York [Mr. LENT] has 3 minutes remaining.

Mr. LENT. Mr. Chairman, I yield 2 of those 3 minutes to the gentleman from California [Mr. LAGOMARSINO].

Mr. LAGOMARSINO. Mr. Chairman, I appreciate the gentleman from New York [Mr. LENT] yielding this time to me. I will not take the entire 2 minutes.

However, Mr Chairman, I did want to commend one of the officers of the Santa Barbara air pollution control district, assistant director Bill Masters, for the very good work that he has done on this issue, and I think people should be aware of that.

Mr. TAUZIN. Mr. Chairman, I yield the balance of my time.

Mr. LENT. Mr. Chairman, I have one last request for time. I yield the balance of my time to the gentleman from Texas [Mr. FIELDS].

Mr. FIELDS. Mr. Chairman, I just want to ask the gentleman from Louisiana [Mr. TAUZIN] a question.

My question is: "Do you think the gentleman from California [Mr. LEVINE] would use this to stop or hinder OCS development off California or off Florida? In your esteemed opinion?"

Mr. TAUZIN. Mr. Chairman, will the gentleman yield?

Mr. FIELDS. I yield to the gentleman from Louisiana.

Mr. TAUZIN. Mr. Chairman, the answer lies only in the mind of the gentleman from California [Mr. LEVINE]. I would not want to presume his mind.

Mr. FIELDS. In that case, Mr. Chairman, I ask the gentleman from Louisiana if in his mind he has an answer.

Mr. TAUZIN. I have some very strong opinions about what is occurring in California, but——

Mr. FIELDS. Mr. Chairman, I know the answer.

Mr. DINGELL. Mr. Chairman, I rise to congratulate the Members who worked so hard to achieve this compromise. In particular, I want to single out the efforts of Mr. TAUZIN and Mr. LEVINE. This amendment strikes a balance between the need to protect clean air in our off-shore areas and the need to continue oil and natural gas production in our off-shore areas. Striking the proper balance is the essence of good environmental legislation, and I thank the Members who have crafted this agreement.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan [Mr. DINGELL].

The question was taken; and the Chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. TAUZIN. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 411, noes 5, not voting 16, as follows:

[Roll No. 135]

□ 2013

Mr. STUMP changed his vote from "aye" to "no."

So the amendment was agreed to.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: Page 180, strike lines 3 through 8 and renumber the following paragraphs accordingly.

Page 180, strike line 16 and all that follows down through line 15 on page 181, and insert:

"(1) COVERED FLEET.—The term 'covered fleet' means 10 or more motor vehicles which are owned or operated by a single person. In determining the number of vehicles owned or operated by a single person for purposes of this paragraph, all motor ve-

hicles owned or operated, leased or otherwise controlled by such person, by any person which controls such person, by any person controlled by such person, and by any person under common control with such person shall be treated as owned by such person. The term 'covered fleet' shall not include motor vehicles held for lease or rental to the general public, motor vehicles held for sale by motor vehicle dealers (including demonstration vehicles), motor vehicles used for motor vehicle manufacturer product evaluations or tests, law enforcement and other emergency vehicles, or nonroad vehicles (including specialty farm vehicles).

"(11) COVERED FLEET VEHICLES.—The term 'covered fleet vehicles' means only motor vehicles in a covered fleet which are centrally fueled (or capable of being centrally fueled).

Page 181, strike line 19 and all that follows down through line 22 on page 207, insert the following, and redesignate subsection (g) as subsection (c) in line 23 on page 207:

"(a) URBAN BUSES.—

"(1) IN GENERAL.—Not later than January 1, 1992, the Administrator shall promulgate regulations requiring the use of clean alternative fuels in new urban buses operated primarily in a metropolitan statistical area or consolidated metropolitan statistical area with a 1980 population of 750,000 or more. The regulations shall provide that all new urban buses purchased or placed in service by owners or operators of urban buses in such areas shall be clean-fuel vehicles and shall be exclusively operated on clean alternative fuel. The Administrator shall prescribe a schedule phasing in the applicability of the requirements established by this paragraph over the 1994 through 1996 model years as follows: 25 percent of new urban buses purchased or placed into service in model year 1994; 60 percent of new urban buses purchased or placed into service in model year 1995; 100 percent of new urban buses purchased or placed into service in 1996 and later model years.

"(2) EXISTING URBAN BUSES.—The regulations under this subsection shall provide that all urban buses operated primarily in the areas referred to in paragraph (1) which have their engines replaced or rebuilt after January 1, 1996, shall be clean-fuel vehicles and shall be exclusively operated, while in such areas, on clean alternative fuel.

"(3) EMISSION STANDARDS FOR CLEAN-FUEL VEHICLES.—

"(A) IN GENERAL.—Not later than January 1, 1992, the Administrator shall promulgate regulations under section 202(a) containing specific emission standards applicable to clean fuel vehicles under this subsection. Such standards shall be based on the best technology that can reasonably be anticipated to be available at the time such measures are to be implemented, taking costs, safety, energy, lead time, and other relevant factors into account. Except to the extent that specific requirements are promulgated under subparagraph (B) of this paragraph, the standards applicable to such vehicles shall require compliance with the standard applicable under section 202 to emissions from conventional heavy-duty vehicles of the same type and model year.

"(B) SPECIFIC REQUIREMENTS.—The standards under this subsection shall require that (i) emissions of either oxides of nitrogen or particulate matter shall not exceed 50 percent of the emissions of such air pollutant allowed under the emission standard applicable for such air pollutant for a conventional heavy-duty vehicle or engine of the same type and model year pursuant to standards under section 202 and (ii) emissions of particulate matter shall not exceed 0.10 grams per brake horsepower-hour. The Administrator shall increase the level of emissions allowed under clause (i) if the Administrator determines that the 50 percent reduction is not technologically achievable, taking into account durability, costs, lead time, safety, and other relevant factors, except that the Administrator may not increase such level of emissions above 70 percent.

"(C) DETERMINATION.—As part of the rulemaking under this paragraph, the Administrator shall make a determination as to whether the 50 percent reduction referred to in subparagraph (A) is technologically achievable, taking into account durability, costs, lead time, safety, and other relevant factors.

"(4) PARTICULATE MATTER.—The regulations under section 202(a)(1) applicable to emissions of particulate matter from 1991 through 1992 model year urban buses capable of operating on diesel fuel shall contain a standard which provides that emissions of particulate matter from such buses may not exceed 0.25 grams per brake horsepower hour. Emissions of particulate matter from such buses after model year 1992 shall not exceed 0.10 grams per brake horsepower hour.

"(b) CENTRALLY FUELED FLEETS.—

"(1) FLEET PROGRAMS FOR SERIOUS, SEVERE, AND EXTREME OZONE NONATTAINMENT AREAS.—

"(A) IN GENERAL.—Each State in which there is located all or part of an ozone nonattainment area with a population of 250,000 or more classified under subpart 2 of part D of title I of this Act as Serious, Severe, or Extreme and each State in which there is located all or part of a carbon monoxide nonattainment area with a population of 250,000 or more and a 1988 carbon monoxide design value at or above 16.0 parts per million (as calculated according to the most recent interpretation methodology issued prior to enactment of this section by the United States Environmental Protection Agency), excluding those carbon monoxide nonattainment areas in which mobile sources do not contribute significantly to carbon monoxide concentrations, shall submit, within 24 months after the enactment of the Clean Air Act Amendments of 1990, a State implementation plan revision under section 110 and part D of title I to establish a clean-fuel vehicle program for fleets under this subsection.

"(B) PHASE-IN OF REQUIREMENTS.—Except as provided in clause (ii), the plan revision required under this subsection shall contain provisions requiring at least 30 percent of all new covered fleet vehicles operated by each covered fleet operator in each such area beginning in 1995, at least 50 percent of such vehicles in 1996, and at least 50 percent of such vehicles in 1996, and at least 70 percent in 1998, to be clean-fuel vehicles and to use clean alternative fuels when operating in the area.

"(ii) In the case of vehicles of 8,500 lbs. and above gross vehicle weight rating (gvwr), the plan revision required under this subsection shall contain provisions requiring at least 30 percent of all new covered fleet vehicles operated by each covered fleet operator in each such area beginning in 1998, at least 50 percent of such vehicles in 1999, and at least 70 percent of such vehicles in 2000 to be clean-fuel vehicles and to use clean alternative fuels when operating in the area.

"(C) CONSULTATION; CONSIDERATION OF FACTORS.—Each such State shall develop its implementation plan revision under this subsection in consultation with fleet operators, vehicle manufacturers, fuel producers and distributors, motor vehicle fuel system convertors, and other interested parties, taking into consideration operational range, specialty uses, vehicle and fuel availability, conversion capability, costs, safety, resale values of vehicles and equipment and other relevant factors.

"(D) CHOICE OF VEHICLES AND FUEL.—The plan revision under this subsection shall provide that the choice of clean-fuel vehicles and clean alternative fuels shall be made by the covered fleet operator subject to the requirements of this subsection.

"(E) CREDITS.—The State plan revision required under this subsection may provide for this issuance by the State of appropriate credits to each covered fleet operator for the use of clean-fuel vehicles which achieve on a per vehicle basis greater emission reductions than those required on a per vehicle basis under this subsection or for the use of more clean-fuel vehicles than required under this subsection. Such credits may be used by the person receiving such credits to demonstrate compliance with this subsection or may be traded or sold for use by any person to demonstrate compliance with other requirements applicable under this subsection in the same nonattainment area. Within 12 months after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue guidelines for the credit progam.

"(2) RECLASSIFIED AREAS.—In the case of ozone nonattainment areas reclassified as Serious, Severe, or Extreme, a plan revision meeting the requirements of this subsection shall be submitted within 1 year after reclassification. Such plan revision shall implement the requirements applicable under this subsection at the time of reclassification and thereafter, except that the Administrator may adjust for a limited period the deadlines for compliance where compliance with such deadlines would be infeasible.

"(3) AVAILABILITY TO THE PUBLIC.—At any facility owned or operated by a department, agency, or instrumentality of the United States where vehicles subject to this subsection are supplied with clean alternative fuel, such fuel shall be offered for sale to the public for use in other vehicles during reasonable business times and subject to national security concerns, unless such fuel is commercially available for vehicles in the vicinity of such Federal facilities.

"(4) EMISSION STANDARDS FOR CLEAN-FUEL VEHICLES.—Not later than 12 months after the date of enactment of the Clean Air Act Amendments of 1990, the Administration shall promulgate regulations under section 202(a) containing specific emission standards applicable to clean-fuel vehicles under this subsection. Such standards shall be based on the best technology that can reasonably be anticipated to be available at the time such measures are to be implemented, taking into account costs, safety, energy, lead time, and other relevant factors. In addition to the specific requirements set forth in this paragraph, the standards applicable to such vehicles shall require compliance with the most stringent standard applicable under section 202 to emissions from conventional vehicles of the same type and model year.

"(A) LIGHT-DUTY VEHICLES AND TRUCKS.—For light-duty vehicles and trucks of less than 3,750 pounds (loaded vehicle weight)

and not more than 8,500 pounds gross vehicle weight rating (gvwr):

"(i) Beginning with model year 1995, the standards under this subsection shall require that the total vehicle emissions of ozone forming volatile organic compounds shall not exceed 0.66 grams per mile (gpm).

"(ii) Beginning with model year 2000 the standards under this subsection shall require that the total vehicle emissions of ozone forming volatile organic compounds shall not exceed 0.25 grams per mile (gpm). The Administrator shall by rule waive for a period not to exceed 3 model years, the standards for oxides of nitrogen in the case of vehicles subject to the standard for volatile organic compounds under the clause and establish a different standard for oxides of nitrogen if the Administrator determines that such different standard is necessary in order to achieve the .25 grams per mile standard under this clause. Such different standard for oxides of nitrogen shall not exceed 0.7 grams per mile (gpm). The Administrator shall during such 3-model-year period conduct a study, and report the results to the Congress, concerning the technological feasibility of achieving the reductions required under this clause and the standard for oxides of nitrogen without such waiver.

"(B) LIGHT-DUTY VEHICLES AND TRUCKS OF 3,750 LVW OR GREATER.—For light-duty vehicles and trucks of 3,750 pounds (loaded vehicle weight) or more but less than 8,500 gross vehicles weight rating (gvwr) the standards under this subsection shall be, during Phase I, the light duty truck equivalent of a passenger car at 0.53 gpm emissions of ozone producing volatile organic compounds and, during Phase II, such eqivalent of a passenger car at 0.25 gpm, and shall include, for each phase an equivalent reduction in emissions of hazardous air pollutants.

"(C) VEHICLES OF 8,500 POUNDS (GVWR) AND ABOVE.—(i) For vehicles of 8,500 pounds and above (gross vehicle weight rating) the standard under this subsection shall, at a minimum, require that (I) emissions of either oxides of nitrogen or particulate matter shall not exceed 50 percent of the emissions of such air pollutant allowed under this emission standard applicable for such air pollutant for a conventional heavy-duty vehicles or engine of the same type and model year pursuant to standards under section 202 and (II) emissions of particulate matter shall not exceed 0.10 grams per brake horsepower-hour. The Administrator shall increase the level of emissions allowed under clause (I) if the Administrator determines that the 50 percent reduction is not technologically achievable for clean diesel engines, taking into account durability, costs, lead time, safety, and other relevant factors, except that the Administrator may not increase such level of emission above 70 percent.

"(ii) DETERMINATION.—As part of the rulemaking under this paragraph, the Administrator shall make a determination as to whether the 50 percent reduction referred to in clause (i) is technologically achievable, taking into account durability, costs, lead time, and safety.

"(5) TRANSPORTATION CONTROL MEASURES.—The Administrator shall by rule within 1 year after the enactment of the Clean Air Act Amendments of 1990 ensure that certain transportation control measures including high-occupancy vehicle lanes, time-of-day or day-of-week restrictions, and other similar measures that restrict vehicle usage, do not apply to any clean-fuel vehicle that is subject to the requirements of this subsection.

Page 212, strike line 3 and all that follows down through line 25 on page 218, and insert the following new subsection:

"(d) CALIFORNIA PILOT TEST PROGRAM.—

"(1) ESTABLISHMENT.—The Administrator shall establish a pilot program in the State of California to demonstrate the effectiveness of clean-fuel vehicles in controlling air pollution ozone nonattainment areas.

"(2) APPLICABILITY.—The provisions of this subsection shall only apply to passenger cars and light-duty trucks of less than 3,750 leaded vehicle weight (l.v.w.) and only in the State of California (hereinafter referred to as the 'covered area').

"(3) PROGRAM REQUIREMENTS.—Not later than 12 months after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations establishing requirements under this subsection. The regulations shall provide the following:

"(A) CLEAN-FUEL VEHICLES.—Clean-fuel vehicles shall be produced, sold, and distributed in accordance with normal business practices and applicable franchise agreements to ultimate purchasers in the covered area (including owners of covered fleets referred to in subsection (b)) in numbers that meet or exceed the following schedule (as may be revised under subparagraph (D)): 150,000 vehicles in model years 1994 through 1996; 300,000 in model years 1997 and thereafter. The Administrator may by regulation grant a manufacturer an appropriate amount of credits toward fulfillment of the requirements prescribed under this subparagraph for selling more clean-fuel vehicles than regulations under this subparagraph require. A manufacturer granted credits may transfer some or all of the credits for use by one or more other manufacturers in demonstrating compliance with the requirements prescribed under this subparagraph. The Administrator may make the credits available for use after consideration of enforceability, environmental, and economic factors and upon such terms and conditions as he finds appropriate. The Administrator shall grant credits in accordance with this subparagraph, notwithstanding any requirements of State law or any credits granted with respect to the same vehicles under any State, law, rule, or regulation.

"(B) CLEAN ALTERNATIVE FUELS.—(i) The clean alternative fuels on which the vehicles required under subparagraph (A) can operate shall be produced by fuel refiners and made available in the covered area. At a minimum, sufficient clean alternative fuels shall be produced to assure that all clean-fuel vehicles required under this subsection can operate, to the maximum extent practicable, exclusively on such fuels in such area and one such fuel shall be offered for retail sale at service stations dispensing at least 50,000 gallons of motor vehicle fuel per month, on average. The Administrator shall determine the clean alternative fuels to be produced and made available based on motor vehicle manufacturers' projections of future sales of clean-fuel vehicles and consultations with the affected State and local governments. The Administrator may by regulation grant persons subject to the requirements prescribed under this subparagraph an appropriate amount of credits for exceeding such requirements, and any person granted credits may transfer some or all of the credits for use by one or more persons in demonstrating compliance with such requirements. The Administrator may make the credits available for use after consideration of enforceability, environmental, and economic factors and upon such terms and conditions as he finds appropriate. The Administrator may also by regulation specifications for any clean alternative fuel produced and made available under this subparagraph as he finds necessary to reduce or eliminate an unreasonable risk to public health, welfare, or safety associated with its use or to ensure acceptable vehicle maintenance and performance characteristics.

"(ii) If a retail gasoline dispensing facility would have to remove or replace one or more motor vehicle fuel underground storage tanks and accompanying piping in order to comply with the provisions of this subsection, and it had removed and replaced such tank or tanks and accompanying piping in order to comply with subtitle I of the Solid Waste Disposal Act prior to the date of the enactment of the Clean Air Act Amendments of 1990, it shall not be required to comply with this subsection until a period of 7 years has passed from the date of the removal and replacement of such tank or tanks.

"(4) EMISSION STANDARDS FOR CLEAN-FUEL VEHICLES.—Not later than 12 months after the date of enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations under section 202(a) containing specific emission standards applicable to clean-fuel vehicle under this subsection. Such standards shall be based on the best technology that can reasonably be anticipated to be available at the time such measures are to be implemented, taking costs, safety, energy, and other relevant factors into account. In addition to the specific requirements set forth in this paragraph, the standards applicable to such vehicles shall require compliance with the most stringent standard applicable under section 202 to emissions from conventional vehicles of the same type and model year.

"(A) LIGHT-DUTY VEHICLES AND TRUCKS.—For light-duty vehicles and trucks of less than 3,750 pounds loaded vehicle weight (l.v.w.) and less than 8,500 gross vehicle weight rating (gvwr):

"(i) Beginning with model year 1995, the standards under this subsection shall require emission reductions representing a 50 percent reduction in emissions of ozone-forming volatile organic compounds and a 50 percent reduction from those of a baseline vehicle in total vehicle emissions of benzene, 1,3-butadiene, gasoline vapors, polycyclic organic material (POM), including POM and diesel particulates, and formaldehyde and such other hazardous air pollutants as the Administrator may by rule determined to warrant regulation.

"(ii) Unless the Administrator determines that it is not technologically feasible (considering durability, costs, lead, time, safety, and other relevant factors) beginning with model year 2003 in the case of clean-fuel vehicles subject to the requirements of this subsection, the standards under this subsection shall, at a minimum, require emission reductions representing a 75 percent reduction in ozone-forming volatile organic compounds and a 75 percent reduction from a baseline vehicle in total vehicle emissions of benzene, 1,3-butadiene, gasoline vapors, polycyclic organic material (POM), including POM and diesel particulates, and formaldehyde and such other hazardous air pollutants as the Administrator may by rule warrant regulation. If the Administrator determines that it is not technologically feasible (considering durability, costs, lead, time,

safety, and other relevant factors) to require such 75 percent reduction, the Administrator shall increase the level of emissions allowed under this clause, except that the Administrator may not increase such level of emissions above 50 percent.

For purposes of this subparagraph, the term 'baseline vehicle' means a conventional gasoline-fueled vehicle of the same type and model year meeting the most stringent standards in effect for that vehicle under section 202.

"(B) OTHER FUELS.—The standards under this paragraph shall permit clean-fuel vehicles to use a fuel other than a clean alternative fuel, if, when operated on any such other fuel, such vehicle complies with the emission standards applicable under section 202 to conventional gasoline-fueled vehicles of the same type and model year.

"(5) PROGRAM EVALUATION.—Not later than June 30, 1998 the Administrator shall complete and submit a report to Congress on the effectiveness of the California pilot program under this subsection. The report shall evaluate the level of emission reductions achieved under the program, the costs of the program, the advantages and disadvantage of extending the program to other nonattainment areas, and desirability of continuing or expanding the program in California. The program cannot be extended or terminated by the Administrator except by Act of Congress enacted after the date of the Clean Air Act Amendments of 1990. Section 177 of this Act does not apply to the program under this subsection.

"(e) INCENTIVE PROGRAM.—(1) At the time the Administrator submits the report to Congress under paragraph (5) of subsection (d), the Administrator shall promulgate regulations establishing an incentive program to encourage the purchase of clean-fuel vehicles. Such regulations may include any of the following:

"(A) A State registration fee on new motor vehicles registered in the State which are not clean-fuel vehicles in the amount of at least 1 percent of the cost of the vehicle. The proceeds of such fee shall be used to provide financial incentives to purchasers of clean-fuel vehicles and to vehicle dealers who sell high volumes or high percentages of clean-fuel vehicles and to defray the administrative costs of the incentive program.

"(B) Provisions to exempt clean-fuel vehicles from high occupancy vehicle or trip reduction requirements.

"(C) Provisions to provide preference in the use of existing parking spaces for clean-fuel vehicles.

"(D) The incentives under this subsection shall not apply in the case of covered fleet vehicles.

"(2) The regulations shall include a procedure under which States may submit implementation plan revisions to incorporate incentive programs consistent with the Administrators regulations under this paragraph.

"(f) STATE REFUELING FACILITIES.—If any State adopts enforceable provisions in an implementation plan applicable to a nonattainment area which provides that existing State refueling facilities will be made available to the public for the purchase of clean alternative fuels or that State-operated refueling facilities for such fuels will be constructed and operated by the State and made available to the public at reasonable times, taking into consideration safety costs, and other relevant factors, in approving such plan under section 110 and part D, the Administrator may credit a State with the emission reductions for purposes of part D attributable to such actions.

"(g) NO PRODUCTION MANDATE.—The Administrator shall have no authority under this section to mandate the production of clean fuel vehicles except as provided in the California test pilot program or to specify as applicable the models, lines, or types of, or marketing or price practices, policies, or strategies for, vehicles subject to this section. Nothing in this section shall be construed to give the Administrator authority to mandate marketing or pricing practicing policies, or strategies for fuels.

"(h) VEHICLE CONVERSIONS.—(1) The requirements of this section may be met through the conversion of existing gasoline or diesel-powered vehicles to a clean-fuel vehicle which comply with the applicable requirements of this section.

"(2) The Administrator shall, within 12 months after the enactment of the Clean Air Amendments of 1990, consistent with the requirements of this title applicable to new vehicles, promulgate regulations governing such conversions. Such regulations shall establish criteria for such conversions which will ensure that a converted vehicle will, when operating on a clean alternative fuel, comply with the applicable standards under this section. Such regulations shall provide for the application to such conversions of the same provisions of this title as are applicable to standards under section 202 (including the provisions of section 206, 207, 208, and 209) except that in the case of conversions the Administrator may modify the applicable regulations implementing such provisions as the Administrator deems necessary to implement this subsection. Such provisions shall be enforced in the case of conversions the same manner and to the same extent as in the case of vehicles subject to standards under section 202.

"(3) Any person who obtains, pursuant to paragraph (2), a certification under section 206 shall be considered a manufacturer for purposes of sections 206 and 207 and related enforcement provisions. Nothing in the preceding sentence shall require a person who obtains such a certification to warrant any part or operation of a vehicle other than what is required under section 206 and 207. Nothing in this paragraph shall limit the applicability of any other warranty to unrelated parts or operations.

"(4) The conversion from a vehicle capable of operating on gasoline or diesel fuel only to a clean-fuel vehicle shall not be considered a violation of section 203(a)(3) if such conversion complies with the regulations promulgated under this subsection.

"(5) The Secretary of Transportation shall, if necessary, promulgate rules under applicable motor vehicle laws regarding the safety of converted vehicles.

Page 219, strike line 7 and all that follows through line 5 on page 220.

Page 263, strike line 14, and all that follows down through page 266, line 19 and make the necessary conforming changes.

Mr. DINGELL (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. DINGELL. Mr. Chairman, I seek recognition for the purpose of controlling 30 minutes in support of the amendment.

The CHAIRMAN. Under the rule, the gentleman from Michigan [Mr. DINGELL] will be recognized for 30 minutes, and a Member in opposition will be recognized for 30 minutes.

Mr. DINGELL. Mr. Chairman, if there is no Member in opposition, I ask unanimous consent that the gentleman from New York [Mr. LENT] be recognized to control the other 30 minutes under the rule in lieu of an opponent.

The CHAIRMAN. Is there any Member in opposition? If not, without objection, the gentleman from New York [Mr. LENT] is recognized for 30 minutes.

There was no objection.

Mr. BURTON of Indiana. Mr. Chairman, I do not wish to control the time, but the Chair asked if anyone is in opposition, and I am.

The CHAIRMAN. The gentleman from New York [Mr. LENT] will yield time to the gentleman.

Mr. LENT. Mr. Chairman, I will assure the gentleman that he will be given ample opportunity to present his opposition.

The CHAIRMAN. Without objection, therefore, the gentleman from Michigan [Mr. DINGELL] will be recognized for 30 minutes, and the gentleman from New York [Mr. LENT] will be recognized for 30 minutes.

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan [Mr. DINGELL].

Mr. DINGELL. Mr. Chairman, I yield such time as he may consume to the gentleman from Michigan [Mr. WOLPE].

Mr. DINGELL. Mr. Chairman, I yield myself 3 minutes.

Mr. Chairman, the most contentious issue that this committee confronted today was the issue of clean motor vehicles and fuels for those motor vehicles.

The issue of the fuels was compromised away earlier. In the past few minutes, Mr. Chairman, the issue of the number and the requirements of the motor vehicles has been addressed, and by agreement between my three colleagues, the gentleman from New York [Mr. LENT], the gentleman from California [Mr. WAXMAN], the gentleman from Illinois [Mr. MADIGAN], and I, we have brought the Members what we think is a compromise which is worthy of consideration by the committee.

□ 2020

Mr. Chairman, the original amendment offered by my friend and colleague, the gentleman from California [Mr. WAXMAN], would have required that there be mandated production of vehicles. The compromise before the

committee does not. The compromise goes on to address some problems which a number of Members find to be particularly difficult with regard to the amendment offered by the gentleman from California [Mr. WAXMAN].

As mentioned, the compromise eliminates the mandates requiring national production of certain categories of heavy and light duty vehicles to meet prescribed Federal standards. It sets up a special pilot program in California. It establishes a program for heavy duty vehicles in fleets. It permits certain waivers in connection with pollutants which would be produced by vehicles within those fleets.

It also establishes a light duty vehicle fleet program. That program was one which was started by the President, and I would note that the package that is before us is in fact fuel neutral.

It is my belief that we have many difficult questions yet to address with regard to this matter. Those questions will be dealt with in the rather difficult conference which I anticipate with our colleagues in the other body.

Mr. Chairman, I would urge my colleagues to vote in favor of the substitute which is offered by agreement under the rule between myself, the gentleman from New York [Mr. LENT], the gentleman from California [Mr. WAXMAN], and the gentleman from Illinois [Mr. MADIGAN].

Mr. Chairman, I reserve the balance of my time.

Mr. LENT. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in strong support of the compromise proposal on clean alternative fuel vehicles which has been worked out between those of us who supported the committee-passed bill and those who sought a production mandate of one million new clean fuel vehicles each year as proposed by the Waxman-Lewis amendment.

Clean alternative fuels were a key ingredient of President Bush's clean air proposal when it was announced last June. Unfortunately, the issue divided us in the Subcommittee on Health and the Environment and during markup in the full Committee on Energy and Commerce. There was never a disagreement about the goal of promoting fuels which are cleaner than conventional gasoline—only honest disputes about how to do so.

The President's proposal was for alternative fuels in new vehicles. The concern that a production mandate did not work, and that requiring a premature introduction of exotic fuels, like methanol, would be unwise, resulted in the oil industry and auto industry coming forward with various proposals, including ways to reformulate gasoline. Such cleaner gasoline could be run in conventional vehicles, including those now on the road. The amendment we adopted earlier today in the Energy and Commerce Committee amendment package will mean that such reformulated gasoline will be the only gasoline sold in the Nation's nine smoggiest cities.

Particularly after taking that action, we do not need to mandate the production and sale of vehicles on a mass basis—as the Waxman-Lewis amendment would have done. This compromise deletes the mandated production requirement and replaces it with a demonstration program in the State of California. This program will test the use of very clean fuels, again making California a national laboratory for clean air requirements—just as it has done with respect to tailpipe controls.

The compromise amendment also contains provisions so that fleets which are centrally fueled in one of the 27 most serious ozone nonattainment areas, will phase in requirements that an increasing portion of the new vehicles acquired by fleets be much cleaner burning. In the second phase—which begins in model year 2000—the emissions standard is such that fleets in these smoggy areas will be required to burn fuels like compressed natural gas, methanol, and electric power. It makes more sense to put these clean fuel requirements on fleets rather than the general public, as would have been the case in many instances had the production mandate gone forward. I appreciate the efforts which went into making the fleet requirement for heavy duty trucks more flexible than would otherwise have been the case. Finally, the compromise keeps the urban bus program which President Bush proposed and which the committee expanded to include more metropolitan areas.

This compromise is appropriate, coming as it does near the end of the consideration by the House of the Clean Air Act Amendments of 1990. No one would ever have guessed that the Energy and Commerce Committee could bring such a unified position on so many issues to the House. This last remaining issue, as contentious as it has been at times, has now been resolved. The House is in debt to Chairman JOHN DINGELL and Subcommittee Chairman HENRY WAXMAN, and to all of our committee colleagues who worked so hard on these issues, such as JACK FIELDS, and RALPH HALL, and ED MADIGAN.

Again, Mr. Chairman, I am pleased that so many issues have been resolved to the mutual satisfaction of the parties involved. With the notable exception of the adoption of the Wise amendment, I am pleased with the outcome of our deliberations, and urge favorable support for this compromise and an "yea" vote on final passage.

Mr. DINGELL. Mr. Chairman, I yield 7 minutes to the distinguished gentleman from California [Mr. WAXMAN].

Mr. WAXMAN. Mr. Chairman, I thank the gentleman from Michigan [Mr. DINGELL] for yielding time to me to support this agreement which is now before the House. What I saw as the inadequacy of the bill that came out of the Committee on Energy and Commerce was that it did not have a program for urban buses. It did not have a program to develop fleets—cars in fleets that would run on alternative fuels. It did not start us down the path to get passenger cars that are going to run on alternative fuels.

Mr. Chairman, this amendment would accomplish those results. The urban fleet program, the urban bus program, would apply in major cities. It would require that buses run on clean fuels in 1994 and would apply to existing urban buses that are retrofitted.

The fleet program would apply in all seriously polluted areas, 31 cities, for fleets of 10 or more that have the capability of being centrally refueled. The pilot project in the State of California would mean 150,000 cars in 1994 that would achieve a 50-percent reduction in pollution, going up to 300,000 cars in 1997 that would be 50 percent cleaner.

Mr. Chairman, I believe we must move in this direction of clean burning cars. We are not about to restrict the transportation use of vehicles. We are going to have motor vehicles. If we are going to have motor vehicles, we have got to get motor vehicles that will use alternatives to gasoline, that will reduce pollution.

The importance of this amendment is enormous for its environmental benefits. It is tremendously significant as well for our national security. We are overly dependent on oil as a monopoly; we need to run our cars on alternative fuels. We know about natural-gas powered cars. We are hearing a lot from General Motors about electric cars and hydrogen cars. There may be alternative fuels that we do not even know about today. But we have got to set in place the infrastructure to move us in that direction.

Mr. Chairman, I am pleased with this amendment and I am pleased with this bill. I want to thank particularly the gentleman from the State of California [Mr. LEWIS] for working with me on this amendment and for his important leadership in this whole area of clean air. We come from southern California. It is the worst polluted area in the country. We know we have got to do more there. But we also know that the rest of the country will face pollution problems just like Los Angeles if efforts are not made to reduce air pollution from the industries and vehicles that cause pollution.

□ 2030

And we also know that Los Angeles is going to be like Mexico City if we do not reduce the pollution there.

I think that those who want the status quo, especially in the automobile industry, who do not want to be told to do anything or encouraged to do anything to change, are going to look back at this moment and welcome it, because there is a market not only in this country for these clean-burning cars, but all around the world in cities that are so heavily polluted even worse than our own.

The amendment before us is a worthwhile amendment. It moves us in the direction that we ought to take. It is a direction that President Bush said we needed to take if we are going to be innovative in reducing pollution and moving our Nation forward to energy independence.

Mrs. BOXER. Mr. Chairman, will the gentleman yield?

Mr. WAXMAN. I yield to the gentlewoman from California for the purposes of a colloquy on a related issue.

Mrs. BOXER. Mr. Chairman, I thank the gentleman for yielding and congratulate him on all of his hard work on this bill.

Would the gentleman agree that increasing fuel economy is critical not only to addressing our Nation's energy needs, but to stemming the threat of global warming, and if so, would you explain why increasing fuel economy standards for auto manufacturers was not pursued in this bill?

Mr. WAXMAN. I agree that raising automobile fuel economy standards is necessary for the environmental and energy reasons the gentlewoman mentioned. It is my belief, however, that increasing the fuel economy standards for automakers at this time would have jeopardized the passage of this badly needed clean air legislation.

Mrs. BOXER. I understand and agree that it is essential that the Congress move to strengthen the Clean Air Act to protect public health and the natural environment.

Since 1985 I have introduced fuel economy legislation in the House. Although it has been well over a decade since the body seriously addressed the urgent needs for improvement in our fuel economy, I am pleased to report that the Senate's Commerce Committee has marked up companion legislation to my bill, H.R. 4532, the Motor Vehicle Fuel Efficiency Act of 1990. The bill is expected to reach the floor sometime this summer.

Since the gentleman agrees that this type of legislation is needed, is it his intention once Congress has passed clean air legislation to work with me on this important issue?

Mr. WAXMAN. I share the gentlewoman's concern about this issue. I want to explore it with her and work with her and our other colleagues on the committee. It is a major national policy matter, and I hope we can get moving in this area as soon as is reasonably possible.

Mrs. BOXER. I thank my colleague and I look forward to working with him.

Mr. WAXMAN. Mr. Chairman, I urge the adoption of the amendment and I yield back the balance of my time.

Mr. LENT. Mr. Chairman, I yield 3 minutes to the gentleman from Texas [Mr. FIELDS].

Mr. FIELDS. Mr. Chairman, I thank the gentleman for yielding time to me.

Mr. Chairman, overall this is a very reasonable compromise, and I think Chairman DINGELL, Chairman WAXMAN, Mr. LENT, Mr. HALL, Mr. TAUZIN, Mr. SYNAR, and Mr. LEWIS of California should be congratulated, along with all of the staff. Certainly it is a significant improvement over what we would have been debating tonight.

I think this amendment maintains the integrity of the fleet program that was originally put together by the gentleman from Louisiana [Mr. TAUZIN], the gentleman from Oklahoma [Mr. SYNAR], the gentleman from Texas [Mr. HALL], and myself. However, this goes a little further. It sets up a demonstration program which mandates the production of ultra-clean cars sold exclusively in California, and it does not make the rest of the country pay for a problem that is unique to California. It continues to allow vehicles outside of California to run on reformulated gasoline, and it allows the marketplace to work. It gives the consumers choice at the lowest possible cost.

However, I still have some concerns, and I hope that my colleagues will work with me and others to address these in conference.

I am very concerned that this California-only program mandates excessive reductions in toxins, in phase I 50 percent, and in phase II 75 percent. These are lofty goals and I hope the goals can be achieved. But as I understand the California program, it currently does not require that. It requires reductions only for volatile organic compounds, and we do not even know if a fuel can be made to meet those type of toxic standards. I hope that it can.

Also I am a little concerned that this amendment does not include a provision which was in my amendment which allows a 5-year phasein for service stations in the placement of new tanks. If this phasein is not allowed, then service stations could close their doors. But I did receive a commitment from Chairman WAXMAN and Chairman DINGELL to address this concern. I feel we will as we move to conference.

Overall, I feel this is a reasonable compromise, and I urge my colleagues to support it, and yield back the balance of my time to the gentleman from New York.

Mr. DINGELL. Mr. Chairman, I yield 2 minutes to the gentleman from Oklahoma [Mr. SYNAR].

Mr. SYNAR. Mr. Chairman, I thank the gentleman for yielding time to me.

Mr. Chairman, I rise in support of this amendment. It includes strong fleet provisions which are going to be the key to the use of newer and cleaner fuels. It includes cars and trucks in the private and government sectors, and it will make significant improvements in cleaning the air.

It helps build the needed infrastructure for the new fuels by making Federal agency refueling stations open to the public, and it gives the incentives to fleet operators by exempting clean fuel vehicles from transportation control measures.

The agreement ensures the availability of clean alternative fuels in the amounts necessary to fuel the new vehicles.

The California pilot project, with its earlier dates, will convince others in other areas that these vehicles and fuels can and will make a difference for a cleaner environment.

My friends, we have come a long way. It has taken us over 10 years to get to this point, but tonight, because of the outstanding efforts of Mr. DINGELL, Mr. WAXMAN, Mr. LENT, Mr. MADIGAN, Mr. ECKART, Mr. FIELDS, Mr. HALL, Mr. TAUZIN, and others, we are here, and we have offered a very darn good compromise on a long, long overdue bill.

Mr. WAXMAN. Mr. Chairman, will the gentleman yield?

Mr. SYNAR. I yield to the gentleman from California.

Mr. WAXMAN. Mr. Chairman, I just want to use this moment to express to the gentleman from Oklahoma my deep heartfelt thanks for all of his efforts in this area. He has been a champion of fleets running on these alternative fuels, and I am pleased that we have the provision that we do. It is primarily due to the kind of efforts that the gentleman has put in to make sure that we did not let this issue go by the wayside. The gentleman from Oklahoma has been a champion for the environment, and for alternative fuels. He has been a good friend to me, and I thank him so much for yielding.

Mr. SYNAR. I thank the gentleman.

Mr. LENT. Mr. Chairman, I yield 3 minutes to the gentleman from Indiana [Mr. BURTON].

Mr. BEREUTER. Mr. Chairman, will the gentleman yield?

Mr. BURTON of Indiana. I yield to the gentleman from Nebraska.

Mr. BEREUTER. Mr. Chairman, I rise in support of H.R. 3030 and the Richardson-Madigan provisions.

Mr. Chairman, this Member rises in strong support of the so-called Richardson-Madigan

provisions which were a part of the Dingell en bloc amendment and in support of H.R. 3030, as amended. This amendment would require an oxygen content of 2.7 percent in reformulated gasoline sold in nonattainment areas by 1992. This provision would not only serve to clean up our air, but also would boost market opportunities for renewable, domestically produced alcohol fuels. Use of ethanol in reformulated fuels can reduce CO emissions by up to 25 percent, and reduce ozone pollution. Reformulated gasoline will help reduce pollution from older vehicles, which pollute much more than the newer models. Some companies are already selling reformulated gasoline at no extra cost, potentially making this provision the most cost-effective way to reduce pollution in the entire Clean Air Act.

The benefits of alcohol fuels are numerous. Most important after their potential to reduce air pollution, is the fact that the use of agriculturally produced ethanol fuels supports family farmers, rural main street businesses, and a whole array of agribusinesses which support and rely on economic activity in rural areas and agricultural regions. Alcohol fuels are not only renewable, but are produced domestically, making them even more attractive.

This Member would strongly encourage his colleagues to support the Richardson-Madigan provisions and alcohol based fuels. In doing so you will support economic development in rural America, reduce our dependence on imported oil, and clean up our air. These provisions are pro-environment, pro-agriculture, and pro-rural development.

Mr. BURTON of Indiana. Mr. Chairman, I will not belabor the point. I do not want to be the fly at the picnic, but there are some problems with this amendment as far as I am concerned.

I represent thousands of autoworkers in Anderson, IN, at the Guide and Delco Division of General Motors, and I have received 2,000 to 3,000 petitions from them expressing concern about the original amendment. They want clean air, but they do not want the auto industry severely hurt and their jobs jeopardized by fixes that are not well thought out and rushed through, and I think that is what is happening tonight.

This is the camel's nose under the tent, and it is likely we will be back here next year expanding dramatically this program.

This test program is limited to California, and I just asked the gentleman from California how many cars there are in Los Angeles. Do my colleagues know how many? There are 7 million in Los Angeles alone. So how is a test program with 150,000 units going to clean up the environment? It is not going to make a dent. We are going to be back here next year wanting to expand this program dramatically, and if it is not well thought out and put in over a period of time we are going to throw thousands and thousands of autoworkers out of jobs in the process of trying to clean up the air problems in this country that have been created over a long period of time just like that.

We are moving too fast on this thing.

Let me just tell my colleagues some things that concern me about this. They say that it is not a mandated production line they are going to have to have to get these things built. But they are going to have to have a production line, and these cars are going to cost, under the old plan, the Waxman-Lewis plan, $500 to $2,000 more. Because of limited production, they are going to cost $4,000 to $5,000 more per unit. I am telling Members they are going to be hard to sell, and the people of California are going to have to bear the brunt of that additional expense. It is going to take two to three times as long to fill these tanks of these cars, and there are not going to be a lot of service stations running to put these products in their tanks because they are not going to have that much demand for it.

□ 2040

So they are going to be few and far between, regarding the Waxman-Lewis vehicles that are supposed to produce less carbon monoxide. But what has not been expressed here tonight is that these cars will produce more hydrocarbons and nitrogen oxide. So there is going to be another environmental problem created by these vehicles.

The bottom line is this is the camel's nose under the tent. In a year they will want to expand this to 1 million, 2 million units. It is going to put a lot of Americans out of work, put us in an uncompetitive situation with respect to our foreign trading partners overseas. More Japanese cars will be sold in this country, in my view.

I think we are moving too fast. This amendment should be killed tonight, given more thought. We should come back in a year and see what we come up with.

Mr. DINGELL. Mr. Chairman, I yield 2 minutes to the gentleman from Texas [Mr. ANDREWS].

Mr. ANDREWS. Mr. Chairman, I rise in support of the alternative fuels amendment compromise. this is a critical part of this legislation; let me tell you why.

The fact is that many of our cities have a terrible pollution problem which affects the health of our citizens and our economy.

My home of Houston ranks as one of the most polluted cities in the country. We have the fourth worst ozone pollution problem behind cities like Los Angeles and Chicago. Our air pollution is worse than New York City's.

To show you how bad the problem is, consider that smog is mostly comprised of ozone. In the last 10 years, Houston managed to exceed the Environmental Protection Agency's ozone pollution standard 537 times. That's over a year and a half of days when Houstonians breathed dangerously dirty air.

About half of our smog comes from cars, trucks, and buses. We have the technology—today—to run these vehicles on very clean-burning alternative fuels like natural gas which can cut smog forming emissions by over half. We need to get such vehicles on the road as quickly as possible.

One recent study shows that a strong fleet program would remove enough pollution from Houston's air every year to fill 12 Houston Astrodomes.

But the benefits do not stop with the environment. A strong alternative fuels program will also benefit the domestic energy industry. We are currently importing over 50 percent of our oil. Our economy will benefit to the extent that we can replace this oil with domestic natural gas—one of the primary clean-burning fuels. In Texas we have lots of natural gas—it is cleaner, cheaper, and it is domestic. By one estimate, significantly increasing natural gas use will result in 15,000 new jobs for Texans.

Our decision today will impact Houston's air quality into the next century. Continuing on our present course condemns Houston and other big cities to polluted air. It will hurt our ability to attract new industry. It will hurt our quality of life.

Mr. Chairman, I am from an energy State. Houston is proud to be the energy capital of the world. And I am here to tell you that Houston needs the strongest clean-burning fuel program that we can provide.

Mr. LENT. Mr. Chairman, I yield 3 minutes to the gentleman from Louisiana [Mr. LIVINGSTON].

Mr. LIVINGSTON. Mr. Chairman, I rise in strong support of the Tauzin-Dingell-Waxman-Lewis, et cetera, compromise. If there is one lesson to be learned from world events in Eastern Europe in the last 12 months, it is that private entrepreneurship is more effective in getting a job done than simple government fiat.

That was the choice before the House before this compromise. Should we have approved a proposal which set only federally mandated production quotas on private companies, whether the American consumer bought the product or not? Or should we focus on the market and give the private sector the incentive to spur development of clean-burning cars and trucks, vehicles that could dramatically improve urban air?

I am pleased to say that except for California, the market-oriented approach in the Tauzin-Dingell amendment has been incorporated into the compromise and will encourage America's auto manufacturers to produce

clean fuel passenger vehicles. And they will be of sufficiently good quality that the American consumers will want to buy those vehicles.

For the vast majority of this country, this compromise establishes incentives rather than mandates, not only for the passengers vehicles themselves but also for the infrastructure necessary for fuel distribution.

It also increases the number of cities having clean fuel fleets from 9 to 31, pending approval of EPA.

Passage of this amendment will foster and enhance our natural gas industry, and since we are shutting down the oil drilling on the OCS tonight and the burning of coal, obviously, natural gas is one of the few fuels. left. This is the rightway for us to go.

It emphasizes the market over the government, incentive over mandate; it encourages the use of clean-burning, efficient fuels and it promises cleaner, healthier air for all Americans.

I urge my colleagues to support this compromise.

Mr. DINGELL. Mr. Chairman, may I inquire how much time remains?

The CHAIRMAN. The gentleman from Michigan [Mr. DINGELL] has 16½ minutes remaining, and the gentleman from New York [Mr. LENT] has 19 minutes remaining.

Mr. DINGELL. Mr. Chairman, I yield 2 minutes to the distinguished gentleman from Indiana [Mr. SHARP].

Mr. SHARP. I thank the gentleman for yielding.

Mr. Chairman, I rise in support of the compromise.

The goal of trying to bring cleaner fuels into the marketplace is an extremely important one for achieving environmental benefits for the public and protecting our health. Our problem for more than a year and a half has been to figure out how, as a practical matter, we can accomplish that.

The approach of trying to dictate production, trying to allocate the market, trying to outguess the consumer is one fraught with great danger and great potential for failure.

In the compromise, we have overwhelmingly rejected much of that approach. In the compromise, however, remain tough standards to meet, an ambitious schedule and still is fraught with risk because our knowledge about the pollution components of these other fuels, our knowledge about the economics and our knowledge about what the American consumer will do remains sketchy.

So we are going to have to continue to learn as we go. But I think we are wise to make this journey, I think we will make a contribution to the clean-up of our environment. But we are also going to have to be very sensitive to learn along the way.

I hope our colleagues will support this amendment.

Mr. LENT. Mr. Chairman, I yield 3 minutes to the gentleman from Texas [Mr. BARTON], a member of the committee.

Mr. BARTON of Texas. Mr. Chairman, first let me say that I want to thank all of my colleagues in the House who have asked about the status of my father-in-law, who underwent open-heart surgery today.

His operation lasted approximately 4½ hours. He is resting well. I appreciate the House giving me leave to be at the hospital this morning in Dallas.

Mr. Chairman, I am here to support this compromise amendment that has been arranged between the chairman of the committee, the ranking Republican on the committee, Mr. WAXMAN, Mr. FIELDS, Mr. TAUZIN, and Mr. HALL. I think it is a good compromise.

The original title that is being compromised is over 50 pages in the committee bill. It is very complex. It deals with general vehicles, the standards for 1995 and the year 2000, fleet vehicle standards 1995 and the year 2000 and buses from the years 1992 through 1997.

I can say that the VOC standards that remain in this amendment are very tough. General vehicles have to meet a 9.5-percent reduction by 1995 and 24-percent reduction by the year 2000.

Our fleet vehicles have to meet a 30-percent reduction by the year 1995 and 74-percent reduction by the year 2000. The bus provisions, as amended, will require that all buses in cities of 250,000 or larger, in the 31 nonattainment areas, potentially nonattainment areas, that 30 percent of these must be using an alternative fuel by the year 1995. This is a very tough amendment.

The pilot program that Congressman WAXMAN has talked about in the State of California is going to give us an opportunity to evaluate the mandated use of alternative-fuel vehicles in a certain part of the country.

□ 2050

So all in all, I think this is a good step forward.

I might add that an amendment that has been included earlier in the bill that I offered in committee, that I called a clean air smog trap, is going to identify the existing vehicles that are polluting, as they are actually driving down the highways and byways, and that in combination with this should move Members toward meeting the ozone standards in the bill.

I supported it, and I would hope that my colleagues would, also.

Mr. DINGELL. Mr. Chairman, I yield 3 minutes to the gentleman from Texas [Mr. HALL].

Mr. HALL of Texas. Mr. Chairman, I certainly support this agreement forged by the gentleman from Michigan [Mr. DINGELL] and the minority member, the gentleman from New York [Mr. LENT], and the gentleman from California [Mr. WAXMAN]. I particularly want to thank the gentleman from Texas [Mr. FIELDS] with whom I worked on the Fields-Hall amendment. I particularly want to thank the other Texas members on the Committee on Energy and Commerce, including Mr. BARTON, Mr. BRYANT, and the late Mickey Leland, who worked toward cleaning the air and bringing Members to this moment.

While this amendment before Members is a very comprehensive amendment in dealing with the promotion of alternative fuels in passenger cars, in government and private fleets, I want to speak for a moment on the fuels issue.

I became involved in this bills proposal for the use of an alternative fuels program to set aside the singular and narrow-in-vision pursuit of establishing methanol as the only fuel that could meet the bill requirement and be utilized. That was an ineffective approach to the problem of mobile source pollution, and restrictive use of what we have learned about the possibility of using natural gas, ethanol, electricity or combinations thereof. The scope of this regulation is too far reaching to allow only one solution.

Technology is the driving force in discovering the best alternative fuel under this amendment. It creates, in a sense, an open market system for competition between the fuels. As in any market system, the product that best satisfies performance and economic requirements placed upon it, will prevail.

Mandating one certain fuel by specific reference, or by establishing standards attainable only by that fuel, will kill the opportunity for technology to come up with a truly great alternative fuel.

Personally, I hope that compressed natural gas prevails as the winner in the competition for fuel utilization.

When President Carter passed a Fuel Use Act, he did so partially basing his action on his mistaken belief that we were out of natural gas. We were not out of natural gas. We were simply out of incentives to search for it.

But as I previously stated, this is too vast a program to think in local terms only.

Supporting this amendment along with the reformulated gasoline provisions in the committee amendment means you are supporting the most fair and most efficient method of alternative fuel development and use in the greatest number of vehicles. If you sent twenty people to one destination, but let each take his own way, somebody is going to find a shorter route on a smoother road.

So it will be fuel of the future that will prevail not from a geographic location or strength of representation,

but the cleanest and most efficient use of our Nation.

Mr. LENT. Mr. Chairman, I yield 3 minutes to the gentleman from Michigan [Mr. SCHUETTE].

Mr. SCHUETTE. Mr. Chairman, I simply want to express congratulations to the gentleman from Michigan [Mr. DINGELL], the gentleman from New York [Mr. LENT], the gentleman from California [Mr. WAXMAN], and the gentleman from Illinois [Mr. MADIGAN] for their ability in crafting this amendment that we have presented this evening, Certainly, the removal of 1 million vehicles of mandated production vehicles as being proposed is a positive step.

Do I still have concerns? Yes. So when we go to the conference, it is important that these items are worked out to make sure that we are competitive, that we are providing jobs for people, and that our air is clean.

Now, this bill has dealt with many items, from emissions, both stationary and mobile source, CFC's permit and enforcement. The intent of this bill was to have a balance, a balance of America's air and America's jobs. The ecology and the economy. For the most part, we were able to put that in balance. However, mandated production went too far. It tipped the balance, would have put people out of work, hurt our competitiveness—and people in this place always talk about our trade imbalance. Are we competitive? Let Members make sure in the future we remain competitive.

If we were to force 1 million cars to be produced, in centralized planning, bad medicine for autoworkers. Nobody wanted them, nobody would buy them, they would sit in dealers' lots and cause people to be laid off. My point in talking about this today is, let me issue a warning. Let Members make sure in the future we do not have "son of mandated production," "cousin of mandated production," and "in-law" coming to visit. There can be no mandated production in the future, because that would tip the balance, that would not be the ecology and the economy hand in hand. It would not be America's air and America's jobs.

So let Members be careful as we work through the conference, and in other legislation where we want to have air, healthy air for Americans, and jobs for real people, because if we go too far, the autoworkers take the hit. They will be laid off. That is not sound policy for this House, either. So let me say that I will support this amendment with a watching eye, making sure in the future we balance these twin competing goals that can be achieved, but not in a conflicting way.

Mr. DINGELL. Mr. Chairman, I yield 2 minutes to the distinguished gentleman from Louisiana [Mr. TAUZIN].

Mr. TAUZIN. Mr. Chairman, this was not an easy compromise. I think this House owes a debt of gratitude to our chairman, the gentleman from Michigan [Mr. DINGELL], and the chairman, the gentleman from California [Mr. WAXMAN], the gentleman from New York [Mr. LENT], and particularly the gentlemen from Texas [Mr. HALL and Mr. FIELDS], the gentleman from Oklahoma [Mr. SYNAR], the gentleman from Kansas [Mr. SLATTERY], and all those Members who worked so diligently to find a compromise. I also see the gentleman from Ohio [Mr. ECKART], and I want to thank him for his efforts, and the staff of those committees and the members who worked so diligently.

This bill is not only a good compromise now, but it is also a working compromise. If Members have doubts about it, let me speak of one fuel. In this community, just a few minutes away, the gas company that serves this region has 200 natural gas fueled vehicles operating in this community. In my own community in Louisiana, near Raceland, Southco Gas converted 25 of its cars to natural gas and saved $23,000 in fuel costs, and cut maintenance in half, operating on a fuel so clean a person can hold a handkerchief under the tailpipe and not see damage. I traveled with the Columbia Natural Gas bus built by Cummings Diesel who specified an engine for natural gas, and by the biggest bus manufacturer in America, I traveled with that bus and saw its fuel efficiency and its economy. One bus fueled on that fuel will replace 500 dirty cars in America. It is already happening.

All who worked to make this compromise possible tonight, I think they have given America something special. There are two provisions in this compromise that I want to highlight. One, we have protected those people in America who wanted to convert their vehicles from warranty problems in this bill; and second, we have incentive to make sure there are fuel stations in the community so if a person wants to go to alternative clean fuel, they can get the vehicles refueled. Those kinds of incentives, built into this compromise, will make the bill work. The clean air bill will make it happen. It is happening already. I congratulate all who were a part of this compromise.

Mr. LENT. Mr. Chairman, I yield 3 minutes to the gentleman from California [Mr. LEWIS].

Mr. LEWIS of California. Mr. Chairman, I rise only to express my deep appreciation for members of this committee on which I do not serve, for their kind patience with me, because this issue is so important not only in my district, but to my State as well. I express my appreciation to them, while I also express great appreciation to members of the administration, not just here in Washington but in California, where the California Resources Board, the Energy Commission, people in our regional district, were extremely helpful in this effort. Both the staff and the Members who worked out this compromise today have allowed Members to move forward with renewal of the Clean Air Act, and indeed that is the most important step of solving clean air in my State, and I believe in our country.

Mr. Chairman, in addition, I wish to make specific note of why I feel this compromise is so important to my State, California. We face the paradox of having the most stringent air program and yet the Nation's worst pollution problem. This compromise gives Federal sanction to our effort to once again lead in the fight for innovative solutions to our country's worst clean air problems.

The bill and compromise we have before us today is the result of the leadership and initiative of our President. The compromise tracks very closely with the amendment which was offered by Senator WILSON and Senator WIRTH in the other body and yet was narrowly defeated. The leadership of President Bush will be central to the delicate and sensitive work which lies ahead in conference. More importantly, and this is a most significant message for the entire environmental community, a Republican administration has clearly recognized your message.

A dedicated Congress has delivered a product which is deserving of bipartisan support. We can do more. We can bring more cities into attainment. We can improve public health. With the Waxman-Lewis compromise, I believe we will make the most significant of inroads in the years ahead.

Mr. DINGELL. Mr. Chairman, I yield 2 minutes to the gentleman from California [Mr. WAXMAN].

Mr. WAXMAN. Mr. Chairman, I want to thank the gentleman from Michigan [Mr. DINGELL], the gentleman from New York [Mr. LENT], and the gentleman from Illinois [Mr. MADIGAN] for their cooperation and hard work on this legislation. I know my colleagues are anxious to leave, but I do want to take this moment to express, before we conclude our business, an acknowledgment of the extraordinary efforts of our staffs over this past year.

The full committee staff, led by John Orlando, Jack Clough, David Finnegan, Margaret Durbin, Chuck Knauss and John Schelk, were tireless in moving the bill forward and made the gentleman from Michigan [Mr. DINGELL] and the gentleman from New York [Mr. LENT] proud.

Also, staff members of personal offices like Ann Forestal and Dirk Forrester, and many others too numerous to mention, aided not only their Members but all the committee members in their work on this bill. Similarly, Matt Tunitsky, Dennis Bunk, Molly Edwards, Norah Mail and Pat Delgado, and most particularly, Phil Schiliro, my administrative assistant, who per-

formed incredible tasks under difficult circumstances. Most of all, I want to thank Greg Wetstone and Phil Barnett of my subcommittee staff.

□ 2100

Mr. Chairman, I cannot tell the Members how many hours they have given to this legislation. Their work has never been short of superb, and I think they have earned the gratitude of all of us. I do not know how we could have passed clean air legislation without them.

Lastly, I want to note the enormous contribution of Pope Barrow as our legislative counsel. He has put in countless hours to bring this bill before the House.

Mr. Chairman, I think we can all be proud of this legislation. We can be proud of the work that has been done by the leadership staff of the House of Representatives. I would extend our commendations to Jack Dooling from the Rules Committee, to George Stephanopoulous from the majority leader's office, and George Kundanis and Mimi McGee of the Speaker's office. They served the House well in helping this legislation move forward.

Mr. Chairman, we can be proud of this legislation. We have accomplished a great deal. I thank everyone involved in this effort, and I thank my chairman as well for yielding me this time.

Mr. RAHALL. Mr. Chairman, the House is called upon to make many decisions on many subjects. In doing so, I believe we should be fully aware of all the consequences of our actions.

We have adopted an amendment to H.R. 3030 which has the effect of mandating the production and distribution of certain types of reformulated gasoline to reduce pollution levels in a number of large urban areas. That proposal was discussed at length. The debate focused on the environmental aspects of the amendment and the correctness of congressional action to legislate formulas for fuels.

While I agree with the action taken by the House, I must call the attention of the House to the adverse impact the widespread use of reformulated gasoline will have on our ability to arrest the deterioration of the national highway system.

At the present time, gasoline is subject to a Federal tax of 9 cents per gallon. This revenue is deposited in the highway trust fund to finance most of the Federal share of highway programs and, to a lesser degree, mass transit activities.

A few years ago, in an effort to promote the development and use of gasohol—a mixture of gasoline and ethanol—the Congress decreed that gasohol would be taxed at 6 cents less than gasoline. Current levels of gasohol use result in an annual loss of $550 million to the trust fund.

Now, in the context of reducing air pollution, we have taken a step which could lead to a greatly increased use of reformulated gasoline, or gasohol, and will result in greater losses of revenues to the highway trust fund. If this action becomes law, it is estimated that the loss to the trust fund will climb to more than $1 billion a year. This is money that could be committed to improving the flow of traffic in the very cities where we seek to reduce pollution levels by requiring the use of gasohol.

Mr. Chairman, we have moved from encouraging to requiring the use of gasohol in automobiles. If this is to be our choice, it is logical that we also remove at the earliest possible date the unfair subsidy enjoyed by the producers of gasohol and tax this fuel at the same rate as gasoline. It is a case of equity and of recapturing funds to carry out urgently needed highway improvements.

Mr. BRYANT. Mr. Chairman, I am pleased to rise in support of the compromise to strengthen the alternative fuels proposal in the Clean Air Act.

I support the alternative fuels provisions for very good reasons. Enactment of these provisions will give us a cleaner environment, incentives for developing new cars and fuels, and create new jobs.

The legislature in my home State of Texas last year passed one of the most innovative clean air packages in the country, including strong fleet vehicle requirements, some of which are already in place with great success.

Currently, government fleet vehicles and schoolbuses in Texas are required to begin using alternative fuels, and each year more vehicles will be covered.

Half the air pollution in the United States comes from mobile sources. However, in densely populated areas, the percentage can be much higher. For example, in Dallas, vehicles cause between 68 and 70 percent of the air pollution.

Past cleanup attempts have focused on the hardware of gasoline and diesel-powered vehicles—catalytic converters and the like. Recently, reformulated gasoline has been marketed in California for cars built before 1975, and light trucks before 1980, that use leaded gasoline—a step in the right direction of cleaner fuels.

Because the infrastructure exists to distribute gasoline and diesel fuel, there is no incentive for alternative fuel development due to tradition and vested interests in maintaining the status quo.

The only way to break this deadlock is with an alternative fuel program for fleet vehicles. This approach solves the refueling and servicing problems through centralized operations. It is also easier to convert fleet vehicles, as well as to monitor the economic and environmental benefits of conversion.

A study done by the Radian Corp. of Austin, TX, for the Texas General Land Office showed that the city of Houston could achieve up to 17 million tons reduction of air pollutants if new clean fueled vehicles are put on the streets, at the same time saving up to $17 million in lower fuel and maintenance costs.

By breaking the chicken or egg first mind set—proving that fleet operations work, such as that in the Garland Independent School District in Texas, the Washington Gas Co.'s compressed natural gas fleet refueling and maintenance operation just south of us in Virginia, or any number of other projects around the country—we establish the track record necessary to encourage a general expansion of the refueling and service operations necessary for use of an alternative fuel like CNG in standard passenger vehicles.

There are 3½ million fleet vehicles in the nine worst nonattainment areas in the country. Fleet vehicles are driven an average of 23,000 miles per year, versus the 9,500 miles for private passenger vehicles. Fleet vehicles account for only 7 percent of the vehicles on the road, but log in 15 percent of the miles driven each year.

It stands to reason that we should have a strong program in effect for vehicles which contribute to our pollution problem out of proportion to their numbers.

Only when we here in Congress push Detroit and Tokyo to offer cleaner burning engines for our vehicles and when we push refiners to develop and offer cleaner fuels will we solve our mobile pollution problems.

In the 1970's when we forced fuel economy standards on automobile manufacturers, the American public finally got greater fuel economy. The Japanese seemed to be ahead of the game at that time. I hope that Detroit will remember that financially painful experience and take the initiative now to put clean cars—cars that use cleaner fuels and pollute far less—on the road first.

American industry—the auto industry and the various components of our energy industry—can and should take the lead in the fight for clean air rather than be dragged kicking and screaming into a cleaner 21st century.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan [Mr. DINGELL].

The question was taken; and the Chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. LEWIS of California. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 405, noes 15, not voting 12, as follows:

[Roll No. 136]

□ 2120

The Clerk announced the following pair:

On this vote:

Mr. Robinson for, with Mr. Thomas of California, against.

Mrs. VUCANOVICH changed her vote from "aye" to "no."

Mr. CRAIG changed his vote from "no" to "aye."

So the amendment was agreed to.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. COOPER

Mr. COOPER. Mr. Chairman, pursuant to the rule, I offer an amendment.

The CHAIRMAN. The Clerk will designate the amendment.

The text of the amendment is as follows:

Amendment offered by Mr. COOPER: Page 498, after line 9, at the end of title VII of H.R. 3030, insert:

SEC. 709. INFORMATION GATHERING ON GREENHOUSE CASES CONTRIBUTING TO GLOBAL CLIMATE CHANGE.

(a) MONITORING.—The Administrator of the Environmental Protection Agency shall promulgate regulations within 18 months after the enactment of the Clean Air Act Amendments of 1990 to require that all affected sources subject to title V of the Clean Air Act shall also monitor carbon dioxide emissions according to the same timetable as in section 511(b) and (c). The regulations shall require that such data be reported to the Administrator. The provisions of section 511(e) of title V of the Clean Air Act shall apply for purposes of this section in the same manner and to the same extent as such provision applies to the monitoring and data referred to in section 511.

(b) PUBLIC AVAILABILITY OF CARBON DIOXIDE INFORMATION.—For each unit required to monitor and provide carbon dioxide data under subsection (a) the Administrator shall compute the unit's aggregate annual total carbon dioxide emissions, incorporate such data into a computer data base, and make such aggregate annual data available to the public.

The CHAIRMAN. The gentleman from Tennessee [Mr. COOPER] will be recognized for 5 minutes, and a Member in opposition will be recognized for 5 minutes.

The Chair recognizes the gentleman from Tennessee [Mr. COOPER].

Mr. COOPER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, this is a simple commonsense amendment, and I can assure my colleagues that the gentleman from California [Mr. MOORHEAD] and I will be very brief. We plan on taking no more than the 5 minutes.

This is a simple data collection amendment having to do with carbon dioxide emissions. We seek to get utilities across America to collect and report data on carbon dioxide emissions. Right now this data is not available and it needs to be collected.

Mr. Chairman, it is important to stress that this amendment does not force $CO_2$ reductions.

Also, this amendment does not require installation of expensive monitoring equipment. You can fulfill the requirements of this amendment by fuel sampling or fuel analysis, so this is not an expensive amendment.

Mr. WAXMAN. Mr. Chairman, will the gentleman yield?

Mr. COOPER. I yield to the gentleman from California.

Mr. WAXMAN. Mr. Chairman, I want to tell the gentleman from Tennessee that he has an excellent amendment. I think we should all support it.

Mr. HALL of Texas. Mr. Chairman, will the gentleman yield?

Mr. COOPER. I yield to the gentleman from Texas.

Mr. HALL of Texas. Mr. Chairman, I have discussed the fact of changing the word "monitoring" to "calculating" on line 7, and striking lines 10 to 14, but I think the gentleman has set out his intent in his "Dear Colleague" letter, dated May 23, 1990, signed by the gentleman from Tennessee and the gentleman from California [Mr. MOORHEAD].

Mr. Chairman, the "Dear Colleague" letter referred to is as follows:

HOUSE OF REPRESENTATIVES,
*Washington, DC, May 23, 1990.*

KEY GLOBAL WARMING VOTE

DEAR COLLEAGUE: The Clean Air Act addresses many air quality problems, but it ignores the global warming problem. The Cooper-Moorhead amendment, which will be offered at the end of the debate on H.R. 3030, is probably going to be your main opportunity to do something about global warming in this legislation.

Cooper-Moorhead requires that electric utilities monitor and report on their carbon dioxide emissions, the key global warming gas. The EPA does not currently collect this information.

Cooper-Moorhead does not force reductions in $CO_2$, but it does begin the process of measuring $CO_2$ so that we can better understand the global threat, so that we can more intelligently fashion U.S. policy, and so that we can better negotiate with other nations.

Cooper-Moorhead is not unduly expensive or burdensome to utilities. $CO_2$ emissions can be monitored or calculated in a variety of ways, including in-stack monitors or fuel sampling. The key point is to get accurate numbers on utility $CO_2$ emissions.

This amendment is supported by the National Clean Air Coalition. It is important we get this issue to conference because the Senate bill has no equivalent provision.

Support the Cooper-Moorhead amendment.

Sincerely,

CARLOS MOORHEAD,
JIM COOPER,
*Members of Congress.*

Mr. COOPER. Mr. Chairman, that does convey the intent of the authors of the amendment.

Mr. Chairman, I would like to point out that this amendment is supported by the Clean Air Coalition.

With the help of Ned Helme of the Center for Clean Air Policy, and also from the Environmental Defense Fund, Bill Roberts, and Dan Dudek of the Center for Clean Air Policy, we feel that this is a very important global warming greenhouse effect amendment.

The Senate bill has no equivalent provision.

Mr. Chairman, I yield whatever time I have remaining to the gentleman from California [Mr. MOORHEAD].

Mr. MOORHEAD. Mr. Chairman, I yield to the gentleman from North Carolina [Mr. MCMILLAN].

Mr. MCMILLAN of North Carolina. Mr. Chairman, I rise in support of the amendment.

Mr. MOORHEAD. Mr. Chairman, I rise today to speak in support of the Copper-Moorhead amendmemt, a simple, but important amendment that will give scientists a critical tool to use to measure the impact of one of the most serious potential problems facing our planet: global warming.

The Clean Air Act Amendments of 1990 will go a long way to improve air quality in our Nation's cities, curtail acid rain, reduce pollution from the cars we drive, and limit toxic emissions from industrial plants. But, despite these improvements on a domestic level, we must still consider the effects our emissions may have on the global climate.

Scientists have disagreed about the scope and magnitude of global climate change from manmade air pollution, and much of that disagreement stems from lack of necessary data to assess the impact these emissions may have on the Earth's climate. The Cooper-Moorhead amendment helps fill this information gap.

The Cooper-Moorhead amendment will require U.S. utilities to monitor their emissions of carbon dioxide, which many scientists believe to be one of the major contributors to global warming.

Although many scientists estimate that utility emissions account for roughly one third of our Nation's contribution to global carbon dioxide emissions, EPA does not collect data on these emissions and the current Clean Air Act does not require these emissions to be monitored.

Whether manmade carbon dioxide emissions actually increase the Earth's temperature will continue to be a hotly contested issue, but we can hardly expect to make responsible decisions about controlling these emissions if we fail to take the necessary steps to improve our understanding of the magnitude and rate of increase in these emissions.

In fact, the President has recognized the importance of understanding the scope of global climate change by launching an aggressive program to collect the information we need to assess the magnitude of this potentially serious problem. The Cooper-Moorhead amendment will directly further that effort.

The Cooper-Moorhead amendment will also give us a head start if and when we need to take steps to reduce our carbon dioxide emissions. By establishing an early record of carbon dioxide emissions for our domestic utility companies, we will put the United States in a position to take credit for its efforts to control emissions.

This is an important point. What I hope to achieve with this amendment is the elimination of the possibility that U.S. utilities will reduce $CO_2$ emissions as a consequence of compliance with these Clean Air Act amendments and not get credit for these reductions in the future if the United States signs an international treaty on global climate change.

Cooper-Moorhead is a cost-effective, responsible approach to a problem of growing concern. Mr. COOPER and I have worked together to develop this amendment and, we both believe it is a responsible and measured next step to address global climate change concerns. This amendment has received the endorsement of several utilities and the National Clean Air Coalition.

I urge my colleagues to support this amendment.

Mr. Chairman, in closing, I am proud of the efforts of the Committee on Energy and Commerce in producing this legislation and with the help they have gotten from other committees that have been involved.

Certainly the gentleman from Michigan [Mr. DINGELL], the gentleman from California [Mr. WAXMAN], the gentleman from New York [Mr. LENT], and all of the other people involved have worked together closely in bringing to the House a bill that I think we can all be proud of and which will certainly help us as we move together with the Senate in establishing a final version of the Clean Air Act.

The CHAIRMAN. All time has expired.

The question is on the amendment offered by the gentleman from Tennessee [Mr. COOPER].

The amendment was agreed to.

Mr. GEPHARDT. Mr. Chairman, I first want to congratulate JOHN DINGELL, HENRY WAXMAN, PHIL SHARP, NORM LENT, and many of our colleagues who have worked so hard to strengthen our Nation's air pollution laws.

Up to now, deep disagreements have dominated the clean air debate. In spite of growing evidence of the enormous health costs of air pollution, these divisions had remained formidable. Some within the administration had predicted publicly that these divisions would lead Congress to weaken the President's bill.

But because of the hard work and leadership of many Members, today we have a bill that achieves broad agreement on many major issues—and significantly strengthens the administration bill.

House Democrats have taken the lead in tightening controls on toxic air pollution, in cleaning up gasoline and the automobile, in reducing acid rain, in protecting air quality in our national parks and in confronting the issue of global ozone depletion. Our bill raises the quality of air across the country and improves the health of the American people. It gets cleaner air faster than the President's bill, and it does so in the most effective and efficient manner.

Let me retrace briefly how our bill strengthens current law.

First, it reduces emissions that contribute to acid rain by 10 million tons per year and maintains a nationwide cap on those emissions. This will reduce the continuing damage to our forests, protect human health and improve visibility. And it will achieve these goals with less economic disruption and the President's proposal.

Second, this bill sharply reduces emissions of airborne toxics. In the last decade or more, regulations have been promulgated for only seven hazardous air pollutants—even though toxic air pollution causes as many as 3,000 cancer deaths per year. This bill imposes tough controls on polluters and assures regulation of all major industrial sources—twice the number proposed for action by President Bush.

Third, this bill attacks urban smog. It imposes tougher tailpipe standards than those proposed by the President and removes 25 percent of the worst pollutants from gasoline by 2000. Moreover, the House legislation—more effectively than the President's proposal—promotes the use of alternative fuels that can be produced domestically and that can reduce our dependence on imported oil.

Fourth, our legislation includes an important initiative to strengthen dramatically the nation's laws protecting air quality in our national parks. We will not allow national jewels like the Grand Canyon to remain obscured in haze.

Fifth, this legislation reduces the use of CFC's and other chemicals known to contribute to global warming and to deplete the Earth's ozone layer. The growth of the ozone hole over the Antarctic, the appearance of a similar hole over the Arctic, and the reduction in ozone concentrations at all latitudes have raised concerns that millions of skin cancers and other disorders will occur in future decades unless stronger controls are implemented now. This bill will position the United States as a leader in the international effort to protect the ozone layer.

While we all want a bill that properly balances strong environmental protection with a healthy economy, the administration has tended to either loosen its standards of environmental protection or ignore the issue of job displacement.

Our legislation strikes a different balance. Our legislation imposes tougher environmental standards. But we have also adopted a modest 5-year transition program to assist workers displaced by the provisions of this bill.

Unfortunately, the administration has cited this provision as a reason to issue a veto threat of the clean air bill. This is an affront to those who may bear the heaviest cost of this legislation and to Americans who breathe polluted air.

The House has sought earnestly to strike a balance between strong protection of the environment and a healthy economy that provides good jobs. If the administration is serious about its own rhetoric, it will support this legislation and discard its heavy-handed veto threat.

Air pollution imposes on this country a $100 billion annual health care cost, tens of thousands of premature deaths and a diminished quality of life. While there will be costs, this bill is of critical importance to the American people. It makes an important investment in our health and in the quality of life of this and future generations. It is an investment we must make.

I urge Members to support this bill.

Mr. SKAGGS. Mr. Chairman, today we will vote on one of the most important pieces of legislation in more than a decade—the Clean Air Amendments of 1990. The long road leading to this vote has been fraught with political and ideological detours. In the process, the critical reasons we need clean air legislation—the health of our Nation's people and even, ultimately, the survival of the planet—have too often been obscured.

As the cold war winds down, we may not be as threatened with a sudden death by nuclear war as with a gradual suicide by environmental decay.

Because air pollution is often as invisible as it is insidious, it's sometimes easy to miss what's at stake. But Mother Nature has recently sent us a clear wake-up call, including a growing, life-threatening hole in the Earth's protective ozone layer; striking evidence of global warming; and increasing incidence of cardiovascular disease and cancer related to toxic pollutants.

The need for this bill is great and clear. Best estimates are that nearly half of all Americans are breathing air that doesn't meet national health standards. And that's a national disgrace. What's more, it will only get worse as population growth drives increasing demand for energy, cars, and trucks—the principal sources of air pollution. H.R. 3030 will help counter all this, with tough new standards for mobile sources, toxic chemicals and for utility emissions.

As a member of the Committee on Public Works and Transportation, I'm particularly pleased with provisions of H.R. 3030 that require greater conformity of regional transportation system plans with State plans to improve air quality. Increased use of motor vehicles is the key reason that it is difficult to continue making progress in improving air quality. That's why we must support the development of transportation programs and policies that can be a coherent part of the solution to air pollution. The language recommended by the Committee on Public Works and Transporation and included in this bill will further that goal.

In addition, there are several provisions in H.R. 3030 of special importance to the people of Colorado. I am proud that some of these provisions closely parallel ones I authored last year, when I introduced the toughest vehicle-emissions bill in Congress. These include a new authorization for a high-altitude emissions test center; a provision requiring manufacturers to ensure that cars can meet tougher carbon monoxide emission standards at cold temperatures; and, a provision requiring light-duty trucks to meet the same standards as autos. Another provision I authored, which was approved by the Committee on Science, Space and Technology and has been incorporated in the bill, would require the Environmental Protection Agency to identify ways to reduce carbon dioxide emissions from mobile sources—one of the major causes of global warming.

There is no way to know for sure whether the unintended consequences of human activity may have already pushed this Earth past the point of no return. We do know for sure that we can't delay action any longer. If we continue to wait for tomorrow, there may eventually be no tomorrow. I urge my colleagues to join me in voting for this bill. It is important for all of us who breathe

Mr. MCMILLEN of Maryland. Mr. Chairman, a necessary component of any effective clean air bill is a research and development section. This is critical if we are to ascertain and understand the effects of air pollution beyond the year 2000. Better understanding of our air quality dilemma will invariably help us define appropriate remediation technologies. The science committee under the aegis of Representative BOB ROE of New Jersey has worked diligently on a set of research initiatives that are a perfect addition of H.R. 3030.

Mr. Chairman, I have the distinct pleasure of serving on both the Science Committee and the Energy and Commerce Committee—given this combination of assignments has given me a special overview of the intent and direction of this landmark piece of legislation. One omission that I saw was that in the clean air debate, we are operating somewhat in an informational vacuum. We go about updating the Clean Air Act of 1972 without a full and complete understanding of air pollution control efforts by other countries across the globe. For example, can we be sure that another country hasn't developed a technology that would have beneficial applications to the United States? Possibly there is something that international environmental organizations have learned that is applicable to our own set of environmental circumstances.

I am proud to have introduced—and had accepted—language that authorizes the EPA to conduct an assessment of international air pollution control efforts and problems. This was included in the Science Committee's R&D amendments that are presently being offered for inclusion in H.R. 3030. I view this measure as an elementary first step in achieving a full understanding of the best possible methods available—here or abroad—in combating poor air quality.

Ms. OAKAR. Mr. Chairman, recently, there has been a great deal of media attention focused on the issue of reformulated gasolines. The bill on the floor before us today sets up a formula or performance standards for gasolines to be used in ozone nonattainment areas, as well as mandating the use of oxygenates in 44 cities in America that have carbon monoxide problems. What concerns me today from a substantive policy perspective is whether the Congress is prescribing a formula for gasoline lines tomorrow. My concern is focused very simply on whether there is enough supply of oxygenates to comply with the bill's provisions.

Let us look at some simple arithmetic. Today in America, there are two oxygenates available in commercial quantities: ethanol an MTBE. Current ethanol production, according to my constituents, is around 50,000 barrels per day, while MTBE production totals around 100,000 barrels per day. The biggest supplier in my State believes that only 50,000 to 100,000 barrels per day of capacity can be added by 1994 by both foreign and domestic plants.

According to my sources, approximately 340,000 barrels per day of oxygenates would be required to cover the 44 carbon monoxide nonattainment cities at the 2.7 percent level required in the bill. Additionally, approximately 230,000 barrels of oxygenates per day would be required in the nine ozone nonattainment cities. Allowing for the overlap between the carbon monoxide areas and the ozone areas, roughly 480,000 barrels per day of oxygenates would be required by this legislation. Given the current amount of MTBE and ethanol, equated for their oxygen capacities, we would need almost three times the amount of total oxygenates currently available.

Given the numbers, it is clear that this legislation is a formula not for a new gasoline but for a supply shortage. As I recall, constituents did not enjoy the gas lines of the early 1970's, and I sure don't want to create them in 1992. At the very least, this legislation should recognize the supply constraints and provide for a waiver process for shortages of domestic supply for both ozone and carbon monoxide. This legislation does not do so.

In addition, the carbon monoxide section which moves the compliance date up to 1992 should addtionally provide waivers for areas, such as Cleveland, where other less expensive control techniques will bring the city into attainment without the threat of gas lines. If the authors are insistent on this type of mandate, authority should be given to the Administration of EPA to allocate oxygenates to areas most in need to comply with the attainment schedules.

In summary, it is clear that not enough supply of oxygenates exists to meet the requirements of the bill, and the legislation needs modification to recognize these problems in conference.

Mr. SYNAR. Mr. Chairman, this historic Clean air Act compromise will ensure that all Americans can breathe healthier air. It cor-

rects many deficiencies of past clean air acts, but it attempts to do so in cost-effective, efficient ways. Controversial issues considered impossible to reconcile—even just a few days ago—have been negotiated, but not at the expense of a better environment.

In addition, the bill does not neglect the country's need for a sound economy. Whenever possible, both costs and paperwork requirements were kept to a minimum.

The House bill provides new economic opportunities for Oklahoma by encouraging the use of our clean-burning natural gas for both acid rain control and as the fuel for a new generation of clean cars and trucks.

The section dealing with smog addresses cities—like Tulsa—which EPA considers to have exceeded the health-based standard for ozone. Fortunately, Tulsa is ready to come off EPA's noncompliance list. The bill contains language I offered during committee negotiations which help Tulsa tremendously by enabling the city to complete its required compliance activities without interference from this new act. This will help clear the path for new growth and new jobs in Tulsa.

The fuels section contains new requirements for pollution caused by gasoline. Beginning in 1992, gasoline will need to be reformulated to meet the needs of nine especially polluted cities. This is a monumental task for the petroleum industry but, through negotiations, the bill now contains language which I offered to give oil companies alternative ways to meet the strong performance standards more efficiently. This would provide the industry with the flexibility it needs to avoid excessive costs and potentially disastrous supply disruptions.

Several provisions which would have been particularly damaging to Oklahoma industries were also negotiated before the bill reached the floor.

The toxic air pollution section addresses a list of about 200 especially dangerous air pollutants created by a wide variety of industries. Under this bill, industrial plants must install the kinds of technologies used by the best facilities in their sector.

I am pleased that the bill includes language I offered in committee which prevents EPA from adding together the emissions from oil and gas exploration and production facilities located near each other and considering them as one source for purposes of this section. This means that only a few of these sources in Oklahoma—rather than thousands—will be considered for regulation under the toxic air pollution provisions. Without this protection, even stripper wells might have been subjected to requirements so costly that they might have been shut in.

The committee also eliminated an amendment which could have had a serious financial impact on refineries, including those owned by Phillips Petroleum, which use the hydrofluoric [HF] alkylation process. As originally drafted, the amendment would have required that all refineries using the hydrofluoric acid process convert to sulfuric acid with 3 years. Since both the processes use hazardous chemicals, I wanted to be sure that extremely costly conversions actually yielded on overall environmental benefit.

The amendment I negotiated and which is now included in the bill requires a comparison study of both processes before any regulations. If the HF process ultimately is found to be more hazardous, companies which use it will have the time they need to move to safer technologies. If, on the other hand, the HF process is found to be environmentally superior, no conversions would have to be made.

The bill also contains alternative fuels provisions to promote the use of cleaner fuels such as compressed natural gas, propane, and ethanol. During deliberations in committee, I negotiated a better deal for alternative fuels like natural gas, by setting new, higher fuel standards for new vehicles purchased by fleets, such as the U.S. Post Office, delivery companies, or big city bus companies. Fleet purchases of alternative fuels and vehicles offer the best way to introduce these products to the general market, to pave the way for public demand for new vehicles and fuels and to create a new system for fuel marketing.

The bill aggressively deals with acid rain by cutting the emissions of sulfur dioxide from power plants. Since Oklahoma's powerplant emissions are relatively clean, the State is impacted far less than most others by this section. I fought successfully to remove the tax which Oklahomans would have had to pay to help reduce emissions in dirtier States and ensured that all States could have the benefit of using Oklahoma's clean natural gas to clean up their dirty plants.

In addition, the bill will provide Oklahoma with the emission credits it needs to grow, and extra credits if our utilities implement additional energy conservation technologies.

Both of these provisions will lessen the bill's cost impact on Oklahomans and were principles for which I successfully fought in committee.

The bill also includes one item especially close to my heart: Protection for America's crown jewels, our national parks and wilderness areas. Last March, my Environment, Energy, and Natural Resources Subcommittee held a hearing on EPA's failure to protect these unique public assets. I'm proud that the amendment accepted by the House, which I cosponsored, addresses almost all of the problems exposed by my hearing and will help ensure the extra protection American's want for these national treasures.

Finally, the measure includes an amendment to provide assistance to workers who lost their jobs, or have their wages or hours reduced, as a direct result of the bill's requirements. The amendment would provide additional unemployment benefits, retraining assistance, and job counseling. The amendment makes a valuable point: Clean air and worker protection should not be contradictory goals.

In short, while this bill is not without new economic costs, it also presents many bold new economic opportuntites and, most of all, a clean and healthy environment for all of our citizens.

Mr. MURTHA. Mr. Chairman, the steel industry is a major employer in my district, and I want to bring to the attention of the House the concerns this important industry has with the pending Clean Air Act legislation. The steel industry supports reauthorization of the Clean Air Act, and is committed to doing their part in implementing the new statute. There are a number of areas, however, in which H.R. 3030 has raised serious concerns for the steel industry. First, I want to share with the House the substantial record of investment in air pollution control that the steel industry has already made.

The American steel industry is committed to the implementation of the Clean Air Act and has allocated tremendous resources to this end over many years. Today air pollution controls are employed at every step of the steelmaking process, ranging from massive dust control devices such as electrostatic preceipitators, baghouses, and scrubbers on steelmaking furnaces and other processes, to vacum sweeper trucks on plant roadways and water sprays on raw material piles. Gaseous emissions such as sulfur dioxide and nitrogen oxides have been substantially curtailed by the use of low-sulfur fuels, coke oven gas desulfurization, and increases in energy usage efficiency. Under recently promulgated benzene emission standards under section 112, the industry will be installing extensive additional controls before September 1991 at a cost of over $200 million.

This is an industry that has already invested more than $6 billion for facilities to control pollution. Two thirds of that, or $4 billion, has been for air pollution control facilities. During the decade of the 1970's, over 15 percent of the industry's capital spending was for environmental facilities. The dividends from these massive investments are impressive—the discharge of air pollutants has been reduced by over 90 percent by the steel industry from pre-1970 levels. As a result, the air in American steelmaking cities today is dramatically cleaner.

The typical steel plant now has many workers whose jobs are devoted entirely to pollution control, and many environmental professionals who strive to meet all standards while optimizing processes. Operation and maintenance of air pollution control facilities adds $10 to $20 per ton to the cost of steel produced by the industry, an amount which exceeds industry profits even in prosperous years.

The steel industry is also committed to the control of toxic air pollutants through the application of maximum achievable control technology. For example, controls already in place on coke oven batteries have reduced emissions by over 90 percent over those prevalent in the 1960's. However, coke oven emissions continue to pose a particularly difficult problem for the industry. Although much progress has been made, the industry appears to be reaching the limits of what can be done to control emissions from these inherently difficult to control coke oven batteries. Even with these substantial improvements, the coking process still consists of driving volatile organic compounds out of coal under positive pressure in a refractory structure—a pile of bricks. Coke ovens are almost certain to leak, even new ones, at some time during their life cycle.

Steelmaking is highly capital-intensive, and during the 1980's, the industry has undergone a major restructuring and modernization of facilities. The cost of retaining the superior productivity of the U.S. industry and of making its costs of production competitive with foreign suppliers has required $9 billion in capital in-

vestment since 1982, and much more will be necessary. We all recognize, of course, that new plants are inherently cleaner than old plants. New facilities are equipped with far more superior environmental controls than can be retrofitted into older facilities.

Dramatic strides have also been made by the steel industry in energy usage and conservation. The amount of energy required to produce a ton of steel decreased by 36 percent from 1972 to 1982, as a result of technological improvements and energy conservation measures. These efforts continue, and decreasing energy usage will of itself reduce the generation of air pollutants.

The American steel industry remains committed to further essential modernization and to a cleaner environment. While steelmakers are committed to compliance with the requirements of the Clean Air Act, I remind my colleagues that the Congress must consider the effects on competitiveness which unreasonable further control requirements can have.

Many of the concerns the steel industry had with the original introduced version of H.R. 3030, and with the many other clean air bills, have been addressed in the reported bill. Some new concerns have been raised by some of the proposed floor amendments. It is possible that more of the concerns I will describe will be eased by amendments adopted this week. As H.R. 3030 stands now, however, these are issues that still trouble the steel industry.

AIR TOXICS

Title III of H.R. 3030 substantially modifies the Clean Air Act's scheme for regulating hazardous air pollutants. The steel industry supports major revision to section 112, to reorient it to a technology-based standard approach. This is the most important issue in the current legislation for the steel indsutry, as proposed risk-based emission standards for coke ovens could force the shutdown of many coke oven batteries. This would be devastating to integrated steelmaking.

While supporting technology-based standards, the steel industry has consistently opposed any arbitrary risk-based standards or any so-called shutdown standards. The reported bill takes the approach of establishing technology-based MACT standards, and postponing any risk-based standards until after an EPA/Surgeon General study, at least 11 years after enactment. At that time, the risk standard would be that of current law: To provide an ample margin of safety to protect public health. While I understand the steel industry supports this approach, I believe they hope for a reasonable interpretation of current section 112, perhaps akin to that in the recent benzene NESHAP, and certainly they will want to avoid any shutdown of coke ovens due to a risk-based standard which might occur as early as 13 years after enactment.

It is also important to the steel industry that the MACT determinations for coke ovens not be made on the basis of a few batteries allegedly meeting very stringent performance levels. The committee report says, "MACT is not intended to * * * drive sources to the brink of shutdown." A super MACT standard, based on a few plants that have had to meet LAER or BACT standards, would surely drive many existing coke oven batteries to shutdown. We need to assure that the steel industry will not be faced with this dilemma.

$NO_x$ CONTROLS

As reported, title I of H.R. 3030 requires controls on oxides of nitrogen [$NO_x$] more stringent than ever before suggested under the Clean Air Act. These controls would include new source review with offsets and LAER requirements, and reasonably available control technology [RACT] requirements for existing sources. The size of source to which these requirements will apply would reduce substantially with the severity of the ozone nonattainment problem of the area in which they are located. Almost the entire Northeast, in the ozone transport region, would be subject to RACT requirements for $NO_x$ sources even outside of nonattainment areas.

Beyond these specific controls, each nonattainment area is subject to an $NO_x$ emission inventory reduction requirement, with a specific percentage of the area's inventory that must be reduced over a set number of years. This is likely to require substantial reductions in $NO_x$, even beyond those required by LAER and RACT.

These provisions appear to apply to industrial sources of $NO_x$ in addition to utility sources, although $NO_x$ controls are not nearly as cost effective for industrial sources as for utility sources. $NO_x$ controls for industrial sources can easily reach many thousands of dollars per ton removed. While RACT requirements by definition require only reasonably available controls, such restraint do not apply to LAER, offsets, or the emission inventory reduction requirement. Even if RACT for $NO_x$ is affordable, the total cost to the steel industry of these new $NO_x$ controls could be massively expensive, and possibly constrain steelmaking operations in some areas. To the extent this issue is not addressed in House floor amendments, it is vitally important that some relief is found in the conference on this legislation.

ACID RAIN CONTROLS

Just as nearly every other industry in America, the steel industry will be paying higher electric bills as a result of the acid rain control provisions of H.R. 3030. Their major concern, however, has been the possibility that direct $SO_2$ controls would be required for industrial sources. I am gratified that H.R. 3030 as reported does not require any $SO_2$ reductions for industrial sources. There is a provision in the Senate bill under which EPA might be required to establish emission limitations for industrial sources of $SO_2$ at some point in the future. I hope the conferees will approach this in a way that minimizes the steel industry's concerns.

PM-10 PROVISIONS

H.R. 3030 substantially revises the regulation of particulate matter. EPA has promulgated a change from implementing standards for total suspended particulates [TSP] to standards for the fraction of particulates below a certain particle size, called PM-10. The steel industry has been contesting the basis for these new standards. If not implemented in a reasonable and cost effective manner, attainment with PM-10 standards could be very costly to the industry, with very little associated improvement in public health protection.

The title I PM-10 provisions of H.R. 3030 somewhat reschedule the attainment dates that would otherwise apply under the PM-10 standards as promulgated by EPA. The fundamental control strategy appears to be RACT requirements. As long as the Agency and the States implement RACT in a truly reasonable manner, the consequences of PM-10 control for the steel industry may be manageable. If overly stringent controls result from the new title I PM-10 subpart added to the Clean Air Act by H.R. 3030, however, it could impose a very costly burden on the steel industry. As I noted earlier, the steel industry has already achieved reductions in particulate matter greater than 90 percent from uncontrolled levels.

This is not intended to be an exhaustive list of the steel industry's concern with clean air legislation. I did want, Mr. Speaker, to provide my colleagues with a idea of the areas of greatest concern to the steel industry. Again, I thank the members of the Energy and Commerce Committee for the many improvements they made in this legislation. I hope they will continue to follow this approach in the upcoming conference with the Senate.

Mr. WOLPE. Mr. Chairman, I rise in strong support of H.R. 3030, the Clean Air Act Amendments of 1990, and I commend Mr. DINGELL and Mr. WAXMAN and the other members of the Energy and Commerce Committee for all their diligent effort over many months which produced this extraordinary piece of environmental legislation.

The Clean Air Act, first enacted in 1970, is the cornerstone of our public health and environmental protection efforts. For more than a decade, Congress has been sharply divided over the issue of clean air. Today, however, the House is on the verge of passing landmark legislation. The House clean air bill far surpasses both the version of the legislation initially crafted by the administration, and the bill passed by the Senate. The bill before us today would not have been possible to achieve had it not been for the incredible grassroots effort by citizens all across the country. The House bill is both stronger from an environmental standpoint and more flexible and cheaper for industry to implement.

This legislation reflects a new public—and congressional—awareness that clean air is not simply a matter of aesthetics; it is also a matter of economics and survival. Indeed, we are today paying dearly for our earlier inability to recognize the economic and human consequences of our failure to provide adequate protection for our environment. The truth is that our future economic growth is directly dependent on the health and stability of our environment and resource base.

The clean air bill we are debating today represents a light-year's advance in our thinking in yet another respect: We are beginning to understand that pollution prevention must be given much higher priority in the management of our hazardous wastes. My hope is that we will not only insist on the toughest possible enforcement but that we will move increasingly to emphasize prevention of pollution at the source. We are just now becoming aware that pollution prevention pays. It is a "win-win" sit-

uation both for the environment and for industry.

While, for many, pollution prevention represents a new way of thinking about environmental protection, it is clearly the best way to deal with environmental problems. Rather than trying to control or clean up the pollution after it has been created, the source of the problem—the waste itself—is reduced.

Additionally, pollution prevention contributes to our competitiveness in a global economy by reducing industry's costs for raw materials, waste management and liability. U.S. industries have a tremendous, untapped potential for reducing wastes through cost-effective changes in production processes, housekeeping methods, and raw materials use.

The Clean Air Act Amendments of 1977 focused almost entirely on the two issues of urban smog and motor vehicle emissions. While progress has been made in resolving some of the air quality problems, others have proved intractable. In fact, levels of certain pollutants have actually increased in some areas over the past two decades and new problems not anticipated in the orginal legislation have emerged.

Today, the U.S. Environmental Protection Agency estimates that 110 million Americans breathe air that is unhealthy and the American Lung Association claims the national health care bill for air pollution-related illnesses is $40 billion a year. Additionally, standards for ozone—the main ingredient in urban smog—were violated in 101 U.S. cities during the 1986–88 period. And despite massive reductions in emissions of some pollutants, even in Michigan, industries still pumped 91 million pounds of toxic chemicals into the air in 1988.

H.R. 3030 goes a long way toward correcting many of the air pollution problems caused by smog, motor vehicles, air toxics, and acid rain—all of which are covered by major titles in the clean air bill. Among the significant accomplishments in H.R. 3030 are provisions to revise schedules and mechanisms for achieving Federal air quality standards in polluted areas, tougher tailpipe emissions standards for motor vehicles, and a new system of technology-based controls on air emissions of hazardous pollutants.

I urge my colleagues to support passage of this urgently needed environmental measure.

Mr. MCMILLEN of Maryland. Mr. Chairman, a necessary component of any effective clean air bill is a research and development section. This is critical if we are to ascertain the effects of air pollution beyond the year 2000. Better understanding of our air quality dilemma will invariably help us define appropriate remediation technologies. The Science Committee under the AEGIS of Representative BOB ROE of New Jersey has worked diligently on a set of research initiatives that are a perfect addition to H.R. 3030.

Mr. Chairman, I have the distinct pleasure of serving on both the Science Committee and the Energy and Commerce Committee—this combination of assignments has given me a special overview of the intent and direction of this landmark piece of legislation. One omission that I saw was that in the clean air debate, we are operating somewhat in an informational vacuum. We go about updating the Clean Air Act of 1972 without a full and complete understanding of air pollution control efforts by other countries across the globe. For example, can we be sure that another country hasn't developed a technology that would have beneficial applications to the United States? Possibly there is something that international environmental organizations have learned that is applicable to our own set of environmental circumstances.

I am proud to have introduced—and had accepted—language that authorizes the EPA to conduct an assessment of international air pollution control efforts and programs. This was included in the Science Committee's R&D amendments that are presently being offered for inclusion in H.R. 3030. I view this measure as an elementary first step in achieving a full understanding of the best possible methods available—here or abroad—in combating poor air quality.

Mr. WEISS. Mr. Chairman, today, Congress has a rare opportunity to improve the environment. The Clean Air Act addresses many of the environmental problems facing this Nation. I especially want to congratulate my colleagues—Congressman DINGELL and Congressman WAXMAN—who have worked so hard to produce this bill.

I also urge my colleagues to strengthen the bill through a series of important amendments. Those efforts are amendments on clean vehicles, on auto emissions equipment warranties, and on phasing out ozone-depleting chemicals.

Perhaps the most critical area left unaddressed by the Clean Air Act is the issue of worker protection provisions. Fortunately, the amendment offered by Congressman BOB WISE softens the economic dislocation suffered by thousands of workers affected by the Clean Air Act.

The Federal Government has a responsibility to provide for the adequate retraining of and support for displaced workers. I take issue with my colleagues who argue that such a role for the Federal Government is improper and even dangerous.

Just as military budget cuts will disrupt hundreds of communities and thousands of lives across the Nation, so will the Clean Air Act. The Federal Government cannot abandon these workers. I have introduced legislation—the Defense Adjustment Act—to respond to this problem for defense workers. The Wise amendment will provide similar protection for workers displaced by the Clean Air Act. I feel these two bills are kindred spirits in helping workers adversely affected by our Government's actions. I congratulate and strongly support Congressmen WISE's efforts to ease the effects of the Clean Air Act on communities and individuals. This amendment is vital and timely, and I urge my colleagues to support it.

With the adoption of the Wise amendment and other strengthening amendments, H.R. 3030 will finally give the issue of environmental protection much-needed attention and puts us on the path toward a cleaner and healthier America.

Mr. SANGMEISTER. Mr. Chairman, a new direction for American environmental policy was set today by the landmark passage of the Clean Air Act of 1990 in the House of Representatives. I take great pride in voting in favor of the Clean Air Act. The House took a vital step toward addressing the problems of smog, acid rain, ozone depletion, and toxic pollutants. I believe this legislation is long overdue. If the threat of global warming is to be reduced, responsible action is needed, not more hot air.

Today, the House took action. It is easy to put a price tag on how much it costs to clean up the environment. It is more difficult to determine the health costs if pollution is not reduced.

According to the American Lung Association, studies indicate the annual health cost of air pollution to the American public is nearly $100 billion. One can debate the number, but there is no doubt that pollution is exacting a great price, economically and physically. The ones most at risk are children, pregnant women, and the elderly. Long-term exposure to air pollution includes reproductive health problems, nervous system disorders, and liver and kidney damage. Other chemicals pose health threats when they are released in large amounts. These effects include headaches, dizziness, nausea, skin rashes, severe eye irritation, and in some cases, even death.

PCB's and other contaminants have also severely affected fish and wildlife in the Great Lakes region. Over 30 species of fish have been deemed unsafe for consumption mainly due to airborne sources of PCB's. Each year, more than 45 million tons of sulfur dioxide and nitrogen oxide are released into the air over the United States. This type of pollution causes acid rain which is responsible for the death of more than 3,000 lakes and 23,000 miles of rivers and streams.

The Office of Technology Assessment estimates that every year 50,000 lives are ended prematurely due to air pollution. In the air of Southeast Chicago, the Illinois Environmental Protection Agency has found unhealthy amounts of the carcinogens, benzene, and toluene, along with heavy metals such as arsenic, beryllium, chromium, and cadmium. The Clean Air Act provides goals and guidelines which are fundamental to solving this environmental crisis.

For example, by the year 2000, the legislation's provisions are expected to reduce sulfur dioxide emissions by 10 million tons annually and nitrogen oxide emissions by 2.5 million tons. In addition, the bill directs the EPA to investigate the sources of atmospheric deposition of hazardous pollutants into the Great Lakes and to evaluate any harmful effects on human health and the environment.

An old Chinese proverb says that a journey of 1,000 miles begins with one step. Passing this legislation today was the first step. Let us now walk forward together and finish the journey to a healthier world.

Mr. GEJDENSON. Mr. Chairman, I rise to express my support for H.R. 3030, the Clean Air Act Amendments of 1990. This legislation takes important steps toward improving the quality of the air we breathe, to improving the health of the American people, to reducing the emissions that cause acid rain that kills our forests, lakes, and rivers, and most importantly, to revising the clean air laws that have not been updated since 1977. Because of the increased number of polluting sources, many

of the air quality problems which were meant to be addressed in the original legislation have gotten worse, and new unanticipated problems have emerged as serious environmental and public health problems.

Mr. Chairman, floor consideration of this bill is long overdue. When I came to Congress in 1981, scientists identified some of the most serious air quality problems facing this Nation. Acid rain is killing our forests, our lakes, and our rivers. Cities and States across the Nation are experiencing dangerous levels of ozone pollution which is sacrificing the health and safety of the American people. We have known what the problems are, and we know the best ways to resolve these environmental and public health problems. Finally, after many years, the political logjam has been removed, and I compliment my colleagues, Mr. DINGELL and Mr. WAXMAN, and countless others, who have worked so diligently to resolve the many regional and political differences that exist. Though this bill is not perfect, it is a good start, and with some of the amendments that will be considered, we can make very real progress to address the very serious health and environmental problems associated with our Nation's air quality.

In 1988, the National Wildlife Federation released a report listing 1,734 large lakes that the Environmental Protection Agency [EPA] identified as acidic or in danger of becoming acidic because of acid rain. In my home State of Connecticut, the report revealed that 11 large lakes are on that list, 7 of those in eastern Connecticut. These are 11 lakes that are no longer habitable for many species of fish and marine life and that are no longer usable for recreational purposes. For some of these lakes, the damage has been done, but for others, the prospects for recovery are good if we act soon.

This legislation takes that important first step toward protecting those vulnerable areas. Enactment of H.R. 3030 should make progress toward reducing the emissions of acid rain causing nitrogen oxide and sulfur dioxide by requiring the reduction of sulfur dioxide emissions by 10 million tons and requiring nitrogen oxide emission reductions of 2.5 million tons by December 31, 2000.

Mr. Chairman, many parts of my home State of Connecticut are considered nonattainment areas because of unhealthy levels for a wide variety of pollutants. Both southwestern Connecticut and the Hartford area are listed as in serious or extreme violation of the national air quality standards for ozone. The Hartford-Middletown area is designated as a nonattainment area for carbon monoxide. The I-95 corridor in Connecticut, in Fairfield, and New Haven is designated as having serious levels of small particulate pollution. All this despite an aggressive air pollution program that has seen demonstrated reductions in ozone levels through controls on in-State stationary sources, in-use motor vehicles, and gasoline volatility. But according to the Connecticut Department of Environmental Protection, which monitors and enforces Connecticut's stringent air quality standards, if Connecticut industry completely stops emissions and if motorists stopped driving on Connecticut's roads, our State would still be out of attainment. Connecticut's air quality problems are attributable to pollutants transported from the south and west. In addition, Connecticut's geographic location also contributes to the high frequency of days with elevated ozone levels. As a result, Connecticut, through no fault of its own, could face sanctions including cutoffs in Federal highway funds or Federal economic development grants, because of its nonattainment status.

As a result of this landmark legislation, however, this very serious problem can be addressed for the first time. H.R. 3030 creates multi-State ozone nonattainment areas to ensure that neighboring States that share air quality problems and pollution sources coordinate the air quality programs to ensure that each State takes care of its own pollution sources and is responsible for the air quality problems that it may create for others. H.R. 3030 also allows States, that are part of a multi-State area, that fail to attain the national ambient air quality standards because of transported air, to be exempted from sanctions if it can demonstrate that it took appropriate action to reach healthy air quality levels. This is crucial to a State like Connecticut that could face sanctions as a result of the pollution generated elsewhere and for which it had little control over.

Mr. Chairman, many opponents of strengthening the Clean Air Act claim that we cannot afford this bill and cannot afford to make the required emissions reductions. I say we cannot afford to wait any longer. The Office of Technology Assessment estimates that some 500,000 premature deaths are caused each year by the chemical precursors to acid rain. The Congressional Research Service reported that the annual forest damage from acid rain deposition in the Eastern United States alone could cost more than $1.75 billion. Studies estimate that a 50-percent reduction in wet deposition could result in $140 million annual benefits from increased soybean yields alone. And the damage to buildings and historic monuments is estimated to cost business directly and the taxpayers indirectly approximately $60 million per year. Not acting now would be a mistake for this Nation. It would not only be bad policy from an environmental standpoint, but also from a public health, an agricultural, a business, and an economic standpoint.

To those who say that our economy and our society cannot affort this measure, I say that we cannot afford to wait.

We have already waited too long. Though this legislation is not perfect, it is an important start. And though some of the health problems, the environmental, and the ecological damage due to acid rain, toxic pollutants, and poor air quality are irreparable, there is still time for other areas and for our children to live in a country where they can breathe clean air and swim and fish in lakes that are not dead because of acid rain.

Mrs. ROUKEMA. Mr. Chairman, I rise today to assert my strong support for the Clean Air Act Amendments of 1990. First and foremost, I must acknowledge the leadership of President George Bush. His administration has put forward a comprehensive program and thereby breaking a 10-year stalemate.

I also want to take this opportunity to commend my colleagues on the Energy and Commerce Committee and the other committees of jurisdiction who have worked with dedication and commitment in bringing this bill to the floor.

The Nation has waited too long for Congress to break the impasse and reach consensus on this critical legislation. After the 1977 Clean Air Act was enacted, the National Commission on Air Quality reported, that by 1981 nearly all areas would be in attainment. As we all know, this did not happen.

With this bill, we are not on the brink of enacting landmark legislation. This bill clearly sets priorities, ranking the health of the American people and of future generations as primary.

This legislation before us is a culmination of a decade of work to develop amendments to the Clean Air Act that would resolve ozone smog in the urban areas, emissions of toxic chemicals from industrial plants and acid rain. Currently, over 100 areas in the United States do not meet health standards under the Clean Air Act for ozone smog; more than 40 areas are failing to attain the carbon monoxide standards; and an estimated 58 areas exceed the health standard for particulate matter [PM-10].

This sweeping bill divides cities into six categories for ozone reduction. It requires the reduction of mobile source emissions which are responsible for up to 45 percent of total emissions of both volatile organic compounds [VOC's] and nitrogen oxides [$NO_x$], the two pollutants which are main compounds of urban smog. It requires a 10 million ton reduction of sulfur dioxide [$SO_2$] and nitrogen oxide [$NO_x$], two chemicals which cause acid rain.

Not only will this bill help to control the emission of hazardous air pollutants, but it helps make the Clean Air Act more readily enforceable and consistent with recent environmental statutes, like the Clean Water Act and Resource Conservation and Recovery Act. This bill also creates a broad array of new enforcement authorities which will provide the necessary penalties to fit the severity of the violation.

I have long been concerned about the effects of acid rain on our lives and our environment. It is gradually, but certainly ruining our forests, lakes, and streams. There is a wealth of evidence that emissions responsible for acid pollution also pose a major threat to human health. The rain in the Eastern United States, as well as in pockets in the West, averages 30 to 40 times more acid than normal. And acid deposition is also an international problem, with half of the Canadian acid precipitation coming from emissions in the United States.

The pollutants that cause acid rain, sulfur dixoide, and nitrogen oxides aggravate human respiratory illness. Airborne sulfates are implicated in thousands of premature deaths each year, increased infant mortality, and reduced lung function in many Americans. Acid rain damage to forests, crops, soils, lakes and streams, and buildings costs Americans billions of dollars each year.

Mr. Chairman, as my colleagues from the New Jersey delegation will certainly agree, the time is late. Coming from the most densely populated State in the country, I have been

made painfully aware of the excessive cancer-causing emissions that plague New Jersey. We suffer from severe levels of mobile source emissions—carbon monoxide, nitrogen oxides, hydrocarbons, and diesel particulates from motor vehicles. It is estimated that 150 million people in our Nation are affected adversely from exposure to these pollutants. Therefore, I am particularly pleased this legislation in title II—mobile source emission reduction, addresses this issues in a commonsense approach by calling for the reduction of pollution from cars, trucks, buses, and other vehicles. This bill strengthens standards to control tailpipe emissions from cars and light-duty trucks and establishes programs to encourage the use of clean fuels. I strongly support the reduction of $No_x$ emissions, as well as the use of clean fuels and alternative fueled vehicles.

This opportunity to restore and protect our precious environment must not be squandered. We have come far. Let us be realistic in our expectations and work to get this important job done by passing this bill and preserving our environment. Once lost, we cannot restore the health of those afflicted. The longer we delay, the higher the price we will have to pay to restore and repair the damage for ourselves, our children, and their children.

Mr. YOUNG of Alaska. Mr. Chairman, the North Slope Alaska oilfields are currently producing 25 percent of the Nation's domestic oil production. The large oil and gas production and handling facilities utilized in this energy production are protected by halon fire and explosion suppression systems. In the interest of national security, it is essential that safe and adequate fire and explosion suppression systems be available to accommodate continued energy production in a sustained and safe manner.

The proposed phaseout of halon production and utilization by the year 2000 could jeopardize national security with respect to arctic energy production, if an equally effective fire and explosion suppression agent is not available. Due to the extreme climatic conditions in the arctic, all facilities are constructed as large enclosed modules. The ideal fire suppression system in these manned, heated, enclosed modules must be nonhazardous to personnel and nondestructive to hydrocarbon-processing equipment. The low toxicity of Halon 1301 allows it to be safely discharged from total-flood systems in occupied spaces, an advantage which no other gaseous agent has. The explosion suppression capabilities of halon, in addition to this low toxicity, provides a unique fire protection agent for use in hydrocarbon-processing facilities in Alaska's arctic region.

The arctic energy producing companies are fully aware of the need to reduce or eliminate halon releases to the atmosphere. Halon is only released in the production facilities during infrequent emergency conditions, or by accident. The latter occurrences have been substantially reduced during the past several years through effective training and improvements to fire and gas detection systems.

The arctic energy producing companies have also joined the Halon Alternatives Research Corp., a nonprofit organization that is working closely with a Government working group led by the EPA, to develop halon alternatives.

In view of the fact that suitable halon replacements may not be available at any known time in the future, it is essential that current and proposed legislation provide the flexibility for limited halon usage in critical areas such as arctic energy production. To do otherwise, may subsequently impact national security.

Mr. MACHTLEY. Mr. Chairman, one of the successes of the past decade has been a growing attention to more efficient use of our energy sources. Not so many years ago, power companies were pumping out energy with little or no attention to the damaging effects of unrestrained energy production on our environment.

This outlook is changing. In my region of New England, New England Electric has put into effect an innovative and far-reaching plan to encourage energy conservation.

We need to support these actions by providing incentives for both power producers and consumers to meet greater levels of energy efficiency.

My colleagues, ED MARKEY and CARLOS MOORHEAD, crafted a powerful amendment in the Energy and Commerce Committee to encourage utilities to promote conservation and the use of renewable energy sources.

A better organized use of our energy resources can go a long way toward preserving our environment. As the cochair with ED MARKEY of the New England energy caucus, I have supported the idea of integrated, regional planning for energy needs as an alternative to the construction of new powerplants.

In addition, as a member of the Armed Services Committee, I am looking closely at the need to ensure that military facilities are making the most environmentally efficient use of energy.

The Clean Air Act reauthorization provides a strong catalyst for conservation and the use of renewable energy sources. Let's take advantage of this opportunity to ensure a safer, cleaner world for the future.

Mr. OWENS of Utah. Mr. Chairman, Utah is fortunate to be the proud possessor of five national parks—the crown jewels of our public lands. But we have been remiss in our care, and the jewels have grown dusty. When Utahns or Americans travel to a national park, they are seeking, in part, an illusion of America as it was. But that illusion vanishes when smog obscures the view. I strongly favor protecting the vistas which draw tourists to Utah from all over the world.

The State of Utah requires very clean powerplants, and our future energy growth is in no way impaired by supporting this amendment. I am sorry that the provision establishing a regional commission has been eliminated, although I commend Chairman DINGELL and Mr. WAXMAN, Mr. WYDEN, and Mr. CONTE for their efforts to find compromise. The Western States need to confer together to discuss proposed projects which could affect the quality of air across State borders. A case in point is the proposed 2,000-megawatt Thousand Springs power project just 20 miles across the Utah border in Nevada, which we fear will have serious consequences, not just to the pristine air of our parks, but also to the already polluted air of the Salt Lake Valley.

I have seen the Grand Canyon on a perfectly clear day, the kind John Wesley Powell saw 130 years ago, and I have also seen the canyon on a day when I could barely see the other rim, only 10 miles away. There is no comparison in the level of the experience. A few months ago, I rose to speak in favor of a protected water right in wilderness areas, and I rise today for a similar reason. It makes little sense to protect an area for the enjoyment of future generations if it cannot be seen. Admittedly, the national parks experience is an illusion of primitive America. But it is an illusion worth maintaining and preserving. I strongly support this amendment to protect the air quality of our parks in the West. It will help Utah by preserving its vistas without impeding our growth. I am pleased to endorse the amendment joining my colleague from Utah, HOWARD NIELSON, and the other members of the Energy and Commerce Committee.

Mr. DEWINE. Mr. Chairman, the Congress has been struggling for some time to put together a comprehensive clean air bill. I think we all agree on the need for legislation to control air pollutants and protect our environment. Clean air is a vital national problem—there is no dispute about this. It had been my hope that the Congress could produce a clean air bill that makes deep reductions in air pollutants, but also ensure that the burden of these reductions is distributed fairly among all the States.

It is also clear that this bill will have a grave impact on the Midwestern States, particularly my State—Ohio. Unfortunately, Mr. Speaker, I cannot support this legislation. I would like to, but I cannot. The economic burden placed on Ohio is simply too great, especially by title V, the acid rain provisions. Under this bill, the Midwestern States are forced to make a disproportionate share of sulfur dioxide [$SO_2$] emission reductions. Ohio, for example, could be required to make up to 18 percent of the $SO_2$ reductions under the bill, while the State's 1980 contribution was only 11 percent of the national total.

Ultimately, the bill could cost Ohio well over $1 billion a year after phase 2. According to the Governor's office, Ohioans may be paying anywhere from 17 percent to 40 percent for electricity. The effects on Ohio businesses could be even more burdensome, jeopardizing their ability to compete on equal footing with businesses in other States. In addition, 10,000 or more Ohio coal mining and related jobs could be lost as a direct result of this legislation.

According to a study by two professors at Carnegie-Mellon University, Robert Hahn and Wilbur Steger, H.R. 3030 would place over 2 million jobs at risk nationally. For Ohio the effect is severe, over 200,000 jobs would be placed at risk—over 320,000 jobs under the Senate bill. For my district, Professors Hahn and Steger estimate that H.R. 3030 could place about 31,000 jobs and as many as 700 plants and businesses at risk. The Senate bill could imperil 50,000 jobs in my district. Although the Wise amendment, the worker's employment benefit program, is an extremely important and needed improvement, it is too little too late to provide the kind of assistance

that Ohio needs as it begins to comply with this legislation.

The citizens of Ohio are willing to do their part. They only want a fair shake. Ohio citizens have paid their share during the savings and loan crisis, which primarily helped Texas, California, and the Southwest. They have paid for water projects which benefit the Western States. And, for every dollar that Ohio contributes to the Federal Highway Trust Fund, Ohio receives back only 85 cents. Ohioans have done their part, Mr. Speaker. There is no reason, then, that Ohioans should be expected to pay for more than their fair share of the acid rain cleanup. Yet, that is exactly what this legislation does.

I agree with my colleagues that clean air is a vital national problem. Controls on air pollutants are necessary. That is not at issue. The question simply is: Who is going to pay for this cleanup? Because acid rain and clean air are national problems, no one State or region should be forced to shoulder the enormous cost of cleaning up our Nation's air. But the emphasis of this legislation on auto emissions and acid rain, impose uniquely burdensome costs on Ohio because of its high concentration of high sulfur coal and auto related businesses.

Historically, Ohio taxpayers have been there to help other States in need. Yet this legislation imposes such a costly and disproportionate burden on the State of Ohio that I cannot support it.

Mr. MARKEY. Mr. Chairman, I would like to rise in support of an important provision in H.R. 3030, the Clean Air Act Amendments of 1990, which would authorize funding for the National Institute of Environmental Health Sciences [NIEHS] to conduct basic research on the effects of air pollution on humans and to establish an educational program for health care providers to recognize and treat those effects.

This health research and training provision has also been incorporated in S. 1630, the Senate's clean air bill, under the sponsorship of Senator EDWARD KENNEDY. In the House of Representatives this amendment was sponsored by Representatives JOSEPH MOAKLEY, RON WYDEN, and myself. There was widespread support from many quarters for this provision, which was included in the Energy and Commerce Committee amendment to H.R. 3030.

This provision authorizes funding over 5 years for the NIEHS to conduct a program of basic research on the risks to human health from air pollutants. NIEHS has already contributed indispensable data from long-term population studies on air pollution's health effects. But to realize fully the goals of H.R. 3030 it is crucial to understand the long-term health effects of the various air pollutants that affect the American public. NIEHS can help provide that understanding.

EPA does important work here, but they do not provide data on the long-term health impacts experienced by people who are exposed in their everyday environment to air pollutants. The work of the NIEHS is essential by supplying EPA with health data upon which to base H.R. 3030's new air quality standards, including the many additional toxic air substances which will be regulated. Only by acquiring more scientific data can we expect to aid people affected with respiratory illnesses and other diseases caused by these airborne poisons.

In addition to authorizing funding for the NIEHS for these health studies, this provision will authorize funding for the NIEHS to conduct an educational and training program for healthcare providers in the area of environmental health. NIEHS currently sponsors a program of grants to prepare graduate students in a range of scientific disciplines to conduct research on the impacts of air pollution, but does not include medical students; in fact, medical schools now rarely focus on the issues raised by this legislation. By working with medical educators and students, the NIEHS will be able to promote the correct diagnosis and treatment of medical problems resulting from air pollution.

Without a feasible program that builds a base of doctors who are trained to recognize and correctly treat the damage caused by airborne pollutants, the serious health effects of air pollution will be difficult to control. This amendment will help healthcare personnel fully recognize how to aid those who are affected with air pollution-related ailments.

We have not authorized a specific funding level in this provision. I am confident that the Appropriations Committees of both Houses will provide sufficient funding for work of this importance; certainly the NIEHS should receive at least $120 million over the next 5 years.

Mr. Chairman, I am very pleased that H.R. 3030 will authorize the National Institute of Environmental Health Sciences to conduct this essential research and education. Investment in public health research and education will certainly prove to be one of the best bargains in the Clean Air Act Amendments of 1990.

Mr. BLILEY. Mr. Chairman, we seem to have overlooked the fact that the 1977 Clean Air Act has actually been doing what it was supposed to: cleaning up the air. In 1988, the Environmental Protection Agency released its air quality and emissions trends report that shows that over the last 10 years the Clean Air Act has been working. For instance, from 1977–87: ambient ozone levels improved 21 percent; ambient carbon monoxide levels improved 32 percent; and ambient sulfur dioxide levels improved 27 percent.

Despite these gains it is clear the Clean Air Act did not go far enough. For instance, this past August, over 100 areas failed to reach the desired health level for carbon monoxide and/or ozone. Even more disturbing is preliminary data that show yet another 28 cities not previously noted are now in nonattainment. Acid rain has proven to be an irritant to our environment and a continued source of friction in our Nation's relationship with Canada. Finally, recent research has shown the need to mitigate the emissions of hazardous pollutants into our air.

The Clean Air Act of 1977 had done an excellent job of picking the low-hanging fruit, the easily identified and relatively easily controlled sources. But the problem persisted. Congress realized that it must devise a measure to effectively control those harder to reach fruit. But despite this general agreement, as Bismark once said: "The devil is in the details."

For the past 8 years I have had the privilege of serving on the Subcommittee on Health and Environment of the Energy and Commerce Committee which, as you know, has direct jurisdiction over the Clean Air Act. Throughout this time, the committee had heard countless hours of testimony and had engaged in countless hours of debate without being able to agree on an appropriate measure.

This is not to say that there has not been progress. At the start, sketchy science and an incomplete understanding of this complex issue led to widely varying perspectives on what needed to be done. Over the last few years, a greater degree of certainty in our data and more mature understanding of the issue has shrunken the parameters of the debate and led us closer to a consensus.

For this reason, I wrote President Bush asking that his administration prepare a proposal for a comprehensive Clean Air Act amendment. It was my hope that the new administration would draft a strong measure that protected our environment without threatening the economic well-being of our Nation. The proposal should reflect the varied strengths and needs of our communities. Just as important, the measure should set reasonable short-term goals that recognize the long-term promise of new emerging technologies.

It was my feeling that Presidential leadership was the final ingredient needed to produce a Clean Air Act amendment that we could all be proud of.

And I'll tell you, President Bush did not disappoint. His administration drafted a proposal that thoroughly addressed most of the issues regarding the Clean Air Act. Most importantly, Presidential leadership on the issue did make a great difference in tone of the debate in Congress.

My committee, the Committee on Energy and Commerce, used the President's bill as a starting point and has spent a great amount of time and energy refining, strengthening and improving the proposal. I am proud of the document that emerged from the many vigorous rounds of negotiations. It is a strong yet balanced bill that will touch every American's way of life. The bill will call on the best and brightest in academia, business, and State and local governments to push to the administrative and technological limits.

I am particularly proud of my role in the committee's strengthening of title I of the bill which deals with the nonattainment issues. I believe the changes that we made will give State and local planners the tools to reach that low-hanging fruit. I strongly pushed language that prevailed that freed these planners to look beyond the antiquated local boundaries and to consider the entire consolidated metropolitan statistical area when devising control strategies. I feel this gives them a much more realistic picture of the problems and the solutions.

I am also pleased that the bill includes language that I advocated that recognized the unique problems faced by the shipbuilding and repair industry. This language requires the

EPA to develop a separate control technique for this industry.

Finally, I am pleased that language was included that I authored that instructs EPA to make all emission control regulations from this group to be consistent with other air control regulations.

I strongly support the committee agreement to further clamp down on tailpipe emissions from existing automobiles; require cleaner standards for gasoline in the near future; and provisions that will sensibly introduce alternate fueled vehicles into our communities.

I also want to take note of language that I amended that will instruct EPA to issue a rule for implementation of onboard cannisters as long as they are safe to the motorist. Upon promulgation of this rule, the requirement for stage II in moderate nonattainment areas will be lifted. I feel that this is a more efficient and equitable method for reducing the emission from refueling.

The committee also agreed to control almost all major sources for toxic air pollutants which will greatly aid in our combat against cancer and birth defects. I am particularly proud of a provision that I was able to incorporate into this section that calls for a separate study of the toxic air pollutants effects on the Chesapeake Bay. I am grateful for the cooperation of my colleagues, Mr. SIKORSKI and Mr. MCMILLEN, with this matter.

I want to point to an amendment that I offered that passed unanimously that struck the original language that gave EPA veto power over every individual permit. This language represented yet another attempt to take away any local control over their destiny. If the State is the permitting body, they should have the appropriate authority. In addition to this assault on States rights, this language would have created an expensive and duplicate Federal level of bureaucracy.

I am pleased to have played a role in the agreement which produced the toughest acid rain control bill that has ever come before the House. Better yet, it achieves this environmental goal in a least cost fashion by building in flexibility and introducing market forces into the bill. I strongly support President Bush's innovative emission allowance trading system and am pleased that my idea of an auction, designed to prevent allowance hoarding, has been incorporated into the bill.

Finally, I am very pleased with the agreement reached to improve the visibility in our national parks. The hard-won agreement is carefully tailored to allow additional measures to be developed to enhance the visibility in our national parks in the Western United States while recognizing that the best step toward improving the visibility in the Eastern United States is to pass the emission control measures incorporated in the other sections of the bill. I want to express my appreciation my colleague, Mr. WYDEN, for his tremendous cooperation and reasonableness in this matter. I also want to note the efforts of Mr. SYNAR, Mr. NEILSON, Mr. SCHAEFER, and Mr. SWIFT in resolving this issue.

The reaction has been interesting: Industry has cried that this bill goes too far, that it is too costly for the severity of the problem while others argue that it is a sellout to industry and that it does not go far enough. This section leads me to believe that we might be on to something.

I commend the chairman of the full committee, Mr. DINGELL, for his foresight and leadership on this bill. I also want to recognize the contributions of our ranking member on the full committee, Mr. LENT and the chairman of the Health Subcommittee. I also want to congratulate all of my colleagues on the committee for their excellent work. Mr. Speaker, it is a tough bill that we can all be proud of.

Mr. BORSKI. Mr. Chairman, I rise today in strong support of H.R. 3030, the Clean Air Act amendments.

Mr. Speaker, Congress passed the Clean Air Act in 1970 and has not amended it in 13 years. That means that many Members, myself included, were not here when legislation to improve air quality was first passed, or when that legislation was later revised.

No, Mr. Chairman, I was not in Congess when the Clean Air Act was first passed, or when the 1977 amendments were approved.

But as a lifelong resident of Philadelphia, now one of the nine smoggiest cities, I saw the early benefits of the Clean Air Act; cleaner, clearer, sweeter air. This landmark legislation went a long way toward improving air quality across America.

In the intervening years, however, events have eroded much of the progress of the original Clean Air Act.

The sheer number of cars on the road today has virtually negated the fact that those cars were much cleaner than they were 20 years ago. More people are driving more cars more places. The volume of traffic has cities throughout the United States choking on smog.

Powerplants spew sulfur dioxide and nitrogen oxide into the air, which then falls as acid rain, a phenomenon virtually unknown in 1970. That acid rain is now damaging lakes and forests in Pennsylvania and other States.

The Clean Air Act led to the regulation of only a handful of toxic pollutants. Since then, there have been discoveries of new toxics and more information is now available on their effects on the public's health.

Now, Mr. Chairman, in this 20th anniversary year of Earth Day and the first Clean Air Act, Congress is acting to amend that act and return breathable, healthy air to the United States.

This is a comprehensive clean air bill. H.R. 3030 will tighten tailpipe emissions standards for cars, to help reduce urban smog. This legislation will reduce sulfur dioxide and nitrous oxide emissions and place a nationwide cap on those emissions, to protect our lakes and forests. H.R. 3030 will also reduce and regulate over 100 of the worst toxic pollutants, to protect the public's health.

The time has come to renew the promise of the Clean Air Act of 20 years ago: clean air for all Americans. H.R. 3030 will renew that pledge and I strongly support its passage.

My only regret is that H.R. 3030 does recognize and encourage the use of mass transit as a resource to help clean the air. Public transit is the cleanest, safest and most efficient way to move people.

Millions of cars are creating thousands of traffic jams and spewing tons of pollution into the air. By reinvesting in America's mass transit system, we could reduce the number of cars on the road, eliminate at least some of the traffic jams and significantly cut down on the smog in our cities.

I will continue to work for a return to mass transit in this country. Having said that, I urge my colleagues to join me in supporting H.R. 3030, the Clean Air Act amendments.

Mr. VENTO. Mr. Chairman, I rise in support of this critical legislation to clean our Nation's air.

Our actions today will have a profound effect on the health and quality of life of the people of this Nation. By breaking the 10-year deadlock on clean air, we are making great progress toward fulfilling the promise made to the American people of a clean, safe environment.

The bill before us is a strong and comprehensive rewrite of our outdated clean air laws. It is long overdue. Yet the bill is not perfect, and its passage will not automatically guarantee clean air. Today I supported amendments to strengthen the provisions of the bill relating to clean cars, protection of the ozone layer, visibility in pristine areas, reformulated gas and clean coasts. These amendments will help improve the bill further and ensure adequate protection for public health and the environment.

Even with these amendments adopted, we have much work to do to fulfill our promise of healthy air to the American people. We cannot rest our clean air laurels on a single new law. The assault on our environment is dynamic and everchanging and we must defend the quality of our air with constant vigilance. First we must ensure that the stronger provisions of the House bill are preserved in conference. We also must be vigorous in overseeing the implementation of the new law. The Environmental Protection Agency's enforcement of the Clean Air Act has been at its best spotty and at its worst, dismal.

Mr. Chairman, I have had a longstanding interest in improving air quality. Minnesota the State I represent proudly places a premium on its natural resources values. Minnesotans have a strong conservation and environmental ethic. Minnesotans don't take clean air and clean water for granted. They expect and demand sound State and national law and policy to achieve and maintain clean air. Naturally we are concerned about acid rain in lakes in northern Minnesota, or about health advisories for fish caught in Lake Superior because of airborne toxic contamination. Minnesota has strong environmental laws, including one of the few State acid rain control laws in the country.

I have attempted to take an active role in congressional efforts to overhaul the Clean Air Act for the past decade. In 1982, Jerry Lewis and I introduced the commitment to the Clean Air Act resolution, a proposal which garnered the bipartisan support of over 100 Members of Congress. In 1985, the Subcommittee on National Parks and Recreation I led investigated the impacts of air pollution on national park units. These hearings documented the deterioration of cultural resources and the impaired visibility occurring at our Nation's crown jewels, the national parks. I have worked on and cosponsored legislation to control acid

deposition and pay for it in an equitable fashion.

In 1987, my colleague BILL GREEN and I sent out a letter calling on the Engery and Commerce Committee to report out strong and comprehensive legislation to reauthorize our Nation's clean air laws. The Vento-Green letter identified the serious air quality problems facing our Nation at the time—smog, acid rain, ozone depletion and global warming, airborne toxics and air pollution in pristine areas. The letter suggested broad goals for pollution reduction as well as specific targets and means of meeting those targets. Two hundred and thirty Members, a bipartisan majority, signed our letter. Today our votes are the core support for a strong Clean Air Act. The 1988 words and promises have become performance in 1990, today Mr. Chairman.

Although no clean air legislation was passed in the 100th Congress, the Vento-Green letter was a strong and clear demonstration of the significant support that existed in the House for a timely and tough Clean Air Act. It reflected the deep feelings of the American people about the importance of clean air. The American people were tired of poor quality air and they wanted their Government to act. Another Vento-Green letter was sent last year in 1989, urging President Bush to submit strong and comprehensive clean air legislation to the House. This letter also received strong bipartisan support. The submission of a bill by President Bush was a welcome change from the poor environmental leadership exhibited by the previous administration. The President's bill set the stage for House and Senate action on this complex issue. A final Vento-Green letter was sent last November urging the Energy and Commerce Committee to complete its consideration of H.R. 3030 in a timely fashion.

Mr. Chairman, the length and complexity of this bill prohibit me from explaining the many important changes contained in it which will clean our Nation's air. I support many features of this bill. The bill sets in place new requirements for the control of emissions from mobile sources, which cause 50 percent of urban ozone pollution. New actions would be required for carbon monoxide nonattainment areas such as my district of St. Paul, MN. The acid rain program was carefully developed to achieve the reductions in emissions needed to protect public health while being fair to States which will have to bear the disproportionate share of the burden for reducing acid rain. The program will achieve a 10-million-ton reduction in sulfur dioxide and up to a 4-million-ton reduction in nitrogen oxides. This bill also establishes a program to regulate 170 toxic substances which are responsible for thousands of cancer cases annually. Finally, thanks to the work of Representative WYDEN and others, the bill was amended to reduce regional haze and preserve visibility in our national parks and wilderness areas. I worked with Mr. WYDEN to develop this response addressing the serious threat to our national treasures posed by air pollution.

Mr. Chairman, we have heard a lot about the costs of this bill. All in the House Chamber recognize that this bill has a stiff price. However the scare tactics and outlandish estimates being touted by industry lobbyists have transparently self-serving goals. The House, however, has wisely recognized the enormous costs of not acting on a sound clean air law. The total costs of continued air pollution to the Nation's health, environment and economy can't be measured. I believe this bill balances the needs of the industries and businesses which have made our Nation prosperous with the needs of protecting human health and the natural environment.

So many people have been essential to reaching the historic agreements made here today. I commend the chairman and ranking member of the Energy and Commerce Committee, Mr. DINGELL and Mr. LENT for their patience and dedication to achieving passage of a new clean air act. Of course, the commitment of Representative WAXMAN to this process has been extraordinary. The compromises reached by Mr. DINGELL and Mr. WAXMAN on a number of issues represent the finest type of cooperation this House has to offer.

I urge my colleagues to support strengthening amendments and vote for final passage of H.R. 3030, the Clean Air Act amendments.

Mr. HOUGHTON. Mr. Chairman, I rise in strong support of H.R. 3030, clean air legislation.

It has been 13 years since our clean air laws have been revised. This process has been difficult, divisive, complex—pitted region against region—industry against industry—fraying nerves and shortening tempers.

But since H.R. 3030 was introduced last year, we have managed to set aside most conflicts and produce a tough, fair piece of legislation. It has put us on the forefront. H.R. 3030 is the most comprehensive environmental bill written so far.

The most important environmental problems of the day—urban smog, motor vehicle emissions, cleaner burning fuels, toxic emissions, and acid rain—have been resolved in a series of bipartisan, almost virtually unanimous agreements. So by this action we will have the greatest environmental and health benefits of anyone. However, the bill will impose burdens on American business, its employees, and eventually the consumer.

Let me mention a few. While some mandates are good—I wouldn't want to see U.S. manufacturers unduly burdened particularly if our foreign trading partners will not be abiding by the same environmental standards. I would like to see that we ensure that the playing field is level—meaning not give foreign manufacturers an advantage because of an inequitable lost burden. Our rules should be their rules and vice versa. U.S. industries should not be unfairly disadvantaged in the global market.

The bill in a way addresses this concern. H.R. 3030 encourages international negotiations on environmental standards for industries worldwide. It also calls on the President to assess any trade imbalance which may have been caused by the passage of our environmental laws. So I promise that if an imbalance is found, I will do what I can to see that we respond with appropriate tariff action.

Looking into the United States—we should not ignore the impact new clean air mandates will have on U.S. worker dislocation if this be required. Employees should be helped in the transition to new jobs. That's why I support an effort to ensure that employees who have lost jobs as a result of this bill are provided job training and 6 months of additional unemployment benefits.

Having said all this, I believe that we all must do our part to clean up our air. So utility companies, auto manufacturers, a small dry cleaner, a bakery, as well as the American people are all in order. We will pay more for cleaner, healthier air. So let's make sure it works.

Is the bill reasonable and balanced? I believe it is. The 34th District of New York has long felt the impact of acid rain. $SO_2$ and $NO_x$ emissions from electric utilities have long eroded lakes, streams, and forests in upstate New York. Resolving this issue has been on hold for years. A compromise has been struck, a 10-million-ton sulfur dioxide reduction. This produces the strongest acid rain provision ever considered by Congress. This is a compromise that works for environmentalists and utilities who will have to share the greatest share of the cleanup cost.

I must believe that we have met the challenge to solve the scientific, economic, and environmental controversies surrounding clean air. Every step along the way, we try to build upon our knowledge, to improve the health and economic opportunity for our communities.

I've heard many times from constituents and friends in the 34th district. The overwhelming message: Support clean air legislation, even if it means having to pay more for a healthier environment.

We supported H.R. 3030 when it was first introduced. We support the changes that have been made along the way in committee hearings. I support the bill before us today.

Mr. MCMILLAN of North Carolina. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Tennessee Mr. [COOPER] and the gentleman from California [Mr. MOORHEAD]. Currently, there has been no data collected on carbon dioxide emissions from electric utilities, and with the rising emphasis on "global warming," this should better our understanding of the situation.

There was some concern expressed initially regarding application of monitoring equipment. This was clarified by Mr. COOPER. Utilities have a range of options with which to calculate carbon dioxide emissions, including fuel sampling and devices already required for measuring other gases.

I would hope that such information may be analyzed geographically and compared to electric energy output from all sources, including hydroelectric and nuclear. That should shed light on possible energy alternatives that will not contribute to global warming and the degree to which they are being utilized.

Mr. RICHARDSON. Mr. Speaker, I rise in strong support of H.R. 3030, the Clean Air Act Amendment of 1990. The provisions in this legislation were extremely contentious and took hundreds of hours of negotiation to restore. As a result, the bill we have before us represents genuine compromise and give and take on all sides.

I must bring to the attention of my colleagues, the exceptional work of Chairman DINGELL and Chairman WAXMAN in passing

out a strong environmentally sound Clean Air Act. They must be commended.

During the committee process we reached strengthening compromises on State responsibilities in the pursuit of clean air. In this area, I must particularly commend my colleagues, Representative AL SWIFT and DENNY ECKART who kept the negotiations moving and on track.

TITLE I—STATE IMPLMENTATION PLANS

Under title I, a system of graduated controls was adopted whereby more heavily polluted areas must adopt more stringent controls. An important milestone program was also added in which areas must review their attainment progress. If areas fail to achieve milestone reductions on time, the area must adopt additional control measures.

An additional environmental change included the adoption of tough but realistic sanctions including a ban on new highway funds and a 2 to 1 offset ratio. Previously, sanctions included a ban on new drinking water hookups that was so severe it was never used.

TITLE III—AIR TOXICS

In the regulation of toxic emissions, the environment won out again. While H.R. 3030 as introduced only regulated half of the major sources of hazardous air pollutants, the amendment adopted by the committee regulates 100 percent of major sources as well as 90 percent of area source emissions with respect to acid rain.

TITLE V—ACID RAIN (INDEPENDENT POWER PRODUCERS)

The bill also contains several amendments I offered during committee markup with respect to Independent Power Producers. The next 10 years will be an important transition period for the Nation's clean air and energy supply goals. Old powerplants will have to be cleaned up or replaced by new, clean facilities. Independents have proven to be a clean, reliable source of electricity accounting for about 4 percent of the Nation's electric supply, with the potential to provide a far greater share. The bill ensures a competitive market for these independent power producers.

I would also like to take this opportunity to ask my colleague's support for two amendments I will offer during consideration of H.R. 3030, the Richardson-Madigan reformulated gasoline amendment and the Richardson-Bryant-Slattery-Barton Accidental Air Toxics Release amendment.

I am pleased to advise my colleagues that bipartisan committee agreements have been reached on both of these important issues.

RICHARDSON-MADIGAN REFORMULATED GASOLINE AMENDMENT

Richardson-Madigan will require the use of reformulated gasoline in the 9 worst ozone nonattainment cities. Other cities may opt-in as the program gets under way. More importantly, gasoline sold in these cities will contain 15 percent less ozone-forming compounds and toxic air pollutants respectively.

Additionally, all 44 carbon monoxide nonattainment cities will be required to sell gasoline containing a minimum oxygen content level of 2.7 percent to reduce carbon monoxide to healthy levels.

Among others, our amendment addresses two of the major concerns expressed by the oil industry. These include the charge that the amendment mandates a recipe for reformulated gasoline and that the amendment will increase nitrogen oxide emissions.

On the first point, Richardson-Madigan establishes minimum standards to reduce ozone forming and toxic compounds. So long as equivalent or greater emissions reductions are achieved, oil companies are free to formulate their fuels any way they choose. On the second point, our amendment specifically prohibits a fuel from being certified for sale if it results in incresed ozone or nitrogen oxide emissions.

In short, this amendment has substantial environmental and health benefits by controlling ozone forming and carcinogenic air toxic compounds, trade and economic benefits by reducing dependence upon foreign oil, expanding the domestic renewable fuels industry, and reducing farm price supports.

RICHARDSON-BRYANT-SLATTERY-BARTON ACCIDENTAL AIR TOXICS RELEASE

I will also be offering a strong accidental air toxic release amendment. There have been more than 11,000 accidental releases of toxic chemicals in the United States between 1980 and 1987. As a result, more than 300 people died and more than 10,000 were injured. Moreover, since 1980, the United States has had 17 different air toxic accidents with potential effects greater than the Bhopal, India, catastrophe.

My amendment requires EPA to establish a list of at least 100 accident hazard chemicals. Moreover, EPA would be required to promulgate rules establishing risk management plans to detect and prevent or minimize accidental releases. Chemical companies would be required to develop risk management plans, including hazard assessments, prevention and response programs, and employee training.

This amendment would also establish an independent Chemical Safety and Hazard Assessment Board to investigate the causes of chemical accidents. Finally, my amendment includes language offered on the Senate floor by Senator JEFFORDS clarifying the roles of the Occupational Safety and Health Administration and EPA, and requiring OSHA to promulgate a chemical process safety standard requiring employers to take steps to prevent toxic accidents.

DIESEL DESULFURIZATION

Finally, I will be offering an amendment that would allow small diesel refiners to earn marketable allowances for reductions in $SO_2$ emissions.

In order to achieve heavy-duty diesel engine emission requirements established by the Environmental Protection Agency, sulfur content in diesel fuel must be reduced to a level of 0.05 percent by October 1, 1993. The cost of diesel desulfurization has an extraordinary impact on small refiners and threatens the continued operation of many facilities.

Since the desulfurization of diesel fuel reduces $SO_2$ emissions, small refiners should be able to acquire allowances for these emissions reductions. EPA estimates this amendment will reduce $SO_2$ emissions by as much as 15,000 tons per year beginning the year 2000. The amendment fosters greater $SO_2$ emissions reductions while helping a class of refiners to achieve compliance.

PLAINS ELECTRIC

In closing, I would like to address an issue relating to a specific powerplant in New Mexico, the Escalante Generating Plant operated by Plains Electric. The Escalante plant is a super-clean coal burning plant that has a sulfur dioxide emissions rate of 0.2 or below that began operating in 1985. Under the acid rain provisions of this bill, allowances for existing units are based on the average of 1975–87 emissions levels. These emission levels are recorded by the Department of Energy on form 767. Plants that filed these forms by 1985 would use a baseline established by the 1985 National Acid Precipitation Assessment Program Emissions Inventory. For plants filing after 1985 the baseline is established using the National Utility Reference file [NURF].

Plains Electric, however, filed form 167 for financing purposes only in 1985. Thus, the most appropriate baseline established for Plains Electric should be calculated from the NURF data instead of using the figures from form 767. The NURF data provides a more realistic account of the Escalante plant and would provide a sufficient number of allowances so that this plant can continue to operate at current levels and meet future growth demands. I urge my colleagues to support this distinction.

Mr. FRENZEL. Mr. Chairman, today I rise to support H.R. 3030 as reported out of the Energy and Commerce Committee. Amendments to the Clean Air Act are long overdue. I believe that Congress' failure to pass amendments to the Clean Air Act since 1977, have helped create the problems we are facing today and probably increased their costs. I am glad to see this issue finally being resolved here on the House floor.

This legislation is a positive step in the "clean" direction. Many groups have claimed H.R. 3030 is either too stringent or too weak. I would be worried if either preservationists or the industrialists loved the bill. H.R. 3030 has made it this far because environmentalists and industries have been willing to compromise. This legislation, like many budget matters I work on, is going to require sacrifice from industry and lifstyle changes from citizens.

I feel we owe the thanks to President Bush for getting the ball rolling by introducing a clean air bill, and demanding that Congress act after all these years.

I also want to commend the Committee on Energy and Commerce for bringing this enormous bill to the floor. The committee worked out three major compromises in the smog, acid rain, and toxic sections of the bill.

As one of 166 sponsors of H.R. 3030 as originally introduced by Representatives DINGELL and LENT, I am satisfied with the bill that has come out of committee. I am concerned about the costs it will place on industry and on the job losses that it will cause. The overall costs of H.R. 3030 are expected to be around $20 billion. And this is probably a conservative estimate.

I do not think that pollution controls are incompatible with economic growth. However, we have to take economic growth into ac-

count when mandating reductions and new technologies. I am not in favor of achieving a few more percentage points at more than doubling the cost. In this bill, our late start justifies stern measures.

Two of my primary concerns with the clean air bill are that it achieve the necessary cleanup and that we do not unfairly burden some regions in order to help others which did not help themselves. For example, in the acid rain section, companies in Minnesota who have spent money installing scrubbers should not foot the bill for cleaning up dirtier plants in other States.

Several amendments will be offered on the House floor this week. I want to caution my colleagues to look at the big picture and avoid amendments that will unravel the tenuous compromises that are in the bill. I also want to advise my colleagues that some of these amendments will surely initiate a Presidential veto. We have a duty to pass a sensible clean air bill and to pass it now.

Consideration of this bill is long overdue. It is my goal that Congress pass a prudent and environmentally conscious bill that helps clean up the environment without placing an undue burden on industry. I believe that H.R. 3030 fits these criteria and I urge my colleagues to swiftly pass the bill unamended.

Mr. RINALDO. Mr. Chairman, the passage of H.R. 3030, the Clean Air Act amendments will mean far healthier, much cleaner air for New Jersey. For over 8 years, I have worked to clean up our atmosphere and to end acid rain. I am proud to have sponsored the first comprehensive approach to ending acid rain. With that beginning, the legislation evolved into the first overall reexamination of our efforts to clean up the atmosphere since 1977.

Since the original Clean Air Act was passed in 1970, a great deal of progress has been made in eliminating some types of atmospheric pollution. Unfortunately, neither the 1970 bill nor its 1977 rewrite anticipated some of the problems that we face today. As a result, over 121 million Americans live in areas where air pollution exceeds federal health standards.

Air pollution imposes a very real cost on our society. In addition to causing various respiratory problems, it is also responsible for increased incidents of cancer, birth defects and other diseases. Air pollution and acid rain kills fish and wildlife, while also destroying forests and fields. It reduces agricultural yields and forest productivity.

Today, the House of Representatives approves a tough, but fair bill that will sharply reduce the pollution that people in New Jersey have had to breathe every day. There are many types of air pollution, and this legislation is a comprehensive approach to almost all of them.

Passage of H.R. 3030 means that in time acid rain will no longer be a threat to our forests and lakes, and the bill represents a major step toward fighting global warming and protecting our ozone layer. In addition, it also deals with smog, toxic air emissions, pollution from cars and trucks, visibility at our national parks, and a number of other problems. There are some areas where the bill should be stronger, but in general, this is good legislation.

The controls that it contains are strong, but realistic. While large plants will be subject to strict emissions controls, this bill also addresses the small sources that together cause most air pollution.

It would have been simple to slap controls on small businesses, and to leave it up to them to figure out how to comply. However, the permits and enforcement sections take a balanced approach that makes it very clear that emissions must be controlled, but also provides for technical assistance and eased permitting procedures for small businesses.

Smog is a very real problem for New Jersey. Title I of H.R. 3030 establishes strong new standards that will require States and localities to develop smog control programs. Interim goals will have to be established and met to ensure that real progress is being made.

I am especially pleased that this bill addresses the air pollution that comes into our State from other areas. It sets up regional councils to ensure that a State with strict air quality controls does not suffer because its neighbors have looser standards. This is a major problem for New Jersey, since it is surrounded by industrial areas in other States. I have seen studies that show that even if every plant and business in New Jersey totally stopped operations, and every car, truck, and bus in the State were idle, New Jersey would still be out of compliance because of the pollution blown in from other States.

Pollution from cars, trucks, and buses is also a severe problem for New Jersey, and a realistic approach to cleaner cars and cleaner fuels was legislated. Because of the leadership of the chairman and ranking minority member of both the full Energy and Commerce Committee and the Health and the Environment Subcommittee, auto manufacturers and fuel companies will have to meet strict new emissions standards. The new fuel and vehicle standards will force advances in technology that are badly needed. We cannot simply sit back and let clean cars and fuels develop slowly and haphazardly. At the same time, there is is no way that Congress can legislate chemistry or engineering. Today we are doing neither, but we are letting producers know that while we appreciate their efforts up until now, much more is needed, and quickly.

Since New Jersey leads the Nation in chemical production, it is also very important to our citizens that H.R. 3030 includes a section on toxic air pollutants. While our companies have an excellent safety record, the effects of many pollutants have simply not been known or effectively controlled.

Title III includes a list of 170 hazardous pollutants, and directs EPA to identify the major sources of their emissions, and to require the maximum achievable reduction in the danger that they pose. A similar effort was made in 1970, but in 20 years only seven pollutants have been controlled. This time, we make it very clear that the EPA is to control these toxics without any further delays or excuses.

The bill also sets up special procedures for handling potentially dangerous accidental releases of toxic gases. For the first time, safety standards and emergency programs will be established to help to prevent these accidents, and to deal with them if they do occur.

The acid rain section is especially important to me. It does more than just reduce sulfur dioxide emissions by 10 million tons a year and nitrogen oxide emissions by 2.5 million tons annually. It placed an absolute cap on the total amount of these pollutants that can be emitted in the future. We will not face a situation in 2020 where pollution has again crept up to critical levels. For every new ton of these emissions, one will have to be reduced from another source.

The mechanism to achieve this will be a system of allowances that can be bought and sold as they are needed. The House version fairly distributes these allowances among the various areas of the country, and allows for future growth. There was no easy way to do this, but through the efforts of members of the Energy and Commerce Committee, sectional conflicts were avoided.

Today, we have made this bill even better, by ensuring that both our national parks and the outer continental shelf will be specially protected so that our grandchildren can enjoy their pristine beauty.

Finally, we have informed the world that this country will take the leadership in eliminating the CFC's and HCFC's that are destroying the ozone layer and causing global warming. As the world's leading industrial nation, we can do no less, and we invite them to follow our lead.

Mr. CHAIRMAN, this is a good bill. It is not a perfect bill, but it is much better than most of us expected when the Energy and Commerce Committee began to work on it a year ago. I believe that this legislation will provide greater reductions in pollution at a lower cost to our economy than its companion in the other Chamber. I am proud to support it today, and to bring it before the people of New Jersey as an answer to one of our State's most critical needs.

Mr. THOMAS of Wyoming. Mr. Chairman, there is an issue important to the State of Wyoming, as well as the United States, that was not addressed in H.R. 3030, the "Clean Air Act Amendments of 1990."

The issue I'm referring to is that of dual regulation of radionuclides. Radionuclides are currently regulated by both the Environmental Protection Agency [EPA] and the Nuclear Regulatory Commission [NRC]. Dual regulation by these agencies affects not only nuclear powerplants, but also hospitals and clinics. Dual regulation is a costly hardship for those who are regulated and those who are regulating. But in the end, it's the consumer who will pay for the increase in costs.

During the last day of Senate floor debate on S. 1630, the Senate's clean air legislation, the Senate adopted by voice vote, an amendment offered by Senator ALAN SIMPSON. The language contains a provision that no standard for radionuclide emissions from facilities licensed by the NRC is required to be promulgated if the Administrator of EPA determines, after consultation with the NRC, that the regulatory program established by the NRC pursuant to the Atomic Energy Act provides an ample margin of safety to protect the public health.

Given the stated position of EPA—in its December 15, 1989, radionuclide rulemaking—

that emissions from NRC licensee sources are currently being regulated in a manner that adequately protects public health with an ample margin of safety, Senator SIMPSON'S amendment favorably addresses the concerns of the uranium industry.

This is an important issue and it is my hope that the conferees will retain Senator SIMPSON'S language in the final version of this legislation.

Mr. BRYANT. Mr. Chairman, I am pleased to rise in support of the compromise to strengthen the alternative fuels proposal in the Clean Air Act.

I support the alternative fuels provisions for very good reasons. Enactment of these provisions will give us a cleaner environment, incentives for developing new cars and fuels, and create new jobs.

The legislature in my home State of Texas last year passed one of the most innovative clean air packages in the country, including strong fleet vehicle requirements, some of which are already in place with great success.

Currently, government fleet vehicles and school buses in Texas are required to begin using alternative fuels, and each year more vehicles will be covered.

Half the air pollution in the United States comes from mobile sources. However, in densely populated areas, the percentage can be much higher. For example, in Dallas, vehicles cause between 68 and 70 percent of the air pollution.

Past cleanup attempts have focused on the hardware of gasoline- and diesel-powered vehicles—catalytic converters and the like. Recently, reformulated gasoline has been marketed in California for cars built before 1975, and light trucks before 1980, that use leaded gasoline—a step in the right direction of cleaner fuels.

Because the infrastructure exists to distribute gasoline and diesel fuel, there is no incentive for alternative fuel development due to tradition and vested interests in maintaining the status quo.

The only way to break this deadlock is with an alternative fuel program for fleet vehicles. This approach solves the refueling and servicing problems through centralized operations. It is also easier to convert fleet vehicles, as well as to monitor the economic and environment benefits of conversion.

A study done by the Radian Corp. of Austin, TX, for the Texas General Land Office, showed that the city of Houston could achieve up to 17 million tons reduction of air pollutants if new clean fueled vehicles are put on the streets, at the same time saving up to $17 million in lower fuel and maintenance costs.

By breaking the "chicken or egg first" mindset—providing that fleet operations work, such as that in the Garland Independent School District in Texas, the Washington Gas Co., compressed natural gas fleet refueling and maintenance operation just south of us in Virginia, or any number of other projects around the country—we establish the track record necessary to encourage a general expansion of the refueling and service operations necessary for use of an alternative fuel like CNG in standard passenger vehicles.

There are 3½ million fleet vehicles in the nine worst nonattainment areas in the country. Fleet vehicles are driven an average of 23,000 miles per year, versus the 9,500 miles for private passenger vehicles. Fleet vehicles account for only 7 percent of the vehicles on the road, but log in 15 percent of the miles driven each year.

It stands to reason that we should have a strong program in effect for vehicles which contribute to our pollution problem out of proportion to their numbers.

Only when we here in Congress push Detroit and Tokyo to offer cleaner burning engines for our vehicles and when we push refiners to develop and offer cleaner fuels will we solve our mobile pollution problems.

In the 1970's when we forced fuel economy standards on automobile manufacturers, the American public finally got greater fuel economy. The Japanese seemed to be ahead of the game at that time. I hope that Detroit will remember that financially painful experience and take the initiative now to put clean cars—cars that use cleaner fuels and pollute far less—on the road first.

American industry—the auto industry and the various components of our energy industry—can and should take the lead in the fight for clean air rather than be dragged kicking and screaming into a cleaner 21st century.

Mr. FEIGHAN. Mr. Chairman, Congress approved the original Clean Air Act in 1970 and strengthened it once in 1977. Thirteen years later, we've seen air pollution grow worse. While cars and fuels are cleaner, there are more cars, buses, and trucks on the road. Toxic chemical emissions are threatening a new generation of Americans and acid rain is still killing our lakes, rivers, and streams.

The bill before us will change this. H.R. 3030, the Clean Air Act Amendments of 1990, will help solve the acid rain problem. It will sharply reduce dangerous sulfur dioxide ($SO_2$) and nitrogen oxide (NO) emissions, the main components of acid rain. While I remain concerned by the potentially detrimental effects of the acid rain provisions on my home State of Ohio, I was heartened by the adoption of the Wise amendment. This provision will provide $275 million over 5 years for the retraining and readjustment of workers who are negatively impacted by this legislation. The Wise amendment proves that we're not only a nation of action but a nation of compassion. I urge President Bush to show compassion and sign this bill with the Wise amendment.

The title covering automobiles and fuel standards started out strong and we made it stronger. The clean fuel amendment which will require the use of reformulated gasoline—with a higher oxygen content—is a vital part of this section. Clean fuels combined with the clean car provisions of the Waxman/Dingell/Lewis compromise will go a long way toward lowering ozone-forming and toxic emissions in cities throughout the country.

H.R. 3030 also cracks down on emissions of air toxics. While air toxics seem to be a new issue, their cancer-causing consequences have been around for too long. My State, Ohio, ranked No. 1 nationwide last year in total volume of air toxic emissions that pose a serious threat to our most valuable asset, Lake Erie. That's why I voted for the tough air toxics section.

The Clean Air Act amendments take action on the three major air pollution issues—acid rain, urban smog, and air toxics. But, it doesn't stop there. H.R. 3030 includes an amendment—which I supported—to phase out chlorofluorocarbons [CFC's] and other dangerous ozone-depleting chemicals. In addition, the final version includes important provisions to erase pollution from America's national parks, to extend pollution regulations to offshore as well as onshore areas and to extend warranties on the two most important automotive emissions-control devices.

I congratulate the Energy and Commerce Committee for their fine work. I am proud to support this legislation—both the core and the strengthening amendments. As the bill moves to conference, I urge the House negotiators to fight for our version. After 13 years, it is hard to say that it's been worth the wait. In fact, it is easier to say it's about time. Either way, the Clean Air Act amendments are a great step forward.

The CHAIRMAN. The question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

□ 2130

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. HOYER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 3030) to amend the Clean Air Act to provide for the attainment and maintenance of the national ambient air quality standards, the control of toxic air pollutants, the prevention of acid deposition, and other improvements in the quality of the Nation's air, pursuant to House Resolution 399, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment adopted by the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

RECORDED VOTE

Mr. DANNEMEYER. Mr. Speaker, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 401, noes 21, not voting 10, as follows:

[Roll No. 137]

A motion to reconsider was laid on the table.

□ 2150

GENERAL LEAVE

Mr. DINGELL. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks, and include extraneous material on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

AUTHORIZING THE CLERK TO MAKE CORRECTIONS IN ENGROSSMENT OF H.R. 3030, CLEAN AIR ACT AMENDMENTS OF 1990

Mr. DINGELL. Mr. Speaker, I ask unanimous consent that, in the engrossment of the bill, H.R. 3030, the Clerk be authorized to correct section numbers, cross-references, punctuation, and indentation, and to make other technical and conforming changes necessary to reflect the actions of the House.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

PRIVILEGES OF THE HOUSE—RETURNING S. 1630 TO THE SENATE

Mr. ROSTENKOWSKI. Mr. Speaker, I rise to a question of the privileges of the House, and I send to the desk a privileged resolution (H. Res. —) returning to the Senate the bill S. 1630.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

H. RES. —

*Resolved*, That the bill of the Senate (S. 1630) to amend the Clean Air Act to provide for attainment and maintenance of health protective national ambient air quality standards, and for other purposes, in the opinion of this House, contravenes the first clause of the seventh section of the first article of the Constitution of the United States and is an infringement of the privileges of this House and that such bill be respectfully returned to the Senate with a message communicating this resolution.

The SPEAKER. The gentleman from Illinois states a privilege of the House, and the gentleman from Illinois [Mr. ROSTENKOWSKI] is recognized for 1 hour.

Mr. ROSTENKOWSKI. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House resolution — is a simple resolution returning to the Senate the bill, S. 1630, because it contravenes the constitutional requirement that revenue measures originate in the House of Representatives. Title 7 of S. 1630, which passed the Senate on March 5, 1990, adds a new title 5 to the Clean Air Act. Section 512(a) of that title would prohibit the importation of ozone depleting substances and products containing such substances, unless the country in which the substance or product was manufactured and from which it is imported is a party to, and in compliance with, the Montreal protocol on substances that deplete the ozone layer. The bill also authorizes the President to prohibit the importation of goods manufactured with ozone depleting substances.

Title 7 of the Senate bill could have a substantial impact on Customs revenues. The list of products potentially covered by the import ban is broad, ranging from CFC's and other ozone depleting substances to any product which the President has reason to believe may have been made with such a substance. The ban could cover virtually all electronics products, for example. This change in our tariff laws constitutes a revenue measure in the constitutional sense, because it would

have an immediate impact on Customs revenues. Therefore, I am asking that the House insist on its constitutional prerogatives.

There are numerous precedents for taking the action I am requesting. For example, on July 30, 1987, the House passed House Resolution 235, returning to the Senate S. 829, an appropriation bill which included provisions prohibiting the importation of gold ore, agricultural machinery, and other products from the Soviet Union. On June 16, 1988, the House passed House Resolution 474, returning to the Senate S. 1748, which would have prohibited the importation of all products of Iran.

The House, by adopting this resolution tonight, will preserve its prerogative to orginate revenue matters. However, I want to make it clear to all Members that our action does not constitute a rejection of their provisions of the Senate bill on their merits. The fact that the House has just passed its own version of the Clean Air Act Amendments, H.R. 3030, makes that clear. Thus, our action tonight is merely procedural in nature. It makes it clear to the Senate that the appropriate procedure for dealing with tariff matters that affect revenues is for the House to act first on a revenue bill and the Senate to add its amendments and seek a conference.

Mr. GEPHARDT. Mr. Speaker, will the gentleman yield?

Mr. ROSTENKOWSKI. I yield to the gentleman from Missouri

Mr. GEPHARDT. Mr. Speaker, on behalf of the leadership, I commend Chairman ROSTENKOWSKI for raising an issue of fundamental importance involving the prerogatives of the House of Representatives. The leadership fully agrees that the constitutional prerogatives of the House to originate revenue legislation must be protected.

In the interest of expediting the bill to conference, however, I would request the Chairman to withhold this resolution until the clean air conference report is presented to the House. In the event that the Senate-originated revenue provision is not deleted in conference, I want to assure the chairman that all his parliamentary rights will be preserved including any appropriate points of order and the right to offer a "blue slip" resolution on the conference report.

Mr. ROSTENKOWSKI. I want to thank the majority leader for his assurances on behalf of the leadership that all parliamentary rights and privileges will be protected on the conference report. I want to inform my colleagues that I have spoken to the Senate majority leader, Mr. MITCHELL, who informed me that inclusion of this revenue measure in the Senate bill was inadvertent. Furthermore, Majority Leader MITCHELL has given me his personal assurances that he will do all in his power to see that the other body does not send us other Senate-originated revenue measures in the future.

Mr. Speaker, on the basis of these assurances from both the leadership of the House and Senate, I withdraw the privileged resolution.

The SPEAKER. The gentleman from Illinois withdraws the resolution.

Mr. DINGELL. Mr. Speaker, pursuant to House Resolution 399, I call up the Senate bill (S. 1630) to amend the Clean Air Act to provide for attainment and maintenance of health protective national ambient air quality standards, and for other purposes, and ask for its immediate consideration.

The Clerk read the title of the Senate bill.

MOTION OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. DINGELL moves to strike out all out after the enacting clause of the Senate bill. S. 1630, and insert in lieu thereof the provisions of H.R. 3030 as passed by the House, as follows:

S. 1630

*SECTION 1. SHORT TITLE, REFERENCE, AND TABLE OF CONTENTS.*

*(a) SHORT TITLE.—This Act may be cited as the "Clean Air Act Amendments of 1990".*

*(b) REFERENCE.—Whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Clean Air Act.*

*TABLE OF CONTENTS*

*TITLE I—PROVISIONS FOR ATTAINMENT AND MAINTENANCE OF NATIONAL AMBIENT AIR QUALITY STANDARDS*

*Subtitle A—In General*

*Sec. 101. General planning requirements.*
*Sec. 102. General provisions for nonattainment areas.*
*Sec. 103. Additional provisions for ozone nonattainment areas.*
*Sec. 104. Additional provisions for carbon monoxide nonattainment areas.*
*Sec. 105. Additional provisions for particulate matter (PM-10) nonattainment areas.*
*Sec. 106. Additional provisions for areas designated nonattainment for sulfur oxides, nitrogen dioxide, and lead.*
*Sec. 107. Provisions related to Indian tribes.*
*Sec. 108. Miscellaneous provisions.*
*Sec. 109. Interstate pollution.*
*Sec. 110. Conforming amendments.*

*Subtitle B—Clean Air Employment Transition Assistance*

*Sec. 111. Transition assistance.*
*Sec. 112. Amendment to Job Training Partnership Act.*
*Sec. 113. GAO assessments of effects of Clean Air Act compliance on employment.*
*Sec. 114. Appropriations required.*

*TITLE II—PROVISIONS RELATING TO MOBILE SOURCES*

*Sec. 201. Clean fuel requirements.*
*Sec. 202. Emission standards for certain motor vehicles.*
*Sec. 203. Conforming amendment.*
*Sec. 204. Carbon monoxide emissions at cold temperatures.*
*Sec. 205. Evaporative emissions.*
*Sec. 206. Control of vehicle refueling emissions.*
*Sec. 207. Mobile source-related air toxics.*
*Sec. 208. Emission control diagnostics systems.*
*Sec. 209. Auto warranties.*
*Sec. 210. Heavy-duty trucks.*
*Sec. 211. Nonroad engines and vehicles.*
*Sec. 212. Vehicle certification.*
*Sec. 213. In-use compliance—recall.*
*Sec. 214. Compliance program fees.*
*Sec. 215. Information collection.*
*Sec. 216. Fuel volatility.*
*Sec. 217. Diesel fuel sulfur content.*
*Sec. 218. Lead substitute gasoline additives.*
*Sec. 219. Nonroad fuels.*
*Sec. 220. Fuel waivers.*
*Sec. 221. State fuel regulation.*
*Sec. 222. Enforcement.*
*Sec. 223. High altitude testing.*
*Sec. 224. Technical amendments.*

*TITLE III—HAZARDOUS AIR POLLUTANTS*

*Sec. 301. Technology-based standards for hazardous air pollutants.*
*Sec. 302. Chemical process safety management.*

*TITLE IV—PERMITS*

*Sec. 401. Permits.*

*TITLE V—ACID DEPOSITIONS CONTROL*

*Sec. 501. Acid deposition control.*
*Sec. 502. New source performance standards.*

*TITLE VI—PROVISIONS RELATING TO ENFORCEMENT*

*Sec. 601. Section 113 enforcement.*
*Sec. 602. Compliance certification.*
*Sec. 603. Administrative enforcement subpoenas.*
*Sec. 604. Enforcement of administrative orders.*
*Sec. 605. Scope of emergency orders.*
*Sec. 606. Contractor listings.*

Sec. 901. Clean air research.

TITLE X—DISADVANTAGED BUSINESS CONCERNS

Sec. 1001. Disadvantaged business concerns.
Sec. 1002. Use of quotas prohibited.

TITLE I—PROVISIONS FOR ATTAINMENT AND MAINTENANCE OF NATIONAL AMBIENT AIR QUALITY STANDARDS

Subtitle A—In General

Sec. 101. General planning requirements.
Sec. 102. General provisions for nonattainment areas.
Sec. 103. Additional provisions for ozone nonattainment areas.
Sec. 104. Additional provisions for carbon monoxide nonattainment areas.
Sec. 105. Additional provisions for particulate matter (PM-10) nonattainment areas.
Sec. 106. Additional provisions for areas designated nonattainment for sulfur oxides, nitrogen dioxide, and lead.
Sec. 107. Provisions related to Indian tribes.
Sec. 108. Miscellaneous provisions.
Sec. 109. Interstate pollution.
Sec. 110. Conforming amendments.

Subtitle B—Clean Air Employment Transition Assistance

Sec. 111. Transition assistance.
Sec. 112. Amendment to Job Training Partnership Act.
Sec. 113. GAO assessments of effects of Clean Air Act compliance on employment.
Sec. 114. Appropriations required.

*Subtitle A—In General*

*SEC. 101. GENERAL PLANNING REQUIREMENTS.*

*(a) AREA DESIGNATIONS.—Section 107(d) (42 U.S.C. 7407(d)) is amended to read as follows:*

*"(d) DESIGNATIONS.—*

*"(1) DESIGNATIONS GENERALLY.—*

*"(A) SUBMISSION BY GOVERNORS OF INITIAL DESIGNATIONS FOLLOWING PROMULGATION OF NEW OR REVISED STANDARDS.—By such date as the Administrator may reasonably require, but not later than 1 year after promulgation of a new or revised national ambient air quality standard for any pollutant under section 109, the Governor of each State shall (and at any other time the Governor of a State deems appropriate the Governor may) submit to the Administrator a list of all areas (or portions thereof) in the State, designating as—*

*"(i) nonattainment, any area that does not meet (or that contributes to ambient air quality in a nearby area that does not meet) the national primary or secondary ambient air quality standard for the pollutant,*

*"(ii) attainment, any area (other than an area identified in clause (i)) that meets the national primary or secondary ambient air quality standard for the pollutant, or*

*"(iii) unclassifiable, any area that cannot be classified on the basis of available information as meeting or not meeting the national primary or secondary ambient air quality standard for the pollutant.*

*The Administrator may not require the Governor to submit the required list sooner than 120 days after promulgating a new or revised national ambient air quality standard.*

*"(B) PROMULGATION BY EPA OF DESIGNATIONS.—(i) Upon promulgation or revision of a national ambient air quality standard, the Administrator shall promulgate the designations of all areas (or portions thereof) submitted under subparagraph (A) as expeditiously as practicable, but in no case later than 2 years from the date of promulgation of the new or revised national ambient air quality standard. Such period may be extended for up to one year in the event the Administrator has insufficient information to promulgate the designations.*

*"(ii) In making the promulgations required under clause (i), the Administrator may make such modifications as the Administrator deems necessary to the designations of the areas (or portions thereof) submitted under subparagraph (A) (including to the boundaries of such areas or portions thereof). Whenever the Administrator intends to make a modification, the Administrator shall notify the State and provide such State with an opportunity to demonstrate why any proposed modification is inappropriate. The Administrator shall give such notification no later than 120 days before the date the Administrator promulgates the designation, including any modification thereto. If the Governor fails to submit the list in whole or in part, as required under subparagraph (A), the Administrator shall promulgate the designation that the Administrator deems appropriate for any area (or portion thereof) not designated by the State.*

*"(iii) If the Governor of any State, on the Governor's own motion, under subparagraph (A), submits a list of areas (or portions thereof) in the State designated as nonattainment, attainment, or unclassifiable, the Administrator shall act on such designations in accordance with the procedures under paragraph (3)(B) (relating to redesignation).*

*"(iv) A designation for an area (or portion thereof) made pursuant to this subsection shall remain in effect until the area (or portion thereof) is redesignated pursuant to paragraph (3) or (4).*

*"(C) DESIGNATIONS BY OPERATION OF LAW.—(i) Any area designated with respect to any air pollutant under the provisions of paragraph (1) (A), (B), or (C) of this subsection (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) is designated, by operation of law, as a nonattainment area for such pollutant within the meaning of subparagraph (A)(i).*

*"(ii) Any area designated with respect to any air pollutant under the provisions of paragraph (1)(E) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) is designated by operation of law, as an attainment area for such pollutant within the meaning of subparagraph (A)(ii).*

*"(iii) Any area designated with respect to any air pollutant under the provisions of paragraph (1)(D) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) is designated, by operation of law, as an unclassifiable area for such pollutant within the meaning of subparagraph (A)(iii).*

*"(2) PUBLICATION OF DESIGNATIONS AND REDESIGNATIONS.—(A) The Administrator shall publish a notice in the Federal Register promulgating any designation under paragraph (1) or (5), or announcing any designation under paragraph (4), or promulgating any redesignation under paragraph (3).*

*"(B) Promulgation or announcement of a designation under paragraph (1), (4) or (5) shall not be subject to the provisions of sections 553 through 557 of title 5 of the United States Code (relating to notice and comment), except nothing herein shall be construed as precluding such public notice and comment whenever possible.*

*"(3) REDESIGNATION.—(A) Subject to the requirements of subparagraph (E), and on the basis of air quality data, planning and control considerations, or any other air quality-related considerations the Administrator deems appropriate, the Administrator may at any time notify the Governor of any State that available information indicates that the designation of any area or portion of an area within the State or interstate area should be revised. In issuing such notification, which shall be public, to the Governor, the Administrator shall provide such information as the Administrator may have available explaining the basis for the notice.*

*"(B) No later than 120 days after receiving a notification under subparagraph (A), the Governor shall submit to the Administrator such redesignation, if any, of the appropriate area (or areas) or portion thereof within the State or interstate area, as the Governor considers appropriate.*

*"(C) No later than 120 days after the date described in subparagraph (B), the Administrator shall promulgate the redesignation, if any, of the area or portion thereof, submitted by the Governor in accordance with subparagraph (B), making such modifications as the Administrator may deem necessary, in the same manner and under the same procedure as is applicable under clause (ii) of paragraph (1)(B), except that the phrase '60 days' shall be substituted for the phrase '120 days' in that clause. If the Governor does not submit, in accordance with subparagraph (B), a redesignation for an area (or portion thereof) identified by the Administrator under subparagraph (A), the Administrator shall promulgate such redesignation, if any, that the Administrator deems appropriate.*

*"(D) The Governor of any State may, on the Governor's own motion, submit to the Administrator a revised designation of any area or portion thereof within the State. Within 18 months of receipt of a complete State redesignation submittal, the Administrator shall approve or deny such redesignation. The submission of a redesignation by a Governor shall not affect the effectiveness or enforceability of the applicable implementation plan for the State.*

*"(E) The Administrator may not promulgate a redesignation of a nonattainment area (or portion thereof) to attainment unless—*

*"(i) the Administrator determines that the area has attained the national ambient air quality standard;*

"(ii) the Administrator has fully approved the applicable implementation plan for the area under section 110(k);

"(iii) the Administrator determines that the improvement in air quality is due to permanent and enforceable reductions in emissions resulting from implementation of the applicable implementation plan and applicable Federal air pollutant control regulations and other permanent and enforceable reductions;

"(iv) the Administrator has fully approved a maintenance plan for the area as meeting the requirements of section 175A; and

"(v) the State containing such area has met all requirements applicable to the area under this Act.

"(F) The Administrator shall not promulgate any redesignation of any area (or portion thereof) from nonattainment to unclassifiable.

"(4) NONATTAINMENT DESIGNATIONS FOR OZONE, CARBON MONOXIDE AND PARTICULATE MATTER (PM-10).—

"(A) OZONE AND CARBON MONOXIDE.—(i) Within 120 days after the date of the enactment of the Clean Air Act Amendments of 1990, each Governor of each State shall submit to the Administrator a list that designates, affirms or reaffirms the designation of, or redesignates (as the case may be), all areas (or portions thereof) of the Governor's State as attainment, nonattainment, or unclassifiable with respect to the national ambient air quality standards for ozone and carbon monoxide.

"(ii) No later than 120 days after the date the Governor is required to submit the list of areas (or portions thereof) required under clause (i) of this subparagraph, the Administrator shall promulgate such designations, making such modifications as the Administrator may deem necessary, in the same manner, and under the same procedure, as is applicable under clause (ii) of paragraph (1)(B), except that the phrase '60 days' shall be substituted for the phrase '120 days' in that clause. If the Governor does not submit, in accordance with clause (i) of this subparagraph, a designation for an area (or portion thereof), the Administrator shall promulgate the designation that the Administrator deems appropriate.

"(iii) No nonattainment area may be redesignated as an attainment area under this subparagraph.

"(iv) Notwithstanding paragraph (1)(C)(ii) of this subsection, if an ozone or carbon monoxide nonattainment area located within a metropolitan statistical area or consolidated metropolitan statistical area (as established by the Bureau of the Census) is classified under part D of this title as a Serious, Severe, or Extreme Area, the boundaries of such area are hereby revised (on the date 45 days after such classification) by operation of law to include the entire metropolitan statistical area or consolidated metropolitan statistical area, as the case may be, unless within such 45-day period the Governor (in consultation with State and local air pollution control agencies) notifies the Administrator that additional time is necessary to evaluate the application of clause (v). Whenever a Governor has submitted such a notice to the Administrator, such boundary revision shall occur on the later of the date 8 months after such classification or 14 months after the date of the enactment of the Clean Air Act Amendments of 1990 unless the Governor makes the finding referred to in clause (v), and the Administrator concurs in such finding, within such period. Except as otherwise provided in this paragraph, a boundary revision under this clause or clause (v) shall apply for purposes of any State implementation plan revision required to be submitted after the date of the enactment of the Clean Air Act Amendments of 1990.

"(v) Whenever the Governor of a State has submitted a notice under clause (iv), the Governor, in consultation with State and local air pollution control agencies, shall undertake a study to evaluate whether the entire metropolitan statistical area or consolidated metropolitan statistical area should be included within the nonattainment area. Whenever a Governor finds and demonstrates to the satisfaction of the Administrator, and the Administrator concurs in such finding, that with respect to a portion of a metropolitan statistical area or consolidated metropolitan statistical area, sources in the portion do not contribute significantly to violation of the national ambient air quality standard, the Administrator shall approve the Governor's request to exclude such portion from the nonattainment area. In making such finding, the Governor and the Administrator shall consider factors such as population density, traffic congestion, commercial development, industrial development, meteorological conditions, and pollution transport.

"(B) PM-10 DESIGNATIONS.—By operation of law, until redesignation by the Administrator pursuant to paragraph (3)—

"(i) each area identified in 52 Federal Register 29383 (Aug. 7, 1987) as a Group I area (except to the extent that such identification was modified by the Administrator before the date of the enactment of the Clean Air Act Amendments of 1990) is designated nonattainment for PM-10;

"(ii) any area containing a site for which air quality monitoring data show a violation of the national ambient air quality standard for PM-10 before January 1, 1989 (as determined under part 50, appendix K of title 40 of the Code of Federal Regulations) is hereby designated nonattainment for PM-10; and

"(iii) each area not described in clause (i) or (ii) is hereby designated unclassifiable for PM-10.

Any designation for particulate matter (measured in terms of total suspended particulates) that the Administrator promulgated pursuant to this subsection (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) shall remain in effect for purposes of implementing the maximum allowable increases in concentrations of particulate matter (measured in terms of total suspended particulates) pursuant to section 163(d), until the Administrator determines that such designation is no longer necessary for that purpose.

"(5) DESIGNATIONS FOR LEAD.—The Administrator may, in the Administrator's discretion at any time the Administrator deems appropriate, require a State to designate areas (or portions thereof) with respect to the national ambient air quality standard for lead in effect as of the date of the enactment of the Clean Air Act Amendments of 1990, in accordance with the procedures under subparagraphs (A) and (B) of paragraph (1), except that in applying subparagraph (B)(i) of paragraph (1) the phrase '2 years from the date of promulgation of the new or revised national ambient air quality standard' shall be replaced by the phrase '1 year from the date the Administrator notifies the State of the requirement to designate areas with respect to the standard for lead'.".

(b) GENERAL REQUIREMENTS FOR IMPLEMENTATION PLANS.—Section 110(a)(2) (42 U.S.C. 7410(a)(2)) is amended to read as follows:

"(2) Each implementation plan submitted by a State under this Act shall be adopted by the State after reasonable notice and public hearing. Each such plan shall—

"(A) include enforceable emission limitations and other control measures, means, or techniques (including economic incentives such as fees, marketable permits, and auctions of emissions rights), as well as schedules and timetables for compliance, as may be necessary or appropriate to meet the applicable requirements of this Act;

"(B) provide for establishment and operation of appropriate devices, methods, systems, and procedures necessary to—

"(i) monitor, compile, and analyze data on ambient air quality, and

"(ii) upon request, make such data available to the Administrator;

"(C) include a program to provide for the enforcement of the measures described in subparagraph (A), and regulation of the modification and construction of any stationary source within the areas covered by the plan as necessary to assure that national ambient air quality standards are achieved, including a permit program as required in parts C and D;

"(D) contain adequate provisions—

"(i) prohibiting, consistent with the provisions of this title, any source or other type of emissions activity within the State from emitting any air pollutant in amounts which will—

"(I) contribute significantly to nonattainment in, or interfere with maintenance by, any other State with respect to any such national primary or secondary ambient air quality standard, or

"(II) interfere with measures required to be included in the applicable implementation plan for any other State under part C to prevent significant deterioration of air quality or to protect visibility,

"(ii) insuring compliance with the applicable requirements of sections 126 and 115 (relating to interstate and international pollution abatement);

"(E) provide (i) necessary assurances that the State (or, except where the Administrator deems inappropriate, the general purpose local government or governments, or a regional agency designated by the State or general purpose local governments for such purpose) will have adequate personnel, funding, and authority under State (and, as appropriate, local) law to carry out such implementation plan (and is not prohibited by any provision of Federal or State law from carrying out such implementation plan or portion thereof), (ii) requirements that the State comply with the requirements respecting State boards under section 128, and (iii) necessary assurances that, where the State has relied on a local or regional government, agency, or instrumentality for the implementation of any plan provision, the State has responsibility for ensuring adequate implementation of such plan provision;

"(F) require, as may be prescribed by the Administrator—

"(i) the installation, maintenance, and replacement of equipment, and the implementation of other necessary steps, by owners or operators of stationary sources to monitor emissions from such sources,

"(ii) periodic reports on the nature and amounts of emissions and emissions-related data from such sources, and

"(iii) correlation of such reports by the State agency with any emission limitations

or standards established pursuant to this Act, which reports shall be available at reasonable times for public inspection;

"(G) provide for authority comparable to that in section 303 and adequate contingency plans to implement such authority;

"(H) provide for revision of such plan—

"(i) from time to time as may be necessary to take account of revisions of such national primary or secondary ambient air quality standard or the availability of improved or more expeditious methods of attaining such standard, and

"(ii) except as provided in paragraph (3)(C), whenever the Administrator finds on the basis of information available to the Administrator that the plan is substantially inadequate to attain the national ambient air quality standard which it implements or to otherwise comply with any additional requirements established under this Act;

"(I) in the case of a plan or plan revision for an area designated as a nonattainment area, meet the applicable requirements of part D (relating to nonattainment areas);

"(J) meet the applicable requirements of section 121 (relating to consultation), section 127 (relating to public notification), and part C (relating to prevention of significant deterioration of air quality and visibility protection);

"(K) provide for—

"(i) the performance of such air quality modeling as the Administrator may prescribe for the purpose of predicting the effect on ambient air quality of any emissions of any air pollutant for which the Administrator has established a national ambient air quality standard, and

"(ii) the submission, upon request, of data related to such air quality modeling to the Administrator;

"(L) require the owner or operator of each major stationary source to pay to the permitting authority, as a condition of any permit required under this Act, a fee sufficient to cover—

"(i) the reasonable costs of reviewing and acting upon any application for such a permit, and

"(ii) if the owner or operator receives a permit for such source, the reasonable costs of implementing and enforcing the terms and conditions of any such permit (not including any court costs or other costs associated with any enforcement action),

until such fee requirement is superseded with respect to such sources by the Administrator's approval of a fee program under title IV;

"(M) provide for consultation and participation by local political subdivisions affected by the plan; and

"(N) provide for establishment (consistent with the requirements of this Act) of a small source technical assistance entity that shall—

"(i) offer to audit the operations of small sources to determine compliance with all requirements of this Act or offer to refer small sources to qualified auditors;

"(ii) provide information on alternative technologies, including equipment, chemical products, and methods of operation, which will help reduce air pollution; and

"(iii) facilitate lawful cooperation among small generators and other persons where such cooperation would further comply with this Act.".

(c) ADDITIONAL PROVISIONS.—Section 110 (42 U.S.C. 7410) is amended by adding the following at the end thereof:

"(k) ENVIRONMENTAL PROTECTION AGENCY ACTION ON PLAN SUBMISSIONS.—

"(1) COMPLETENESS OF PLAN SUBMISSIONS.—

"(A) COMPLETENESS CRITERIA.—Within 9 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate minimum criteria that any plan submission must meet before the Administrator is required to act on such submission under this subsection. The criteria shall be limited to the information necessary to enable the Administrator to determine whether the plan submission complies with the provisions of this Act.

"(B) COMPLETENESS FINDING.—Within 60 days of the Administrator's receipt of a plan or plan revision, but no later than 6 months after the date, if any, by which a State is required to submit the plan or revision, the Administrator shall determine whether each part of the plan or revision meets the minimum criteria established pursuant to subparagraph (A). Any plan or plan revision that a State submits to the Administrator, and that has not been determined by the Administrator (by the date 6 months after receipt of the submission) to have failed to meet the minimum criteria established pursuant to subparagraph (A), shall on that date be deemed by operation of law to meet such minimum criteria.

"(C) EFFECT OF FINDING OF INCOMPLETENESS.—Where the Administrator determines that a plan submission (or part thereof) does not meet the minimum criteria established pursuant to subparagraph (A), the State shall be treated as not having made the submission (or, in the Administrator's discretion, part thereof).

"(2) DEADLINE FOR ACTION.—Within 12 months of a determination by the Administrator (or a determination deemed by operation of law) under paragraph (1) that a State has submitted a plan or plan revision (or, in the Administrator's discretion, part thereof) that meets the minimum criteria established pursuant to paragraph (1), if applicable (or, if those criteria are not applicable, within 12 months of submission of the plan or revision), the Administrator shall act on the submission in accordance with paragraph (3).

"(3) FULL AND PARTIAL APPROVAL AND DISAPPROVAL.—In the case of any submittal on which the Administrator is required to act under paragraph (2), the Administrator shall approve such submittal as a whole if it meets all of the applicable requirements of this Act. If a portion of the plan revision meets all the applicable requirements of this Act, the Administrator may approve the plan revision in part and disapprove the plan revision in part. The plan revision shall not be treated as meeting the requirements of this Act until the Administrator approves the entire plan revision as complying with the applicable requirements of this Act.

"(4) CONDITIONAL APPROVAL.—The Administrator may approve a plan revision based on a commitment of the State to adopt specific enforceable measures by a date certain, but not later than 1 year after the date of approval of the plan revision. Any such conditional approval shall be treated as a disapproval if the State fails to comply with such commitment.

"(5) CALLS FOR PLAN REVISIONS.—Whenever the Administrator finds that the applicable implementation plan for any area is substantially inadequate to attain or maintain the relevant national ambient air quality standard, to mitigate adequately the interstate pollutant transport described in section 176A or section 184, or to otherwise comply with any requirement of this Act, the Administrator shall require the State to revise the plan as necessary to correct such inadequacies. The Administrator shall notify the State of the inadequacies, and may establish reasonable deadlines (not to exceed 18 months after the date of such notice) for the submission of such plan revisions. Such findings and notice shall be public. Any finding under this paragraph shall, to the extent the Administrator deems appropriate, subject the State to the requirements of this Act to which the State was subject when it developed and submitted the plan for which such finding was made, except that the Administrator may adjust any dates applicable under such requirements as appropriate (except that the Administrator may not adjust any attainment date prescribed under part D, unless such date has elapsed).

"(6) CORRECTIONS.—Whenever the Administrator determines that the Administrator's action approving, disapproving, or promulgating any plan or plan revision (or part thereof), area designation, redesignation, classification, or reclassification was in error, the Administrator may in the same manner as the approval, disapproval, or promulgation revise such action as appropriate without requiring any further submission from the State. Such determination and the basis thereof shall be provided to the State and public.

"(l) PLAN REVISIONS.—Each revision to an implementation plan submitted by a State under this Act shall be adopted by such State after reasonable notice and public hearing. The Administrator shall not approve a revision of a plan if the revision would interfere with any applicable requirement concerning attainment and reasonable further progress (as defined in section 171), or any other applicable requirement of this Act.

"(m) SANCTIONS.—The Administrator may apply any of the sanctions listed in section 179(b) at any time (or at any time after) the Administrator makes a finding, disapproval, or determination under paragraphs (1) through (4), respectively, of section 179(a) in relation to any plan or plan item (as that term is defined by the Administrator) required under this Act, with respect to any portion of the State the Administrator determines reasonable and appropriate, for the purpose of ensuring that the requirements of this Act relating to such plan or plan item are met. The Administrator shall, by rule, establish criteria for exercising his authority under the previous sentence with respect to any deficiency referred to in section 179(a) to ensure that, during the 24-month period following the finding, disapproval, or determination referred to in section 179(a), such sanctions are not applied on a statewide basis where one or more political subdivisions covered by the applicable implementation plan are principally responsible for such deficiency.

"(n) SAVINGS CLAUSES.—

"(1) EXISTING PLAN PROVISIONS.—Any provision of any applicable implementation plan that was approved or promulgated by the Administrator pursuant to this section as in effect before the date of the enactment of the Clean Air Act Amendments of 1990 shall remain in effect as part of such applicable implementation plan, except to the extent that a revision to such provision is approved or promulgated by the Administrator pursuant to this Act.

"(2) ATTAINMENT DATES.—For any area not designated nonattainment, any plan or plan revision submitted or required to be submitted by a State—

"(A) in response to the promulgation or revision of a national primary ambient air quality standard in effect on the date of the enactment of the Clean Air Act Amendments of 1990, or

"(B) in response to a finding of substantial inadequacy under subsection (a)(2) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990),

shall provide for attainment of the national primary ambient air quality standards within 3 years of the date of the enactment of the Clean Air Act Amendments of 1990 or within 5 years of issuance of such finding of substantial inadequacy, whichever is later.

"(3) RETENTION OF CONSTRUCTION MORATORIUM IN CERTAIN AREAS.—In the case of an area to which, immediately before the date of the enactment of the Clean Air Act Amendments of 1990, the prohibition on construction or modification of major stationary sources prescribed in subsection (a)(2)(I) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) applied by virtue of a finding of the Administrator that the State containing such area had not submitted an implementation plan meeting the requirements of section 172(b)(6) (relating to establishment of a permit program) (as in effect immediately before the date of enactment of the Clean Air Act Amendments of 1990) or 172(a)(1) (to the extent such requirements relate to provision for attainment of the primary national ambient air quality standard for sulfur oxides by December 31, 1982) as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990, no major stationary source of the relevant air pollutant or pollutants shall be constructed or modified in such area until the Administrator finds that the plan for such area meets the applicable requirements of section 172(c)(5) (relating to permit programs) or subpart 5 of part D (relating to attainment of the primary national ambient air quality standard for sulfur dioxide), respectively.".

(d) CONFORMING AMENDMENTS.—Section 110 (42 U.S.C. 7410) is amended as follows:

(1) Strike out subparagraph (D) of section 110(a)(3).

(2) Strike out paragraph (4) of section 110(a).

(3) In subsection (c)—

(A) strike out subparagraph (A) of paragraph (2);

(B) strike out paragraph (2)(C);

(C) strike out paragraph (4); and

(D) in paragraph (5)(B) strike out "(including the written evidence required by part D),".

(4) Strike subsection (d) and in section 302 (42 U.S.C. 7602) add the following new subsection after subsection (p):

"(q) For purposes of this Act, the term 'applicable implementation plan' means the portion (or portions) of the implementation plan, or most recent revision thereof, which has been approved under section 110, or promulgated under section 110(c), or promulgated or approved pursuant to regulations promulgated under section 301(d) and which implements the relevant requirements of this Act.".

(5) strike out subsection (e).

(6) In subsection (g), strike "the required four month period" and insert "12 months of submission of the proposed plan revision".

(7) In subsection (h)—

(A) strike "one year after the date of enactment of the Clean Air Act Amendments of 1977 and annually thereafter" and insert "5 years after the date of the enactment of the Clean Air Act Amendments of 1990, and every 3 years thereafter"; and

(B) strike the second sentence of paragraph (1).

(8) In subsection (a)(1) strike "nine months" each place it appears and insert "3 years (or such shorter period as the Administrator may prescribe)".

(e) FEDERAL FACILITIES.—Section 118(a) (42 U.S.C. 7418(a)) is amended by inserting ", including fees that meet the requirements of title IV or any other reasonable service charges that are equally applicable to, and paid by, facilities owned or operated by State, regional, or local government entities," immediately after "respecting the control and abatement of air pollution".

(f) CONFORMITY REQUIREMENTS.—Section 176(c) (42 U.S.C. 7506(c)) is amended by striking "(1)", "(2)", "(3)" and "(4)" where they appear, by inserting "(1)" after "(c)", and by adding the following at the end thereof: "Conformity to a plan means—

"(A) conformity to a plan's purpose of eliminating or reducing the severity and number of violations of the national ambient air quality standards and achieving expeditious attainment of such standards; and

"(B) that such activities will not, considering any growth likely to result from such activities—

"(i) cause or contribute to a failure to attain any standard in any area; or

"(ii) delay timely attainment of any standard or any required interim emission reductions.

"(2) In the case of a plan or program developed pursuant to the comprehensive planning process under section 134 of title 23 of the United States Code (hereinafter in this subsection referred to as a 'transportation plan') conformity to a plan approved or promulgated under section 110 (hereinafter in this subsection referred to as an 'applicable implementation plan') shall be determined for the transportation plan taken as a whole and shall not be determined for projects included in such plan, except as provided in paragraphs (3) and (4). In determining conformity in the case of any such transportation plan, subparagraphs (A) and (B) of paragraph (1) shall apply and in addition, the transportation plan shall provide for the implementation of the transportation provisions of the applicable implementation plan in accordance with the schedule set forth in such applicable implementation plan. In making a determination of conformity under subparagraph (A) of paragraph (1), emissions resulting from such plans and programs shall be required to be consistent with baseline emission inventories and emission reduction projections and schedules assigned to those plans and programs in the applicable implementation plan.

"(3) If a transportation plan has been found to conform to an applicable implementation plan as provided in paragraph (2), any project included in such conforming transportation plan shall be treated as conforming to the applicable implementation plan if—

"(A) it is a control measure from the applicable implementation plan; or

"(B) it comes from the conforming transportation plan and the design and scope of such project have not changed since the conformity finding regarding such transportation plan.

"(4) If a transportation plan has been found, within the previous 2-year period, to conform to an applicable implementation plan as provided in paragraph (2), any project not referred to in paragraph (3) shall be treated as conforming to the applicable implementation plan only if it is demonstrated—

"(A) that the projected emissions from such project would not cause the transportation plans and programs within the nonattainment area to exceed the emission reduction projections and schedules assigned to such plans and programs, or

"(B) that any emissions resulting from such project are, before such project is approved, taken into account (i) in a revised transportation plan which conforms as provided in paragraph (2), or (ii) in a revised applicable implementation plan.

"(5) No later than one year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate criteria and procedures for determining conformity (except in the case of transportation plans and projects) of, and for keeping the Administrator informed about, the activities referred to in paragraph (1). No later than one year after such date of enactment, the Administrator, with the concurrence of the Secretary of Transportation, shall promulgate criteria and procedures for demonstrating and assuring conformity in the case of transportation plans and projects. Such procedures shall include a requirement that each State containing an ozone or carbon monoxide nonattainment area shall submit to the Administrator and the Secretary of Transportation, within 24 months after such date of enactment, a revision to its implementation plan that includes, for each such nonattainment area, criteria and procedures for assessing the conformity of any plan, program or project subject to the conformity requirements of this subsection.".

SEC. 102. GENERAL PROVISIONS FOR NONATTAINMENT AREAS.

(a) DEFINITIONS.—(1) Part D of title I is amended by inserting immediately after "PART D—PLAN REQUIREMENTS FOR NONATTAINMENT AREAS" the following:

"Subpart 1—Nonattainment Areas in General

"Sec. 171. Definitions.
"Sec. 172. Nonattainment plan provisions.
"Sec. 173. Permit requirements.
"Sec. 174. Planning procedures.
"Sec. 175. Environmental Protection Agency grants.
"Sec. 176. Limitations on certain Federal assistance.
"Sec. 177. New motor vehicle emission standards in nonattainment areas.
"Sec. 178. Guidance documents.".

(2) Section 171 (42 U.S.C. 7501) is amended as follows:

(A) In the introductory language, strike out "and section 110(a)(2)(I)".

(B) Amend paragraph (1) to read as follows:

"(1) REASONABLE FURTHER PROGRESS.—The term 'reasonable further progress' means such annual incremental reductions in emissions of the relevant air pollutant as are required by this part or may reasonably be required by the Administrator for the purpose of ensuring attainment of the applicable national ambient air quality standard by the applicable date.".

(C) Amend paragraph (2) to read as follows:

"(2) NONATTAINMENT AREA.—The term 'nonattainment area' means, for any air pollutant, an area which is designated 'nonattain-

ment' with respect to that pollutant within the meaning of section 107(d).".

(b) NONATTAINMENT PLAN PROVISIONS IN GENERAL.—Section 172 (42 U.S.C. 7502) is amended to read as follows:

"SEC. 172. NONATTAINMENT PLAN PROVISIONS IN GENERAL.

"(a) CLASSIFICATIONS AND ATTAINMENT DATES.—

"(1) CLASSIFICATIONS.—(A) On or after the date the Administrator promulgates the designation of an area as a nonattainment area pursuant to section 107(d) with respect to any national ambient air quality standard (or any revised standard, including a revision of any standard in effect on the date of the enactment of the Clean Air Act Amendments of 1990), the Administrator may classify the area for the purpose of applying an attainment date pursuant to paragraph (2), and for other purposes. In determining the appropriate classification, if any, for a nonattainment area, the Administrator may consider such factors as the severity of nonattainment in such area and the availability and feasibility of the pollution control measures that the Administrator believes may be necessary to provide for attainment of such standard in such area.

"(B) The Administrator shall publish a notice in the Federal Register announcing each classification under subparagraph (A), except the Administrator shall provide an opportunity for at least 30 days for written comment. Such classification shall not be subject to the provisions of sections 553 through 557 of title 5 of the United States Code (concerning notice and comment) and shall not be subject to judicial review until the Administrator takes final action under subsection (k) or (l) of section 110 (concerning action on plan submissions) or section 179 (concerning sanctions) with respect to any plan submissions required by virtue of such designation.

"(C) This paragraph shall not apply with respect to nonattainment areas for which classifications are specifically provided under other provisions of this part.

"(2) ATTAINMENT DATES FOR NONATTAINMENT AREAS.—(A) The attainment date for an area designated nonattainment with respect to a national primary ambient air quality standard shall be the date by which attainment can be achieved as expeditiously as practicable, but no later than 5 years from the date such area was designated nonattainment under section 107(d), except that the Administrator may extend the attainment date to the extent the Administrator determines appropriate, for a period no greater than 10 years from the date of designation as nonattainment, considering the severity of nonattainment and the availability and feasibility of pollution control measures.

"(B) The attainment date for an area designated nonattainment with respect to a secondary national ambient air quality standard shall be as expeditiously as practicable after the date such area was designated nonattainment under section 107(d).

"(C) Upon application by any State, the Administrator may extend for 1 additional year (hereinafter referred to as the 'Extension Year') the attainment date determined by the Administrator under subparagraph (A) or (B) if—

"(i) the State has complied with all requirements and commitments pertaining to the area in the applicable implementation plan, and

"(ii) in accordance with guidance published by the Administrator, no more than a minimal number of exceedances of the relevant national ambient air quality standard has occurred in the area in the year preceding the Extension Year.

No more than 2 one-year extensions may be issued under this subparagraph for a single nonattainment area.

"(D) This paragraph shall not apply with respect to nonattainment areas for which attainment dates are specifically provided under other provisions of this part.

"(b) SCHEDULE FOR PLAN SUBMISSIONS.—At the time the Administrator promulgates the designation of an area as nonattainment with respect to a national ambient air quality standard under section 107(d), the Administrator shall establish a schedule according to which the State containing such area shall submit a plan or plan revision (including the plan items) meeting the applicable requirements of subsection (c) and section 110(a)(2). Such schedule must, at a minimum, include a date or dates, extending no later than 3 years from the date of the nonattainment designation, for the submission of a plan or plan revision (including the plan items) meeting the applicable requirements of subsection (c) and section 110(a)(2).

"(c) NONATTAINMENT PLAN PROVISIONS.—The plan provisions (including plan items) required to be submitted under this part shall comply with each of the following:

"(1) IN GENERAL.—Such plan provisions shall provide for the implementation of all reasonably available control measures as expeditiously as practicable (including such reductions in emissions from existing sources in the area as may be obtained through the adoption, at a minimum, of reasonably available control technology) and shall provide for attainment of the national primary ambient air quality standards.

"(2) RFP.—Such plan provisions shall require reasonable further progress.

"(3) INVENTORY.—Such plan provisions shall include a comprehensive, accurate, current inventory of actual emissions from all sources of the relevant pollutant or pollutants in such area, including such periodic revisions as the Administrator may determine necessary to assure that the requirements of this part are met.

"(4) IDENTIFICATION AND QUANTIFICATION.—Such plan provisions shall expressly identify and quantify the emissions, if any, of any such pollutant or pollutants which will be allowed, in accordance with section 173(a)(1)(B), from the construction and operation of major new or modified stationary sources in each such area. The plan shall demonstrate to the satisfaction of the Administrator that the emissions quantified for this purpose will be consistent with the achievement of reasonable further progress and will not interfere with attainment of the applicable national ambient air quality standard by the applicable attainment date.

"(5) PERMITS FOR NEW AND MODIFIED MAJOR STATIONARY SOURCES.—Such plan provisions shall require permits for the construction and operation of new or modified major stationary sources anywhere in the nonattainment area, in accordance with section 173.

"(6) OTHER MEASURES.—Such plan provisions shall include enforceable emission limitations, and such other control measures, means or techniques (including economic incentives such as fees, marketable permits, and auctions of emission rights), as well as schedules and timetables for compliance, as may be necessary or appropriate to provide for attainment of such standard in such area by the applicable attainment date specified in this part.

"(7) COMPLIANCE WITH SECTION 110(a)(2).—Such plan provisions shall also meet the applicable provisions of section 110(a)(2).

"(8) EQUIVALENT TECHNIQUES.—Upon application by any State, the Administrator may allow the use of equivalent modeling, emission inventory, and planning procedures, unless the Administrator determines that the proposed techniques are, in the aggregate, less effective than the methods specified by the Administrator.

"(9) CONTINGENCY MEASURES.—Such plan shall provide for the implementation of specific measures to be undertaken if the area fails to make reasonable further progress, or to attain the national primary ambient air quality standard by the attainment date applicable under this part. Such measures shall be included in the plan revision as contingency measures to take effect in any such case without further action by the State or the Administrator.

"(d) PLAN REVISIONS REQUIRED IN RESPONSE TO FINDING OF PLAN INADEQUACY.—Any plan revision for a nonattainment area which is required to be submitted in response to a finding by the Administrator pursuant to section 110(k)(5) (relating to calls for plan revisions) must correct the plan deficiency (or deficiencies) specified by the Administrator and meet all other applicable plan requirements of section 110 and this part. The Administrator may reasonably adjust the dates otherwise applicable under such requirements to such revision (except for attainment dates that have not yet elapsed), to the extent necessary to achieve a consistent application of such requirements. In order to facilitate submittal by the States of adequate and approvable plans consistent with the applicable requirements of this Act, the Administrator shall, as appropriate and from time to time, issue written guidelines, interpretations, and information to the States which shall be available to the public, taking into consideration any such guidelines, interpretations, or information provided before the date of the enactment of the Clean Air Act Amendments of 1990.

"(e) FUTURE MODIFICATION OF STANDARD.—If the Administrator relaxes a national primary ambient air quality standard after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall, within 12 months after the relaxation, promulgate requirements applicable to all areas which have not attained that standard as of the date of such relaxation. Such requirements shall provide for controls which are not less stringent than the controls applicable to areas designated nonattainment before such relaxation.".

(c) NEW SOURCE PERMIT REQUIREMENTS.—Section 173 (42 U.S.C. 7503) is amended as follows:

(1) Strike the center heading and "SEC. 173." and insert:

"SEC. 173. PERMIT REQUIREMENTS.".

(2) Insert "(a) IN GENERAL.—" before the first sentence.

(3) Insert the following after "(1)": "in accordance with regulations issued by the Administrator for the determination of baseline emissions in a manner consistent with the assumptions underlying the applicable implementation plan approved under section 110 and this part,".

(4) Make the following amendments in subparagraph (A) of paragraph (1):

(A) Insert "sufficient offsetting emissions reductions have been obtained, such that" immediately after the comma following "commence operation".

*(B) Strike "allowed under the applicable implementation plan" and insert "(as determined in accordance with the regulations under this paragraph)".*

*(5) Make the following amendments in subparagraph (B) of paragraph (1):*

*(A) Insert "in the case of a new or modified major stationary source which is located in a zone (within the nonattainment area) identified by the Administrator, in consultation with the Secretary of Housing and Urban Development, as a zone to which economic development should be targeted," at the beginning thereof.*

*(B) Strike "'172(b)" and insert "172(c)".*

*(6) Make the following amendments in paragraph (4):*

*(A) Insert "the Administrator has not determined that" after "(4)".*

*(B) Strike "being carried out" and insert "not being adequately implemented".*

*(C) Replace the period at the end thereof with "; and".*

*(7) Add the following new paragraph after paragraph (4):*

*"(5) an analysis of alternative sites, sizes, production processes, and environmental control techniques for such proposed source demonstrates that benefits of the proposed source significantly outweigh the environmental and social costs imposed as a result of its location, construction, or modification.".*

*(8) Strike "(1)(A) shall be legally binding" in the concluding sentence of subsection (a), as redesignated by this subsection and insert "(1) shall be federally enforceable".*

*(9) Add a new subsection (b) to read as follows:*

*"(b) PROHIBITION ON USE OF OLD GROWTH ALLOWANCES.—Any growth allowance included in an applicable implementation plan to meet the requirements of section 172(b)(5) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) shall not be valid for use in any area that received or receives a notice under section 110(a)(2)(H)(ii) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) or under section 110(k)(1) that its applicable implementation plan containing such allowance is substantially inadequate.".*

*(10) Add the following new subsections at the end thereof:*

*"(c) OFFSETS.—(1) The owner or operator of a new or modified major stationary source may comply with any offset requirement in effect under this part for increased emissions of any air pollutant only by obtaining emission reductions of such air pollutant from the same source or other sources in the same nonattainment area, except that the State may allow the owner or operator of a source to obtain such emission reductions in another nonattainment area if (A) the other area has an equal or higher nonattainment classification than the area in which the source is located and (B) emissions from such other area contribute to a violation of the national ambient air quality standard in the nonattainment area in which the source is located. Such emission reductions shall be, by the time a new or modified source commences operation, in effect and enforceable and shall assure that the total tonnage of increased emissions of the air pollutant from the new or modified source shall be offset by an equal or greater reduction, as applicable, in the actual emissions of such air pollutant from the same or other sources in the area.*

*"(2) Emission reductions otherwise required by this Act shall not be creditable as emissions reductions for purposes of any such offset requirement. Incidental emission reductions which are not otherwise required by this Act shall be creditable as emission reductions for such purposes if such emission reductions meet the requirements of paragraph (1).*

*"(d) CONTROL TECHNOLOGY INFORMATION.—The State shall provide that control technology information from permits issued under this section will be promptly submitted to the Administrator for purposes of making such information available through the RACT/BACT/LAER clearinghouse to other States and to the general public.*

*"(e) ROCKET ENGINES OR MOTORS.—The permitting authority of a State shall allow a source to offset by alternative or innovative means emission increases from rocket engine and motor firing, and cleaning related to such firing, at an existing or modified major source that tests rocket engines or motors under the following conditions:*

*"(1) Any modification proposed is solely for the purpose of expanding the testing of rocket engines or motors at an existing source that is permitted to test such engines on the date of enactment of this subsection.*

*"(2) The source demonstrates to the satisfaction of the permitting authority of the State that it has used all reasonable means to obtain and utilize offsets, as determined on an annual basis, for the emissions increases beyond allowable levels, that all available offsets are being used, and that sufficient offsets are not available to the source.*

*"(3) The source has obtained a written finding from the Department of Defense, Department of Transportation, National Aeronautics and Space Administration or other appropriate Federal agency, that the testing of rocket motors or engines at the facility is required for a program essential to the national security.*

*"(4) The source will comply with an alternative measure, imposed by the permitting authority, designed to offset any emission increases beyond permitted levels not directly offset by the source. In lieu of imposing any alternative offset measures, the permitting authority may impose an emissions fee to be paid to such authority of a State which shall be an amount no greater than 1.5 times the average cost of stationary source control measures adopted in that area during the previous 3 years. The permitting authority shall utilize the fees in a manner that maximizes the emissions reductions in that area.".*

*(d) PLANNING PROCEDURES.—Section 174 (42 U.S.C. 7504) is amended to read as follows:*

*"SEC. 174. PLANNING PROCEDURES.*

*"(a) IN GENERAL.—For any ozone or carbon monoxide nonattainment area, the State containing such area and elected officials of affected local governments shall, before the date required for submittal of the inventory described under sections 182(a)(1) and 187(a)(1), jointly review and update as necessary the planning procedures adopted pursuant to this subsection as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990, or develop new planning procedures pursuant to this subsection, as appropriate. In preparing such procedures the State and local elected officials shall determine which elements of a revised implementation plan will be developed, adopted, and implemented (through means including enforcement) by the State and which by local governments or regional agencies, or any combination of local governments, regional agencies, or the State. The implementation plan required by this part shall be prepared by an organization certified by the State, in consultation with elected officials of local governments and in accordance with the determination under the second sentence of this subsection. Such organization shall include elected officials of local governments in the affected area, and representatives of the State air quality planning agency, the State transportation planning agency, the metropolitan planning organization designated to conduct the continuing, cooperative and comprehensive transportation planning process for the area under section 134 of title 23, United States Code, the organization responsible for the air quality maintenance planning process under regulations implementing this Act, and any other organization with responsibilities for developing, submitting, or implementing the plan required by this part. Such organization may be one that carried out these functions before the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(b) COORDINATION.—The preparation of implementation plan provisions and subsequent plan revisions under the continuing transportation-air quality planning process described in section 108(e) shall be coordinated with the continuing, cooperative and comprehensive transportation planning process required under section 134 of title 23, United States Code, and such planning processes shall take into account the requirements of this part.*

*"(c) JOINT PLANNING.—In the case of a nonattainment area that is included within more than one State, the affected States may jointly, through interstate compact or otherwise, undertake and implement all or part of the planning procedures described in this section.".*

*(e) MAINTENANCE PLANS.—After section 175 insert:*

*"SEC. 175A. MAINTENANCE PLANS.*

*"(a) PLAN REVISION.—Each State which submits a request under section 107(d) for redesignation of a nonattainment area for any air pollutant as an area which has attained the national primary ambient air quality standard for that air pollutant shall also submit a revision of the applicable State implementation plan to provide for the maintenance of the national primary ambient air quality standard for such air pollutant in the area concerned for at least 10 years after the redesignation. The plan shall contain such additional measures, if any, as may be necessary to ensure such maintenance.*

*"(b) SUBSEQUENT PLAN REVISIONS.—8 years after redesignation of any area as an attainment area under section 107(d), the State shall submit to the Administrator an additional revision of the applicable State implementation plan for maintaining the national primary ambient air quality standard for 10 years after the expiration of the 10-year period referred to in subsection (a).*

*"(c) NONATTAINMENT REQUIREMENTS APPLICABLE PENDING PLAN APPROVAL.—Until such plan revision is approved and an area is redesignated as attainment for any area designated as a nonattainment area, the requirements of this part shall continue in force and effect with respect to such area.*

*"(d) CONTINGENCY PROVISIONS.—Each plan revision submitted under this section shall contain such contingency provisions as the Administrator deems necessary to assure that the State will promptly correct any violation of the standard which occurs after the*

redesignation of the area as an attainment area. Such provisions shall include a requirement that the State will implement all measures with respect to the control of the air pollutant concerned which were contained in the State implementation plan for the area before redesignation of the area as an attainment area. The failure of any area redesignated as an attainment area to maintain the national ambient air quality standard concerned shall not result in a requirement that the State revise its State implementation plan unless the Administrator, in the Administrator's discretion, requires the State to submit a revised State implementation plan.".

(f) INTERSTATE TRANSPORT PROVISIONS.—

(1) INTERSTATE TRANSPORT COMMISSIONS.—After section 176 (42 U.S.C. 7506) insert:

"SEC. 176A. INTERSTATE TRANSPORT COMMISSIONS.

"(a) AUTHORITY TO ESTABLISH INTERSTATE TRANSPORT REGIONS.—Whenever, on the Administrator's own motion or by petition from the Governor of any State, the Administrator has reason to believe that the interstate transport of air pollutants from one or more States contributes significantly to a violation of a national ambient air quality standard in one or more other States, the Administrator may establish, by rule, a transport region for such pollutant that includes such States. The Administrator, on the Administrator's own motion or upon petition from the Governor of any State, or upon the recommendation of a transport commission established under subsection (b), may—

"(1) add any State or portion of a State to any region established under this subsection whenever the Administrator has reason to believe that the interstate transport of air pollutants from such State significantly contributes to a violation of the standard in the transport region, or

"(2) remove any State or portion of a State from the region whenever the Administrator has reason to believe that the control of emissions in that State or portion of the State pursuant to this section will not significantly contribute to the attainment of the standard in any area in the region.

The Administrator shall approve or disapprove any such petition or recommendation within 18 months of its receipt. The Administrator shall establish appropriate proceedings for public participation regarding such petitions and motions, including notice and comment.

"(b) TRANSPORT COMMISSIONS.—

"(1) ESTABLISHMENT.—Whenever the Administrator establishes a transport region under subsection (a), the Administrator shall establish a transport commission comprised of (at a minimum) each of the following members:

"(A) The Governor of each State in the region or the designee of each such Governor.

"(B) The Administrator or the Administrator's designee.

"(C) The Regional Administrator (or the Administrator's designee) for each Regional Office for each Environmental Protection Agency Region affected by the transport region concerned.

"(D) An air pollution control official representing each State in the region, appointed by the Governor.

Decisions of, and recommendations and requests to, the Administrator by each transport commission may be made only by a majority vote of all members other than the Administrator and the Regional Administrators (or designees thereof).

"(2) RECOMMENDATIONS.—The transport commission shall assess the degree of interstate transport of the pollutant or precursors to the pollutant throughout the transport region, assess strategies for mitigating the interstate pollution, and recommend to the Administrator such measures as the Commission determines to be necessary to ensure that the plans for the relevant States meet the requirements of section 110(a)(2)(D). Such commission shall not be subject to the provisions of the Federal Advisory Committee Act (5 U.S.C. App.).

"(c) COMMISSION REQUESTS.—A transport commission established under subsection (b) may request the Administrator to issue a finding under section 110(k)(5) that the implementation plan for one or more of the States in the transport region is substantially inadequate to meet the requirements of section 110(a)(2)(D). The Administrator shall approve, disapprove, or partially approve and partially disapprove such a request within 18 months of its receipt and, to the extent the Administrator approves such request, issue the finding under section 110(k)(5) at the time of such approval. In acting on such request, the Administrator shall provide an opportunity for public participation and shall address each specific recommendation made by the commission. Approval or disapproval of such a request shall constitute final agency action within the meaning of section 307(b).".

(2) AMENDMENTS CONFORMING TO TRANSPORT PROVISIONS.—Section 106 (42 U.S.C. 7406) is amended as follows:

(A) Insert "or of implementing section 176A (relating to control of interstate air pollution) or section 184 (relating to control of interstate ozone pollution)" immediately following "section 107".

(B) Insert "any commission established under section 176A (relating to control of interstate air pollution) or section 184 (relating to control of interstate ozone pollution) or" immediately following "program costs of".

(C) Insert "or such commission" in the last sentence immediately following "such agency".

(D) Insert "or commission" at the end thereof, immediately before the period.

(g) SANCTIONS.—After section 178 (42 U.S.C. 7508) insert:

"SEC. 179. SANCTIONS AND CONSEQUENCES OF FAILURE TO ATTAIN.

"(a) STATE FAILURE.—For any implementation plan or plan revision required under this part (or required in response to a finding of substantial inadequacy as described in section 110(k)(5)), if the Administrator—

"(1) finds that a State has failed, for an area designated nonattainment under section 107(d), to submit a plan, or to submit 1 or more of the elements (as determined by the Administrator) required by the provisions of this Act applicable to such an area, or has failed to make a submission for such an area that satisfies the minimum criteria established in relation to any such element under section 110(k),

"(2) disapproves a submission under section 110(k), for an area designated nonattainment under section 107, based on the submission's failure to meet one or more of the elements required by the provisions of this Act applicable to such an area,

"(3)(A) determines that a State has failed to make any submission as may be required under this Act, other than one described under paragraph (1) or (2), including an adequate maintenance plan, or has failed to make any submission, as may be required under this Act, other than one described under paragraph (1) or (2), that satisfies the minimum criteria established in relation to such submission under section 110(k)(1)(A), or

"(B) disapproves in whole or in part a submission described under subparagraph (A), or

"(4) finds that any requirement of an approved plan (or approved part of a plan) is not being implemented,

unless such deficiency has been corrected within 18 months after the finding, disapproval, or determination referred to in paragraphs (1), (2), (3), and (4), one of the sanctions referred to in subsection (b) shall apply, as selected by the Administrator, until the Administrator determines that the State has come into compliance, except that if the Administrator finds a lack of good faith, both of such sanctions shall apply until the Administrator determines that the State has come into compliance. If the Administrator has selected one of such sanctions and the deficiency has not been corrected within 6 months thereafter, both of such sanctions shall apply until the Administrator determines that the State has come into compliance. In addition to any other sanction applicable as provided in this section, the Administrator may withhold all or part of the grants for support of air pollution planning and control programs that the Administrator may award under section 105.

"(b) SANCTIONS.—The sanctions referred to in subsection (a) are as follows:

"(1) HIGHWAY FUNDS.—The Secretary of Transportation shall not approve any project or award any grant under title 23, United States Code, other than for safety or mass transit.

"(2) OFFSETS.—In applying the emissions offset requirements of section 173 to new or modified sources or emissions units for which a permit is required under part D, the ratio of emission reductions to increased emissions shall be at least 2 to 1.

"(c) NOTICE OF FAILURE TO ATTAIN.—(1) As expeditiously as practicable after the applicable attainment date for any nonattainment area, but not later than 6 months after such date, the Administrator shall determine, based on the area's air quality as of the attainment date, whether the area attained the standard by that date.

"(2) Upon making the determination under paragraph (1), the Administrator shall publish a notice in the Federal Register containing such determination and identifying each area that the Administrator has determined to have failed to attain. The Administrator may revise or supplement such determination at any time based on more complete information or analysis concerning the area's air quality as of the attainment date.

"(d) CONSEQUENCES FOR FAILURE TO ATTAIN.—(1) Within 1 year after the Administrator publishes the notice under subsection (c)(2) (relating to notice of failure to attain), each State containing a nonattainment area shall submit a revision to the applicable implementation plan meeting the requirements of paragraph (2) of this subsection.

"(2) The revision required under paragraph (1) shall meet the requirements of section 110 and section 172. In addition, the revision shall include such additional measures as the Administrator may reasonably prescribe, including all measures that can be feasibly implemented in the area in light of

technological achievability, costs, and any nonair quality and other air quality-related health and environmental impacts.

"(3) The attainment date applicable to the revision required under paragraph (1) shall be the same as provided in the provisions of section 172(a)(2), except that in applying such provisions the phrase 'from the date of the notice under section 179(c)(2)' shall be substituted for the phrase 'from the date such area was designated nonattainment under section 107(d)' and for the phrase 'from the date of designation as nonattainment'.".

(h) FEDERAL IMPLEMENTATION PLANS.—Section 110(c)(1) (42 U.S.C. 7410(c)) is amended to read as follows: "(1) The Administrator shall promulgate a Federal implementation plan at any time within 2 years after the Administrator—

"(A) finds that a State has failed to make a required submission or finds that the plan or plan revision submitted by the State does not satisfy the minimum criteria established under section 110(k)(1)(A), or

"(B) disapproves a State implementation plan submission in whole or in part.".

SEC. 103. ADDITIONAL PROVISIONS FOR OZONE NONATTAINMENT AREAS.

Part D of title I is amended by adding the following new subpart at the end thereof:

**"Subpart 2—Additional Provisions for Ozone Nonattainment Areas**

"Sec. 181. Classifications and attainment dates.
"Sec. 182. Plan submissions and requirements.
"Sec. 183. Federal ozone measures.
"Sec. 184. Control of interstate ozone air pollution.
"Sec. 185. Enforcement for Severe and Extreme ozone nonattainment areas for failure to attain.
"Sec. 185A. Transitional areas.
"Sec. 185B. $NO_x$ and VOC study.

"SEC. 181. CLASSIFICATIONS AND ATTAINMENT DATES.

"(a) CLASSIFICATION AND ATTAINMENT DATES FOR 1989 NONATTAINMENT AREAS.—(1) Each area designated nonattainment for ozone pursuant to section 107(d) shall be classified at the time of such designation, under table 1, by operation of law, as a Marginal Area, a Moderate Area, a Serious Area, a Severe Area, or an Extreme Area based on the design value for the area. The design value shall be calculated according to the interpretation methodology issued by the Administrator most recently before the date of the enactment of the Clean Air Act Amendments of 1990. For each area classified under this subsection, the primary standard attainment date for ozone shall be as expeditiously as practicable but not later than the date provided in table 1.

"TABLE 1

| Area class | Design value * | Primary standard attainment date ** |
|---|---|---|
| Marginal | 0.121 up to 0.138. | 3 years after enactment |
| Moderate | 0.138 up to 0.160. | 6 years after enactment |
| Serious | 0.160 up to 0.180. | 9 years after enactment |
| Severe | 0.180 up to 0.280. | 15 years after enactment |
| Extreme | 0.280 and above. | 20 years after enactment |

* The design value is measured in parts per million (ppm).

** The primary standard attainment date is measured from the date of the enactment of the Clean Air Amendments of 1990.

"(2) Notwithstanding table 1, in the case of a severe area with a 1988 ozone design value between 0.190 and 0.280 ppm, the attainment date shall be 17 years (in lieu of 15 years) after the date of the enactment of the Clean Air Amendments of 1990.

"(3) At the time of publication of the notice under section 107(d)(4) (relating to area designations) for each ozone nonattainment area, the Administrator shall publish a notice announcing the classification of such ozone nonattainment area. The provisions of section 172(a)(1)(B) (relating to lack of notice and comment and judicial review) shall apply to such classification.

"(4) If an area classified under paragraph (1) (Table 1) would have been classified in another category if the design value in the area were 5 percent greater or 5 percent less than the level on which such classification was based, the Administrator may, in the Administrator's discretion, within 90 days after the initial classification, by the procedure required under paragraph (3), adjust the classification to place the area in such other category. In making such adjustment, the Administrator may consider the number of exceedances of the national primary ambient air quality standard for ozone in the area, the level of pollution transport between the area and other affected areas, including both intrastate and interstate transport, and the mix of sources and air pollutants in the area.

"(5) Upon application by any State, the Administrator may extend for 1 additional year (hereinafter referred to as the 'Extension Year') the date specified in table 1 of subsection (a) if—

"(A) the State has complied with all requirements and commitments pertaining to the area in the applicable implementation plan, and

"(B) no more than 1 exceedance of the national ambient air quality standard level for ozone has occurred in the area in the year preceding the Extension Year.

No more than 2 one-year extensions may be issued under this paragraph for a single nonattainment area.

"(b) NEW DESIGNATIONS AND RECLASSIFICATIONS.—

"(1) NEW DESIGNATIONS TO NONATTAINMENT.—Any area that is designated attainment or unclassifiable for ozone under section 107(d)(4), and that is subsequently redesignated to nonattainment for ozone under section 107(d)(3), shall, at the time of the redesignation, be classified by operation of law in accordance with table 1 under subsection (a). Upon its classification, the area shall be subject to the same requirements under section 110, subpart 1 of this part, and this subpart that would have applied had the area been so classified at the time of the notice under subsection (a)(3), except that any absolute, fixed date applicable in connection with any such requirement is extended by operation of law by a period equal to the length of time between the date of the enactment of the Clean Air Act Amendments of 1990 and the date the area is classified under this paragraph.

"(2) RECLASSIFICATION UPON FAILURE TO ATTAIN.—(A) Within 6 months following the applicable attainment date (including any extension thereof) for an ozone nonattainment area, the Administrator shall determine, based on the area's design value (as of the attainment date), whether the area attained the standard by that date. Except for any Severe or Extreme area, any area that the Administrator finds has not attained the standard by that date shall be reclassified by operation of law in accordance with table 1 of subsection (a) to the higher of—

"(i) the next higher classification for the area, or

"(ii) the classification applicable to the area's design value as determined at the time of the notice required under subparagraph (B).

No area shall be reclassified as Extreme under clause (ii).

"(B) The Administrator shall publish a notice in the Federal Register, no later than 6 months following the attainment date, identifying each area that the Administrator has determined under subparagraph (A) as having failed to attain and identifying the reclassification, if any, described under subparagraph (A).

"(3) VOLUNTARY RECLASSIFICATION.—The Administrator shall grant the request of any State to reclassify a nonattainment area in that State in accordance with table 1 of subsection (a) to a higher classification. The Administrator shall publish a notice in the Federal Register of any such request and of action by the Administrator granting the request.

"(4) FAILURE OF SEVERE AREAS TO ATTAIN STANDARD.—(A) If any Severe Area fails to achieve the national primary ambient air quality standard for ozone by the applicable attainment date (including any extension thereof), the fee provisions under section 185 shall apply within the area, the percent reduction requirements of section 182(c)(2)(B) and (C) (relating to reasonable further progress demonstration and $NO_x$ control) shall continue to apply to the area, and the State shall demonstrate that such percent reduction has been achieved in each 3-year interval after such failure until the standard is attained. Any failure to make such a demonstration shall be subject to the sanctions provided under this part.

"(B) In addition to the requirements of subparagraph (A), if the ozone design value for a Severe Area referred to in subparagraph (A) is above 0.140 ppm for the year of the applicable attainment date, or if the area has failed to achieve its most recent milestone under section 182(g), the new source review requirements applicable under this subpart in Extreme Areas shall apply in the area and the term 'major source' and 'major stationary source' shall have the same meaning as in Extreme Areas.

"(C) In addition to the requirements of subparagraph (A) for those areas referred to in subparagraph (A) and not covered by subparagraph (B), the provisions referred to in subparagraph (B) shall apply after 3 years from the applicable attainment date unless the area has attained the standard by the end of such 3-year period.

"(D) If, after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator modifies the method of determining compliance with the national primary ambient air quality standard, a design value or other indicator comparable to 0.140 in terms of its relationship to the standard shall be used in lieu of 0.140 for purposes of applying the provisions of subparagraphs (B) and (C).

"(c) REFERENCES TO TERMS.—(1) Any reference in this subpart to a 'Marginal Area', a 'Moderate Area', a 'Serious Area', a 'Severe Area', or an 'Extreme Area' shall be considered a reference to a Marginal Area, a Mod-

*erate Area, a Serious Area, a Severe Area, or an Extreme Area as respectively classified under this section.*

*"(2) Any reference in this subpart to 'next higher classification' or comparable terms shall be considered a reference to the classification related to the next higher set of design values in table 1.*

*"SEC. 182. PLAN SUBMISSIONS AND REQUIREMENTS.*

*"(a) MARGINAL AREAS.—Each State in which all or part of a Marginal Area is located shall, with respect to the Marginal Area (or portion thereof, to the extent specified in this subsection), submit to the Administrator the State implementation plan revisions (including the plan items) described under this subsection except to the extent the State has made such submissions as of the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(1) INVENTORY.—Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a comprehensive, accurate, current inventory of actual emissions from all sources, as described in section 172(c)(3), in accordance with guidance provided by the Administrator.*

*"(2) CORRECTIONS TO THE STATE IMPLEMENTATION PLAN.—Within the periods prescribed in this paragraph, the State shall submit a revision to the State implementation plan that meets the following requirements—*

*"(A) REASONABLY AVAILABLE CONTROL TECHNOLOGY CORRECTIONS.—For any Marginal Area (or, within the Administrator's discretion, portion thereof) the State shall submit, within 6 months of the date of classification under section 181(a), a revision that includes such provisions to correct requirements in (or add requirements to) the plan concerning reasonably available control technology as were required under section 172(b) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990), as interpreted in guidance issued by the Administrator under section 108 before the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(B) SAVINGS CLAUSE FOR VEHICLE INSPECTION AND MAINTENANCE.—(i) For any Marginal Area (or, within the Administrator's discretion, portion thereof), the plan for which already includes, or was required by section 172(b)(11)(B) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) to have included, a specific schedule for implementation of a vehicle emission control inspection and maintenance program, the State shall submit, immediately after the date of the enactment of the Clean Air Act Amendments of 1990, a revision that includes any provisions necessary to provide for a vehicle inspection and maintenance program of no less stringency than that of either the program defined in House Report Numbered 95-294, 95th Congress, 1st Session, 281-291 (1977) as interpreted in guidance of the Administrator issued pursuant to section 172(b)(11)(B) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) or the program already included in the plan, whichever is more stringent.*

*"(ii) Within 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall review, revise, update, and republish in the Federal Register the guidance for the States for motor vehicle inspection and maintenance programs required by this Act, taking into consideration the Administrator's investigations and audits of such program. The guidance shall, at a minimum, cover the frequency of inspections, the types of vehicles to be inspected (which shall include leased vehicles that are registered in the nonattainment area), vehicle maintenance by owners and operators, audits by the State, the test method and measures, including whether centralized or decentralized, inspection methods and procedures, quality of inspection, components covered, assurance that a vehicle subject to a recall notice from a manufacturer has complied with that notice, and effective implementation and enforcement, including ensuring that any retesting of a vehicle after a failure shall include proof of corrective action and providing for denial of vehicle registration in the case of tampering or misfueling. The guidance which shall be incorporated in the applicable State implementation plans by the States shall provide the States with continued reasonable flexibility to fashion effective, reasonable, and fair programs for the affected consumer. No later than 2 years after the Administrator promulgates regulations under section 202(m)(3) (relating to emission control diagnostics), the State shall submit a revision to such program to meet any requirements that the Administrator may prescribe under that section.*

*"(C) PERMIT PROGRAMS.—Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision that includes each of the following:*

*"(i) Provisions to require permits, in accordance with sections 172(c)(5) and 173, for the construction and operation of each new or modified major stationary source (with respect to ozone) to be located in the area.*

*"(ii) Provisions to correct requirements in (or add requirements to) the plan concerning permit programs as were required under section 172(b)(6) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990), as interpreted in regulations of the Administrator promulgated as of the date of the enactment of the Clean Air Act Amendments of 1990.*

*"(3) PERIODIC INVENTORY.—*

*"(A) GENERAL REQUIREMENT.—No later than the end of each 3-year period after submission of the inventory under paragraph (1) until the area is redesignated to attainment, the State shall submit a revised inventory meeting the requirements of subsection (a)(1).*

*"(B) EMISSIONS STATEMENTS.—(i) Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to the State implementation plan to require that the owner or operator of each stationary source of oxides of nitrogen or volatile organic compounds provide the State with a statement, in such form as the Administrator may prescribe (or accept an equivalent alternative developed by the State), for classes or categories of sources, showing the actual emissions of oxides of nitrogen and volatile organic compounds from that source. The first such statement shall be submitted within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990. Subsequent statements shall be submitted at least every year thereafter. The statement shall contain a certification that the information contained in the statement is accurate to the best knowledge of the individual certifying the statement.*

*"(ii) The State may waive the application of subparagraph (A) to any class or category of stationary sources which emit less than 25 tons per year of volatile organic compounds or oxides of nitrogen if the State, in its submissions under subparagraphs (1) or (3)(A), provides an inventory of emissions from such class or category of sources, based on the use of the emission factors established by the Administrator or other methods acceptable to the Administrator.*

*"(4) GENERAL OFFSET REQUIREMENT.—For purposes of satisfying the emission offset requirements of this part, the ratio of total emission reductions of volatile organic compounds to total increase emissions of such air pollutant shall be at least 1.1 to 1.*

*The Administrator may, in the Administrator's discretion, require States to submit a schedule for submitting any of the revisions or other items required under this subsection. The requirements of this subsection shall apply in lieu of any requirement that the State submit a demonstration that the applicable implementation plan provides for attainment of the ozone standard by the applicable attainment date in any Marginal area. Section 172(c)(9) (relating to contingency measures) shall not apply to Marginal Areas.*

*"(b) MODERATE AREAS.—Each State in which all or part of a Moderate Area is located shall, with respect to the Moderate Area, make the submissions described under subsection (a) (relating to Marginal Areas), and shall also submit the revisions to the applicable implementation plan described under this subsection.*

*"(1) PLAN PROVISIONS FOR REASONABLE FURTHER PROGRESS.—*

*"(A) GENERAL RULE.—(i) By no later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to the applicable implementation plan to provide for volatile organic compound emission reductions, within 6 years after the date of the enactment of the Clean Air Act Amendments of 1990, of at least 15 percent from baseline emissions, accounting for any growth in emissions after the year in which the Clean Air Act Amendments of 1990 are enacted. Such plan shall provide for such specific annual reductions in emissions of volatile organic compounds and oxides of nitrogen as necessary to attain the national primary ambient air quality standard for ozone by the attainment date applicable under this Act. This subparagraph shall not apply in the case of oxides of nitrogen for those areas for which the Administrator determines (when the Administrator approves the plan or plan revision) that additional reductions of oxides of nitrogen would not contribute to attainment.*

*"(ii) A percentage less than 15 percent may be used for purposes of clause (i) in the case of any State which demonstrates to the satisfaction of the Administrator that—*

*"(I) new source review provisions are applicable in the nonattainment areas in the same manner and to the same extent as required under subsection (e) in the case of Extreme Areas (with the exception that, in applying such provisions, the terms 'major source' and 'major stationary source' shall include (in addition to the sources described in section 302) any stationary source or group of sources located within a contiguous area and under common control that emits, or has the potential to emit, at least 5 tons per year of volatile organic compounds);*

*"(II) reasonably available control technology is required for all existing major sources (as defined in subclause (I)); and*

"(III) the plan reflecting a lesser percentage than 15 percent includes all measures that can feasibly be implemented in the area, in light of technological achievability.

To qualify for a lesser percentage under this clause, a State must demonstrate to the satisfaction of the Administrator that the plan for the area includes the measures that are achieved in practice by sources in the same source category in nonattainment areas of the next higher category.

"(B) BASELINE EMISSIONS.—For purposes of subparagraph (A), the term 'baseline emissions' means the total amount of actual VOC or $NO_x$ emissions from all anthropogenic sources in the area during the calendar year of the enactment of the Clean Air Act Amendments of 1990, excluding emissions that would be eliminated under the regulations described in clauses (i) and (ii) of subparagraph (D).

"(C) GENERAL RULE FOR CREDITABILITY OF REDUCTIONS.—Except as provided under subparagraph (D), emissions reductions are creditable toward the 15 percent required under subparagraph (A) to the extent they have actually occurred, as of 6 years after the date of the enactment of the Clean Air Act Amendments of 1990, from the implementation of measures required under the applicable implementation plan, rules promulgated by the Administrator, or a permit under title IV.

"(D) LIMITS ON CREDITABILITY OF REDUCTIONS.—Emission reductions from the following measures are not creditable toward the 15 percent reductions required under subparagraph (A):

"(i) Any measure relating to motor vehicle exhaust or evaporative emissions promulgated by the Administrator by January 1, 1990.

"(ii) Regulations concerning Reid Vapor Pressure promulgated by the Administrator by the date of the enactment of the Clean Air Act Amendments of 1990 or required to be promulgated under section 211(h).

"(iii) Measures required under subsection (a)(2)(A) (concerning corrections to implementation plans prescribed under guidance by the Administrator).

"(iv) Measures required under subsection (a)(2)(B) to be submitted immediately after the date of the enactment of the Clean Air Act Amendments of 1990 (concerning corrections to motor vehicle inspection and maintenance programs).

"(2) REASONABLY AVAILABLE CONTROL TECHNOLOGY.—The State shall submit a revision to the applicable implementation plan to include provisions to require the implementation of reasonably available control technology under section 172(c)(1) with respect to each of the following:

"(A) Each category of VOC sources in the area covered by a CTG document issued by the Administrator between the date of the enactment of the Clean Air Act Amendments of 1990 and the date of attainment.

"(B) All VOC sources in the area covered by any CTG issued before the date of the enactment of the Clean Air Act Amendments of 1990.

"(C) All other major stationary sources of VOCs that are located in the area.

Each revision described in subparagraph (A) shall be submitted within the period set forth by the Administrator in issuing the relevant CTG document. The revisions with respect to sources described in subparagraphs (B) and (C) shall be submitted by 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, and shall provide for the implementation of the required measures as expeditiously as practicable but no later than May 31, 1995.

"(3) GASOLINE VAPOR RECOVERY.—

"(A) GENERAL RULE.—Not later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to the applicable implementation plan to require all owners or operators of gasoline dispensing systems to install and operate, by the date prescribed under subparagraph (B), a system for gasoline vapor recovery of emissions from the fueling of motor vehicles. The Administrator shall issue guidance as appropriate as to the effectiveness of such system. This subparagraph shall apply only to facilities which sell more than 10,000 gallons of gasoline per month (50,000 gallons per month in the case of an independent small business marketer of gasoline as defined in section 325).

"(B) EFFECTIVE DATE.—The date required under subparagraph (A) shall be—

"(i) 6 months after the adoption date, in the case of gasoline dispensing facilities for which construction commenced after the date of the enactment of the Clean Air Act Amendments of 1990;

"(ii) one year after the adoption date, in the case of gasoline dispensing facilities which dispense at least 100,000 gallons of gasoline per month, based on average monthly sales for the 2-year period before the adoption date; or

"(iii) 2 years after the adoption date, in the case of all other gasoline dispensing facilities.

Any gasoline dispensing facility described under both clause (i) and clause (ii) shall meet the requirements of clause (i).

"(C) REFERENCE TO TERMS.—For purposes of this paragraph, any reference to the term 'adoption date' shall be considered a reference to the date of adoption by the State of requirements for the installation and operation of a system for gasoline vapor recovery of emissions from the fueling of motor vehicles.

"(4) MOTOR VEHICLE INSPECTION AND MAINTENANCE.—For all Moderate Areas, the State shall submit, immediately after the date of the enactment of the Clean Air Act Amendments of 1990, a revision to the applicable implementation plan that includes provisions necessary to provide for a vehicle inspection and maintenance program as described in subsection (a)(2)(B) (without regard to whether or not the area was required by section 172(b)(11)(B) (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) to have included a specific schedule for implementation of such a program).

"(5) GENERAL OFFSET REQUIREMENT.—For purposes of satisfying the emission offset requirements of this part, the ratio of total emission reductions of volatile organic compounds to total increase emissions of such air pollutant shall be at least 1.15 to 1.

"(c) SERIOUS AREAS.—Except as otherwise specified in paragraph (4), each State in which all or part of a Serious Area is located shall, with respect to the Serious Area (or portion thereof, to the extent specified in this subsection), make the submissions described under subsection (b) (relating to Moderate Areas), and shall also submit the revisions to the applicable implementation plan (including the plan items) described under this subsection. For any Serious Area, the terms 'major source' and 'major stationary source' include (in addition to the sources described in section 302) any stationary source or group of sources located within a contiguous area and under common control that emits, or has the potential to emit, at least 50 tons per year of volatile organic compounds.

"(1) ENHANCED MONITORING.—In order to obtain more comprehensive and representative data on ozone air pollution, not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990 the Administrator shall promulgate rules, after notice and public comment, for enhanced monitoring of ozone, oxides of nitrogen, and volatile organic compounds. The rules shall, among other things, cover the location and maintenance of monitors. Immediately following the promulgation of rules by the Administrator relating to enhanced monitoring, the State shall commence such actions as may be necessary to adopt and implement a program based on such rules, to improve monitoring for ambient concentrations of ozone, oxides of nitrogen and volatile organic compounds and to improve monitoring of emissions of oxides of nitrogen and volatile organic compounds. Each State implementation plan for the area shall contain measures to improve the ambient monitoring of such air pollutants.

"(2) ATTAINMENT AND REASONABLE FURTHER PROGRESS DEMONSTRATIONS.—Within 4 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to the applicable implementation plan that includes each of the following:

"(A) ATTAINMENT DEMONSTRATION.—A demonstration that the plan, as revised, will provide for attainment of the ozone national ambient air quality standard by the applicable attainment date. This attainment demonstration must be based on photochemical grid modeling or any other analytical method determined by the Administrator, in the Administrator's discretion, to be at least as effective.

"(B) REASONABLE FURTHER PROGRESS DEMONSTRATION.—A demonstration that the plan, as revised, will result in VOC emissions reductions from the baseline emissions described in subsection (b)(1)(B) equal to the following amount averaged over each consecutive 3-year period beginning 6 years after the date of the enactment of the Clean Air Act Amendments of 1990, until the attainment date:

"(i) at least 3 percent of baseline emissions each year; or

"(ii) an amount less than 3 percent of such baseline emissions each year, if the State demonstrates to the satisfaction of the Administrator that the plan reflecting such lesser amount includes all measures that can feasibly be implemented in the area, in light of technological achievability.

To lessen the 3 percent requirement under clause (ii), a State must demonstrate to the satisfaction of the Administrator that the plan for the area includes the measures that are achieved in practice by sources in the same source category in nonattainment areas of the next higher classification. Any determination to lessen the 3 percent requirement shall be reviewed at each milestone under section 182(g) and revised to reflect such new measures (if any) achieved in practice by sources in the same category in any State, allowing a reasonable time to implement such measures. The emission reductions described in this subparagraph shall be calculated in accordance with subsection (b)(1) (C) and (D) (concerning creditability of reductions). The reductions creditable for the period beginning 6 years after the date of the enactment of the Clean Air Act

Amendments of 1990, shall include reductions that occurred before such period, computed in accordance with subsection (b)(1), that exceed the 15-percent amount of reductions required under subsection (b)(1)(A).

"(C) $NO_x$ CONTROL.—The revision may contain, in lieu of the demonstration required under subparagraph (B), a demonstration to the satisfaction of the Administrator that the applicable implementation plan, as revised, provides for reductions of emissions of VOC's and oxides of nitrogen (calculated according to the creditability provisions of subsection (b)(1) (C) and (D)), that would result in a reduction in ozone concentrations at least equivalent to that which would result from the amount of VOC emission reductions required under subparagraph (B). Within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue guidance concerning the conditions under which $NO_x$ control may be substituted for VOC control or may be combined with VOC control in order to maximize the reduction in ozone air pollution. In accord with such guidance, a lesser percentage of VOCs may be accepted as an adequate demonstration for purposes of this subsection.

"(3) ENHANCED VEHICLE INSPECTION AND MAINTENANCE PROGRAM.—

"(A) REQUIREMENT FOR SUBMISSION.—Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to the applicable implementation plan to provide for an enhanced program to reduce hydrocarbon emissions and $NO_x$ emissions from in-use motor vehicles registered in each urbanized area (in the nonattainment area), as defined by the Bureau of the Census, with a 1980 population of 200,000 or more.

"(B) EFFECTIVE DATE OF STATE PROGRAMS; GUIDANCE.—The State program required under subparagraph (A) shall take effect no later than 2 years from the date of the enactment of the Clean Air Act Amendments of 1990, and shall comply in all respects with guidance published in the Federal Register (and from time to time revised) by the Administrator for enhanced vehicle inspection and maintenance programs. Such guidance shall include—

"(i) a performance standard achievable by a program combining emission testing, including on-road emission testing, with inspection to detect tampering with emission control devices and misfueling for all light-duty vehicles and all light-duty trucks subject to standards under section 202; and

"(ii) program administration features necessary to reasonably assure that adequate management resources, tools, and practices are in place to attain and maintain the performance standard.

Compliance with the performance standard under clause (i) shall be determined using a method to be established by the Administrator.

"(C) STATE PROGRAM.—The State program required under subparagraph (A) shall include, at a minimum, each of the following elements—

"(i) Computerized emission analyzers, including on-road testing devices.

"(ii) No waivers for vehicles and parts covered by the emission control performance warranty as provided for in section 207(b) unless a warranty remedy has been denied in writing, or for tampering-related repairs.

"(iii) In view of the air quality purpose of the program, if, for any vehicle, waivers are permitted for emissions-related repairs not covered by warranty, an expenditure to qualify for the waiver of an amount of $450 or more for such repairs (adjusted annually as determined by the Administrator on the basis of the Consumer Price Index in the same manner as provided in title IV).

"(iv) Enforcement through denial of vehicle registration (except for any program in operation before the date of the enactment of the Clean Air Act Amendments of 1990 whose enforcement mechanism is demonstrated to the Administrator to be more effective than the applicable vehicle registration program in assuring that noncomplying vehicles are not operated on public roads).

"(v) Annual emission testing and necessary adjustment, repair, and maintenance, unless the State demonstrates to the satisfaction of the Administrator that a biennial inspection, in combination with other features of the program which exceed the requirements of this Act, will result in emission reductions which equal or exceed the reductions which can be obtained through such annual inspections.

"(vi) Operation of the program on a centralized basis, unless the State demonstrates to the satisfaction of the Administrator that a decentralized program will be equally effective. An electronically connected testing system, a licensing system, or other measures (or any combination thereof) may be considered, in accordance with criteria established by the Administrator, as equally effective for such purposes.

"(vii) Inspection of emission control diagnostic systems and the maintenance or repair of malfunctions or system deterioration identified by or affecting such diagnostics systems.

Each State shall biennially prepare a report to the Administrator which assesses the emission reductions achieved by the program required under this paragraph based on data collected during inspection and repair of vehicles. The methods used to assess the emission reductions shall be those established by the Administrator.

"(4) CLEAN-FUEL VEHICLE PROGRAMS.—(A) Except to the extent that substitute provisions have been approved by the Administrator under subparagraph (B), the State shall submit to the Administrator, within 42 months of the date of the enactment of the Clean Air Act Amendments of 1990, a revision to the applicable implementation plan for each area described under section 212 to include such measures as may be necessary to ensure the effectiveness of the applicable provisions of the clean-fuel vehicle program prescribed under section 212, including all measures necessary to make the use of clean alternative fuels in clean-fuel vehicles (as defined in section 216) economic from the standpoint of vehicle owners. Such a revision shall also be submitted for each area that opts into the clean fuel-vehicle program as provided in section 212.

"(B) The Administrator shall approve, as a substitute for all or a portion of the clean-fuel vehicle program prescribed under section 212, any revision to the relevant applicable implementation plan that in the Administrator's judgment will achieve long-term reductions in ozone-producing and toxic air emissions equal to those achieved under section 212, or the percentage thereof attributable to the portion of the clean-fuel vehicle program for which the revision is to substitute. The Administrator may approve such revision only if it consists exclusively of provisions other than those required under this Act for the area. Any State seeking approval of such revision must submit the revision to the Administrator within 24 months of the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall approve or disapprove any such revision within 30 months of the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall publish the revision submitted by a State in the Federal Register upon receipt. Such notice shall constitute a notice of proposed rulemaking on whether or not to approve such revision and shall be deemed to comply with the requirements concerning notices of proposed rulemaking contained in sections 553 through 557 of title 5 of the United States Code (related to notice and comment). Where the Administrator approves such revision for any area, the State need not submit the revision required by subparagraph (A) for the area with respect to the portions of the Federal clean-fuel vehicle program for which the Administrator has approved the revision as a substitute.

"(C) Where the Administrator approves under section 214 any market-based alternative emissions reduction plan applicable in an area, the Administrator may approve a plan revision for the area providing for changes to the plan provisions otherwise required by this paragraph to ensure consistency with such alternative emissions reduction plan.

"(D) If the Administrator determines, under section 179, that the State has failed to submit any portion of the program required under subparagraph (A), then, in addition to any sanctions available under section 179, the State may not receive credit, in any demonstration of attainment or reasonable further progress for the area, for any emission reductions from implementation of the corresponding aspects of the Federal clean-fuel vehicle requirements established in section 212.

"(5) TRANSPORTATION CONTROL.—(A) Beginning 6 years after the date of the enactment of the Clean Air Act Amendments of 1990 and each third year thereafter, the State shall submit a demonstration as to whether current aggregate vehicle mileage, aggregate vehicle emissions, congestion levels, and other relevant parameters are consistent with those used for the area's demonstration of attainment. Where such parameters and emissions levels exceed the levels projected for purposes of the area's attainment demonstration, the State shall within 18 months develop and submit a revision of the applicable implementation plan that includes a transportation control measures program consisting of measures that will reduce emissions to levels that are consistent with emissions levels projected in such demonstration. The revision shall be developed in accordance with guidance issued by the Administrator pursuant to section 108(f) and shall include implementation and funding schedules that achieve expeditious emissions reductions in accordance with implementation plan projections. In the alternative, the State may offset the impact of increased vehicle miles traveled and congestion levels by implementing other controls on other source categories that will produce reductions comparable to those that would be achieved by implementation of such transportation demand management program, consistent with the emission reduction schedules in the plan.

"(B) Any plan revision under this subsection shall include measures to reduce congestion, including passenger vehicle trips and miles traveled per trip.

"(6) DE MINIMIS RULE.—The new source review provisions under this part shall ensure that increased emissions of volatile organic compounds resulting from any physical change in, or change in the method of operation of, a stationary source located in the area shall not be considered de minimis for purposes of determining the applicability of the permit requirements established by this Act unless the increase in net emissions of such air pollutant from such source does not exceed 25 tons when aggregated with all other net increases in emissions from the source over any period of 5 consecutive calendar years which includes the calendar year in which such increase occurred.

"(7) SPECIAL RULE FOR MODIFICATIONS OF SOURCES EMITTING LESS THAN 100 TONS.—In the case of any major stationary source of volatile organic compounds located in the area (other than a source which emits or has the potential to emit 100 tons or more of volatile organic compounds per year), whenever any change (as described in section 111(a)(4)) at that source results in any increase (other than a de minimis increase) in emissions of volatile organic compounds from any discrete operation, unit, or other pollutant emitting activity at the source, such increase shall be considered a modification for purposes of section 172(c)(5) and section 173(a), except that such increase shall not be considered a modification for such purposes if the owner or operator of the source elects to offset the increase by a greater reduction in emissions of volatile organic compounds concerned from other operations, units, or activities within the source at an internal offset ratio of at least 1.3 to 1. If the owner or operator does not make such election, such change shall be considered a modification for such purposes, but in applying section 173(a)(2) in the case of any such modification, the best available control technology (BACT), as defined in section 169, shall be substituted for the lowest achievable emission rate (LAER). The Administrator shall establish and publish policies and procedures for implementing the provisions of this paragraph.

"(8) SPECIAL RULE FOR MODIFICATIONS OF SOURCES EMITTING 100 TONS OR MORE.—In the case of any major stationary source of volatile organic compounds located in the area which emits or has the potential to emit 100 tons or more of volatile organic compounds per year, whenever any change (as described in section 111(a)(4)) at that source results in any increase (other than a de minimis increase) in emissions of volatile organic compounds from any discrete operation, unit, or other pollutant emitting activity at the source, such increase shall be considered a modification for purposes of section 172(c)(5) and section 173(a), except that if the owner or operator of the source elects to offset the increase by a greater reduction in emissions of volatile organic compounds from other operations, units, or activities within the source at an internal offset ratio of at least 1.3 to 1, the requirements of section 173(a)(2) (concerning the lowest achievable emission rate (LAER)) shall not apply.

"(9) CONTINGENCY PROVISIONS.—In addition to the contingency provisions required under section 172(c)(9), the plan revision shall provide for the implementation of specific measures to be undertaken if the area fails to meet any applicable milestone. Such measures shall be included in the plan revision as contingency measures to take effect without further action by the State or the Administrator upon a failure by the State to meet the applicable milestone.

"(10) GENERAL OFFSET REQUIREMENT.—For purposes of satisfying the emission offset requirements of this part, the ratio of total emission reductions of volatile organic compounds to total increase emissions of such air pollutant shall be at least 1.2 to 1.

Any reference to 'attainment date' in subsection (b), which is incorporated by reference into this subsection, shall refer to the attainment date for serious areas.

"(d) SEVERE AREAS.—Each State in which all or part of a Severe Area is located shall, with respect to the Severe Area, make the submissions described under subsection (c) (relating to Serious Areas), and shall also submit the revisions to the applicable implementation plan (including the plan items) described under this subsection. For any Severe Area, the terms 'major source' and 'major stationary source' include (in addition to the sources described in section 302) any stationary source or group of sources located within a contiguous area and under common control that emits, or has the potential to emit, at least 25 tons per year of volatile organic compounds.

"(1) VEHICLE MILES TRAVELED.—Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision that includes all reasonably available techniques for reducing aggregate vehicle emissions and, at a minimum, identifies and adopts specific enforceable strategies and transportation control measures to offset any growth in emissions from growth in vehicle miles traveled or numbers of vehicle trips in such area. The State shall consider, at a minimum, measures specified in section 108(f). If the State fails to include any such measure, the implementation plan shall contain an explanation of why such measure was not adopted and what emissions reduction measure was adopted to provide a comparable reduction in emissions, or reasons why such reduction is not necessary to attain the national primary ambient air quality standard for ozone.

"(2) OFFSET REQUIREMENT.—For purposes of satisfying the offset requirements pursuant to this part, the ratio of total emission reductions of VOCs to total increased emissions of such air pollutant shall be at least 1.3 to 1, except that if the State plan requires all existing major sources in the nonattainment area to use best available control technology (as defined in section 169(3)) for the control of volatile organic compounds, the ratio shall be at least 1.2 to 1.

"(3) ENFORCEMENT UNDER SECTION 185.—By December 31, 2000, the State shall submit a plan revision which includes the provisions required under section 185.

Any reference to the term 'attainment date' in subsection (b) or (c), which is incorporated by reference into this subsection (d), shall refer to the attainment date for Severe Areas.

"(e) EXTREME AREAS.—Each State in which all or part of an Extreme Area is located shall, with respect to the Extreme Area, make the submissions described under subsection (d) (relating to Severe Areas), and shall also submit the revisions to the applicable implementation plan (including the plan items) described under this subsection. The provisions of clause (ii) of subsection (c)(2)(B) (relating to reductions of less than 3 percent) and the provisions of clause (ii) of subsection (b)(1)(A) (relating to reductions of less than 15 percent) shall not apply in the case of an Extreme Area. For any Extreme Area, the terms 'major source' and 'major stationary source' includes (in addition to the sources described in section 302) any stationary source or group of sources located within a contiguous area and under common control that emits, or has the potential to emit, at least 10 tons per year of volatile organic compounds.

"(1) OFFSET REQUIREMENT.—For purposes of satisfying the offset requirements pursuant to this part, the ratio of total emission reductions of VOCs to total increased emissions of such air pollutant shall be at least 1.5 to 1, except that if the State plan requires all existing major sources in the nonattainment area to use best available control technology (as defined in section 169(3)) for the control of volatile organic compounds, the ratio shall be at least 1.2 to 1.

"(2) MODIFICATIONS—Any change (as described in section 111(a)(4)) at a major stationary source which results in any increase in emissions from any discrete operation, unit, or other pollutant emitting activity at the source shall be considered a modification for purposes of section 172(c)(5) and section 173(a), except that for purposes of complying with the offset requirement pursuant to section 173(a)(1), any such increase shall not be considered a modification if the owner or operator of the source elects to offset the increase by a greater reduction in emissions of the air pollutant concerned from other discrete operations, units, or activities within the source at an internal offset ratio of at least 1.3 to 1. The offset requirements of this part shall not be applicable in Extreme Areas to a modification of an existing source if such modification consists of installation of equipment required to comply with the applicable implementation plan, permit, or this Act.

"(3) USE OF CLEAN FUELS OR ADVANCED CONTROL TECHNOLOGY.—For Extreme Areas, a plan revision shall be submitted within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990 to require, effective 8 years after such date, that each new, modified, and existing electric utility and industrial and commercial boiler which emits more than 25 tons per year of oxides of nitrogen—

"(A) burn as its primary fuel natural gas, methanol, or ethanol (or a comparably low polluting fuel), or

"(B) use advanced control technology (such as catalytic control technology or other comparably effective control methods) for reduction of emissions of oxides of nitrogen.

For purposes of this subsection, the term 'primary fuel' means the fuel which is used 90 percent or more of the operating time. This paragraph shall not apply during any natural gas supply emergency (as defined in title III of the Natural Gas Policy Act of 1978).

"(4) TRAFFIC CONTROL MEASURES DURING HEAVY TRAFFIC HOURS.—For Extreme Areas, each implementation plan revision under this subsection may contain provisions establishing traffic control measures applicable during heavy traffic hours to reduce the use of high polluting vehicles or heavy-duty vehicles, notwithstanding any other provision of law.

"(5) NEW TECHNOLOGIES.—The Administrator may, in accordance with section 110, approve provisions of an implementation plan for an Extreme Area which anticipate development of new control techniques or improvement of existing control technologies, and an attainment demonstration based on such provisions, if the State demonstrates to the satisfaction of the Administrator that—

"(A) such provisions are not necessary to achieve the incremental emission reductions required during the first 10 years after the date of the enactment of the Clean Air Act Amendments of 1990; and

"(B) the State has submitted enforceable commitments to develop and adopt contingency measures to be implemented as set forth herein if the anticipated technologies do not achieve planned reductions.

Such contingency measures shall be submitted to the Administrator no later than 3 years before proposed implementation of the plan provisions and approved or disapproved by the Administrator in accordance with section 110. The contingency measures shall be adequate to produce emission reductions sufficient, in conjunction with other approved plan provisions, to achieve the periodic emission reductions required by subsection (b)(1) or (c)(2) and attainment by the applicable dates. If the Administrator determines that an Extreme area has failed to achieve an emission reduction requirement set forth in subsection (b)(1) or (c)(2), and that such failure is due in whole or part to an inability to fully implement provisions approved pursuant to this subsection, the Administrator shall require the State to implement the contingency measures to the extent necessary to assure compliance with subsections (b)(1) and (c)(2).

Any reference to the term 'attainment date' in subsection (b), (c), or (d) which is incorporated by reference into this subsection, shall refer to the attainment date for Extreme Areas.

"(f) $NO_x$ Requirements.—The plan provisions required under this subpart for major stationary sources of volatile organic compounds shall also apply to major stationary sources (as defined in section 302 and subsections (c), (d), and (e) of this section) of oxides of nitrogen. This subsection shall not apply in the case of oxides of nitrogen for those sources for which the Administrator determines (when the Administrator approves a plan or plan revision) that net air quality benefits are greater in the absence of reductions of oxides of nitrogen from the sources concerned. This subsection shall also not apply in the case of oxides of nitrogen for—

"(1) nonattainment areas not within an ozone transport region under section 184 if the Administrator determines (when the Administrator approves a plan or plan revision) that additional reductions of oxides of nitrogen would not contribute to attainment of the national ambient air quality standard for ozone in the area, or

"(2) nonattainment areas within such an ozone transport region if the Administrator determines (when the Administrator approves a plan or plan revision) that additional reductions of oxides of nitrogen would not produce net ozone air quality benefits in such region.

"(g) MILESTONES.—

"(1) REDUCTIONS IN EMISSIONS.—6 years after the date of the enactment of the Clean Air Amendments of 1990 and at intervals of every 3 years after, the State shall determine whether each nonattainment area (other than an area classified as Marginal or Moderate) has achieved a reduction in emissions during the preceding intervals equivalent to the total emission reductions required to be achieved by the end of such interval pursuant to subsection (b)(1) and the corresponding requirements of subsections (c)(2) (B) and (C), (d), and (e). Such reduction shall be referred to in this section as an applicable milestone.

"(2) COMPLIANCE DEMONSTRATION.—For each nonattainment area referred to in paragraph (1), not later than 90 days after the date on which an applicable milestone occurs (not including an attainment date on which a milestone occurs in cases where the standard has been attained), each State in which all or part of such area is located shall submit to the Administrator a demonstration that the milestone has been met. A demonstration under this paragraph shall be submitted in such form and manner, and shall contain such information and analysis, as the Administrator shall require, by rule. The Administrator shall determine whether or not a State's demonstration is adequate within 90 days after the Administrator's receipt of a demonstration which contains the information and analysis required by the Administrator.

"(3) SERIOUS AND SEVERE AREAS; STATE ELECTION.—If a State fails to submit a demonstration under paragraph (2) for any Serious or Severe area within the required period or if the Administrator determines that the area has not met any applicable milestone, the State shall elect, within 90 days after such failure or determination—

"(A) to have the area reclassified to the next higher classification,

"(B) to implement specific additional measures adequate, as determined by the Administrator, to meet the next milestone as provided in the applicable contingency plan, or

"(C) to adopt an economic incentive program as described in paragraph (4).

If the State makes an election under subparagraph (B), the Administrator shall, within 90 days after the election, review such plan and shall, if the Administrator finds the contingency plan inadequate, require further measures necessary to meet such milestone. Once the State makes an election, it shall be deemed accepted by the Administrator as meeting the election requirement. If the State fails to make an election required under this paragraph within the required 90-day period or within 6 months thereafter, the area shall be reclassified to the next higher classification by operation of law at the expiration of such 6-month period. Within 12 months after the date required for the State to make an election, the State shall submit a revision of the applicable implementation plan for the area that meets the requirements of this paragraph. The Administrator shall review such plan revision and approve or disapprove the revision within 9 months after the date of its submission.

"(4) ECONOMIC INCENTIVE PROGRAM.—(A) An economic incentive program under this paragraph shall be consistent with rules published by the Administrator and sufficient, in combination with other elements of the State plan, to achieve the next milestone. The State program may include a nondiscriminatory system, consistent with applicable law regarding interstate commerce, of State established emissions fees or a system of marketable permits, or a system of State fees on sale or manufacture of products the use of which contributes to ozone formation, or any combination of the foregoing or other similar measures. The program may also include incentives and requirements to reduce vehicle emissions and vehicle miles traveled in the area, including any of the transportation control measures identified in section 108(f).

"(B) Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall publish rules for the programs to be adopted pursuant to subparagraph (A). Such rules shall include model plan provisions which may be adopted for reducing emissions from permitted stationary sources, area sources, and mobile sources. The guidelines shall require that any revenues generated by the plan provisions adopted pursuant to subparagraph (A) shall be used by the State for any of the following:

"(i) Providing incentives for achieving emission reductions.

"(ii) Providing assistance for the development of innovative technologies for the control of ozone air pollution and for the development of lower-polluting solvents and surface coatings. Such assistance shall not provide for the payment of more than 75 percent of either the costs of any project to develop such a technology or the costs of development of a lower-polluting solvent or surface coating.

"(iii) Funding the administrative costs of State programs under this Act. Not more than 50 percent of such revenues may be used for purposes of this clause.

"(5) EXTREME AREAS.—If a State fails to submit a demonstration under paragraph (2) for any Extreme Area within the required period, or if the Administrator determines that the area has not met any applicable milestone, the State shall, within 9 months after such failure or determination, submit a plan revision to implement an economic incentive program which meets the requirements of paragraph (4). The Administrator shall review such plan revision and approve or disapprove the revision within 9 months after the date of its submission.

"(h) RURAL TRANSPORT AREAS.—(1) Notwithstanding any other provision of section 181 or this section, a State containing an ozone nonattainment area that does not include, and is not adjacent to, any part of a Metropolitan Statistical Area or, where one exists, a Consolidated Metropolitan Statistical Area (as defined by the United States Bureau of the Census), which area is treated by the Administrator, in the Administrator's discretion, as a rural transport area within the meaning of paragraph (2), shall be treated by operation of law as satisfying the requirements of this section if it makes the submissions required under subsection (a) of this section (relating to marginal areas).

"(2) The Administrator may treat an ozone nonattainment area as a rural transport area if the Administrator finds that sources of VOC (and, where the Administrator determines relevant, $NO_x$) emissions within the area do not make a significant contribution to the ozone concentrations measured in the area or in other areas.

"(i) RECLASSIFIED AREAS.—Each State containing an ozone nonattainment area reclassified under section 181(b)(2) shall meet such requirements of subsections (b) through (d) of this section as may be applicable to the area as reclassified, according to the schedules prescribed in connection with such requirements, except that the Administrator may adjust any applicable deadlines (other than attainment dates) to the extent such adjustment is necessary or appropriate to assure consistency among the required submissions.

"(j) MULTI-STATE OZONE NONATTAINMENT AREAS.—

"(1) COORDINATION AMONG STATES.—Each State in which there is located a portion of a single ozone nonattainment area which covers more than one State (hereinafter in this section referred to as a 'multi-State ozone nonattainment area') shall—

"(A) take all reasonable steps to coordinate, substantively and procedurally, the revisions and implementation of State implementation plans applicable to the nonattainment area concerned; and

"(B) use photochemical grid modeling or any other analytical method determined by the Administrator, in his discretion, to be at least as effective.

The Administrator may not approve any revision of a State implementation plan submitted under this part for a State in which part of a multi-State ozone nonattainment area is located if the plan revision for that State fails to comply with the requirements of this subsection.

"(2) FAILURE TO DEMONSTRATE ATTAINMENT.—If any State in which there is located a portion of a multi-State ozone nonattainment area fails to provide a demonstration of attainment of the national ambient air quality standard for ozone in that portion within the required period, the State may petition the Administrator to make a finding that the State would have been able to make such demonstration but for the failure of one or more other States in which other portions of the area are located to commit to the implementation of all measures required under section 182 (relating to plan submissions and requirements for ozone nonattainment areas). If the Administrator makes such finding, the provisions of section 179 (relating to sanctions) shall not apply, by reason of the failure to make such demonstration, in the portion of the multi-State ozone nonattainment area within the State submitting such petition.

"SEC. 183. FEDERAL OZONE MEASURES.

"(a) CONTROL TECHNIQUES GUIDELINES FOR VOC SOURCES.—Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue control techniques guidelines, in accordance with section 108, for 11 categories of stationary sources of VOC emissions for which such guidelines have not been issued as of such date of enactment, not including the categories referred to in paragraphs (3) and (4) of subsection (b) of this section. The Administrator may issue such additional control techniques guidelines as the Administrator deems necessary.

"(b) EXISTING AND NEW CTGS.—(1) Within 36 months after the date of the enactment of the Clean Air Act Amendments of 1990, and periodically thereafter, the Administrator shall review and, if necessary, update control technique guidance issued under section 108 before the date of the enactment of the Clean Air Act Amendments of 1990.

"(2) In issuing the guidelines the Administrator shall give priority to those categories which the Administrator considers to make the most significant contribution to the formation of ozone air pollution in ozone nonattainment areas, including hazardous waste treatment, storage, and disposal facilities which are permitted under subtitle C of the Solid Waste Disposal Act. Thereafter the Administrator shall periodically review and, if necessary, revise such guidelines.

"(3) Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue control techniques guidelines in accordance with section 108 to reduce the aggregate emissions of volatile organic compounds into the ambient air from aerospace coatings and solvents. Such control techniques guidelines shall, at a minimum, be adequate to reduce aggregate emissions of volatile organic compounds into the ambient air from the application of such coatings and solvents to such level as the Administrator determines may be achieved through the adoption of best available control measures. Such control technology guidance shall provide for such reductions in such increments and on such schedules as the Administrator determines to be reasonable, but in no event later than 10 years after the final issuance of such control technology guidance. In developing control technology guidance under this subsection, the Administrator shall consult with the Secretary of Defense, the Secretary of Transportation, and the Administrator of the National Aeronautics and Space Administration with regard to the establishment of specifications for such coatings. In evaluating VOC reduction strategies, the guidance shall take into account the applicable requirements of section 112 and the need to protect stratospheric ozone.

"(4) Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue control techniques guidelines in accordance with section 108 to reduce the aggregate emissions of volatile organic compounds and PM-10 into the ambient air from paints, coatings, and solvents used in shipbuilding operations and ship repair. Such control techniques guidelines shall, at a minimum, be adequate to reduce aggregate emissions of volatile organic compounds and PM-10 into the ambient air from the removal or application of such paints, coatings, and solvents to such level as the Administrator determines may be achieved through the adoption of the best available control measures. Such control techniques guidelines shall provide for such reductions in such increments and on such schedules as the Administrator determines to be reasonable, but in no event later than 10 years after the final issuance of such control technology guidance. In developing control techniques guidelines under this subsection, the Administrator shall consult with the appropriate Federal agencies.

"(c) ALTERNATIVE CONTROL TECHNIQUES.—Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue technical documents which identify alternative controls for all categories of stationary sources of volatile organic compounds and oxides of nitrogen which emit, or have the potential to emit 25 tons per year or more of such air pollutant. The Administrator shall revise and update such documents as the Administrator determines necessary.

"(d) GUIDANCE FOR EVALUATING COST-EFFECTIVENESS.—Within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall provide guidance to the States to be used in evaluating the relative cost-effectiveness of various options for the control of emissions from existing stationary sources of air pollutants which contribute to nonattainment of the national ambient air quality standards for ozone.

"(e) CONTROL OF EMISSIONS FROM CERTAIN SOURCES.—

"(1) DEFINITIONS.—For purposes of this subsection—

"(A) BEST AVAILABLE CONTROLS.—The term 'best available controls' means the degree of emissions reduction that the Administrator determines, on the basis of technological and economic feasibility, health, environmental, and energy impacts, is achievable through the application of the most effective equipment, measures, processes, methods, systems or techniques, including chemical reformulation, product or feedstock substitution, repackaging, and directions for use, consumption, storage, or disposal.

"(B) CONSUMER OR COMMERCIAL PRODUCT.—The term 'consumer or commercial product' means any substance, product (including paints, coatings, and solvents), or article (including any container or packaging) held by any person, the use, consumption, storage, disposal, destruction, or decomposition of which may result in the release of volatile organic compounds. The term does not include fuels or fuel additives regulated under section 211, or motor vehicles, non-road vehicles, and non-road engines as defined under section 216.

"(C) REGULATED ENTITIES.—The term 'regulated entities' means—

"(i) manufacturers, processors, wholesale distributors, or importers of consumer or commercial products for sale or distribution in interstate commerce in the United States; or

"(ii) manufacturers, processors, wholesale distributors, or importers that supply the entities listed under clause (i) with such products for sale or distribution in interstate commerce in the United States.

"(2) STUDY AND REPORT.—

"(A) STUDY.—The Administrator shall conduct a study of the emissions of volatile organic compounds into the ambient air from consumer and commercial products (or any combination thereof) in order to—

"(i) determine their potential to contribute to ozone levels which violate the national ambient air quality standard for ozone; and

"(ii) establish criteria for regulating consumer and commercial products or classes or categories thereof which shall be subject to control under this subsection.

The study shall be completed and a report submitted to Congress not later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(B) CONSIDERATION OF CERTAIN FACTORS.—In establishing the criteria under subparagraph (A)(ii), the Administrator shall take into consideration each of the following:

"(i) The uses, benefits, and commercial demand of consumer and commercial products.

"(ii) The health or safety functions (if any) served by such consumer and commercial products.

"(iii) Those consumer and commercial products which emit highly reactive volatile organic compounds into the ambient air.

"(iv) Those consumer and commercial products which are subject to the most cost-effective controls.

"(v) The availability of alternatives (if any) to such consumer and commercial products which are of comparable costs, considering health, safety, and environmental impacts.

"(3) REGULATIONS TO REQUIRE EMISSION REDUCTIONS.—

"(A) IN GENERAL.—Upon submission of the final report under paragraph (2), the Administrator shall list those categories of consumer or commercial products that the Administrator determines, based on the study, account for at least 80 percent of the VOC emissions, on a reactivity-adjusted basis, from consumer or commercial products in areas that violate the NAAQS for ozone. Credit toward the 80 percent emissions calculation shall be given for emission reductions from consumer or commercial products made after the date of enactment of this section. At such time, the Administrator shall divide the list into 4 groups establish-

ing priorities for regulation based on the criteria established in paragraph (2). Every 2 years after promulgating such list, the Administrator shall regulate one group of categories until all 4 groups are regulated. The regulations shall require best available controls as defined in this section. Such regulations may exempt health use products for which the Administrator determines there is no suitable substitute. In order to carry out this section, the Administrator may, by regulation, control or prohibit any activity, including the manufacture or introduction into commerce, offering for sale, or sale of any consumer or commercial product which results in emission of volatile organic compounds into the ambient air.

"(B) REGULATED ENTITIES.—Regulations under this subsection may be imposed only with respect to regulated entities.

"(C) USE OF CTGS.—For any consumer or commercial product the Administrator may issue control techniques guidelines under this Act in lieu of regulations required under subparagraph (A) if the Administrator determines that such guidance will be substantially as effective as regulations in reducing emissions of volatile organic compounds which contribute to ozone levels in areas which violate the national ambient air quality standard for ozone.

"(4) SYSTEMS OF REGULATION.—The regulations under this subsection may include any system or systems of regulation as the Administrator may deem appropriate, including requirements for registration and labeling, self-monitoring and reporting, prohibitions, limitations, or reasonable fees, charges, and other economic incentives (including marketable permits and auctions of emissions rights) concerning the manufacture, processing, distribution, use, consumption, or disposal of the product.

"(5) FEES, ETC.—Any fees, charges, or other funds established and collected by the Administrator under such regulations shall be deposited in a special fund in the United States Treasury for licensing and other services, which thereafter shall be available until expended, subject to annual appropriation Acts, solely to carry out the activities of the Administrator for which such fees, charges, or collections are established or made.

"(6) ENFORCEMENT.—Any regulation established under this subsection shall be treated, for purposes of enforcement of this Act, as a standard under section 111 and any violation of such regulation shall be treated as a violation of a requirement of section 111(e).

"(7) STATE ADMINISTRATION.—Each State may develop and submit to the Administrator a procedure under State law for implementing and enforcing regulations promulgated under this subsection. If the Administrator finds the State procedure is adequate, the Administrator shall approve such procedure. Nothing in this paragraph shall prohibit the Administrator from enforcing any applicable regulations under this subsection.

"(8) SIZE, ETC.—No regulations regarding the size, shape, or labeling of a product may be promulgated, unless the Administrator determines such regulations to be useful in meeting any national ambient air quality standard.

"(9) STATE CONSULTATION.—Any State which proposes regulations other than those adopted under this subsection shall consult with the Administrator regarding whether any other State or local subdivision has promulgated or is promulgating regulations on any products covered under this part. The Administrator shall establish a clearinghouse of information, studies, and regulations proposed and promulgated regarding products covered under this subsection and disseminate such information collected as requested by State or local subdivisions.

"(f) MARINE VESSEL STANDARDS.—

"(1) SCHEDULE FOR STANDARDS.—(A) Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate standards applicable to the emission of VOCs and any other air pollutant from loading and unloading of marine tank vessels which the Administrator finds causes, or contributes to, air pollution that may be reasonably anticipated to endanger public health or welfare. Such standards shall require the application of reasonably available control technology, considering costs, any nonair-quality benefits, environmental impacts, energy requirements and safety factors associated with alternative control techniques. To the extent practicable such standards shall apply to loading and unloading facilities and not to marine vessels.

"(B) Any regulation prescribed under this subsection (and any revision thereof) shall take effect after such period as the Administrator finds (after consultation with the Secretary of the department in which the Coast Guard is operating) necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period, except that the effective date shall not be more than 2 years after promulgation of such regulations.

"(2) REGULATIONS ON EQUIPMENT SAFETY.—Within 6 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Secretary of the Department in which the Coast Guard is operating shall issue regulations to ensure the safety of the equipment and operations which are to control emissions from the loading and unloading of marine tank vessels, under section 3703 of title 46 of the United States Code and section 6 of the Ports and Waterways Safety Act (33 U.S.C. 1225). The regulations issued by a State or political subdivision regarding emissions from the loading and unloading of marine tank vessels shall be consistent with the regulations regarding safety of the Department in which the Coast Guard is operating.

"(3) AGENCY AUTHORITY.—(A) The Administrator shall ensure compliance with the vessel emission standards prescribed under paragraph (1)(A).

"(B) The Secretary of the Department in which the Coast Guard is operating shall ensure compliance with the regulations issued under paragraph (2).

"(4) STATE OR LOCAL STANDARDS.—After the Administrator promulgates standards under this section, no State or political subdivision thereof may adopt or attempt to enforce any standard respecting emissions from marine vessels subject to regulation under paragraph (1) unless such standard is no less stringent than the standards promulgated under paragraph (1).

"(5) ENFORCEMENT.—Any standard established under paragraph (1)(A) shall be treated, for purposes of enforcement of this Act, as a standard under section 111 and any violation of such standard shall be treated as a violation of a requirement of section 111(e).

"(g) OZONE DESIGN VALUE STUDY.—The Administrator shall conduct a study of whether the methodology in use by the Environmental Protection Agency as of the date of the enactment of the Clean Air Act Amendments of 1990 for establishing a design value for ozone provides a reasonable indicator of the ozone air quality of ozone nonattainment areas. The Administrator shall obtain input from States, local subdivisions thereof, and others. The study shall be completed and a report submitted to Congress not later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990. The results of the study shall be subject to peer and public review before submitting it to Congress.

"SEC. 184. CONTROL OF INTERSTATE OZONE AIR POLLUTION.

"(a) OZONE TRANSPORT REGIONS.—A single transport region for ozone (within the meaning of section 176A(a)), comprised of the States of Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, and the Consolidated Metropolitan Statistical Area that includes the District of Columbia, is hereby established by operation of law. The provisions of section 176A(a) (1) and (2) shall apply with respect to the transport region established under this section and any other transport region established for ozone, except to the extent inconsistent with the provisions of this section. The Administrator shall convene the commission required (under section 176A(b)) as a result of the establishment of such region within 6 months of the date of the enactment of the Clean Air Act Amendments of 1990.

"(b) PLAN PROVISIONS FOR STATES IN OZONE TRANSPORT REGIONS.—(1) In accordance with section 110, not later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990 (or 9 months after the subsequent inclusion of a State in a transport region established for ozone), each State included within a transport region established for ozone shall submit a State implementation plan or revision thereof to the Administrator which requires the following—

"(A) that each area in such State that is in an ozone transport region, and that is a metropolitan statistical area or part thereof with a population of 100,000 or more comply with the provisions of section 182(c)(2)(A) (pertaining to enhanced vehicle inspection and maintenance programs); and

"(B) implementation of reasonably available control technology with respect to all sources of volatile organic compounds in the State covered by a control techniques guideline issued before or after the date of the enactment of the Clean Air Act Amendments of 1990.

"(2) Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall complete a study identifying control measures capable of achieving emission reductions comparable to those achievable through vehicle refueling controls contained in section 182(b)(3), and such measures or such vehicle refueling controls shall be implemented in accordance with the provisions of this section. Notwithstanding other deadlines in this section, the applicable implementation plan shall be revised to reflect such measures within 1 year of completion of the study. For purposes of this section any stationary source that emits or has the potential to emit at least 50 tons per year of volatile organic compounds shall be considered a major stationary source and subject to the requirements which would be applicable to major stationary sources if the area were

classified as a Moderate nonattainment area.

"(c) ADDITIONAL CONTROL MEASURES.—

"(1) RECOMMENDATIONS.—Upon petition of any State within a transport region established for ozone, and based on a majority vote of the Governors on the Commission (or their designees), the Commission may, after notice and opportunity for public comment, develop recommendations for additional control measures to be applied within all or a part of such transport region if the commission determines such measures are necessary to bring any area in such region into attainment by the dates provided by this subpart. The commission shall transmit such recommendations to the Administrator.

"(2) NOTICE AND REVIEW.—Whenever the Administrator receives recommendations prepared by a commission pursuant to paragraph (1) (the date of receipt of which shall hereinafter in this section be referred to as the 'receipt date'), the Administrator shall—

"(A) immediately publish in the Federal Register a notice stating that the recommendations are available and provide an opportunity for public hearing within 90 days beginning on the receipt date; and

"(B) commence a review of the recommendations to determine whether the control measures in the recommendations are necessary to bring any area in such region into attainment by the dates provided by this subpart and are otherwise consistent with this Act.

"(3) CONSULTATION.—In undertaking the review required under paragraph (2)(B), the Administrator shall consult with members of the commission of the affected States and shall take into account the data, views, and comments received pursuant to paragraph (2)(A).

"(4) APPROVAL AND DISAPPROVAL.—Within 9 months after the receipt date, the Administrator shall (A) determine whether to approve, disapprove, or partially disapprove and partially approve the recommendations; (B) notify the commission in writing of such approval, disapproval, or partial disapproval; and (C) publish such determination in the Federal Register. If the Administrator disapproves or partially disapproves the recommendations, the Administrator shall specify—

"(i) why any disapproved additional control measures are not necessary to bring any area in such region into attainment by the dates provided by this subpart or are otherwise not consistent with the Act; and

"(ii) recommendations concerning equal or more effective actions that could be taken by the commission to conform the disapproved portion of the recommendations to the requirements of this section.

"(5) FINDING.—Upon approval or partial approval of recommendations submitted by a commission, the Administrator shall issue to each State which is included in the transport region and to which a requirement of the approved plan applies, a finding under section 110(k)(5) that the implementation plan for such State is inadequate to meet the requirements of section 110(a)(2)(D). Such finding shall require each such State to revise its implementation plan to include the approved additional control measures within one year after the finding is issued.

"(d) BEST AVAILABLE AIR QUALITY MONITORING AND MODELING.—For purposes of this section, not later than 6 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate criteria for purposes of determining the contribution of sources in one area to concentrations of ozone in another area which is a nonattainment area for ozone. Such criteria shall require that the best available air quality monitoring and modeling techniques be used for purposes of making such determinations.

"SEC. 185. ENFORCEMENT FOR SEVERE AND EXTREME OZONE NONATTAINMENT AREAS FOR FAILURE TO ATTAIN.

"(a) GENERAL RULE.—Each implementation plan revision required under section 182(d) and (e) (relating to the attainment plan for Severe and Extreme ozone nonattainment areas) shall provide that, if the area to which such plan revision applies has failed to attain the national primary ambient air quality standard for ozone by the applicable attainment date, each major stationary source of VOCs located in the area shall, except as otherwise provided under subsection (c), pay a fee to the State as a penalty for such failure, computed in accordance with subsection (b), for each calendar year beginning after the attainment date, until the area is redesignated as an attainment area for ozone. Each such plan revision should include procedures for assessment and collection of such fees.

"(b) COMPUTATION OF FEE.—

"(1) FEE AMOUNT.—The fee shall equal $5,000, adjusted in accordance with paragraph (3), per ton of VOC emitted by the source during the calendar year in excess of 80 percent of the baseline amount, computed under paragraph (2).

"(2) BASELINE AMOUNT.—For purposes of this section, the baseline amount shall be computed, in accordance with such guidance as the Administrator may provide, as the lower of the amount of actual VOC emissions ('actuals') or VOC emissions allowed under the permit applicable to the source (or, if no such permit has been issued for the attainment year, the amount of VOC emissions allowed under the applicable implementation plan ('allowables')) during the attainment year. Notwithstanding the preceding sentence, the Administrator may issue guidance authorizing the baseline amount to be determined in accordance with the lower of average actuals or average allowables, determined over a period of more than one calendar year. Such guidance may provide that such average calculation for a specific source may be used if that source's emissions are irregular, cyclical, or otherwise vary significantly from year to year.

"(3) ANNUAL ADJUSTMENT.—The fee amount under paragraph (1) shall be adjusted annually, beginning in the year beginning after the year of enactment, in accordance with section 402(b)(3)(B)(v) (relating to inflation adjustment).

"(c) EXCEPTION.—Notwithstanding any provision of this section, no source shall be required to pay any fee under subsection (a) with respect to emissions during any year that is treated as an Extension Year under section 181(a)(5).

"(d) FEE COLLECTION BY THE ADMINISTRATOR.—If the Administrator has found that the fee provisions of the implementation plan do not meet the requirements of this section, or if the Administrator makes a finding that the State is not administering and enforcing the fee required under this section, the Administrator shall, in addition to any other action authorized under this title, collect, in accordance with procedures promulgated by the Administrator, the unpaid fees required under subsection (a). If the Administrator makes such a finding under section 179(a)(4), the Administrator may collect fees for periods before the determination, plus interest computed in accordance with section 6621(a)(2) of the Internal Revenue Code of 1986 (relating to computation of interest on underpayment of Federal taxes), to the extent the Administrator finds such fees have not been paid to the State. The provisions of clauses (ii) through (iii) of section 402(b)(3)(C) (relating to penalties and use of the funds, respectively) shall apply with respect to fees collected under this subsection.

"(e) EXEMPTIONS FOR CERTAIN SMALL AREAS.—For areas with a total population under 200,000 which fail to attain the standard by the applicable attainment date, no sanction under this section or under any other provision of this Act shall apply if the area can demonstrate, consistent with guidance issued by the Administrator, that attainment in the area is prevented because of ozone or ozone precursors transported from other areas. The prohibition applies only in cases in which the area has met all requirements and implemented all measures applicable to the area under this Act.

"SEC. 185A. TRANSITIONAL AREAS.

"If an area has not violated the NAAQS for ozone for the 36-month period commencing on January 1, 1987, and ending on December 31, 1989, the Administrator shall suspend the requirements of this subpart until December 31, 1991. By June 30, 1992, the Administrator shall determine by order, based on the area's design value as of the attainment date, whether the area attained such standard by December 31, 1991. If the Administrator determines that the area attained the standard, the Administrator shall require, as part of the order, the State to submit a maintenance plan for the area within 12 months of such determination. If the Administrator determines that the area failed to attain the standard, the Administrator shall, by June 30, 1992, designate the area as nonattainment under section 107(d)(4).

"SEC. 185B. $NO_x$ AND VOC STUDY.

"The Administrator, in conjunction with the National Academy of Sciences, shall conduct a study on the role of ozone precursors in tropospheric ozone formation and control. The study should examine the roles of oxides of nitrogen and volatile organic compounds emission reductions, the role of biogenic volatile organic compounds emissions, and the basic information required for air quality models. The study should be completed and a report submitted to Congress within 2 years of the date of the enactment of the Clean Air Act Amendments of 1990.".

SEC. 104. ADDITIONAL PROVISIONS FOR CARBON MONOXIDE NONATTAINMENT AREAS.

Part D of title I is amended by adding the following new subpart at the end:

"Subpart 3—Additional Provisions for Carbon Monoxide Nonattainment Areas

"Sec. 186. Classifications and attainment dates.

"Sec. 187. Plan submissions and requirements.

"SEC. 186. CLASSIFICATION AND ATTAINMENT DATES.

"(a) CLASSIFICATION BY OPERATION OF LAW AND ATTAINMENT DATES FOR NONATTAINMENT AREAS.—(1) Each area designated nonattainment for carbon monoxide pursuant to section 107(d) shall be classified at the time of such designation under table 1, by operation of law, as a Moderate Area or a Serious Area based on the design value for the area. The design value shall be calculated according to

the interpretation methodology issued by the Administrator most recently before the date of the enactment of the Clean Air Act Amendments of 1990. For each area classified under this subsection, the primary standard attainment date for carbon monoxide shall be as expeditiously as practicable but not later than the date provided in table 1:

"TABLE 1

| Area classification | Design value | Primary standard attainment date |
|---|---|---|
| Moderate | 9.1–16.4 ppm. | December 31, 1995. |
| Serious | 16.5 and above. | December 31, 2000. |

"(2) At the time of publication of the notice required under section 107 (designating carbon monoxide nonattainment areas), the Administrator shall publish a notice announcing the classification of each such carbon monoxide nonattainment area. The provisions of section 172(a)(1)(B) (relating to lack of notice-and-comment and judicial review) shall apply with respect to such classification.

"(3) If an area classified under paragraph (1), table 1, would have been classified in another category if the design value in the area were 5 percent greater or 5 percent less than the level on which such classification was based, the Administrator may, in the Administrator's discretion, within 90 days after the date of the enactment of the Clean Air Act Amendments of 1990 by the procedure required under paragraph (2), adjust the classification of the area. In making such adjustment, the Administrator may consider the number of exceedances of the national primary ambient air quality standard for carbon monoxide in the area, the level of pollution transport between the area and the other affected areas, and the mix of sources and air pollutants in the area. The Administrator may make the same adjustment for purposes of paragraphs (2), (3), (6), and (7) of section 187(a).

"(4) Upon application by any State, the Administrator may extend for 1 additional year (hereinafter in this subpart referred to as the 'Extension Year') the date specified in table 1 of subsection (a) if—

"(A) the State has complied with all requirements and commitments pertaining to the area in the applicable implementation plan, and

"(B) no more than one exceedance of the national ambient air quality standard level for carbon monoxide has occurred in the area in the year preceding the Extension Year.

No more than 2 one-year extensions may be issued under this paragraph for a single nonattainment area.

"(b) NEW DESIGNATIONS AND RECLASSIFICATIONS.—

"(1) NEW DESIGNATIONS TO NONATTAINMENT.—Any area that is designated attainment or unclassifiable for carbon monoxide under section 107(d)(4), and that is subsequently redesignated to nonattainment for carbon monoxide under section 107(d)(3), shall, at the time of the redesignation, be classified by operation of law in accordance with table 1 under subsections (a)(1) and (a)(4). Upon its classification, the area shall be subject to the same requirements under section 110, subpart 1 of this part, and this subpart that would have applied had the area been so classified at the time of the notice under subsection (a)(2), except that any absolute, fixed date applicable in connection with any such requirement is extended by operation of law by a period equal to the length of time between the date of the enactment of the Clean Air Act Amendments of 1990 and the date the area is classified.

"(2) RECLASSIFICATION OF MODERATE AREAS UPON FAILURE TO ATTAIN.—

"(A) GENERAL RULE.—Within 6 months following the applicable attainment date for a carbon monoxide nonattainment area, the Administrator shall determine, based on the area's design value as of the attainment date, whether the area has attained the standard by that date. Any Moderate Area that the Administrator finds has not attained the standard by that date shall be reclassified by operation of law in accordance with table 1 of subsection (a)(1) as a Serious Area.

"(B) PUBLICATION OF NOTICE.—The Administrator shall publish a notice in the Federal Register, no later than 6 months following the attainment date, identifying each area that the Administrator has determined, under subparagraph (A), as having failed to attain and identifying the reclassification, if any, described under subparagraph (A).

"(c) REFERENCES TO TERMS.—Any reference in this subpart to a 'Moderate Area' or a 'Serious Area' shall be considered a reference to a Moderate Area or a Serious Area, respectively, as classified under this section.

"SEC. 187. PLAN SUBMISSIONS AND REQUIREMENTS.

"(a) MODERATE AREAS.—Each State in which all or part of a Moderate Area is located shall, with respect to the Moderate Area (or portion thereof, to the extent specified in guidance of the Administrator issued before the date of the enactment of the Clean Air Act Amendments of 1990), submit to the Administrator the State implementation plan revisions (including the plan items) described under this subsection, within such periods as are prescribed under this subsection, except to the extent the State has made such submissions as of such date of enactment:

"(1) INVENTORY.—No later than 2 years from the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a comprehensive, accurate, current inventory of actual emissions from all sources, as described in section 172(c)(3), in accordance with guidance provided by the Administrator.

"(2) VEHICLE MILES TRAVELED.—No later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, for areas with a design value above 12.7 ppm at the time of classification, the plan revision shall contain a forecast of vehicle miles traveled in the nonattainment area concerned for each year before the year in which the plan projects the national ambient air quality standard for carbon monoxide to be attained in the area. The forecast shall be based on guidance which shall be published by the Administrator within 6 months after the date of the enactment of the Clean Air Act Amendments of 1990. The plan revision shall provide for annual updates of the forecasts to be submitted to the Administrator together with annual reports regarding the extent to which such forecasts proved to be accurate. Such annual reports shall contain estimates of actual vehicle miles traveled in each year for which a forecast was required.

"(3) CONTINGENCY PROVISIONS.—No later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, for areas with a design value above 12.7 ppm at the time of classification, the plan revision shall provide for the implementation of specific measures to be undertaken if any estimate of vehicle miles traveled in the area which is submitted in an annual report under paragraph (2) exceeds the number predicted in the most recent prior forecast or if the area fails to attain the national primary ambient air quality standard for carbon monoxide by the primary standard attainment date. Such measures shall be included in the plan revision as contingency measures to take effect without further action by the State or the Administrator if the prior forecast has been exceeded by an updated forecast or if the national standard is not attained by such deadline.

"(4) SAVINGS CLAUSE FOR VEHICLE INSPECTION AND MAINTENANCE PROVISIONS OF THE STATE IMPLEMENTATION PLAN.—Immediately after the date of the enactment of the Clean Air Act Amendments of 1990, for any Moderate Area (or, within the Administrator's discretion, portion thereof), the plan for which is of the type described in section 182(a)(2)(B) any provisions necessary to ensure that the applicable implementation plan includes the vehicle inspection and maintenance program described in section 182(a)(2)(B).

"(5) PERIODIC INVENTORY.—No later than September 30, 1995, and no later than the end of each 3 year period thereafter, until the area is redesignated to attainment, a revised inventory meeting the requirements of subsection (a)(1).

"(6) ENHANCED VEHICLE INSPECTION AND MAINTENANCE.—No later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990 in the case of Moderate Areas with a design value greater than 12.7 ppm at the time of classification, a revision that includes provisions for an enhanced vehicle inspection and maintenance program as required in section 182(c)(3) (concerning serious ozone nonattainment areas), except that such program shall be for the purpose of reducing carbon monoxide rather than hydrocarbon emissions.

"(7) ATTAINMENT DEMONSTRATION AND SPECIFIC ANNUAL EMISSION REDUCTIONS.—In the case of Moderate Areas with a design value greater than 12.7 ppm at the time of classification, no later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, a revision to provide, and a demonstration that the plan as revised will provide, for attainment of the carbon monoxide NAAQS by the applicable attainment date and provisions for such specific annual emission reductions as are necessary to attain the standard by that date.

The Administrator may, in the Administrator's discretion, require States to submit a schedule for submitting any of the revisions or other items required under this subsection. In the case of Moderate Areas with a design value of 12.7 ppm or lower at the time of classification, the requirements of this subsection shall apply in lieu of any requirement that the State submit a demonstration that the applicable implementation plan provides for attainment of the carbon monoxide standard by the applicable attainment date.

"(b) SERIOUS AREAS.—Each State in which all or part of a Serious Area is located shall, with respect to the Serious Area, make the submissions applicable under subsection (a) to Moderate Areas with a design value of 12.7 ppm or greater at the time of classification, and shall also submit the revision and other items described under this subsection. Within 2 years after the date of the enact-

ment of the Clean Air Act Amendments of 1990 the State shall submit a revision that includes the transportation control measures as required in section 182(d)(1) except that such revision shall be for the purpose of reducing CO emissions rather than volatile organic compound emissions. Within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the State shall submit a revision to require that gasoline sold, supplied, offered for sale or supply, dispensed, transported or introduced into commerce in the larger of—

"(1) the Consolidated Metropolitan Statistical Area (as defined by the United States Office of Management and Budget) (CMSA) in which the area is located, or

"(2) if the area is not located in a CMSA, the Metropolitan Statistical Area (as defined by the United States Office of Management and Budget) in which the area is located,

be blended, during the portion of the year in which the area is prone to high ambient concentrations of carbon monoxide (as determined by the Administrator), with fuels containing such level of oxygen as is necessary, in combination with other measures, to provide for attainment of the carbon monoxide national ambient air quality standard by the applicable attainment date and maintenance of the national ambient air quality standard thereafter in the area. The revision shall provide that such requirement shall take effect no later than October 1, 1993, and shall include a program for implementation and enforcement of the requirement consistent with guidance to be issued by the Administrator. Notwithstanding the preceding provisions of this paragraph, the revision described in this paragraph shall not be required for an area if the State demonstrates to the satisfaction of the Administrator that the revision is not necessary to provide for attainment of the carbon monoxide national ambient air quality standard by the applicable attainment date and maintenance of the national ambient air quality standard thereafter in the area.

"(c) AREAS WITH SIGNIFICANT STATIONARY SOURCE EMISSIONS OF CO.—

"(1) SERIOUS AREAS.—In the case of Serious Areas in which stationary sources contribute significantly to carbon monoxide levels (as determined under rules issued by the Administrator), the State shall submit a plan revision within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, which provides that the term 'major stationary source' includes (in addition to the sources described in section 302) any stationary source which emits, or has the potential to emit, 50 tons per year or more of carbon monoxide.

"(2) WAIVERS FOR CERTAIN AREAS.—The Administrator may, on a case-by-case basis, waive any requirements that pertain to transportation controls, inspection and maintenance, or oxygenated fuels where the Administrator determines by rule that mobile sources of carbon monoxide do not contribute significantly to carbon monoxide levels in the area.

"(3) GUIDELINES.—Within 6 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue guidelines for and rules determining whether stationary sources contribute significantly to carbon monoxide levels in an area.

"(d) CO MILESTONE.—

"(1) MILESTONE DEMONSTRATION.—By March 31, 1996, each State in which all or part of a Serious Area is located shall submit to the Administrator a demonstration that the area has achieved a reduction in emissions of CO equivalent to the total of the specific annual emission reductions required by December 31, 1995. Such reductions shall be referred to in this subsection as the milestone.

"(2) ADEQUACY OF DEMONSTRATION.—A demonstration under this paragraph shall be submitted in such form and manner, and shall contain such information and analysis, as the Administrator shall require. The Administrator shall determine whether or not a State's demonstration is adequate within 90 days after the Administrator's receipt of a demonstration which contains the information and analysis required by the Administrator.

"(3) FAILURE TO MEET EMISSION REDUCTION MILESTONE.—If a State fails to submit a demonstration under paragraph (1) within the required period, or if the Administrator notifies the State that the State has not met the milestone, the State shall, within 9 months after such a failure or notification, submit a plan revision to implement an economic incentive and transportation control program as described in section 182(g)(4). Such revision shall be sufficient to achieve the specific annual reductions in carbon monoxide emissions set forth in the plan by the attainment date.

"(e) MULTI-STATE CO NONATTAINMENT AREAS.—

"(1) COORDINATION AMONG STATES.—Each State in which there is located a portion of a single nonattainment area for carbon monoxide which covers more than one State ('multi-State nonattainment area') shall take all reasonable steps to coordinate, substantively and procedurally, the revisions and implementation of State implementation plans applicable to the nonattainment area concerned. The Administrator may not approve any revision of a State implementation plan submitted under this part for a State in which part of a multi-State nonattainment area is located if the plan revision for that State fails to comply with the requirements of this subsection.

"(2) FAILURE TO DEMONSTRATE ATTAINMENT.—If any State in which there is located a portion of a multi-State nonattainment area fails to provide a demonstration of attainment of the national ambient air quality standard for carbon monoxide in that portion within the period required under this part the State may petition the Administrator to make a finding that the State would have been able to make such demonstration but for the failure of one or more other States in which other portions of the area are located to commit to the implementation of all measures required under section 187 (relating to plan submissions for carbon monoxide nonattainment areas). If the Administrator makes such finding, in the portion of the nonattainment area within the State submitting such petition, no sanction shall be imposed under section 179 or under any other provision of this Act, by reason of the failure to make such demonstration.

"(f) RECLASSIFIED AREAS.—Each State containing a carbon monoxide nonattainment area reclassified under section 186(b)(2) shall meet the requirements of subsection (b) of this section, as may be applicable to the area as reclassified, according to the schedules prescribed in connection with such requirements, except that the Administrator may adjust any applicable deadlines (other than the attainment date) where such deadlines are shown to be infeasible.

"(g) FAILURE OF SERIOUS AREA TO ATTAIN STANDARD.—If the Administrator determines under section 186(b)(2) that the national primary ambient air quality standard for carbon monoxide has not been attained in a Serious Area by the applicable attainment date, the State shall submit a plan revision for the area within 9 months after the date of such determination. The plan revision shall provide that a program of incentives and requirements as described in section 182(g)(4) shall be applicable in the area, and such program, in combination with other elements of the revised plan, shall be adequate to reduce the total tonnage of emissions of carbon monoxide in the area by at least 5 percent per year in each year after approval of the plan revision and before attainment of the national primary ambient air quality standard for carbon monoxide.".

SEC. 105. ADDITIONAL PROVISIONS FOR PARTICULATE MATTER (PM-10) NONATTAINMENT AREAS.

(a) PM-10 NONATTAINMENT AREAS.—Part D of title I is amended by adding the following new subpart after subpart 3:

**"Subpart 4—Additional Provisions for Particulate Matter Nonattainment Areas**

"Sec. 188. Classifications and attainment dates.
"Sec. 189. Plan provisions and schedules for plan submissions.
"Sec. 190. Issuance of guidance.

"SEC. 188. CLASSIFICATIONS AND ATTAINMENT DATES.

"(a) INITIAL CLASSIFICATIONS.—Every area designated nonattainment for PM-10 pursuant to section 107(d) shall be classified at the time of such designation, by operation of law, as a moderate PM-10 nonattainment area (also referred to in this subpart as a 'Moderate area') at the time of such designation. At the time of publication of the notice under section 107(d)(4) (relating to area designations) for each PM-10 nonattainment area, the Administrator shall publish a notice announcing the classification of such area. The provisions of section 172(a)(1)(B) (relating to lack of notice-and-comment and judicial review) shall apply with respect to such classification.

"(b) RECLASSIFICATION AS SERIOUS.—

"(1) RECLASSIFICATION BEFORE ATTAINMENT DATE.—The Administrator may reclassify as a Serious PM-10 nonattainment area (identified in this subpart also as a 'Serious Area') any area that the Administrator determines cannot practicably attain the national ambient air quality standard for PM-10 by the attainment date (as prescribed in subsection (c)) for Moderate Areas. The Administrator shall reclassify appropriate areas as Serious by the following dates:

"(A) For areas designated nonattainment for PM-10 under section 107(d)(4), the Administrator shall propose to reclassify appropriate areas by June 30, 1991, and take final action by December 31, 1991.

"(B) For areas subsequently designated nonattainment, the Administrator shall reclassify appropriate areas within 18 months after the required date for the State's submission of a SIP for the Moderate Area.

"(2) RECLASSIFICATION UPON FAILURE TO ATTAIN.—Within 6 months following the applicable attainment date for a PM-10 nonattainment area, the Administrator shall determine whether the area attained the standard by that date. If the Administrator finds that any Moderate Area is not in attainment after the applicable attainment date—

"(A) the area shall be reclassified by operation of law as a Serious Area; and

"(B) the Administrator shall publish a notice in the Federal Register no later than 6 months following the attainment date,

identifying the area as having failed to attain and identifying the reclassification described under subparagraph (A).

"(c) ATTAINMENT DATES.—Except as provided under subsection (d), the attainment dates for PM-10 nonattainment areas shall be as follows:

"(1) MODERATE AREAS.—For a Moderate Area, the attainment date shall be as expeditiously as practicable but no later than the end of the sixth calendar year after the area's designation as nonattainment, except that, for areas designated nonattainment for PM-10 under section 107(d)(4), the attainment date shall not extend beyond December 31, 1994.

"(2) SERIOUS AREAS.—For a Serious Area, the attainment date shall be as expeditiously as practicable but no later than the end of the tenth calendar year beginning after the area's designation as nonattainment, except that, for areas designated nonattainment for PM-10 under section 107(d)(4), the date shall not extend beyond December 31, 2001.

"(d) EXTENSION OF ATTAINMENT DATE FOR MODERATE AREAS.—Upon application by any State, the Administrator may extend for 1 additional year (hereinafter referred to as the 'Extension Year') the date specified in paragraph (c)(1) if—

"(1) the State has complied with all requirements and commitments pertaining to the area in the applicable implementation plan, and

"(2) no more than one exceedance of the 24-hour national ambient air quality standard level for PM-10 has occurred in the area in the year preceding the Extension Year, and the annual mean concentration of PM-10 in the area for such year is less than or equal to the standard level.

No more than 2 one-year extensions may be issued under the subsection for a single nonattainment area.

"(e) EXTENSION OF ATTAINMENT DATE FOR SERIOUS AREAS.—Upon application by any State, the Administrator may extend the attainment date for a Serious Area beyond the date specified under subsection (c), if attainment by the date established under subsection (c) would be impracticable, the State has complied with all requirements and commitments pertaining to that area in the implementation plan, and the State demonstrates to the satisfaction of the Administrator that the plan for that area includes the most stringent measures that are included in the implementation plan of any State or are achieved in practice in any State, and can feasibly be implemented in the area. At the time of such application, the State must submit a revision to the implementation plan that includes a demonstration of attainment by the most expeditious alternative date practicable. In determining whether to grant an extension, and the appropriate length of time for any such extension, the Administrator may consider the nature and extent of nonattainment, the types and numbers of sources or other emitting activities in the area (including the influence of uncontrollable natural sources and transboundary emissions from foreign countries), the population exposed to concentrations in excess of the standard, the presence and concentration of potentially toxic substances in the mix of particulate emissions in the area, and the technological and economic feasibility of various control measures. The Administrator may not approve an extension until the State submits an attainment demonstration for the area. The Administrator may grant at most one such extension for an area, of no more than 5 years.

"(f) WAIVERS FOR CERTAIN AREAS.—The Administrator may, on a case-by-case basis, waive any requirement applicable to any Serious Area under this subpart where the Administrator determines that anthropogenic sources of PM-10 do not contribute significantly to the violation of the PM-10 standard in the area. The Administrator may also waive a specific date for attainment of the standard where the Administrator determines that nonanthropogenic sources of PM-10 contribute significantly to the violation of the PM-10 standard in the area.

"SEC. 189. PLAN PROVISIONS AND SCHEDULES FOR PLAN SUBMISSIONS.

"(a) MODERATE AREAS.—

"(1) PLAN PROVISIONS.—Each State in which all or part of a Moderate Area is located shall submit, according to the applicable schedule under paragraph (2), an implementation plan that includes each of the following:

"(A) For the purpose of meeting the requirements of section 172(c)(5), a permit program providing that permits meeting the requirements of section 173 are required for the construction and operation of new and modified major stationary sources of PM-10.

"(B) Either (i) a demonstration (including air quality modeling) that the plan will provide for attainment by the applicable attainment date; or (ii) a demonstration that attainment by such date is impracticable.

"(C) Provisions to assure that reasonably available control measures for the control of PM-10 shall be implemented no later than December 10, 1993, or 4 years after designation in the case of an area classified as moderate after the date of the enactment of the Clean Air Act Amendments of 1990.

"(2) SCHEDULE FOR PLAN SUBMISSIONS.—A State shall submit the plan required under subparagraph (1) no later than the following:

"(A) Within 1 year of the date of the enactment of the Clean Air Act Amendments of 1990, for areas designated nonattainment under section 107(d)(4), except that the provision required under subparagraph (1)(A) shall be submitted no later than June 30, 1992.

"(B) 18 months after the designation as nonattainment, for those areas designated nonattainment after the designations prescribed under section 110(b)(4).

"(b) SERIOUS AREAS.—

"(1) PLAN PROVISIONS.—In addition to the provisions submitted to meet the requirements of paragraph (a)(1) (relating to Moderate Areas), each State in which all or part of a Serious Area is located shall submit an implementation plan for such area that includes each of the following:

"(A) A demonstration (including air quality modeling)—

"(i) that the plan provides for attainment of the PM-10 national ambient air quality standard by the applicable attainment date, or

"(ii) for any area for which the State is seeking, pursuant to section 188(e), an extension of the attainment date beyond the date set forth in section 188(c), that attainment by that date would be impracticable, and that the plan provides for attainment by the most expeditious alternative date practicable.

"(B) Provisions to assure that the best available control measures for the control of PM-10 shall be implemented no later than 4 years after the date the area is classified (or reclassified) as a Serious Area.

"(2) SCHEDULE FOR PLAN SUBMISSIONS.—A State shall submit the demonstration required for an area under paragraph (1)(A) no later than 4 years after reclassification of the area to Serious, except that for areas reclassified under section 188(b)(2), the State shall submit the attainment demonstration within 18 months after reclassification to Serious. A State shall submit the provisions described under paragraph (1)(B) no later than 18 months after reclassification of the area as a Serious Area.

"(3) MAJOR SOURCES.—For any Serious Area, the terms 'major source' and 'major stationary source' include any stationary source or group of stationary sources located within a contiguous area and under common control that emits, or has the potential to emit, at least 70 tons per year of PM-10.

"(c) MILESTONES.—(1) Plan revisions demonstrating attainment submitted to the Administrator for approval under this subpart shall contain quantitative milestones which are to be achieved every 3 years until the area is redesignated attainment and which demonstrate reasonable further progress, as defined in section 171(1), toward attainment by the applicable date.

"(2) Not later than 90 days after the date on which a milestone applicable to the area occurs, each State in which all or part of such area is located shall submit to the Administrator a demonstration that all measures in the plan approved under this section have been implemented and that the milestone has been met. A demonstration under this subsection shall be submitted in such form and manner, and shall contain such information and analysis, as the Administrator shall require. The Administrator shall determine whether or not a State's demonstration under this subsection is adequate within 90 days after the Administrator's receipt of a demonstration which contains the information and analysis required by the Administrator.

"(3) If a State fails to submit a demonstration under paragraph (2) with respect to a milestone within the required period or if the Administrator determines that the area has not met any applicable milestone, the Administrator shall require the State, within 9 months after such failure or determination to submit a plan revision that assures that the State will achieve the next milestone (or attain the national ambient air quality standard for PM-10, if there is no next milestone) by the applicable date.

"(d) FAILURE TO ATTAIN.—In the case of a Serious PM-10 nonattainment area in which the PM-10 standard is not attained by the applicable attainment date, the State in which such area is located shall, after notice and opportunity for public comment, submit within 12 months after the applicable attainment date, plan revisions which provide for attainment of the PM-10 air quality standard and, from the date of such submission until attainment, for an annual reduction in PM-10 or PM-10 precursor emissions within the area of not less than 5 percent of the amount of such emissions as reported in the most recent inventory prepared for such area.

"(e) PM-10 PRECURSORS.—The control requirements applicable under plans in effect under this part for major stationary sources of PM-10 shall also apply to major stationary sources of PM-10 precursors, except where the Administrator determines that such sources do not contribute significantly to PM-10 levels which exceed the standard in the area. The Administrator shall issue guidelines regarding the application of the preceding sentence.

"SEC. 190. ISSUANCE OF RACM AND BACM GUIDANCE.

"The Administrator shall issue, in the same manner and according to the same procedure as guidance is issued under section 108(c), technical guidance on reasonably available control measures and best available control measures for urban fugitive dust, and emissions from residential wood combustion (including curtailments and exemptions from such curtailments) and prescribed silvicultural and agricultural burning, no later than 18 months following the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall also examine other categories of sources contributing to nonattainment of the PM-10 standard, and determine whether additional guidance on reasonably available control measures and best available control measures is needed, and issue any such guidance no later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990. In issuing guidelines and making determinations under this section, the Administrator (in consultation with the State) shall take into account emission reductions achieved, or expected to be achieved, under title V and other provisions of this Act.".

(b) PM-10 INCREMENTS IN PSD AREAS.—Section 166 (42 U.S.C. 7476) is amended by adding the following new subsection at the end:

"(f) PM-10 INCREMENTS.—The Administrator is authorized to substitute, for the maximum allowable increases in particulate matter specified in section 163(b) and section 165(d)(2)(C)(iv), maximum allowable increases in particulate matter with an aerodynamic diameter smaller than or equal to 10 micrometers. Such substituted maximum allowable increases shall be of equal stringency in effect as those specified in the provisions for which they are substituted. Until the Administrator promulgates regulations under the authority of this subsection, the current maximum allowable increases in concentrations of particulate matter shall remain in effect.".

SEC. 106. ADDITIONAL PROVISIONS FOR AREAS DESIGNATED NONATTAINMENT FOR SULFUR OXIDES, NITROGEN DIOXIDE, AND LEAD.

Part D of title I is amended by adding a new subpart after subpart 4 as follows:

**"Subpart 5—Additional Provisions for Areas Designated Nonattainment for Sulfur Oxides, Nitrogen Dioxide, or Lead**

"Sec. 191. Plan submission deadlines.
"Sec. 192. Attainment dates.
"Sec. 193. General savings clause.
"Sec. 194. Air Pollution Release Investigation Board.

"SEC. 191. PLAN SUBMISSION DEADLINES.

"(a) SUBMISSION.—Any State containing an area designated or redesignated under section 107(d) as nonattainment with respect to the national primary ambient air quality standards for sulfur oxides, nitrogen dioxide, or lead subsequent to the date of the enactment of the Clean Air Act Amendments of 1990 shall submit to the Administrator, within 18 months of the designation, an applicable implementation plan meeting the requirements of this part.

"(b) STATES LACKING FULLY APPROVED STATE IMPLEMENTATION PLANS.—Any State containing an area designated nonattainment with respect to national primary ambient air quality standards for sulfur oxides or nitrogen dioxide under section 107(d)(1)(C)(i), but lacking a fully approved implementation plan complying with the requirements of this Act (including part D) as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990, shall submit to the Administrator, within 18 months of the date of the enactment of the Clean Air Act Amendments of 1990, an implementation plan meeting the requirements of subpart 1 (except as otherwise prescribed by section 192).

"SEC. 192. ATTAINMENT DATES.

"(a) PLANS UNDER SECTION 191(a).—Implementation plans required under section 191(a) shall provide for attainment of the relevant primary standard as expeditiously as practicable but no later than 5 years from the date of the nonattainment designation.

"(b) PLANS UNDER SECTION 191(b).—Implementation plans required under section 191(b) shall provide for attainment of the relevant primary national ambient air quality standard within 5 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(c) INADEQUATE PLANS.—Implementation plans for nonattainment areas for sulfur oxides or nitrogen dioxide with plans that were approved by the Administrator before the date of the enactment of the Clean Air Act Amendments of 1990 but, subsequent to such approval, were found by the Administrator to be substantially inadequate, shall provide for attainment of the relevant primary standard within 5 years from the date of such finding.".

SEC. 107. PROVISIONS RELATED TO INDIAN TRIBES.

(a) DEFINITION OF AIR POLLUTION CONTROL AGENCY.—Section 302(b) (42 U.S.C. 7602(b)) is amended by—

(1) deleting "or" at the end of paragraph (3);

(2) striking the semicolons at the end of paragraphs (1), (2), and (3) and inserting periods at the end of each such paragraph; and

(3) adding the following new paragraph after paragraph (4):

"(5) An agency of an Indian tribe.".

(b) DEFINITION OF INDIAN TRIBE.—Section 302 (42 U.S.C. 7602) is amended by adding new subsection (r) to read as follows:

"(r) INDIAN TRIBE.—The term 'Indian tribe' means any Indian tribe, band, nation, or other organized group or community, including any Alaska Native village, which is Federally recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians.".

(c) SIPS.—Section 110 (42 U.S.C. 7410) is amended by adding the following new subsection after subsection (n):

"(o) INDIAN TRIBES.—If an Indian tribe submits an implementation plan to the Administrator pursuant to section 301(d), the plan shall be reviewed in accordance with the provisions for review set forth in this section for State plans, except as otherwise provided by regulation promulgated pursuant to section 301(d)(2). When such plan becomes effective in accordance with the regulations promulgated under section 301(d), the plan shall become applicable to all areas (except as expressly provided otherwise in the plan) located within the exterior boundaries of the reservation, notwithstanding the issuance of any patent and including rights-of-way running through the reservation.".

(d) TRIBAL AUTHORITY.—Section 301 (42 U.S.C. 7601) is amended by adding at the end thereof the following new subsection:

"(d) TRIBAL AUTHORITY.—(1) Subject to the provisions of paragraph (2), the Administrator—

"(A) is authorized to treat Indian tribes as States under this Act, except for purposes of the requirement that makes available for application by each State no less than one-half of 1 percent of annual appropriations under section 105; and

"(B) may provide any such Indian tribe grant and contract assistance to carry out functions provided by this Act.

"(2) The Administrator shall promulgate regulations within 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, specifying those provisions of this Act for which it is appropriate to treat Indian tribes as States. Such treatment shall be authorized only if—

"(A) the Indian tribe has a governing body carrying out substantial governmental duties and powers;

"(B) the functions to be exercised by the Indian tribe pertain to the management and protection of air resources within the exterior boundaries of the reservation or other areas within the tribe's jurisdiction; and

"(C) the Indian tribe is reasonably expected to be capable, in the judgment of the Administrator, of carrying out the functions to be exercised in a manner consistent with the terms and purposes of this Act and all applicable regulations.

"(3) The Administrator may promulgate regulations which establish the elements of tribal implementation plans and procedures for approval or disapproval of tribal implementation plans and portions thereof.

"(4) In any case in which the Administrator determines that the treatment of Indian tribes as identical to States is inappropriate or administratively infeasible, the Administrator may provide, by regulation, other means by which the Administrator will directly administer such provisions so as to achieve the appropriate purpose.

"(5) Until such time as the Administrator promulgates regulations pursuant to this subsection, the Administrator may continue to provide financial assistance to eligible Indian tribes under section 105.".

SEC. 108. MISCELLANEOUS PROVISIONS.

(a) TRANSPORTATION PLANNING GUIDANCE.—(1) Section 108(e) (42 U.S.C. 7408(e)) is amended by revising the first sentence to read as follows: "Within 9 months after the date of the enactment of the Clean Air Act Amendments of 1990 and periodically thereafter as necessary to maintain a continuous process of transportation and air quality planning, including emissions inventory development, the Administrator shall, after consultation with the Secretary of Transportation and State and local officials, update the June 1978 Transportation-Air Quality Planning Guidelines.".

(2) So much of subsection (f)(1) of section 108 (42 U.S.C. 7408) as precedes subparagraph (B) is amended to read as follows:

"(f) INFORMATION TO BE AVAILABLE.—(1) Within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall publish and make available to appropriate Federal, State, and local environmental and transportation agencies, and from time to time thereafter the Administrator shall revise—

"(A) information, prepared as appropriate after consultation with the Secretary of Transportation, and after providing public notice and opportunity for comment, regarding the emission reduction potential of transportation control measures, including—

"(i) trip-reduction ordinances;

"(ii) employer-based transportation management plans;

"(iii) transit improvements;

"(iv) traffic-flow improvements;
"(v) areawide rideshare programs;
"(vi) park-and-ride and fringe parking programs;
"(vii) work-schedule changes;
"(viii) restriction of certain roads or lanes to, or construction of such roads or lanes for use by, passenger buses or high occupancy vehicles;
"(ix) programs to control extended idling of vehicles;
"(x) vanpool purchase incentives;
"(xi) incentives for employer-based transportation management plans;
"(xii) programs to limit portions of road surfaces to the use of nonmotorized vehicles or pedestrian use, both as to time and place;
"(xiii) programs for secure bicycle storage facilities and other facilities, including bicycle lanes;
"(xiv) programs for new construction and major reconstruction of paths or tracks solely for use by pedestrian or other nonmotorized means of transportation; and
"(xv) telecommuting.

In considering such measures for inclusion in any State implementation plan or revision thereto as may be required under this Act, the State shall choose from among and implement such measures as necessary, and should ensure adequate access to downtown, other commercial, and residential areas and avoid measures that increase or relocate emissions and congestion rather than reduce them.".

(b) RACT/BACT/LAER CLEARINGHOUSE.—Section 108 (42 U.S.C. 7408) is amended by adding the following at the end thereof:

"(h) RACT/BACT/LAER CLEARINGHOUSE.—The Administrator shall make information regarding emission control technology available to the States and to the general public through a central database. Such information shall include all control technology information received pursuant to State plan provisions requiring permits for sources, including operating permits for existing sources.".

(c) STATE REPORTS ON EMISSIONS-RELATED DATA.—Section 110 (42 U.S.C. 7410) is amended by adding the following new subsection after subsection (o):

"(p) REPORTS.—Any State shall submit, according to such schedule as the Administrator may prescribe, such reports as the Administrator may require relating to emission reductions, vehicle miles traveled, congestion levels, and any other information the Administrator may deem necessary to assess the development effectiveness, need for revision, or implementation of any plan or plan revision required under this Act.".

(d) NEW SOURCE STANDARDS OF PERFORMANCE.—(1) Section 111(b)(1)(B) (42 U.S.C. 7411(b)(1)(B)) is amended as follows:

(A) Strike "120 days" and insert "one year".

(B) Strike "90 days" and insert "one year".

(C) Strike "four years" and insert "8 years".

(D) Immediately before the sentence beginning "Standards of performance or revisions thereof" insert "Notwithstanding the requirements of the previous sentence, the Administrator need not review any such standard if the Administrator determines that such review is not appropriate in light of readily available information on the efficacy of such standard.".

(E) Add the following at the end: "When implementation and enforcement of any requirement of this Act indicate that emission limitations and percent reductions beyond those required by the standards promulgated under this section are achieved in practice, the Administrator shall, when revising standards promulgated under this section, consider the emission limitations and percent reductions achieved in practice.".

(2) Section 111(f)(1) (42 U.S.C. 7411(f)(1)) is amended to read as follows:

"(1) For those categories of major stationary sources that the Administrator listed under subsection (b)(1)(A) before the date of the enactment of the Clean Air Act Amendments of 1990 and for which regulations had not been proposed by the Administrator by such date, the Administrator shall—

"(A) propose regulations establishing standards of performance for at least 25 percent of such categories of sources within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990;

"(B) propose regulations establishing standards of performance for at least 50 percent of such categories of sources within 4 years after the date of the enactment of the Clean Air Act Amendments of 1990; and

"(C) propose regulations for the remaining categories of sources within 6 years after the date of the enactment of the Clean Air Act Amendments of 1990.".

(e) SAVINGS CLAUSE.—Section 111(a)(3) (42 U.S.C. 7411(f)(1)) is amended by adding at the end: "Nothing in title II of this Act relating to nonroad engines shall be construed to apply to stationary internal combustion engines.".

(f) REGULATION OF EXISTING SOURCES.—Section 111(d)(1)(A)(i) (42 U.S.C. 7411(d)(1)(A)(i)) is amended by striking "or 112(b)(1)(A)" and inserting "or emitted from a source category which is regulated under section 112".

(g) CONSULTATION.—The penultimate sentence of section 121 (42 U.S.C. 7421) is amended to read as follows: "The Administrator shall update as necessary the original regulations required and promulgated under this section (as in effect immediately before the date of the enactment of the Clean Air Act Amendments of 1990) to ensure adequate consultation.".

(h) DELEGATION.—The second sentence of section 301(a)(1) (42 U.S.C. 7601(a)(1)) is amended by inserting "subject to section 307(d)" immediately following "regulations".

(i) DEFINITIONS.—Section 302 (42 U.S.C. 7602) is amended as follows:

(1) Insert the following new subsections after subsection (r):

"(s) VOC.—The term 'VOC' means volatile organic compound, as defined by the Administrator.

"(t) PM-10.—The term 'PM-10' means particulate matter with an aerodynamic diameter less than or equal to a nominal ten micrometers, as measured by such method as the Administrator may determine.

"(u) NAAQS AND CTG.—The term 'NAAQS' means national ambient air quality standard. The term 'CTG' means a Control Technique Guideline published by the Administrator under section 108.

"(v) $NO_x$.—The term '$NO_x$' means oxides of nitrogen.

"(w) CO.—The term 'CO' means carbon monoxide.

"(x) SMALL SOURCE.—The term 'small source' means a source that emits less than 100 tons of regulated pollutants per year, or any class of persons that the Administrator determines, through regulation, generally lack technical ability or knowledge regarding control of air pollution.

"(y) FEDERAL IMPLEMENTATION PLAN.—The term 'Federal implementation plan' means a plan (or portion thereof) promulgated by the Administrator to fill all or a portion of a gap or otherwise correct all or a portion of an inadequacy in a State implementation plan, and which includes enforceable emission limitations or other control measures, means or techniques (including economic incentives, such as fees, marketable permits, or auctions of emissions allowances), and provides for attainment of the relevant national ambient air quality standard.".

(2) Section 302(g) (42 U.S.C. 7602(g)) is amended by adding the following at the end: "Such term includes any precursors to the formation of any air pollutant, to the extent the Administrator has identified such precursor or precursors for the particular purpose for which the term 'air pollutant' is used.".

(j) POLLUTION PREVENTION.—Section 101 (42 U.S.C. 7401) is amended as follows:

(1) Amend subsection (a)(3) to read as follows:

"(3) that air pollution prevention (that is, the reduction or elimination, through any measures, of the amount of pollutants produced or created at the source) and air pollution control at its source is the primary responsibility of States and local governments; and".

(2) Amend subsection (b)(4) by inserting "prevention and" immediately after "pollution".

(3) Add a new subsection (c) to read as follows:

"(c) POLLUTION PREVENTION.—A primary goal of this Act is to encourage or otherwise promote reasonable Federal, State, and local governmental actions, consistent with the provisions of this Act, for pollution prevention.".

(k) Title I is amended by adding the following after section 192:

"SEC. 193. GENERAL SAVINGS CLAUSE.

"Each regulation, standard, rule, notice, order and guidance promulgated or issued by the Administrator under this Act, as in effect before the date of the enactment of the Clean Air Act Amendments of 1990 shall remain in effect according to its terms, except to the extent otherwise provided under this Act, inconsistent with any provision of this Act, or revised by the Administrator. No control requirement in effect, or required to be adopted by an order, settlement agreement, or plan in effect before the date of the enactment of the Clean Air Act Amendments of 1990 in any area which is a nonattainment area for any air pollutant may be modified after such enactment in any manner unless the modification insures equivalent or greater emission reductions of such air pollutant.".

(l) BOUNDARY CHANGES.—Section 162(a) (42 U.S.C. 7472(a)) is amended by adding at the end thereof the following: "The extent of the areas designated as Class I under this section shall conform to any changes in the boundaries of such areas which have occurred subsequent to the date of the enactment of the Clean Air Act Amendments of 1977, or which may occur subsequent to the date of the enactment of the Clean Air Act Amendments of 1990.".

(m) BOUNDARIES.—Section 164(a) (42 U.S.C. 7474(a)) is amended by inserting immediately before the sentence beginning "Any area (other than an area referred to in paragraph (1) or (2)" the following: "The extent of the areas referred to in paragraph (1) and (2) shall conform to any changes in the boundaries of such areas which have occurred subsequent to the date of the enact-

ment of the Clean Air Act Amendments of 1977, or which may occur subsequent to the date of the enactment of the Clean Air Act Amendments of 1990.".

(n) ASSESSMENTS.—Section 108 (42 U.S.C. 7408) is amended by adding at the end thereof a new subsection (g) to read as follows:

"(g) ASSESSMENT OF RISKS TO ECOSYSTEMS.—The Administrator may assess the risks to ecosystems from exposure to criteria air pollutants (as identified by the Administrator in the Administrator's sole discretion).".

(o) REVIEW OF REPORTS AND PUBLIC PARTICIPATION.—Section 307 (42 U.S.C. 7607) is amended by adding the following after subsection (g):

"(h) REPORTS.—No report required by this Act to be submitted to Congress shall be subject to judicial review.

"(i) PUBLIC PARTICIPATION.—It is the intent of Congress that, consistent with the policy of the Administrative Procedures Act, the Administrator in promulgating any regulation under this Act, including a regulation subject to a deadline, shall ensure a reasonable period for public participation of at least 30 days, except as otherwise expressly provided in section 107(d), 172(a), 181(a) and (b), and 186(a) and (b).".

(p) ETHICS, FINANCIAL DISCLOSURE, AND CONFLICTS OF INTEREST.—Section 318 (42 U.S.C. 7618) is repealed.

(q) INFORMATION PROMOTING COMPLIANCE BY SMALL SOURCES.—The following new section is added after section 128:

"SEC. 129. INFORMATION FOR SMALL SOURCES.

"(a) IN GENERAL.—The Administrator shall develop, collect, evaluate, and coordinate information on compliance methods and technologies for small sources. The Administrator shall maintain a central reference library of such information, and shall disseminate such information to States or other persons seeking to comply with this Act.

"(b) EDUCATION PROGRAMS FOR SMALL SOURCES.—The Administrator shall, in cooperation with the States and their small source technical assistance programs created pursuant to section 110(a)(2)(N), develop programs for educating small sources about their obligations under this Act and means to comply.".

SEC. 109. INTERSTATE POLLUTION.

(a) AMENDMENTS TO SECTION 126.—Section 126 (42 U.S.C. 7426) is amended as follows:

(1) In subsection (b)—

(A) in the first sentence, following "major source", insert "or group of stationary sources"; and

(B) strike "110(a)(2)(E)(i)" and insert in lieu thereof "110(a)(2)(D)(ii) or this section".

(2) In subsection (c)—

(A) in the first sentence, following the words "violation of", insert "this section and"; and

(B) strike "110(a)(2)(E)(i)" wherever it appears and insert in lieu thereof "110(a)(2)(D)(ii) or this section".

(b) AMENDMENT TO SECTION 302.—Section 302(h) (42 U.S.C. 7602(h)) is amended by inserting before the period ", whether caused by transformation, conversion, or combination with other air pollutants".

SEC. 110. CONFORMING AMENDMENTS.

The Clean Air Act is amended as follows—

(1) Strike, in section 161 (42 U.S.C. 7471), "identified pursuant to section 107(d)(1)(D) or (E)" and insert "designated pursuant to section 107 as attainment or unclassifiable".

(2) Strike, in section 162(b) (42 U.S.C. 7472(b)), "identified pursuant to section 107(d)(1)(D) or (E)" and insert "designated pursuant to section 107(d) as attainment or unclassifiable";

(3) Strike, in section 167 (42 U.S.C. 7477), the reference to "included in the list promulgated pursuant to paragraph (1)(D) or (E) of subsection (d) of section 107 of this Act" and insert "designated pursuant to section 107(d) as attainment or unclassifiable".

(4) Strike subsections (a) and (b) of section 176 (42 U.S.C. 7506).

(5) Amend section 307(d)(1) (42 U.S.C. 7607(d)(1)) as follows:

(A) Subparagraph (C) is amended to read as follows:

"(C) the promulgation or revision of any standard of performance under section 111, or emission standard or limitation under section 112(d), any standard under section 112(f), or any regulation under section 112(g)(1)(D) and (F), or any regulation under section 112(m) or (n),".

(B) Subparagraph (F) is amended to read as follows:

"(F) the promulgation or revision of any regulation under title V (relating to control of acid deposition),".

(C) Delete "and" at the end of subparagraph (M), redesignate subparagraph (N) as subparagraph (U), and add the following new subparagraphs after subparagraph (M):

"(N) the promulgation or revision of any regulation pertaining to consumer and commercial products under section 183(e),

"(O) the promulgation or revision of any regulation pertaining to field citations under section 113(d)(3),

"(P) the promulgation or revision of any regulation pertaining to urban buses or the clean-fuel vehicle, clean-fuel fleet, and clean fuel programs under section 212,

"(Q) the promulgation or revision of any regulation pertaining to nonroad engines or nonroad vehicles under section 213,

"(R) the promulgation or revision of any regulation relating to motor vehicle compliance program fees under section 217,

"(S) the promulgation or revision of any regulation pertaining to market-based alternative controls under section 214, the promulgation or revision of any regulation under title IV,

"(T) the promulgation or revision of any regulation under section 183(f) pertaining to marine vessels, and".

### Subtitle B—Clean Air Employment Transition Assistance

SEC. 111. TRANSITION ASSISTANCE.

The Federal-State Extended Unemployment Compensation Act of 1970 is amended by adding at the end thereof the following new subtitle:

### "Subtitle B—Clean Air Employment Transition Assistance

"SEC. 210. SHORT TITLE; ETC.

"(a) GENERAL RULE.—This subtitle may be cited as the 'Clean Air Employment Transition Act'.

"(b) COORDINATION.—Except as otherwise specifically provided—

"(1) the provisions of this title which precede this subtitle shall not apply for purposes of this subtitle, and

"(2) any reference to the Federal-State Extended Unemployment Compensation Act of 1970 shall be treated as referring only to the provisions of this Act which precede this subtitle.

### "PART I—PETITIONS AND DETERMINATIONS

"SEC. 211. PETITIONS.

"(a) IN GENERAL.—A petition for certification of eligibility to apply for clean air employment transition assistance under this subtitle may be filed with the Secretary of Labor (hereinafter in this subtitle referred to as the 'Secretary') by a group of workers or by their certified or recognized union or other duly authorized representative. Upon receipt of the petition, the Secretary shall promptly publish notice in the Federal Register that he has received the petition and initiated an investigation.

"(b) PUBLIC HEARING.—If the petitioner, or any other person found by the Secretary to have a substantial interest in the proceedings, submits not later than 10 days after the date of the Secretary's publication under subsection (a) a request for a hearing, the Secretary shall provide for a public hearing and afford such interested persons an opportunity to be present, to produce evidence, and to be heard.

"SEC. 212. GROUP ELIGIBILITY REQUIREMENTS.

"(a) IN GENERAL.—The Secretary shall certify a group of workers as eligible to apply for clean air employment transition assistance under this subtitle if the Secretary determines—

"(1) that a significant number or proportion of the workers in such workers' firm or an appropriate subdivision of the firm have become totally or partially separated, or are threatened to become totally or partially separated;

"(2) that sales or production, or both, of such firm or subdivision have decreased absolutely; and

"(3) that compliance by such firm or subdivision with the Clean Air Act contributed importantly to such total or partial separation, or threat thereof, and to such decline in sales or production.

"(b) DEFINITIONS.—For purposes of subsection (a)—

"(1) The term 'contributed importantly' means a cause which is important but not necessarily more important than any other cause.

"(2) The term 'production' includes the provision of services.

"SEC. 213. DETERMINATIONS BY SECRETARY OF LABOR.

"(a) IN GENERAL.—As soon as possible after the date on which a petition is filed under section 211, but in any event not later than 60 days after that date, the Secretary shall determine whether the petitioning group meets the requirements of section 212 and shall issue a certification of eligibility to apply for assistance under this subtitle covering workers in any group which meets such requirements. Each certification shall specify the date on which the total or partial separation began or threatened to begin.

"(b) TIME LIMITATION ON SEPARATIONS BEFORE CERTIFICATION.—A certification under this section shall not apply to any worker whose last total or partial separation from the firm or appropriate subdivision of the firm before his application under section 211 occurred—

"(1) more than one year before the date of the petition on which such certification was granted; or

"(2) more than 6 months before the effective date of this subtitle.

"(c) NOTICE OF DETERMINATION.—Upon reaching his determination on a petition, the Secretary shall promptly publish a summary of the determination in the Federal Register together with his reasons for making such determination.

"(d) TERMINATION OF CERTIFICATION.—Whenever the Secretary determines, with respect to any certification of eligibility of the workers of a firm or subdivision of the firm, that total or partial separations from such

*firm or subdivision are no longer attributable to the conditions specified in section 212, he shall terminate such certification and promptly have notice of such termination published in the Federal Register together with his reasons for making such determination. Such termination shall apply only with respect to total or partial separations occurring after the termination date specified by the Secretary.*

*"SEC. 214. BENEFIT INFORMATION TO WORKERS.*

*"(a) IN GENERAL.—The Secretary shall provide full information to workers about the benefit allowances available under this subtitle and the training and other employment services available under section 325 of the Job Training Partnership Act and about the petition and application procedures, and the appropriate filing dates, for such allowances, training and services. The Secretary shall provide whatever assistance is necessary to enable groups of workers to prepare petitions or applications for program benefits. The Secretary shall make every effort to ensure that cooperating State agencies fully comply with the agreements entered into under section 231(a) and shall periodically review such compliance. The Secretary shall inform the Council established under section 122 of the Job Training Partnership Act or equivalent agency and other public or private agencies, institutions, and employers, as appropriate, of each certification issued under section 213 and of projections, if available, of the needs for training under section 325 of the Job Training Partnership Act as a result of such certification.*

*"(b) WRITTEN NOTICE OF BENEFITS.—(1) The Secretary shall provide written notice through the mail of the benefits available under this subtitle or section 325 of the Job Training Partnership Act to each worker whom the Secretary has reason to believe is covered by a certification made under this part—*

*"(A) at the time such certification is made, if the worker was partially or totally separated from the adversely affected employment before such certification; or*

*"(B) at the time of the total or partial separation of the worker from the adversely affected employment, if subparagraph (A) does not apply.*

*"(2) The Secretary shall publish notice of the benefits available under this subtitle or section 325 of the Job Training Partnership Act to workers covered by each certification made under this subtitle in newspapers of general circulation in the areas in which such workers reside.*

***"PART II—CLEAN AIR EMPLOYMENT TRANSITION ALLOWANCES***

*"SEC. 221. QUALIFYING REQUIREMENTS FOR WORKERS.*

*"(a) IN GENERAL.—Payment of a clean air employment transition allowance shall be made to an adversely affected worker covered by a certification under part I who files an application for such allowance for any week of unemployment which begins more than 60 days after the date on which the petition that resulted in such certification was filed under section 211, if the following conditions are met:*

*"(1) Such worker's total or partial separation before his application under this subtitle occurred—*

*"(A) on or after the date, as specified in the certification under which he is covered, on which total or partial separation began or threatened to begin in the adversely affected employment;*

*"(B) before the expiration of the 2-year period beginning on the date on which the determination under section 213 was made; and*

*"(C) before the termination date (if any) determined pursuant to section 213(d).*

*"(2) Such worker had, in the 52-week period ending with the week in which such total or partial separation occurred, at least 26 weeks of employment at wages of $30 or more a week in adversely affected employment with a single firm or subdivision of a firm, or, if data with respect to weeks of employment with a firm are not available, equivalent amounts of employment computed under regulations prescribed by the Secretary. For the purpose of this paragraph, any week in which such worker—*

*"(A) is on the employer-authorized leave for purposes of vacation, sickness, injury, maternity, or inactive duty or active duty military service for training;*

*"(B) does not work because of a disability that is compensable under a workmen's compensation law or plan of a State or the United States; or*

*"(C) had his employment interrupted in order to serve as a full-time representative of a labor organization in such firm or subdivision,*

*shall be treated as a week of employment at wages of $30 or more, but not more than 7 weeks, in case of weeks described in subparagraph (A) or (C), or both, may be treated as weeks of employment under this sentence.*

*"(3) Such worker—*

*"(A) was entitled to (or would be entitled to if he applied therefor) unemployment insurance for a week within the benefit period—*

*"(i) in which such total or partial separation took place, or*

*"(ii) which began (or would have begun) by reason of the filing of a claim for unemployment insurance by such worker after such total or partial separation;*

*"(B) has exhausted all rights to any unemployment insurance to which he was entitled (or would be entitled if he applied therefor); and*

*"(C) does not have an unexpired waiting period applicable to him for any such unemployment insurance.*

*"(4) Such worker, with respect to such week of unemployment, would not be disqualified for extended compensation payable under this title by reason of the work acceptance and job search requirements in section 202(a)(3) of this title.*

*"(5) Such worker—*

*"(A) is enrolled in a training program approved by the Secretary under section 325(b) of the Job Training Partnership Act; or*

*"(B) has, after the date on which the worker became totally separated, or partially separated, from the adversely affected employment, completed a training program approved by the Secretary under section 325(b) of the Job Training Partnership Act; or*

*"(C) has received a written statement certified under subsection (c)(1) after the date described in subparagraph (B).*

*"(b) FAILURE TO MEET TRAINING REQUIREMENTS.—(1) If—*

*"(A) the Secretary determines that—*

*"(i) the adversely affected worker—*

*"(I) has failed to begin participation in the training program the enrollment in which meets the requirement of subsection (a)(5), or*

*"(II) has ceased to participate in such training program before completing such training program; and*

*"(ii) there is no justifiable cause for such failure or cessation; or*

*"(B) the certification made with respect to such worker under subsection (c)(1) is revoked under subsection (c)(2),*

*no clean air employment transition allowance may be paid to the adversely affected worker under this part for the week in which such failure, cessation, or revocation occurred, or any succeeding week, until the adversely affected worker begins or resumes participation in a training program approved under section 325(b) of the Job Training Partnership Act.*

*"(2) The provisions of subsection (a)(5) and paragraph (1) shall not apply with respect to any week of unemployment which begins—*

*"(A) after the date that is 60 days after the date on which the petition that results in the certification that covers the worker is filed under section 211; and*

*"(B) before the first week following the week in which such certification is made under part I.*

*"(c) TRAINING NOT FEASIBLE OR INAPPROPRIATE.—(1)(A) If the Secretary finds that it is not feasible or appropriate to approve a training program for a worker under section 325(b) of the Job Training Partnership Act, the Secretary shall submit to such worker a written statement certifying such finding.*

*"(B) If a State or State agency has an agreement with the Secretary under section 231 and the State or State agency finds that it is not feasible or appropriate to approve a training program for a worker pursuant to the requirements of section 325(b) of the Job Training Partnership Act, the State or State agency shall—*

*"(i) submit to such worker a written statement certifying such finding; and*

*"(ii) submit to the Secretary a written statement certifying such finding and the reasons for such finding.*

*"(2) The Secretary shall submit to the appropriate committees of the Congress an annual report on the number of workers who received certifications under paragraph (1) during the preceding year and the number of certifications made under paragraph (1) that were revoked during the preceding year.*

*"SEC. 222. WEEKLY AMOUNTS.*

*"(a) IN GENERAL.—Subject to subsections (b) and (c), the clean air employment transition allowance payable to an adversely affected worker for a week of total unemployment shall be an amount equal to the most recent weekly benefit amount of the unemployment insurance payable to the worker for a week of total unemployment preceding the worker's first exhaustion of unemployment insurance (as determined for purposes of section 221(a)(3)(B)) reduced (but not below zero) by—*

*"(1) any training allowance deductible under subsection (c); and*

*"(2) income that is deductible from unemployment insurance under the disqualifying income provisions of the applicable State law or Federal unemployment insurance law.*

*"(b) PAYMENT DURING APPROVED TRAINING.—Any adversely affected worker who is entitled to clean air employment transition allowances and who is undergoing training approved by the Secretary shall receive for each week in which he is undergoing any such training, a clean air employment transition allowance in an amount (computed for such week) equal to the amount computed under subsection (a) or (if greater) the amount of any weekly allowance for such training to which he would be entitled under any other Federal law for the training*

of workers, if he applied for such allowance. Such clean air employment transition allowance shall be paid in lieu of any training allowance to which the worker would be entitled under such other Federal law.

"(c) OFFSETS IF TRAINING ALLOWANCE PAYABLE UNDER OTHER FEDERAL LAW.—If a training allowance under any Federal law is paid to an adversely affected worker for any week of unemployment with respect to which he would be entitled (determined without regard to any disqualification under section 221(b)) or to a clean air employment transition allowance if he applied for such allowance, each such week shall be deducted from the total number of weeks of clean air employment transition allowance otherwise payable to him under section 223(a) when he applies for a clean air employment transition allowance and is determined to be entitled to such allowance. If such training allowance paid to such worker for any week of unemployment is less than the amount of the clean air employment transition allowance to which he would be entitled if he applied for such allowance, he shall receive, when he applies for a clean air employment transition allowance and is determined to be entitled to such allowance, a clean air employment transition allowance for such week equal to such difference.

"SEC. 223. LIMITATIONS ON CLEAN AIR EMPLOYMENT TRANSITION ALLOWANCES.

"(a) MAXIMUM AMOUNT PAYABLE.—(1) The maximum amount of clean air employment transition allowances payable with respect to the period covered by any certification to an adversely affected worker shall be the amount which is the product of 52 multiplied by the clean air employment transition allowance payable to the worker for a week of total unemployment (as determined under section 222(a)), but such product shall be reduced by the total sum of the unemployment insurance to which the worker was entitled (or would have been entitled if he had applied therefor) in the worker's first benefit period described in section 221(a)(3)(A).

"(2) A clean air employment transition allowance shall not be paid for any week occurring after the close of the 104-week period that begins with the first week following the week in which the adversely affected worker was most recently totally separated from adversely affected employment—

"(A) within the period which is described in section 221(a)(1); and

"(B) with respect to which the worker meets the requirements of section 221(a)(2).

"(3) Notwithstanding paragraph (1), in order to assist the adversely affected worker to complete training approved for him under section 325 of the Job Training Partnership Act, and in accordance with regulations prescribed by the Secretary, payments may be made as clean air employment transition allowances for up to 26 additional weeks in the 26-week period that—

"(A) follows the last week of entitlement to clean air employment transition allowances otherwise payable under this subtitle; or

"(B) begins with the first week of such training, if such training begins after the last week described in subparagraph (A).

Payments for such additional weeks may be made only for weeks in such 26-week period during which the individual is participating in such training.

"(b) APPLICATION FOR TRAINING.—No clean air employment transition allowance may be paid for an additional week specified in subsection (a)(3) if the adversely affected worker who would receive such allowance did not make a bona fide application to a training program approved by the Secretary under section 325 of the Job Training Partnership Act within 210 days after the date of the worker's first certification of eligibility to apply for transition assistance issued by the Secretary, or, if later, within 210 days after the date of the worker's total or partial separation referred to in section 221(a)(1).

"(c) ADJUSTMENT OF AMOUNTS.—Amounts payable to an adversely affected worker under this subtitle shall be subject to such adjustment on a week-to-week basis as may be required by section 222(b).

"(d) OFFSET FOR EXTENDED BENEFITS.—Notwithstanding any other provision of this title or other Federal law, if the benefit year of a worker ends within an extended benefit period, the number of weeks of extended benefits that such worker would, but for this subsection, be entitled to in that extended benefit period shall be reduced (but not below zero) by the number of weeks for which the worker was entitled, during such benefit year, to clean air employment transition allowances under this part. For purposes of this subsection, the terms 'benefit year' and 'extended benefit period' shall have the same respective meanings given to them by sections 203 and 205 of this title.

"(e) ON-THE-JOB-TRAINING EXCLUSION.—No clean air employment transition allowance shall be paid to a worker under this part for any week during which the worker is receiving on-the-job training in employment for which compensation is paid.

"(f) PARTICIPATION IN TRAINING.—For purposes of this title, a worker shall be treated as participating in training during any week which is part of a break in training that does not exceed 14 days if—

"(1) the worker was participating in a training program approved under section 325(b) of the Job Training Partnership Act before the beginning of such break in training; and

"(2) the break is provided under such training program.

"SEC. 224. EFFECT ON OTHER BENEFITS.

"(a) LIMITATION ON DETERMINING INELIGIBILITY OR DISQUALIFICATION FOR BENEFITS.—A worker may not be determined to be ineligible or disqualified for unemployment insurance or program benefits under this subtitle because—

"(1) the individual is in training approved under section 325 of the Job Training Partnership Act,

"(2) of leaving work which is not suitable employment to enter such training, or

"(3) of the application to any such week in training of provisions of State law or Federal unemployment insurance law relating to availability for work, active search for work, or refusal to accept work.

The Secretary shall submit to the Congress a quarterly report regarding the amount of funds expended during the quarter concerned to provide training under such section 325(a) and the anticipated demand for such funds for any remaining quarters in the fiscal year concerned.

"(b) DEFINITION OF SUITABLE EMPLOYMENT.—For purposes of this section, the term 'suitable employment' means, with respect to a worker, work of a substantially equal or higher skill level than the worker's past adversely affected employment, and wages for such work at not less than 80 percent of the worker's average weekly wage.

"SEC. 225. APPLICATION OF STATE LAWS.

"Except where inconsistent with the provisions of this subtitle and subject to such regulations as the Secretary may prescribe, the availability and disqualification provisions of the State law—

"(1) under which an adversely affected worker is entitled to unemployment insurance (whether or not he has filed a claim for such insurance); or

"(2) if he is not so entitled to unemployment insurance, of the State in which he was totally or partially separated,

shall apply to any such worker who files a claim for clean air employment transition allowances. The State law so determined with respect to a separation of a worker shall remain applicable, for purposes of the preceding sentence, with respect to such separation until such worker becomes entitled to unemployment insurance under another State law (whether or not he has filed a claim for such insurance).

"PART III—GENERAL PROVISIONS

"SEC. 231. AGREEMENTS WITH STATES.

"(a) IN GENERAL.—The Secretary is authorized on behalf of the United States to enter into an agreement with any State, or with any State agency (referred to in this part as 'cooperating States' and 'cooperating State agencies', respectively). Under such an agreement, the cooperating State agency—

"(1) as agent of the United States, will receive applications for, and will provide, payments on the basis provided in this subtitle,

"(2) will make any certification required under section 221(c)(2), and

"(3) will otherwise cooperate with the Secretary and with other State and Federal agencies in providing payments and services under this title.

"(b) AGREEMENT TERMS AND CONDITIONS.—Each agreement under this part shall provide the terms and conditions upon which the agreement may be amended, suspended, or terminated.

"(c) UNEMPLOYMENT INSURANCE.—Each agreement under this part shall provide that unemployment insurance otherwise payable to any adversely affected worker will not be denied or reduced for any week by reason of any right to payments under this subtitle.

"(d) REVIEW.—A determination by a cooperating State agency with respect to entitlement to program benefits under an agreement is subject to review in the same manner and to the same extent as determinations under the applicable State law and only in that manner and to that extent.

"(e) COORDINATION OF ADMINISTRATION OF EMPLOYMENT SERVICES, TRAINING, AND ADMINISTRATION.—Any agreement entered into under this section shall provide for the coordination with the administration of the provisions for employment services, training, and supplemental assistance under title III of the Job Training Partnership Act upon such terms and conditions as are established by the Secretary in consultation with the States and set forth in such agreement. Any agency of the State jointly administering such provisions under such agreement shall be considered to be a cooperating State agency for purposes of this title.

"(f) STATE AGENCY FUNCTIONS.—Each cooperating State agency shall, in carrying out subsection (a)(2)—

"(1) advise each worker who applies for unemployment insurance of the benefits under this subtitle and the procedures and deadlines for applying for such benefits,

"(2) facilitate the early filing of petitions under section 211 for any workers that the agency considers are likely to be eligible for benefits under this subtitle, and

"(3) advise each adversely affected worker to apply for training under section 325(b) of the Job Training Partnership Act before, or at the same time, the worker applies for clean air employment transition allowances under part III.

"SEC. 232. ADMINISTRATION ABSENT STATE AGREEMENT.

"(a) IN GENERAL.—In any State where there is no agreement in force between a State or its agency under section 231, the Secretary shall arrange under regulations prescribed by him for performance of all necessary functions under part II of this subtitle, including provision for a fair hearing for any worker whose application for payments is denied.

"(b) JUDICIAL REVIEW.—A final determination under subsection (a) with respect to eligibility for program benefits under part II of this subtitle is subject to review by the courts in the same manner and to the same extent as is provided by section 205(g) of the Social Security Act.

"SEC. 233. PAYMENTS TO STATES.

"(a) CERTIFICATION OF PAYMENTS.—The Secretary shall from time to time certify to the Secretary of the Treasury for payment to each cooperating State the sums necessary to enable such State as agent of the United States to make payments provided for by this subtitle.

"(b) APPLICATION OF PAYMENTS.—All money paid a State under this section shall be used solely for the purposes for which it is paid; and money so paid which is not used for such purposes shall be returned, at the time specified in the agreement under this part to the Secretary of the Treasury.

"(c) SURETY BONDS.—Any agreement under this part may require any officer or employee of the State certifying payments or disbursing funds under the agreement or otherwise participating in the performance of the agreement, to give surety bond to the United States in such amount as the Secretary may deem necessary, and may provide for the payment of the cost of such bond from funds for carrying out the purposes of this subtitle.

"SEC. 234. LIABILITIES OF CERTIFYING AND DISBURSING OFFICERS.

"(a) CERTIFYING OFFICERS.—No person designated by the Secretary, or designated pursuant to an agreement under this part, as a certifying officer, shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment certified by him under this subtitle.

"(b) DISBURSING OFFICERS.—No disbursing officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment by him under this subtitle if it was based upon a voucher signed by a certifying officer designated as provided in subsection (a).

"SEC. 235. FRAUD AND RECOVERY OF OVERPAYMENTS.

"(a) LIABILITY FOR REPAYMENT.—(1) If a cooperating State agency, the Secretary, or a court of competent jurisdiction determines that any person has received any payment under this subtitle for which the person was not eligible, including a payment referred to in subsection (b), such person shall be liable to repay such amount to the State agency or the Secretary, as the case may be, except that the State agency or the Secretary may waive such repayment if such agency or the Secretary determines, in accordance with guidelines by the Secretary, that—

"(A) the payment was made without fault on the part of such individual, and

"(B) requiring such repayment would be contrary to equity and good conscience.

"(2) Unless an overpayment is otherwise recovered, or waived under paragraph (1), the State agency or the Secretary shall recover the overpayment by deductions from any sums payable to such person under this subtitle, under any Federal unemployment compensation law administered by the State agency or the Secretary, or under any other Federal law administered by the State agency or the Secretary which provides for the payment of assistance or an allowance with respect to unemployment, and, notwithstanding any other provisions of State law or Federal law to the contrary, the Secretary may require the State agency to recover any overpayment under this subtitle by deduction from any unemployment insurance payable to such person under the State law, except that no single deduction under this paragraph shall exceed 50 percent of the amount otherwise payable.

"(b) FRAUD.—If a cooperating State agency, the Secretary, or a court of competent jurisdiction determines that an individual—

"(1) knowingly has made, or caused another to make, a false statement or representation of a material fact, or

"(2) knowingly has failed, or caused another to fail, to disclose a material fact,

and as a result of such false statement or representation, or of such nondisclosure, such individual has received any payment under this subtitle to which the individual was not entitled, such individual shall, in addition to any other penalty provided by law, be ineligible for any further payments under this subtitle.

"(c) NOTICE AND HEARING.—Except for overpayments determined by a court of competent jurisdiction, no repayment may be required, and no deduction may be made, under this section until a determination under subsection (a)(1) by the State agency or the Secretary, as the case may be, has been made, notice of the determination and an opportunity for a fair hearing thereon has been given to the individual concerned, and the determination has become final.

"(d) DISPOSITION OF RECOVERED AMOUNTS.—Any amount recovered under this section shall be returned to the Treasury of the United States.

"SEC. 236. PENALTIES.

"Whoever makes a false statement of a material fact knowing it to be false, or knowingly fails to disclose a material fact, for the purpose of obtaining or increasing for himself or for any other person any payment authorized to be furnished under this subtitle or pursuant to an agreement under section 231 shall be fined not more than $1,000 or imprisoned for not more than one year, or both.

"SEC. 237. AUTHORIZATION OF APPROPRIATIONS.

"(a) TRANSITION ALLOWANCES.—There are authorized to be appropriated to the Department of Labor to pay transition allowances under this subtitle—

"(1) $30,000,000 for fiscal year 1992,

"(2) $34,000,000 for fiscal year 1993,

"(3) $36,000,000 for fiscal year 1994,

"(4) $37,000,000 for fiscal year 1995, and

"(5) $38,000,000 for fiscal year 1996.

Sums appropriated under this subsection shall remain available until expended.

"(b) APPROPRIATIONS REQUIRED.—Notwithstanding any other provision of this subtitle, the authority to make payments under this subtitle is subject to the availability of funds appropriated therefor.

"SEC. 238. DEFINITIONS.

"For purposes of this title—

"(1) The term 'adversely affected employment' means employment in a firm or appropriate subdivision of a firm, if workers of such firm or subdivision are eligible to apply for clean air employment transition assistance under this subtitle.

"(2) The term 'adversely affected worker' means an individual who, because of lack of work in adversely affected employment—

"(A) has been totally or partially separated from such employment, or

"(B) has been totally separated from employment with the firm in a subdivision of which such adversely affected employment exists.

"(3) The term 'average weekly wage' means one-thirteenth of the total wages paid to an individual in the high quarter. For purposes of this computation, the high quarter shall be that quarter in which the individual's total wages were highest among the first 4 of the last 5 completed calendar quarters immediately before the quarter in which occurs the week with respect to which the computation is made. Such week shall be the week in which total separation occurred, or, in cases where partial separation is claimed, an appropriate week, as defined in regulations prescribed by the Secretary.

"(4) The term 'average weekly hours' means the average hours worked by the individual (excluding overtime) in the employment from which he has been or claims to have been separated in the 52 weeks (excluding weeks during which the individual was sick or on vacation) preceding the week specified in the last sentence of paragraph (3).

"(5) The term 'partial separation' means, with respect to an individual who has not been totally separated, that he has had—

"(A) his hours of work reduced to 80 percent or less of his average weekly hours in adversely affected employment, and

"(B) his wages reduced to 80 percent or less of his average weekly wage in such adversely affected employment.

"(6) The term 'State' includes the District of Columbia and the Commonwealth of Puerto Rico; and the term 'United States' when used in the geographical sense includes such Commonwealth.

"(7) The term 'State agency' means the agency of the State which administers the State law.

"(8) The term 'State law' means the unemployment insurance law of the State approved by the Secretary of Labor under section 3304 of the Internal Revenue Code of 1986.

"(9) The term 'total separation' means the layoff or severance of an individual from employment with a firm in which, or in a subdivision of which, adversely affected employment exists.

"(10) The term 'unemployment insurance' means the unemployment compensation payable to an individual under any State law or Federal unemployment compensation law, including chapter 85 of title 5, United States Code, and the Railroad Unemployment Insurance Act. The terms 'regular compensation', 'additional compensation', and 'extended compensation' have the same respective meanings that are given them in section 205(2), (3), and (4) of this Act.

"(11) The term 'week' means a week as defined in the applicable State law.

"(12) The term 'week of unemployment' means a week of total, part-total, or partial unemployment as determined under the applicable State law or Federal unemployment insurance law.

"(13) The term 'benefit period' means, with respect to an individual—

"(A) the benefit year and any ensuing period, as determined under applicable State law, during which the individual is eligible for regular compensation, additional compensation, or extended compensation, or

"(B) the equivalent to such a benefit year or ensuing period provided for under the applicable Federal unemployment insurance law.

"(14) The term 'on-the-job training' means training provided by an employer to an individual who is employed by the employer.

"SEC. 239. REGULATIONS.

"The Secretary shall prescribe such regulations as may be necessary to carry out the provisions of this subtitle.

"SEC. 240. SUBPOENA POWER.

"(a) IN GENERAL.—The Secretary may require by subpoena the attendance of witnesses and the production of evidence necessary for him to make a determination under the provisions of this subtitle.

"(b) COMPLIANCE.—If a person refuses to obey a subpoena issued under subsection (a), a United States district court within the jurisdiction of which the relevant proceeding under this title is conducted may, upon petition by the Secretary, issue an order requiring compliance with such subpoena.".

SEC. 112. AMENDMENT TO JOB TRAINING PARTNERSHIP ACT.

(a) TRAINING PROGRAMS AUTHORIZED.—Title III of the Job Training Partnership Act is amended by adding at the end thereof the following new section:

"TRAINING FOR WORKERS ADVERSELY AFFECTED BY CLEAN AIR ACT COMPLIANCE

"SEC. 325. (a) EMPLOYMENT SERVICES.—The Secretary shall ensure that adversely affected workers covered by a certification under part I of the Clean Air Employment Transition Act receive the counseling, testing, and placement services, and supportive and other services, provided for under this Act or any other Federal law. The Secretary shall, whenever appropriate, procure such services through agreements with the States.

"(b) TRAINING.—(1) If the Secretary determines that—

"(A) there is no suitable employment (which may include technical and professional employment) available for an adversely affected worker,

"(B) the worker would benefit from appropriate training,

"(C) there is a reasonable expectation of employment following completion of such training,

"(D) training approved by the Secretary is reasonably available to the worker from either governmental agencies or private sources (which may include area vocational education schools, as defined in section 195(2) of the Vocational Education Act of 1963, and employers),

"(E) the worker is qualified to undertake and complete such training, and

"(F) such training is suitable for the worker and available at a reasonable cost,

the Secretary shall approve such training for the worker. Upon such approval, the worker shall be eligible to have payment of the costs of such training (subject to the limitations imposed by this section) paid on his behalf by the Secretary directly or through a certificate system. Insofar as possible, the Secretary shall provide or assure the provision of such training on the job, which shall include related education necessary for the acquisition of skills needed for a position within a particular occupation.

"(2) For purposes of applying paragraph (1)(C), a reasonable expectation of employment does not require that employment opportunities for a worker be available, or offered, immediately upon the completion of training approved under paragraph (1).

"(3)(A) If the costs of training an adversely affected worker are paid by the Secretary under paragraph (1), no other payment for such costs may be made under any other provision of Federal law.

"(B) No payment may be made under paragraph (1) of the costs of training an adversely affected worker if such costs—

"(i) have already been paid under any other provision of Federal law, or

"(ii) are reimbursable under any other provision of Federal law and a portion of such costs have already been paid under such other provision of Federal law.

"(C) The provisions of this paragraph shall not apply to, or take into account, any funds provided under any other provision of Federal law which are used for any purpose other than the direct payment of the costs incurred in training a particular adversely affected worker, even if such use has the effect of indirectly paying or reducing any portion of the costs involved in training the adversely affected worker.

"(4) The training programs and activities that may be approved under paragraph (1) include, but are not limited to—

"(A) on-the-job training,

"(B) any program or activity under this title,

"(C) any other program or activity under this Act for which the individual is eligible,

"(D) any program of remedial education,

"(E) any training program (other than a training program described in paragraph (6)) for which all, or any portion, of the costs of training the worker are paid—

"(i) under any Federal or State program other than this section, or

"(ii) from any source other than this section, and

"(F) any other training program approved by the Secretary.

"(5)(A) The Secretary is not required under paragraph (1) to pay the costs of any training approved under paragraph (1) to the extent that such costs are paid—

"(i) under any Federal or State program other than this subtitle, or

"(ii) from any source other than this section.

"(B) Before approving any training to which subparagraph (A) may apply, the Secretary may require that the adversely affected worker enter into an agreement with the Secretary under which the Secretary will not be required to pay under this section the portion of the costs of such training that the worker has reason to believe will be paid under the program, or by the source, described in clause (i) or (ii) of subparagraph (A).

"(6) The Secretary shall not approve a training program if—

"(A) all or a portion of the costs of such training program are paid under any nongovernmental plan or program,

"(B) the adversely affected worker has a right to obtain training or funds for training under such plan or program, and

"(C) such plan or program requires the worker to reimburse the plan or program from funds provided under this subtitle or from wages paid under such training program, for any portion of the costs of such training program paid under the plan or program.

"(7) The Secretary may approve training for any adversely affected worker who is a member of a group certified under part I of the Clean Air Employment Transition Act at any time after the date on which the group is certified under part I of such Act, without regard to whether such worker has exhausted all rights to any unemployment insurance to which the worker is entitled.

"(8) The Secretary shall prescribe regulations which set forth the criteria under each of the subparagraphs of paragraph (1) that will be used as the basis for making determinations under paragraph (1).

"(c) SUPPLEMENTAL ASSISTANCE.—The Secretary may, where appropriate, authorize supplemental assistance necessary to defray reasonable transportation and subsistence expenses for separate maintenance when training is provided in facilities which are not within commuting distance of a worker's regular place of residence. The Secretary may not authorize—

"(1) payments for subsistence that exceed whichever is the lesser of (A) the actual per diem expenses for subsistence, or (B) payments at 50 percent of the prevailing per diem allowance rate authorized under the Federal travel regulations, or

"(2) payments for travel expenses exceeding the prevailing mileage rate authorized under the Federal travel regulations.

"(d) ON-JOB-TRAINING COSTS.—The Secretary shall pay the costs of any on-the-job training of an adversely affected worker that is approved under subsection (b)(1) in equal monthly installments, but the Secretary may pay such costs, notwithstanding any other provision of this section, only if—

"(1) no currently employed worker is displaced by such adversely affected worker (including partial displacement such as a reduction in the hours of nonovertime work, wages, or employment benefits),

"(2) such training does not impair existing contracts for services or collective bargaining agreements,

"(3) in the case of training which would be inconsistent with the terms of a collective bargaining agreement, the written concurrence of the labor organization concerned has been obtained,

"(4) no other individual is on layoff from the same, or any substantially equivalent, job for which such adversely affected worker is being trained,

"(5) the employer has not terminated the employment of any regular employee or otherwise reduced the workforce of the employer with the intention of filling the vacancy so created by hiring such adversely affected worker,

"(6) the job for which such adversely affected worker is being trained is not being created in a promotional line that will infringe in any way upon the promotional opportunities of currently employed individuals,

"(7) such training is not for the same occupation from which the worker was separated and with respect to which such worker's group was certified pursuant to section 212 of the Clean Air Employment Transition Act,

"(8) the employer certifies to the Secretary that the employer will continue to employ such worker for at least 26 weeks after completion of such training if the worker desires to continue such employment and the employer does not have due cause to terminate such employment,

"(9) the employer has not received payment under subsection (b)(1) with respect to any other on-the-job training provided by such employer which failed to meet the re-

quirements of paragraphs (1), (2), (3), (4), (5), and (6), and

"(10) the employer has not taken, at any time, any action which violated the terms of any certification described in paragraph (8) made by such employer with respect to any other on-the-job training provided by such employer for which the Secretary has made a payment under subsection (b)(1).

"(e) JOB SEARCH ALLOWANCES.—Any adversely affected worker covered by a certification under part I of the Clean Air Employment Transition Act may file an application with the Secretary for a job search allowance. Such allowance, if granted, shall provide reimbursement to the worker of 90 percent of the cost of necessary job search expenses as prescribed by regulations of the Secretary; except that—

"(1) such reimbursement may not exceed $800 for any worker, and

"(2) reimbursement may not be made for subsistence and transportation expenses at levels exceeding those allowable under subsection (c) (1) and (2).

"(f) CRITERIA FOR GRANTING ALLOWANCES.—A job search allowance may be granted only—

"(1) to assist an adversely affected worker who has been totally separated in securing a job within the United States;

"(2) where the Secretary determines that such worker cannot reasonably be expected to secure suitable employment in the commuting area in which he resides; and

"(3) where the worker has filed an application for such allowance with the Secretary before—

"(A) the later of—

"(i) the 365th day after the date of the certification under which the worker is eligible, or

"(ii) the 365th day after the date of the worker's last total separation; or

"(B) the 182nd day after the concluding date of any training received by the worker, if the worker was referred to such training by the Secretary.

"(g) REIMBURSEMENT FOR NECESSARY EXPENSES.—The Secretary shall reimburse any adversely affected worker for necessary expenses incurred by such worker in participating in a job search program approved by the Secretary.

"(h) RELOCATION ALLOWANCES.—(1) Any adversely affected worker covered by a certification under part I of the Clean Air Employment Transition Act may file an application with the Secretary for a relocation allowance, subject to the terms and conditions of this section, if such worker files such application before—

"(A) the later of—

"(i) the 425th day after the date of the certification, or

"(ii) the 425th day after the date of the worker's last total separation; or

"(B) the 182nd day after the concluding date of any training received by such worker, if the worker was referred to such training by the Secretary.

"(2) A relocation allowance may be granted only to assist an adversely affected worker in relocating within the United States and only if the Secretary determines that such worker cannot reasonably be expected to secure suitable employment in the commuting area in which the worker resides and that such worker—

"(A) has obtained suitable employment affording a reasonable expectation of long-term duration in the area in which the worker wishes to relocate, or

"(B) has obtained a bona fide offer of such employment, and

"(C) is totally separated from employment at the time relocation commences.

"(3) A relocation allowance shall not be granted to such worker unless his relocation occurs within 182 days after the filing of the application therefor or (in the case of a worker who has been referred to training by the Secretary) within 182 days after the conclusion of such training.

"(i) DEFINITIONS.—For the purposes of this section—

"(1) The term 'relocation allowance' means—

"(A) 90 percent of the reasonable and necessary expenses (including, but not limited to, subsistence and transportation expenses at levels not exceeding those allowable under subsection (c) (1) and (2)) specified in regulations prescribed by the Secretary, incurred in transporting a worker and his family, if any, and household effects, and

"(B) a lump sum equivalent to 3 times the worker's average weekly wage, up to a maximum payment of $800.

"(2) The term 'adversely affected worker' means an individual who is determined to be eligible for a transition allowance under section 221 of the Clean Air Employment Transition Act.".

(b) AUTHORIZATION OF APPROPRIATIONS.—Section 3(c) of the Job Training Partnership Act is amended—

(1) by redesignating paragraphs (1) and (2) as subparagraphs (A) and (B), respectively,

(2) by inserting "(1)" after "(c)",

(3) by inserting "(other than section 325)" after "title III", and

(4) by adding at the end thereof the following new paragraph:

"(2) There are authorized to be appropriated to carry out section 325—

"(A) $15,000,000 for fiscal year 1991, and

"(B) such sums as may be necessary for each of fiscal years 1992, 1993, 1994, and 1995,

except that the total amount appropriated for all five such fiscal years shall not exceed $75,000,000. Sums appropriated pursuant to this paragraph are authorized to remain available until expended.".

SEC. 113. GAO ASSESSMENTS OF EFFECTS OF CLEAN AIR ACT COMPLIANCE ON EMPLOYMENT.

The Comptroller General of the United States shall—

(1) identify and assess, on a continuing basis, the effects on employment that are attributable to compliance with the provisions of the Clean Air Act; and

(2) submit to the Congress on the 3rd anniversary of the date of the enactment of this subtitle a written report on the assessments required under paragraph (1).

After submission of the report required on the 3rd anniversary of such date of enactment, the Comptroller General shall submit to the appropriate committees of the Congress such periodic updates regarding the assessments as are considered necessary or appropriate by the Comptroller General or such committees.

SEC. 114. APPROPRIATIONS REQUIRED.

Notwithstanding any other provision of this subtitle or any amendment made by this subtitle, the authority to make payments under this subtitle (or under any such amendment) is subject to the availability of funds appropriated therefor.

## TITLE II—PROVISIONS RELATING TO MOBILE SOURCES

Sec. 201. Clean fuel requirements.
Sec. 202. Emission standards for certain motor vehicles.
Sec. 203. Conforming amendment.
Sec. 204. Carbon monoxide emissions at cold temperatures.
Sec. 205. Evaporative emissions.
Sec. 206. Control of vehicle refueling emissions.
Sec. 207. Mobile source-related air toxics.
Sec. 208. Emission control diagnostics systems.
Sec. 209. Auto warranties.
Sec. 210. Heavy-duty trucks.
Sec. 211. Nonroad engines and vehicles.
Sec. 212. Vehicle certification.
Sec. 213. In-use compliance—recall.
Sec. 214. Compliance program fees.
Sec. 215. Information collection.
Sec. 216. Fuel volatility.
Sec. 217. Diesel fuel sulfur content.
Sec. 218. Lead substitute gasoline additives.
Sec. 219. Nonroad fuels.
Sec. 220. Fuel waivers.
Sec. 221. State fuel regulation.
Sec. 222. Enforcement.
Sec. 223. High altitude testing.
Sec. 224. Technical amendments.

SEC. 201. CLEAN FUEL REQUIREMENTS.

(a) DEFINITIONS.—Section 216 (42 U.S.C. 7550) is amended by adding the following at the end:

"(7) URBAN BUS.—The term 'urban bus' has the meaning provided under regulations of the Administrator promulgated under section 202(a).

"(8) CLEAN ALTERNATIVE FUEL.—The term 'clean alternative fuel' means any fuel (including methanol, ethanol, or other alcohols (including any mixture thereof containing 85 percent or more by volume of such alcohol with gasoline or other fuels), reformulated gasoline, diesel, natural gas, liquefied petroleum gas, and hydrogen) or power source (including electricity) used in a clean-fuel vehicle (or clean-fuel fleet vehicle) that complies with the standards and requirements applicable to such vehicle under this title when using such fuel or power source.

"(9) EMISSIONS OF OZONE-FORMING VOLATILE ORGANIC COMPOUNDS.—The term 'emissions of ozone-forming volatile organic compounds' means motor vehicle exhaust and evaporative, refueling, and running loss emissions of oxygenated and nonoxygenated hydrocarbons, excluding methane, and, after such exclusion, adjusted for reactivity.

"(10) COVERED FLEET.—The term 'covered fleet' means 10 or more motor vehicles which are owned or operated by a single person. In determining the number of vehicles owned or operated by a single person for purposes of this paragraph, all motor vehicles owned or operated, leased or otherwise controlled by such person, by any person which controls such person, by any person controlled by such person, and by any person under common control with such person shall be treated as owned by such person. The term 'covered fleet' shall not include motor vehicles held for lease or rental to the general public, motor vehicles held for sale by motor vehicle dealers (including demonstration vehicles), motor vehicles used for motor vehicle manufacturer product evaluations or tests, law enforcement and other emergency vehicles, or nonroad vehicles (including specialty farm vehicles).

"(11) COVERED FLEET VEHICLES.—The term 'covered fleet vehicles' means only motor vehicles in a covered fleet which are centrally fueled (or capable of being centrally fueled).

(b) CLEAN FUEL REQUIREMENTS.—Section 212 (42 U.S.C. 7546) is amended to read as follows:

"SEC. 212. CLEAN FUEL REQUIREMENTS.

"(a) URBAN BUSES.—

"(1) IN GENERAL.—Not later than January 1, 1992, the Administrator shall promulgate regulations requiring the use of clean alternative fuels in new urban buses operated primarily in a metropolitan statistical area or consolidated metropolitan statistical area with a 1980 population of 750,000 or more. The regulations shall provide that all new urban buses purchased or placed in service by owners or operators of urban buses in such areas shall be clean-fuel vehicles and shall be exclusively operated on clean alternative fuel. The Administrator shall prescribe a schedule phasing in the applicability of the requirements established by this paragraph over the 1994 through 1996 model years as follows: 25 percent of new urban buses purchased or placed into service in model year 1994; 60 percent of new urban buses purchased or placed into service in model year 1995; 100 percent of new urban buses purchased or placed into service in 1996 and later model years.

"(2) EXISTING URBAN BUSES.—The regulations under this subsection shall provide that all urban buses operated primarily in the areas referred to in paragraph (1) which have their engines replaced or rebuilt after January 1, 1996, shall be clean-fuel vehicles and shall be exclusively operated, while in such areas, on clean alternative fuel.

"(3) EMISSION STANDARDS FOR CLEAN-FUEL VEHICLES.—

"(A) IN GENERAL.—Not later than January 1, 1992, the Administrator shall promulgate regulations under section 202(a) containing specific emission standards applicable to clean fuel vehicles under this subsection. Such standards shall be based on the best technology that can reasonably be anticipated to be available at the time such measures are to be implemented, taking costs, safety, energy, lead time, and other relevant factors into account. Except to the extent that specific requirements are promulgated under subparagraph (B) of this paragraph, the standards applicable to such vehicles shall require compliance with the standard applicable under section 202 to emissions from conventional heavy-duty vehicles of the same type and model year.

"(B) SPECIFIC REQUIREMENTS.—The standards under this subsection shall require that (i) emissions of either oxides of nitrogen or particulate matter shall not exceed 50 percent of the emissions of such air pollutant allowed under the emission standard applicable for such air pollutant for a conventional heavy-duty vehicle or engine of the same type and model year pursuant to standards under section 202 and (ii) emissions of particulate matter shall not exceed 0.10 grams per brake horsepower hour. The Administrator shall increase the level of emissions allowed under clause (i) if the Administrator determines that the 50 percent reduction is not technologically achievable, taking into account durability, costs, lead time, safety, and other relevant factors, except that the Administrator may not increase such level of emissions above 70 percent.

"(C) DETERMINATION.—As part of the rulemaking under this paragraph, the Administrator shall make a determination as to whether the 50 percent reduction referred to in subparagraph (A) is technologically achievable, taking into account durability, costs, lead time, safety, and other relevant factors.

"(4) PARTICULATE MATTER.—The regulations under section 202(a)(1) applicable to emissions of particulate matter from 1991 through 1992 model year urban buses capable of operating on diesel fuel shall contain a standard which provides that emissions of particulate matter from such buses may not exceed 0.25 grams per brake horsepower hour. Emissions of particulate matter from such buses after model year 1992 shall not exceed 0.10 grams per brake horsepower hour.

"(b) CENTRALLY FUELED FLEETS.—

"(1) FLEET PROGRAM FOR SERIOUS, SEVERE, AND EXTREME OZONE NONATTAINMENT AREAS.—

"(A) IN GENERAL.—Each State in which there is located all or part of an ozone nonattainment area with a population of 250,000 or more classified under subpart 2 of part D of title I of this Act as Serious, Severe, or Extreme and each State in which there is located all or part of a carbon monoxide nonattainment area with a population of 250,000 or more and a 1988 carbon monoxide design value at or above 16.0 parts per million (as calculated according to the most recent interpretation methodology issued prior to enactment of this section by the United States Environmental Protection Agency), excluding those carbon monoxide nonattainment areas in which mobile sources do not contribute significantly to carbon monoxide concentrations, shall submit, within 24 months after the enactment of the Clean Air Act Amendments of 1990, a State implementation plan revision under section 110 and part D of title I to establish a clean-fuel vehicle program for fleets under this subsection.

"(B) PHASE-IN OF REQUIREMENTS.—(i) Except as provided in clause (ii), the plan revision required under this subsection shall contain provisions requiring at least 30 percent of all new covered fleet vehicles operated by each covered fleet operator in each such area beginning in 1995, at least 50 percent of such vehicles in 1996, and at least 70 percent in 1998, to be clean-fuel vehicles and to use clean alternative fuels when operating in the area.

"(ii) In the case of vehicles of 8,500 lbs. and above gross vehicle weight rating (gvwr), the plan revision required under this subsection shall contain provisions requiring at least 30 percent of all new covered fleet vehicles operated by each covered fleet operator in each such area beginning in 1998, at least 50 percent of such vehicles in 1999, and at least 70 percent of such vehicles in 2000 to be clean-fuel vehicles and to use clean alternative fuels when operating in the area.

"(C) CONSULTATION; CONSIDERATION OF FACTORS.—Each such State shall develop its implementation plan revision under this subsection in consultation with fleet operators, vehicle manufacturers, fuel producers and distributors, motor vehicle fuel system convertors, and other interested parties, taking into consideration operational range, specialty uses, vehicle and fuel availability, conversion capability, costs, safety, resale values of vehicles and equipment and other relevant factors.

"(D) CHOICE OF VEHICLES AND FUEL.—The plan revision under this subsection shall provide that the choice of clean-fuel vehicles and clean alternative fuels shall be made by the covered fleet operator subject to the requirements of this subsection.

"(E) CREDITS.—The State plan revision required under this subsection may provide for the issuance by the State of appropriate credits to each covered fleet operator for the use of clean-fuel vehicles which achieve on a per vehicle basis greater emission reductions than those required on a per vehicle basis under this subsection or for the use of more clean-fuel vehicles than required under this subsection. Such credits may be used by the person receiving such credits to demonstrate compliance with this subsection or may be traded or sold for use by any person to demonstrate compliance with other requirements applicable under this subsection in the same nonattainment area. Within 12 months after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall issue guidelines for the credit program.

"(2) RECLASSIFIED AREAS.—In the case of ozone nonattainment areas reclassified as Serious, Severe, or Extreme, a plan revision meeting the requirements of this subsection shall be submitted within 1 year after reclassification. Such plan revision shall implement the requirements applicable under this subsection at the time of reclassification and thereafter, except that the Administrator may adjust for a limited period the deadlines for compliance where compliance with such deadlines would be infeasible.

"(3) AVAILABILITY TO THE PUBLIC.—At any facility owned or operated by a department, agency, or instrumentality of the United States where vehicles subject to this subsection are supplied with clean alternative fuel, such fuel shall be offered for sale to the public for use in other vehicles during reasonable business times and subject to national security concerns, unless such fuel is commercially available for vehicles in the vicinity of such Federal facilities.

"(4) EMISSION STANDARDS FOR CLEAN-FUEL VEHICLES.—Not later than 12 months after the date of enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations under section 202(a) containing specific emission standards applicable to clean-fuel vehicles under this subsection. Such standards shall be based on the best technology that can reasonably be anticipated to be available at the time such measures are to be implemented, taking into account costs, safety, energy, lead time, and other relevant factors. In addition to the specific requirements set forth in this paragraph, the standards applicable to such vehicles shall require compliance with the most stringent standard applicable under section 202 to emissions from conventional vehicles of the same type and model year.

"(A) LIGHT-DUTY VEHICLES AND TRUCKS.—For light-duty vehicles and trucks of less than 3,750 pounds (loaded vehicle weight) and not more than 8,500 pounds gross vehicle weight rating (gvwr):

"(i) Beginning with model year 1995, the standards under this subsection shall require that the total vehicle emissions of ozone forming volatile organic compounds shall not exceed 0.66 grams per mile (gpm).

"(ii) Beginning with model year 2000 the standards under this subsection shall require that the total vehicle emissions of ozone forming volatile organic compounds shall not exceed 0.25 grams per mile (gpm). The Administrator shall by rule waive for a period not to exceed 3 model years, the standards for oxides of nitrogen in the case of vehicles subject to the standard for volatile organic compounds under this clause and establish a different standard for oxides of nitrogen if the Administrator determines that such different standard is necessary in order to achieve the 0.25 grams per mile standard under this clause. Such different standard for oxides of nitrogen shall not exceed 0.7 grams per mile (gpm). The Administrator shall during such 3-model-year

period conduct a study, and report the results to the Congress, concerning the technological feasibility of achieving the reductions required under this clause and the standard for oxides of nitrogen without such waiver.

"(B) LIGHT-DUTY VEHICLES AND TRUCKS OF 3,750 LVW OR GREATER.—For light-duty vehicles and trucks of 3,750 pounds (loaded vehicle weight) or more but less than 8,500 gross vehicle weight rating (gvwr) the standards under this subsection shall be, during Phase I, the light-duty truck equivalent of a passenger car at 0.53 gpm emissions of ozone producing volatile organic compounds and, during Phase II, such equivalent of a passenger car at 0.25 gpm, and shall include, for each phase an equivalent reduction in emissions of hazardous air pollutants.

"(C) VEHICLES OF 8,500 POUNDS (GVWR) AND ABOVE.—(i) For vehicles of 8,500 pounds and above (gross vehicle weight rating) the standards under this subsection shall, at a minimum, require that (I) emissions of either oxides of nitrogen or particulate matter shall not exceed 50 percent of the emissions of such air pollutant allowed under the emission standard applicable for such air pollutant for a conventional heavy-duty vehicle or engine of the same type and model year pursuant to standards under section 202 and (II) emissions of particulate matter shall not exceed 0.10 grams per brake horsepower hour. The Administrator shall increase the level of emissions allowed under clause (I) if the Administrator determines that the 50 percent reduction is not technologically achievable for clean diesel engines, taking into account durability, costs, lead time, safety, and other relevant factors, except that the Administrator may not increase such level of emissions above 70 percent.

"(ii) DETERMINATION.—As part of the rulemaking under this paragraph, the Administrator shall make a determination as to whether the 50 percent reduction referred to in clause (i) is technologically achievable, taking into account durability, costs, lead time, and safety.

"(5) TRANSPORTATION CONTROL MEASURES.—The Administrator shall by rule, within 1 year after the enactment of the Clean Air Act Amendments of 1990, ensure that certain transportation control measures including high-occupancy vehicle lanes, time-of-day or day-of-week restrictions, and other similar measures that restrict vehicle usage, do not apply to any clean-fuel vehicle that is subject to the requirements of this subsection.

"(c) OXYGENATED FUELS.—

"(1) CO NONATTAINMENT AREAS.—Each State in which there is located all or part of an area classified under section 186 as a Moderate or Serious Area for carbon monoxide shall submit to the Administrator a State implementation plan revision under section 110 and part D of title I for such area. The plan revision shall be submitted within 1 year after the classification of the area. The plan revision shall contain provisions to require that gasoline sold, or dispensed, to the ultimate consumer or sold or dispensed directly or indirectly by fuel refiners or marketers to persons who sell or dispense to ultimate consumers, in the larger of—

"(A) the Consolidated Metropolitan Statistical Area (CMSA) in which the area is located, or

"(B) if the area is not located in a CMSA, the Metropolitan Statistical Area in which the area is located,

be blended, during the portion of the year in which the area is prone to high ambient concentrations of carbon monoxide (as determined by the Administrator), to contain not less than 2.7 percent oxygen. The revision shall provide that such requirement shall take effect no later than October 1, 1992, and shall include a program for implementation and enforcement of the requirement consistent with guidance to be issued by the Administrator. The Administrator shall waive, in whole or in part, the requirements of this paragraph upon a demonstration by the State to the satisfaction of the Administrator that the use of oxygenated fuels would prevent or interfere with the attainment by the area of a national primary ambient air quality standard (or a State or local ambient air quality standard) for any air pollutant other than carbon monoxide. The Administrator shall, upon demonstration by the State satisfactory to him, waive the requirement of this paragraph where he determines that mobile sources of carbon monoxide do not contribute significantly to carbon monoxide levels in an area.

"(2) FUEL DISPENSING SYSTEMS.—Any person selling oxygenated fuel at retail pursuant to this subsection shall be required under regulations promulgated by the Administrator to label the fuel dispensing system with a notice that the fuel is oxygenated and will reduce the carbon monoxide emissions from the motor vehicle and indicate such other pertinent information for the benefit of the public.

"(3) GUIDELINES.—The Administrator shall promulgate guidelines, within 9 months after the date of the enactment of the Clean Air Act Amendments of 1990, allowing the use of marketable oxygen credits from fuels with higher oxygen content than required to offset the sale or use of fuels with a lower oxygen content than required.

"(4) DEADLINE ADJUSTMENT.—For any area classified as a Serious Area under section 186(b), the Administrator shall adjust the deadlines referred to in this subsection where necessary.

"(5) CONSTRUCTION.—Nothing in this subsection shall be interpreted as requiring an oxygenated fuels program in an area which is in attainment for carbon monoxide and such program is not necessary to maintain such standard thereafter in the area.

"(6) If the Administrator determines under section 186(b)(2) that the national primary ambient air quality standard for carbon monoxide has not been attained in a Serious Area by the applicable attainment date, the State shall submit a plan revision for the area within 9 months after the date of such determination. The plan revision shall provide that the minimum oxygen content of gasoline referred to in paragraph (1) shall be 3.1 percent by weight unless such requirement is waived in accordance with the provisions of this section.

"(d) CALIFORNIA PILOT TEST PROGRAM.—

"(1) ESTABLISHMENT.—The Administrator shall establish a pilot program in the State of California to demonstrate the effectiveness of clean-fuel vehicles in controlling air pollution ozone nonattainment areas.

"(2) APPLICABILITY.—The provisions of this subsection shall only apply to passenger cars and light-duty trucks of less than 3,750 loaded vehicle weight (l.v.w.) and only in the State of California (hereinafter referred to as the 'covered area').

"(3) PROGRAM REQUIREMENTS.—Not later than 12 months after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations establishing requirements under this subsection. The regulations shall provide the following:

"(A) CLEAN-FUEL VEHICLES.—Clean-fuel vehicles shall be produced, sold, and distributed in accordance with normal business practices and applicable franchise agreements to ultimate purchasers in the covered area (including owners of covered fleets referred to in subsection (b)) in numbers that meet or exceed the following schedule (as may be revised under subparagraph (D)): 150,000 vehicles in model years 1994 through 1996; 300,000 in model years 1997 and thereafter. The Administrator may by regulation grant a manufacturer an appropriate amount of credits toward fulfillment of the requirements prescribed under this subparagraph for selling more clean-fuel vehicles than regulations under this subparagraph require. A manufacturer granted credits may transfer some or all of the credits for use by one or more other manufacturers in demonstrating compliance with the requirements prescribed under this subparagraph. The Administrator may make the credits available for use after consideration of enforceability, environmental, and economic factors and upon such terms and conditions as he finds appropriate. The Administrator shall grant credits in accordance with this subparagraph, notwithstanding any requirements of State law or any credits granted with respect to the same vehicles under any State law, rule, or regulation.

"(B) CLEAN ALTERNATIVE FUELS.—(i) The clean alternative fuels on which the vehicles required under subparagraph (A) can operate shall be produced by fuel refiners and made available in the covered area. At a minimum, sufficient clean alternative fuels shall be produced to assure that all clean-fuel vehicles required under this subsection can operate, to the maximum extent practicable, exclusively on such fuels in such area and one such fuel shall be offered for retail sale at service stations dispensing at least 50,000 gallons of motor vehicle fuel per month, on average. The Administrator shall determine the clean alternative fuels to be produced and made available based on motor vehicle manufacturers' projections of future sales of clean-fuel vehicles and consultations with the affected State and local governments. The Administrator may by regulation grant persons subject to the requirements prescribed under this subparagraph an appropriate amount of credits for exceeding such requirements, and any person granted credits may transfer some or all of the credits for use by one or more persons in demonstrating compliance with such requirements. The Administrator may make the credits available for use after consideration of enforceability, environmental, and economic factors and upon such terms and conditions as he finds appropriate. The Administrator may also by regulation establish specifications for any clean alternative fuel produced and made available under this subparagraph as he finds necessary to reduce or eliminate an unreasonable risk to public health, welfare, or safety associated with its use or to ensure acceptable vehicle maintenance and performance characteristics.

"(ii) If a retail gasoline dispensing facility would have to remove or replace one or more motor vehicle fuel underground storage tanks and accompanying piping in order to comply with the provisions of this subsection, and it had removed and replaced such tank or tanks and accompanying piping in order to comply with subtitle I of the Solid Waste Disposal Act prior to the date of the enactment of the Clean Air Act Amendments of 1990, it shall not be required to comply

with this subsection until a period of 7 years has passed from the date of the removal and replacement of such tank or tanks.

"(4) EMISSION STANDARDS FOR CLEAN-FUEL VEHICLES.—Not later than 12 months after the date of enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations under section 202(a) containing specific emission standards applicable to clean-fuel vehicles under this subsection. Such standards shall be based on the best technology that can reasonably be anticipated to be available at the time such measures are to be implemented, taking costs, safety, energy, and other relevant factors into account. In addition to the specific requirements set forth in this paragraph, the standards applicable to such vehicles shall require compliance with the most stringent standard applicable under section 202 to emissions from conventional vehicles of the same type and model year.

"(A) LIGHT-DUTY VEHICLES AND TRUCKS.—For light-duty vehicles and trucks of less than 3,750 pounds loaded vehicle weight (l.v.w.) and less than 8,500 gross vehicle weight rating (gvwr):

"(i) Beginning with model year 1995, the standards under this subsection shall require emission reductions representing a 50 percent reduction in emissions of ozone-forming volatile organic compounds and a 50 percent reduction from those of a baseline vehicle in total vehicle emissions of benzene, 1,3-butadiene, gasoline vapors, polycyclic organic material (POM), including POM and diesel particulates, and formaldehyde and such other hazardous air pollutants as the Administrator may by rule determine to warrant regulation.

"(ii) Unless the Administrator determines that it is not technologically feasible (considering durability, costs, lead time, safety, and other relevant factors) beginning with model year 2003 in the case of clean-fuel vehicles subject to the requirements of this subsection, the standards under this subsection shall, at a minimum, require emission reductions representing a 75 percent reduction in ozone-forming volatile organic compounds and a 75 percent reduction from a baseline vehicle in total vehicle emissions of benzene, 1,3-butadiene, gasoline vapors, polycyclic organic material (POM), including POM and diesel particulates, and formaldehyde and such other hazardous air pollutants as the Administrator may by rule warrant regulation. If the Administrator determines that it is not technologically feasible (considering durability, costs, lead time, safety, and other relevant factors) to require such 75 percent reduction, the Administrator shall increase the level of emissions allowed under this clause, except that the Administrator may not increase such level of emissions above 50 percent.

For purposes of this subparagraph, the term 'baseline vehicle' means a conventional gasoline-fueled vehicle of the same type and model year meeting the most stringent standards in effect for that vehicle under section 202.

"(B) OTHER FUELS.—The standards under this paragraph shall permit clean-fuel vehicles to use a fuel other than a clean alternative fuel, if, when operated on any such other fuel, such vehicle complies with the emission standards applicable under section 202 to conventional gasoline-fueled vehicles of the same type and model year.

"(5) PROGRAM EVALUATION.—Not later than June 30, 1998, the Administrator shall complete and submit a report to Congress on the effectiveness of the California pilot program under this subsection. The report shall evaluate the level of emission reductions achieved under the program, the costs of the program, the advantages and disadvantages of extending the program to other nonattainment areas, and desirability of continuing or expanding the program in California. The program cannot be extended or terminated by the Administrator except by Act of Congress enacted after the date of the Clean Air Act Amendments of 1990. Section 177 of this Act does not apply to the program under this subsection.

"(e) INCENTIVE PROGRAM.—(1) At the time the Administrator submits the report to Congress under paragraph (5) of subsection (d), the Administrator shall promulgate regulations establishing an incentive program to encourage the purchase of clean-fuel vehicles. Such regulations may include any of the following:

"(A) A State registration fee on new motor vehicles registered in the State which are not clean-fuel vehicles in the amount of at least 1 percent of the cost of the vehicle. The proceeds of such fee shall be used to provide financial incentives to purchasers of clean-fuel vehicles and to vehicle dealers who sell high volumes or high percentages of clean-fuel vehicles and to defray the administrative costs of the incentive program.

"(B) Provisions to exempt clean-fuel vehicles from high occupancy vehicle or trip reduction requirements.

"(C) Provisions to provide preference in the use of existing parking spaces for clean-fuel vehicles.

"(D) The incentives under this subsection shall not apply in the case of covered fleet vehicles.

"(2) The regulations shall include a procedure under which States may submit implementation plan revisions to incorporate incentive programs consistent with the Administrator's regulations under this paragraph.

"(f) STATE REFUELING FACILITIES.—If any State adopts enforceable provisions in an implementation plan applicable to a nonattainment area which provides that existing State refueling facilities will be made available to the public for the purchase of clean alternative fuels or that State-operated refueling facilities for such fuels will be constructed and operated by the State and made available to the public at reasonable times, taking into consideration safety, costs, and other relevant factors, in approving such plan under section 110 and part D, the Administrator may credit a State with the emission reductions for purposes of part D attributable to such actions.

"(g) NO PRODUCTION MANDATE.—The Administrator shall have no authority under this section to mandate the production of clean-fuel vehicles except as provided in the California test pilot program or to specify as applicable the models, lines, or types of, or marketing or price practices, policies, or strategies for, vehicles subject to this section. Nothing in this section shall be construed to give the Administrator authority to mandate marketing or pricing practices, policies, or strategies for fuels.

"(h) VEHICLE CONVERSIONS.—(1) The requirements of this section may be met through the conversion of existing gasoline or diesel-powered vehicles to a clean-fuel vehicle which comply with the applicable requirements of this section.

"(2) The Administrator shall, within 12 months after the enactment of the Clean Air Act Amendments of 1990, consistent with the requirements of this title applicable to new vehicles, promulgate regulations governing such conversions. Such regulations shall establish criteria for such conversions which will ensure that a converted vehicle will, when operating on a clean alternative fuel, comply with the applicable standards under this section. Such regulations shall provide for the application to such conversions of the same provisions of this title as are applicable to standards under section 202 (including the provisions of sections 206, 207, 208, and 209), except that in the case of conversions the Administrator may modify the applicable regulations implementing such provisions as the Administrator deems necessary to implement this subsection. Such provisions shall be enforced in the case of conversions in the same manner and to the same extent as in the case of vehicles subject to standards under section 202.

"(3) Any person who obtains, pursuant to paragraph (2), a certification under section 206 shall be considered a manufacturer for purposes of sections 206 and 207 and related enforcement provisions. Nothing in the preceding sentence shall require a person who obtains such a certification to warrant any part or operation of a vehicle other than what is required under sections 206 and 207. Nothing in this paragraph shall limit the applicability of any other warranty to unrelated parts or operations.

"(4) The conversion from a vehicle capable of operating on gasoline or diesel fuel only to a clean-fuel vehicle shall not be considered a violation of section 203(a)(3) if such conversion complies with the regulations promulgated under this subsection.

"(5) The Secretary of Transportation shall, if necessary, promulgate rules under applicable motor vehicle laws regarding the safety of converted vehicles.

"(i) TANK AND FUEL SYSTEM SAFETY.—The Secretary of Transportation shall, in accordance with the National Motor Vehicle Traffic Safety Act of 1966, promulgate applicable regulations regarding the safety and use of fuel storage cylinders and fuel systems, including appropriate testing and retesting, in conversions of motor vehicles.

"(j) CONSULTATION WITH DEPARTMENT OF ENERGY AND DEPARTMENT OF TRANSPORTATION.—The Administrator shall coordinate with the Secretaries of the Department of Energy and the Department of Transportation in carrying out the Administrator's duties under this section.".

(c) CONFORMING AMENDMENT.—Section 202(a)(4) (42 U.S.C. 7521(a)(4)) is amended by striking out "standards prescribed under this subsection" every place it occurs and inserting "requirements prescribed under this title".

(d) REFORMULATED GASOLINE.—Section 211 is amended by adding the following new subsection at the end thereof:

"(k) CLEAN FUELS FOR CONVENTIONAL VEHICLES.—(1) Within 1 year after the enactment of the Clean Air Act Amendments of 1990 the Administrator shall promulgate regulations under this section establishing requirements for cleaner gasoline to be used in gasoline-fueled vehicles. Such regulations shall require the greatest reduction in emissions of ozone forming volatile organic compounds (during the period referred to in subparagraph (B)(i)) and emissions of hazardous air pollutants achieveable through the reformulation of conventional gasoline, taking into consideration the cost of achieving such emission reductions, any nonair-quality and other air-quality related health and environmental impacts, including reactivity and relative toxicity, and energy require-

ments. Such requirements shall comply with the more stringent of either the requirements set forth in subparagraph (A) or the requirements set forth in subparagraph (B), except that the requirements of subparagraph (A) (iii) and (iv) shall apply in all cases. For purposes of determining the more stringent provision, subparagraphs (B)(i) and (B)(ii) shall be considered independently. The requirements of subparagraph (C) shall apply in all cases.

"(A)(i) The benzene content of the fuel shall not exceed 0.8 percent by volume.

"(ii) The aromatic hydrocarbon content of the fuel shall not exceed the following limits: 30 percent by volume after January 1, 1992, 28 percent by volume after January 1, 1994, and 25 percent by volume after January 1, 1996.

"(iii) The fuel shall have no lead content.

"(iv) The fuel shall contain additives to prevent the accumulation of deposits in engine fuel supply systems.

"(v) The oxygen content of the fuel shall equal or exceed the following: 2.0 percent by weight as of January 1, 1992, 2.5 percent by weight by January 1, 1993, and 2.7 percent by weight by January 1, 1994, except as otherwise required by this Act.

"(B)(i) During the high ozone season (as defined by the Administrator), the total emissions of ozone forming volatile organic compounds from representative model year 1990 vehicles when using the fuel shall, in the aggregate, be at least 15 percent below the total emissions of ozone forming volatile organic compounds from such vehicles when using 1990 certification fuel. Effective in calendar year 1997 and thereafter, 20 percent shall be substituted for 15 percent in applying this subparagraph. Effective in calendar year 2000 and thereafter, 25 percent shall be substituted for 20 percent in applying this clause.

"(ii) During the entire year, the total emissions of hazardous air pollutants from representative model year 1990 vehicles when using the fuel shall, in the aggregate, be at least 15 percent below the total emissions of hazardous air pollutants from such vehicles when using 1990 certification fuel (or to such other levels as the administrator determines will achieve at least as great a reduction in aggregate adverse health effects as such 15 percent reduction). Effective in calendar year 1997 and thereafter, 20 percent shall be substituted for 15 percent in applying this subparagraph. Effective in calendar year 2000 and thereafter, 25 percent shall be substituted for 20 percent in applying this clause. For purposes of this clause, within 1 year after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall, by rule, determine appropriate measures of and methodology for ascertaining the emissions of harzardous air pollutants (including calculations, equipment, and tolerances) and their aggregate health effects.

"(C) The total emissions of oxides of nitrogen from representative vehicles when using the fuel shall in the aggregate be no greater than the level of such emissions from such vehicles when using conventional gasoline (as defined by the Administrator) of the same grade which meets the requirements applicable under this section.

"(2) The regulations promulgated under this subsection shall include procedures under which the Administrator shall certify fuels as complying with the requirements established pursuant to paragraph (1). Under such regulations, the Administrator shall establish procedures for any person to petition the Administrator to certify an alternative fuel formulation, or slate of fuel formulations. The Administrator shall certify a fuel formulation or slate of fuel formulations if such fuel or fuels (A) achieves equivalent or greater reductions in emissions of ozone forming volatile organic compounds and emissions of hazardous air pollutants than are achieved by a fuel meeting the requirements of paragraph (1) and (B) complies with the requirements of subparagraph (C) of paragraph (1). Such procedures shall further require that the Administrator shall approve or deny such petition within 90 days of receipt, and failure to act within such time shall be deemed a denial of such petition. Within 1 year after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall determine the level of emissions of ozone forming volatile organic compounds and emissions of hazardous air pollutants emitted by representative model year 1990 motor vehicles when operating on 1990 certification fuel.

"(3)(A) Effective January 1, 1994, no person may sell or dispense to the ultimate consumer, and no fuel refiner or marketer may directly or indirectly sell or dispense to persons who sell or dispense to ultimate consumers, in any ozone nonattainment area classified under subpart 2 of part D of title I as Severe or Extreme any fuel for use in conventional gasoline-fueled vehicles that has not been certified by the Administrator under this subsection.

"(B) Effective January 1, 1992, until January 1, 1994, no person may sell or dispense to the ultimate consumer, and no fuel refiner or marketer may directly or indirectly sell or dispense to persons who sell or dispense to ultimate consumers, in any such area any fuel for use in conventional gasoline-fueled vehicles that has not been certified by the Administrator under this subsection as complying with subparagraph (A) (ii) and (v) and subparagraph (C) of paragraph (1).

"(4)(A) Upon the application of the Governor of a State, the Administrator shall apply the prohibition set forth in paragraph (3) in any area in the State classified under subpart 2 of part D of title I as a Marginal, Moderate, or Serious Area, and in any such case, the Administrator shall establish an effective date for such prohibition as he deems appropriate, not later than January 1, 1994, or 1 year after such application is received, whichever is later. The Administrator shall publish such application in the Federal Register upon receipt.

"(B) If the Administrator determines, on his own motion or on petition of any person, after consultation with the Secretary of Energy, that there is insufficient domestic capacity to produce fuel certified under this subsection, the Administrator shall, by rule, extend the effective date of such prohibition in Marginal, Moderate, or Serious Areas for one additional year, and may, by rule, renew such extension for 2 additional one-year periods. The Administrator shall act on any petition submitted under this paragraph within 6 months after receipt of the petition. The administrator shall issue such extensions for areas with a lower ozone classification before issuing any such extension for areas with a higher classification.

"(5)(A) The regulations promulgated under this subsection shall provide for the granting of an appropriate amount of credits to a person who produces and certifies a fuel that—

"(i) has an oxygen content that exceeds the minimum oxygen content specified in paragraph (1); or

"(ii) has an aromatic hydrocarbon content that is less than the maximum aromatic hydrocarbon content specified in paragraph (1).

"(B) The regulations described in subparagraph (A) shall also provide that a person who is granted credits may use such credits, or transfer all or a portion of such credits to another person, for the purpose of complying with this subsection.

"(C) The regulations promulgated under subparagraphs (A) and (B) shall ensure the enforcement of the requirements for the issuance, application, and transfer of the credits. Such regulations shall prohibit the granting or transfer of such credits for use with respect to any fuel in a nonattainment area, if the use of such credits would result in—

"(i) an average fuel aromatic hydrocarbon content (taking into account all fuel used in all conventional gasoline-fueled vehicles in the nonattainment area) higher than the average fuel aromatic hydrocarbon content that would occur in the absence of such credits; and

"(ii) an average fuel oxygen content (taking into account all fuel used in all conventional gasoline-fueled vehicles in the nonattainment area) lower than the average fuel oxygen content that would occur in the absence of such credits.

"(6) Within 1 year after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations applicable to gasoline to ensure that gasoline (other than gasoline subject to the requirements of paragraph (1)) does not result in emissions of ozone forming volatile organic compounds, nitrogen oxides, or carbon monoxide, or aggregate emissions of hazardous air pollutants from representative motor vehicles in excess of the levels of emissions of such pollutants that would result if conventional gasoline of a similar grade sold in calendar year 1989 were used in such vehicles. Such regulations shall take effect no later than January 1, 1992.

"(7) For purposes of this subsection, the term '1990 certification fuel' means fuel used in exhaust and evaporative emissions testing for 1990 model year vehicles.".

SEC. 202. EMISSION STANDARDS FOR CERTAIN MOTOR VEHICLES.

(a) STANDARDS.—Section 202 (42 U.S.C. 7521) is amended by adding the following at the end thereof:

"(g) NMHC AND CO STANDARDS FOR MODEL YEARS AFTER 1993.—Effective with respect to the model year 1994 and thereafter, the regulations under subsection (a) applicable to emissions of nonmethane hydrocarbons (NMHC) and carbon monoxide (CO) from passenger cars and light-duty trucks (LDTs) shall contain standards which provide that emissions from a specified percentage of each manufacturer's sales volume of such cars and trucks shall comply with the levels specified in table 1. The specified percentage shall be 40 percent in model year 1994, 80 percent in 1995, and 100 percent thereafter.

"TABLE 1.—EMISSION STANDARDS FOR NHMC AND CO FROM GASOLINE AND DIESEL FUELED PASSENGER VEHICLES AND LIGHT-DUTY TRUCKS OF UP TO 6,000 LBS. GVWR

| Vehicle type | Column A * (5 yrs/50,000 mi) | | Column B ** (10 yrs/100,000 mi) | |
|---|---|---|---|---|
| | NMHC | CO | NMHC | CO |
| Passenger Cars.... | 0.25 | 3.4 | 0.31 | 4.2 |
| LDT's (0-3,750 lbs LVW). | 0.25 | 3.4 | 0.31 | 4.2 |
| LDT's (3,751-5,750 lbs LVW). | 0.32 | 4.4 | 0.40 | 5.5 |

Standards are expressed in grams per mile (gpm).

LVW refers to loaded vehicle weight and GVWR refers to gross vehicle weight rating each as defined by EPA in regulations in effect as of the date of the enactment of the Clean Air Act Amendments of 1990.

* In the case of the standards under column A, for purposes of certification under section 206, the applicable useful life shall be 5 years or 50,000 miles (or the equivalent) whichever first occurs.

** In the case of the standards under column B, for purposes of certification under section 206, the applicable useful life shall be 10 years or 100,000 miles (or the equivalent), whichever first occurs.

"(h) $NO_x$ AND PM STANDARDS FOR MODEL YEARS AFTER 1993.—Effective with respect to the model years after 1993 in the case of passenger cars, and effective with respect to model years after 1994 in the case of light-duty trucks (LTDs), the regulations under subsection (a) applicable to emissions of oxides of nitrogen ($NO_x$) and particulate matter (PM) from such cars and trucks shall contain standards which provide that such emissions from a specified percentage of each manufacturer's sales volume of such cars and trucks shall comply with the levels specified in table 2. In the case of passenger cars, the specified percentage shall be 40 percent in model year 1994 and 100 percent thereafter. In the case of light-duty trucks, the specified percentage shall be 40 percent in model year 1995 and 100 percent thereafter.

"TABLE 2.—EMISSION STANDARDS FOR $NO_x$ and PM From Gasoline and Diesel Fueled Passenger Cars and Light-Duty Trucks (LDTs) OF UP TO 6,000 LBS. GVWR

| Vehicle type | Pollutant | Standard * |
|---|---|---|
| Passenger cars and LDT's with LVW of 3,750 lbs. or less. | $NO_x$..... | 0.4 gpm |
| | PM..... | 0.08 gpm |
| LDT's with LVW of 3,751 to 5,750 lbs. | $NO_x$..... | 1.0 gpm |
| | PM..... | 0.08 gpm |

Standards are expressed in grams per mile (gpm).

LVW refers to loaded vehicle weight and GVWR refers to gross vehicle weight rating each as defined by EPA in regulations in effect as of the date of the enactment of the Clean Air Act Amendments of 1990.

* For these standards, for purpose of certification under section 206, the applicable useful life shall be 5 years or 50,000 miles (or the equivalent), whichever first occurs.

"(i) PHASE II STUDY.—(1) The Administrator, with the participation of the Office of Technology Assessment, shall study whether or not further reductions in emissions from passenger cars and light-duty trucks should be required pursuant to this title. The study shall consider whether to establish with respect to model years commencing after January 1, 2003, the standards and useful life period for gasoline and diesel-fueled passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less specified in the following table:

"TABLE 3.—PENDING EMISSION STANDARDS FOR GASOLINE AND DIESEL FUELED PASSENGER VEHICLES AND LIGHT-DUTY TRUCKS WITH 3,750 LBS. LVW OR LESS

| Pollutant | Emission level* |
|---|---|
| NMHC..... | 0.125 gpm |
| $NO_x$..... | 0.2 gpm |
| CO..... | 1.7 gpm |

* Emission levels are expressed in grams per mile (gpm). For vehicles and engines subject to this subsection for purposes of section 202(d) and any reference thereto, the useful life of such vehicles and engines shall be a period of 10 years or 100,000 miles (or the equivalent), whichever first occurs.

Such study shall also consider other standards and useful life periods which are more stringent or less stringent than those set forth in table 3 (but more stringent than those referred to in subsections (g) and (h)).

"(2)(A) As part of the study under paragraph (1), the Administrator shall examine the need for further reductions in emissions in order to attain or maintain the national ambient air quality standards, taking into consideration the waiver provisions of section 209(b). As part of such study, the Administrator shall also examine—

"(i) the availability of technology (including the costs thereof), in the case of passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less, for meeting more stringent emission standards than those provided in subsections (g) and (h) for model years commencing not earlier than after January 1, 2003 and not later than model year 2006, including the lead time and safety and energy impacts of meeting more stringent emission standards; and

"(ii) the need for, and cost effectiveness of, obtaining further reductions in emissions from such passenger cars and light-duty trucks, taking into consideration alternative means of attaining or maintaining the national primary ambient air quality standards pursuant to State implementation plans and other requirements of this Act, including their feasibility and cost effectiveness.

"(B) The Administrator shall submit a report to Congress no later than June 1, 1997, containing the results of the study under this subsection, including the results of the examination conducted under subparagraph (A). Before submittal of such report the Administrator shall provide a reasonable opportunity for public comment and shall include a summary of such comments in the report to Congress.

"(3)(A) Based on the study under paragraph (1) the Administrator shall determine, by rule, within 3 calendar years after the report is submitted to Congress, but not later than December 31, 1999, whether—

"(i) there is a need for further reductions in emissions as provided in paragraph (2)(A);

"(ii) the technology for meeting more stringent emission standards will be available, as provided in paragraph (2)(A)(i), in the case of passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less, for model years commencing not earlier than January 1, 2003 and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); and

"(iii) obtaining further reductions in emissions from such vehicles will be needed and cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii).

The rulemaking under this paragraph shall commence within 3 months after submission of the report to Congress under paragraph (2)(B).

"(B) If the Administrator determines under subparagraph (A) that—

"(i) there is no need for further reductions in emissions as provided in paragraph (2)(A);

"(ii) the technology for meeting more stringent emission standards will not be available as provided in paragraph (2)(A)(i), in the case of passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less, for model years commencing not earlier than January 1, 2003, and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); or

"(iii) obtaining further reductions in emissions from such vehicles will not be needed or cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii),

the Administrator shall not promulgate more stringent standards than those in effect pursuant to subsections (g) and (h). (Nothing in this paragraph shall prohibit the Administrator from exercising the Administrator's authority under subsection (a) to promulgate more stringent standards for passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less at any other time thereafter in accordance with subsection (a).)

"(C) If the Administrator determines under subparagraph (A) that—

"(i) there is a need for further reductions in emissions as provided in paragraph (2)(A);

"(ii) the technology for meeting more stringent emission standards will be available, as provided in paragraph (2)(A)(i), in the case of passenger cars and light-duty trucks with a loaded vehicle weight (lvw) of 3,750 lbs. or less, for model years commencing not earlier than January 1, 2003, and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); and

"(iii) obtaining further reductions in emissions from such vehicles will be needed and cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii),

the Administrator shall either promulgate the standards (and useful life periods) set forth in table 3 of paragraph (1) or promulgate alternative standards (and useful life periods) which are more stringent than those referred to in subsections (g) and (h). Any such standards (or useful life periods) promulgated by the Administrator shall take effect with respect to any such vehicles or engines no earlier than the model year 2003 but not later than model year 2006, as determined by the Administrator in the rule.

"(D) Nothing in this paragraph shall be construed by the Administrator or by a court as a presumption that any standards (or useful life period) set forth in table 3 shall be promulgated in the rulemaking required under this paragraph. The action required of the Administrator in accordance with this paragraph shall be treated as a nondiscretionary duty for purposes of section 304(a)(2) (relating to citizen suits).

"(E) Unless the Administrator determines not to promulgate more stringent standards as provided in subparagraph (B) or to postpone the effective date of standards referred to in table 3 of paragraph (1) or to establish alternative standards as provided in subparagraph (C), effective with respect to model years commencing after January 1, 2003, the regulations under subsection (a) applicable to emissions of nonmethane hydrocarbons (NMHC), oxides of nitrogen (NOx), and carbon monoxide (CO) from motor vehicles and motor vehicle engines in the classes specified in table 3 of paragraph (1) above shall contain standards which provide that emissions may not exceed the pending emission levels specified in table 3 of paragraph (1).".

(b) CONFORMING AMENDMENT.—Section 202(d)(1) (42 U.S.C. 7521(d)(1)) is amended by inserting ", except as otherwise specifically provided in this title" before the semicolon at the end thereof.

(c) REVISED STANDARDS.—Subparagraph (C) of section 202(b)(1) (42 U.S.C. 7521(b)(1)(C)) is amended to read as follows:

"(C) The Administrator may promulgate regulations under subsection (a)(1) revising any standard prescribed or previously revised under this subsection, as needed to protect public health or welfare, taking costs, energy, and safety into account. Any revised standard shall require a reduction of emissions from the standard that was previously applicable. Any such revision under this title may provide for a phase-in of the standard.".

(d) PROMULGATION.—Section 202(b)(2) (42 U.S.C. 7521(b)(2)) is amended to read as follows:

"(2) Emission standards under paragraph (1), and measurement techniques on which such standards are based (if not promulgated prior to the date of the enactment of the Clean Air Act Amendments of 1990), shall be promulgated by regulation within 180 days after such date.".

SEC. 203. CONFORMING AMENDMENT.

Section 206(f)(1) (42 U.S.C. 7525(f)(1)) is amended by inserting "and light-duty trucks" immediately after "light-duty vehicles and engines".

SEC. 204. CARBON MONOXIDE EMISSIONS AT COLD TEMPERATURES.

Section 202 (42 U.S.C. 7521) is amended by adding the following new subsection after subsection (i):

"(j) COLD CO STANDARD.—(1) Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations under subsection (a) of this section applicable to emissions of carbon monoxide from 1993 and later model year light-duty vehicles and light-duty trucks when operated at 20 degrees Fahrenheit. The regulations shall contain standards which provide that emissions of carbon monoxide from a manufacturer's vehicles when operated at 20 degrees Fahrenheit may not exceed, in the case of light-duty vehicles, 10.0 grams per mile, and in the case of light-duty trucks, a level comparable in stringency to the standard applicable to light-duty vehicles. The standards also shall provide that each manufacturer's light-duty vehicle and light-duty truck fleets shall comply with applicable standards according to the following schedule: at least 40 percent of 1993 model year vehicles shall comply with applicable standards; at least 80 percent of 1994 model year vehicles shall comply with applicable standards; and 100 percent of 1995 and later model year vehicles shall comply with applicable standards.

"(2)(A) Not later than December 31, 1993, the Administrator shall complete a study assessing the need for further reductions in emissions of carbon monoxide and the maximum reductions in such emissions achievable from 1998 and later model year light-duty vehicles and light-duty trucks when operated at 20 degrees Fahrenheit.

"(B) The Administrator may promulgate (and from time to time revise) regulations under subsection (a)(1) of this section applicable to emissions of carbon monoxide from 1998 and later model year light-duty vehicles and light-duty trucks when operated at 20 degrees Fahrenheit, as needed to protect public health and welfare, taking costs into account.

"(3) The Administrator also may promulgate regulations under subsection (a)(1) applicable to emissions of carbon monoxide from heavy-duty vehicles and engines when operated at cold temperatures.".

SEC. 205. EVAPORATIVE EMISSIONS.

Section 202 (42 U.S.C. 7521) is amended by adding the following new subsection after subsection (j):

"(k) CONTROL OF EVAPORATIVE EMISSIONS.—The Administrator shall promulgate (and from time to time revise) regulations applicable to evaporative emissions of hydrocarbons from all gasoline-fueled motor vehicles—

"(1) during operation; and

"(2) over 2 or more days of nonuse;

under ozone-prone summertime conditions (as determined by regulations of the Administrator). The regulations shall take effect as expeditiously as possible and shall require the greatest degree of emission reduction achievable by means reasonably expected to be available for production during any model year to which the regulations apply, giving appropriate consideration to fuel volatility, and to cost, energy, and safety factors associated with the application of the appropriate technology. The Administrator shall commence a rulemaking under this subsection within 12 months after the date of the enactment of the Clean Air Act Amendments of 1990. If final regulations are not promulgated under this subsection within 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall submit a statement to the Congress containing an explanation of the reasons for the delay and a date certain for promulgation of such final regulations in accordance with this Act. Such date certain shall not be later than 15 months after the expiration of such 18 month deadline.".

SEC. 206. CONTROL OF VEHICLE REFUELING EMISSIONS.

Section 202(a)(6) (42 U.S.C. 7521(a)(6)) is amended to read as follows:

"(6) ONBOARD VAPOR RECOVERY.—Within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate standards under this section requiring that all new light-duty motor vehicles manufactured in the third model year after the model year in which the standards are promulgated and thereafter shall be equipped with vehicle-based ('onboard') systems for the control of evaporative emissions during vehicle refueling. The Administrator shall determine, in consultation with the Secretary of Transportation, that such systems are safe. The standards shall require that such systems provide a minimum evaporative emission capture efficiency of 95 percent. The requirements of section 182(b)(3) (relating to stage II gasoline vapor recovery) for areas classified under section 181 as moderate for ozone shall not apply after promulgation of such standards and the Administrator may revise or waive the application of the requirements of such section 182(b)(3) for areas classified under section 181 as Serious, Severe, or Extreme for ozone, as appropriate, after such time as the Administrator determines that onboard emissions control systems required under this paragraph are in widespread use throughout the motor vehicle fleet.".

SEC. 207. MOBILE SOURCE-RELATED AIR TOXICS.

Section 202 (42 U.S.C. 7521) is amended by adding the following new subsection after subsection (k):

"(l) MOBILE SOURCE-RELATED AIR TOXICS.—

"(1) STUDY.—Not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall complete a study of the need for, and feasibility of, controlling emissions of toxic air pollutants which are unregulated under this Act and associated with motor vehicles and motor vehicle fuels, and the need for, and feasibility of, controlling such emissions and the means and measures for such controls. The study shall focus on those categories of emissions that pose the greatest risk to human health or about which significant uncertainties remain, including emissions of benzene, formaldehyde, and 1, 3 butadiene. The proposed report shall be available for public review and comment and shall include a summary of all comments.

"(2) STANDARDS.—Within 54 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall, based on the study under paragraph (1), promulgate (and from time to time revise) regulations under subsection (a)(1) or section 211(c)(1) containing reasonable requirements to control hazardous air pollutants from motor vehicles and motor vehicle fuels. The regulations shall contain standards for such fuels or vehicles, or both, which the Administrator determines reflect the greatest degree of emission reduction achievable through the application of technology which will be available, taking into consideration the standards established under subsection (a), the availability and costs of the technology, and noise, energy, and safety factors, and lead time. Such regulations shall not be inconsistent with standards under section 202(a). The regulations shall, at a minimum, apply to emissions of benzene and formaldehyde.".

SEC. 208. EMISSION CONTROL DIAGNOSTICS SYSTEMS.

(a) EMISSION CONTROL DIAGNOSTICS.—Section 202 (42 U.S.C. 7521) is amended by adding the following after subsection (l):

"(m) EMISSIONS CONTROL DIAGNOSTICS.—

"(1) RULEMAKING.—The Administrator, after consideration of environmental benefits, technology, safety, and economic factors, shall promulgate (and from time to time revise) regulations requiring manufacturers to install on all new motor vehicles and motor vehicle engine diagnostics systems capable of—

"(A) accurately identifying, to the extent practicable, emission-related systems deterioration or malfunction which could cause or result in failure of the vehicle to comply with emission standards established under this section,

"(B) alerting the vehicle's owner or operator to the likely need for emission-related components or systems maintenance or repair,

"(C) storing and retrieving fault codes specified by the Administrator, and

"(D) providing access to stored information in a manner specified by the Administrator.

"(2) EFFECTIVE DATE.—The regulations prescribing emission control diagnostics systems under paragraph (1) of this subsection (and any revision thereof) shall take effect after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period and energy and safety factors.

"(3) STATE INSPECTION.—The Administrator, by regulation, may require States that have implementation plans under section 110 containing motor vehicle inspection and maintenance programs to amend their plans within 2 years of promulgation of the regulations to provide for inspection of emission control diagnostics systems (as prescribed by regulations under paragraph (1) of this subsection) and the maintenance or repair of malfunctions or system deterioration identified by or affecting such diagnostics systems.

"(4) EMISSIONS CONTROL DIAGNOSTICS.—The Administrator shall, by regulation, require manufacturers—

"(A) to provide standardized connectors through which the emission control diagnostics system is accessed for inspection, diagnosis, service, or repair on all motor vehicles and motor vehicle engines;

"(B) to provide standardized access to the emission control diagnostics system through such connectors which shall be unrestricted and shall not require any access code or any device which is only available from a vehicle manufacturer; and

"(C) to provide standardized output of the data from the emission control diagnostics system through such connectors to a scanning device which shall be usable without the need for any unique decoding information or device.

"(5) INFORMATION AVAILABILITY.—The Administrator, by regulation, shall require (subject to the provisions of section 208(c) regarding the protection of methods or processes entitled to protection as trade secrets) manufacturers, including motor vehicle or motor vehicle engine manufacturers, to make available in a timely manner, under reasonable terms and conditions to any person engaged in the repair, diagnosing, or servicing of motor vehicles or motor vehicle engines any information reasonably necessary to utilize fully the emission control diagnostic system and to make effective emissions related repairs and service. No such information may be withheld under section 208(c) if that information is provided (directly or indirectly) by the manufacturer to franchised dealers or other persons engaged in the repair, diagnosing, or servicing of motor vehicles or motor vehicle engines. Such information shall also be available to the Administrator, subject to section 208(c), in carrying out the Administrator's responsibilities under this section.

"(6) REVIEW OF DATA.—The Administrator may, in promulgating regulations under this section, review data output from emission control diagnostic systems and revise such regulations to improve the emissions repair effectiveness by use of such data. In the review process, the Administrator should consult with the industry, including vehicle manufacturers, parts manufacturers, diagnostic equipment manufacturers, and motor vehicle repair service providers, regarding the quality and usefulness of the data provided by the emission control diagnostic system, technology developments in motor vehicle emission control diagnostics, and any other matters that would lead to improving the effectiveness of emission control systems repairs and maintenance.

"(7) BRAND, CORPORATE, AND TRADE NAMES.—The Administrator, in promulgating regulations under this subsection, shall require that information and data from the emissions control diagnostics systems not require the use of any component or service which is identified by brand, trade, or corporate name, as provided by subparagraphs (A) and (B) of section 207(c)(3).

"(8) RULEMAKING.—The Administrator shall commence a rulemaking under this subsection within 12 months after the date of the enactment of the Clean Air Act Amendments of 1990. If the final regulations under this subsection are not promulgated within 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall submit a statement to the Congress containing an explanation of the reasons for the delay and a date certain for promulgation of such final regulations in accordance with this Act. Such date certain shall not be later than 15 months after such 18-month deadline.".

(b) SCHEDULED REPLACEMENT.—The last sentence of section 207(a)(3) (42 U.S.C. 7541(a)(3)) is amended to read as follows: "The term 'designed for emission control' as used in the preceding sentence means a catalytic converter, a thermal reactor, an emission control diagnostics system, or other component installed on or in a vehicle for the sole or primary purpose of reducing vehicle emissions (not including those vehicle components which were in general use prior to model year 1968 and the primary function of which is not related to emission control).".

SEC. 209. AUTO WARRANTIES.

Section 207 (42 U.S.C. 7541) is amended as follows:

(1) Strike out "useful life (as determined under section 202(d))" each place it appears in subsection (b) and insert "the warranty period (as determined under subsection (i))".

(2) Strike so much of section 207(b) as follows the third sentence thereof.

(3) Add the following new subsection at the end thereof:

"(i) WARRANTY PERIOD.—

"(1) IN GENERAL.—For purposes of subsection (a)(1) and subsection (b), the warranty period, effective with respect to new motor vehicles and engines manufactured in the model year 1995 and thereafter, shall be the first 2 years or 24,000 miles of use (whichever first occurs), except as provided in paragraph (2).

"(2) SPECIFIED MAJOR EMISSION CONTROL COMPONENTS.—In the case of a specified major emission control component, the warranty period for purposes of subsection (a)(1) and subsection (b) shall be 8 years or 80,000 miles of use (whichever first occurs). As used in this paragraph, the term 'specified major emission control component' means only a catalytic converter or electronic emissions control unit, except that the Administrator may designate any other pollution control device or component as a specified major emission control component if—

"(A) the device or component (except in the case of onboard emission control diagnostic equipment required by section 216) was not in general use on vehicles and engines manufactured prior to the model year 1990; and

"(B) the Administrator determines that the retail cost (exclusive of installation costs) of such device or component exceeds $200 (in 1989 dollars, adjusted for inflation or deflation as calculated by the Administrator at the time of such determination.

Nothing in this Act shall be construed to provide that any part (other than a part referred to in the preceding sentence) shall be required to be warranted under this Act for the period of 8 years or 80,000 miles referred to in this paragraph.

"(3) INSTRUCTIONS.—Subparagraph (A) of subsection (b)(2) shall apply only where the Administrator has made a determination that the instructions concerned conform to the requirements of subsection (c)(3).".

(4) Amend subsection (a)(1) by adding the following at the end thereof: "In the case of vehicles and engines manufactured in the model year 1995 and thereafter such warranty shall require that the vehicle or engine is free from any such defects for the warranty period provided under subsection (i).".

SEC. 210. HEAVY-DUTY TRUCKS.

Section 202(a)(3) (42 U.S.C. 7521(a)(3)) is amended as follows:

(1) Strike subparagraphs (A), (B), (C), (D), and (E) and insert the following:

"(A)(i) Unless the standard is changed as provided in subparagraph (B), regulations under paragraph (1) of this subsection applicable to emissions of hydrocarbons, carbon monoxide, oxides of nitrogen, and particulate matter from classes and categories of heavy-duty vehicles or engines manufactured during or after model year 1983 shall contain standards which reflect the greatest degree of emission reduction achievable through the application of technology which the Administrator determines will be available for the model year to which such standards apply, giving appropriate consideration to cost, energy, and safety factors associated with the application of such technology.

"(ii) In establishing classes or categories of vehicles or engines for purposes of regulations under this paragraph, the Administrator may base such classes or categories on gross vehicle weight, horsepower, type of fuel used, or other appropriate factors.

"(B) On the basis of information available to the Administrator concerning the effects of air pollutants emitted from heavy-duty vehicles or engines and from other sources of mobile source related pollutants on the public health and welfare, and taking costs into account, the Administrator may promulgate regulations under paragraph (1) of this subsection revising any standard promulgated under or before the date of the enactment of the Clean Air Act amendments of 1990 (or previously revised under this subparagraph).".

(2) Redesignate subparagraph (F) as subparagraph (C).

(3) Add a new subparagraph (D) to read as follows:

"(D) The Administrator shall study the practice of rebuilding heavy-duty engines and the impact rebuilding has on engine emissions. On the basis of that study and other information available to him, the Administrator may prescribe requirements to control rebuilding practices, including standards applicable to emissions from any rebuilt heavy-duty engines (whether or not the engine is past it's statutory useful life), which in the Administrator's judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare taking costs into account. Any regulation shall take effect after a period the Administrator finds necessary

to permit the development and application of the requisite control measures, giving appropriate consideration to the cost of compliance within the period and energy and safety factors.".

SEC. 211. NONROAD ENGINES AND VEHICLES.

(a) DEFINITIONS.—Section 216 (42 U.S.C. 7550) is amended by adding the following at the end thereof:

"(13) NONROAD ENGINE.—The term 'nonroad engine' means an internal combustion engine (including the fuel system) that is not used in a motor vehicle or a vehicle used solely for competition, or that is not subject to standards promulgated under section 111 or section 202.

"(14) NONROAD VEHICLE.—The term 'nonroad vehicle' means a vehicle that is powered by a nonroad engine and that is not a motor vehicle or a vehicle used solely for competition.".

(b) DEFINITION OF MANUFACTURER.—Paragraph (1) of section 216 (42 U.S.C. 7550) is amended by striking out "new motor vehicles or new motor vehicle engines" every place it occurs and inserting "new motor vehicles, new motor vehicle engines, new nonroad vehicles or new nonroad engines".

(c) EMISSION STANDARDS.—Section 213 (42 U.S.C. 7547) is amended to read as follows:

"SEC. 213. NONROAD ENGINES AND VEHICLES.

"(a) EMISSIONS STANDARDS.—(1) The Administrator shall conduct a study of emissions from nonroad engines and nonroad vehicles to determine if such emissions cause, or significantly contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare. Such study shall be completed within 18 months of the date of the enactment of the Clean Air Act Amendments of 1990.

"(2) After notice and opportunity for public hearing, the Administrator shall determine within 12 months after completion of the study under paragraph (1), based upon the results of such study, whether emissions of carbon monoxide, oxides of nitrogen, and volatile organic compounds from new nonroad engines or nonroad vehicles are significant contributors to ozone or carbon monoxide concentrations in more than 1 area which has failed to attain the national ambient air quality standards for ozone or carbon monoxide.

"(3) If the Administrator makes an affirmative determination under paragraph (2), within 18 months thereafter the Administrator shall promulgate (and from time to time revise) such regulations as the Administrator deems appropriate containing standards applicable to emissions from those classes or categories of new nonroad engines and new nonroad vehicles which in the Administrator's judgment cause, or contribute to, such air pollution, taking into account costs, noise, safety and energy factors associated with the application of technology which the Administrator determines will be available for the engines and vehicles to which such standards apply. The regulations shall apply to the useful life of the engines or vehicles (as determined by the Administrator).

"(4) If the Administrator determines that any emissions from new nonroad engines or vehicles not covered by paragraph (2) significantly contribute to air pollution which may reasonably be anticipated to endanger public health or welfare, the Administrator may promulgate (and from time to time revise) such regulations as the Administrator deems appropriate containing standards applicable to emissions from those classes or categories of new nonroad engines and new nonroad vehicles which in the Administrator's judgment cause, or contribute to, such air pollution, taking into account costs, noise, safety, and energy factors associated with the application of technology which the Administrator determines will be available for the engines and vehicles to which such standards apply. The regulations shall apply to the useful life of the engines or vehicles (as determined by the Administrator).

"(b) EFFECTIVE DATE.—Standards under this section shall take effect at the earliest possible date considering the lead time necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period and energy and safety.

"(c) SAFE CONTROLS.—Effective with respect to engines or vehicles to which standards under this section apply, no emission control device, system, or element of design shall be used in a new nonroad engine or new nonroad vehicle for purposes of complying with such standards if such device, system, or element of design will cause or contribute to an unreasonable risk to public health, welfare, or safety in its operation or function. In determining whether an unreasonable risk exists, the Administrator shall consider factors including those described in section 202(a)(4)(B).

"(d) ENFORCEMENT.—The standards under this section shall be subject to sections 206, 207, 208, and 209, with such modifications of the applicable regulations implementing such sections as the Administrator deems appropriate, and shall be enforced in the same manner as standards prescribed under section 202. The Administrator shall revise or promulgate regulations as may be necessary to determine compliance with, and enforce, standards in effect under this section.".

(d) STATE STANDARDS.—Section 209 (42 U.S.C. 7543) is amended by adding the following at the end thereof:

"(e) STATE STANDARDS.—No State or any political subdivision thereof shall adopt or attempt to enforce any standard or other requirement relating to the control of emissions from new nonroad engines or nonroad vehicles subject to regulation under this Act. Subsection (b) shall not apply for purposes of this subsection.".

SEC. 212. VEHICLE CERTIFICATION.

(a) ADDITIONAL TESTING PROCEDURES.—Section 206(a) (42 U.S.C. 7525(a)) is amended by adding the following after paragraph (3):

"(4)(A) Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall revise the regulations promulgated under this subsection to add test procedures capable of determining whether 1993 and later model year light-duty vehicles and light-duty trucks, when properly maintained and used, will pass the inspection methods and procedures established under section 207(b) for that model year, under conditions reasonably likely to be encountered in the conduct of inspection and maintenance programs, but which those programs cannot reasonably influence or control. The conditions shall include fuel characteristics, ambient temperature, and short (30 minutes or less) waiting periods before tests are conducted. The Administrator shall not grant a certificate of conformity under this subsection for any 1993 or later model year vehicle or engine that the Administrator concludes cannot pass the test procedures established under this paragraph.

"(B) From time to time, the Administrator may revise the regulations promulgated under subparagraph (A), as the Administrator deems appropriate.".

(b) PROJECTED SALES NOT EXCEEDING 300.—Section 206(a)(1) (42 U.S.C. 7525(a)(1)) is amended by striking the third sentence and inserting the following: "In the case of any original equipment manufacturer (as defined by the Administrator in regulations promulgated before the date of the enactment of the Clean Air Act Amendments of 1990) of vehicles or vehicle engines whose projected sales in the United States for any model year (as determined by the Administrator) will not exceed 300, the Administrator shall not require, for purposes of determining compliance with regulations under section 202 for the useful life of the vehicle or engine, operation of any vehicle or engine manufactured during such model year for more than 5,000 miles or 160 hours, respectively, unless the Administrator by regulation prescribes otherwise. The Administrator shall apply any adjustment factors that the Administrator deems appropriate to assure that each vehicle or engine will comply during its useful life (as determined under section 202(d)) with the regulations prescribed under section 202.".

SEC. 213. IN-USE COMPLIANCE—RECALL.

Section 207(c) (42 U.S.C. 7541(c)) is amended by adding the following at the end thereof:

"(4) INTERMEDIATE IN-USE STANDARDS.—

"(A) MODEL YEARS 1994 AND 1995.—For passenger cars and light-duty trucks of less than 6,000 lbs. gross vehicle weight rating (GVWR) which are subject to standards under table 1 of section 202(g) in model years 1994 and 1995 (40 percent of the manufacturer's sales volume in model year 1994 and 80 percent in model year 1995), the standards applicable to NHMC and CO for purposes of this subsection shall be those set forth in table A in lieu of the standards for such air pollutants otherwise applicable under this title, except that any more stringent standards in effect for such purpose before the date of the enactment of the Clean Air Act Amendments of 1990 shall remain in effect until a more stringent standard takes effect as provided in paragraph (5).

"TABLE A.—INTERMEDIATE IN-USE STANDARDS

| Vehicle type | NMHC | CO |
|---|---|---|
| Passenger cars | 0.32 | 5.2 |
| LDT's (0-3,750 LVW) | 0.32 | 5.2 |
| LDT's (3,751-5,750 LVW) | 0.41 | 6.7 |

"(B) MODEL YEARS 1996 AND 1997.—In the model years 1996 and 1997, passenger cars and light-duty trucks of less than 6,000 lbs. gross vehicle weight rating (GVWR) which are not subject to final in-use standards under paragraph (5) (60 percent of the manufacturer's sales volume in model year 1996 and 20 percent in model year 1997) shall be subject to the standards for NHMC and CO for purposes of this subsection set forth in table A in lieu of those set forth in paragraph (5), except that any more stringent standards in effect for such purpose before the date of the enactment of the Clean Air Act Amendments of 1990 shall remain in effect until a more stringent standard takes effect as provided in paragraph (5).

"(C) USEFUL LIFE.—In the case of the in-use standards applicable under this paragraph for purposes of applying this subsection the applicable useful life shall be 5 years or

50,000 miles or the equivalent (whichever is less).

"(5) FINAL IN-USE STANDARDS.—After the model year 1995, for purposes of applying this subsection, in the case of the percentage specified in Implementation Schedule B of each manufacturer's sales volume of passenger cars and light-duty trucks of less than 6,000 lbs. gross vehicle weight rating (GVWR), the standards applicable to NHMC and CO shall be those set forth in table B in lieu of the standards for such air pollutants otherwise applicable under this title:

"TABLE B.—FINAL IN-USE STANDARDS

| Vehicle type | Column A * | | Column B ** | |
|---|---|---|---|---|
| | NMHC | CO | NMHC | CO |
| Passenger cars..... | 0.25 | 3.4 | 0.31 | 4.2 |
| LDT's (0-3,750 LVW). | 0.25 | 3.4 | 0.31 | 4.2 |
| LDT's (3,751-5,750 LVW). | 0.32 | 4.4 | 0.40 | 5.5 |

Standards are expressed in grams per mile (gpm). LVW refers to loaded vehicle weight as defined by EPA in regulations in effect as of the date of the enactment of the Clean Air Act Amendments of 1990.

* In the case of the standards under column A, for purposes of applying this subsection the applicable useful life shall be 5 years or 50,000 miles (or the equivalent), whichever first occurs.

** In the case of the standards under column B, for purposes of applying this subsection the applicable useful life shall be 7 years or 75,000 miles (or the equivalent), whichever first occurs.

"IMPLEMENTATION SCHEDULE B—IMPLEMENTATION OF FINAL IN-USE STANDARDS

| Model year | Percent |
|---|---|
| 1996 | 40 |
| 1997 | 80 |
| 1998 | 100.". |

SEC. 214. COMPLIANCE PROGRAM FEES.

Part A of title II is amended by adding the following new section at the end thereof:

"SEC. 217. MOTOR VEHICLE COMPLIANCE PROGRAM FEES.

"(a) FEE COLLECTION.—Consistent with section 9701 of title 31, United States Code, the Administrator may promulgate (and from time to time revise) regulations establishing fees to recover all reasonable costs to the Administrator associated with—

"(1) new vehicle or engine certification under section 206(a),

"(2) new vehicle or engine compliance monitoring and testing under section 206(b), and

"(3) in-use vehicle or engine compliance monitoring and testing under section 207(c).

The Administrator may establish for all foreign and domestic manufacturers a fee schedule based on such factors as the Administrator finds appropriate and equitable and nondiscriminatory, including the number of vehicles or engines produced under a certificate of conformity.

"(b) SPECIAL TREASURY FUND.—Any fees collected under this section shall be deposited in a special fund in the United States Treasury for licensing and other services which thereafter shall be available for appropriation, to remain available until expended, to carry out the Agency's activities for which the fees were collected.

"(c) LIMITATION ON FUND USE.—Moneys in the special fund referred to in subsection (b) shall not be used until after the first fiscal year commencing after the first July 1 when fees are paid into the fund.

"(d) ADMINISTRATOR'S TESTING AUTHORITY.—Nothing in this subsection shall be construed to limit the Administrator's authority to require manufacturer or confirmatory testing as provided in this part.".

SEC. 215. INFORMATION COLLECTION.

Section 208 (42 U.S.C. 7542) is amended to read as follows:

"SEC. 208. INFORMATION COLLECTION.

"(a) MANUFACTURER'S RESPONSIBILITY.—Every manufacturer of new motor vehicles or new motor vehicle engines, and every manufacturer of new motor vehicle or engine parts or components, and other persons subject to the requirements of this part, shall establish and maintain records, perform tests where such testing is not otherwise reasonably available under this part (including fees for testing), make reports and provide information the Administrator may reasonably require to determine whether the manufacturer or other person has acted or is acting in compliance with this part and regulations thereunder, or to otherwise carry out the provision of this part, and shall, upon request of an officer or employee duly designated by the Administrator, permit such officer or employee at reasonable times to have access to and copy such records.

"(b) ENFORCEMENT AUTHORITY.—For the purposes of enforcement of this section and section 207(c), officers or employees duly designated by the Administrator upon presenting appropriate credentials are authorized—

"(1) to enter, at reasonable times, any establishment of the manufacturer, or of any person whom the manufacturer engages to perform any activity required by subsection (a), for the purposes of inspecting or observing any activity conducted pursuant to subsection (a), and

"(2) to inspect records, files, papers, processes, controls, and facilities used in performing any activity required by subsection (a), by such manufacturer or by any person whom the manufacturer engages to perform any such activity.

"(c) AVAILABILITY TO THE PUBLIC; TRADE SECRETS.—Any records, reports, or information obtained under this part shall be available to the public, except that upon a showing satisfactory to the Administrator by any person that records, reports, or information, or a particular portion thereof (other than emission data), to which the Administrator has access under this section, if made public, would divulge methods or processes entitled to protection as trade secrets of that person, the Administrator shall consider the record, report, or information or particular portion thereof confidential in accordance with the purposes of section 1905 of title 18 of the United States Code. Any authorized representative of the Administrator shall be considered an employee of the United States for purposes of section 1905 of title 18 of the United States Code. Nothing in this section shall prohibit the Administrator or authorized representative of the Administrator from disclosing records, reports or information to other officers, employees or authorized representatives of the United States concerned with carrying out this Act or when relevant in any proceeding under this Act. Nothing in this section shall authorize the withholding of information by the Administrator or any officer or employee under the Administrator's control from the duly authorized committees of the Congress.".

SEC. 216. FUEL VOLATILITY.

Section 211 (42 U.S.C. 7545) is amended by adding the following new subsection after subsection (g):

"(h) REID VAPOR PRESSURE REQUIREMENTS.—(1) Not later than 6 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations making it unlawful for any person during the high ozone season (as defined by the Administrator) to sell, offer for sale, dispense, supply, offer for supply, transport, or introduce into commerce gasoline with a Reid Vapor Pressure in excess of 9.0 pounds per square inch (psi). Such regulations shall also establish more stringent Reid Vapor Pressure standards in a nonattainment area as the Administrator finds necessary to generally achieve comparable evaporative emissions (on a per-vehicle basis) in nonattainment areas, taking into consideration the enforceability of such standards, the need of an area for emission control, and economic factors. Such regulations shall not make it unlawful for any person to sell, offer for supply, transport, or introduce into commerce gasoline with a Reid Vapor Pressure of 9.0 pounds per square inch (p.s.i.) or lower in any area designated under section 107 as an attainment area.

"(2) Such regulations shall provide that the requirements of this subsection shall take effect not later than the high ozone season for 1992, and shall include such provisions as the Administrator determines are necessary to implement and enforce the requirements of this subsection.

"(3) In establishing standards for fuel volatility under this subsection, the Administrator shall permit a 1.0 pound per square inch (psi) tolerance level for gasoline containing at least 10 percent ethanol. A manufacturer or processor of gasoline containing at least 10 percent ethanol shall be deemed to be in full compliance with such standards if the Administrator provides a certification (based on testing) or other evidence acceptable to the Administrator that—

"(A) the gasoline portion of the blend complies with the gasoline volatility standards under this subsection,

"(B) the ethanol portion of the blend does not exceed its waiver conditions under subsection (f)(4), and

"(C) no additional alcohol or other additive has been added to increase the Reid Vapor Pressure of the ethanol portion of the blend.

"(4) The provisions of this subsection shall apply only to the 48 contiguous States and the District of Columbia.".

SEC. 217. DIESEL FUEL SULFUR CONTENT.

Section 211 (42 U.S.C. 7545) is amended by adding the following new subsection after subsection (h):

"(i) SULFUR CONTENT REQUIREMENTS FOR DIESEL FUEL.—(1) Effective October 1, 1993, no person shall manufacture, sell, supply, offer for sale or supply, dispense, transport, or introduce into commerce motor vehicle diesel fuel which contains a concentration of sulfur in excess of 0.05 per centum (by weight) or which fails to meet a cetane index minimum of 40.

"(2) Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations to implement and enforce the requirements of paragraph (1). The Administrator may require manufacturers and importers of diesel fuel not intended for use in motor vehicles to dye such

*fuel in a particular manner in order to segregate it from motor vehicle diesel fuel.*

*"(3) The sulfur content of fuel required to be used in the certification of 1991 through 1993 model year heavy-duty diesel vehicles and engines shall be 0.10 percent (by weight). The sulfur content and cetane index minimum of fuel required to be used in the certification of 1994 and later model year heavy-duty diesel vehicles and engines shall comply with the regulations promulgated under paragraph (2).*

*"(4) The States of Alaska and Hawaii may be exempted from the requirements of this subsection in the same manner as provided in section 324. The Administrator shall take final action on any petition filed under section 324 for an exemption from the requirements of this subsection, within 12 months from the date of the petition.".*

*SEC. 218. LEAD SUBSTITUTE GASOLINE ADDITIVES.*

*(a) ADDITIVES.—Section 211 (42 U.S.C. 7545) is amended by adding the following at the end thereof:*

*"(j) LEAD SUBSTITUTE GASOLINE ADDITIVES.—(1) After the date of the enactment of the Clean Air Act Amendments of 1990, any person proposing to register any gasoline additive under subsection (a) or to use any previously registered additive as a lead substitute may also elect to register the additive as a lead substitute gasoline additive for reducing valve seat wear by providing the Administrator with such relevant information regarding product identity and composition as the Administrator deems necessary for carrying out the responsibilities of paragraph (2) of this subsection (in addition to other information which may be required under subsection (b)).*

*"(2) In addition to the other testing which may be required under subsection (b), in the case of the lead substitute gasoline additives referred to in paragraph (1), the Administrator shall develop and publish a test procedure to determine the additives' effectiveness in reducing valve seat wear and the additives' tendencies to produce engine deposits and other adverse side effects. The test procedures shall be developed in cooperation with the Secretary of Agriculture and with the input of additive manufacturers, engine and engine components manufacturers, and other interested persons. The Administrator shall enter into arrangements with an independent laboratory to conduct tests of each additive using the test procedures developed and published pursuant to this paragraph. The Administrator shall publish the results of the tests by company and additive name in the Federal Register along with, for comparison purposes, the results of applying the same test procedures to gasoline containing 0.1 gram of lead per gallon in lieu of the lead substitute gasoline additive. The Administrator shall not rank or otherwise rate the lead substitutive additives. Test procedures shall be established within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990. Additives shall be tested within 18 months of the date of the enactment of the Clean Air Act Amendments of 1990 or 6 months after the lead substitute additives are identified to the Administrator.*

*"(3) The Administrator may impose a user fee to recover the costs of testing of any fuel additive referred to in this subsection. The fee shall be paid by the person proposing to register the fuel additive concerned. Such fee shall not exceed $20,000 for a single fuel additive.*

*"(4) There are authorized to be appropriated to the Administrator not more than $1,000,000 for the first full fiscal year after the date of the enactment of the Clean Air Act Amendments of 1990 to establish test procedures and conduct engine tests as provided in this subsection. Not more than $500,000 per year is authorized to be appropriated for 5 subsequent fiscal years.*

*"(5) Any fees collected under this subsection shall be deposited in a special fund in the United States Treasury for licensing and other services which thereafter shall be available for appropriation, to remain available until expended, to carry out the Agency's activities for which the fees were collected.".*

*SEC. 219. NONROAD FUELS.*

*(a) FUELS AND FUEL ADDITIVES.—Section 211(a) (42 U.S.C. 7545(a)) is amended by inserting "(including any fuel or fuel additive used exclusively in nonroad engines or nonroad vehicles)" immediately after "fuel or fuel additive".*

*(b) ANALYTICAL TECHNIQUES.—Section 211(b)(2)(B) (42 U.S.C. 7545(2)(B)) is amended by striking "or" after "vehicle" and inserting in lieu thereof a comma, and by inserting immediately after "vehicle engine," the phrase: "nonroad engine or nonroad vehicle,".*

*(c) REGULATION.—Section 211(c)(1) (42 U.S.C. 7545(c)(1)) is amended by striking "or" after "motor vehicle" and inserting in lieu thereof a comma, and by inserting immediately after "motor vehicle engine" a comma followed by "or nonroad engine or nonroad vehicle".*

*SEC. 220. FUEL WAIVERS.*

*(a) COVERAGE.—Section 211(f)(1) (42 U.S.C. 7545(f)(1) is amended by inserting "(A)" immediately after "(1)" and by adding the following new subparagraph at the end thereof:*

*"(B) Effective upon the date of the enactment of the Clean Air Act Amendments of 1990, it shall be unlawful for any manufacturer of any fuel or fuel additive to first introduce into commerce, or to increase the concentration in use of, any fuel or fuel additive for use by any person in motor vehicles manufactured after model year 1974 which is not substantially similar to any fuel or fuel additive utilized in the certification of any model year 1975, or subsequent model year, vehicle or engine under section 206.".*

*(b) CONFORMING AMENDMENT.—Section 211(f)(3) (42 U.S.C. 7545(f)(3)) is amended by inserting "(A)" immediately after "(1)".*

*SEC. 221. STATE FUEL REGULATION.*

*(a) IN GENERAL.—Section 211(c)(4)(A) (42 U.S.C. 7545(c)(4)(A)) is amended as follows:*

*(1) Strike out "use of a" and insert "any characteristic or component".*

*(2) In clause (i) after "control or prohibition" insert "of the characteristic or component of a fuel or fuel additive".*

*(3) In clause (ii) after "such" insert "characteristic or component of a".*

*(b) FINDING OF NECESSITY.—Section 211(c)(4)(C) (42 U.S.C. 7545(c)(4)(C)) is amended by adding the following at the end: "The Administrator may find that a State control or prohibition is necessary to achieve that standard if no other measures that would bring about timely attainment exist, or if other measures exist and are technically possible to implement, but are unreasonable or impracticable. The Administrator may make a finding of necessity under this subparagraph even if the plan for the area does not contain an approved demonstration of timely attainment.".*

*SEC. 222. ENFORCEMENT.*

*(a) INSPECTIONS AND TESTING.—Section 203(a)(2) (42 U.S.C. 7522(a)(2)) is amended to read as follows:*

*"(2)(A) for any person to fail or refuse to permit access to or copying of records or to fail to make reports or provide information required under section 208;*

*"(B) for any person to fail or refuse to permit entry, testing or inspection authorized under section 206(c) or section 208;*

*"(C) for any person to fail or refuse to perform tests, or have tests performed as required under section 207(c) or section 208;".*

*(b) TAMPERING WITH VEHICLE EMISSION CONTROLS.—(1) Section 203(a)(3) (42 U.S.C. 7522(a)(3)) is amended to read as follows:*

*"(3)(A) for any person to remove or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this title prior to its sale and delivery to the ultimate purchaser, or for any person knowingly to remove or render inoperative any such device or element of design after such sale and delivery to the ultimate purchaser; or*

*"(B) for any person to manufacture or sell, or offer to sell, or install, any part or component intended for use with, or as part of, any motor vehicle or motor vehicle engine, where a principal effect of the part or component is to bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this title, and where the person knows or should know that such part or component is being offered for sale or installed for such use or put to such use; or".*

*(2) At the end of section 203(a) (42 U.S.C. 7522(a)) insert the following: "No action with respect to any device or element of design referred to in paragraph (3) shall be treated as a prohibited act under that paragraph if (i) the action is for the purpose of repair or replacement of the device or element, or is a necessary and temporary procedure to repair or replace any other item and the device or element is replaced upon completion of the procedure, and (ii) such action thereafter results in the proper functioning of the device or element referred to in paragraph (3). No action with respect to any device or element of design referred to in paragraph (3) shall be treated as a prohibited act under that paragraph if the action is for the purpose of a conversion of a motor vehicle for use of a clean alternative fuel (as defined in this title) and if such vehicle complies with the applicable standard under section 202 when operating on such fuel, and if in the case of a clean alternative fuel vehicle (as defined by rule by the Administrator), the device or element is replaced upon completion of the conversion procedure and such action results in proper functioning of the device or element when the motor vehicle operates on conventional fuel.".*

*(c) DEFINITION.—Section 216 (42 U.S.C. 7550) is amended by adding the following at the end:*

*"(15) MOTOR VEHICLE OR ENGINE PART MANUFACTURER.— The term 'motor vehicle or engine part manufacturer' as used in sections 207 and 208 means any person engaged in the manufacturing, assembling or rebuilding of any device, system, part, component or element of design which is installed in or on motor vehicles or motor vehicle engines.".*

(d) CIVIL AND ADMINISTRATIVE PENALTIES.—Section 205 (42 U.S.C. 7524) is amended to read as follows:

"SEC. 205. CIVIL PENALTIES.

"(a) VIOLATIONS.—Any person who violates sections 203(a)(1) or 203(a)(4), any manufacturer or dealer who violates section 203(a)(3)(A), or any person who violates regulations prescribed under sections 212 (a), (b), (d), or (h) shall be subject to a civil penalty of not more than $25,000. Any person other than a manufacturer or dealer who violates section 203(a)(3)(A) or any person who violates section 203(a)(3)(B) shall be subject to a civil penalty of not more than $2,500. Any such violation with respect to paragraph (1), (3)(A), or (4) of section 203(a) shall constitute a separate offense with respect to each motor vehicle or motor vehicle engine. Any such violation with respect to section 203(a)(3)(B) shall constitute a separate offense with respect to each part or component. Any person who violates section 203(a)(2), or regulations prescribed under section 212(c), shall be subject to a civil penalty of not more than $25,000 per day of violation.

"(b) CIVIL ACTIONS.—The Administrator may commence a civil action to assess and recover any civil penalty under subsection (a) of this section, section 211(d), or section 213(d). Any action under this subsection may be brought in the district court of the United States for the district in which the violation is alleged to have occurred or in which the defendant resides or has the Administrator's principal place of business, and the court shall have jurisdiction to assess a civil penalty. In determining the amount of any civil penalty to be assessed under this subsection, the court shall take into account the gravity of the violation, the economic benefit or savings (if any) resulting from the violation, the size of the violator's business, the violator's history of compliance with this title, action taken to remedy the violation, the effect of the penalty on the violator's ability to continue in business, and such other matters as justice may require. In any such action, subpoenas for witnesses who are required to attend a district court in any district may run into any other district.

"(c) ADMINISTRATIVE ASSESSMENT OF CERTAIN PENALTIES.—

"(1) ADMINISTRATIVE PENALTY AUTHORITY.—In lieu of commencing a civil action under subsection (b), the Administrator may assess any civil penalty prescribed in subsection (a) of this section, section 211(d), or section 213(d), except that the maximum amount of penalty sought against each violator in a penalty assessment proceeding shall not exceed $200,000, unless the Administrator and the Attorney General jointly determine that a matter involving a larger penalty amount is appropriate for administrative penalty assessment. Any such determination by the Administrator and the Attorney General shall not be subject to judicial review. Assessment of a civil penalty under this subsection shall be by an order made on the record after opportunity for a hearing in accordance with sections 554 and 556 of title 5 of the United States Code. The Administrator shall issue reasonable rules for discovery and other procedures for hearings under this paragraph. Before issuing such an order, the Administrator shall give written notice to the person to be assessed an administrative penalty of the Administrator's proposal to issue such order and provide such person an opportunity to request such a hearing on the order, within 30 days of the date the notice is received by such person. The Administrator may compromise, or remit, with or without conditions, any administrative penalty which may be imposed under this section.

"(2) DETERMINING AMOUNT.—In determining the amount of any civil penalty assessed under this subsection, the Administrator shall take into account the gravity of the violation, the economic benefit or savings (if any) resulting from the violation, the size of the violator's business, the violator's history of compliance with this title, action taken to remedy the violation, the effect of the penalty on the violator's ability to continue in business, and such other matters as justice may require.

"(3) EFFECT OF ADMINISTRATOR'S ACTION.—(A) Action by the Administrator under this subsection shall not affect or limit the Administrator's authority to enforce any provision of this Act; except that any violation,

"(i) with respect to which the Administrator has commenced and is diligently prosecuting an action under this subsection, or

"(ii) for which the Administrator has issued a final order not subject to further judicial review and the violator has paid a penalty assessment under this subsection,

shall not be the subject of civil penalty action under subsection (b).

"(B) No action by the Administrator under this subsection shall affect any person's obligation to comply with any section of this Act.

"(4) FINALITY OF ORDER.—An order issued under this subsection shall become final 30 days after its issuance unless a petition for judicial review is filed under paragraph (5).

"(5) JUDICIAL REVIEW.—Any person against whom a civil penalty is assessed in accordance with this subsection may seek review of the assessment in the United States District Court for the District of Columbia, or for the district in which the violation is alleged to have occurred, in which such person resides, or where such person's principal place of business is located, within the 30-day period beginning on the date a civil penalty order is issued by simultaneously sending a copy of the filing by certified mail to the Administrator and the Attorney General. The Administrator shall file in the court a certified copy, or certified index, as appropriate, of the record on which the order was issued within 30 days. The court shall not set aside or remand any order issued in accordance with the requirements of this subsection unless there is not substantial evidence in the record, taken as a whole, to support the finding of a violation or unless the Administrator's assessment of the penalty constitutes an abuse of discretion, and the court shall not impose additional civil penalties unless the Administrator's assessment of the penalty constitutes an abuse of discretion. In any proceedings, the United States may seek to recover civil penalties assessed under this section.

"(6) COLLECTION.—If any person fails to pay an assessment of a civil penalty imposed by the Administrator as provided in this subsection—

"(A) after the order making the assessment has become final, or

"(B) after a court in an action brought under paragraph (5) has entered a final judgment in favor of the Administrator,

the Administrator shall request the Attorney General to bring a civil action in an appropriate district court to recover the amount assessed (plus interest at rates established pursuant to section 6621(a)(2) of the Internal Revenue Code of 1986 from the date of the final order or the date of the final judgment, as the case may be). In such an action, the validity, amount, and appropriateness of the penalty shall not be subject to review. Any person who fails to pay on a timely basis the amount of an assessment of a civil penalty as described in the first sentence of this paragraph shall be required to pay, in addition to that amount and interest, the United States' enforcement expenses, including attorneys fees and costs for collection proceedings, and a quarterly nonpayment penalty for each quarter during which such failure to pay persists. The nonpayment penalty shall be in an amount equal to 10 percent of the aggregate amount of that person's penalties and nonpayment penalties which are unpaid as of the beginning of such quarter.".

(e) ENFORCEMENT OF FUELS REGULATIONS.—Section 211(d) (42 U.S.C. 7545(d)) is amended to read as follows:

"(d) PENALTIES AND INJUNCTIONS.—

"(1) CIVIL PENALTIES.—Any person who violates subsection (a), (f), (g), or (k) of this section or the regulations prescribed under subsection (c), (h), (i), or (k) of this section or the regulations prescribed under subsection 212(c) or who fails to furnish any information or conduct any tests required by the Administrator under subsection (b) of this section shall be liable to the United States for a civil penalty of not more than the sum of $25,000 for every day of such violation and the amount of economic benefit or savings resulting from the violation. Any violation with respect to a regulation prescribed under subsection (c) of this section or section 212(c) which establishes a regulatory standard based upon a multiday averaging period shall constitute a separate day of violation for each and every day in the averaging period. Civil penalties shall be assessed in accordance with subsections (b) and (c) of section 205.

"(2) INJUNCTIVE AUTHORITY.—The district courts of the United States shall have jurisdiction to restrain violations of subsections (a), (f), (g), and (k) of this section and of the regulations prescribed under subsection (c), (h), (i), or (k) of this section or section 212(c), to award other appropriate relief, and to compel the furnishing of information and the conduct of tests required by the Administrator under subsection (b) of this section. Actions to restrain such violations and compel such actions shall be brought by and in the name of the United States. In any such action, subpoenas for witnesses who are required to attend a district court in any district may run into any other district.".

(f) MISFUELING.—Section 211(g) (42 U.S.C. 7545(g)) is amended to read as follows:

"(g) MISFUELING.—No person shall introduce, or cause or allow the introduction of, leaded gasoline into any motor vehicle which is labeled 'unleaded gasoline only,' which is equipped with a gasoline tank filler inlet designed for the introduction of unleaded gasoline, which is a 1990 or later model year motor vehicle, or which that person knows or should know is a vehicle designed solely for the use of unleaded gasoline. Nothing in this section shall limit the applicability of section 211(d)(3).".

SEC. 223. HIGH ALTITUDE TESTING.

Section 215 (42 U.S.C. 7549) is amended by adding the following at the end thereof:

"(e) HIGH ALTITUDE TESTING.—The Administrator shall promptly establish at least one testing center (in addition to the testing centers existing on the date of the enactment of the Clean Air Act Amendments of 1990) lo-

cated at a site that represents high altitude conditions, to ascertain in a reasonable manner whether, when in actual use throughout their useful life (as determined under section 202(d)), each class or category of vehicle and engines to which regulations under section 202 apply conforms to the emissions standards established by such regulations. For purposes of this subsection, the term 'high altitude conditions' refers to high altitude as defined in regulations of the Administrator in effect as of the date of the enactment of the Clean Air Act Amendments of 1990.".

SEC. 224. TECHNICAL AMENDMENTS.

The Clean Air Act is amended as follows:

(1) In section 202(b)(3) (42 U.S.C. 7521(b)(3)), strike out "(3) For purposes of this part—" and redesignate subparagraphs (A), (B) and (C) of section 202(b)(3) as paragraphs (16), (17), and (18) of section 216, redesignate clauses (i) and (ii) of new paragraph (16) as subparagraphs (A) and (B), respectively, in new subparagraph (B) strike "as provided in clause (i)" and insert "as provided in subparagraph (A)", and after "by subsection (b)" insert "of section 202".

(2) Strike out section 202(b)(4) (42 U.S.C. 7521(b)(4)).

(3) Strike out section 202(b)(5) (42 U.S.C. 7521(b)(5)).

(4) In section 202(b)(6) (42 U.S.C. 7521(b)(6))—

(A) strike out "(A)" after "(6)",

(B) strike out subparagraph (B), and

(C) redesignate paragraph (6) as paragraph (3) and redesignate clauses (i) through (iii) as subparagraphs (A) through (C).

(5) Strike out section 202(b)(7) (42 U.S.C. 7521(b)(7)).

(6) Strike out section 203(c) (42 U.S.C. 7522(c)).

(7) Strike out "announce in the Federal Register and" in section 206(e) (42 U.S.C. 7525(e)).

(8) In section 206(f) (42 U.S.C. 7525(f))—

(A) strike out "(1)" after "(f)", and

(B) strike out paragraph (2).

(9) In section 207(g) (42 U.S.C. 7526(g)), strike out "(but not designed for emission control under the terms of the last three sentences of section 207(a)(1)" and insert "(but not designed for emission control under the terms of the last sentence of section 207(a)(3))".

(10) In section 231(a) (42 U.S.C. 7571(a)), strike out paragraph (1) and redesignate paragraphs (2) and (3) as paragraphs (1) and (2), respectively.

TITLE III—HAZARDOUS AIR POLLUTANTS

Sec. 301. Technology-based standards for hazardous air pollutants.
Sec. 302. Chemical process safety management.

SEC. 301. TECHNOLOGY-BASED STANDARDS FOR HAZARDOUS AIR POLLUTANTS.

Section 112 (42 U.S.C. 7412) is amended to read as follows:

"SEC. 112. HAZARDOUS AIR POLLUTANTS.

"(a) DEFINITIONS.—For the purposes of this section—

"(1) MAJOR SOURCE.—The term 'major source', for pollutants other than radionuclides, means any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit considering controls, in the aggregate, 10 metric tons per year or more of any hazardous air pollutant or 25 metric tons per year or more of any combination of hazardous air pollutants which have been listed pursuant to subsection (b). The Administrator may establish a lesser quantity for a major source other than specified in the previous sentence on the basis of the potency, characteristics of the air pollutant, or other relevant factors. For radionuclides, such term shall have the meaning specified by the Administrator by rule, considering radiation dose.

"(2) AREA SOURCE.—The term 'area source' means any source that is not a major source but that is a member of a source category listed under this section based on aggregate emissions, or potential aggregate emissions, of a listed pollutant or pollutants.

"(3) NEW SOURCE.—The term 'new source' means a stationary source the construction or reconstruction or modification of which is commenced after the Administrator proposes regulations under this section establishing an emission standard applicable to such source category or subcategory pursuant to subsection (d) or (f). For purposes of the section, the term 'modification' means any physical change in, or change in the method of operation of, a major source which increases the amount of any hazardous air pollutant emitted by such source by more than a de minimus amount or which results in the emission of any hazardous air pollutant not previously emitted by more than a de minimus amount.

"(4) ELECTRIC UTILITY.—The term 'electric utility steam generating unit' means any fossil fuel fired steam electric generating unit that is constructed for the purpose of supplying more than one-third of its potential electric output capacity and more than 25 megawatts electrical output to any utility power distribution system for sale. Any steam supplied to a steam distribution system for the purpose of providing steam to a steam-electric generator that would produce electrical energy for sale is also considered in determining the electrical energy output capacity of the facility.

"(5) OTHER TERMS.—The terms 'stationary source', 'owner or operator', and 'existing' source shall have the same meaning as such terms have under section 111(a).

"(b) HAZARDOUS AIR POLLUTANT LIST.—

"(1) ESTABLISHMENT OF LIST.—The Congress establishes for purposes of this section a list of hazardous air pollutants as follows:

| CAS number | Chemical name |
|---|---|
| 75070 | Acetaldehyde |
| 60355 | Acetamide |
| 75058 | Acetonitrile |
| 98862 | Acetophenone |
| 53963 | 2-Acetylaminofluorene |
| 107028 | Acrolein |
| 79061 | Acrylamide |
| 79107 | Acrylic acid |
| 107131 | Acrylonitrile |
| 107051 | Allyl chloride |
| 92671 | 4-Aminobiphenyl |
| 62533 | Aniline |
| 90040 | o-Anisidine |
| 1332214 | Asbestos |
| 71432 | Benzene (including benzene from gasoline) |
| 92875 | Benzidine |
| 98077 | Benzotrichloride |
| 100447 | Benzyl chloride |
| 92524 | Biphenyl |
| 117817 | Bis(2-ethylhexyl)phthalate (DEHP) |
| 542881 | Bis(chloromethyl)ether |
| 75252 | Bromoform |
| 106990 | 1,3-Butadiene |
| 156627 | Calcium cyanamide |
| 105602 | Caprolactam |
| 133062 | Captan |
| 63252 | Carbaryl |
| 75150 | Carbon disulfide |
| 56235 | Carbon tetrachloride |
| 463581 | Carbonyl sulfide |
| 120809 | Catechol |
| 133904 | Chloramben |
| 57749 | Chlordane |
| 7782505 | Chlorine |
| 79118 | Chloroacetic acid |
| 532274 | 2-Chloroacetophenone |
| 108907 | Chlorobenzene |
| 510156 | Chlorobenzilate |
| 67663 | Chloroform |
| 107302 | Chloromethyl methyl ether |
| 126998 | Chloroprene |
| 1319773 | Cresols/Cresylic acid (isomers and mixture) |
| 95487 | Cresols/Cresylic acid (isomers and mixture) |
| 108394 | Cresols/Cresylic acid (isomers and mixture) |
| 106445 | Cresols/Cresylic acid (isomers and mixture) |
| 98828 | Cumene |
| 94757 | 2,4-D, salts and esters |
| 3547044 | DDE |
| 334883 | Diazomethane |
| 132649 | Dibenzofurans |
| 96128 | 1,2-Dibromo-3-chloropropane |
| 84742 | Dibutylphthalate |
| 106467 | 1,4-Dichlorobenzene(p) |
| 91941 | 3,3-Dichlorobenzidene |
| 111444 | Dichloroethyl ether (Bis(2-chloroethyl)ether) |
| 542756 | 1,3-Dichloropropene |
| 62737 | Dichlorvos |
| 111422 | Diethanolamine |
| 121697 | N,N-Diethyl aniline (N,N-Dimethylaniline) |
| 64675 | Diethyl sulfate |
| 119904 | 3,3-Dimethoxybenzidine |
| 60117 | Dimethyl aminoazobenzene |
| 119937 | 3,3'-Dimethyl benzidine |
| 79447 | Dimethyl carbamoyl chloride |
| 68122 | Dimethyl formamide |
| 57147 | 1,1-Dimethyl hydrazine |
| 131113 | Dimethyl phthalate |
| 77781 | Dimethyl sulfate |
| 534521 | 4,6-Dinitro-o-cresol, and salts |
| 51285 | 2,4-Dinitrophenol |
| 121142 | 2,4-Dinitrotoluene |
| 123911 | 1,4-Dioxane (1,4-Diethyleneoxide) |
| 122667 | 1,2-Diphenylhydrazine |
| 106898 | Epichlorohydrin (1-Chloro-2,3-epoxypropane) |
| 106887 | 1,2-Epoxybutane |
| 140885 | Ethyl acrylate |
| 100414 | Ethyl benzene |
| 51796 | Ethyl carbamate (Urethane) |
| 75003 | Ethyl chloride (Chloroethane) |
| 106934 | Ethylene dibromide (Dibromoethane) |
| 107062 | Ethylene dichloride (1,2-Dichloroethane) |
| 107211 | Ethylene glycol |
| 151564 | Ethylene imine (Aziridine) |
| 75218 | Ethylene oxide |
| 96457 | Ethylene thiourea |
| 75343 | Ethylidene dichloride (1,1-Dichloroethane) |
| 50000 | Formaldehyde |
| 76448 | Heptachlor |
| 118741 | Hexachlorobenzene |
| 87683 | Hexachlorobutadiene |
| 77474 | Hexachlorocyclopentadiene |
| 67721 | Hexachloroethane |
| 822060 | Hexamethylene-1,6-diisocyanate |
| 680319 | Hexamethylphosphoramide |
| 110543 | Hexane |
| 302012 | Hydrazine |
| 7647010 | Hydrochloric acid |
| 7664393 | Hydrogen fluoride (Hydrofluoric acid) |
| 123319 | Hydroquinone |
| 78591 | Isophorone |
| 58899 | Lindane (all isomers) |
| 108316 | Maleic anhydride |
| 67561 | Methanol |
| 72435 | Methoxychlor |
| 74839 | Methyl bromide (Bromomethane) |
| 74873 | Methyl chloride (Chloromethane) |
| 71556 | Methyl chloroform (1,1,1-Trichloroethane) |
| 78933 | Methyl ethyl ketone (2-Butanone) |
| 60344 | Methyl hydrazine |
| 74884 | Methyl iodide (Iodomethane) |

| CAS number | Chemical name |
|---|---|
| 108101 | Methyl isobutyl ketone (Hexone) |
| 624839 | Methyl isocyanate |
| 80626 | Methyl methacrylate |
| 1634044 | Methyl tert butyl ether |
| 101144 | 4,4-Methylene bis(2-chloroaniline) |
| 75092 | Methylene chloride (Dichloromethane) |
| 101688 | Methylene diphenyl diisocyanate (MDI) |
| 101779 | 4,4'-Methylenedianiline |
| 91203 | Naphthalene |
| 98953 | Nitrobenzene |
| 92933 | 4-Nitrobiphenyl |
| 100027 | 4-Nitrophenol |
| 79469 | 2-Nitropropane |
| 684935 | N-Nitroso-N-methylurea |
| 62759 | N-Nitrosodimethylamine |
| 59892 | N-Nitrosomorpholine |
| 56382 | Parathion |
| 82688 | Pentachloronitrobenzene (Quintobenzene) |
| 87865 | Pentachlorophenol |
| 108952 | Phenol |
| 106503 | p-Phenylenediamine |
| 75445 | Phosgene |
| 7803512 | Phosphine |
| 7723140 | Phosphorus |
| 85449 | Phthalic anhydride |
| 1336363 | Polychlorinated biphenyls (Arolors) |
| 1120714 | 1,3-Propane sultone |
| 57578 | beta-Propiolactone |
| 123386 | Propionaldehyde |
| 114261 | Propoxur (Baygon) |
| 78875 | Propylene dichloride (1,2-Dichloropropane) |
| 75569 | Propylene oxide |
| 75558 | 1,2-Propylenimine (2-Methyl aziridine) |
| 91225 | Quinoline |
| 106514 | Quinone |
| 100425 | Styrene |
| 96093 | Styrene oxide |
| 1746016 | 2,3,7,8-Tetrachlorodibenzo-p-dioxin |
| 79345 | 1,1,2,2-Tetrachloroethane |
| 127184 | Tetrachloroethylene (Perchloroethylene) |
| 7550450 | Titanium tetrachloride |
| 108883 | Toluene |
| 95807 | 2,4-Toluene diamine |
| 584849 | 2,4-Toluene diisocyanate |
| 95534 | o-Toluidine |
| 8001352 | Toxaphene (chlorinated camphene) |
| 120821 | 1,2,4-Trichlorobenzene |
| 79005 | 1,1,2-Trichloroethane |
| 79016 | Trichloroethylene |
| 95954 | 2,4,5-Trichlorophenol |
| 88062 | 2,4,6-Trichlorophenol |
| 121448 | Triethylamine |
| 1582098 | Trifluralin |
| 540841 | 2,2,4-Trimethylpentane |
| 108054 | Vinyl acetate |
| 593602 | Vinyl bromide |
| 75014 | Vinyl chloride |
| 75354 | Vinylidene chloride (1,1-Dichloroethylene) |
| 1330207 | Xylenes (isomers and mixture) |
| 95476 | Xylenes (isomers and mixture) |
| 108383 | Xylenes (isomers and mixture) |
| 106423 | Xylenes (isomers and mixture) |
| | Antimony Compounds |
| | Arsenic Compounds (inorganic including arsine) |
| | Beryllium Compounds |
| | Cadmium Compounds |
| | Chromium Compounds |
| | Cobalt Compounds |
| | Coke Oven Emissions |
| | Cyanide Compounds[1] |
| | Glycol ethers[2] |
| | Lead Compounds |
| | Manganese Compounds |
| | Mercury Compounds |
| | Fine mineral fibers[3] |
| | Nickel Compounds |
| | Polycylic Organic Matter[4] |
| | Radionuclides (including radon)[5] |
| | Selenium Compounds |

NOTE: For all listings above which contain the word "compounds" and for glycol ethers, the following applies: Unless otherwise specified, these listings are defined as including any unique chemical substance that contains the named chemical (i.e., antimony, arsenic, etc.) as part of that chemical's infrastructure.

[1] X'CN where X = H' or any other group where a formal dissociation may occur. For example KCN or Ca(CN)2

[2] includes mono- and di- ethers of ethylene glycol, diethylene glycol, and triethylene glycol R-(OCH2CH2)n-OR' where

n = 1, 2, or 3

R = alkyl or aryl groups

R' = R, H, or groups which, when removed, yield glycol ethers with the structure: R-(OCH2CH)n-OH Polymers are excluded from the glycol category.

[3] includes mineral fiber emissions from facilities manufacturing or processing glass, rock, or slag fibers (or other mineral derived fibers) of average diameter 1 micrometer or less.

[4] includes organic compounds with more than one benzene ring, and which have a boiling point greater than or equal to 100 °C

[5] a type of atom which spontaneously undergoes radioactive decay.

"(2) ADDITIONS AND DELETIONS.—The Administrator may add or delete a substance from the list under paragraph (1).

"(A) ADDITIONS.—A substance may be added to the list under paragraph (1) if the Administrator determines in the Administrator's judgment that the substance is an air pollutant and that there is sufficient evidence to establish that the pollutant is known to cause or can reasonably be anticipated to cause in humans one or more of the following:

"(i) cancer or developmental effects, or

"(ii) serious or irreversible—

"(I) reproductive dysfunctions,

"(II) neurological disorders,

"(III) heritable gene mutations,

"(IV) other chronic health effects, or

"(V) adverse acute human health effects.

"(B) DELETIONS.—The Administrator may delete a pollutant from the list under paragraph (1) if the Administrator determines that the criteria described in subparagraph (A) do not apply. For pollutants on the list which do not have a CAS number and which are comprised of more than one unique chemical substance, the Administrator may determine that one or more of such substances shall not be considered a hazardous air pollutant if the Administrator determines that such substance or substances do not meet the criteria described in subparagraph (A).

"(C) FURTHER INFORMATION.—If the Administrator determines that information on the health effects of a substance is not sufficient to make a determination required by this paragraph, the Administrator may use any authority available to the Administrator to acquire such information.

"(3) PETITIONS.—Beginning at any time after the list is published under subsection (c), any person may petition the Administrator to modify the list of hazardous air pollutants under this subsection by adding or deleting a substance. Within 18 months after receipt of a petition, the Administrator shall either grant or deny the petition by publishing a written explanation of the reasons for the Administrator's decision. Any such petition shall include a showing by the petitioner that there is adequate data on the health effects of the pollutant or other evidence adequate to support the petition. The Administrator may not deny a petition solely on the basis of inadequate resources or time for review. No air pollutant which is listed under section 108(a) may be added to the list under this section.

"(4) REVIEW.—The Administrator shall periodically review the list established by this subsection and publish the results thereof and, where appropriate, revise such list by rule.

"(c) SOURCE CATEGORY LIST.—(1) Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall publish, and shall from time to time, but no less often than every 8 years, revise, if appropriate, in response to public comment or new information, a list of all categories and subcategories of major sources and area sources designated under paragraph (3) of the air pollutants listed pursuant to subsection (b)(1).

"(2) For the categories and subcategories the Administrator lists, the Administrator shall establish emission standards under subsection (d), according to the schedule in subsection (e).

"(3) The Administrator shall list and designate, based on actual or estimated aggregate emissions of a listed pollutant or pollutants, sufficient categories and subcategories of area sources to ensure that area sources representing 90 percent of the area source emissions of each hazardous air pollutant are subject to regulation under this section. For purposes of this section, the term 'area sources' shall not include motor vehicles or nonroad vehicles subject to regulation under title II.

"(4) The Administrator may, in the Administrator's discretion, list any category or subcategory previously regulated under this section as in effect before the date of the enactment of the Clean Air Act Amendments of 1990.

"(5) The Administrator may decide not to list a source category or subcategory, and the Administrator may withdraw a source category or subcategory from the list under this subsection, on petition of any person or on the Administrator's own motion, whenever the Administrator makes the following determination or determinations, as applicable:

"(A) In the case of hazardous air pollutants emitted by sources in the category or subcategory that may result in cancer in humans, a determination that no source in the category or subcategory (or group of sources in the case of area sources) emits such hazardous air pollutants in quantities which may cause a lifetime risk of cancer greater than one in one million to the individual in the population who is most exposed to emissions of such pollutants from the source (or group of sources in the case of area sources).

"(B) In the case of hazardous air pollutants that may result in adverse health effects in humans other than cancer, a determination that emissions from no source in the category or subcategory concerned (or group of sources in the case of area sources) exceed a level which is adequate to protect public health with an ample margin of safety.

The Administrator shall grant or deny a petition under this paragraph within 1 year after the petition is filed.

"(6) The Administrator shall establish a separate category or subcategory covering research or laboratory facilities, as necessary to assure the equitable treatment of such facilities. For purposes of this section, 'research or laboratory facility' means any stationary source whose primary purpose is to conduct research and development into new processes and products, where such source is operated under the close supervision of technically trained personnel and is not engaged in the manufacture of products for commercial sale in commerce, except in a de minimis manner.

"(d) MAXIMUM ACHIEVABLE CONTROL TECHNOLOGY EMISSION STANDARDS.—(1) The Administrator shall promulgate regulations establishing emission standards for each category or subcategory of major sources and area sources in accordance with the schedule provided in subsection (e). The Administrator may distinguish among classes, types, and sizes of sources within a category or subcategory in establishing such standards. The Administrator may set standards for emissions of radionuclides from a category or subcategory separately from regulating other listed pollutants emitted by that category or subcategory.

"(2) Emission standards promulgated under this subsection shall be applicable to new and existing major sources and area sources in each category or subcategory, and shall require the maximum degree of reduction in emissions of the air pollutants subject to this section (including a prohibition of such emissions, if achievable) that the Administrator, taking into consideration the cost of achieving such emission reduction, and any nonair quality and other air quality-related health and environmental impacts, and energy requirements, determines is achievable through application of measures, processes, methods, systems or techniques including measures which—

"(A) reduce the volume of, or eliminate emissions of, such pollutants through process changes, substitution of materials or other modifications such as reuse or recycling;

"(B) enclose systems or processes to eliminate emissions;

"(C) collect, capture or treat such pollutants when released from a process, stack, storage or fugitive emissions point;

"(D) are design, equipment, work practice or operational methods, or radiation dose standards;

"(E) establish requirements for operator training or certification; or

"(F) are a combination of the above.

If the Administrator finds that it is not feasible to prescribe or enforce an emission standard, the Administrator may instead issue regulations requiring any of the measures identified in this paragraph, or any combination of such measures. None of the measures described in subparagraphs (A) through (D) shall, consistent with the provisions of section 114(c), in any way compromise any United States patent or United States trademark right, or any confidential business information, or any trade secret or any other intellectual property right.

"(3) The maximum degree of reduction in emissions that is deemed achievable for new sources in a category or subcategory shall not be less stringent than the emission control that is achieved in practice by the best controlled similar source, as determined by the Administrator. Emissions standards promulgated under this subsection for existing sources in a category or subcategory may be less stringent than standards for new sources in the same category or subcategory but shall not be less stringent, and may be more stringent than—

"(A) the average emissions limitation achieved by the best performing 15 percent of the existing sources (for which the Administrator has emissions information and excluding those sources that have achieved, within 12 months prior to promulgation of such standards, a level of emissions rate or emissions reduction which complies, or would comply if the source is not subject to such standard, with lowest achievable emission rate (as defined by section 171) applicable to the source category and prevailing at the time) in the category or subcategory for categories or subcategories with 30 or more sources, or

"(B) the average emissions limitation achieved by the best performing 5 sources (for which the Administrator has or could reasonably obtain emissions information) in the category or subcategory for categories or subcategories with fewer than 30 sources. Emission standards under this section for radionuclides shall be set based upon radiation dose.

"(4) Emission standards or other regulations promulgated under this subsection shall be effective upon promulgation.

"(5) In promulgating emission standards for a source category under this subsection, the Administrator shall prescribe a date for compliance with the standards for existing sources. In no event shall such date be later than 3 years after promulgation of the standards.

"(6) With respect only to categories and subcategories of area sources listed pursuant to subsection (c), the Administrator may, in lieu of the authorities provided in paragraph (2) and subsection (f), elect to promulgate standards or requirements applicable to sources in such categories or subcategories which provide for the use of generally available control technologies or management practices by such sources to reduce emissions of listed hazardous air pollutants.

"(7) The Administrator shall from time to time, but no less often than every 8 years after promulgation of standards under this subsection, review and, if appropriate, revise such standards.

"(e) SCHEDULE FOR STANDARDS.—(1) The Administrator shall promulgate standards for categories and subcategories listed under subsection (c) according to the following schedule:

"(A) Emission standards for not less than 10 categories or subcategories shall be promulgated not later than 2 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(B) Emission standards for 25 per centum of the listed categories and subcategories shall be promulgated not later than 4 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(C) Emission standards for an additional 25 per centum of the listed categories and subcategories shall be promulgated not later than 7 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(D) Emission standards for the remaining categories and subcategories shall be promulgated not later than 10 years after the date of the enactment of the Clean Air Act Amendments of 1990.

"(E) In the case of source categories and subcategories listed after publication of the initial list required under subsection (c)(1), emission standards under this section for the category or subcategory shall be promulgated within 10 years after the date of the enactment of the Clean Air Act Amendments of 1990, or within 2 years after the date on which such category or subcategory is listed, whichever is later.

"(2) In determining priorities for promulgating standards under subsection (d), the Administrator shall consider—

"(A) the quantity and location of emissions or reasonably anticipated emissions of air pollutants subject to this section that each category or subcategory will emit;

"(B) the known or anticipated adverse effects of such pollutants on public health; and

"(C) the efficiency of grouping categories or subcategories according to the pollutants emitted, or the processes or technologies used.

"(f) RESIDUAL RISK.—(1) Not later than 8 years after the date of the enactment of the Clean Air Act Amendments of 1990 the Administrator shall investigate and report, after consultation with the Surgeon General and after an opportunity for public comment, to Congress on:

"(A) Methods of calculating the risk to public health remaining, or likely to remain, from sources subject to regulation under this section after the application of standards under subsection (d).

"(B) The public health significance of such estimated remaining risk and the technologically and commercially available methods and costs of reducing such risks.

"(C) The actual health effects with respect to persons living in the vicinity of sources, any available epidemiological or other health studies, risks presented by background concentrations of hazardous air pollutants, any uncertainties in risk assessment methodology or other health assessment technique, and any negative health consequences to the community of efforts to reduce such risks.

"(D) Recommendations as to legislation regarding such remaining risk.

"(2) If Congress does not act on any recommendation submitted under paragraph (1), the Administrator shall, within 8 years after promulgation of standards for each category or subcategory of sources pursuant to subsection (d), promulgate standards for such category or subcategory in accordance with this section (as in effect before the date of the enactment of the Clean Air Act Amendments of 1990) if promulgation of such standards is required in order, in the Administrator's judgment, to provide an ample margin of safety to protect public health in accordance with this section (as in effect before the date of the enactment of the Clean Air Act Amendments of 1990). The Administrator shall determine whether or not to promulgate such standards, and if the Administrator decides to promulgate such standards, shall promulgate the standards, 8 years after promulgation of the standards under subsection (d) for each source category or subcategory concerned. In the case of categories or subcategories for which standards under subsection (d) are required to be promulgated within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall have 9 years after promulgation of standards under subsection (d) to make the determination under the preceding sentence and, if required, to promulgate the standards under this paragraph. Nothing in subsection (c)(5) or (g)(1)(A) or in any other provision of this section shall be construed as affecting, or applying to, the Administrator's interpretation of this section, as in effect before the date of the enactment of the Clean Air Act Amendments of 1990.

"(3) Any emission standard established pursuant to this subsection shall become effective upon promulgation.

"(4) No air pollutant to which a standard under this subsection applies may be emitted from any stationary source in violation of such standard, except that in the case of an existing source—

"(A) such standard shall not apply until 90 days after its effective date, and

"(B) the Administrator may grant a waiver permitting such source a period of up to 2 years after the effective date of a

standard to comply with the standard if the Administrator finds that such period is necessary for the installation of controls and that steps will be taken during the period of the waiver to assure that the health of persons will be protected from imminent endangerment.

"(g) ALTERNATIVE EMISSIONS LIMITATIONS.—(1) Notwithstanding the requirements of subsection (d), a State with a program approved under title IV, may issue a permit that authorizes—

"(A) a major source (or area sources in a category or subcategory in an area) to comply with alternative emission limitations in lieu of standards under this section, if the owner or operator presents evidence sufficient to demonstrate that emissions from the source (or such area sources) in compliance with such limitations—

"(i) in the case of hazardous air pollutants emitted by the source (or such area sources) which may result in cancer in humans, do not cause a lifetime risk of cancer greater than one in 1,000,000 to the actual person who is most exposed to emissions of such pollutants from such source (or group of sources in the case of area sources); and

"(ii) in the case of hazardous air pollutants that may result in adverse health effects in humans other than cancer, do not exceed a level which is adequate to protect public health with an ample margin of safety;

"(B)(i) any existing source, for which the owner or operator demonstrates that it has achieved a reduction of 90 percent or more in emissions of listed pollutants (95 percent or more in the case of listed particulate pollutants) from the source before proposal of an applicable standard promulgated pursuant to subsection (d), to meet emission limitations based on such reduction in lieu of such standard for a period of 5 years from the otherwise applicable compliance date; the reduction shall be determined with respect to verifiable and actual emissions on an annual average basis and in a base year not earlier than calendar year 1987, unless emissions in the base year are artificially or substantially greater than emissions in other years before implementation of emissions reduction measures;

"(ii) any existing source to comply with a standard under subsection (d) 5 years after promulgation if the source, within 5 years before proposal of the standard under subsection (d), has achieved a level of emission rate or emission reduction which complies (or would comply if the source is not subject to such standards) with the best available control technology determination (as defined in section 169(3)), which is applicable to the source category and prevailing at the time the reduction is achieved; and

"(iii) any existing source to comply with a standard under subsection (d) 5 years after promulgation if the source, within 5 years before proposal of the standard under subsection (d), has achieved a level of emission rate or emission reduction which complies (or would comply if the source is not subject to such standard) with the lowest achievable emissions rate (as defined by section 171) which is applicable to the source category and prevailing at the time the reduction is achieved.

The Administrator shall review emissions from sources subject to emissions limitations under subparagraph (B) according to subsection (f) at the same time that other sources in the category or subcategory are reviewed.

"(2) The Administrator shall promulgate regulations to carry out paragraph (1) as expeditiously as practicable, but not later than 24 months after the date of the enactment of the Clean Air Act Amendments of 1990.

"(3) Rules published pursuant to paragraph (1) may identify categories or subcategories of sources listed under subsection (c) for which no alternative emission limitations may be established, including categories or subcategories of area sources for which emission standards are promulgated to control combined emissions from sources, rather than emissions of individual sources.

"(4) The regulations under paragraph (1) shall establish methods for assessing the significance of public health risks and methods for evaluating evidence presented by an owner or operator applying for alternative emissions limitations under this subsection. Any modeling demonstration performed to support a showing under subsection (g)(1)(A) shall comply with such regulations. Any stack height credit used in a modeling demonstration shall be based on the lesser of actual stack height of the source as it existed on January 1, 1989, or the stack height credit as provided in regulations issued by the Administrator.

"(5) An existing source which achieves the reduction referred to in paragraph (1)(B)(i) after the proposal of an applicable standard but before January 1, 1994, may qualify under paragraph (1)(B)(i) if the source makes an enforceable commitment to achieve such reduction before the proposal of the standard. Such commitment shall be enforceable to the same extent as a regulation under this section.

"(6) Any State with a program approved under title IV may issue a permit that grants an extension permitting an existing source up to 2 additional years to comply with standards under subsection (d) if such additional period is necessary for the installation of controls. An additional extension of up to 3 years may be added for mining waste operations if the 5-year compliance time is insufficient to dry and cover mining waste in order to reduce emissions of any pollutant listed under subsection (b).

"(7) No alternative emission limitation under this paragraph shall take effect until it is approved by the Administrator.

"(8) If the State in which a source is located does not have a program approved under title IV, the Administrator may grant any extensions authorized under this subsection for such source.

"(h) PRECONSTRUCTION AND OPERATING REQUIREMENTS.—After the effective date of any standard or under subsection (d) or (f), or an alternative emission limitation under subsection (g)—

"(1) no person may construct any new major source subject to such emission standard or limitation unless the Administrator, or a State with a permit program approved under title IV, determines that such source, if properly constructed and operated, will comply with the standard or limitation; and

"(2) no person may operate any new or existing source subject to an emission standard or limitation except in compliance with such standard or limitation (and any schedule which is applicable under subsection (d)(5) or (f)(4)).

"(i) TECHNICAL ASSISTANCE.—The Administrator shall establish and maintain an air toxics clearinghouse and center to provide technical information and assistance to State and local agencies and, on a cost recovery basis, to others on control technology, health and ecological risk assessment, risk analysis, ambient monitoring and modeling, and emissions measurement and monitoring. The Administrator shall use the authority of section 103 to examine methods for preventing, measuring, and controlling emissions and evaluating associated health and ecological risks. Where appropriate, such activity shall be conducted with not-for-profit organizations.

"(j) PRESIDENTIAL EXEMPTION.—The President may exempt any stationary source from compliance with any standard or limitation under this section for a period of not more than 2 years if the President determines that the technology to implement such standard is not available and that it is in the national security interests of the United States to do so. An exemption under this paragraph may be extended for one or more additional periods, each period not to exceed 2 years. The President shall report to Congress with respect to each exemption (or extension thereof) made under this subsection.

"(k) SAVINGS PROVISION.—(1) Any standard under this section in effect before the date of the enactment of the Clean Air Act Amendments of 1990 shall remain in force and effect after such date unless modified as provided in this section before the date of the enactment of such Amendments or under such Amendments. Each such standard shall be reviewed and, if appropriate, revised, to comply with the requirements of subsection (d) within 10 years after the date of the enactment of the Clean Air Act Amendments of 1990. If a timely petition for review of any such standard under section 307 is pending on such date of enactment, the standard shall be upheld if it complies with this section as in effect before that date. If any such standard is remanded to the Administrator, the Administrator may in the Administrator's discretion apply either the requirements of this section, or those of this section as in effect before the date of the enactment of the Clean Air Act Amendments of 1990.

"(2) Notwithstanding paragraph (1), no standard shall be established under this section, as amended by the Clean Air Act Amendments of 1990, for radionuclide emissions from (A) elemental phosphorous plants, (B) grate calcination elemental phosphorous plants, (C) phosphogypsum stacks, or (D) any subcategory of the foregoing. This section, as in effect prior to the date of the enactment of the Clean Air Act Amendments of 1990, shall remain in effect for radionuclide emissions from such plants and stacks.

"(3) Notwithstanding section 307 of this Act, no action of the Administrator adding a pollutant to the list under subsection (b), listing or designating a source category or subcategory under subsection (c), or determining whether or not to promulgate a standard under subsection (f)(2), shall be final agency action subject to judicial review, except that any such action may be reviewed under such section 307, if otherwise final, when the Administrator issues emission standards for such pollutant or category.

"(l) ELECTRIC UTILITIES.—The Administrator shall perform a study of the hazards to public health reasonably anticipated to occur as a result of emissions by electric utility steam generating units of pollutants listed under subsection (b) after imposition of the requirements of this Act. The Administrator shall report the results of this study to the Congress within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall develop and describe in the Administrator's report to Congress alternative control strate-

gies for emissions which may warrant regulation under this section. The Administrator shall regulate electric utility steam generating units under this section if the Administrator finds such regulation is appropriate and necessary after considering the results of the study required in this subsection.

"(m) ACCIDENT PREVENTION, DETECTION, AND RESPONSE.—

"(1) REGULATIONS AND GUIDANCE.—Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate, in consultation and coordination with the Secretaries of Transportation and Labor and the laws administered by the Secretaries, reasonable regulations and appropriate guidance to provide, to the greatest extent practicable, for the prevention and detection of accidental releases into the ambient air of an air pollutant listed under this subsection from a stationary source as defined in this subsection and for response to such releases by the owners or operators thereof. The Administrator shall utilize the expertise of such Secretaries and others in promulgating such regulations. As appropriate, such regulations shall cover the use, operation, repair, replacement, and maintenance of equipment to monitor, detect, inspect, and control such releases, including the training of persons in the use and maintenance of such equipment and in the conduct of periodic inspections. The regulations shall include procedures and measures for emergency response after an accidental release in order to protect public health and the environment. The regulations shall cover storage, as well as operations. To ensure effectiveness, reasonableness, and avoidance of duplication, such regulations shall be promulgated and implemented in a manner consistent with other applicable law, including the other provisions of this section, and consolidated to the maximum extent practicable with similar requirements under other law. The regulations shall, as appropriate, recognize differences in size, operations, processes, class and categories of sources, and the voluntary actions of such sources to prevent such releases and respond to such releases. The regulations shall take effect 3 years after the date of promulgation, or 3 years after the addition of a substance to the list under this subsection, whichever is later.

"(2) LIST.—As part of the regulations under paragraph (1), the Administrator shall promulgate not later than 24 months after enactment of this subsection an initial list of significant air pollutants which, in the case of an accidental release, are known to cause or may reasonably be anticipated to cause serious adverse effects to public health or the environment. For purposes of promulgating such list, the Administrator shall use the list of extremely hazardous substances published under the Superfund Amendments and Reauthorization Act of 1986, with such modifications as the Administrator deems appropriate. The initial list shall include chlorine, anhydrous ammonia, methyl chloride, ethylene oxide, vinyl chloride, methyl isocyanate, hydrogen cyanide, tetrachloroethylene, ammonia, hydrogen sulfide, phosgene, and bromine, anhydrous hydrogen chloride, hydrogen fluoride, anhydrous sulfur dioxide, sulfur trioxide. The initial list shall include at least the 100 air pollutants which pose the greatest risk of causing serious adverse effects to public health or the environment from accidental releases. The list shall include ammonia (CAS Number 7664417) and hydrogen sulfide (CAS Number 7783064). The regulations shall include an explanation of the basis for establishing the list. The list may be revised from time to time by the Administrator on his own motion or by petition and shall be reviewed at least every 5 years. No air pollutant for which a national primary ambient air quality standard has been established shall be included on any such list. No substance, practice, process, or activity regulated under part B shall be subject to regulation under this subsection. At the time any air pollutant is listed, the Administrator shall establish a reasonable minimum quantity for the pollutant, taking into account toxicity, dispersibility, combustibility, or flammability and the likelihood of an accidental release. The Administrator shall establish procedures for the addition and deletion of substances from the list established under this subsection consistent with those applicable to the list in section 112(b).

"(3) FACTORS TO BE CONSIDERED.—In listing substances under this subsection, the Administrator shall consider each of the following criteria:

"(A) The severity of any acute adverse health effects associated with accidental releases of the substance.

"(B) The likelihood of accidental releases of the substance.

"(C) The potential magnitude of human exposure to accidental releases of the substance.

"(4) THRESHOLD QUANTITY.—At the time any substance is listed pursuant to this subsection, the Administrator shall establish by rule, a threshold quantity for the substance, taking into account the amount of the substance which, as a result of an accidental release, is known to cause or may reasonably be anticipated to cause the serious acute adverse effects to human health for which the substance was listed. The Administrator shall exempt from the requirements of this subsection, a cargo tank (commonly known as a nurse tank and considered an implement of husbandry) transporting anhydrous ammonia, and operated by a private carrier exclusively for agricultural purposes, as described in the regulations under section 173.315(m) of title 49 of the Code of Federal Regulations, as in effect on the date immediately preceding the date of the enactment of the Clean Air Act Amendments of 1990 and used in agriculture.

"(5) RISK MANAGEMENT PLANS.—The regulations under this subsection shall require the owner or operator of stationary sources at which a substance listed under this section is present in quantities greater than a threshold quantity established pursuant to paragraph (4) to prepare and implement a risk management plan to detect and prevent or minimize accidental releases of substances listed under this subsection from the stationary source, and to provide a prompt emergency response to any such releases in order to protect human health and the environment. Such plan shall provide for compliance with the requirements of this subsection and shall also include each of the following:

"(A) HAZARD ASSESSMENT.—A hazard assessment to assess the potential effects of, an accidental release of any substance listed under this section from the stationary source. This assessment shall include an estimate of potential release quantities and a determination of downwind effects, including potential exposures to affected populations. Such assessment shall include a previous release history of the past 5 years, including the size, concentration, and duration of releases, and shall include an evaluation of worst case accidental releases.

"(B) PREVENTION PROGRAM.—A program for preventing accidental releases of substances listed under this section, including safety precautions and maintenance, monitoring and employee training measures to be used at the source.

"(C) RESPONSE PROGRAM.—A response program providing for specific actions to be taken in response to an accidental release of a listed substance so as to protect human health and the environment, including procedures for informing the public and local agencies responsible for responding to accidental releases, emergency health care, and employee training measures.

At the time regulations are promulgated under this section, the Administrator shall promulgate guidelines to assist stationary sources in the preparation of risk management plans. The guidelines shall, to the extent practicable, include model risk management plans.

"(6) COMPLIANCE WITH RISK MANAGEMENT PLAN.—The owner or operator of each stationary source covered by paragraph (5) shall register a risk management plan prepared under this section with the Administrator before the effective date of regulations under this section in such form and manner as the Administrator shall, by rule, require. Plans prepared pursuant to this subsection shall also be submitted to the Air Pollutant Release Investigation Board, to the State in which the facility is located, and to any local agency or entity having responsibility for planning for or responding to accidental releases which may occur at such source, and shall be available to the public under section 114(c). The Administrator shall establish, by rule, an auditing system to regularly review and, if necessary, require revisions in risk management plans to assure that the plans comply with this section. Each such plan shall be updated periodically as required by the Administrator, by rule.

"(7) CONSISTENCY WITH CERTAIN STANDARDS; SMALL BUSINESS CONCERNS.—Any regulations promulgated pursuant to this subsection shall, to the maximum extent practicable consistent with the purposes of this subsection, be consistent with the recommendations and standards established by the American Society of Mechanical Engineers (ASME), the American National Standards Institute (ANSI), the American Society of Testing Materials, and other organizations. The Administrator shall take into consideration the concerns of small businesses in promulgating regulations under this subsection.

"(8) ACCIDENTAL RELEASE INVESTIGATION BOARD.—(A) There is hereby established an independent board to be known as the 'Accidental Release Investigation Board'.

"(B) The Board shall consist of 5 members, including a Chairperson, who shall be appointed by the President, by and with the advice and consent of the Senate. Members of the Board shall be appointed on the basis of technical qualification, professional standing, and demonstrated knowledge in the fields of accident reconstruction, safety engineering, human factors, toxicology, or air pollution regulation. The terms of office of members of the Board shall be established by the President. Any member of the Board, including the Chairperson, may be removed for inefficiency, neglected duty, or malfeasance in office. The Chairperson shall be the Chief Executive Officer of the Board and shall exercise the executive and administrative functions of the Board.

"(C) The Board shall investigate or cause to be investigated (in such detail as it shall

prescribe), and determine the facts, conditions, circumstances, and causes or probable causes of any significant accidental release of a regulated substance or a substance which is unregulated (but could reasonably satisfy the factors of paragraph (3)) into the ambient air from a stationary source resulting in a fatality or serious injury, except for the following:

"(i) Any release of source, byproduct, or special nuclear material from a nuclear incident which the Nuclear Regulatory Commission is authorized to investigate.

"(ii) Any transportation-related release, including marine oil spills, which the National Transportation Safety Board (NTSB) is authorized to investigate.

The Board may utilize the expertise and experience of other agencies.

"(D) The Board shall coordinate its activities with investigations and studies conducted by other agencies of the United States having a responsibility to protect public health and safety. The Board shall enter into a memorandum of understanding with the National Transportation Safety Board to assure coordination of functions and to limit duplication of activities which shall designate the National Transportation Safety Board as the lead agency for the investigation of releases which are transportation related. The Board shall enter into a memorandum of understanding with the Occupational Safety and Health Administration so as to limit duplication of activities. In no event shall the Board forego an investigation where a sudden, accidental release involving the production, processing, handling, or storage of a chemical substance causes a fatality or serious injury among the general public, or had the potential to cause substantial property damage or a number of deaths or injuries among the general public.

"(E) For any investigation performed under subparagraph (A), the Board shall develop a written report on the facts, conditions, circumstances, cause or probable causes of the release. No report of the Board shall be subject to review by the Administrator or any Federal agency or to judicial review in any court. No part of the conclusions, findings, or recommendations of any report of the Board relating to any accidental release or the investigation thereof shall be admitted as evidence or used in any action or suit for damages arising out of any matter mentioned in such report.

"(F) Any report of the Board pursuant to paragraph (3)(B) may include recommendations to the Administrator or the Secretary of Labor for the adoption of regulations concerning the detection and prevention of accidental releases into the ambient air of regulated substances and for the mitigation of the potential effects of such releases under the authority of this section or under the Occupational Health and Safety Act. Any such recommendations shall be specific and shall identify the regulated substances or class of regulated substances to which the recommendations apply.

"(G) Within 2 years after enactment of this section and every 2 years thereafter, the Board shall issue reports to Congress, Federal, State, and local agencies, including the Environmental Protection Agency and the Occupational Safety and Health Administration, and other interested persons recommending the adoption of regulations for the prevention of accidental releases of regulated substances into the ambient air and for the mitigation of the potential adverse effect on human health or the environment as a result of accidental releases. The Board may include proposed rules or orders which should be issued by the Administrator under the authority of this section or by the Secretary of Labor under the Occupational Health and Safety Act. Any such recommendations shall be specific and shall identify the regulated substance or class of regulated substances to which the recommendations apply. The Administrator and the Administrator of the Occupational Safety and Health Administration shall respond to the recommendations within 12 months after receipt thereof. If either the Administrator or the Administrator of the Occupational Safety and Health Administration fail to conform to the recommendations, such Administrator shall publish an explanation of the reasons for not conforming to such recommendations.

"(H) The Board shall establish by regulation requirements binding on persons for reporting accidental releases into the ambient air subject to the Board's investigatory jurisdiction. Reporting releases to the National Response Center, in lieu of the Board directly, shall satisfy such regulations. The National Response Center shall promptly notify the Board of any releases which are within the Board's jurisdiction.

"(I)(i) The Board, or upon the authority of the Board, any member thereof, may, for the purpose of carrying out this subsection, hold such hearings, sit and act at such times and places, and administer such oaths, as the Board or such officer or employee deems advisable.

"(ii) In addition to that described in paragraph (A), the Board may use any information gathering authority of the Administrator under this Act, including the subpoena power provided in section 307(a)(1) of this Act.

"(J) Any records, reports, or information obtained by the Board shall be available to the Administrator, the Secretary of Labor, the Congress and the public, except that upon a showing satisfactory to the Board by any person that records, reports, or information, or particular part thereof (other than release or emissions data) to which the Board has access, if made public, is likely to cause substantial harm to the person's competitive position, the Board shall consider such record, report, or information, or particular portion thereof confidential in accordance with section 1905 of title 18, United States Code, except that such record, report, or information may be disclosed to other officers, employees, and authorized representatives of the United States concerned with carrying out this Act or when relevant under any proceeding under this Act. This paragraph does not constitute authority to withhold records, reports, or information from the Congress. Whenever the Board conducts an investigation of a facility pursuant to this subsection, employees and their representatives shall have the same rights to participate in such inspections as provided for in the Occupational Safety and Health Act.

"(9) DEFINITIONS.—For the purposes of this section—

"(A) The term 'accidental release' means an unanticipated emission of a regulated substance (except as provided in section 9(c)) into the ambient air from a stationary source.

"(B) The term 'regulated substance' means a substance listed pursuant to this subsection.

"(C) The term 'stationary source' means any buildings, structures, or installations (i) which belong to the same industrial grouping, (ii) which are located on one or more contiguous properties, (iii) which are under the control of the same person (or persons under common control), and (iv) at which a regulated substance is present in excess of threshold quantities established by the Administrator.

"(n) PROTECTION OF GREAT LAKES AND CHESAPEAKE BAY.—

"(1) STUDY AND REPORT TO CONGRESS.—The Administrator shall investigate the sources of atmospheric deposition of hazardous air pollutants (and their atmospheric transformation products) on the Great Lakes, the Chesapeake Bay, and their tributary waters and evaluate the adverse effects to human health and the adverse environmental effects, including the tendency to bioaccumulate and effects resulting from indirect exposure pathways, caused by such deposition. Such investigation and evaluation shall include monitoring of listed substances in the ambient air, biological sampling for such substances (or their organic forms) in fish and wildlife within the Great Lakes, the Chesapeake Bay, and their tributary waters, and an analysis to characterize the sources of such substances. The Administrator shall report to Congress on the results of the investigation and evalution within 2 years after the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall afford an opportunity for public review of the report before submitting it to Congress and shall include a summary of the public comments with the report.

"(2) ADDITIONAL REGULATION.—As part of the report to Congress, the Administrator shall determine whether the other provisions of this section are adequate to prevent serious adverse effects to human health and serious or widespread environmental effects, including such effects resulting from indirect exposure pathways, associated with atmospheric deposition on the Great Lakes, the Chesapeake Bay, and their tributary waters of hazardous air pollutants (and their atmospheric transformation products). The Administrator shall take into consideration the tendency of such pollutants to bioaccumulate. Within 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall, based on such report and determination, promulgate, in accordance with this section, such further emissions standards or control measures as may be necessary and appropriate to prevent such effects, including effects due to bioaccumulation and indirect exposure pathways.

"(o) TECHNICAL ASSISTANCE FOR SMALL SOURCES.—The Administrator (and States with permit programs) shall establish means and measures to supply technical assistance and information to area sources and stationary sources that are not major stationary sources to help carry out the requirements of this section, including meeting the applicable standards and obtaining needed permits. The assistance should cover information on availability and types of equipment, measures, methods, practices, processes, and techniques in reducing emissions of air pollutants and preventing and detecting accidents. The Administrator should establish and maintain a clearinghouse of such information.

"(p) HYDROFLUORIC ACID.—(1) Not later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall complete a study to determine if there is a net benefit to public safety, human health, and the environment from the use by oil refineries of any sub-

stance or process which is an alternative to hydrofluoric acid. The study shall include an analysis of the loss of human life or damage to human health in the event of a reasonable worst-case accidental release of hydrofluoric acid or sulfuric acid or other alternative substance, the customary air and water emissions associated with the use of hydrofluoric acid or sulfuric acid or other alternative, the production of waste from the customary use of hydrofluoric acid or sulfuric acid or other alternative, and the risk and consequences of accidents from the transportation of hydrofluoric acid or sulfuric acid or other alternative. In making the determination regarding net benefit, the Administrator shall not consider the financial costs associated with the use of any alternative accidental release mitigation systems which could be rendered inoperable in the event of an earthquake, or the cause of a worst-case accidental release. In making the determination regarding net benefit, if the Administrator considers the likelihood of the risk or danger to human health and the environment from a worst-case accidental hydrofluoric acid release, the Administrator shall also consider similar probabilities resulting from the use of any alternative. In the event that existing data on hydrofluoric acid or sulfuric acid or alternative proves inadequate for the study, the Environmental Protection Agency shall perform the necessary data collection or field tests. The study shall examine both acute and chronic risks.

"(2) If the Administrator determines there is an alternative that provides a net benefit to public safety, human health, and the environment, not later than 1 year and 3 months after the completion of the study under paragraph (1), the Administrator shall promulgate regulations requiring each oil refinery in the Nation to convert to such alternative within 10 years. The Administrator is authorized to make differing determinations on a site-specific basis.

"(3) Not later than 2 years after the completion of the study under paragraph (1), the Administrator shall make recommendations to Congress, and is authorized to promulgate regulations to implement, methods to mitigate or eliminate the danger of a worst-case accidental release of hydrofluoric acid at all other commercial facilities, including the use of alternative processes or substances which provide a net benefit to public safety, human health, and the environment, and relocation of facilities to unpopulated areas.

"(q) MICKEY LELAND URBAN AIR TOXICS RESEARCH CENTER.—

"(1) ESTABLISHMENT.—The Administrator shall oversee the establishment of a National Urban Air Toxics Research Center, to be located at a university, a hospital, or other facility capable of undertaking and maintaining similar research capabilities in the areas of epidemiology, oncology, toxicology, pulmonary medicine, pathology, and biostatistics. The center shall be known as the Mickey Leland National Urban Air Toxics Research Center. The geographic site of the National Urban Air Toxics Research Center should be further directed to Harris County, Texas, in order to take full advantage of the well developed scientific community presence currently on site at the Texas Medical Center as well as the extensive data previously compiled from the comprehensive monitoring system currently in place.

"(2) BOARD OF DIRECTORS.—The National Urban Air Toxics Research Center shall be governed by a Board of Directors to be comprised of 9 members, the appointment of which shall be allocated pro rata among the Speaker of the House, the majority leader of the Senate and the President. The members of the Board of Directors shall be selected based on their respective academic and professional backgrounds and expertise in matters relating to public health, environmental pollutions, and the industrial hygiene. The duties of the Board of Directors shall be to determine policy and research guidelines, submit views from center sponsors and the public and issue periodic reports of center fundings and activities.

"(3) SCIENTIFIC ADVISORY PANEL.—The Board of Directors shall be advised by a Scientific Advisory Panel, the 13 members of which shall be appointed by the Board, and to include eminent members of the scientific and medical communities. The Panel membership may include scientists with relevant experience from the National Institute of Environmental Health Sciences, the Center for Disease Control, the Environmental Protection Agency, the National Cancer Institute, and others, and the Panel shall conduct peer review and evaluate research results. The Panel shall assist the Board in developing the research agenda, reviewing proposals and applications, and advise on the awarding of research grants.

"(4) FINDINGS.—The center shall be established and funded with both Federal and private source funds.

"(r) OIL AND GAS WELLS.—(1) Notwithstanding the provisions of this section, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources, and in the case of any oil or gas exploration or production well (with its associated equipment), such emissions shall not be aggregated for any purpose under this section.

"(2) In the case of oil and gas wells listed under this section, in promulgating regulations under this section, the Administrator shall determine whether oil and gas wells present a risk greater than that referred to in subsection (g)(1)(A). If the Administrator determines that such wells do present a risk greater than the levels referred to in subsection (g)(1)(A) the Administrator shall promulgate standards under this section applicable to such wells.

"(s) COKE OVEN PRODUCTION TECHNOLOGY STUDY.—(1) The Secretary of Energy and the Administrator shall jointly undertake a 6-year study to assess coke oven production emission control technologies and to assist in the development and commercialization of technically practicable and economically viable control technologies which will have the potential to significantly reduce emissions of hazardous air pollutants from coke oven production facilities. In identifying control technologies, the Secretary and the Administrator shall consider the range of existing coke oven operations and battery design and the availability of sources of materials for such ovens as well as alternatives to existing coke oven production design.

"(2) The Secretary and the Administrator are authorized to enter into agreements with persons who propose to develop, install, and operate coke production emission control technologies which have the potential for significant emissions reductions of hazardous air pollutants provided that Federal funds shall not exceed 50 percent of the cost of any project assisted pursuant to this subsection.

"(3) The Secretary shall prepare annual reports to Congress on the status of the research program and at the completion of the study shall make recommendations to the Administrator identifying practicable and economically viable control technologies for coke oven production facilities to reduce residual risks remaining after implementation of the standard under subsection (d) (MACT).

"(4) There are authorized to be appropriated $5,000,000 for each of the fiscal years 1991 through 1996 to carry out the program authorized by this subsection.

"(t) REPORT ON COSTS AND BENEFITS.—Commencing on January 1, three years after the date of the enactment of the Clean Air Act Amendments of 1990 and annually thereafter, the Government Accounting Office, in consultation with other agencies, such as the Environmental Protection Agency, the Department of Labor, the Department of Commerce, the United States Trade Representative, the National Academy of Sciences, the National Academy of Engineering, the Council on Environmental Quality, and the Surgeon General, shall provide a report to Congress on the incremental human health and environmental benefits and incremental costs associated with compliance with the provisions of the Maximum Achievable Control Technologies prescribed by the Clean Air Act Amendments of 1990. The report shall include, for each source category and subcategory for which MACT is prescribed, the effects on human life, human health, the environment, and the economy (including both positive impacts and impacts detrimental to jobs and communities resulting from loss of employers and employment, etc.), energy security impacts, the actual emissions reductions as a result of the Clean Air Act Amendments of 1990, the effect on United States products and industrial competitiveness in national and international markets and any impacts on employment in the affected areas contributed to by the emission control requirements.

"(u) In the case of any category or subcategory of sources the air emissions of which are regulated under subtitle C of the Solid Waste Disposal Act, the Administrator shall take into account any regulations of such emissions which are promulgated under such subtitle and shall, to the maximum extent practicable and consistent with the provisions of this section, ensure that the requirements of such subtitle and this section are consistent.".

SEC. 302. CHEMICAL PROCESS SAFETY MANAGEMENT.

(a) The Secretary of Labor shall act under the Occupational Safety and Health Act of 1970 (29 U.S.C. 653) to prevent accidental releases of chemicals which could pose a threat to employees. Not later than 12 months after the date of enactment of this section, the Secretary of Labor, in coordination with the Administrator, shall promulgate, pursuant to the Occupational Safety and Health Act, a chemical process safety standard designed to protect employees from hazards associated with accidental releases of highway hazardous chemicals in the workplace.

(b) The Secretary shall include as part of such standard a list of highly hazardous chemicals, which include toxic, flammable, highly reactive and explosive substances. The list of such chemicals may include those chemicals listed by the Administrator under

section 302 of the Emergency Planning and Community Right to Know Act of 1986, title III of the Superfund Amendments and Reauthorization Act (SARA). The Secretary may make additions to such list when a substance is found to pose a threat of serious injury or fatality in the event of an accidental release in the workplace.

(c) Such standard shall, at minimum, require employers to—

(1) develop and maintain written safety information identifying workplace chemical and process hazards, equipment used in the processes, and technology used in the processes;

(2) perform a workplace hazard assessment, including, as appropriate, identification of potential sources of accidental releases, an identification of any previous release within the facility which had a likely potential for catastrophic consequences in the workplace, estimation of the workplace effects of a range of releases, estimation of the health and safety effects of such a range on employees;

(3) consult with employees on the development and conduct of hazard assessments and the development of chemical accident prevention plans and provide access to these and other records required under the standard;

(4) establish a system to respond to the workplace hazard assessment findings, which shall address prevention, mitigation, and emergency responses;

(5) periodically review the workplace hazard assessment and response system;

(6) develop and implement written operating procedures for the chemical process including procedures for each operating phase, operating limitations, and safety and health considerations;

(7) provide written safety and operating information to employees and train employees in operating procedures, emphasizing hazards and safe practices;

(8) ensure contractors and contract employees are provided appropriate information and training;

(9) train and educate employees and contractors in emergency response in a manner as comprehensive and effective as that required by the regulation promulgated pursuant to section 126(b) of SARA;

(10) establish a quality assurance program to ensure that initial process related equipment, maintenance materials, and spare parts are fabricated and installed consistent with design specifications;

(11) establish maintenance systems for critical process related equipment including written procedures, employee training, appropriate inspections, and testing of such equipment to ensure ongoing mechanical integrity;

(12) conduct pre-start-up safety reviews of all newly installed or modified equipment;

(13) establish and implement written procedures to manage change to process chemicals, technology, equipment and facilities; and

(14) investigate every incident which results in or could have resulted in a major accident in the workplace, with any findings to be reviewed by operating personnel and modifications made if appropriate.

(d) Nothing in this section may be construed to diminish the authority of the States and political subdivisions thereof.

(e) In exercising any authority under this subsection, the Administrator shall not, for the purposes of section 653(b)(1) of title 29, be deemed to be exercising statutory authority to prescribe or enforce standards or regulations affecting occupational safety and health.

TITLE IV—PERMITS

Sec. 401. Permits.

SEC. 401. PERMITS.

Add the following new title IV after title III:

"TITLE IV—PERMITS

"Sec. 401. Definitions.
"Sec. 402. Permit programs.
"Sec. 403. Permit applications.
"Sec. 404. Permit requirements and conditions.
"Sec. 405. Notification to Administrator and contiguous states.
"Sec. 406. Other authorities.
"Sec. 407. Small source and technical and environmental compliance assistance program.

"SEC. 401. DEFINITIONS.

As used in this title—

"(1) AFFECTED SOURCE.—The term 'affected source' shall have the meaning given such term in title V.

"(2) MAJOR SOURCE.—The term 'major source' means any stationary source (or any group of stationary sources located within a contiguous area and under common control) that is either of the following:

"(A) A major source as defined in section 112.

"(B) A major stationary source as defined in section 302 or part D of title I.

"(3) TERMS DEFINED IN SECTION 112.—For sources subject to standards under section 112, the terms 'new source', 'stationary source', and 'area source' shall have the meaning given such terms in that section.

"(4) TERMS DEFINED IN SECTION 111.—For sources subject to standards under section 111, the terms 'new source', 'modification', 'existing source', and 'stationary source' shall have the meaning given such terms in that section.

"(5) SCHEDULE OF COMPLIANCE.—The term 'schedule of compliance' means a schedule of remedial measures, including an enforceable sequence of actions or operations, leading to compliance with an applicable implementation plan, emission standard, emission limitation or emission prohibition.

"(6) PERMITTING AUTHORITY.—The term 'permitting authority' means the Administrator or the air pollution control agency authorized by the Administrator to carry out a permit program under this title.

"SEC. 402. PERMIT PROGRAMS.

"(a) VIOLATIONS.—After the effective date of any permit program approved or promulgated under this title, it shall be unlawful for any person to violate any requirement of a permit issued under this title, or to operate an affected source (as provided in title V), a major source, any other source (including an area source) subject to standards or regulations under sections 111 or 112, any source required to have a permit under parts C or D, or any other stationary source category or subcategory designated (in whole or in part) by regulations promulgated by the Administrator which shall include a finding setting forth the basis for such designation, except in compliance with a permit issued by a permitting authority under this title. Nothing in this subsection shall be construed to alter the requirements of sections 165, 172, and 173 regarding the requirement that a permit be obtained before construction. The Administrator may, in the Administrator's discretion, promulgate regulations to exempt 1 or more source categories or subcategories (in whole or in part) from the requirements of this subsection if the Administrator finds that compliance with such requirements is impracticable, infeasible, or unnecessarily burdensome on such categories or subcategories, except that the Administrator may not exempt any major source from such requirements.

"(b) REGULATIONS.—The Administrator shall promulgate within 12 months after the date of the enactment of the Clean Air Act Amendments of 1990 regulations establishing the minimum elements of a permit program to be administered by any air pollution control agency. These elements shall include each of the following:

"(1) Requirements for permit applications, including a standard application form and criteria for determining in a timely fashion the completeness of applications.

"(2) Monitoring and reporting requirements.

"(3)(A) A requirement under State law that the owner or operator of all sources subject to the requirement to obtain a permit under this title pay an annual fee, or the equivalent over some other period, sufficient to cover all reasonable (direct and indirect) costs required to develop and administer the permit program requirements of this title, including section 407, including the reasonable costs of—

"(i) reviewing and acting upon any application for such a permit,

"(ii) if the owner or operator receives a permit for such source, whether before or after the date of the enactment of the Clean Air Act Amendments of 1990, implementing and enforcing the terms and conditions of any such permit (not including any court costs or other costs associated with any enforcement action),

"(iii) emissions and ambient monitoring,

"(iv) preparing generally applicable regulations, or guidance,

"(v) modeling, analyses, and demonstrations, and

"(vi) preparing inventories and tracking emissions.

"(B) The total amount of fees collected by the permitting authority shall conform to the following requirements:

"(i) The Administrator shall not approve a program as meeting the requirements of this paragraph unless the State demonstrates that, except as otherwise provided in subparagraphs (ii) through (v) of this subparagraph, the program will result in the collection, in the aggregate, from all sources subject to subparagraph (A), of an amount not less than $25 per ton of each regulated pollutant, or such other amount as the Administrator may determine adequately reflects the reasonable costs of the permit program.

"(ii) As used in this subparagraph, the term 'regulated pollutant' shall mean (I) a volatile organic compound; (II) each pollutant regulated under section 111 or 112; and (III) each pollutant for which a national primary ambient air quality standard has been promulgated (except that carbon monoxide shall be excluded from this reference).

"(iii) In determining the amount under clause (i), the permitting authority is not required to include any amount of regulated pollutant emitted by any source in excess of 4,000 tons per year of that regulated pollutant.

"(iv) The requirements of clause (i) shall not apply if the permitting authority demonstrates that collecting an amount less than the amount specified under clause (i) will meet the requirements of subparagraph (A).

"(v) The fee calculated under clause (i) shall be increased (consistent with the need

to cover reasonable costs authorized by subparagraph (A)) in each year beginning after the year of the enactment of the Clean Air Act Amendments of 1990 by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year exceeds the Consumer Price Index for the calendar year 1989. For purposes of this clause—

"(I) the Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the 12-month period ending on August 31 of each calendar year, and

"(II) the revision of the Consumer Price Index which is most consistent with the Consumer Price Index for calendar year 1989 shall be used.

"(C)(i) If the Administrator determines, under subsection (d), that the fee provisions of the operating permit program do not meet the requirements of this paragraph, or if the Administrator makes a determination, under subsection (i), that the permitting authority is not adequately administering or enforcing an approved fee program, the Administrator may, in addition to taking any other action authorized under this title, collect reasonable fees from the sources identified under subparagraph (A) without regard to the requirements of subparagraph (B).

"(ii) Any source that fails to pay fees lawfully imposed by the Administrator under this subparagraph shall pay a penalty of 50 percent of the fee amount, plus interest on the fee amount computed in accordance with section 6621(a)(2) of the Internal Revenue Code of 1986 (relating to computation of interest on underpayment of Federal taxes).

"(iii) Any fees, penalties, and interest collected under this subparagraph shall be deposited in a special fund in the United States Treasury for licensing and other services, which thereafter shall be available for appropriation, to remain available until expended, subject to appropriation, to carry out the Agency's activities for which the fees were collected. Any fee required to be collected by a State or interstate agency under this subsection shall be utilized solely to support the air pollution control permit program of such State or interstate agency as provided in this paragraph.

"(4) Requirements for adequate personnel and funding to administer the program.

"(5) A requirement that the permitting authority have adequate authority to:

"(A) issue permits and assure compliance by all sources required to have a permit under this title with each applicable standard, regulation or requirement under this Act;

"(B) issue permits for a fixed term, not to exceed 5 years;

"(C) assure that upon issuance or renewal permits incorporate emission limitations and other requirements in an applicable implementation plan;

"(D) terminate, modify, or revoke and reissue permits for cause; and

"(E) enforce permits, permit fee requirements, and the requirement to obtain a permit, including authority to recover civil penalties in an amount not less than $10,000 per day for each violation, and appropriate criminal penalties.

"(6) Adequate, streamlined, and reasonable procedures for expeditiously determining when applications are complete, for processing such applications, for public notice, including offering an opportunity for public comment and a hearing, and for expeditious review of permit actions, including applications, renewals, or revisions, and including an opportunity for judicial review of the final permit action by the applicant or any person who participated in the public comment process.

"(7) Authority, and reasonable procedures consistent with the need for expeditious action by the permitting authority on permit applications and related matters, to make available to the public any permit application, compliance plan, permit, and monitoring or compliance report under section 403(e), subject to the provisions of section 114(c) of this Act.

"(8) A requirement that the permitting authority, in the case of permits with a term of 3 or more years for major sources, shall require revisions to the permit to incorporate applicable standards and regulations promulgated under this Act after the issuance of such permit. Such revisions shall occur as expeditiously as practicable and consistent with the procedures established under paragraph (6) but not later than 18 months after the promulgation of such standards and regulations. No such revision shall be required if the effective date of the standards or regulations is a date after the expiration of the permit term. Such permit revision shall be treated as a permit renewal if it complies with the requirements of this title regarding renewals.

"(9) Provisions to allow changes within a permitted facility (or one operating pursuant to section 403(d)) without requiring a permit revision, if the changes are not modifications under any provision of title I and the changes do not exceed the emissions allowable under the permit, provided that the facility provides the Administrator and the permitting authority with advance notification of the changes.

"(c) SINGLE PERMIT.—A single permit may be issued for a facility with multiple sources.

"(d) SUBMISSION AND APPROVAL.—(1) Not later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Governor of each State shall develop and submit to the Administrator a permit program under State law or under an interstate compact meeting the requirements of this title. In addition, the Governor shall submit a legal opinion from the attorney general (or the attorney for those State air pollution control agencies that have independent legal counsel), or from the chief legal officer of an interstate agency, that the laws of the State, locality, or the interstate compact provide adequate authority to carry out the program. Not later than 1 year after receiving a program, and after notice and opportunity for public comment, the Administrator shall approve or disapprove such program, in whole or in part. The Administrator may approve a program to the extent that the program meets the requirements of this Act, including the regulations issued under subsection (b). If the program is disapproved, in whole or in part, the Administrator shall notify the Governor of any revisions or modifications necessary to obtain approval. The Governor shall revise and resubmit the program for review under this section within 180 days after receiving notification.

"(2)(A) Except in the case of a program referred to in subparagraph (B), if the Governor does not submit a program as required under paragraph (1) or if the Administrator disapproves a program submitted by the Governor under paragraph (1), in whole or in part, the Administrator may, in the Administrator's discretion, apply any of the sanctions specified in section 179(b).

"(B) If the Governor does not submit a program as required under paragraph (1) which is applicable to each nonattainment area (as defined in part D of title I) in the State and which applies to all air pollutants for which national ambient air quality standards have been promulgated, or if the Administrator disapproves any such program submitted by the Governor under paragraph (1) in whole or in part, within 18 months after the date required for such submittal or the date of such disapproval, as the case may be, the Administrator shall apply such sanctions in the same manner and conditions as are applicable in the case of a determination, disapproval, or finding under section 179(a).

"(3) If a program meeting the requirements of this title has not been approved in whole for any State within 2 years after the date required for submission of such a program under paragraph (1), the Administrator shall promulgate a program under this title for that State.

"(e) SUSPENSION.—The Administrator shall suspend the issuance of permits promptly upon publication of notice of approval of a permit program under this section, but may, in such notice, retain jurisdiction over permits that have been federally issued, but for which the administrative or judicial review process is not complete. The Administrator shall continue to administer and enforce federally issued permits under this title until they are replaced by a permit issued by a permitting program. Nothing in this subsection should be construed to limit the Administrator's ability to enforce permits issued by a State.

"(f) PARTIAL PERMIT PROGRAM.—The Governor of a State may submit, and the Administrator may approve, a partial permit program. No partial permit program shall be approved unless, at a minimum, it applies, and ensures compliance with, this title and each of the following:

"(1) All requirements established under title V applicable to 'affected sources'.

"(2) All requirements established under section 112 applicable to 'major sources', 'area sources,' and 'new sources'.

"(3) All requirements of title I (other than section 112) applicable to sources required to have a permit under this title.

Approval of a partial program shall not relieve the State of its obligation to submit a complete program, nor from the application of any sanctions under this Act for failure to submit an approvable permit program.

"(g) INTERIM APPROVAL.—If a program (including a partial permit program) submitted under this title substantially meets the requirements of this title, but is not fully approvable, the Administrator may by rule grant the program interim approval. In the notice of final rulemaking, the Administrator shall specify the changes that must be made before the program can receive full approval. An interim approval under this subsection shall expire on a date set by the Administrator not later than 2 years after such approval, and may not be renewed.

"(h) EFFECTIVE DATE.—The effective date of a permit program, or partial or interim program, approved under this title, shall be the effective date of approval by the Administrator. The effective date of a permit program, or partial permit program, promulgated by the Administrator shall be the date of promulgation.

"(i) ADMINISTRATION AND ENFORCEMENT.—(1) Whenever the Administrator makes a deter-

mination that a permitting authority is not adequately administering and enforcing a program, or portion thereof, in accordance with the requirements of this title, the Administrator may, in the Administrator's discretion, apply any of the sanctions specified in section 179(b), except as provided in paragraph (2).

"(2) Whenever the Administrator makes a determination that a permitting authority is not adequately administering and enforcing a program, or portion thereof, in accordance with the requirements of this title in the case of a program applicable to a nonattainment area (as defined in part D of title I), within 18 months after the date of the notice under paragraph (1), the Administrator shall apply the sanctions under section 179(b) in the same manner and subject to the same deadlines and other conditions as are applicable in the cast of a determination, disapproval, or finding under section 179(a).

"(3) Whenever the Administrator has made a finding under paragraph (1) with respect to any State, unless the State has corrected such deficiency within 18 months after the date of such finding, the Administrator shall, within 2 years after the date of such finding, promulgate a program under this title for that State. Nothing in this paragraph shall be construed to affect the validity of a program which has been approved under this title or the authority of any permitting authority acting under such program until such time as such program is promulgated by the Administrator under this paragraph.

"SEC. 403. PERMIT APPLICATIONS.

"(a) APPLICABLE DATE.—Any source specified in section 402(a) shall become subject to a permit program, and required to have a permit, on the later of the following dates—

"(1) the effective date of a permit program or partial or interim permit program applicable to the source; or

"(2) the date such source becomes subject to section 402(a).

"(b) COMPLIANCE PLAN.—(1) The regulations required by section 402(b) shall include a requirement that there is submitted with the permit application a compliance plan describing how the source will comply with all applicable requirements under this Act. The compliance plan shall include a schedule of compliance, and a schedule under which the permittee will submit progress reports to the permitting authority no less frequently than every 6 months.

"(2) The regulations shall further require the permittee to periodically certify that the facility is in compliance with any applicable requirements of the permit, and to promptly report, consistent with provisions of the United States Constitution regarding self-incrimination, any violations of such requirements to the permitting authority.

"(c) DEADLINE.—Any person required to have a permit shall, not later than 12 months after the date on which the source becomes subject to a permit program approved or promulgated under this title, or such earlier date as the permitting authority may establish, submit to the permitting authority a compliance plan and an application for a permit signed by a responsible official, who shall certify the accuracy of the information submitted. The permitting authority shall approve or disapprove a completed application (consistent with the procedures established under this title for consideration of such applications) within 18 months after the date of receipt thereof, except that the permitting authority shall establish a phased schedule for acting on permit applications submitted within the first full year after the effective date of a permit program (or a partial or interim program). Any such schedule shall assure that at least one-quarter of such permits will be acted on by such authority annually over a period of not to exceed 4 years after such effective date. Such authority shall establish reasonable procedures to prioritize such approval or disapproval actions in the case of applications not subject to subsection (d).

"(d) TIMELY AND COMPLETE APPLICATIONS.—Except for sources required to have a permit before construction under sections 165, 172, or 173, if an applicant has submitted a timely and complete application for a permit required by this title (including renewals), but final action has not been taken on such application, the source's failure to have a permit shall not be a violation of this Act, unless the delay in final action was due to the failure of the applicant timely to submit information required or requested to process the application. No source required to have a permit under this title shall be in violation of section 402(a) before the date on which the source is required to submit an application under subsection (c).

"(e) COPIES; AVAILABILITY.—A copy of each permit application, compliance plan, emissions or compliance monitoring report, certification, and each permit issued under this title, shall be available to the public. If an applicant or permittee is required to submit information entitled to protection from disclosure under section 114(c) of this Act, the applicant or permittee may submit such information separately. The requirements of section 114(c) shall apply to such information. The contents of a permit shall not be entitled to protection under section 114(c).

"SEC. 404. PERMIT REQUIREMENTS AND CONDITIONS.

"(a) CONDITIONS.—Each permit issued under this title shall include emission limitations and standards, a schedule of compliance, and such other conditions as are necessary to assure compliance with applicable requirements of this Act. Such conditions shall be consistent with this title and the regulations under section 402.

"(b) MONITORING AND ANALYSIS.—The Administrator may by rule prescribe procedures and methods for determining compliance and for monitoring and analysis of pollutants regulated under this Act, but continuous emissions monitoring need not be required if alternative methods are available that provide sufficiently reliable and timely information for determining compliance and shall not be required if technology for such monitoring is unavailable for a source category. Nothing in this subsection shall be construed to affect any continuous emissions monitoring requirement of title V, or where required elsewhere in this Act.

"(c) INSPECTION ENTRY, MONITORING CERTIFICATION AND REPORTING.—Each permit issued under this title shall set forth inspection, entry, monitoring, compliance certification, and reporting requirements to assure compliance with the permit terms and conditions. Such monitoring and reporting requirements shall conform to any applicable regulation under subsection (b). Any report required to be submitted by a permit issued to a corporation under this title shall be signed by a responsible corporate official, who shall certify its accuracy.

"(d) GENERAL PERMITS.—The permitting authority may, after notice and opportunity for public hearing, issue a general permit covering numerous similar sources. Any general permit shall comply with all requirements applicable to permits under this title. No source covered by a general permit shall thereby be relieved from the obligation to file an application under section 403.

"(e) TEMPORARY SOURCES.—The permitting authority may issue a single permit authorizing emissions from similar operations at multiple temporary locations. No such permit shall be issued unless it includes conditions that will assure compliance with all the requirements of this Act at all authorized locations, including ambient standards and compliance with any applicable increment or visibility requirements under part C of title I. Any such permit shall in addition require the owner or operator to notify the permitting authority in advance of each change in location. The permitting authority may require a separate permit fee for operations at each location.

"(f) COMPLIANCE.—Compliance with a permit issued under this title shall be deemed compliance with section 402. Except as otherwise provided by the Administrator by rule, the permit may also provide that compliance with the permit shall be deemed compliance with other applicable provisions of this Act if the permit includes the applicable requirements of such provisions or if the permitting authority in acting on the permit application and the written record of the permit proceeding, made a determination in writing that such other provisions are not applicable (whether or not such determination is expressed in the permit). The preceding sentence shall not apply in the case of a standard issued under section 112(f). Compliance with a permit issued under a partial program under section 402(f) shall be deemed compliance only with those requirements for which the program was approved.

"SEC. 405. NOTIFICATION TO ADMINISTRATOR AND CONTIGUOUS STATES.

"(a) TRANSMISSION AND NOTICE.—(1) Each permitting authority shall transmit to the Administrator a copy of each permit application, including any compliance plan and any application for alternative emission limitations under section 112(g), or for a permit modification, submitted under this title, and shall provide notice, in accordance with regulations promulgated by the Administrator, of each permit proposed to be issued and issued by the authority.

"(2) The permitting authority shall notify all States whose air quality may be affected and that are contiguous to the State in which the emission originates of each permit application or proposed permit forwarded to the Administrator under this section, and shall provide an opportunity for such States to submit written recommendations respecting the issuance of the permit and its terms and conditions. If any part of those recommendations are not accepted by the permitting authority, such authority shall notify the State submitting the recommendations and the Administrator in writing of its failure to accept those recommendations and the reasons therefor.

"(b) OBJECTION BY EPA.—The permitting authority shall respond in writing if the Administrator (1) within 45 days after receipt of the proposed permit under subsection (a)(1), or (2) within 45 days after receiving notification under subsection (a)(2), objects in writing to its issuance as not in compliance with the requirements of this Act, including the requirements of section 110(a)(2)(D). With the objection, the Administrator shall provide a statement of the rea-

sons for the objection. A copy of the objection and statement shall be provided to the applicant.

"(c) ISSUANCE OR DENIAL.—If the permitting authority fails within 90 days after the date of an objection under subsection (b), to submit a permit revised to meet the objection, the Administrator shall issue or deny the permit in accordance with the requirements of this title. No objection shall be subject to judicial review until the Administrator takes final action to issue or deny a permit under this subsection.

"(d) WAIVER OF NOTIFICATION REQUIREMENT.—(1) The Administrator may waive the requirements of subsections (a) and (b) at the time of approval of a permit program under this title for any category (including any class, type, or size within such category) of sources covered by the program other than major sources.

"(2) The Administrator may, by regulation, establish categories of sources (including any class, type, or size within such category) to which the requirements of subsections (a) and (b) shall not apply. The preceding sentence shall not apply to major sources.

"(3) The Administrator may exclude from any waiver under this subsection notification under paragraph (a)(2). Any waiver granted under this subsection may be revoked or modified by the Administrator by rule.

"(e) REFUSAL OF PERMITTING AUTHORITY TO TERMINATE, MODIFY, OR REVOKE AND REISSUE.—If the Administrator finds that cause exists under section 402(b)(5)(D) to terminate, modify, or revoke and reissue a State permit under this title, the Administrator shall notify the permitting authority and the source of the Administrator's finding. The permitting authority shall, within 90 days after receipt of such notification, forward to the Administrator under this section a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend such 90 day period for an additional 90 days if the Administrator finds that a new or revised permit application is necessary, or that the permitting authority must require the permittee to submit additional information. The Administrator may review such proposed determination under the provisions of subsections (a) and (b). If the permitting authority fails to submit the required proposed determination, or if the Administrator objects and the permitting authority fails to resolve the objection within 90 days, the Administrator may, after notice and in accordance with fair and reasonable procedures, terminate, modify, or revoke and reissue the permit.

"SEC. 406. OTHER AUTHORITIES.

"Nothing in this title shall prevent a State, or interstate permitting authority, from establishing additional permitting requirements not inconsistent with this Act.

"SEC. 407. SMALL SOURCE TECHNICAL AND ENVIRONMENTAL COMPLIANCE ASSISTANCE PROGRAM.

"(a) PLAN REVISIONS.—Consistent with sections 110 and 112, each State shall, after reasonable notice and public hearings, adopt and submit to the Administrator as part of the State implementation plan for such State or as a revision to such State implementation plan under this section, plans for establishing a small source technical and environmental compliance assistance program. Such submission shall be made within 24 months after the date of the enactment of the Clean Air Act Amendments of 1990. The Administrator shall approve such program if it includes each of the following:

"(1) Adequate mechanisms for developing, collecting, evaluating, and coordinating information concerning compliance methods and technologies for small sources.

"(2) Adequate mechanisms for advising small sources on pollution prevention, including providing information concerning alternative technologies, process changes, products, and methods of operation that help reduce air pollution.

"(3) A designated State office within the relevant State agency to serve as ombudsman for small sources in connection with the implementation of this Act.

"(4) A program for permits that meets the requirements of subsection (c).

"(5) Adequate mechanisms to assure that small sources receive notice of their rights under this Act in such manner and form as to assure reasonably adequate time for such sources to evaluate compliance methods and any relevant or applicable proposed or final regulation or standard issued under this Act.

"(b) PROGRAM.—The Administrator shall establish within 9 months after the date of the date of the enactment of the Clean Air Act Amendments of 1990 a small source technical assistance program. Such program shall—

"(1) assist the States in the development of the program required under subsection (a) and section 112(o) (relating to technical assistance for small sources);

"(2) issue technical guidance for the use of the States in the implementation of these programs that includes alternative control technologies and pollution prevention methods applicable to small sources; and

"(3) provide for implementation of the program required under subsection (c) in any State that fails to submit an applicable program under that paragraph.

"(c) STATE PERMIT PROGRAM.—The State shall establish a permit program for small sources located within a nonattainment area, ozone transport area, or subject to a standard under section 112 consistent with the other provisions of this title. Such program shall provide that—

"(1) a small source shall have the option of obtaining an individual permit under this subsection as a substitute for any general permit issued under this title;

"(2) such individual permit shall be developed after consultation with the small source or with duly authorized representatives of the small sources;

"(3) individual permits issued under this subsection to small sources shall require compliance with applicable standards, regulations, or requirements under this Act, including emission limitations, pollution control measures, and recordkeeping and reporting requirements under this Act, except that prescribed work practice or technological methods of compliance with any such standard or requirement or the schedule for implementing such methods, if any may be modified for a small source in such permit based on the technical and financial capability of the small source or group of sources and the availability of less burdensome alternatives, and, in particular, pollution prevention measures; any such modifications shall achieve equivalent emission reductions for each regulated air pollutant subject to the permit and shall be consistent with the public health, welfare, and environmental protection goals and deadlines of this Act;

"(4) any individual permit issued to a small source under this subsection shall be issued in accordance with the procedures of this title, and shall be subject to review by the Administrator, as provided in this title;

"(5) the State (or the Administrator) may reduce any fee required under this Act to take into account the financial resources of a small source; and

"(6) requirements for continuous emission monitoring will not be imposed on a small source (or sources) unless the State (or the Administrator) has determined that such requirements are necessary and appropriate.

"(d) ELIGIBILITY.—For purposes of this section, eligibility for participation in the program under this section shall be limited to small sources (as defined in this Act) which are not major sources and which are small businesses (as defined in the Small Business Act). The State may include by petition small sources that are major sources. The State shall grant or deny the petition within 6 months after the petition is filed. The Administrator, in consultation with the Administrator of the Small Business Administration and after providing notice and opportunity for public comment, may exclude from coverage any category or subcategory of sources that the Small Business Administrator determines to have sufficient technical and financial capabilities to meet the requirements of this Act without the application of this subsection.

"(e) MONITORING.—The Administrator shall direct the Agency's Office of Small and Disadvantaged Business Utilization through the Small Business Ombudsman (hereinafter in this section referred to as the 'Ombudsman') to monitor the Small Business Environmental Compliance Assistance Program under this subsection. In carrying out such monitoring activities, the Ombudsman shall—

"(1) render advisory opinions on the overall effectiveness of the Small Source Technical and Environmental Compliance Assistance Program, difficulties encountered, and degree and severity of enforcement;

"(2) make periodic reports to the Congress on the compliance of the Small Source Technical and Environmental Compliance Assistance Program with the requirements of the Paperwork Reduction Act, the Regulatory Flexibility Act, and the Equal Access to Justice Act;

"(3) review information to be issued by the Small Source Technical and Environmental Compliance Assistance Program for small business stationary sources to ensure that the information is understandable by the layperson; and

"(4) have the Small Source Technical and Environmental Compliance Assistance Program serve as the secretariat for the development and dissemination of such reports and advisory opinions.

"(f) COMPLIANCE ADVISORY PANEL.—(1) There shall be created a Compliance Advisory Panel (hereinafter referred to as the 'Panel') on the State level of not less than 7 small business owners. This Panel shall—

"(A) render advisory opinions concerning the effectiveness of the Small Source Technical and Compliance Assistance Program, difficulties encountered, and degree and severity of enforcement;

"(B) make periodic reports to the Administrator concerning the compliance of the State Small Source Technical and Environmental Compliance Assistance Program with the requirements of the Paperwork Reduction Act, the Regulatory Flexibility Act, and the Equal Access to Justice Act;

"(C) review information for small stationary sources to assure such information is understandable by the layperson; and

"(D) have the Small Source Technical and Environmental Compliance Assistance Program serve as the secretariat for the development and dissemination of such reports and advisory opinions.

"(2) The Panel shall consist of—

"(A) 2 members selected by the Governor;

"(B) 2 members selected by the State legislature (1 member each by the majority and minority leadership of the lower house, or in the case of a unicameral State legislature, 2 members each shall be selected by the majority leadership and the minority leadership, respectively, of such legislature, and subparagraph (C) shall not apply);

"(C) 2 members selected by the State legislature (1 member each by the majority and minority leadership of the upper house, or the equivalent State entity); and

"(D) 1 member selected by the head of the department or agency of the State responsible for air pollution permit programs.".

TITLE V—ACID DEPOSITION CONTROL

Sec. 501. Acid deposition control.
Sec. 502. New source performance standards.

SEC. 501. ACID DEPOSITION CONTROL.

Add the following new title after title IV:

"TITLE V—ACID DEPOSITION CONTROL

"Sec. 501. Findings and purposes.
"Sec. 502. Definitions; data.
"Sec. 503. Allowance program.
"Sec. 504. First Phase sulfur dioxide emission reduction program.
"Sec. 505. Second Phase sulfur dioxide emission reduction program.
"Sec. 506. Nitrogen oxides emission reduction program.
"Sec. 507. Permits and compliance plans.
"Sec. 508. Repowered sources.
"Sec. 509. Election for additional sources.
"Sec. 510. Excess emissions enforcement penalty
"Sec. 511. Monitoring, reporting, and recordkeeping requirements.
"Sec. 512. Compliance with other provisions.
"Sec. 513. Enforcement.
"Sec. 514. Report to Congress.
"Sec. 515. Clean coal technology incentives.
"Sec. 516. Severe energy supply interruptions and energy fuel supply shortages.
"Sec. 517. Protection of low-income households.
"Sec. 518. DOE units.
"Sec. 519. Auction.
"Sec. 520. Regulatory reforms to reduce air emissions.
"Sec. 521. Effect of provisions on certain Federal agencies.

"SEC. 501. FINDINGS AND PURPOSES.

"(a) FINDINGS.—The Congress finds that—

"(1) the presence of acidic compounds and their precursors in the atmosphere and in deposition from the atmosphere represents a threat to natural resources, ecosystems, materials, visibility, and public health;

"(2) the principal sources of the acidic compounds and their precursors in the atmosphere are emissions of sulfur and nitrogen oxides from the combustion of fossil fuels and other industrial processes;

"(3) the problem of acid deposition is of national and international significance and cannot be addressed adequately without effective State-Federal and international cooperation;

"(4) strategies and technologies for the control of precursors to acid deposition exist now that are economically feasible, and improved methods are expected to become increasingly available over the next decade;

"(5) current and future generations of Americans will be adversely affected by delaying measures to remedy the problem;

"(6) reduction of total atmospheric loading of sulfur dioxide and nitrogen oxides will enhance protection of the public health and welfare and the environment;

"(7) control measures to reduce acid deposition precursor emissions from steam-electric generating units should be initiated without delay.

"(b) PURPOSES.—The purpose of this title is to reduce the adverse effects of acid deposition through reductions in annual emissions of sulfur dioxide of approximately 10,000,000 tons from 1980 emission levels, and reductions in annual emissions of oxides of nitrogen of approximately 2,500,000 tons relative to their levels in the year 2000, in the 48 contiguous States and the District of Columbia, while providing for the continued use of all fossil fuels for electric generation and ensuring electric reliability. It is also the purpose of this title to encourage energy conservation and the use of renewable resources and to encourage pollution prevention as a long range strategy, consistent with the provisions of this title, for reducing air pollution and other adverse impacts of energy production and use and, to the greatest extent possible, to prevent or mitigate potential losses or shifts in employment and other socioeconomic impacts caused by such reductions and prevention.

"(c) COVERAGE.—This title shall apply only in the 48 contiguous States and the District of Columbia.

"SEC. 502. DEFINITIONS; DATA.

"(a) DEFINITIONS.—As used in this title—

"(1) AFFECTED SOURCE.—The term 'affected source' means a source that includes one or more affected units.

"(2) UNIT.—The term 'unit' means a fossil fuel-fired steam production device such as a boiler or furnace used to combust fuel to produce steam.

"(3) AFFECTED UNIT.—The term 'affected unit' means a unit for which annual allowances are allocated under this title.

"(4) ELECTRIC UTILITY STEAM GENERATING UNIT.—The term 'electric utility steam generating unit' has the meaning provided by section 112(a)(4), except that such term does not include any qualifying small power production facility or qualifying cogeneration facility (within the meaning of section 3(17)(C) or 3(18)(B) of the Federal Power Act) (A) that sells power pursuant to a long-term contract to supply electricity executed on or before December 31, 1989, or (B) with respect to which a State regulatory authority issued an order on or before December 31, 1989, directing the purchasing utility to execute such a contract with such a facility.

"(5) EXISTING ELECTRIC UTILITY STEAM GENERATING UNIT.—The term 'existing electric utility steam generating unit' means an electric utility steam generating unit that commenced commercial operation before the date of the enactment of the Clean Air Act Amendments of 1990. Any such unit which is modified, reconstructed or repowered after such date shall continue to be an existing electric utility steam generating unit for purposes of this title.

"(6) NEW ELECTRIC UTILITY STEAM GENERATING UNIT.—The term 'new electric utility steam generating unit' means any electric utility steam generating unit which is not an existing electric utility steam generating unit.

"(7) ALLOWANCE.—The term 'allowance' means an authorization, as described in section 503(f), issued by the Administrator under this title, to emit, during any single calendar year, a ton of sulfur dioxide (or nitrogen oxides in the case of nitrogen oxide allowances issued under section 509).

"(8) BASELINE.—Except as otherwise provided in this title, the term 'baseline' means the annual quantity of fossil fuel consumed, measured in millions of British thermal units ('mmBtu'), calculated as follows:

"(A) For each electric utility steam generating unit in commercial operation before January 1, 1985, the baseline shall be the average annual quantity of fuel (in mmBtu) consumed during calendar years 1985, 1986, and 1987, as recorded pursuant to Department of Energy Form 767. For any unit for which these forms were not filed, the baseline shall be the annual fuel consumption level specified for that unit in the 1985 National Acid Precipitation Assessment Program (NAPAP) Emissions Inventory, Version 2 (including where applicable, the National Utility Reference File (NURF)). The Administrator shall exclude periods during which a unit is shut down for a continuous period of 4 months or longer, and make appropriate adjustments under this paragraph. Upon petition of the owner or operator of any unit, the Administrator may make appropriate baseline adjustments for accidents that caused prolonged outages.

"(B) For each existing electric utility steam generating unit that commenced commercial operation on or after January 1, 1985, the baseline shall be the unit's average annual fuel consumption (in mmBtu) at a 65 percent capacity factor, except that upon petition of the owner or operator, the Administrator may establish as the baseline for any such unit—

"(i) the annual average fuel consumption (in mmBtu) for the first 3 full consecutive calendar years beginning after the unit commenced commercial operation, or

"(ii) if it is not feasible to use such 3-calendar year period, the unit's annual average fuel consumption (in mmBtu) for a representative calendar year after 1985, as calculated pursuant to a method which the Administrator shall, by regulation, prescribe.

"(C) For any other unit, the baseline shall be the average annual quantity of fuel consumed (in mmBtu) by that unit, as established by the Administrator by rule.

"(9) COMPLIANCE PLAN.—The term 'compliance plan' means the compliance plan required under title IV.

"(10) CONTINUOUS EMISSION MONITORING SYSTEM.—The terms 'continuous emission monitoring system' and 'CEMS' mean the equipment used to sample, measure, analyze, and provide, on a continuous basis, a permanent record of emissions and flow (expressed in pounds per million British thermal units (lbs./mmBtu), pounds per hour (lbs./hr.)), or such other items as the Administrator may, by rule, prescribe under section 511(a).

"(11) FIRST AND SECOND PHASE.—The term 'First Phase' means the period after December 31, 1995, and before January 1, 2001, and the term 'Second Phase' means the period beginning January 1, 2001.

"(12) PERMITTING AUTHORITY.—The term 'permitting authority' has the meaning given that term in title IV.

"(13) CLEAN COAL TECHNOLOGY.—The term 'clean coal technology' means any technology, including any technology applied at the precombustion, combustion, or postcombustion stage, at a new or existing electric utility steam generating unit which will achieve significant reductions in air emissions of

any pollutant or pollutants associated with the utilization of coal in the generation of electricity, process steam, or industrial products, which is not in widespread use as of the date of the enactment of the Clean Air Act Amendments of 1990.

"(14) REPOWERING.—The term 'repowering' means replacement of an existing coal-fired boiler with one of the following clean coal technologies: atmospheric or pressurized fluidized bed combustion, integrated gasification combined cycle, magnetohydrodynamics, direct and indirect coal-fired turbines, integrated gasification fuel cells, or a derivative of one or more of these technologies, or any other technology capable of controlling multiple combustion emissions simultaneously with improved boiler or generation efficiency and of achieving significantly greater waste reduction relative to the performance of technology in widespread commercial use as of the date of the enactment of the Clean Air Act Amendments of 1990, as determined by the Administrator, in consultation with the Secretary of Energy.

"(15) STATE.—The term 'State' means one of the 48 contiguous States or the District of Columbia.

"(16) ACTUAL 1985 EMISSION RATE.—For any unit, the term 'actual 1985 emission rate' means the lesser of the rate described in subparagraph (A) or (B), expressed in lbs./mmBtu—

"(A) The unit's average emission rate for sulfur dioxide or oxides of nitrogen for the calendar year 1985 as reported in the National Acid Precipitation Assessment Program (NAPAP) Emissions Inventory, Version 2 (National Utility Reference File (NURF), if applicable).

"(B) The emission rate (if any) applicable to the unit under the applicable implementation plan for the calendar year 1985, based on documentation in existence before January 1, 1990.

In the case of an existing unit that was not in commercial operation in calendar year 1985, the term 'actual 1985 emissions rate' means the unit's emissions rate for a representative calendar year after 1985, as determined by the Administrator. The Administrator shall select the representative calendar year to be used for such purposes within 1 year after the enactment of the Clean Air Act Amendments of 1990.

"(b) CORRECTION OF DATA.—The Administrator shall, upon application or on the Administrator's own motion, by December 31, 1991, correct any factual errors in data from which affected Second Phase units' baselines or actual 1985 emission rates have been calculated. Corrected data shall be used for purposes of issuing allowances under this title. The failure of the Administrator to correct any alleged factual error in such reports shall not be subject to judicial review.

"SEC. 503. ALLOWANCE PROGRAM.

"(a) ALLOCATION OF ANNUAL ALLOWANCES FOR EXISTING UNITS.—The Administrator shall allocate annual allowances to the owner or operator of the affected units at an affected source in the annual amounts calculated under this title. First Phase allowances may not be allocated or issued for the Second Phase. Nothing in the preceding sentence shall be construed to prohibit the banking of unused First Phase allowances to be carried forward and added to allowances allocated in subsequent years, including years in the Second Phase. Except as provided in section 508(d) and 509, the removal of an existing affected unit or source from commercial operation at any time after the date of the enactment of the Clean Air Act Amendments of 1990 (whether before or after commencement of the First Phase or Second Phase) shall not terminate or otherwise affect the allocation of allowances for the First Phase or for the Second Phase to which the unit is entitled. Allowances shall be allocated and issued by the Administrator without cost to the recipient.

"(b) EPA ALLOWANCE SYSTEM REGULATIONS.—

"(1) IN GENERAL.—(A) Not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate such regulations under this section as may be necessary to implement the allowance system established under this section.

"(B) The regulations under this section shall ensure that (i) allowances are issued and allocated in a timely manner, (ii) the allowance system functions effectively, efficiently, and competitively and without discrimination, (iii) allowances are reasonably transferable temporarily or permanently by purchase, lease, or otherwise, and (iv) allowances are not used to impede access to, or competition for, electric energy in any market.

"(C) The regulations under this section shall otherwise protect the integrity and value of such allowances and of the allowance system from fraud or misuse.

"(D) The regulations under this section shall be consistent with requirements for electric utility reliability, including central dispatch and the need to meet or cope with emergencies of any kind, and shall govern the issuance, transfer, holding, use, and banking of all allowances.

"(E) The regulations under this section shall provide that the allowances issued under this title may be transferred among the owners or operators of affected sources and other persons, including a multistate electric utility and new independent power producer units. Such regulations shall permit the transfer of the right to receive allowances prior to the issuance of such allowances. Such regulations shall permit transfers, including transfers by auction or through the mechanism of a reserve, only within each of the 2 major geographic regions of the country as defined by the Administrator in such regulations, except as provided in subsection (e) in the case of new units, and except that an owner or operator, as of the date of enactment of the Clean Air Act Amendments of 1990, of 2 or more affected units may transfer allowances among such units, irrespective of regional boundaries.

"(2) REVIEW AND REVISION.—The Administrator shall review the allowance program established under this section, and the regulations implementing such program, at intervals of at least every 4 years after promulgation of such regulations and shall make the results of such review public. Based on such review, the Administrator shall amend such regulations to the extent necessary, consistent with the purposes and provisions of this title.

"(3) CONSULTATION.—In the development and promulgation of regulations under this section and in the administration of the allowance program established under this section, the Administrator shall consult with, and utilize the expertise of, the Secretary of Energy and the Federal Energy Regulatory Commission. In the case of State regulated electric utilities, the Administrator shall also consult with, and obtain the advice of, the applicable electric utility ratemaking authority of the State. The Administrator shall also consult with, and obtain the advice of, representatives of regulated and nonregulated electric utilities. The Administrator shall also consult with the interested public. The Administrator shall particularly consult with the Commission and such ratemaking authorities concerning issues of operation and ownership of affected units under applicable laws, tariffs, regulations, and contractual arrangements to ensure that the allowances are properly issued and recorded and that the allowance system functions as provided by paragraph (1).

"(4) MULTIPLE OWNERSHIP.—(A) The Administrator shall include in the regulations under this section requirements under this paragraph regarding the issuance of allowances for an affected unit where the affected unit is owned by more than one person. Such regulations shall require that, unless the owners of the unit otherwise provide by contract, allowances for the affected unit shall be issued to each person owning a share in the unit in proportion to the ownership shares.

"(B) The regulations under this paragraph shall also require that, unless the owners of the unit otherwise provide by contract, whenever any owner is required by contract to contribute to the costs of control of emissions at the unit and the level of emissions control at such unit makes allowances issued to such unit available for transfer, the owners required to contribute to such costs of control shall share such transferable allowances in proportion to each owner's contribution to such costs.

"(C) The regulations under this paragraph shall also provide, for the purpose of this section, that—

"(i) the term 'owner' shall include the holder of a leasehold interest in an affected unit or any part thereof and shall not include a passive lessor, or a person who has an equitable interest through such passive lessor, whose rental payments are not based directly or indirectly upon the revenues or income from the affected unit; and

"(ii) where a utility purchases power from an affected unit under a life-of-the-unit, firm power contractual arrangement, such utility shall be considered an owner in proportion to its contractual share.

For the purposes of clause (ii) of this subparagraph, the term 'life-of-the-unit, firm power contractual arrangement' means a contractual arrangement under which a utility receives a specified amount or percentage of capacity and associated energy generated by a specified generating unit (or units) and pays its proportional amount of such unit's total costs for the life of the unit.

"(c) INTERPOLLUTANT TRADING.—The regulations under subsection (b) shall provide, subject to any applicable restrictions pursuant to section 520, for trading and banking of allowances for sulfur dioxide and oxides of nitrogen, including the establishment of a baseline under section 509 for emissions of oxides of nitrogen. Such regulations shall provide that, for trading purposes, 1.5 pounds of oxides of nitrogen shall be equivalent to 1.0 pound of sulfur dioxide. Interpollutant trades of allowances for use in areas failing to meet the applicable national primary ambient air quality standard for ozone, nitrogen dioxide, sulfur dioxide, or PM-10 shall be subject to approval by the Administrator in accordance with such regulations.

"(d) ALLOWANCE TRACKING SYSTEM.—(1) The Administrator shall establish a system for issuing, recording, and tracking allowances under this title, and shall specify by regula-

*tion, promulgated as provided in subsection (b), the procedures and requirements for that system.*

*"(2) All allowance allocations and transfers shall, upon recordation by the Administrator, be deemed a part of each unit's permit for purposes of section 507.*

*"(3) The Administrator shall take such steps as may be necessary to ensure that allowance transfers are recorded within 14 working days after receipt of a properly certified notice of such transfer and that persons receiving or transferring allowances file accurate annual reports regarding such transactions and that persons holding allowances during any year file accurate annual reports regarding the number of such allowances held. Transfers of allowances shall not be effective until written certification of the transfer on a proper form (signed by a responsible official of each party to the transfer) is received and recorded by the Administrator. All such transfers shall be consistent with the purposes and requirements of this title and shall not result in emissions of sulfur dioxide (or, if applicable, nitrogen oxides) in any year in excess of the total number of allowances authorizing such emissions in that year, including allowances carried forward from previous years.*

*"(4) In order to insure electric reliability, such regulations shall not prohibit or affect temporary increases and decreases in emissions within utility systems or power pools that result from their operations, including emergencies and central dispatch, and such temporary emissions increases and decreases shall not require transfer of allowances among units nor shall it require recordation. Notwithstanding the preceding sentence, the total tonnage of emissions in any calendar year (calculated at the end thereof) from each unit involved shall not exceed the allowances allocated to the unit for the calendar year concerned and issued to the owner or operator of the unit for that year, plus or minus allowances transferred to or from the unit for such calendar year or carried forward to that year from prior years.*

*"(5) Regulations under this section shall provide, consistent with the purposes of this title, for the identification of unused allowances and for such unused allowances to be carried forward and added to allowances allocated in subsequent years.*

*"(6) No allowance allocated to any unit for a subsequent year may be carried backward and added to allowances in an earlier year.*

*"(7) The provisions of section 1001 of title 18 of the United States Code shall apply to reports under this section and to the recordation of allowance transactions and holdings under this section.*

*"(e) NEW ELECTRIC UTILITY STEAM GENERATING UNITS.—In the Second Phase, the owner or operator of each new electric utility steam generating unit must hold allowances equal to the annual tonnage of sulfur dioxide emitted by the unit. Notwithstanding the geographic limitations referred to in subsection (b), such new units may obtain allowances from any person, consistent with the regulations issued under this section.*

*"(f) NATURE OF ALLOWANCES.—An allowance issued under this title is a limited authorization to emit sulfur dioxide or nitrogen oxides in accordance with the provisions of this title. Nothing in this title or in any other provision of law shall be construed to limit the authority of the United States to terminate or limit such authorization by Act of Congress. Consistent with section 512, nothing in this section relating to allowances shall be construed as affecting the application of, or compliance with, any other provision of this Act to an affected unit or source, including the provisions related to applicable National Ambient Air Quality Standards and State implementation plans. Allowances under this title may not be extinguished by the Administrator. Nothing in this section shall be construed as requiring a change of any kind in any State law regulating electric utility rates and charges or affecting any State law regarding such State regulation or as limiting State regulation (including any prudency review) under such a State law. Nothing in this section shall be construed as modifying the Federal Power Act or as affecting the authority of the Federal Energy Regulatory Commission under that Act. Nothing in this title shall be construed to interfere with or impair any program for competitive bidding for power supply in a State in which such program is established. Allowances, once issued to a person by the Administrator, may be received, held, and temporarily or permanently transferred in accordance with this title and the regulations of the Administrator without regard to whether or not a permit is in effect under title IV or section 507 with respect to the unit for which such allowance was originally issued and recorded. Each permit under this title and each permit issued under title IV for any affected unit shall provide that the affected unit may not emit an annual tonnage of sulfur dioxide in excess of the allowances allocated to that unit for the year concerned and issued to the owner or operator of the unit for that year, plus or minus the allowances transferred to or from the unit for that year or carried forward to that year from prior years. Nothing in title IV or section 507 shall be construed as affecting any allowances issued in accordance with this title or as authorizing a permitting authority to modify or revoke any allowance issued under this title or, in issuing a permit to establish conditions affecting allowances issued under this title.*

*"(g) PROHIBITION.—It shall be unlawful for any person to hold or transfer any allowance issued under this title, except in accordance with regulations issued by the Administrator.*

*"(h) ISSUANCE.—The Administrator shall issue First Phase allowances under this title promptly following the promulgation of regulations under this section. The Administrator shall issue Second Phase allowances under this title promptly following publication of the list and the making of any required adjustments under subsection (i), but no later than 6 months after publication of the final list under subsection (i).*

*"(i) 8,900,000 TONS OF SECOND PHASE ALLOWANCES.—*

*"(1) LIST OF ALLOWANCES TO BE ISSUED.—The Administrator shall publish, not later than December 31, 1991, but before issuing Second Phase allowances, a proposed list of all Second Phase allowances to be allocated and issued under this section based on this title (other than section 509). After notice and opportunity for public comment on such proposed list, but no later than December 31, 1995, the Administrator shall publish the final list of all Second Phase allowances.*

*"(2) 3,980,000 TONS FOR CLEAN UNITS AND SMALL UNITS.—If the Administrator determines that the total of Second Phase allowances to be issued under this title (other than under section 509) to units with an actual 1985 emissions rate below 1.2 lbs/mmBtu and to units with a nameplate capacity below 75 Mwe would be more or less than 3,980,000 tons per year, the Administrator shall adjust the number of allowances to be issued under this title for the Second Phase to those units to ensure that such tonnage will equal 3,980,000 tons per year. The Administrator shall reallocate any reduction or increase in allowances to each such affected unit on the basis of the ratio which the allowances which (but for the preceding sentence) would be issued to such unit bears to the total allowances which (but for the preceding sentence) would be issued to all of such units.*

*"(3) 4,920,000 TONS FOR LARGE UNITS EMITTING AT 1.2 OR ABOVE.—If the Administrator determines that the total tonnage of Second Phase allowances to be issued under this title (other than section 509) to units with an actual 1985 emissions rate of 1.2 lbs/mmBtu or greater and a nameplate capacity of 75 Mwe or greater would be more or less than 4,920,000 tons per year, the Administrator shall adjust the allowances to be issued under this title for the Second Phase to those units to ensure that such allowances will equal 4,920,000 tons per year. The Administrator shall reallocate any reduction or increase in allowances to each such affected unit on the basis of the ratio which the tonnage of allowances which (but for the preceding sentence) would be issued to such unit bears to the total allowances which (but for the preceding sentence) would be issued to all of such units.*

*"(4) TOTAL LIMIT.—In no event shall the Administrator issue Second Phase allowances in excess of 8,900,000 tons per year under this title (other than under section 509).*

*"(5) DEDUCTION AND RESERVE TO COMPENSATE FOR INTERRUPTIBLE GAS PROVISIONS.—In order to compensate for potential emissions of sulfur dioxide from interruptible gas units as described in section 505(h), in calculating under this subsection the allowances to be issued under this title (other than section 509), the Administrator shall deduct from the total allowances which would otherwise be issued to all affected units referred to in paragraph (2) for the Second Phase allowances equal to 75,000 tons per year. The Administrator shall credit such allowances to a Reserve for Gas Supply Interruptions. Every 3 years after establishing such reserve the Administrator shall allocate the unused allowances to all affected units referred to in paragraph (2) on a pro rata basis. For purposes of this paragraph, for any such unit, the term 'pro rata basis' means the ratio which the allowances allocated under this title to that unit bears to the allowances allocated under this title to all such units.*

*"(j) ENERGY CONSERVATION AND RENEWABLE ENERGY.—*

*"(1) DEFINITIONS.—As used in this subsection:*

*"(A) The term 'qualified energy conservation measure' means a cost effective measure, as identified by the Administrator in consultation with the Secretary of Energy, that increases the efficiency of the use of electricity provided by an electric utility to its customers.*

*"(B) The term 'qualified renewable energy' means energy derived from biomass, solar, geothermal, or wind as identified by the Administrator in consultation with the Secretary of Energy.*

*"(C) The term 'electric utility' means any person, State agency, or Federal agency, which sells electric energy.*

"(2) ALLOWANCES FOR EMISSIONS AVOIDED THROUGH ENERGY CONSERVATION AND RENEWABLE ENERGY.—

"(A) IN GENERAL.—The regulations under paragraph (4) of this subsection shall provide that for each ton of sulfur dioxide emissions avoided by an electric utility, during the applicable period, through the use of qualified energy conservation measures or qualified renewable energy, the Administrator shall allocate and issue a single allowance to such electric utility, on a first-come-first-served basis from the Conservation and Renewable Energy Reserve established under subsection (k), to the extent allowances are available for issuance from such Reserve.

"(B) REQUIREMENTS FOR ISSUANCE.—The Administrator shall issue allowances to an electric utility under this subsection only if all of the following requirements are met:

"(i) Such electric utility is paying for the qualified energy conservation measures or qualified renewable energy directly or through purchase from another person.

"(ii) The emissions of sulfur dioxide avoided through the use of qualified energy conservation measures or qualified renewable energy are quantified in accordance with regulations promulgated by the Administrator under this subsection.

"(iii)(I) Such electric utility has adopted and is implementing a least cost energy conservation and electric power plan which evaluates a range of resources, including new power supplies, energy conservation, and renewable energy resources, in order to meet expected future demand at the lowest system cost.

"(II) The qualified energy conservation measures or qualified renewable energy, or both, are consistent with that plan.

"(III) Electric utilities subject to the jurisdiction of a State regulatory authority must have such plan approved by such authority. For electric utilities not subject to the jurisdiction of a State regulatory authority such plan shall be approved by the entity with rate-making authority for such utility.

"(iv) In the case of a State regulated electric utility, the Secretary of Energy certifies that the State regulatory authority with jurisdiction over the electric rates of such electric utility has established rates and charges which ensure that the net income of such electric utility after implementation of specific cost effective energy conservation measures is at least as high as such net income would have been if the energy conservation measures had not been implemented. Upon the date of any such certification by the Secretary of Energy, all allowances which, but for this paragraph, would have been issued under subparagraph (A) before such date, shall be issued to the electric utility.

"(v) Such utility or any subsidiary of the utility's holding company owns or operates at least one affected unit.

"(C) USE OF ALLOWANCES.—The allowances issued under this subsection may be used to authorize emissions only at units owned or operated by an electric utility which is implementing a least cost energy plan meeting the requirements of subparagraph (B)(iii)(I) and approved as provided in subparagraph (B)(iii)(III).

"(D) PERIOD OF APPLICABILITY.—Allowances under this subsection shall be issued only with respect to kilowatt hours of electric energy saved by qualified energy conservation measures or generated by qualified renewable energy after January 1, 1992 and before the earlier of (i) December 31, 2000, or (ii) the date on which any electric utility steam generating unit owned or operated by the electric utility to which the allowances are issued becomes subject to this title (including those sources that elect to become affected by this title, pursuant to section 509).

"(E) DETERMINATION OF AVOIDED EMISSIONS.—

"(i) APPLICATION.—In order to receive allowances under this subsection, an electric utility shall make an application which—

"(I) designates the qualified energy conservation measures implemented and the qualified renewable energy sources used for purposes of avoiding emissions,

"(II) calculates, in accordance with subparagraphs (F) and (G), the number of tons of emissions avoided by reason of the implementation of such measures or the use of such renewable energy sources; and

"(III) demonstrates that the requirements of subparagraph (B) have been met.

Such application for allowances by a State-regulated electric utility shall require approval by the State regulatory authority with jurisdiction over such electric utility. The authority shall review the application for accuracy and compliance with this subsection and the rules under this subsection. Electric utilities whose retail rates are not subject to the jurisdiction of a State regulatory authority shall apply directly to the Administrator for such approval.

"(F) AVOIDED EMISSIONS FROM QUALIFIED ENERGY CONSERVATION MEASURES.—For the purposes of this subsection, the emission tonnage deemed avoided by reason of the implementation of qualified energy conservation measures for any calendar year shall be a tonnage equal to the product of multiplying—

"(i) the kilowatt hours that would otherwise have been supplied by the utility during such year in the absence of such qualified energy conservation measures, by

"(ii) 0.004,

and dividing by 2,000.

"(G) AVOIDED EMISSIONS FROM THE USE OF QUALIFIED RENEWABLE ENERGY.—The emissions tonnage deemed avoided by reason of the use of qualified renewable energy by an electric utility for any calendar year shall be a tonnage equal to the product of multiplying—

"(i) the actual kilowatt hours generated by, or purchased from, qualified renewable energy, by

"(ii) 0.004,

and dividing by 2,000.

"(H) PROHIBITIONS.—(i) No allowances shall be issued under this paragraph for the implementation of programs that are exclusively informational or educational in nature.

"(ii) No allowances shall be issued for energy conservation measures or renewable energy that were operational before January 1, 1992.

"(3) SAVINGS PROVISION.—Nothing in this subsection precludes a State or State regulatory authority from providing additional incentives to utilities to encourage investment in demand-side resources.

"(4) REGULATIONS.—Not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990 and in conjunction with the regulations required to be promulgated under subsections (b) and (c), the Administrator shall, in consultation with the Secretary of Energy, promulgate regulations under this subsection. Such regulations shall list energy conservation measures and renewable energy sources which may be treated as qualified energy conservation measures and qualified renewable energy for purposes of this subsection. Allowances shall only be issued if all requirements of this subsection and the rules promulgated to implement this subsection are complied with. The Administrator shall review the determinations of each State regulatory authority under this subsection to encourage consistency from electric utility to electric utility and from State to State in accordance with the Administrator's rules. The Administrator shall publish the findings of this review no less than annually.

"(k) CONSERVATION AND RENEWABLE ENERGY RESERVE.—The Administrator shall establish a Conservation and Renewable Energy Reserve under this subsection. The reserve shall contain total allowances equal to 400,000 tons which shall be available for issuance following promulgation by the Administrator of regulations under this section, 200,000 tons of which may be used to authorize emissions after January 1, 2001 and the remaining 200,000 tons of which may only be used to authorize emissions after January 1, 2006. The Administrator shall issue allowances which can be used to authorize emissions after January 1, 2001 before issuing allowances which can only be used to authorize emissions after January 1, 2006. In order to establish 300,000 tons of such reserve, the Administrator shall reduce—

"(A) the tonnage specified in subsection (i)(2) by 10,000 tons per year for the first 10 years of the Second Phase, and

"(B) the tonnage specified in subsection (i)(3) by 20,000 tons per year for the first 10 years of the Second Phase.

The remaining 100,000 tons of such 400,000 ton total in the reserve shall be credited to the reserve, without regard to any limitations set forth in subsection (i). If allowances remain in the reserve after January 2, 2011, the Administrator shall allocate and issue 75 percent of such allowances to Second Phase affected units on a pro rata basis. For purposes of this paragraph, for any Second Phase unit, the term 'pro rata basis' refers to the ratio which the reductions made in such unit's allowances in order to establish the reserve under this paragraph bears to the total of such reductions for all Second Phase units.

"(l) CONTINGENCY GUARANTEE FOR CERTAIN NEW INDEPENDENT POWER PRODUCTION FACILITIES.—

"(1) DEFINITIONS.—For purposes of this subsection—

"(A) The term 'independent power producer' means any person who owns or operates, in whole or in part, one or more new independent power production facilities.

"(B) The term 'new independent power production facility' means a facility that—

"(i) is used for the generation of electric energy, 80 percent or more of which is sold at wholesale;

"(ii) is project-financed (as such term is defined by the Secretary of Energy within 3 months of the date of the enactment of the Clean Air Act Amendments of 1990);

"(iii) does not generate electric energy sold to any affiliate (as defined in section 2(a)(11) of the Public Utility Holding Company Act of 1935) of the facility's owner or operator; and

"(iv) is a new unit required to hold allowances under subsection (e).

"(C) The term 'required allowances' means the allowances required to operate such unit for so much of the unit's useful life as occurs after commencement of the Second Phase.

"(2) ENTITLEMENT TO WRITTEN GUARANTEE.—Any independent power producer that submits an application to the Administrator establishing that such independent power producer—

"(A) proposes to construct a new independent power production facility for which allowances are required under this title;

"(B) will apply for financing to construct such facility after January 1, 1990, and before the date of the early auction under section 519(a);

"(C) has submitted to each owner or operator of an affected unit listed in table A (in section 504) a written offer to purchase the required allowances for $750 per ton; and

"(D) has not received (within 180 days after submitting offers to purchase under subparagraph (C)) an acceptance of the offer to purchase the required allowances

shall, within 30 days after submission of such application, be entitled to receive the Administrator's written guarantee (subject to the eligibility requirements set forth in paragraph (3)) that such required allowances will be made available for purchase from the reserve established under section 519(c) and at a guaranteed price. The guaranteed price at which such allowances shall be made available for purchase shall be $1,500 per ton, adjusted by the percentage, if any, by which the Consumer Price Index (as determined under section 402(b)(3)(B)(v)) for the year in which the allowance is purchased exceeds the Consumer Price Index for the calendar year in which the auction takes place.

"(3) ELIGIBILITY REQUIREMENTS.—The guarantee issued by the Administrator under paragraph (2) shall be subject to a demonstration by the independent power producer, satisfactory to the Administrator, that—

"(A) the independent power producer has—

"(i) submitted a good faith bid in the auction under section 519(a);

"(ii) made good faith efforts (after the auction under section 519(a)) to purchase the required allowances from the owners or operators of affected units to which allowances will be allocated, including efforts to purchase at annual auctions under section 519(b), and from industrial sources that have volunteered to become affected units pursuant to section 509; and

"(iii) such bids and efforts were unsuccessful in obtaining the required allowances; and

"(B) the independent power producer will continue to make good faith efforts to purchase the required allowances from the owners or operators of affected units and from industrial sources.

"(4) ISSUANCE OF GUARANTEED ALLOWANCES FROM RESERVE UNDER SECTION 519(C).—From the reserve established under section 519(c)(2), upon payment of the guaranteed price, the Administrator shall issue to any person exercising the right to purchase allowances pursuant to a guarantee under this subsection the allowances covered by such guarantee. Persons to which guarantees under this subsection have been issued shall have the opportunity to purchase allowances pursuant to such guarantee from such reserve before the allowances in such reserve are offered for sale to any other person.

"(m) INCENTIVE ALLOWANCES FOR EARLY REDUCTIONS.—(1) The Administrator shall promulgate regulations under this subsection within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990. Following promulgation of such regulations, the Administrator shall allocate and issue allowances during the First Phase to the owner or operator of each unit which is a First Phase affected unit if the owner or operator of the unit establishes to the satisfaction of the Administrator that—

"(A) the unit has reduced sulfur dioxide emissions in any year after the such date of enactment, but before the First Phase (hereinafter in this subsection referred to as the 'prior year'),

"(B) such emission reductions are not otherwise required under this Act,

"(C) such emission reductions are obtained solely through the installation or additional use of a technological system of continuous emission reduction which achieves at least a 70 percent reduction from the potential combustion concentration, and

"(D) the unit complies with section 511 (relating to monitoring, reporting, and recordkeeping).

"(2) Each allowance issued as provided in this subsection shall authorize a single ton of sulfur dioxide emissions for a single year during the First or Second Phase. Except as provided below, the tonnage of allowances issued under this subsection for any unit shall be equal to the amount by which (A) the product of the unit's baseline multiplied by the unit's 1985 actual sulfur dioxide emissions rate (in lbs per mmBtu), divided by 2,000 lbs./ton exceeds (B) the unit's actual tonnage of sulfur dioxide emissions for the prior year concerned. No allowances shall be allocated as provided in this subsection for emission reductions resulting from reduced utilization. Allowances may be allocated under this subsection only for emission reductions achieved after the enactment of the Clean Air Act Amendments of 1990 as the result of the installation or additional use of a technological system of continuous reduction meeting the requirements of subparagraph (C) of paragraph (1).

"(3)(A) For purposes of receiving allowances for early reductions under this subsection, the requirements of subparagraph (C) of paragraph (1) and the last sentence of paragraph (2) shall not apply in the case of a unit that receives authorization from the Governor of the State in which such unit is located to make early reductions and that is part of a utility system that meets the following requirements: (i) the total coal-fired generation within the utility system as a percentage of total system generation decreased by more than 20 percent between January 1, 1980, and December 31, 1985; and (ii) the weighted capacity factor of all coal-fired units within the utility system averaged over the period from January 1, 1985, through December 31, 1987, was below 50 percent. A unit that is a Second Phase affected unit (but not also a First Phase affected unit) and part of a utility system that includes 1 or more First Phase affected units shall receive allowances for early reductions made during the First Phase if the unit meets the requirements of this subsection (other than subparagraph (C) of paragraph (1) and the last sentence of paragraph (2)) and the requirements of the preceding sentence, except that for the purposes of applying this subsection to any such Second Phase affected unit, the prior year concerned shall be any year after the commencement of the First Phase but prior to the Second Phase.

"(B) In the case of a First Phase affected unit described in subparagraph (A), the allowances awarded under this subsection for early reductions in any prior year may not exceed the amount by which (i) the product of the unit's baseline multiplied by the unit's 1985 actual sulfur dioxide emission rate (in lbs. per mmBtu), divided by 2,000, exceeds (ii) the allowances specified for such unit in table A, reduced by 6 percent. In the case of a Second Phase affected unit described in subparagraph (A), the allowances awarded under this subsection for early reductions in any prior year may not exceed the amount by which (I) the product of the quantity of fossil fuel consumed by the unit (in mmBtu) in the prior year multiplied by the lesser of 2.35 or the most stringent emission rate (in lbs. per mmBtu) applicable to the unit under the applicable implementation plan, divided by 2,000, exceeds (II) the unit's actual tonnage of sulfur dioxide emission for the prior year concerned. Allowances allocated under this subsection to units referred to in subparagraph (A) may be allocated only for emission reductions achieved as a result of physical changes or changes in the method of operation made after the date of enactment of the Clean Air Act Amendments of 1990, including changes in the type or quality of fossil fuel consumed.

"(C) In no event shall the provisions of this paragraph be interpreted as an event of force majure or a commercial impracticability or in any other way as a basis for excused nonperformance by any utility system under a coal sales contract in effect before the date of the enactment of the Clean Air Act Amendments of 1990.

"(4) Paragraph (1)(C) and the last sentence of paragraph (1) shall not apply to units which are located in a State that has enacted as of January 1, 1990, a law, the effective date of which occurs in calendar year 1993, requiring reductions in statewide annual $SO_2$ emissions by at least 40 percent below such State's 1980 levels. Such units may receive allowances under this subsection only for reductions achieved (through any means) after enactment of the Clean Air Act Amendments of 1990 and prior to the effective date of such State law and only so long as there is no net decrease in high sulfur and mining jobs attributable to the application of this paragraph.

"(n) ALTERNATIVE ALLOWANCE ALLOCATION FOR UNITS IN CERTAIN UTILITY SYSTEMS WITH OPTIONAL BASELINE.—

"(1) OPTIONAL BASELINE FOR UNITS IN CERTAIN SYSTEMS.—In the case of a First Phase unit which (as of the date of the enactment of the Clean Air Act Amendments of 1990)—

"(A) has an emission rate below 1.0 lbs mmBtu,

"(B) has decreased its emissions rate by 60 percent or greater since 1980, and

"(C) is part of a utility system which has a weighted average emission rate for all fossil fueled-fired units below 1.0 lbs/mmBtu,

at the option of the owner or operator of such unit, the unit's baseline may be calculated (i) as provided under section 502(a)(8), or (ii) by utilizing the unit's average annual fuel consumption at a 60 percent capacity factor. Such election shall be made no later than March 1, 1991.

"(2) ALLOWANCE ALLOCATION.—Whenever a unit referred to in paragraph (1) elects to calculate its baseline as provided in clause (ii) of paragraph (1), the Administrator shall allocate allowances to the unit for the First and Second Phase in an amount equal to the baseline selected multiplied by the lower of the average emission rate for such unit in 1989, or 1.0 lbs./mmBtu. Such allowance allocation shall be in lieu of any allocation of allowances under sections 504 and

*505. For purposes of applying subsection (i), the units referred to in this subsection shall be treated as units with an actual 1985 emission rate of 1.20 lbs./mmBtu or greater, regardless of the option elected.*

*"SEC. 504. FIRST PHASE SULFUR DIOXIDE EMISSION REDUCTION PROGRAM.*

*"(a) FIRST PHASE AFFECTED UNITS.—(1) For the First Phase (beginning December 31, 1995) each unit listed in table A is a First Phase affected unit under this section. Each source that includes one or more of such affected units is an affected source under this section.*

"(2) For the First Phase, each existing electric utility steam generating unit with nameplate capacity of 100 MWe or greater, not included in table A, that emits sulfur dioxide at an annual rate of 2.50 lbs./mmBtu or greater, for any calendar year after the date of the date of enactment of the Clean Air Act Amendments of 1990 and prior to the Second Phase is also a First Phase affected unit under this section.

The Administrator shall promulgate regulations to prevent abuse of this paragraph, which shall provide that no unit shall be treated as a First Phase affected unit to which allowances are allocated under section 503 where the Administrator finds that the owner or operator of the unit has increased the unit's emissions rate for any calendar year after such date of enactment for the purpose of becoming a First Phase affected unit under this section eligible to receive such allowances.

"(3) After the commencement of the First Phase, no First Phase affected unit referred to in paragraph (1) or (2) shall emit sulfur dioxide in any calendar year in a tonnage amount which exceeds the annual First Phase allowances allocated for that unit and issued to the owner or operator of the unit, plus or minus the allowances transferred to or from the unit, or carried forward from prior years.

"(b) FIRST PHASE EMISSION TONNAGES.—For each affected unit listed in table A, for the First Phase, the Administrator shall allocate to the unit and issue to the owner or operator of the unit the annual tonnage of sulfur dioxide allowances specified in table A, reduced by 6 percent. For each affected unit described in subsection (a)(2), for the First Phase, the Administrator shall allocate to the unit and issue to the owner or operator of the unit annual tonnage of sulfur dioxide allowances equal to the product of such unit's baseline multiplied by an emission rate of 2.35 lbs/mmBtu, divided by 2,000 lbs/ton. The allowances calculated under this section shall apply only during the First Phase. Nothing in this subsection shall be construed to treat any unit which does not emit sulfur dioxide at a rate in excess of 2.50 lbs/mmBtu as a First Phase affected unit.

"(c) AUTHORITY TO SUBSTITUTE UNITS.—The owner or operator of an affected unit under subsection (a) may submit a proposal to substitute for any unit which is an affected unit under this section any other unit or units under the control of the same owner or operator. In order to make such substitution, the owner or operator shall submit an alternative proposal to the Administrator for approval in conjunction with submission of a permit application and compliance plan under section 507(c)(1). Any proposal must include—

"(1) designation of the substitute affected units to which the tonnage amounts under subsection (a) shall apply, in addition to, or in lieu of, the original affected units designated under that subsection;

"(2) specification of the baseline, the actual 1985 sulfur dioxide emission rate, and the authorized annual tonnage amount for the original affected unit;

"(3) calculation of the calendar year 1985 annual tonnage emitted by the substitute units, based on the baseline for each unit, as defined in section 502, multiplied by the unit's actual 1985 emission rate;

"(4) specification of the emission rates, and the annual tonnage amounts that would be applicable to the original and substitute affected units;

"(5) documentation, satisfactory to the Administrator, that the reassigned tonnage amounts will, in total, achieve the same or a greater reduction in emissions than the reduction that would have been achieved by the requirements of subsection (a); and

"(6) such other information as the Administrator may require.

The Administrator shall review and act on any proposal in accordance with subsection (d).

"(d) ADMINISTRATOR'S ACTION ON A PROPOSAL.—(1) The Administrator shall review and approve any proposal meeting the requirements of subsection (c). If a proposal does not meet the requirements of subsection (c), the Administrator shall disapprove it. The Administrator shall act on a proposal within 6 months after receipt of a complete submission.

"(2) For an approved proposal, each substitute unit and source shall be deemed affected under this title and the Administrator shall act on the submission in accordance with section 507(c). The Administrator shall allocate allowances to the affected units in accordance with the approved proposal. For a disapproved proposal, the Administrator shall issue allowances in accordance with subsection (a). The Administrator's action on any proposal submitted under subsection (c) shall not require a hearing or opportunity for public comment, and shall not be subject to judicial review.

"(e) COMPLIANCE EXTENSION FOR CERTAIN SOURCES USING CERTAIN TECHNOLOGICAL MEANS OF EMISSIONS REDUCTION.—No allowances shall be issued or required for calendar year 1996 for any affected unit which uses a technological means of continuous emission reduction (that commences operation after the enactment of the Clean Air Act Amendments of 1990 and achieves at least a 70 percent reduction from the potential combustion concentration) to control sulfur dioxide emissions for purposes of compliance with the requirements of this title during the First Phase. For any such unit, the allowances allocated to the unit for the last 4 years of the First Phase shall be reduced, under rules promulgated by the Administrator, by a total tonnage amount over such 4-year period equal to the amount by which the actual emissions of sulfur dioxide from the unit during the calendar year 1996 exceed the allowances which would (but for this subsection) be allocated to that unit for calendar year 1996. This subsection shall not apply to any unit for which allowances are allocated under subsection (m) (relating to incentive allowances for early reductions).

"(f) TWO FOR ONE ALLOWANCE PROGRAM.—

(1) RESERVE: TOTAL TONNAGE.—The Administrator shall establish a reserve of First Phase allowances to be allocated based on this subsection. The total tonnage of allowances in the reserve shall be equal to 6 percent of the total allowances specified (prior to the 6 percent reduction under section 504(b)) in table A for the First Phase (other than the allowances specified in such table for the units referred to in section 518, relating to DOE units and any units which are not treated as First Phase affected units by reason of the last sentence of subsection (b)) multiplied by 5.

"(2) ADDITIONAL ALLOWANCES FOR CERTAIN UNITS.—In addition to allowances allocated to units described in this paragraph under other provisions of this section, the Administrator shall allocate First Phase allowances under this paragraph to each First Phase affected unit which—

"(A) uses a technological means of continuous emission reduction (achieving at least a 70 percent reduction from the potential combustion concentration) to control sulfur emissions for purposes of compliance with the requirements of this title during the First Phase, which technological means commences operation after the date of the enactment of the Clean Air Act Amendments of 1990; and

"(B) emits sulfur dioxide during the First Phase at an annual rate of 1.20 lbs/mmBtu or less.

"(3) ADDITIONAL ALLOWANCE ALLOCATIONS.—The tonnage of additional allowances allocated under paragraph (2) to each unit referred to in paragraph (2) shall be equal (to the extent adequate allowances are available in the reserve referred to in paragraph (1)) to the amount by which (A) the product of 1.2 lbs/mmBtu multiplied by the unit's baseline, divided by 2,000 exceeds (B) the projected actual annual tonnage emitted by the unit during the First Phase, as determined by the Administrator under regulations promulgated by the Administrator. Such regulations shall insure that such allowances are allocated equitably among the units referred to in paragraph (2) and that the projected emission reductions are achieved by the units to which such allowances are issued. If allowances remain in the reserve at the end of the First Phase, such remaining allowances shall be allocated and issued to all First Phase affected units on a pro rata basis. For purposes of the preceding sentence, for any First Phase unit, the term 'pro rata basis' refers to the ratio which the First Phase allowances allocated to that unit under this title (determined without regard to this subsection) bears to the total of all First Phase allowances allocated to all First Phase units under this title (determined without regard to this subsection).

"SEC. 505. SECOND PHASE SULFUR DIOXIDE EMISSIONS REDUCTION PROGRAM.

"(a) SECOND PHASE AFFECTED UNITS.—(1) During the Second Phase each unit for which an annual tonnage of Second Phase allowances is allocated as provided in this section shall be a Second Phase affected unit under this section. Each source that includes one or more Second Phase affected units under this section shall be an affected source for the Second Phase.

"(2) During the Second Phase, no Second Phase affected unit shall emit sulfur dioxide in an annual tonnage amount which exceeds the Second Phase allowances allocated for that unit and issued to the owner or operator of the unit under section 503, plus or minus the allowances transferred to or from the unit, or carried forward from prior years.

"(b) ELECTRIC UTILITY STEAM GENERATING UNITS 75 MWE OR ABOVE EMITTING 1.20 LBS MMBTU OR ABOVE.—For each year during the Second Phase, the Administrator shall allocate and issue allowances under section 503 for each existing electric utility steam generating unit with a nameplate capacity of 75 MWe or greater and an actual 1985 emissions rate of 1.20 lbs/mmBtu or greater (as certified by the owner or operator thereof) in an amount equal to the product of the unit's baseline, multiplied by an emissions rate equal to 1.20 lbs/mmBtu, divided by 2,000 lbs/ton.

"(c) ELECTRIC UTILITY STEAM GENERATING UNITS BELOW 75 MWE EMITTING 1.20 LBS MMBTU OR ABOVE.—

"(1) IN GENERAL.—For each year during the Second Phase, the Administrator shall allocate and issue allowances under section 503 for each existing electric utility steam generating unit with a nameplate capacity below 75 MWe and an actual 1985 emissions rate of 1.20 lbs/mmBtu or greater in accordance with the same rules as are applicable under subsection (b), except as otherwise provided in this subsection.

"(2) ELECTION FOR SMALL SYSTEMS.—(A) If a unit referred to in paragraph (1) is owned by an electric utility with, as of December 31, 1989, a total steam electric generating capacity of 500 megawatts or less, the owner or operator of the unit may make an election to be covered by this paragraph for the period January 1, 2001 to December 31, 2010 (or for such shorter period as adequate allowances are available in the Small System Account established under this paragraph). Such election shall be made by January 1, 1997, and may be revoked at any time after that date. During the period that any such election is in effect, the unit may emit sulfur dioxide in excess of the allowances allocated to the unit under paragraph (1) if the unit does not exceed an annual emissions rate equal to the unit's 1985 annual average emissions rate. The allowances allocated to the unit pursuant to paragraph (1) for such 10-year period shall be treated as used by the unit and may not be transferred or banked for as long as the election remains in effect.

"(B) No later than January 1, 1998, and before January 1 of each successive year through 2009, for each unit for which an election is in effect under this paragraph, the Administrator shall forecast or calculate, as appropriate, the annual tonnage of sulfur dioxide emissions from the unit in excess of the allowances allocated for that unit under paragraph (1). Such excess shall hereinafter in this paragraph be referred to as the 'excess tonnage'. Allowances equal to the excess tonnage shall be deducted from the Small System Account established under subparagraph (D) of this paragraph. On each of the dates referred to in the preceding sentence, the Administrator shall issue a public report specifying the number of allowances to be deducted from the Small System Account for units for which an election is in effect under this paragraph, the number of allowances previously deducted from the Account, the number of allowances remaining available in the Account, and the projected period for which allowances will be available in the Account under this paragraph.

"(C)(i) The Administrator is authorized, on petition of an owner or operator of a unit with a nameplate capacity below 75 Mwe that is part of an electric utility system as described to clause (ii) that is particularly well controlled and primarily dependent on units with a nameplate capacity below 75 Mwe, to treat any such unit as a unit owned by a utility referred to in subparagraph (A) for purposes of participation in the Small System Account so long as such units do not exceed a 2.5 lb/mmBtu emission rate for sulfur dioxide.

"(ii) The electric utility system referred to in clause (i) is any system (I) which, as of the date of the enactment of the Clean Air Act Amendments of 1990, had at least 20 percent of its fossil-fuel capacity controlled by flue gas desulfurization devices, (II) which has more than 10 percent of its fossil-fuel capacity consisting of coal-fired units of less than 75 Mwe, and (III) which has no large units (greater than 400 Mwe) with easy or modest FGD Retrofit Cost Factors (according to the Emissions and the FGD Retrofit Feasibility at the 200 Top Emitting Generating Stations, prepared for the United States Environmental Protection Agency on January 10, 1986).

"(D) For purposes of this paragraph, the Administrator shall establish a Small System Account which shall contain (prior to any deductions under this paragraph) total allowances equal to the difference between—

"(i) 2.5 lbs/mmBtu multiplied by the baseline of each of the units subject to section 518 (relating to DOE units), and

"(ii) 0.4 lbs/mmBtu multiplied by the baseline of each of such units,

multiplied by 5 and divided by 2,000 lbs per ton.

"(d) ELECTRIC UTILITY STEAM GENERATING UNITS EMITTING BELOW 1.20 LBS/MMBTU IN 1985.—

"(1) IN GENERAL.—Except as otherwise provided in this subsection, for each year during the Second Phase the Administrator shall allocate and issue allowances under section 503 for each existing electric utility steam generating unit with an actual 1985 sulfur dioxide emission rate below 1.20 lbs/mmBtu in an annual amount equal to the product of the unit's baseline multiplied by the unit's 1985 actual emissions rate, divided by 2,000 lbs/ton, unless the owner or operator of the unit elects an alternative allowance amount under subsection (e). Such election and any other election under subsection (e), shall be made no later than March 1, 1991.

"(2) 100 PERCENT GAS UNITS.—Allowances shall not be required during the Second Phase for, and the Administrator shall not allocate or issue Second Phase allowances for, an electric utility steam generating unit with an actual 1985 sulfur dioxide emission rate below 0.20 lbs/mmBtu which burns only natural gas as a fuel and which burned only natural gas as a fuel during the calendar years 1985 through 1987. If a unit covered by this paragraph exceeds any fuel or emissions requirement set forth in this subsection, this subsection shall not apply and the unit shall be treated as a new electric utility steam generating unit required to obtain allowances under this title.

"(3) CERTAIN ULTRA CLEAN UNITS WITH LOW CAPACITY FACTORS IN 1985.—For the purposes of this section, in the case of any unit operated by a utility that furnishes electricity, electric energy, steam, and natural gas within an area consisting of a city and 1 contiguous county, and in the case of any unit owned by a State authority, the output of which unit is furnished within that same area consisting of a city and 1 contiguous county, the Administrator shall allocate and issue under section 503 from the reserve under paragraph (5), to the extent allowances are available in such reserve, in addition to the allowances otherwise allocated to such units under this section, 7,000 allowances to the utility and 2,000 allowances to the State authority. Such allowances shall be hereinafter referred to in this subsection as 'additional allowances'.

"(4) UNITS WHICH CONVERTED TO COAL.—For each year during the Second Phase, the Administrator shall allocate and issue under section 503 from the reserve under paragraph (5), to the extent allowances are available in such reserve, allowances for each existing utility unit located east of the Mississippi that has completed conversion from predominantly gas fired operation to coal fired operation between January 1, 1985, and December 31, 1987, for which there has been issued a proposed or final prohibition order pursuant to section 301(b) of the Powerplant and Industrial Fuel Use Act of 1978 (42 U.S.C. 8301 et seq., repealed 1987) in an annual amount equal to the product of the unit's annual fuel consumption, on a Btu basis, at a 65 percent capacity factor multiplied by the lesser of 1.20 lbs/mmBtu or the unit's allowable sulfur dioxide emissions rate, divided by 2,000 lbs/ton, unless the owner or operator of such unit has obtained allowances equal to its actual emissions. Allowances allocated and issued under this paragraph to any such unit that are additional to the allowances which would otherwise be issued to the unit under this section shall be hereinafter in this subsection referred to as 'additional allowances'.

"(5) SPECIAL RESERVE FOR ADDITIONAL ALLOWANCES UNDER PARAGRAPHS (3) AND (4).—For purposes of allocating and issuing the additional allowances referred to in paragraphs (3) and (4), the Administrator shall reserve from the allowances allocated and issued during the Second Phase to units referred to in section 503(i)(3) allowances equal to 13,300 tons per year. For purposes of adjusting the allowances issued under this Act pursuant to section 503(i)—

"(A) the additional allowances allocated and issued to any unit under paragraph (3) and (4) shall be treated as allowances for units referred to in section 503(i)(3) and shall not be treated as allowances for units referred to in section 503(i)(2), but

"(B) such additional allowances shall not be subject to adjustment and reallocation under section 503(i).

Nothing in the preceding sentence shall be construed to affect the application of section 503(i) or any other provision of this title to allowances allocated and issued to units referred to in paragraph (3) or (4) which are not additional allowances within the meaning of paragraph (3) or (4).

"(e) ELECTION FOR CERTAIN UNITS EMITTING BELOW 1.20 LBS/MMBTU—

"(1) COAL UNITS EMITTING 0.6 OR LESS.—For the Second Phase, at the election of the owner or operator of an existing electric utility steam generating unit which is a coal-fired unit with an actual 1985 sulfur dioxide emission rate of 0.60 lbs/mmBtu or less, the Administrator shall allocate and issue allowances under section 503 to the unit in an annual amount equal to the product of the rate computed under subparagraph (A) multiplied by the fuel consumption computed under subparagraph (B), divided by 2,000 lbs/ton.

"(A) The rate computed under this paragraph shall be the most stringent of:

"(i) 0.60 lbs/mmBtu, or

"(ii) the most stringent emission rate (if any) (in lbs/mmBtu) applicable to the unit under the applicable implementation plan, as in effect on December 31, 1989, based on documentation in existence before January 1, 1990.

"(B) The fuel consumption computed under this subparagraph shall be one of the following (as elected by the owner or operator):

"(i) the unit's fuel consumption at a 60 percent capacity factor, or

"(ii) the unit's baseline multiplied by 120 percent.

An election to use either clause (i) or (ii) for purposes of this subparagraph for any unit owned by any owner or operator shall apply with respect to all other units owned or operated by the owner or operator which are subject to this paragraph.

"(2) COAL UNITS EMITTING 0.6 TO 1.2.—During the Second Phase, at the election of the owner or operator of an existing electric utility steam generating unit which is a coal-fired unit with an actual 1985 sulfur dioxide emission rate greater than 0.6 lbs/mmBtu (but less than 1.2 lbs/mmBtu), the Administrator shall allocate and issue allowances under section 503 to the unit in an annual amount equal to the product of the unit's 1985 actual emissions rate, multiplied by one of the following (as elected by the owner or operator), divided by 2,000 lbs/ton:

"(A) the unit's fuel consumption at a 60 percent capacity factor, or

"(B) the unit's baseline multiplied by 120 percent.

An election to use either subparagraph (A) or (B) for purposes of this paragraph for any unit owned by any owner or operator shall apply with respect to all other units which are owned or operated by that owner or operator and which are subject to this paragraph.

"(3) CERTAIN OIL OR GAS UNITS EMITTING 0.6 OR LESS.—During the Second Phase, at the election of the owner or operator of an existing electric utility steam generating unit which is an oil- or gas-fired unit with an actual 1985 sulfur dioxide emission rate of 0.6 lbs/mmBtu or less, the Administrator shall allocate and issue allowances under section 503 to the unit in an annual amount equal to the product of 120 percent of the unit's baseline multiplied by the most stringent of the following, and divided by 2,000 lbs/ton:

"(A) 0.6 lbs/mmBtu.

"(B) The most stringent emission rate for fuel oil, if any, in lbs/mmBtu applicable to the unit under the applicable implementation plan in effect on December 31, 1989, based on documentation in existence before January 1, 1990.

No unit which burned as its fuel during the period 1980 through 1989 on average more than 90 percent natural gas may elect to have allowances allocated and issued as provided in this paragraph.

"(4) OIL OR GAS UNITS EMITTING 0.6 TO 1.2.—During the Second Phase, at the election of the owner or operator of an existing electric utility steam generating unit which is an oil- or gas-fired unit with an actual 1985 sulfur dioxide emission rate greater than 0.6 lbs/mmBtu (but less than 1.2 lbs/mmBtu), the Administrator shall allocate and issue allowances under section 503 to the unit in an annual amount equal to the product of 120 percent of the unit's baseline, multiplied by the unit's actual 1985 emissions rate, divided by 2,000 lbs/ton.

"(f) CERTAIN UNITS TREATED AS EXISTING UNITS.—For the Second Phase, the Administrator shall allocate and issue allowances under section 503 to each electric utility steam generating unit which is listed in table B of this subsection in an annual amount equal to the amount specified in table B.

TABLE B

| Unit | Allowances |
|---|---|
| Brandon Shores | 8,907 |
| Miller 4 | 9,197 |
| TNP One 2 | 2,507 |
| Zimmer 1 | 18,458 |
| Spruce 1 | 7,647 |
| Clover 1 | 2,796 |
| Clover 2 | 2,796 |
| TNP One 3 | 2,506 |
| Twin Oak 1 | 9,158 |
| Cross 1 | 6,401 |
| TNP One 4 | 2,506 |

For purposes of making adjustments under section 503(i), the units referred to in this subsection shall be treated as units described in section 503(i)(3).

"(g) BASELINE FOR CERTAIN UNITS IN STATE EXPERIENCING 25 PERCENT POPULATION GROWTH.—(1) For each existing electric utility steam generating unit in commercial operation before January 1, 1985 and operating in a State which—

"(A) has experienced population growth in excess of 25 percent between 1980 and 1988 (according to State Population and Household Estimates, with Age, Sex, and Components of Change: 1981-1988, issued by the United States Department of Commerce), and

"(B) had an installed electric generation capacity of more than 30,000,000 kw in 1988, the baseline for purposes of this section shall be the annual average fuel consumption (in mmBtu) during any 3 consecutive calendar years between 1980 and 1989 (as selected by the owner or operator) in lieu of the years otherwise applicable for such purposes under section 502(a)(8). Such election shall be made not later than March 1, 1991.

"(2) The Administrator shall calculate the amount by which annual allowances allocated to the units referred to in paragraph (1) exceeds the amount of annual allowances which would be allocated to such units in the absence of paragraph (1). The amount of such excess allowances (if any) issued to such units shall be adjusted pro rata to ensure that the total of such excess allowances allocated to all such units will equal 40,000. For such purposes, the term 'pro rata' refers to the ratio which the allowances which would be issued to each such unit (without regard to the 40,000 allowance limitation) bears to the allowances which would be issued to all such units (without regard to such 40,000 allowance limitation).

"(3) In order to allocate and issue allowances to the units referred to in paragraph (1), the Administrator shall reserve allowances in the amount of 40,000 each year from the Second Phase allowances withheld under section 519(b).

"(h) INTERRUPTIBLE GAS UNITS.—(1) This subsection shall apply only to electric utility steam generating units which burned as their fuel during the period 1980 through 1989 more than 90 percent natural gas, and which purchase natural gas under an interruptible contract. Each such unit shall be referred to in this subsection as an 'interruptible gas unit'.

"(2) So long as sufficient allowances are available in the Reserve for Gas Supply Interruptions established under section 503(i)(5), the Administrator shall issue to the owner or operator of any interruptible gas unit (and deduct from such reserve) allowances for emissions of sulfur dioxide for any year during the Second Phase at a tonnage level in excess of the allowances otherwise allocated and issued to the unit under this section if each of the following requirements are met:

"(A) The excess emissions referred to in this paragraph are temporary emissions during a period or periods in which natural gas supplies are interrupted (as certified by the owner or operator in such form as the Administrator may require) under—

"(i) an interruptible contract, or

"(ii) State law,

by reason of either weather or other unusual factors not under the control of the owner or operator of the unit. The total of the periods of such interruption in any calendar year may not exceed 25 percent of that calendar year (hereinafter in this paragraph referred to as the 'interruption period').

"(B) During the interruption period, emissions of sulfur dioxide from the unit shall not exceed the lower of—

"(i) 0.5 lbs per million Btu, or

"(ii) the most stringent rate applicable to the unit under the applicable implementation plan.

"(C) The unit burns as its fuel more than 90 percent natural gas during any period other than the interruption period.

"(3) If an interruptible gas unit fails to meet any requirement of this subsection, the owner or operator of the unit shall be required to obtain allowances under this title for the excess emissions referred to in paragraph (2).

"SEC. 506. NITROGEN OXIDES EMISSION REDUCTION PROGRAM.

"(a) PROGRAM.—Emission rate requirements for nitrogen oxides shall be met in the Second Phase by coal-fired electric utility steam generating units with a nameplate capacity of 75 MWe or greater. Emission rate requirements under this section shall not apply to cyclone or wet-bottom boilers unless the Administrator promulgates a rule under subsection (c), and includes in such rule the finding referred to in the last sentence of subsection (c). For cell burners, any such emission rate requirement shall be based on commercially available burner technology.

"(b) $NO_x$ EMISSION RATE LIMITATIONS.—The Administrator shall, by rule, within 3 years after the enactment of the Clean Air Act Amendments of 1990 establish a program under this section and section 111 to reduce total nitrogen oxide emissions by approximately 2,500,000 tons below 1989 projected emissions for calendar year 2000. Pursuant to such program, the Administrator shall establish emission rate limitations under this section, to take effect at the beginning of Second Phase based on the application of low nitrogen oxides burner technology for each type of boiler. In establishing such limitations the Administrator shall take into

consideration boiler age and configuration, safety, efficiency, technology, and other relevant factors. In addition, if necessary for purposes of such program, the Administrator shall, consistent with the requirements of section 111, revise new source performance standards under section 111 for emissions of oxides of nitrogen from electric utility steam generating units to insure that such new source performance standards are no less stringent than the emission rate limitations required under this subsection. Any unit subject to an emission rate limitation under this section shall not be an affected unit for nitrogen oxides for purposes of this title, except as provided in section 509.

"(c) ADJUSTMENT OF 2,500,000 TON REDUCTION.—The Administrator may promulgate a rule in calendar year 1996 or any time thereafter increasing the tonnage of reductions in oxides of nitrogen required to be achieved under this section from 2,500,000 tons up to not more than 4,000,000 tons if the Administrator finds, in such rule, that such reductions are—

"(1) needed either for purposes of reducing acid deposition or for meeting the national primary ambient air quality standard for ozone, and

"(2) cost effective, taking into consideration alternative means of reducing such deposition or achieving such standard under this Act, and the practicability of the necessary control technology.

In making any finding under item (1) above, the Administrator shall take into account (A) the reductions in oxides of nitrogen achieved or expected to be achieved under other provisions of this Act and (B) the findings of the study under section 185B. Such rule shall include an explanation of the basis for such findings. To provide such reductions, the Administrator (as part of such rule) may establish or revise new source performance standards under section 111 for nitrogen oxide control. Such rule shall provide reasonable lead time, taking into consideration safety, costs, technology, and other relevant factors, including the requirements of subsection (b). Any such rule may apply to cyclone or wet-bottom boilers, or both, if the Administrator finds that methods are available for reducing emissions from such boilers that are as cost effective as the application of low nitrogen oxides burner technology in the case of wall-fired or tangentially-fired boilers.

"SEC. 507. PERMITS AND COMPLIANCE PLANS.

"(a) PERMIT PROGRAM.—The provisions of this title shall be implemented, subject to section 503, by permits issued to units subject to this title in accordance with the provisions of title IV, as modified by this title. Any such permit issued by the Administrator, or by a State with an approved permit program, shall prohibit—

"(1) annual emissions of sulfur dioxide or nitrogen oxides (if applicable) in excess of the allowances allocated to that unit for the year concerned and issued to the owner or operator of the unit for that year, plus or minus the allowances transferred to or from the unit for that year or carried forward to that year from prior years;

"(2) exceedances of applicable emissions rates, and

"(3) contravention of any other provision of the permit.

Permits issued to implement this title shall be issued for a period of 5 years, notwithstanding title IV.

"(b) COMPLIANCE PLAN.—Each initial permit application shall be accompanied by a compliance plan for the source to comply with its requirements under this title. Where an affected source consists of more than one affected unit, such plan shall cover all such units, and for purposes of section 402(c), such source shall be considered a 'facility'. Nothing in this section regarding compliance plans or in title IV shall be construed as affecting allowances. The compliance plan shall provide all necessary information on the schedule and means by which the source will achieve compliance with its First or Second Phase requirements, including specification of any additional allowances beyond the initial allocation that will be used to achieve compliance. The Administrator may also require—

"(1) for a source, a demonstration of attainment of national ambient air quality standards, and

"(2) from the owner or operator of two or more affected sources, an integrated compliance plan providing an overall plan for achieving compliance at the affected sources.

"(c) FIRST PHASE PERMITS.—The Administrator shall issue permits to First Phase affected sources under section 504.

"(1) PERMIT APPLICATION AND COMPLIANCE PLAN.—(A) Not later than 27 months after the date of the enactment of the Clean Air Act Amendments of 1990, the owner or operator of each First Phase affected source under section 504 shall submit a permit application and compliance plan for that source in accordance with regulations issued by the Administrator under paragraph (3). The permit application and the compliance plan shall be binding on the owner or operator for purposes of this title and section 402(a), and shall be enforceable in lieu of a permit until a permit is issued by the Administrator for the source.

"(B) In the case of a compliance plan for a First Phase affected source under section 504 for which the owner or operator proposes to meet the requirements of that section by reducing utilization of the unit by 20 percent or more, as compared with the baseline prescribed in section 502(8)(A), or by shutting down the unit, the owner or operator of the unit shall include in the compliance plan a specification of the means to compensate for the reduced output of the affected source, including a specification of (i) any other source of electric energy, (ii) any energy conservation or load management programs, and (iii) any imported energy or the other energy that will provide electrical generation. The affected source, and any unit to be used for such compensating generation, if not otherwise affected under section 504, shall be deemed affected under section 504 and subject to the Phase I requirements of this title, except that allowances shall be allocated to such unit in an amount equal to the product of the unit's baseline multiplied by the unit's actual 1985 emission rate, divided by 2000 lbs/ton.

"(2) EPA ACTION ON COMPLIANCE PLANS.—If the Administrator determines that a proposed compliance plan does not satisfy the requirements of this title or title IV, the plan shall be disapproved within 6 months after receipt of a complete submission. If a plan is disapproved, it may be resubmitted for approval with such changes as the Administrator shall require consistent with the requirements of this title and within such period as the Administrator prescribes as part of such disapproval.

"(3) REGULATIONS; ISSUANCE OF PERMITS.—Not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations, in accordance with title IV, to implement a Federal permit program to issue permits for affected sources under this title. Following promulgation, the Administrator shall issue a permit to implement the requirements of section 504 and the allowances provided under section 503 to the owner or operator of each affected source under section 504. Such a permit shall supersede any permit application and compliance plan submitted under paragraph (1).

"(4) FEES.—During the First Phase, no fee shall be required to be paid under section 402(b)(3) or under section 110(a)(2)(L) with respect to emissions from any unit which is a First Phase affected unit under section 504.

"(d) GOVERNOR'S APPROVAL.—Any owner or operator submitting a First Phase permit application and compliance plan under subsection (c) shall request an approval from the Governor of any State within which the source is located that the application and compliance plan are consistent with State law. Where required by State law, the Governor's approval may preclude the use of coal produced outside the State at the source. The Governor's approval shall be a condition of any permit issued by the Administrator to the source unless the Administrator, within 60 days after receipt, notifies the Governor that the approval is inconsistent with the provisions or purposes of the Act or with other compelling national interest. In the event that the Governor fails or refuses to act on a request for approval within 90 days after receipt of the request, the requirements of this subsection shall be waived with respect to such application and compliance plan.

"(e) SECOND PHASE PERMITS.—(1) To provide for permits for (A) new electric utility steam generating units required under section 503(e) to have allowances, (B) affected units or sources under section 505, and (C) existing coal-fired electric utility steam generating units subject to nitrogen oxide emission reductions under section 506, each State in which one or more such units or sources are located shall submit in accordance with title IV, a permit program for approval as provided by that title. Upon approval of such program, for the units or sources subject to such approved program the Administrator shall suspend the issuance of permits as provided in section 402(e) of title IV.

"(2) The owner or operator of each affected source under section 505 shall submit a permit application and compliance plan for that source to the permitting authority, not later than January 1, 1996.

"(3) Not later than December 31, 1997, each State with an approved permit program shall issue permits to the owners or operators of affected sources under section 505 (Second Phase affected sources) that satisfy the requirements of title IV and this title and that submitted to such State a permit application and compliance plan pursuant to paragraph (2). In the case of a State without an approved permit program by July 1, 1996, the Administrator shall, not later than January 1, 1998, issue a permit to the owner or operator of each such affected source. In the case of affected sources for which applications and plans are timely received under paragraph (2), the permit application and the compliance plan, including amendments thereto, shall be binding on the owner or operator and shall be enforceable as a permit for purposes of this title and section 402(a) until a permit is issued by the permitting

*authority for the affected source. The provisions of section 558(c) of title V of the United States Code (relating to renewals) shall apply to permits issued by a permitting authority under this title and title IV.*

*"(4) The permit issued in accordance with this subsection for an affected source shall provide that the affected units at the affected source may not emit an annual tonnage of sulfur dioxide in excess of the allowances allocated to each such unit and issued to the source for the year concerned, plus or minus the allowances transferred to or from such units for that year or carried forward from prior years. In the case of a unit referred to in section 505(c)(2), relating to election for small systems, the permit shall also provide that such unit may not exceed the annual emissions rate specified in that section.*

*"(f) UNITS SUBJECT TO CERTAIN OTHER LIMITS.—The owner or operator of any unit subject to an emission rate requirement under section 506 shall submit a permit application and compliance plan for such unit to the permitting authority, not later than January 1, 1998. The permitting authority shall issue a permit to the owner or operator that satisfies the requirements of title IV and this title, including any appropriate monitoring and reporting requirements. Unless designated under section 509, such a unit shall not receive, and is not obligated to emit oxides of nitrogen in conformance with, allowances issued for oxides of nitrogen under this title.*

*"(g) NEW UNITS.—The owner or operator of each source that includes a new electric utility steam generating unit shall submit a permit application and compliance plan to the permitting authority not later than 24 months before the later of (1) the date of the commencement of the Second Phase, or (2) the date on which the unit commences operation. The permitting authority shall issue a permit to the owner or operator of the unit that satisfies the requirements of title IV and this title.*

*"(h) AMENDMENT OF APPLICATION AND COMPLIANCE PLAN.—At any time after the submission of an application and compliance plan under this section, the applicant may submit a revised application and compliance plan, in accordance with the requirements of this section. In considering any permit application and compliance plan under this title, the permitting authority shall ensure coordination with the applicable electric ratemaking authority, in the case of regulated utilities, and with unregulated public utilities.*

*"(i) PROHIBITION.—(1) It shall be unlawful for an owner or operator required to submit a permit application or compliance plan under this title to fail to submit such application or plan in accordance with the deadlines specified in this section or to otherwise fail to comply with regulations implementing this section.*

*"(2) It shall be unlawful for any person to operate any source subject to this title except in compliance with the terms and requirements of a permit application and compliance plan (including amendments thereto) or permit issued by the Administrator or a State with an approved permit program. For purposes of this subsection, compliance, as provided in section 404(g), with a permit issued under title IV which complies with this title for sources subject to this title shall be deemed compliance with this subsection as well as section 402(a).*

*"(3) In order to ensure reliability of electric power, nothing in this title or title IV shall be construed as requiring termination of operations of an electric utility steam generating unit for failure to have an approved permit or compliance plan, except that any such unit may be subject to the applicable enforcement provisions of section 113.*

*"SEC. 508. REPOWERED UNITS.*

*"(a) AVAILABILITY.—Not later than January 1, 1998, the owner or operator of any Second Phase affected unit may demonstrate to the permitting authority that such unit will be repowered with a qualifying clean coal technology to comply with the requirements applicable to that unit pursuant to section 505 or 506. The owner or operator shall, as part of any such demonstration, provide, not later than December 31, 2000, satisfactory documentation of a preliminary design and engineering effort for such repowering, an executed contract for the majority of the equipment to repower such unit, and such other information as the Administrator may require by regulation. The replacement of an existing electric utility steam generating unit with a new electric utility steam generating unit using a repowering technology referred to in section 502(a)(14) which is located at a different site, shall be treated as repowering of the existing unit for purposes of this title and such replacement unit shall not be treated as a new electric utility steam generating unit within the meaning of section 502 if—*

*"(1) the replacement unit is designated by the owner or operator to replace such existing unit,*

*"(2) the existing unit is retired from service on or before the date on which the designated replacement unit enters commercial operation, and*

*"(3) the designated replacement unit is located in the same air quality control region as the existing unit.*

*"(b) EXTENSION.—(1) An owner or operator satisfying the requirements of subsection (a) for any unit shall be granted an extension of the date on which such unit is required to comply with Second Phase requirements. Such date shall be extended from December 31, 2000 to December 31, 2003. The extension shall be specified in the permit issued to the source under section 507, together with any compliance schedule and other requirements, consistent with this title, necessary to meet Second Phase requirements by the extended date. Any unit that is granted an extension under this section shall not be eligible for a waiver under section 111(j).*

*"(2) If (A) the owner or operator of an existing unit has been granted an extension under paragraph (1) in order to repower such unit with a clean coal unit, and (B) such owner or operator demonstrates to the satisfaction of the Administrator that the repowering technology to be utilized by such unit has been properly constructed and tested on such unit, but nevertheless has been unable to achieve the emission reduction limitations and is economically or technologically infeasible, such existing unit may be retrofitted or repowered with equipment or facilities utilizing another clean coal technology or other available control technology.*

*"(c) CONTROL REQUIREMENTS.—A repowered unit replacing an existing unit qualifying for an extension under this section shall not be required to meet any standard of performance under section 111. A repowered unit replacing an existing unit qualifying for an extension under this section shall not be subject to the requirements of part C or D of this Act if the projected emissions from the repowered unit will not result in an increase in emissions, relative to predemonstration actual emissions of the existing unit, as determined by the Administrator, of any pollutant regulated under this Act. For purposes of calculating projected emissions for purposes of this paragraph, a 70 percent capacity factor shall be used. Notwithstanding the provisions of this subsection, no new unit (1) designated as a replacement for an existing unit, (2) qualifying for the extension under subsection (b), and (3) located at a different site than the existing unit shall receive an exemption from the requirements imposed under section 111 and parts C and D of the Act.*

*"(d) ALLOWANCES.—(1) For the 3-year extension period granted to an affected unit under this section, the Administrator shall issue to the owner or operator of the affected unit, annual allowances for sulfur dioxide equal to the affected unit's baseline multiplied by the lesser of—*

*"(A) emissions limit for sulfur dioxide applicable to the unit under the applicable implementation plan, or*

*"(B) its actual emission rate for 1996.*

*Such allowances may not be transferred or used by any other source to meet requirements of this title.*

*"(2) The owner or operator of the affected unit for which an extension has been granted under this section shall notify the Administrator 60 days in advance of the date on which the affected unit is to be removed from operation to install the repowering technology. Effective on that date, allowances shall be issued for the unit in the tonnage calculated by multiplying 1.20 lbs/mmBtu times the units baseline, divided by 2,000 lbs/ton. Allowances for the year in which the source is removed from operation to install the repowering technology shall be prorated accordingly, and are transferable.*

*"(3) In the case of any unit for which an extension has been granted under this section, the allowances allocated and issued for calendar years after repowering is complete shall be equal to 1.20 lbs/mmBtu multiplied by the unit's baseline, divided by 2,000 lbs/ton.*

*"(4) Allowances shall be allocated and issued under this section for a designated replacement unit which replaces an existing unit (as provided in the last sentence of subsection (a)) in lieu of allocating and issuing allowances for the existing unit.*

*"(5) For the purpose of making adjustments under section 503(i), the units with an extension under this subsection shall be treated as having allowances allocated and issued under paragraph (3).*

*"(e) CERTAIN UNITS SELECTED FOR NEGOTIATIONS.—For purposes of allocating and issuing Second Phase allowances under this title, in the case of any oil and gas fired electric utility steam generating unit which has been selected for negotiations leading to award of clean coal demonstration funding by the Secretary of Energy before July 27, 1989, the Administrator shall allocate allowances to such unit in accordance with paragraph (3) of subsection (d), in lieu of allocating allowances to that unit pursuant to section 505, but no such unit shall be eligible for an extension under this section.*

*"(f) PROHIBITION.—It shall be unlawful for the owner or operator of a repowered source to fail to comply with the requirements of this section, and any regulations to implement this section.*

*"SEC. 509. ELECTION FOR ADDITIONAL SOURCES.*

*"(a) APPLICABILITY.—The owner or operator of any existing unit or process source that is*

not an affected unit for sulfur dioxide or oxides of nitrogen, or both as the case may be, may elect to designate that unit or process source as an affected unit under this section for such pollutant or pollutants. Such an election may be submitted to the Administrator for approval anytime after promulgation of regulations under this section. The Administrator shall approve a designation that meets the requirements of this section. Following approval, such designated unit or process source shall be treated as an affected unit for purposes of this title and shall receive allowances as provided in this section for periods following such approval.

"(b) ESTABLISHMENT OF BASELINE.—The baseline for a unit designated as an affected unit under this section shall be established by the Administrator by regulation, based on fuel consumption and operating data for the unit for calendar years 1985, 1986, and 1987, or if not available, the Administrator may prescribe a baseline based on alternative representative data.

"(c) ALLOWANCES FOR AFFECTED UNITS.—(1) Allowances allocated and issued under this title for sulfur dioxide or nitrogen oxides to a unit which is an affected unit under this section shall be equal to the product of the unit's baseline multiplied by the unit's actual 1985 emission rate in lbs/mmBtu, divided by 2,000 lbs/ton.

"(2) Beginning in the Second Phase, the allowances for oxides of nitrogen for a unit for which an election is in effect under this section for oxides of nitrogen shall be determined based on the rate prescribed under section 506 for any unit subject to that section and any such unit shall be required only to comply with such allowances and shall not also be subject to an emission rate requirement under section 506.

"(3) This subsection shall not apply to any process source.

"(d) PROCESS SOURCES.—The Administrator shall establish, by regulation by 1995, a program for designation of process sources which commenced operation before the date of the enactment of the Clean Air Act Amendments of 1990 as affected units for purposes of this section. The Administrator shall define the sources that may be included (not including any unit as defined under this title), specify the emission baseline and other data requirements, prescribe CEMS or other monitoring requirements, and promulgate permit, reporting, and any other requirements necessary to implement such a program.

"(e) ALLOWANCES AND PERMITS.—The Administrator shall issue allowances to an affected unit under this section in an amount equal to the allowances calculated under subsection (c) or (d), in accordance with section 503. Section 503(i) shall not apply to the allowances issued under this section. Such allowances may be transferred and banked in accordance with the provisions of this title. The permitting authority shall issue a permit for units and process sources which are designated as affected units under this section in the same manner as provided in section 507.

"(f) LIMITATION.—Any unit or process source which is designated under this section as an affected unit shall not transfer or bank allowances produced as a result of emission reductions resulting from reduced utilization or shutdown or compliance with any other provisions of this Act (other than section 112 of this title) except that in the case of a reduced utilization or shutdown such allowances may be transferred or carried forward for use in subsequent years to the extent that—

"(1) any such reduced utilization or shutdown results from the replacement of thermal energy from the unit designated under this section with thermal energy generated by any other unit or units subject to the requirements of this title, and

"(2) the designated unit's allowances are transferred or carried forward for use only at such other replacement unit or units.

"(g) IMPLEMENTATION.—The Administrator shall issue regulations to implement this section not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990.

"SEC. 510. EXCESS EMISSIONS ENFORCEMENT PENALTY.

"(a) EXCESS EMISSIONS ENFORCEMENT PENALTY.—The owner or operator of any affected source that emits sulfur dioxide or nitrogen oxides for any calendar year in excess of the allowances it possesses for that calendar year (hereinafter referred to as 'excess emissions') shall be liable for the payment of an excess emission penalty. That penalty shall be equal to the excess emissions multiplied by $2,000. The penalty shall be due and payable without demand to the Administrator as provided in regulations issued by the Administrator. Any such funds shall be deposited in the United States Treasury pursuant to 31 U.S.C. 3302 (the 'Miscellaneous Receipts Act'). Any penalty due and payable under this section shall not diminish any fine, penalty or fee imposed on the same source under any other section of this Act.

"(b) EXCESS EMISSIONS OFFSET.—The owner or operator of any affected source liable for payment of a penalty under subsection (a) shall also offset the excess emissions by reducing emissions of the air pollutant concerned by an equal tonnage amount in the following calendar year, or such longer period as the Administrator may prescribe. The owner or operator of the source shall, within 60 days after the end of the year in which such excess emissions occurred, submit to the Administrator, and the State, a plan to achieve the required offsets. The Administrator shall also deduct allowances equal to the excess emissions tonnage from those issued for the source for the calendar year, or succeeding years, following the year in which the excess emissions occurred.

"(c) PENALTY ADJUSTMENT.—The Administrator shall, by regulation, adjust the penalty specified in subsection (a) for inflation, based on the Consumer Price Index, beginning in calendar year 1996 and annually thereafter.

"(d) PROHIBITION.—It shall be unlawful for the owner or operator of any source liable for a penalty and offset under this section to fail to pay the penalty under subsection (a) or to fail to provide, and thereafter comply with, a plan as required by subsection (b), or to fail to offset excess emissions as required by subsection (b).

"(e) SAVINGS PROVISION.—Nothing in this title shall limit or otherwise affect the application of section 113 or section 304.

"SEC. 511. MONITORING, REPORTING, AND RECORDKEEPING REQUIREMENTS.

"(a) APPLICABILITY.—All affected sources subject to this title shall be required to install and operate CEMS and quality assure the data for sulfur dioxide, nitrogen oxides, opacity and volumetric flow for each unit subject to this title. The Administrator shall, by regulations issued not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, specify the requirements for CEMS, for alternative methods that provide sufficiently reliable and timely information, and for recordkeeping and reporting of information from such systems. Where 2 or more units utilize a single stack, a separate CEMS shall not be required for each unit, and for such units the regulations shall require that the owner or operator collect sufficient information to permit reliable compliance determinations for each such unit.

"(b) FIRST PHASE REQUIREMENTS.—Within 36 months after the date of the enactment of the Clean Air Act Amendments of 1990, the owner or operator of each unit subject to section 504 shall install and operate CEMS, quality assure the data, and keep records and report in accordance with regulations issued under subsection (a).

"(c) SECOND PHASE REQUIREMENTS.—Not later than January 1, 1995, the owner or operator of each source subject to sections 505 or 506 which has not previously met the requirements of subsection (a) shall comply with those requirements. Upon commencement of commercial operation of each new electric utility steam generating unit, the unit shall comply with the requirements of subsection (a).

"(d) UNAVAILABILITY OF CEMS.—If CEMS data is not available for any affected unit during any period of a calendar year in which such data is required under this title, and the owner or operator cannot provide information, satisfactory to the Administrator, on emissions during that period, the Administrator shall deem the unit to be operating in an uncontrolled manner and, by regulation, prescribe means to calculate emissions for that period. The owner or operator shall be liable for excess emissions penalties and offsets under section 510 in accordance with such regulation which shall be issued not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990.

"(e) PROHIBITION.—It shall be unlawful for the owner or operator of any source subject to this title to operate a source without complying with the requirements of this section, and any regulations implementing this section.

"SEC. 512. COMPLIANCE WITH OTHER PROVISIONS.

"(a) GENERAL.—Except as otherwise expressly provided in this Act, compliance with the requirements of this title shall not exempt or exclude the owner or operator of any source subject to this title from compliance with any other applicable requirements of this Act.

"(b) NEW SOURCE REVIEW OF COMPLIANCE.—No physical change in, or change in the method of operation of, a stationary source for purposes of reducing emissions from such source in order to comply with this title shall be treated as a modification for purposes of section 111 or part C of title I of this Act if such change does not increase the potential emissions of any air pollutant from such source above the potential emissions before the change.

"SEC. 513. ENFORCEMENT.

"A violation by the owner or operator of a source subject to this title of the prohibitions of, requirements of, or regulations promulgated pursuant to, this title shall be a violation of this Act. Operation of an affected source to emit sulfur dioxide or nitrogen oxides in excess of its allowances shall be deemed a violation, with each ton emitted in excess of allowances held constituting a separate violation.

"SEC. 514. REPORT TO CONGRESS.

"Not later than January 1, 2003, the Administrator shall assess and submit a report

to Congress on the environmental effects of the emission reductions under this title.

"SEC. 515. CLEAN COAL TECHNOLOGY INCENTIVES.

"(a) REVISED REGULATIONS FOR CLEAN COAL TECHNOLOGY DEMONSTRATIONS.—The Administrator shall promulgate regulations under this section to revise requirements under section 111 and parts C and D of title I, as appropriate, to facilitate temporary and permanent clean coal demonstration projects, consistent with the attainment and maintenance of national ambient air quality standards and prevention of significant deterioration as provided in subsections (b) and (c). Such regulations shall address physical or operational changes to existing facilities for the sole purpose of installation, operation, cessation, or removal of a clean coal technology demonstration project. For the purposes of this section, a clean coal technology demonstration means—

"(1) a project using funds appropriated under the heading 'Department of Energy—Clean Coal Technology', or

"(2) a similar project funded through appropriations for the Environmental Protection Agency.

"(b) TEMPORARY PROJECTS.—Installation, operation, cessation, or removal of a temporary clean coal technology demonstration project that is operated for a period of 5 years or less, and which complies with all State implementation plans and other requirements necessary to attain and maintain the national ambient air quality standards during and after the project is terminated, shall not subject such facility to the requirements of section 111 or parts C or D of title I.

"(c) PERMANENT PROJECTS.—Any permanent demonstration project that complies with all State implementation plans and other requirements necessary to attain and maintain the national ambient air quality standards shall not be subject to the requirements of part C or D of title I or section 111 if the projected emissions from the project will not result in an increase in emissions, relative to its predemonstration actual emissions, as determined by the Administrator, of any pollutant regulated under this Act. For purposes of calculating projected emissions for purposes of this paragraph, a 70 percent capacity factor shall be used.

"(d) PREEXISTING REQUIREMENTS.—Any clean coal demonstration technology project shall be subject to its preexisting obligations under this Act until such time as it qualifies under regulations implementing this section for alternate requirements.

"(e) PHASE I AFFECTED SOURCES.—(1) A clean coal technology demonstration project defined in subsection (a)(1) of this section may use funds allocated to procurements issued subsequent to May 1, 1989, only if the project is installed at a facility owned or operated by the owner of an affected source subject to section 504(a) (relating to First Phase sulfur dioxide tonnage allowances).

"(2) A clean coal technology demonstration project defined in subsection (a)(2) of this section may be funded after enactment of the Clean Air Act amendments of 1990 only if the project is installed at a facility owned or operated by the owner or operator of an affected source subject to section 504(a) (relating to First Phase sulfur dioxide tonnage allowances).

"SEC. 516. SEVERE ENERGY SUPPLY INTERRUPTIONS AND ENERGY FUEL SUPPLY SHORTAGES.

"(a) EPA ORDER.—(1) The owner or operator of any unit or source required to have allowances under this title as a condition of operation may apply to the Administrator for an order under this subsection whenever, by reason of one or more of the conditions specified in subparagraph (A), (B), or (C) of paragraph (2), the total calendar year emissions of sulfur dioxide from such units and sources owned or operated by such owner or operator exceeds the allowances held by such owner or operator for that calendar year (including allowances held in reserve for contingencies). If, upon such an application, the Administrator finds, after consultation with the Secretary of Energy, that by reason of one or more of such conditions—

"(A) the ability of the owner or operator to comply with the requirements of this title has been significantly impaired,

"(B) the unit or source has emitted an amount of sulfur dioxide or oxides of nitrogen which exceeds the allowances held by the owner or operator (including allowances held in reserve for contingencies), and

"(C) the owner or operator had, before the occurrence of the condition referred to in subparagraph (A), (B), or (C) of paragraph (2), established a reasonable reserve for contingencies but that reserve did not contain sufficient allowances to cover such excess,

the Administrator shall promptly issue an order providing that allowances shall not be required to authorize such excess emissions. The Administrator shall act upon any application under this subsection in an expedited manner. Upon issuance of any such order, the emissions covered by such order in excess of the allowances held by the owner or operator shall not be treated as a violation for purposes of section 513 or for purposes of any other provision of this Act.

"(2) The conditions referred to in paragraph (1) are as follows:

"(A) A severe energy supply interruption (as defined in section 3(8) of the Energy Policy and Conservation Act) has been declared or a determination has been published by the President (including the basis of such determination) that there exists a national or regional fuel supply shortage which is, or is likely to be, of significant scope and duration and of an emergency nature and it causes or may cause a major adverse impact on public health or safety or welfare or on the economy and results, or is likely to result, from an interruption in the supply of fuel or from sabotage or an act of God.

"(B) A catastrophe has occurred that the President finds gives rise to an emergency (as defined in section 102(1) of the Disaster Relief and Emergency Assistance Act) in any part of the United States that requires an assured supply of electricity to save lives and protect property, public health and to avert or lessen the threat of a major disaster.

"(C) A catastrophe has occurred which the President finds gives rise to a major disaster (as defined in section 102(2) of the Disaster Relief and Emergency Assistance Act) in any part of the United States that requires an assured supply of electricity to alleviate the damage, loss, hardship, or suffering caused by such major disaster.

Any order under this subsection shall include such terms and conditions as the Administrator, in consultation with the Secretary of Energy, deems necessary to lessen or minimize the impact of the order consistent with the purposes of this title. The Administrator shall submit a report to Congress on all orders issued under this section. The authority of the President under this section may not be delegated to any other person.

"(b) GAS CURTAILMENTS.—Notwithstanding any emission limitation or allowance requirement applicable under this title, any electric utility steam generating unit that burned as its fuel during the period 1985 through 1987 more than 90 percent natural gas may emit during any natural gas supply emergency (as defined in title III of the Natural Gas Policy Act of 1978), sulfur dioxide at the lower of—

"(1) 0.5 lbs per million Btu, or

"(2) the most stringent rate applicable to the unit under the applicable implementation plan

if the unit burns oil during such curtailment. Notwithstanding section 505 no such unit shall be treated as a new unit required to obtain allowances under this title by reason of this subsection.

"SEC. 517. PROTECTION OF LOW-INCOME HOUSEHOLDS.

"(a) APPLICATION.—This section shall apply to each electric utility, subject to rate regulation by a State regulatory authority whose annual sales of electric energy exceed 500,000,000 kilowatt hours.

"(b) IDENTIFICATION OF EXPENDITURES.—Each State regulatory authority may, in accordance with the applicable procedures thereof, require each utility referred to in subsection (a) to identify, for purposes of this subsection, expenditures needed for purposes of compliance with First Phase or Second Phase of this title and to identify on an annual basis the expenditures made for such purposes within the past 12 months and the expenditures projected to be made for such purposes within the succeeding 24 months. These expenditures shall include both capitalized items and expensed items. Normal cost allocation principles shall apply where costs incurred may be related in part to other purposes or requirements. Such authority may make exceptions from the requirements of this section where the authority determines that the amount of such expenditures cannot be reasonably segregated and identified.

"(c) TREATMENT OF EXPENDITURES.—No utility which has identified expenditures under subsection (b) may, as determined by such authority, include in the rates and charges imposed on any income-eligible retail ratepayer any portion of the expenditures made by such utility to comply with this title. There shall be provision for notice and a public hearing on the sole issue of whether to exempt low-income residents. Any decision whether or not to exempt low-income residents and the reasons therefor must be provided to local officials. This subsection shall apply with respect to the first utility bill submitted by the utility to an income eligible ratepayer after the documentation referred to in subsection (d) is received by the utility (or after the ratepayer is found by the utility to be automatically eligible.)

"(d) INCOME-ELIGIBLE RETAIL RATEPAYER.—

"(1) IN GENERAL.—For purposes of this section, during any 12-month period an income-eligible retail ratepayer shall be any ratepayer of an electric utility subject to the provisions of subsection (b) who provides documentation to the utility (in such form and manner as the State regulatory authority shall, by rule, specify) satisfactory to establish that such ratepayer is an individual who is eligible at the commencement of such period for benefits under any of the following:

"(A) The Low-Income Home Energy Assistance Program (LIHEAP).

"(B) The supplemental security income program under title XVI of the Social Security Act.

"(C) Women, Infants and Children (WIC).
"(D) Food stamps.
"(E) Medical assistance under title XIX of the Social Security Act.
"(F) The Weatherization Assistance Program (WAP).
"(G) A State plan approved under section 402 of the Social Security Act (AFDC).

"(2) APARTMENTS.—Such term also includes any ratepayer who provides documentation to the utility (in such form and manner as the State regulatory authority shall, by rule, specify) satisfactory to establish that such ratepayer leases units in a multiple unit residential dwelling to individuals if ⅔ or more of the units are occupied by individuals who, at the commencement of such period, are eligible for any of the benefits referred to above.

"(3) AUTOMATIC ELIGIBILITY.—No documentation shall be required under this subsection in any case in which a ratepayer is known to the utility to be eligible for one of the types of assistance specified above.

"(4) STATE, LOCAL, PRIVATE NONPROFIT ORGANIZATIONS.—An electric utility shall accept documentation regarding any individual ratepayer under this subsection from any State, local, or private nonprofit organization which administers any of the programs referred to in paragraph (1).

"(e) OUTREACH.—Each utility subject to this section as provided in subsection (a) shall undertake measures, directly or through the services of low-income assistance organizations, to publicize the program under this section to the low-income community.

"(f) FALSE DOCUMENTATION.—Any person who is not an income-eligible ratepayer within the meaning of subsection (d) and who fraudulently provides false documentation to an electric utility purporting to establish that such person is an income-eligible ratepayer within the meaning of subsection (d) shall be liable to the utility for an amount equal to three times the full amount of any reduction in rates obtained by reason of such false documentation.

"SEC. 518. DOE UNITS.

"(a) ALLOWANCE ALLOCATIONS FOR CERTAIN UNITS.—In lieu of allocating allowances to the units at the Joppa, Kyger Creek, and Clifty Creek powerplants as provided in section 504 and section 505, the Administrator shall allocate and issue First Phase and Second Phase allowances pursuant to section 503 to each such unit in an amount equal to 0.4 lbs/mmBtu multiplied by the unit's baseline, divided by 2,000.

"(b) COMPLIANCE.—The Secretary of Energy shall require that affected units at each powerplant listed in Table A of section 504(a) which provides, by contract with the Secretary of Energy, more than 75 percent of the energy generated to Federal facilities on a regular basis may only utilize, for purposes of compliance with this title, a technological system of continuous emission reduction or the purchase of allowances, or any combination of the foregoing. Subject to appropriation, the Secretary of Energy shall pay the costs of construction and installation of such system of continuous emission reduction and a share of the operating costs of such system proportional to the energy purchased by the Secretary of Energy.

"SEC. 519. AUCTION.

"(a) EARLY AUCTION.—

"(1) IN GENERAL.—The Administrator, in consultation with the Secretary of the Treasury, shall conduct an auction before March 31, 1992, at which owners or operators of affected units may offer allowances for sale (hereinafter referred to as the 'early auction').

"(2) DOCUMENTATION.—Before the early auction, the Administrator shall issue to affected units such documentation as may be necessary for the owner or operator of such units to legally transfer through such auction their rights to receive allowances and for the Administrator to record such transfers. If the Administrator fails to provide such documentation within such period, for purposes of the auction, Table A in section 504 (adjusted by the 6 percent amount referred to in section 504) shall be treated as entitling the owners or operators of the units specified in Table A to receive the allowances specified in Table A (as so adjusted) during the First Phase.

"(3) LIMIT ON SALE OF SECOND PHASE ALLOWANCES.—No owner or operator of a unit or units for which Second Phase allowances are to be issued may sell at the early auction more than 50 percent of the allowances to be allocated to those units, based on the list of Second Phase allowances to be published by the Administrator by December 31, 1991.

"(4) SEALED OFFER TO SELL.—Owners or operators of units that elect to participate in the early auction shall specify (by a date set by the Administrator) in a sealed offer to sell: (A) the number of allowances to be offered for sale at the early auction, and (B) the minimum price at which such allowances may be sold at such auction.

"(5) NOTICE.—The Administrator shall publish a notice of the total number of allowances to be offered for sale at the early auction under this section.

"(6) SEALED BID SCHEDULES.—Any person may submit (by a date set by the Administrator) to the Administrator (on a sealed bid schedule provided by the Administrator) offers to purchase specified numbers of allowances at specified prices.

"(7) SALES.—The Administrator shall match the lowest offers to sell under this subsection with the highest bids submitted in the bid schedules. All allowances for which the Administrator has established a match shall be sold at the bid price.

"(8) EFFECT OF SALE AT AUCTION.—Any sale of allowances completed through the auction under this section shall constitute—

"(A) an immediate obligation by the buyer to pay to the purchaser an amount equal to the matched bid price multiplied by the total number of allowances; and

"(B) an obligation of the seller to provide the allowances subject to such bid to the purchaser.

The failure of any person to comply with such obligations shall be considered a violation punishable by the Administrator as provided in section 113(c).

"(9) FUNDS TRANSFERRED.—No funds transferred from a purchaser to a seller of allowances under this subsection shall be held by any officer or employee of the United States or treated for any purpose as revenue to the United States or to the Administrator.

"(b) ANNUAL ALLOWANCE AUCTIONS.—

"(1) 5 PERCENT TAP.—The Administrator shall withhold 5 percent of the allocation of allowances for each year which would (but for this subsection) be issued for each affected unit at an affected source. The Administrator shall record such withholding for purposes of transferring the proceeds of the allowance sales under this subsection. Except for the allowances reserved for sale or other distribution under subsection (c) and section 505(g) (relating to States experiencing population growth in excess of 25 percent), all allowances withheld under this paragraph shall be offered for sale by the Administrator at auctions under paragraph (2).

"(2) ANNUAL AUCTIONS.—Commencing in June of 1993 and in June of each year thereafter, the Administrator shall conduct auctions at which the allowances referred to in paragraph (1) shall be offered for sale in accordance with regulations promulgated by the Administrator, in consultation with the Secretary of the Treasury. One-third of the allowances referred to in paragraph (1) which authorize emissions in calendar year 1996 shall be offered for sale at the auction held under this paragraph in 1993; one-third of such allowances shall be offered for sale at the auction held under this paragraph in 1994; and one-third of such allowances shall be offered for sale at the auction held under this paragraph in 1995. In 1996 and thereafter, all of the allowances referred to in paragraph (1) which authorize emissions in the next calendar year shall be offered for sale. The auction shall be open to any person. A person wishing to bid for such allowances shall submit (by a date set by the Administrator) to the Administrator (on a sealed bid schedule provided by the Administrator) offers to purchase specified numbers of allowances at specified prices. Such regulations shall allocate the auctioned allowances on the basis of bid price, starting with the highest-priced bid and continuing until all allowances for sale at such auction have been allocated. The regulations shall not permit that a minimum price be set for the purchase of withheld allowances. Allowances purchased at the auction may be used for any purpose and at any time after the auction, subject to the provisions of this title.

"(3)(A) Notwithstanding section 3302 of title 31 of the United States Code or any other provision of law, within 90 days of receipt, the Administrator shall transfer the proceeds from the auction under paragraph (2), on a pro rata basis, to the owners or operators of the affected units at an affected source from whom allowances were withheld. No funds transferred from a purchaser to a seller of allowances under this paragraph shall be held by any officer or employee of the United States or treated for any purpose as revenue to the United States or the Administrator.

"(B) At the end of each year, any withheld allowances not sold at the auction shall be returned, without charge, on a pro rata basis to the owners or operators of the affected units from whose allocation the allowances were withheld. For purposes of this paragraph, for any affected unit, the term 'pro rata basis' refers to the ratio which the allowances allocated to that unit bears to the allowances allocated to all affected units.

"(4) Any person holding allowances not withheld under paragraph (1) which authorize emissions of sulfur dioxide for the same year as the allowances being sold at any auction under this subsection may submit those allowances to the Administrator to be offered for sale at such auction. The proceeds of any such sale shall be transferred by the purchaser to the person submitting such allowances for sale. The holder of allowances offered for sale under this paragraph may specify a minimum sale price. Any person may purchase allowances offered for auction under this paragraph. Such allowances shall be allocated to purchasers on the basis of bid price after the auction under paragraph (2) is complete. No funds transferred from a purchaser to a seller of allowances under this paragraph shall be held by

any officer or employee of the United States or treated for any purpose as revenue to the United States or the Administrator.

"(5) The Administrator shall record and publicly report the nature, prices and results of each auction under this subsection, including the prices of successful bids, and shall record the transfers of allowances as a result of each auction in accordance with the requirements of this section. The transfer of allowances at such auction shall be recorded in accordance with the regulations promulgated by the Administrator under this section.

"(c) SPECIAL RESERVATIONS OF ALLOWANCES WITHHELD UNDER SUBSECTION (b).—

"(1) RESERVES.—Within 36 months after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations establishing the reserves referred to in paragraphs (2), (3), (4) and section 505(g) (relating to States experiencing population growth in excess of 25 percent). A portion of the Second Phase allowances withheld under subsection (b) shall be placed in such reserves, as provided in such provisions.

"(2) RESERVE FOR DIRECT SALE AT $1,500 PER TON.—(A) In accordance with regulations under paragraph (1), the Administrator shall establish a Direct Sale Reserve containing allowances in the amount of 100,000 tons per year to be offered for sale as provided in this paragraph. Allowances in the Direct Sale Reserve shall be offered for sale at a price of $1,500 per allowance, adjusted by the Consumer Price Index.

"(B) Requests to purchase allowances from the Direct Sale Reserve under this paragraph shall be approved in the order of receipt until no allowances remain in such Reserve, except that an opportunity to purchase such allowances shall be provided to the independent power producers referred to in section 503(l) before such allowances are offered to any other person. Each applicant shall be required to pay 50 percent of the total purchase price of the allowances within 6 months after the approval of the request to purchase. The remainder shall be paid on or before the transfer of the allowances.

"(C) If the Administrator determines that, during any period of 3 consecutive calendar years after 1997, less than 50 percent of the allowances available in the Direct Sale Reserve established under this paragraph have been purchased under this paragraph, the Administrator shall terminate the reserve and make such allowances available for auction under subsection (b)(2).

"(3) RESERVE FOR DIRECT SALE TO UNITS IN STATES WITH AVERAGE EMISSION RATES BELOW 0.9 MMBTU.—(A) In accordance with regulations under paragraph (1), the Administrator shall establish a Direct Sale Reserve containing allowances in the amount of 25,000 tons per year during the first 10 years of the Second Phase to be offered for sale as provided in this paragraph. Allowances in the Direct Sale Reserve shall be offered for sale at a price of $750 per allowance, adjusted by the Consumer Price Index.

"(B) Requests to purchase allowances from the Direct Sale Reserve under this paragraph shall be approved in the order of receipt until no allowances remain in such Reserve. Each applicant shall be required to pay 50 percent of the total purchase price of the allowances within 6 months after the approval of the request to purchase. The remainder shall be paid on or before the transfer of the allowances.

"(C) Only an owner or operator of a unit located in a State with a Statewide average sulfur dioxide emission for electric utility steam generating units of 0.9 lbs per mmBtu shall be eligible to purchase allowances under this paragraph.

"(D) If the Administrator determines that, during any period of 3 consecutive calendar years, less than 50 percent of the allowances available in the Direct Sale Reserve established under this paragraph have been purchased under this paragraph, the Administrator shall terminate the reserve and make such allowances available for auction under subsection (b)(2).

"(4) RESERVE FOR DISTRIBUTION TO CERTAIN UNITS.—The Administrator shall reserve allowances in the amount of 62,000 tons per year from the Second Phase allowances withheld under subsection (b) for distribution under this paragraph. The Administrator shall distribute such reserved allowances to coal fired electric utility steam generating units which have 1985 sulfur dioxide emission rates less than 1.75 lbs/mmBtu and greater than 1.2 lbs/mmBtu and which are part of a utility system with a 1985 system-wide average sulfur dioxide emission rate for coal fired units of 1.5 lbs/mmBtu or less. Each such unit shall receive such allowances in a tonnage amount equal to 50 percent of the amount computed as follows: multiply 1.2 lbs/mmBtu by the amount by which the unit's fuel consumption at a 60 percent capacity factor exceeds the unit's baseline. The allowances computed under the preceding sentence shall be adjusted to ensure that the total of the allowances distributed under this paragraph is equal to 62,000. The Administrator shall reallocate to each unit any reduction or increase in the allowances to be distributed based on such adjustment on the basis of the ratio which the allowances which would (but for such adjustment) have been distributed to such unit bears to the total allowances which would (but for such adjustment) have been distributed to such units.

"(5) PROCEEDS.—Notwithstanding section 3302 of title 31 of the United States Code or any other provision of law, the Administrator shall require that the proceeds of any sale under this subsection be transferred, within 90 days after the sale, without charge, on a pro rata basis to the owners or operators of the affected units from whom the allowances were withheld and that any unsold allowances be returned, without charge, on a pro rata basis, to such owners or operators. No proceeds of any sale under this subsection shall be held by any officer or employee of the United States or treated for any purpose as revenue to the United States or to the Administrator. For purposes of this paragraph, for any affected unit, the term 'pro rata basis' refers to the ratio which the allowances allocated to that unit bears to the allowances allocated to all affected units.

"SEC. 520. REGULATORY REFORMS TO REDUCE AIR EMISSIONS.

"(a) PROHIBITION.—No State regulated electric utility shall be eligible for interpollutant trading under section 503(c) unless the State regulatory authority exercising ratemaking authority over such utility has certified by January 1, 1995, to the Administrator that the State regulatory authority and such utility have complied with subsection (b) of this section.

"(b) STATE REGULATORY RULEMAKING—Not later than January 1, 1995—

"(1) each such utility shall undertake and complete a planning process and prepare a plan which evaluates a range of resources, including both new power supplies and energy conservation, in order to meet expected future demand at the lowest system cost and provide to such State regulatory authority such plan;

"(2) each such State regulatory authority shall review and consider each plan provided under paragraph (1) and identify and implement appropriate State regulatory mechanisms to ensure that implementation of the plan referred to in paragraph (1) is profitable to the utility; and

"(3) each such utility shall implement any plan approved by the State regulatory authority.

The State regulatory authority shall specifically identify under paragraph (2) regulatory mechanisms to ensure that utility investments in energy conservation and load management measures do not restrict or impair a utility's ability to earn its authorized rate of return.

"(c) UNREGULATED UTILITIES.—All owners or operators of affected units under Phase I whose wholesale rates are not subject to the jurisdiction of the Federal Energy Regulatory Commission or of a State regulatory authority, shall develop and implement, through a public hearing process, a least-cost plan as described in section 520(b)(1) by January 1, 1995. The plan shall be submitted to the Administrator, the Secretary of Energy, and Congress and shall be updated every 2 years.

"(d) STATES CHOOSING NOT TO ADOPT.—If a State regulatory authority chooses not to implement the regulatory reforms under subsection (b)(2), it shall submit by January 1, 1995, to the Administrator a written statement of its determination not to implement such proposed reforms together with its reasons for not doing so.

"(e) SAVINGS PROVISION.—Nothing in this section precludes a State or State regulatory authority from providing additional incentives to utilities to encourage investment in demand-side resources.

"(f) DEFINITIONS.—As used in this section:

"(1) The term 'State regulatory authority' means any State agency which has ratemaking authority with respect to the sale of electric energy or energy services by any electric utility (other than such State agency).

"(2) The term 'State regulated electric utility' means any electric utility with respect to which a State regulatory authority has ratemaking authority.

"SEC. 521. EFFECT OF TITLE ON CERTAIN FEDERAL AGENCIES.

"Nothing in this title shall be construed to prohibit the Tennessee Valley Authority from receiving, retaining, and using, in accordance with other applicable law, any funds received under this title from the sale of allowances.".

SEC. 502. NEW SOURCE PERFORMANCE STANDARDS.

(a) REPEAL.—Section 111(a)(1) (42 U.S.C. 7411(a)(1)) is amended to read as follows:

"(1) The term 'standard of performance' means a standard for emissions of air pollutants which reflects the degree of emission limitation achievable through application of the best system of emission reduction which (taking into account the cost of achieving such reduction and any nonair quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated.".

(b) REVISED REGULATIONS.—Not later than 3 years after the date of the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate revised regulations for standards of performance for new

*electric utility steam generating units commencing construction after the date on which such regulations are proposed that, at a minimum, require any source subject to such revised standards to emit any pollutants for which a standard has been promulgated pursuant to section 109 at a rate not greater than would have resulted from compliance by such source with the applicable standards of performance under this section before such revision.*

*(c) APPLICABILITY.—The provisions of subsections (a) and (b) apply only so long as section 503(e) of the Clean Air Act (relating to new electric utility steam generating units) remains in effect.*

*TITLE VI—PROVISIONS RELATING TO ENFORCEMENT*

*Sec. 601. Section 113 enforcement.*
*Sec. 602. Compliance certification.*
*Sec. 603. Administrative enforcement subpoenas.*
*Sec. 604. Enforcement of administrative orders.*
*Sec. 605. Scope of emergency orders.*
*Sec. 606. Contractor listings.*
*Sec. 607. Judicial review pending reconsideration of regulation.*
*Sec. 608. Citizen suits.*
*Sec. 609. Enhanced implementation and enforcement of new source review requirements.*
*Sec. 610. Movable stationary sources.*
*Sec. 611. Enforcement of new titles of the Act.*

*SEC. 601. SECTION 113 ENFORCEMENT.*

*Section 113 is amended to read as follows:*

*"SEC. 113. FEDERAL ENFORCEMENT.*

*"(a) IN GENERAL.—*

*"(1) ORDER TO COMPLY WITH SIP REQUIREMENTS.—Whenever, on the basis of any information available to him, the Administrator finds that any person has violated or is in violation of any requirement of an applicable implementation plan or permit, the Administrator shall notify the person and the State in which the plan applies of such finding. At any time after the expiration of 30 days following the date on which such notice of the violation is issued, the Administrator may, without regard to the period of violation (subject to section 2462 of title 28 of the United States Code)—*

*"(A) issue an order requiring such person to comply with the requirements of such plan or permit,*

*"(B) issue an administrative penalty order in accordance with subsection (d), or*

*"(C) bring a civil action in accordance with subsection (b).*

*"(2) STATE FAILURE TO ENFORCE SIP OR PERMIT PROGRAM.—Whenever, on the basis of information available to him, the Administrator finds that violations of an applicable implementation plan or an approved permit program under title IV are so widespread that such violations appear to result from a failure of the State in which the plan or permit program applies to enforce the plan or permit program effectively, he shall so notify the State. In the case of a permit program, the notice shall be made in accordance with title IV. If the Administrator finds such failure extends beyond the 30th day after such notice (90 days in the case of such permit program), he shall give public notice of such finding. During the period beginning with such public notice and ending when such State satisfies the Administrator that it will enforce such plan or permit program (hereafter referred to in this section as 'period of federally assumed enforcement'), the Administrator may enforce any requirement of such plan or permit program with respect to any person by—*

*"(A) issuing an order requiring such person to comply with such requirement,*

*"(B) issuing an administrative penalty order in accordance with subsection (d), or*

*"(C) bringing a civil action in accordance with subsection (b).*

*"(3) EPA ENFORCEMENT OF OTHER REQUIREMENTS.—Except for a requirement enforceable under the preceding provisions of this subsection, whenever, on the basis of any information available to him, the Administrator finds that any person has violated, or is in violation of, any requirement of section 111(e) of this title (relating to new source performance standards), section 112 of this title (relating to standards for hazardous emissions), section 114 of this title (relating to inspections, etc.), section 402(a) or 403(c) of title IV (relating to permits), or any prohibition of title V (relating to acid deposition control) (including a requirement of any rule, order, waiver, or permit promulgated or approved under any provision of such sections or titles and including any requirement for the payment of any fee owed to the United States under this Act), the Administrator may—*

*"(A) issue an administrative penalty order in accordance with subsection (d),*

*"(B) issue an order requiring such person to comply with such requirement,*

*"(C) bring a civil action in accordance with subsection (b) or section 305, or*

*"(D) request the Attorney General to commence a criminal action in accordance with subsection (c).*

*"(4) REQUIREMENTS FOR ORDERS.—An order issued under this subsection (other than an order relating to a violation of section 112) shall not take effect until the person to whom it is issued has had an opportunity to confer with the Administrator concerning the alleged violation. A copy of any order issued under this subsection shall be sent to the State air pollution control agency of any State in which the violation occurs. Any order issued under this subsection shall state with reasonable specificity the nature of the violation, specify a time for compliance which the Administrator determines is reasonable, taking into account the seriousness of the violation and any good faith efforts to comply with applicable requirements. In any case in which an order under this subsection (or notice to a violator under paragraph (1)) is issued to a corporation, a copy of such order (or notice) shall be issued to appropriate corporate officers. An order issued under this subsection shall require the person to whom it was issued to comply with the requirement as expeditiously as practicable, but in no event longer than one year after the date the order was issued, and shall be nonrenewable. No order issued under this subsection shall prevent the State or the Administrator from assessing any penalties nor otherwise affect or limit the State or the United States' authority to enforce under other provisions of this Act, nor affect any person's obligations to comply with any section of this Act or with a term or condition of any permit or applicable implementation plan promulgated or approved under this Act.*

*"(5) FAILURE TO COMPLY WITH PART C OR PART D OF TITLE I.—Whenever, on the basis of information available to him, the Administrator finds that a State is not acting in compliance with any requirement of part C or part D of title I, he may—*

*"(A) issue an order prohibiting the construction or modification of any major stationary source in any area to which such requirement applies;*

*"(B) issue an administrative penalty order in accordance with subsection (d), or*

*"(C) bring a civil action under subsection (b)(5).*

*"(6) DE MINIMIS TECHNICAL VIOLATIONS.—This section shall not apply to any de minimis or technical violations, as determined by the Administrator.*

*"(b) CIVIL JUDICIAL ENFORCEMENT.—The Administrator shall, as appropriate, in the case of any person which is the owner or operator of an affected source, a major emitting facility, or a major stationary source, and may, in the case of any other person, commence a civil action for a permanent or temporary injunction, or to assess and recover a civil penalty of not more than $25,000 per day for each violation, or both, in any of the following instances:*

*"(1) Whenever such person violates any requirement of an applicable implementation plan or permit as provided in subsection (a). Such an action shall be commenced (A) during any period of federally assumed enforcement, or (B) more than 30 days following the date of the Administrator's notification under subsection (a)(1) that such person is violating such requirement.*

*"(2) Whenever such person violates any other requirement of title I, III, IV, or V, including, but not limited to, a requirement of any rule, order, waiver or permit promulgated or approved under this Act or for the payment of any fee owed the United States under this Act.*

*"(3) Whenever such person attempts to construct or modify a major stationary source in any area with respect to which a finding under subsection (a)(5) has been made.*

*Any action under this subsection may be brought in the district court of the United States in which the violation is alleged to have occurred or in which the defendant resides or has his principal place of business, and such court shall have jurisdiction to restrain such violation, to require compliance, to assess such civil penalty, to collect any fees owed the United States and any noncompliance assessment and nonpayment penalty owed under section 120 and to award any other appropriate relief. Notice of the commencement of such action shall be given to the appropriate State air pollution control agency. In the case of any action brought by the Administrator under this subsection, the court may award costs of litigation (including reasonable attorney and expert witness fees) to the party or parties against whom such action was brought in any case where the court finds that such action was unreasonable.*

*"(c) CRIMINAL PENALTIES.—(1) Any person who knowingly violates any requirement of an applicable implementation plan (during any period of federally assumed enforcement or more than 30 days after having been notified under subsection (a)(1) by the Administrator that such person is violating such requirement), any order under subsection (a) of this section, any requirement of part B of title I, requirement of section 111(e) of this title (relating to new source performance standards), section 112 of this title (relating to standards for hazardous emissions), section 114 of this title (relating to inspections, etc.), section 165(a) of this title (relating to preconstruction requirements), an order under section 167 of this title (relating to preconstruction requirements), an order under section 303 of title III (relating to emergency orders), section 402(a) or 403(c)*

of title IV (relating to permits), or any prohibition of title V (relating to acid deposition control), (including a requirement of any rule, order, waiver, or permit promulgated or approved under such sections or titles, and including any requirement for the payment of any fee owed the United States under this Act) shall, upon conviction, be punished by a fine pursuant to title 18 of the United States Code, or by imprisonment for not to exceed 5 years, or both. If a conviction of any person under this paragraph is for a violation committed after a first conviction of such person under this paragraph, the maximum punishment shall be doubled with respect to both the fine and imprisonment.

"(2) Any person who knowingly—

"(A) makes any false statement, representation, or certification in, or omits material information from, or knowingly alters, conceals, or fails to file or maintain any notice, application, record, report, plan, or other document required to be filed or maintained under this Act (whether with respect to the requirements imposed by the Administrator or the State pursuant to the requirements of this Act applicable to the State);

"(B) fails to notify or report as required under this Act; or

"(C) falsifies, tampers with, or renders inaccurate, or fails to install any monitoring device or method required to be maintained or followed under this Act

shall, upon conviction, be punished by a fine pursuant to title 18 of the United States Code, or by imprisonment for not more than 2 years, or both.

"(3) Any person who knowingly fails to pay any fee owed the United States under title I, III, IV, or V shall, upon conviction, be punished by a fine pursuant to title 18 of the United States Code, or by imprisonment for not more than 1 year, or both. If a conviction of any person under this paragraph is for a violation committed after a first conviction of such person under this paragraph, the maximum punishment shall be doubled with respect to both the fine and imprisonment.

"(4) Any person who negligently releases into the ambient air any hazardous air pollutant listed pursuant to section 112 or any extremely hazardous substance listed pursuant to section 302(a)(2) of the Superfund Amendments and Reauthorization Act of 1986 (42 U.S.C. 11002(a)(2)) that is not listed in section 112, and who at the time negligently places another person in imminent danger of death or serious bodily injury shall, upon conviction, be punished by a fine under title 18 of the United States Code, or by imprisonment for not more than 1 year, or both. If a conviction of any person under this paragraph is for a violation committed after a first conviction of such person under this paragraph, the maximum punishment shall be doubled with respect to both the fine and imprisonment.

"(5)(A) Any person who knowingly releases into the ambient air any hazardous air pollutant listed pursuant to section 112 or any extremely hazardous substance listed pursuant to section 302(a)(2) of the Superfund Amendments and Reauthorization Act of 1986 (42 U.S.C. 11002(a)(2)) that is not listed in section 112, and who knows at the time that he thereby places another person in imminent danger of death or serious bodily injury shall, upon conviction, be punished by a fine under title 18 of the United States Code, or by imprisonment of not more than 15 years, or both. Any person committing such violation which is an organization shall, upon conviction under this paragraph, be subject to a fine of not more than $1,000,000 for each violation. If a conviction of any person under this paragraph is for a violation committed after a first conviction of such person under this paragraph, the maximum punishment shall be doubled with respect to both the fine and imprisonment. For any air pollutant for which the Administrator has set an emissions standard or for any source for which a permit has been issued under title IV, a release of such pollutant in accordance with that standard or permit shall not constitute a violation of this paragraph or paragraph (4).

"(B) In determining whether a defendant who is an individual knew that the violation placed another person in imminent danger of death or serious bodily injury—

"(i) the defendant is responsible only for actual awareness or actual belief possessed; and

"(ii) knowledge possessed by a person other than the defendant, but not by the defendant, may not be attributed to the defendant;

except that in proving a defendant's possession of actual knowledge, circumstantial evidence may be used, including evidence that the defendant took affirmative steps to be shielded from relevant information.

"(C) It is an affirmative defense to a prosecution that the conduct charged was freely consented to by the person endangered and that the danger and conduct charged were reasonably foreseeable hazards of—

"(i) an occupation, a business, or a profession; or

"(ii) medical treatment or medical or scientific experimentation conducted by professionally approved methods and such other person had been made aware of the risks involved prior to giving consent.

The defendant may establish an affirmative defense under this subparagraph by a preponderance of the evidence.

"(D) The term 'organization' means a legal entity, other than a government, established or organized for any purpose, and such term includes a corporation, company, association, firm, partnership, joint stock company, foundation, institution, trust, society, union, or any other association of persons.

"(E) The term 'serious bodily injury' means bodily injury which involves a substantial risk of death, unconsciousness, extreme physical pain, protracted and obvious disfigurement or protracted loss or impairment of the function of a bodily member, organ, or mental faculty.

"(6) For the purpose of this subsection, the term 'person' includes, in addition to the entities referred to in section 302(e), any responsible corporate officer.

"(d) ADMINISTRATIVE ASSESSMENT OF CIVIL PENALTIES.—(1) The Administrator may issue an administrative order against any person assessing a civil administrative penalty of up to $25,000, per day of violation, whenever, on the basis of any available information, the Administrator finds that such person—

"(A) violates any requirement of an applicable implementation plan (such order shall be issued (i) during any period of federally assumed enforcement, or (ii) more than thirty days following the date of the Administrator's notification under subsection (a)(1) of this section of a finding that such person is violating such requirement); or

"(B) violates any other requirement of title I, III, IV, or V, including a requirement of any rule, order, waiver, or permit promulgated or approved under this Act or for the payment of any fee owed the United States under this Act; or

"(C) attempts to construct or modify a major stationary source in any area with respect to which a finding under subsection (a)(5) of this section has been made.

The Administrator's authority under this paragraph shall be limited to matters where the total penalty sought does not exceed $200,000 and the first alleged date of violation occurred no more than 12 months prior to the initiation of the administrative action, except where the Administrator and the Attorney General jointly determine that a matter involving a larger penalty amount or longer period of violation is appropriate for administrative penalty action. Any such determination by the Administrator and the Attorney General shall not be subject to judicial review.

"(2)(A) An administrative penalty assessed under paragraph (1) shall be assessed by the Administrator by an order made on the record after opportunity for a hearing in accordance with sections 554 and 556 of title 5 of the United States Code. The Administrator shall issue reasonable rules for discovery and other procedures for hearings under this paragraph. Before issuing such an order, the Administrator shall give written notice to the person to be assessed an administrative penalty of the Administrator's proposal to issue such order and provide such person an opportunity to request such a hearing on the order, within 30 days of the date the notice is received by such person.

"(B) The Administrator may compromise, modify, or remit, with or without conditions, any administrative penalty which may be imposed under this subsection.

"(3) The Administrator may implement, after consultation with the Attorney General and the States, a field citation program through regulations establishing appropriate minor violations for which field citations assessing civil penalties not to exceed $5,000 per day of violation may be issued by officers or employees designated by the Administrator. Any person to whom a field citation is assessed may, within a reasonable time as prescribed by the Administrator through regulation, elect to pay the penalty assessment or to request a hearing on the field citation. If a request for a hearing is not made within the time specified in the regulation, the penalty assessment in the field citation shall be final. Such hearing shall not be subject to section 554 or 556 of title 5 of the United States Code, but shall provide a reasonable opportunity to be heard and to present evidence. Payment of a civil penalty required by a field citation shall not be a defense to further enforcement by the United States or a State to correct a violation, or to assess the statutory maximum penalty pursuant to other authorities in the Act, if the violation continues.

"(4) Any person against whom a civil penalty is assessed by the Administrator under this subsection may seek review of such assessment in the United States District Court for the District of Columbia or for the district in which the violation is alleged to have occurred, in which such person resides, or where such person's principal place of business is located, within 30 days following the date the civil penalty order is issued under paragraph (2), or the final decision in a hearing under paragraph (3) is rendered, and by simultaneously sending a copy of the filing by certified mail to the Administrator and the Attorney General. The Administra-

tor or Attorney General, as appropriate, shall promptly file in such court a certified copy, or certified index, as appropriate, of the record on which the order or final decision was issued within 30 days. Such court, in the case of an assessment under paragraph (2), shall not set aside or remand such order or final decision unless there is not substantial evidence in the record, taken as a whole, to support the finding of a violation or unless the Administrator's assessment of the penalty constitutes an abuse of discretion. In any such proceedings, the United States may seek to recover civil penalties assessed under this section.

"(5) If any person fails to pay an assessment of a civil penalty—

"(A) after the order making the assessment or field citation has become final as provided in this subsection, or

"(B) after a court in an action brought under paragraph (4) has entered a final judgment in favor of the Administrator,

the Administrator shall request the Attorney General to bring a civil action in an appropriate district court to recover the amount assessed (plus interest at rates established pursuant to section 6621(a)(2) of the Internal Revenue Code of 1986 from the date of the final order or decision or the date of the final judgment, as the case may be). In such an action, the validity, amount, and appropriateness of such penalty shall not be subject to review. Any person who fails to pay on a timely basis a civil penalty under this section shall be required to pay, in addition to such penalty and interest, the United States enforcement expenses, including but not limited to attorneys fees and costs incurred by the United States for collection proceedings and a quarterly nonpayment penalty for each quarter during which such failure to pay persists. Such nonpayment penalty shall be 10 percent of the aggregate amount of such person's outstanding penalties and nonpayment penalties accrued as of the beginning of such quarter.

"(e) PENALTY ASSESSMENT CRITERIA.—(1) In determining the amount of any penalty to be assessed under this section or section 304(a), the Administrator or the court, as appropriate, shall take into consideration (in addition to such other factors as justice may require) the size of the business, the economic impact of the penalty on the business, the violator's full compliance history and good faith efforts to comply, the duration of the violation as established by any credible evidence (including evidence other than the applicable test method), payment by the violator of penalties previously assessed for the same violation, the economic benefit of noncompliance, and the seriousness of the violation.

"(2) A penalty may be assessed for each day of violation. For purposes of determining the number of days of violation for which a penalty may be assessed under this section or section 304(a), or an assessment may be made under section 120, the violation shall be deemed to commence on the first provable date of violation and to continue each and every day thereafter until the violator establishes that continuous compliance has been achieved, except to the extent that the violator can prove by a preponderance of the evidence that there were intervening days during which no violation occurred or that the violation was not continuing in nature.

"(f) REWARDS.—The Administrator may pay a reward, not to exceed $10,000, to any person who furnishes information or services which lead to a criminal conviction or a judicial or administrative civil penalty for any violation of titles I, III, IV, or V of this Act enforced under this section. Such payment is subject to available appropriations for such purposes as provided in annual appropriation Acts. Any officer, or employee of the United States or any State or local government who furnishes information or renders service in the performance of an official duty is ineligible for payment under this subsection. The Administrator may, by regulation, prescribe additional criteria for eligibility for such a reward.

"(g) SETTLEMENTS; PUBLIC PARTICIPATION.—At least 30 days before a consent order or settlement agreement of any kind under this Act (other than enforcement actions under section 113, 120, or title II, whether or not involving civil or criminal penalties, or judgments subject to Department of Justice policy on public participation) is final or filed with a court, the Administrator shall provide a reasonable opportunity by notice in the Federal Register to persons who are not named as parties or intervenors to the action or matter to comment in writing. The Administrator or the Attorney General, as appropriate, shall promptly consider any such written comments and may withdraw or withhold his consent to the proposed order or agreement if the comments disclose facts or considerations which indicate that is inappropriate, improper, inadequate, or inconsistent with the requirements of this Act. Nothing in this subsection shall apply to civil or criminal penalties under this Act.

"(h) OPERATOR.—For purposes of the provisions of this section and section 120 the term 'operator', as used in such provisions, shall include any person who is senior management personnel or a corporate officer. Such term shall not include any person who is a stationary engineer or technician responsible for the operation, maintenance, repair, or monitoring of equipment and facilities and who often has supervisory and training duties but who is not senior management personnel or a corporate officer. For purposes of subsection (c)(4) of this section, the term 'a person' shall not include an employee who is carrying out his normal activities and who is not a part of senior management personnel or a corporate officer. For purposes of paragraphs (1), (2), (3), and (5) of subsection (c) of this section the term 'a person' shall not include an employee who is carrying out his normal activities and who is acting under orders from the employer.".

SEC. 602. COMPLIANCE CERTIFICATION.

(a) RECORDS, REPORTS, MONITORING, ETC.—Section 114(a)(1) is amended to read as follows:

"(1) the Administrator may require any person who owns or operates any emission source, who manufactures emission control equipment or process equipment, who the Administrator believes may have information necessary for the purposes set forth in this subsection, or who is subject to any requirement of this Act (other than a manufacturer subject to the provisions of section 206(c) or 208 with respect to a provision of title II) on a one-time, periodic or continuous basis to—

"(A) establish and maintain such records;

"(B) make such reports;

"(C) install, use, and maintain such monitoring equipment, and use such audit procedures, or methods;

"(D) sample such emissions (in accordance with such procedures or methods, at such locations, at such intervals, during such periods and in such manner as the Administrator shall prescribe);

"(E) keep records on control equipment parameters, production variables or other indirect data when direct monitoring of emissions is impractical;

"(F) submit compliance certifications in accordance with section 114(a)(3); and

"(G) provide such other information, as he may reasonably require; and".

(b) MONITORING AND COMPLIANCE CERTIFICATIONS.—Section 114(a) is amended by adding the following new paragraph at the end:

"(3) The Administrator shall in the case of any person which is the owner or operator of a major stationary source, and may, in the case of any other person, require enhanced monitoring and submission of compliance certifications. Compliance certifications shall include (A) identification of the applicable requirement that is the basis of the certification, (B) the method used for determining the compliance status of the source, (C) the compliance status, (D) whether compliance is continuous or intermittent, (E) such other facts as the Administrator may require. Compliance certifications and monitoring data shall be public information. Nothing in this paragraph shall be construed as requiring disclosure of information subject to exemption from disclosure under subsection (c) of this section as trade secrets or that is subject to applicable law concerning self-incrimination. Submission of a compliance certification shall in no way limit the Administrator's authorities to investigate or otherwise implement this Act. The Administrator shall promulgate rules to provide guidance and to implement this paragraph within 2 years after the enactment of the Clean Air Act Amendments of 1990.".

(c) JUDICIAL REVIEW.—Section 307(b)(1) is amended by inserting "or revising regulations for enhanced monitoring and compliance certification programs under section 114(a)(3) of this Act," immediately before "or any other final action of the Administrator".

SEC. 603. ADMINISTRATIVE ENFORCEMENT SUBPOENAS.

Section 307(a) is amended by striking out "(1)" after "(a)" and by striking "or section 202(b)(5)" and immediately after "section 202(b)(4) or 211(c)(3)" inserting ", any investigation, monitoring, reporting requirement, entry, compliance inspection, or administrative enforcement proceeding under section 113, section 114, section 120, section 205, section 206, section 208, section 303 or section 306".

SEC. 604. ENFORCEMENT OF ADMINISTRATIVE ORDERS.

Section 303 is amended by striking "(a)" and by striking out subsection (b).

SEC. 605. SCOPE OF EMERGENCY ORDERS.

Section 303 of the Clean Air Act, as amended by section 604 of this Act, is further amended as follows:

(1) Strike "the health of persons," and insert "public health or welfare, or the environment" and after the words "abate such sources" insert "or have not acted adequately to abate such sources".

(2) Amend the second sentence to read "If it is not practicable to assure prompt protection of public health or welfare or the environment by commencement of such a civil action, the Administrator may issue such orders as may be necessary to protect public health or welfare or the environment.".

(3) Strike the last 2 sentences in their entirety.

SEC. 606. CONTRACTOR LISTINGS.

Section 306(a) is amended as follows:

(1) Strike "113(c)(1)" and insert "113(c), 205(d), 211(d)(3), and 212(e)".

(2) Insert at the end thereof: "For convictions arising under section 113(c)(2), the condition giving rise to the conviction also shall be considered to include any substantive violation of this Act associated with the violation of 113(c)(2). The Administrator may extend this prohibition to other facilities owned or operated by the convicted person.".

SEC. 607. JUDICIAL REVIEW PENDING RECONSIDERATION OF REGULATION.

Section 307(b)(1) is amended by adding at the end thereof: "The filing of a petition for reconsideration by the Administrator of any otherwise final rule or action shall not affect the finality of such rule or action for purposes of judicial review nor extend the time within which a petition for judicial review of such rule or action under this section may be filed, and shall not postpone the effectiveness of such rule or action.".

SEC. 608. CITIZEN SUITS.

(a) CIVIL PENALTIES.—Section 304(a) is amended by inserting immediately before the period at the end thereof: ", and to apply any appropriate civil penalties (except for actions under paragraph (2))".

(b) PENALTY FUND.—Section 304 is amended by adding the following new subsection after subsection (f):

"(g) PENALTY FUND.—(1) Penalties received under subsection (a) shall be deposited in a special fund in the United States Treasury for licensing and other services. Amounts in such fund and authorized to be appropriated shall remain available until expended, for use by the Administrator to finance air compliance and enforcement activities. The Administrator shall annually report to the Congress about the sums deposited into the fund, the sources thereof, and the actual and proposed uses thereof.

"(2) Notwithstanding paragraph (1) the court in any action under this subsection to apply civil penalties shall have discretion to order that such civil penalties, in lieu of being deposited in the fund referred to in paragraph (1), be used in beneficial mitigation projects which are consistent with this Act and enhance the public health or the environment. The court shall obtain the view of the Administrator in exercising such discretion and selecting any such projects. The amount of any such payment in any such action shall not exceed $100,000.".

(c) INTERVENTION BY EPA.—Paragraph (2) of section 304(c) is amended to read as follows:

"(2) In any action under this section, the Administrator, if not a party, may intervene as a matter of right at any time in the proceeding. A judgment in an action under this section to which the United States is not a party shall not, however, have any binding effect upon the United States.".

(d) SERVICE OF COMPLAINT; CONSENT JUDGMENTS.—Section 304(c) is amended by adding the following new paragraph after paragraph (2):

"(3) Whenever any action is brought under this section the plaintiff shall serve a copy of the complaint on the Attorney General of the United States and on the Administrator. No consent judgment shall be entered in an action brought under this section in which the United States is not a party prior to 45 days following the receipt of a copy of the proposed consent judgment by the Attorney General and the Administrator during which time the Government may submit its comments on the proposed consent judgment to the court and parties or may intervene as a matter of right.".

(e) OTHER REQUIREMENTS.—Section 304(f) is amended by striking the period at the end of paragraph (3), inserting "; or" and adding the following new paragraph at the end thereof:

"(4) any other standard, limitation, or schedule established under any permit issued pursuant to title IV or under any applicable State implementation plan approved by the Administrator, any permit term or condition, and any requirement to obtain a permit as a condition of operations.".

(f) UNREASONABLE DELAY.—Section 304(a) is amended by adding the following at the end thereof: "The district courts of the United States shall have jurisdiction to compel (consistent with paragraph (2) of this subsection) agency action unreasonably delayed, except that an action to compel agency action referred to in section 307(b) which is unreasonably delayed may only be filed in a United States District Court within the circuit in which such action would be reviewable under section 307(b). In any such action for unreasonable delay, notice to the entities referred to in subsection (b)(1)(A) shall be provided 180 days before commencing such action.".

(g) PAST VIOLATIONS.—Section 304(a) is amended by inserting immediately before "to be in violation" in paragraphs (1) and (3) "to have violated (if there is a prima facie demonstration that the alleged violation has been repeated or continuous) or". The amendment made by this subsection shall take effect with respect to actions brought after the date 2 years after the enactment of the Clean Air Act Amendments of 1990.

(h) DEFERRED ACTIONS.—Section 307(b)(2) is amended by adding the following at the end thereof: "Where a final decision by the Administrator defers performance of any nondiscretionary statutory action to a later time, any person may challenge the deferral pursuant to paragraph (1).".

SEC. 609. ENHANCED IMPLEMENTATION AND ENFORCEMENT OF NEW SOURCE REVIEW REQUIREMENTS.

Section 167 is amended by striking "the construction of a major emitting facility" and inserting "the construction or modification of a major emitting facility".

SEC. 610. MOVABLE STATIONARY SOURCES.

Section 302 is amended by adding the following subsection at the end thereof:

"(z) STATIONARY SOURCE.—The term 'stationary source' means generally any source of an air pollutant except those emissions resulting directly from an internal combustion engine for transportation purposes or from a nonroad engine or nonroad vehicle as defined in section 216.".

SEC. 611. ENFORCEMENT OF NEW TITLES OF THE ACT.

Section 120(a)(2)(A) is amended as follows:

(1) Insert ", 167, 303," after "111" in clause (ii).

(2) Redesignate clause (iii) as (iv) and in new clause (iv) strike "clause (i) or (ii)", and insert "clause (i), (ii), or (iii)".

(3) Insert the following new clause after clause (ii):

"(iii) a stationary source which is not in compliance with any requirement of title IV, V or VII of this Act, or".

TITLE VII—MISCELLANEOUS PROVISIONS

Sec. 701. Grants for support of air pollution planning and control programs.
Sec. 702. Annual report repeal.
Sec. 703. Review and revision of criteria and standards.
Sec. 704. Emission factors.
Sec. 705. Land use authority.
Sec. 706. Virgin Islands.
Sec. 707. Provisions regarding asbestos.
Sec. 708. Class I areas.
Sec. 709. Regional haze impairing visibility in class I areas.
Sec. 710. Creation of centers for prevention of lead poisoning.
Sec. 711. Stratospheric ozone.
Sec. 712. OCS air pollution.
Sec. 713. Authorization.
Sec. 714. Hydrogen fuel cell vehicle study and test program.
Sec. 715. Information gathering on greenhouse gases contributing to global climate change.

SEC. 701. GRANTS FOR SUPPORT OF AIR POLLUTION PLANNING AND CONTROL PROGRAMS.

(a) GRANTS.—Subparagraphs (A) and (B) of section 105(a)(1) are amended to read as follows:

"(A) The Administrator may make grants to air pollution control agencies, within the meaning of paragraph (1), (2), (3), (4), or (5) of section 302, in an amount up to three-fifths of the cost of implementing programs for the prevention and control of air pollution or implementation of national primary and secondary ambient air quality standards. For the purpose of this section, 'implementing' means any activity related to the planning, developing, establishing, carrying-out, improving, or maintaining of such programs.

"(B) Subject to subsections (b) and (c) of this section, an air pollution control agency which receives a grant under subparagraph (A) in which contribute less than the required two-fifths minimum shall have 3 years following the date of the enactment of the Clean Air Act Amendments of 1990 in which to contribute such amount. If such an agency fails to meet and maintain this required level, the Administrator shall reduce the amount of the Federal contribution accordingly.".

(b) CONFORMING AMENDMENT.—Section 105(a)(1)(C) is amended by striking "(B)" and inserting "(A)".

(c) LIMITATION ON GRANTS.—Section 105(b) is amended by—

(1) inserting "(1)" immediately after "(b)"

(2) striking all that follows "(3) the financial need of the respective agencies."; and

(3) redesignating paragraphs (1), (2), and (3) as subparagraphs (A), (B), and (C) respectively.

(d) LIMITATION.—Section 105 is amended by redesignating subsection (c) as paragraph (2) of subsection (b) and by striking all that follows "into which such area extends." in the newly designated paragraph (2) and inserting "Subject to the provisions of paragraph (1) of this subsection, no State shall have made available to it for application less than one-half of 1 per centum of the annual appropriation for grants under this section for grants to agencies within such State.".

(e) MAINTENANCE OF EFFORT.—Section 105 is amended by inserting the following new subsection after subsection (b):

"(c) MAINTENANCE OF EFFORT.—(1) No agency shall receive any grant under this section during any fiscal year when its expenditures of non-Federal funds for recurrent expenditures for air pollution control programs will be less than its expenditures were for such programs during the preceding fiscal year. In order for the Administrator to

award grants under this section in a timely manner each fiscal year, the Administrator shall compare an agency's prospective expenditure level to that of its second preceding fiscal year. The Administrator shall revise the current regulations which define applicable nonrecurrent and recurrent expenditures, and in so doing, give due consideration to exempting an agency from the limitations of this paragraph and subsection (a) due to periodic increases experienced by that agency from time to time in its annual expenditures for purposes acceptable to the Administrator for that fiscal year.

"(2) The Administrator may still award a grant to an agency not meeting the requirements of paragraph (1) of this subsection if the Administrator, after notice and opportunity for public hearing, determines that a reduction in expenditures is attributable to a non-selective reduction in the expenditures in the programs of all Executive branch agencies of the applicable unit of Government. No agency shall receive any grant under this section with respect to the maintenance of a program for the prevention and control of air pollution unless the Administrator is satisfied that such a grant will be so used to supplement and, to the extent practicable, increase the level of State, local, or other non-Federal funds. No grants shall be made under this section until the Administrator has consulted with the appropriate official as designated by the Governor or Governors of the State or States affected.".

(f) COSTS.—Section 106 is amended by striking "three-fourths of the air quality planning program costs of such agency" and inserting "three-fifths of the air quality implementation program costs of such agency".

SEC. 702. ANNUAL REPORT REPEAL.

Section 313 is repealed.

SEC. 703. REVIEW AND REVISION OF CRITERIA AND STANDARDS.

(a) REVIEW AND REVISION OF CRITERIA.—Section 109(d)(1) is amended to read as follows:

"(1)(A) Not later than 5 years after enactment of the Clean Air Act Amendments of 1990 and thereafter as provided in subparagraph (C), the Administrator shall (i) complete a review of the criteria published under section 108 and the standards promulgated under this section (ii) make such revisions in the criteria as may be appropriate to reflect advances in scientific knowledge, and (iii) determine whether it is appropriate to propose revisions of the standards based on the applicable criteria. In making revisions or determinations under this subparagraph, the Administrator may use such procedures as the Administrator deems appropriate. Notice of revisions and determinations made under this subparagraph shall be published in the Federal Register not later than 30 days after the revisions or determinations, respectively, are made, and copies shall be made available to the general public.

"(B) If the Administrator determines under subparagraph (A) that it is appropriate to propose revision of a standard, the Administrator shall commence rulemaking proceedings under section 307(d) and make such revisions as are appropriate as expeditiously as practicable but not later than 3 years after such determination is made. The Administrator may elect to follow the same procedure with respect to a determination that it is inappropriate to propose a revision of a standard.

"(C) After the first review and (as appropriate) revision of a standard under this paragraph, the Administrator shall repeat the process specified in subparagraphs (A) and (B) from time to time for such standard. The review specified in subparagraph (A) shall be completed not later than 5 years after completion of the last review of the standard or, if the standard was revised as a result of such review (or judicial review), not later than 5 years after completion of such revision. For any new standard promulgated after the date of the enactment of the Clean Air Act Amendments of 1990, the first review under subparagraph (A) shall be completed not later than 5 years after the date of promulgation.

"(D) A determination under subparagraph (A) that it is inappropriate to propose a revision of a standard shall be reviewable as a final action under section 307(b). If the Administrator elects to commence rulemaking proceedings under subparagraph (B) with respect to such a determination, the determination shall be reviewable only upon completion of the rulemaking. A determination under subparagraph (A) that it is appropriate to propose revision of a standard shall not be subject to judicial review under section 307(b) or otherwise.

"(E) The Administrator may review and revise criteria or standards earlier or more frequently than required under this paragraph.".

(b) CONFORMING AMENDMENT.—Section 109(d)(2)(B) is amended by striking "January 1, 1980, and at five-year intervals thereafter," and inserting "5 years after the date of the enactment of of the Clean Air Act Amendments of 1990 and thereafter at intervals corresponding to the Administrator's review of criteria and standards under paragraph (1).".

(c) ISSUANCE OF AIR QUALITY CRITERIA.—Section 108(a)(2) is amended by striking "12 months" and inserting "3 years".

(d) CONFORMING AMENDMENT.—Section 108(c) is amended by striking "criteria or" in the first sentence.

(e) PROMULGATION.—Section 109(a)(2) is amended by striking "the Administrator shall" and all that follows down through the period at the end of such paragraphs and inserting "the Administrator shall promulgate proposed national primary and secondary ambient air quality standards as appropriate for such air pollutant not later than 3 years after such issuance. The procedure provided for in subsection (d) shall apply to the revision of such standards.".

(f) REVISION OF STANDARDS.—Section 109(b) is amended by striking the second sentence of paragraph (1) and the second sentence of paragraph (2).

(g) Section 103 is amended by adding the following new subsection at the end thereof:

"(g) STUDIES.—(1) The Director of the National Institute of Environmental Health Sciences shall conduct a program of basic research to identify, characterize, and quantify risks to human health from air pollutants. Such research shall be conducted primarily through a combination of university and medical school-based grants, cooperative agreements, and contracts, as well as through intramural studies and contracts. The procedures applicable to grants and contracts under title IV of the Public Health Service Act shall be followed for purposes of this subsection.

"(2) The Director of the National Institute of Environmental Health Sciences shall conduct a program for the education and training of health care providers in environmental health.

"(3) The Director of the National Institute of Environmental Health Sciences shall assure that programs under this subsection shall not duplicate other research undertaken by the Administration.

"(4) There is authorized to be appropriated to the National Institute of Environmental Health Sciences to carry out this subsection such sums as may be necessary, to remain available until expended.".

SEC. 704. EMISSION FACTORS.

Part A of title I, as amended by section 108(g) of the Act, is amended by adding the following new section at the end thereof:

"SEC. 130. EMISSION FACTORS.

"Within 6 months after enactment of the Clean Air Act Amendments of 1990, and at least every 3 years thereafter, the Administrator shall review and, if necessary, revise, the methods ('emission factors') used for purposes of this Act to estimate the quantity of emissions of carbon monoxide, volatile organic compounds, and oxides of nitrogen from sources of such air pollutants (including area sources and mobile sources). In addition, the Administrator shall establish emission factors for sources for which no such methods have previously been established by the Administrator. The Administrator shall permit any person to demonstrate improved emissions estimating techniques, and following approval of such techniques, the Administrator shall authorize the use of such techniques. Any such technique may be approved only after appropriate public participation. Until the Administrator has completed the revision required by this section, nothing in this section shall be construed to affect the validity of emission factors established by the Administrator before the date of the enactment of the Clean Air Act Amendments of 1990.".

SEC. 705. LAND USE AUTHORITY.

Part A of title I, is amended by section 706 of this Act, is amended by adding the following at the end thereof:

"SEC. 131. LAND USE AUTHORITY.

"Nothing in this Act constitutes an infringement on the existing authority of counties and cities to plan or control land use, and nothing in this Act provides or transfers authority over such land use.".

SEC. 706. VIRGIN ISLANDS.

Section 324(a)(1) (42 U.S.C. 7625-1(a)(1)) is amended by inserting "the Virgin Islands," after "American Samoa,".

SEC. 707. PROVISIONS REGARDING ASBESTOS

(a) TRAINING.—The National Institute of Environmental Health Sciences is authorized to award one-time start-up grants under this section to joint labor-management trust funds and to nonprofit government employee organizations to establish and operate (for the duration of the period of authorized funds) programs for the training and education of workers who are or may be engaged in abatement, removal, and response with respect to friable asbestos containing material in nonschool public and commercial buildings. Applications for grants under this paragraph shall be submitted in such form and manner, and contain such information, as the National Institute for Environmental Health Sciences prescribes. There is authorized to be appropriated to carry out this paragraph the sum of $10,000,000 for each of the fiscal years 1991, 1992, 1993, and 1994. For purposes of this subsection, the term "public and commercial buildings" has the meaning given such term by section 202 of the Toxic Substances Control Act (15 U.S.C. 2642).

(b) ASBESTOS ACCREDITATION REGULATIONS.—(1) For purposes of protecting

human health from asbestos emissions during response actions carried out with respect to asbestos-containing materials in nonschool public and commercial buildings, the Administrator of the Environmental Protection Agency shall promulgate regulations to require accreditation for persons who—

(A) inspect for asbestos-containing material in nonschool public or commercial buildings; or

(B) design or conduct response actions with respect to friable asbestos-containing material in nonschool public or commercial buildings.

(2) The accreditation program contained in the regulations shall include requirements identical to those in the model contractor accreditation plan promulgated by the Administrator under section 206(b) of the Toxic Substances Control Act (15 U.S.C. 2646(b)), except that the requirements with respect to number of hours of training for workers conducting response actions shall be as follows:

(A) To become accredited, any worker conducting response actions in a nonschool public and commercial building shall undergo not fewer than 40 hours of training, at least 12 of which shall be nonclassroom, hands-on training.

(B) To maintain accreditation, such a worker shall complete an 8-hour refresher course annually.

(3) In exercising authority under this subsection, the Administrator shall not, for purposes of section 4(b)(1) of the Occupational Safety and Health Act (29 U.S.C. 653(b)(1)), be considered to be exercising statutory authority to prescribe or enforce standards or regulations affecting occupational safety or health.

(4) For purposes of this section, the terms "asbestos-containing material", "public and commercial building", "response action", and "friable asbestos-containing material" have the meaning given those terms by section 202 of the Toxic Substances Control Act (15 U.S.C. 2642).

(5) Regulations shall be promulgated under this section not later than 6 months after the date of the enactment of the Clean Air Act Amendments of 1990.

SEC. 708. CLASS I AREAS.

(a) CLASS I AND II AREAS.—Section 164(a)(1) is amended by adding after "seashore" the words ", regardless of the date on which established".

(b) NATIONAL PARK AND WILDERNESS AREA.—Section 164(a)(2) is amended by striking out "ten thousand acres in size" and inserting "5,000 acres in size (in the case of a national wilderness area) or 6,000 acres in size (in the case of a national park)".

(c) PUBLIC HEARINGS.—Section 164(b)(1)(A) is amended by inserting in the first sentence after "redesignated" the phrase "(or as near as practicable to such area in the case of a wilderness area)".

(d) ADVERSE IMPACTS ON AIR QUALITY-RELATED VALUES.—Section 165(d)(2)(C) is amended by striking out clause (ii), by inserting "or air quality-related values" after "air quality" and by adding the following at the end of clause (i) "A permit shall also not be issued if the Federal land manager of such lands, or the Administrator, or the Governor of an adjacent State containing such an area, files a notice making a showing, together with documentation, that such emissions may cause or contribute to an adverse impact on the air quality-related values (including visibility) of such lands, unless the owner or operator of the facility demonstrates that such emissions will not cause or contribute to the alleged adverse impact on the air quality-related values (including visibility) identified in such showing.".

(e) NOTICE TO FEDERAL LAND MANAGERS.—Section 165(d)(2)(A) is amended to read as follows: "(A) At the same time as the State transmits a copy of a permit application and notice under paragraph (1) to the Administrator, the State shall also provide a copy thereof to the Federal land manager and the Federal official charged with direct responsibility for management of any lands within a class I area, or an area described in paragraph (1) or (2) of section 164(a), which may be affected by emissions from the proposed facility. The Administrator shall require applications submitted under paragraph (1) to contain sufficient information to enable the Federal land manager of such Federal lands to determine the effects of such facility on the air quality-related values (including visibility) of such Federal lands. The permitting authority shall consult with the Federal land manager for each such area to determine if the application is complete.".

(f) POLLUTANTS COVERED.—Section 165(d)(2)(C)(i) is amended by striking out "particulate matter and sulfur dioxide" and inserting "any air pollutant for which maximum allowable increases or other measures are in effect under section 163 or 166".

(g) POSTCONSTRUCTION MONITORING.—Section 165(a)(7) is amended by adding the following before the "; and" the phrase "and on air quality-related values, including visibility, in class I areas which may be affected by emissions from the proposed facility".

(h) ADVERSE IMPACTS.—Section 165(d)(2)(C) is amended by adding the following at the end thereof:

"(v) In determining under this subparagraph or subparagraph (B) whether emissions from a facility will have an adverse impact on air quality-related values (including visibility), allowable emissions from other existing and permitted sources shall also be taken into account.".

(i) PRECONSTRUCTION MONITORING.—The first sentence of section 165(e)(2) is amended by inserting the following before the period at the end thereof: "and to determine the effect emissions from such facility may have on air quality-related values, including visibility, in class I areas which may be affected by emissions from the proposed facility.".

(j) IDENTIFICATION OF POTENTIAL ADVERSE IMPACTS.—Section 165(d)(2)(B) is amended by adding the following at the end thereof: "In addition to the other authority provided by this section, the Federal land manager charged with the direct responsibility for management of such lands may, by rule, identify the air quality-related values of such lands and the potential adverse impacts of air pollution on such values.".

(k) CLASS I PARKS.—Section 162 is amended by adding the following at the end thereof:

"(c) Upon enactment of this subsection all national parks which exceed 6,000 acres in size which were established after the enactment of the Clean Air Amendments of 1977 and before January 1, 1990, shall be class I areas and may not be redesignated.".

(l) REGULATIONS.—Section 301(a)(1) is amended by adding the following at the end thereof: "Within 2 years after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall amend the regulations under part C of title I to assure that the requirements of the amendments made by section 708A of the Amendments (relating to class I areas) are met.".

SEC. 709. REGIONAL HAZE IMPAIRING VISIBILITY IN CLASS I AREAS.

(a) DEFINITIONS.—(1) Section 169A(g) is amended by striking "and" at the end of paragraph (6), by striking the period at the end of paragraph (7) and inserting "; and" and by adding the following at the end thereof:

"(8) the term 'regional haze' means widespread regionally homogeneous haze resulting from manmade air pollution.".

(2) Section 169A(g) is amended by striking "nonair quality" in each place it appears in paragraphs (1) and (2).

(b) ADDITIONAL REQUIREMENTS.—Section 169A of the Clean Air Act is amended by adding the following after subsection (g):

"(h) PROTECTING VISIBILITY AND AIR QUALITY-RELATED VALUES IN CLASS I AREAS.—

"(1) EPA RULES.—Not later than 1 year after the date of enactment of the Clean Air Act Amendments of 1990, the Administrator shall propose rules, and within 2 years after such date of enactment, promulgate final rules, amending the regulations under subsection (a)(4) to assure that the requirements of this part are met with regard to visibility protection and the protection of air quality related-values in areas protected under this part.

"(2) STATE PLAN REVISIONS.—The regulations under paragraph (1) shall require that revisions of the implementation plans for visibility protection under section 169A, and for the prevention of significant deterioration of air quality under this part, be submitted to the Administrator within one year after promulgation of such amendments. Such plan revisions shall comply with the requirements of this part.

"(3) REGIONAL HAZE PLANS.—The Administrator shall provide information to States regarding control measures for specific classes of sources for which guidance has not been provided under other provisions of this Act and which may reasonably be anticipated to cause or contribute to regional haze impairing visibility in an area identified under subsection (a)(2). In amending the regulations under subsection (a)(4), the Administrator shall provide guidelines for the identification by States of areas where sources may reasonably be anticipated to cause or contribute to regional haze. In addition the Administrator shall promulgate guidelines for the establishment of control strategies in those areas for use by the States if necessary to achieve reasonable progress toward the national goal specified in subsection (a).

"(4) REASONABLE PROGRESS.—The regulations under paragraph (1) shall establish criteria and procedures for determining whether reasonable progress toward the national goal specified in subsection (a) is being made in accordance with this section. The criteria shall include a method for determining baseline visibility in each class I area identified under subsection (a)(2) and for determining whether reasonable progress toward the national goal is being achieved. In adopting such criteria, the Administrator shall consider both annual average visibility and shorter periods that may reflect seasonal patterns and the frequency of severe visibility impairment episodes. The regulations may allow the use of not more than 3 years as the baseline period, and shall require commencement of baseline monitoring within 6 months following promulgation.

"(i) REVIEW OF PROGRESS TOWARD NATIONAL GOAL.—(1) The Administrator, in consultation with the Federal land manager for each mandatory class I area referred to in subsection (a)(2), shall periodically review the status of visibility impairment in such areas and determine whether reasonable progress toward the national goal set forth in subsection (a) is being achieved. The first review under this subsection shall be completed 6 years after the date required for promulgation of the regulations required by subsection (h), and subsequent reviews shall be completed at 5-year intervals thereafter.

"(2) Whenever the Administrator determines that reasonable progress toward the national goal set forth in subsection (a) is not being achieved, the Administrator shall require such revisions of the applicable implementation plan or plans for such area as are necessary to make reasonable progress toward such national goal. The Administrator shall require that such plan revisions be submitted within one year after making any such determination. The Administrator shall not require plan revisions in any State if he determines that such State has adopted all feasible measures that can be expected to achieve reasonable progress. For the purpose of regional haze control, in determining best available retrofit technology, the Administrator may consider the estimated average contribution to visibility impairment from a source or group of sources located in an area identified under guidelines issued under subsection (h)(3). The determinations made by the Administrator under this subsection shall be after notice and an opportunity for public comment.

"(3) At a minimum, for any class I area to which this section applies, reasonable progress toward the national goal set forth in subsection (a) shall include each of the following:

"(A) Preservation of the frequency of days in which the visibility in the area is least impaired by manmade air pollution.

"(B) Over each review period, there shall be a perceptible improvement in average visibility in the area, as compared to the average visibility in the area during the prior review period or the baseline in the case of the first review period.

"(C) Over each review period, there shall be a perceptible improvement in frequency of days when the worst visibility attributable to manmade air pollution occurs, as compared to the frequency of days of the worst visibility attributable to manmade air pollution during the prior review period or the baseline in the case of the first review period.

"(4) The Administrator shall adopt numeric standards for measuring and modeling perceptible improvement, and a reference method specifying a technological method for measuring such improvement.

"(j) RELATIONSHIP TO OTHER PROVISIONS.—In promulgating regulations and amendments to regulations under this section, the Administrator shall take into account the reductions in air pollution obtained pursuant to other provisions of this Act, including the reductions obtained under title V (relating to acid deposition control). States may take credit for emission reductions required by other provisions of this Act (including provisions of an applicable implementation plan) in determining whether additional control strategies are needed to achieve reasonable progress toward the national goal. Nothing in this section shall be construed to require emission reductions of any air pollutant in any area designated as a nonattainment area for that air pollutant at a more rapid rate than required under part D.

"(k) IMPACT OF UNCONTROLLED SOURCES.—(1) The Administrator shall undertake and complete, within 2 years after the date of enactment of the Clean Air Act Amendments of 1990, studies to measure the impact of any uncontrolled major stationary source emitting more than 7,000 tons/year of sulfur dioxide on the air quality-related values (including visibility) of class I areas listed under subsection (a)(2) located within 100 miles of the uncontrolled major stationary source. The Administrator shall conduct studies of such sources under this subsection in accordance with priorities established by the Administrator based on aggregate emissions, location in relation to the class I area, weather patterns and likelihood of impact on the air quality-related values (including visibility) of such area. Studies under this section shall be conducted in consultation with the Federal official charged with direct responsibility for the management of each such class I area and the Federal land manager of each such class I area. These studies may include, but are not limited to, tracer studies requiring the source to release continuously tracers in the source's emissions to enhance the studies' ability to attribute impacts to the source. As part of the studies, the Administrator may require the source to install continuous emission monitors for sulfur oxides and nitrogen oxides or for other air pollutants as he deems necessary or to conduct tracer studies. The study shall include the identification of alternative regulatory strategies that could achieve the goal of section 169A(a)(1) and the costs (economic, energy, and social) of each such alternative. Within 1 year following completion of the study of any source under this subsection, the Administrator shall, in consultation with the Federal land managers, make a determination under subsection (b)(2)(A) with respect to the uncontrolled major stationary source and determine whether the applicable State plan needs to be revised in accordance with such determination. Such determination shall be made after notice and opportunity for comment.

"(2) For purposes of this subsection, the term 'uncontrolled major stationary source' means a major stationary source which—

"(A) does not use a technological means of emission control achieving at least a 50 percent reduction in emissions of sulfur dioxide from the potential combustion concentration; and

"(B) had an actual 1985 emission rate for sulfur dioxide below 1.2 lbs./mmBtu.

"(l) SAVINGS PROVISION.—The requirements and authorities established pursuant to this section shall be in addition to, and not in lieu of any other requirement or authority under any other provision of this Act or under any other authority of law.

"(m) AREAS COVERED.—The provisions of subsections (h) through (l) of this section shall not apply east of the 100th meridian.".

SEC. 710. CREATION OF CENTERS FOR PREVENTION OF LEAD POISONING.

The Toxic Substances Control Act is amended by inserting after section 31 the following:

"SEC. 32. CENTERS FOR PREVENTION OF LEAD POISONING.

"(a) ESTABLISHMENT.—The Administrator shall establish, and provide funding through grants, one or more centers for prevention of lead poisoning. The centers shall be established at institutions of higher education in the United States and shall assist the Administrator in carrying out this title.

"(b) APPLICATIONS.—An institution of higher education may apply for grants under subsection (a) by submitting an application to the Administrator in the form, at the time, and containing the information that the Administrator shall require.

"(c) SELECTION CRITERIA.—The Administrator shall award grants under subsection (a) to institutions of higher education pursuant to the following criteria:

"(1) The capability to provide leadership in making national contributions to the prevention of lead poisoning.

"(2) Demonstrated capacity to conduct research of lead poisoning prevention, including the development of innovative and safe methods for lead paint abatement.

"(3) The appropriateness of the projects proposed to be carried out by the grant recipient.

"(4) The recipient's commitment of at least $100,000 in budgeted institutional funds to research of lead poisoning prevention.

"(5) The presence at the institution of an interdisciplinary staff with demonstrated expertise in lead poisoning prevention.

"(6) The institution's demonstrated ability to disseminate results of its research and educational programs through an interdisciplinary continuing education program.

"(d) FEDERAL SHARE.—The Federal share of a grant awarded under subsection (a) shall not exceed 80 percent of the cost of establishing and operating the center and related research activities carried out by the recipient.

"(e) DEFINITIONS.—As used in this section—

"(1) the term 'center' means a center for prevention of lead poisoning; and

"(2) the term 'institution of higher education' has the meaning given that term in section 481(a) of the Higher Education Act of 1965 (20 U.S.C. 1088(a)).".

SEC. 711. STRATOSPHERIC OZONE.

(a) Part B of title I is amended by striking sections 150 through 155, by redesignating section 156 as section 159F, by striking sections 158 and 159, and by inserting after the heading for such part the following:

"TABLE OF CONTENTS

"Sec. 150. Definitions.
"Sec. 151. Listing of ozone-depleting substances.
"Sec. 152. Monitoring and reporting requirements.
"Sec. 153. Production phaseout for class I substances.
"Sec. 154. Phase out of class II substances.
"Sec. 155. Accelerated schedule.
"Sec. 156. Alternatives.
"Sec. 157. National recycling and disposal program.
"Sec. 158. Servicing of motor vehicle air conditioners.
"Sec. 159. Labeling.
"Sec. 159A. Nonessential products containing chlorofluorocarbons.
"Sec. 159B. Federal procurement.
"Sec. 159C. Federal enforcement.
"Sec. 159D. International cooperation.
"Sec. 159E. State laws concerning household and commercial appliance design.
"Sec. 159F. Regulations.
"Sec. 159G. International cooperation.

"SEC. 150. DEFINITIONS.

"As used in this part:

"(1) The terms 'ozone-depleting substance' and 'substance covered by this part' means any substance which is known, or may rea-

sonably be anticipated, to cause or contribute to stratospheric ozone depletion. Such term includes, at a minimum, all class I and class II substances.

"(2) The term 'class I substance' means each of the substances listed as provided in section 151(a).

"(3) The term 'class II substance' means each of the substances listed as provided in section 151(b).

"(4) The term 'ozone-depletion factor' means a factor established by the Administrator to reflect the ozone-depletion potential of a substance, on a mass per kilogram basis, as compared to tricholorofluoromethane (CFC-11). Such factor shall be based upon the substance's atmospheric lifetime, the molecular weight of bromine and chlorine, and the substance's ability to be photolytically disassociated, and upon other factors determined to be an accurate measure of relative ozone-depletion potential.

"(5) The term 'medical device' means any device used for medical purposes, any diagnostic product, any drug (as defined in the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321)) and any drug delivery system—

"(A) which utilizes a class I or class II substance for which no safe and effective alternative has been developed, and where necessary, approved by the Commissioner, and

"(B) which, after notice and opportunity for public comment, has been approved and determined to be essential by the Commissioner in consultation with the Administrator.

"(6) The term 'Commissioner' means the Commissioner of the Food and Drug Administration.

"(7) The term 'to produce' means—

"(A) to manufacture in the United States a substance or item from any raw material or feedstock chemical; or

"(B) to supply any raw material or feedstock chemical for consumption which has not been domestically manufactured, recycled, or reused.

Such term does not include the manufacture of substances that are used and entirely consumed in the manufacture of other chemicals.

"(8) The term 'household and commercial appliance' means any appliance used for household or commercial purposes, including any air conditioner, refrigerator, chiller, and freezer.

"(9) The term 'baseline year' means the calendar year 1986 (1989 in the case of tetrachloromethane (carbon tetrachloride) and methyl chloroform), except that in the case of any substance added to the list of class I substances after the enactment of this section, and in the case of class II substances, such term shall mean a representative calendar year selected by the Administrator.

"(10) The term 'Montreal Protocol' means the Montreal Protocol to the Vienna Convention for the Protection of the Ozone Layer.

"SEC. 151. LISTING OF OZONE-DEPLETING SUBSTANCES.

"(a) LIST OF CLASS I SUBSTANCES.—Within 90 days after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall publish a list of class I substances. The list shall contain, at a minimum, the following substances:

"Trichlorofluoromethane (CFC-11),
"Dichlorodifluoromethane (CFC-12),
"Trichlorotrifluoroethane (CFC-113),
"Dichlorotetrafluoroethane (CFC-114),
"(Mono)chloropentafluoroethane (CFC-115),
"Bromotrifluoromethane (Halon-1301),
"Bromochlorodifluoromethane (Halon-1211),
"Tetrachloromethane (carbon tetrachloride),
"Methyl chloroform (1,1,1 trichloroethane),
"Dibromotetrafluoroethane (Halon-2402).

Pursuant to subsection (c), the Administrator shall add to the list of class I substances any other ozone-depleting substance that causes or contributes significantly to depletion of the stratospheric ozone layer, including, at a minimum, all ozone-depleting substances having an ozone depletion factor of 0.15 or greater.

"(b) LIST OF CLASS II SUBSTANCES.—Within 90 days after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall publish a list of class II substances. Such list shall contain, at a minimum, the following substances:

"Hydrochlorodifluoromethane (HCFC-22),
"Hydrochlorofluorocarbon-123,
"Hydrochlorofluorocarbon-124,
"Hydrochlorofluorocarbon-141(b),
"Hydrochlorofluorocarbon-142(b).

Pursuant to subsection (c) the Administrator shall add to the list of class II substances any other ozone-depleting substance that has a potentially significant ozone-depletion potential.

"(c) ADDITIONS TO THE LISTS.—(1) The Administrator may add, in accordance with the criteria set forth in subsection (a) or (b), as the case may be, any substance to the list of class I or class II substances under subsection (a) or (b).

"(2) Periodically, but not less frequently than every 3 years after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall list as additional class I or class II substances those substances which he finds meet the criteria of subsection (a) or (b), as the case may be.

"(3) At any time, any person may petition the Administrator to add a substance to the list of class I or class II substances. Within 180 days after receiving such a petition, the Administrator shall either add the chemical to such list or publish an explanation of the petition denial.

"(4) Only a class II substance which is added to the list of class I substances may be removed from the list of class II substances. No substance referred to in subsection (a) may be removed from the list of class I substances.

"(d) OZONE-DEPLETION FACTORS.—Simultaneously with publication of the lists under this section and simultaneously with any addition to either of such lists, the Administrator shall assign to each listed substance a numerical value representing the substance's ozone-depletion potential. In addition the Administrator shall publish the chlorine loading potential and the atmospheric lifetime of each listed substance. In the case of the substances referred to in table 1, the ozone-depletion factor shall be as specified in table 1, unless the Administrator adjusts any such factor based on criteria referred to in section 150(4):

"TABLE 1

| Substance | Ozone-depletion factor |
|---|---|
| Trichlorofluoromethane (CFC-11) | 1.00 |
| Dichlorodifluoromethane (CFC-12) | 1.00 |
| Trichlorotrifluoroethane (CFC-113) | 0.80 |
| Bromotrifluoromethane (Halon-1301) | 10.00 |
| Bromochlorodifluoromethane (Halon-1211) | 3.0 |
| Tetrachloromethane (carbon tetrachloride) | 1.06 |
| Dichlorotetrafluoroethane (CFC-114) | 1.0 |
| (Mono)chloropentafluoroethane (CFC-115) | 0.60 |
| Methyl chloroform | 0.15 |
| Dibromotetrafluoroethane (Halon-2402) | 6.0 |
| Chlorodifluoromethane (CFC-22) | 0.05 |
| Chlorofluorocarbon-123 | 0.02 |
| Chlorofluorocarbon-124 | 0.02 |
| Chlorofluorocarbon-141(b) | 0.1 |
| Chlorofluorocarbon-142(b) | 0.06 |

"SEC. 152. MONITORING AND REPORTING REQUIREMENTS.

"(a) REGULATIONS.—Within 180 days after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall amend the regulations of the Administrator in effect on such date regarding monitoring and reporting of class I and class II substances. Such amendments shall conform to the requirements of this section. The amended regulations shall include requirements with respect to the time and manner of monitoring and reporting as required under this section.

"(b) ANNUAL PRODUCTION LEVEL REPORTS.—On July 1 of each year beginning after the enactment of the Clean Air Act Amendments of 1990 (or after the date on which a substance is added to the list of class I or class II substances by the Administrator) each person producing a class I or class II substance shall file a report with the Administrator setting forth the amount of the substance that such person produced in the preceding calendar year. No such report shall be required after such person permanently ceases production of the substance. Each such report shall be signed and attested by a responsible corporate officer.

"(c) BASELINE REPORTS FOR CLASS I SUBSTANCES.—Unless such information has previously been reported to the Administrator, on the date on which the first annual report under subsection (b) is required to be filed, each person producing a class I substance (other than a substance added to the list after the enactment of the Clean Air Act Amendments of 1990) shall file a report with the Administrator setting forth the amount of such substance that such person produced during the baseline year. In the case of a substance added to the list of class I substances after the Clean Air Act Amendments of 1990, the regulations shall require that each person producing such substance shall file a report with the Administrator within 180 days after the date on which such substance is added to the list, setting forth the amount of the substance that such person produced in the baseline year.

"(d) MONITORING AND REPORTS TO CONGRESS.—(1) The Administrator shall monitor and, not less often than every 2 years following enactment of the Clean Air Act Amendments of 1990, submit a report to Congress on the production and use of class I and class II substances. Such report shall include data on domestic production and use, and an estimate of worldwide production and use of such substances.

"(2) The Administrators of the National Aeronautics and Space Administration and the National Oceanic and Atmospheric Administration shall monitor, and not less often than every 2 years following enactment of the Clean Air Act Amendments of

1990, submit a report to Congress on the current average tropospheric concentration of chlorine and bromine in the atmosphere and on the level of depletion of the stratospheric ozone layer. Not less frequently than every 2 years the Administrator shall report to Congress on the environmental and economic effects of any depletion of the stratospheric ozone layer.

"SEC. 153. PRODUCTION PHASEOUT FOR CLASS I SUBSTANCES.

"(a) REGULATIONS.—The Administrator shall promulgate regulations within 1 year after the enactment of the Clean Air Act Amendments of 1990 phasing out the production of class I substances in accordance with this section, subject to acceleration of the phase out under section 155. The phase out shall provide for equal annual percentage reductions in each of the following periods: July 1, 1991 to July 1, 1993; July 1, 1993 to July 1, 1995; and July 1, 1995 to July 1, 2000.

"(b) 1993 AND 1995 LIMITS.—Effective July 1, 1993, it shall be unlawful for any person to produce any class I substance in an annual quantity greater than 80 percent of the quantity produced by such person in the baseline year. Effective July 1, 1995, it shall be unlawful for any person to produce any class I substance in an annual quantity greater than 50 percent of the quantity produced by such person in the baseline year.

"(c) 2000 LIMIT.—Effective July 1, 2000, it shall be unlawful for any person to produce any amount of a class I substance, except as provided in subsection (e).

"(d) METHYL CHLOROFORM.—In the case of methyl chloroform, the phase-out schedule under subsections (b) and (c) shall not apply but effective July 1, 1993, it shall be unlawful for any person to produce methyl chloroform in annual quantities greater than 80 percent of the baseline amount; effective July 1, 1994, it shall be unlawful for any person to produce methyl chloroform in annual quantities greater than 70 percent of the baseline amount; effective July 1, 1995, it shall be unlawful for any person to produce methyl chloroform in annual quantities greater than 60 percent of the baseline amount; effective July 1, 1996, it shall be unlawful for any person to produce methyl chloroform in annual quantities greater than 50 percent of the baseline amount; and effective July 1, 2005, it shall be unlawful for any person to produce any amount of methyl chloroform, except as provided in subsection (e).

"(e) EXCEPTIONS.—

"(1) MEDICAL PURPOSES.—Notwithstanding the prohibitions set forth in subsections (c) and (d), the Administrator, after notice and opportunity for public comment, shall authorize the production of limited quantities of class I substances solely for use in medical devices if such authorization is determined by the Commissioner, in consultation with the Administrator, to be necessary for such purposes.

"(2) AVIATION SAFETY.—Notwithstanding the prohibitions set forth in subsections (c) and (d), the Administrator, after notice and opportunity for public comment, may authorize the production of limited quantities of bromochlorodifluoromethane (halon-1211), bromotrifluoromethane (halon-1301), and dibromotetrafluoroethane (halon-2402) solely for purposes of aviation safety if the Administrator of the Federal Aviation Administration, in consultation with the Administrator, determines that no safe and effective substitute has been developed and that such authorization is necessary for aviation safety purposes.

"(3) CAP ON EXCEPTIONS.—Under no circumstances may the authority set forth in paragraphs (1) and (2) of this subsection be applied to authorize any person to produce a class I substance in annual quantities greater than 10 percent of that produced by such person during the baseline year.

"(4) FIRE SUPPRESSION.—Notwithstanding the prohibition set forth in subsection (b), the Administrator, after notice and opportunity for public comment, may authorize the production of limited quantities of bromochlorodifluoromethane (halon-1211), bromotrifluoromethane (halon-1301), and dibromotetrafluoroethane (halon-2402) solely for purposes of fire suppression if the Administrator, in consultation with the Administrator of the United States Fire Administration, determines that no safe and effective substitute has been developed and that such authorization is necessary for fire suppression purposes. The Administrator shall not authorize production under this paragraph for purposes of fire safety training or testing of fire suppression equipment. In no event, shall the Administrator grant an exception under this paragraph that permits production after December 1, 1999.

"(f) NEW CLASS I SUBSTANCES.—In the case of substances added to the list of class I substances after the enactment of the Clean Air Act Amendments of 1990, the Administrator may extend the compliance deadlines in subsections (b) and (c) if the deadlines are unattainable. No such extension may extend the compliance deadline in subsection (b) to a date more than 4 years after the addition of the substance to the class I list, and no such extension may extend the compliance deadline under subsection (c) to a date more than 7 years after the date of addition of the substance to such list.

"(g) EXCHANGES.—The Administrator shall, within 18 months after the enactment of the Clean Air Act Amendments of 1990, promulgate rules under this part pursuant to which any person may produce a class I or class II substance in annual quantities greater than those specified pursuant to this section, section 154, or section 155 if such person acquires production allowances , directly or indirectly, from another person who will be subject, under such rules, to an enforceable and quantifiable reduction in the annual production of such substance which—

"(1) exceeds the reduction otherwise applicable to such other person under this part,

"(2) exceeds the production allowances transferred by such other person, and

"(3) would not have occurred in the absence of such transaction.

Such rules shall insure that the transactions under the authority of this subsection will result in greater total reductions in the annual production of substances covered by this part than would occur in the absence of such transactions.

"(h) EXCEPTION FOR EXPORT TO DEVELOPING COUNTRIES.—Notwithstanding the prohibition set forth in this section, the Administrator, after notice and opportunity for public comment, may authorize the production of limited quantities of a substance listed under subsection (a) of section 504 solely for export to and use in developing countries that are parties to the Montreal Protocol and are operating under article 5 of such Protocol. Any production authorized under this subsection shall be solely for purposes of satisfying the basic domestic needs of such countries.

"SEC. 154. PHASE OUT OF CLASS II SUBSTANCES.

"(a) REGULATIONS.—By December 31, 1999, the Administrator shall promulgate regulations phasing out the production and use of class II substances in accordance with this section, subject to any acceleration of the phase out under section 155.

"(b) PHASE OUT OF USE.—Effective January 1, 2015, it shall be unlawful for any person to produce or use any class II substance unless such substance—

"(1) has been used, recovered, and recycled;

"(2) is used and entirely consumed in the production of other chemicals; or

"(3) is used to maintain and service household and commercial appliances manufactured prior to January 1, 2015.

In the case of any class II substance with an atmospheric lifetime equal to or shorter than hydrochlorofluorocarbon-123, in applying this subsection, the date January 1, 2020 shall be substituted for the date January 1, 2015.

"(c) PRODUCTION PHASE OUT.—(1) Effective January 1, 2015, it shall be unlawful for any person to produce any class II substance in an annual quantity greater than the average annual quantity of such substance produced by such person during the baseline year.

"(2) Effective January 1, 2030, it shall be unlawful for any person to produce any class II substance. In the case of any class II substance with an atmospheric lifetime equal to or shorter than hydrochlorofluorocarbon-123, in applying this subsection, the date January 1, 2020 shall be substituted for the date January 1, 2015 and the date January 1, 2035 shall be substituted for the date January 1, 2030.

"(d) EXCEPTION.—

"(1) MEDICAL PURPOSES.—Notwithstanding the prohibitions set forth in subsections (b) and (c), the Administrator, after notice and opportunity for public comment, shall authorize the production and use of limited quantities of class II substances solely for purposes of use in medical devices if such authorization is determined by the Commissioner, in consultation with the Administrator, to be necessary for such purposes.

"(2) CAP ON EXCEPTIONS.—Under no circumstances may the authority set forth in paragraph (1) of this subsection be applied to authorize any person to produce a class II substance in annual quantities greater than 10 percent of that produced by such person during the baseline year.

"SEC. 155. ACCELERATED SCHEDULE.

"The Administrator shall promulgate regulations, after notice and opportunity for public comment, which establish a schedule for phasing out the production and use of substances covered by this part that is more stringent than set forth in section 153 or 154, or both, if—

"(1) based on the latest assessment of information regarding the harmful effects on the stratosphere which may be associated with a class I or class II substance, the Administrator determines that such more stringent schedule may be necessary to protect human health and the environment,

"(2) based on the availability of substitutes for a listed substance, the Administrator determines that such more stringent schedule is attainable, or

"(3) the Montreal Protocol is modified to include a schedule to control or reduce production or use of any substance more rapidly than the applicable schedule set forth in this part.

Any person may petition the Administrator to promulgate regulations under this section. The Administrator shall grant or deny the petition within 180 days after receipt of

*any such petition. If the Administrator denies the petition, he shall publish an explanation of why the petition was denied. If the Administrator grants such petition, such final regulations shall be promulgated within 1 year.*

*"SEC. 156. ALTERNATIVES.*

*"(a) REVIEWS AND REPORT.—(1) The Administrator shall initiate, not less than 30 days after enactment of the Clean Air Act Amendments of 1990, a review of relevant professional, technical, and scientific sources that may contain information concerning potential chemicals or product substitutes and alternative manufacturing processes that are potential replacements for class I substances. The Administrator shall report interim findings to the Congress no later than 12 months after enactment of the Clean Air Act Amendments of 1990. A final report shall be issued no later than 2 years after enactment of the Clean Air Act Amendments of 1990.*

*"(2) The report required under this section shall include the Administrator's findings with regard to each of the following:*

*"(A) The identity of potential replacement chemicals, product substitutes, or alternative production processes.*

*"(B) A chemical profile or an abstract that describes each replacement chemical and alternative production process identified in subparagraph (A) and any health or environmental hazards, including ozone-depletion potential associated with each.*

*"(C) The earliest date upon which each chemical and production process identified pursuant to subparagraph (A) can be available for commercial use.*

*"(3) The Administrator shall require any person who produces a chemical substitute to provide the Administrator with their unpublished health and safety studies on chemical substitutes for class I substances and require producers to notify the Administrator before existing chemicals are introduced into interstate commerce for significant new uses as substitutes for such substances.*

*"(4) The Administrator shall update the review required by this subsection every 2 years. Effective no more than 4 years after enactment of the Clean Air Act Amendments of 1990, potential alternatives to class II substances shall be included in the Administrator's annual review under this subsection.*

*"(b) REPLACEMENT.—Within 2 years after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate rules under this section applicable to the replacement of class I and class II ozone-depleting substances. Such rules shall require that replacement chemicals, product substitutes, and alternative production processes, products, and raw materials that reduce overall risks to human health and the environment are used, to the maximum extent practicable, for the replacement of such substances.*

*"(c) ALTERNATIVES FOR CLASS I SUBSTANCES.—The rules under this section shall provide that, not more than 2 years after enactment of the Clean Air Act Amendments of 1990, it shall be unlawful to replace any class I substance with any substitute substance which the Administrator determines may present adverse effects to human health or the environment, where the Administrator has identified an alternative to such replacement that—*

*"(1) reduces the overall risk to human health and the environment; and*

*"(2) is currently or potentially available.*

*The Administrator shall publish a list of (A) the substitutes prohibited under this subsection for specific uses and (B) the safe alternatives identified under this subsection for specific uses.*

*"(d) RIGHT TO PETITION.—Any person may petition the Administrator to add a substance to the lists under subsection (c) or to remove a substance from either of such lists. The Administrator shall grant or deny the petition within 90 days after receipt of any such petition. If the Administrator denies the petition, he shall publish an explanation of why the petition was denied. If the Administrator grants such petiton the Administrator shall publish such revised list within 6 months thereafter.*

*"SEC. 157. NATIONAL RECYCLING AND DISPOSAL PROGRAM.*

*"(a) IN GENERAL.—The Administrator shall, within 2 years after the enactment of the Clean Air Act Amendments of 1990, promulgate regulations establishing standards and requirements regarding the use and disposal of class I and II substances. Such standards and requirements shall become effective not later than 12 months after promulgation of the regulations. Such regulations shall include requirements that—*

*"(1) reduce the use and emission of such substances to the lowest achievable level, and*

*"(2) maximize the recapture and recycling of such substances. Such regulations may include requirements to use alternative substances (including substances which are not class I or class II substances) or to minimize use of class I or class II substances, or to promote the use of safe alternatives pursuant to section 156, or any combination of the foregoing.*

*"(b) SAFE DISPOSAL.—The regulations under subsection (a) shall establish standards and requirements for the safe disposal of class I and II substances. Such regulations shall include each of the following—*

*"(1) Requirements that class I or class II substances contained in bulk in appliances, machines or other goods (including but not limited to refrigerators and air conditioners) shall be removed from each such appliance, machine or other good prior to the disposal of such items or their delivery for recycling.*

*"(2) Requirements that any appliance, machine or other good containing a class I or class II substance in bulk shall not be manufactured, sold, or distributed in interstate commerce or offered for sale or distribution in interstate commerce unless it is equipped with a servicing aperture or an equally effective design feature which will facilitate the recapture of such substance during service and repair or disposal of such item.*

*"(3) Requirements that any product in which a class I or class II substance is incorporated so as to constitute an inherent element of such product shall be disposed of in a manner that reduces, to the maximum extent practicable, the release of such substance into the environment. If the Administrator determines that the application of this paragraph to any product would result in producing only insignificant environmental benefits, the Administrator shall include in such regulations an exception for such product.*

*"(d) PROHIBITION.—Effective 2 years after the enactment of the Clean Air Act Amendments of 1990, it shall be unlawful for any person, in the course of maintaining, servicing, repairing, or disposing of a household or commercial appliance, to knowingly vent or otherwise knowingly release or dispose of any class I or class II substance used as a refrigerant in such appliance in a manner which permits such substance to enter the environment. De minimis releases associated with good faith attempts to recapture and recycle or safely dispose of any such substance shall not be subject to the prohibition set forth in the preceding sentence.*

*"SEC. 158. SERVICING OF MOTOR VEHICLE AIR CONDITIONERS.*

*"(a) REGULATIONS.—Within 1 year after the enactment of the Clean Air Act Amendments of 1990, the Administrator shall promulgate regulations in accordance with this section establishing standards and requirements regarding the servicing of motor vehicle air conditioners.*

*"(b) DEFINITIONS.—As used in this section—*

*"(1) The term 'refrigerant' means any class I or class II substance used in a motor vehicle air conditioner.*

*"(2)(A) The term 'approved refrigerant recycling equipment' means equipment certified by the Administrator (or an independent standards testing organization approved by the Administrator) to meet the standards established by the Administrator and applicable to equipment for the extraction and reclamation of refrigerant from motor vehicle air conditioners. Such standards shall, at a minimum, be at least as stringent as the standards of the Society of Automotive Engineers in effect as of the date of the enactment of the Clean Air Act Amendments of 1990 and applicable to such equipment (SAE standard J-1990).*

*"(B) Equipment purchased before the proposal of regulations under this section shall be considered certified if it is substantially identical to equipment certified as provided in subparagraph (A).*

*"(3) The term 'properly using' approved refrigerant recycling equipment means using such equipment in conformity with standards established by the Administrator and applicable to the use of such equipment. Such standards shall, at a minimum, be at least as stringent as the standards of the Society of Automotive Engineers in effect as of the date of the enactment of the Clean Air Act Amendments of 1990 and applicable to the use of such equipment (SAE standard J-1989).*

*"(4) The term 'properly trained and certified' means training and certification in the proper use of approved refrigerant recycling equipment for motor vehicle air conditioners in conformity with standards established by the Administrator and applicable to the performance of service on motor vehicle air conditioners. Such standards shall, at a minimum, be at least as stringent as specified, as of the date of the enactment of the Clean Air Act Amendments of 1990 in SAE standard J-1989 under the certification program of the National Institute for Automotive Service Excellence (ASE) or under a similar program such as the training and certification program of the Mobile Air Conditioning Society (MACS).*

*"(b) SERVICING MOTOR VEHICLE AIR CONDITIONERS.—Effective 2 years after the enactment of the Clean Air Act Amendments of 1990, no person repairing or servicing motor vehicles for consideration may perform any service on a motor vehicle air conditioner involving the refrigerant for such air conditioner without properly using approved refrigerant recycling equipment and no such person may perform such service unless such person has been properly trained and certified. The requirements of the previous sentence shall not apply until the date 3 years after the enactment of the Clean Air Act*

*Amendments of 1990 in the case of a person repairing or servicing motor vehicles for consideration at an entity which performed service on fewer than 100 motor vehicle air conditioners during calendar year 1990 and if such person so certifies, pursuant to subsection (c)(2), to the Administrator by the date 2 years after the enactment of the Clean Air Act Amendments of 1990.*

*"(c) CERTIFICATION.—Effective 2 years after the enactment of the Clean Air Act Amendments of 1990, each person performing service on motor vehicle air conditioners shall certify to the Administrator either—*

*"(1) that such person has acquired, and is properly using, approved refrigerant recycling equipment in service on motor vehicle air conditioners involving refrigerant and that each individual authorized by such person to perform such service is properly trained and certified; or*

*"(2) that such person is performing such service at an entity which serviced fewer than 100 motor vehicle air conditioners in 1990.*

*Each certification under this subsection shall contain the name and address of the person and the serial number of each unit of approved recycling equipment acquired by such person and shall be signed by the owner or another responsible corporate officer. Certifications under paragraph (1) may be made by submitting the required information to the Administrator on a standard form provided by the manufacturer of certified refrigerant recycling equipment.*

*"SEC. 159. LABELING.*

*"(a) REGULATIONS.—The Administrator shall promulgate regulations to implement the labeling requirements of this section within 12 months after enactment of the Clean Air Act Amendments of 1990, after notice and opportunity for public comment.*

*"(b) CLASS I SUBSTANCES.—Effective 2 years after the enactment of the Clean Air Act Amendments of 1990, no container in which a class I substance is stored or transported, no product containing such substance, and no product manufactured with a process that uses a class I substance shall be introduced or reintroduced into interstate commerce unless it bears a clearly legible and conspicuous label stating either of the following, as appropriate:*

*"(1) 'Warning: Contains [insert name of substance], a substance which harms public health and environment by destroying ozone in the upper atmosphere'.*

*"(2) 'Warning: Manufactured with [insert name of substance], a substance which harms public health and environment by destroying ozone in the upper atmosphere'.*

*For purposes of any provision of law which requires the labeling of commodities, such a container shall be treated as lawfully labeled only if it complies with this subection.*

*"(c) CLASS II SUBSTANCES.—(1) The requirements of this section shall also apply to any container in which a class II substance is stored or transported, any product containing a class II substance, and any product manufactured with a process that uses a class II substance if the Administrator finds that there is an alternative for such substance or for the use of such substance (in the case of products containing, or manufactured with, the substance) and that such alternative—*

*"(A) reduces the overall risk to human health and the environment; and*

*"(B) is currently or potentially available.*

*"(2) Effective January 1, 2015, the requirements of this section shall apply to containers in which a class II substance is stored or transported, products containing a class II substance, and products manufactured with a process that uses a class II substance.*

*"(d) RELATIONSHIP TO OTHER LAW.—Neither the labeling requirement nor any other provision of this part, shall constitute, in whole or part, a defense to liability or a cause for reduction in damages in any suit, whether civil or criminal, brought under any law, whether Federal or State, other than a suit for failure to comply with the labeling requirements of this section.*

*"SEC. 159A. NONESSENTIAL PRODUCTS CONTAINING CHLOROFLUOROCARBONS.*

*"(a) REGULATIONS.—The Administrator shall promulgate regulations to carry out the requirements of this section within 1 year after the enactment of the Clean Air Act Amendments of 1990.*

*"(b) NONESSENTIAL PRODUCTS.—The regulations under this section shall identify nonessential products that release class I substances into the environment (including any release occurring during manufacture, use, storage, or disposal) and prohibit any person from selling or distributing any such product, or offering any such product for sale or distribution, in interstate commerce. At a minimum such regulations shall apply to chlorofluorocarbon-propelled plastic party streamers and noise horns, chlorofluorocarbon-containing cleaning fluids for noncommercial electronic and photographic equipment, and other consumer products that—*

*"(1) release class I substances into the environment (including any release occurring during manufacture, use, storage, or disposal), and*

*"(2) are determined by the Administrator not to be essential.*

*"(b) EFFECTIVE DATE.—Effective 24 months after the enactment of the Clean Air Act Amendments of 1990, it shall be unlawful for any person to sell or distribute, or offer for sale or distribution, in interstate commerce any nonessential product to which regulations under subsection (a) are applicable.*

*"(c) OTHER PRODUCTS.—Effective January 1, 1994, it shall be unlawful for any person to sell or distribute, or offer for sale or distribution, in interstate commerce—*

*"(1) any aerosol product or other pressurized dispenser which contains a class II substance; or*

*"(2) any plastic foam product (other than a foam insulation product) which contains, or is manufactured with, a class II substance.*

*"(d) SMALL CONTAINERS OF CLASS I OR CLASS II SUBSTANCES.—Effective 2 years after the date of the enactment of the Clean Air Act Amendments of 1990, it shall be unlawful for any person to sell or distribute, or offer for sale or distribution, in interstate commerce to any person (other than a person performing service for consideration on motor vehicle air-conditioning systems in compliance with section 158) any class I or class II substance that is suitable for use as a refrigerant in a motor vehicle air-conditioning system and that is in a container which contains less than 20 pounds of such refrigerant.*

*"(e) MEDICAL DEVICES.—Nothing in this section shall apply to any medical device as defined in section 150.*

*"SEC. 159B. FEDERAL PROCUREMENT.*

*"Not later than 1 year after the enactment of the Clean Air Act Amendments of 1990, the Administrator, in consultation with the Administrator of the General Services Administration, shall promulgate regulations requiring each department, agency, and instrumentality of the United States to conform its procurement regulations to the policies and requirements of this part and to maximize the substitution of safe alternatives identified in section 156 for class I and class II substances.*

*"SEC. 159C. FEDERAL ENFORCEMENT.*

*"The provisions of sections 113, 114, 116, and 304 shall apply for purposes of this part in the same manner and to the same extent as such provisions apply for purposes of enforcement of a standard under section 111, and for purposes of such provisions a violation of any requirement of this part (or of any regulation under this part) shall be treated as a violation of section 111(e). For purposes of sections 116 and 118, the requirements of this part shall be treated as requirements for the control and abatement of air pollution.*

*"SEC. 159D. INTERNATIONAL COOPERATION.*

*"The Administrator, in consultation with the Secretary of State, shall support global participation in the Montreal Protocol by providing technical and financial assistance to developing countries that are parties to the Montreal Protocol and operating under article 5 of the Protocol. There are authorized to be appropriated not more than $30,000,000 to carry out this section in fiscal years 1991, 1992 and 1993.*

*"SEC. 159E. STATE LAWS CONCERNING HOUSEHOLD AND COMMERCIAL APPLIANCE DESIGN.*

*"During the 2-year period beginning on the enactment of the Clean Air Act Amendments of 1990, no State or local government may enforce any requirement concerning the design of any new or recalled household and commercial appliance for the purpose of protecting the stratospheric ozone layer.".*

*(b) CONFORMING AMENDMENTS.—Section 157 is amended by striking subsection (b), striking in subsection (a) the words "any time prior to the submission of the final report referred to in section 155", and by redesignating such section as section 159G.*

*SEC. 712. OCS AIR POLLUTION.*

*Title III of the Clean Air Act is amended by adding the following new section after section 327:*

*"SEC. 328. AIR POLLUTION FROM OUTER CONTINENTAL SHELF ACTIVITIES.*

*"(a)(1) APPLICABLE REQUIREMENTS FOR CERTAIN AREAS.—Not later than 12 months after the enactment of the Clean Air Act Amendments of 1990, following consultation with the Secretary of the Interior and the Commandant of the United States Coast Guard, the Administrator, by rule, shall establish requirements to control air pollution from Outer Continental Shelf sources located offshore of the States along the Pacific, Arctic and Atlantic Coasts, and along the United States Gulf Coast off the State of Florida eastward of longitude 87 degrees and 30 minutes ('OCS sources') to attain and maintain Federal and State ambient air quality standards and to comply with the provisions of part C of title I. For such sources located within 25 miles of the seaward boundary of such States, such requirements shall be the same as would be applicable if the source were located in the corresponding onshore area, and shall include, but not be limited to, State and local requirements for emission controls, emission limitations, offsets, permitting, monitoring, testing, and reporting. New OCS sources shall comply with such requirements on the date of promulgation and existing OCS sources shall comply on the date 12 months thereafter. The Administrator shall update such requirements as necessary to maintain consistency with*

onshore regulations. The authority of this subsection shall supersede section 5(a)(8) of the Outer Continental Shelf Lands Act but shall not repeal or modify any other Federal, State, or local authorities with respect to air quality. Each requirement established under this section shall be treated, for purposes of sections 113, 114, 116, 120, and 304, as a standard under section 111 and a violation of any such requirement shall be considered a violation of section 111(e).

"(2) EXEMPTIONS.—The Administrator may exempt an OCS source from a specific requirement in effect under regulations under this subsection if the Administrator finds that compliance with a pollution control technology requirement is technically infeasible or will cause an unreasonable threat to health and safety. The Administrator shall make written findings explaining the basis of any exemption issued pursuant to this subsection and shall impose another requirement equal to or as close in stringency to the original requirement as possible. The Administrator shall ensure that any increase in emissions due to the granting of an exemption is offset by reductions in actual emissions, not otherwise required by this Act, from the same source or other sources in the area or in the corresponding onshore area. The Administrator shall establish procedures to provide for public notice and comment on exemptions proposed pursuant to this subsection.

"(3) STATE PROCEDURES.—Each State adjacent to an OCS source included under this subsection may promulgate and submit to the Administrator regulations for implementing and enforcing the requirements of this subsection. If the Administrator finds that the State regulations are adequate he shall delegate to that State any authority he has under this Act to implement and enforce such requirements. Nothing in this subsection shall prohibit the Administrator from enforcing any requirement of this section.

"(4) DEFINITIONS.—For purposes of subsections (a) and (b)—

"(A) OUTER CONTINENTAL SHELF.—The term 'Outer Continental Shelf' has the meaning provided by section 2 of the Outer Continental Shelf Lands Act (43 U.S.C. 1331).

"(B) CORRESPONDING ONSHORE AREA.—The term 'corresponding onshore area' means, with respect to any OCS source, the onshore attainment or nonattainment area that is closest to the source, unless the Administrator determines that another area with more stringent requirements with respect to the control and abatement of air pollution may reasonably be expected to be affected by such emissions. Such determination shall be based on the potential for air pollutants from the OCS source to reach the other onshore area and the potential of such air pollutants to affect the efforts of the other onshore area to attain or maintain any Federal or State ambient air quality standard or to comply with the provisions of part C of title I.

"(C) OUTER CONTINENTAL SHELF SOURCE.—The terms 'Outer Continental Shelf source' and 'OCS source' include any equipment, activity, or facility which—

"(i) emits or has the potential to emit any air pollutant,

"(ii) is regulated or authorized under the Outer Continental Shelf Lands Act, and

"(iii) is located on the Outer Continental Shelf or in or on waters above the Outer Continental Shelf.

Such activities include, but are not limited to, platform and drill ship exploration, construction, development, production, processing, and transportation. For purposes of this subsection, emissions from any vessel servicing or associated with an OCS source, including emissions while at the OCS source or en route to or from the OCS source within 25 miles of the OCS source, shall be considered direct emissions from the OCS source.

"(D) NEW AND EXISTING OCS SOURCES.—The term 'new OCS source' means an OCS source which is a new source within the meaning of section 111(a). The term 'existing OCS source' means any OCS source other than a new OCS source.

"(b) REQUIREMENTS FOR OTHER OFFSHORE AREAS.—For portions of the United States Gulf Coast Outer Continental Shelf that are adjacent to the States not covered by subsection (a) which are Texas, Louisiana, Mississippi, and Alabama, the Secretary shall consult with the Administrator to assure coordination of air pollution control regulation for Outer Continental Shelf emissions and emissions in adjacent onshore areas. Concurrently with this obligation, the Secretary shall complete within 3 years of enactment of this section a research study examining the impacts of emissions from Outer Continental Shelf activities in such areas that fail to meet the national ambient air quality standards for either ozone or nitrogen dioxide. Based on the results of this study, the Secretary shall, consult with the Administrator, and determine if any additional actions are necessary. There are authorized to be appropriated such sums as may be necessary to provide funding for the study required under this section.

"(c)(1) COASTAL WATERS.—The study report of section 112(n) of the Clean Air Act shall apply to the coastal waters of the United States to the same extent and in the same manner as such requirements apply to the Great Lakes, the Chesapeake Bay, and their tributary waters.

"(2) The regulatory requirements of section 112(n) of the Clean Air Act shall apply to the coastal waters of the States which are subject to subsection (a) of this section, to the same extent and in the same manner as such requirements apply to the Great Lakes, the Chesapeake Bay, and their tributary waters.".

SEC. 713. AUTHORIZATION.

Section 327 is amended to read as follows:

"SEC. 327. AUTHORIZATION OF APPROPRIATIONS.

"(a) IN GENERAL.—There are authorized to be appropriated to carry out this Act such sums as may be necessary.

"(b) GRANTS FOR PLANNING.—There are authorized to be appropriated (1) not more than $50,000,000 to carry out section 175 beginning in fiscal year 1991, to be available until expended, to develop plan revisions required by subpart 2, 3, or 4 of part D of title I, and (2) not more than $15,000,000 for each of the fiscal years 1991, 1992, and 1993 to make grants to the States to prepare implementation plans as required by subpart 2, 3, or 4 of part D of title I.".

SEC. 714. HYDROGEN FUEL CELL VEHICLE STUDY AND TEST PROGRAM.

The Administrator of the Environmental Protection Agency, in conjunction with the National Aeronautics and Space Administration, and the Department of Energy shall conduct a study and test program on the development of a hydrogen fuel cell electric vehicle. The study and test program shall determine how best to transfer existing NASA hydrogen fuel cell technology into the form of a mass-producible, cost effective hydrogen fuel cell vehicle. Such study and test program shall include at a minimum a feasibility-design study, the construction of a prototype, and a demonstration. This study and test program should be completed and a report submitted to Congress within 3 years after the enactment of the Clean Air Act Amendments of 1990. This study and test program should be performed in the university or universities which are best exhibiting the facilities and expertise to develop such a fuel cell vehicle.

SEC. 715. INFORMATION GATHERING ON GREENHOUSE GASES CONTRIBUTING TO GLOBAL CLIMATE CHANGE.

(a) MONITORING.—The Administrator of the Environmental Protection Agency shall promulgate regulations within 18 months after the enactment of the Clean Air Act Amendments of 1990 to require that all affected sources subject to title V of the Clean Air Act shall also monitor carbon dioxide emissions according to the same timetable as in section 511 (b) and (c). The regulations shall require that such data be reported to the Administrator. The provisions of section 511(e) of title V of the Clean Air Act shall apply for purposes of this section in the same manner and to the same extent as such provision applies to the monitoring and data referred to in section 511.

(b) PUBLIC AVAILABILITY OF CARBON DIOXIDE INFORMATION.—For each unit required to monitor and provide carbon dioxide data under subsection (a) the Administrator shall compute the unit's aggregate annual total carbon dioxide emissions, incorporate such data into a computer data base, and make such aggregate annual data available to the public.

## TITLE VIII—OTHER PROVISIONS

Sec. 801. Establishment of program to monitor and improve air quality in regions along the border between the United States and the United States of Mexico.
Sec. 802. Equivalent air quality controls among trading nations.
Sec. 803. Report on costs and benefits.
Sec. 804. United States-Mexico office within EPA.
Sec. 805. Combustion of contaminated used oil in ships.
Sec. 806. American made products.

SEC. 801. ESTABLISHMENT OF PROGRAM TO MONITOR AND IMPROVE AIR QUALITY IN REGIONS ALONG THE BORDER BETWEEN THE UNITED STATES AND THE UNITED STATES OF MEXICO.

(a) IN GENERAL.—The Administrator of the Environmental Protection Agency (hereinafter referred to as the "Administrator") is authorized, in cooperation with the Department of State and the affected States, to negotiate with representatives of the United States of Mexico to establish a program to monitor and improve air quality in regions directly along the border between the United States and the United States of Mexico. The program established under this section shall be conducted for a period of 60 months beginning on July 1, 1990.

(b) MONITORING AND REMEDIATION.—

(1) MONITORING.—The monitoring component of the program conducted under this section shall identify and determine sources of pollutants for which National ambient air quality standards (hereinafter referred to as "NAAQS") and other air quality goals have been established in regions along the border between the United States and the United States of Mexico. Such monitoring component of the program shall include, but not be limited to, the collection of meteorological data, the measurement of air quality, the compilation of an emissions inventory,

and shall be sufficient to the extent necessary to successfully support the use of a state-of-the-art mathematical air modeling analysis. Such monitoring component of the program shall collect and produce data projecting the level of emission reductions necessary in both the United States of Mexico and the United States to bring about attainment of both primary and secondary NAAQS, and other air quality goals, in regions along the border in the United States. Such monitoring component of the program shall include to the extent possible, data from monitoring programs undertaken by other parties.

(2) REMEDIATION.—The Administrator, in cooperation with the Department of State is authorized to negotiate with appropriate representatives of the United States of Mexico to develop joint remediation measures to reduce the level of airborne pollutants to achieve and maintain primary and secondary NAAQS, and other air quality goals, in regions along the border between the United States and the United States of Mexico. Such joint remediation measures may include, but not be limited to measures included in the Environmental Protection Agency's Control Techniques and Control Technology documents. Such remediation program shall also identify those control measures implementation of which in the United States of Mexico would be expedited by the use of material and financial assistance of the United States. With respect to those control measures identified as requiring funding of the United States for projects within the United States of Mexico, the Administrator shall attempt to the maximum extent practicable to utilize resources of the United States of Mexico that would offset costs of the United States in implementing joint remediation measures under this section. Such joint remediation measures shall be included as enforceable control strategies in the state implementation plan for the respective nonattainment area.

(c) STUDY AND REPORTS.—

(1) GAO STUDY.—The Comptroller General of the General Accounting Office shall, conduct a study and issue a report to Congress not later than January 1, 1994, on the program conducted under this section. Such study shall—

(A) summarize the project to date,

(B) make recommendations on ways to improve the program; and

(C) make recommendations on the advisability of continuing the program or expanding the program to include Canada and other nations.

(2) REPORT OF ADMINISTRATOR.—The Administrator shall, not later than July 1, 1991, and each year thereafter during the operation of the program described in this section, report to Congress on the progress of the program in bringing nonattainment areas along the border of the United States into attainment with primary and secondary NAAQS. The report issued by the Administrator under this paragraph shall include recommendations on funding mechanisms to assist in implementation of monitoring and remediation efforts.

(d) FUNDING AND PERSONNEL.—The Administrator shall, where necessary, make available, subject to appropriation Acts, such funds, personnel, and equipment as may be necessary to implement the provisions of this section. In those cases where direct financial assistance of the United States is provided to implement monitoring and remediation programs in the United States of Mexico, the Administrator shall develop grant agreements with appropriate representatives of the United States of Mexico to assure the accuracy and completeness of monitoring data and the performance of remediation measures which are financed by the United States. Such funding agreements, subject to appropriation Acts, shall include authorization for the Administrator to—

(1) review and agree to plans for monitoring and remediation;

(2) inspect premises, equipment and records to insure compliance with the agreements established under and the purposes set forth in this section; and

(3) where necessary, develop grant agreements with affected States to carry out the provisions of the section.

(e) CONSIDERATION OF FACTORS IN NONATTAINMENT AREAS.—When approving state implementation plans for nonattainment areas (as defined in section 171(2) (42 U.S.C. 7501(2)), the Administrator shall take into account the impacts of the sources of pollutants coming from the United States of Mexico and the role of the United States in developing monitoring and remediation plans with the United States of Mexico to bring about attainment of both primary and secondary NAAQS and other air quality goals in regions along the border in the United States.

SEC. 802. EQUIVALENT AIR QUALITY CONTROLS AMONG TRADING NATIONS.

(a) FINDINGS.—The Congress finds that—

(1) all nations have the responsibility to adopt and enforce effective air quality standards and requirements and the United States, in enacting this Act, is carrying out its responsibility in this regard;

(2) as a result of complying with this Act, businesses in the United States will make significant capital investments and incur incremental costs in implementing control technology standards;

(3) such compliance may impair the competitiveness of certain United States jobs, production, processes, and products if foreign goods are produced under less costly environmental standards and requirements than are United States goods; and

(4) mechanisms should be sought through which the United States and its trading partners can agree to eliminate or reduce competitive disadvantages.

(b) ACTION BY THE PRESIDENT.—

(1) IN GENERAL.—Within 18 months after the date of the enactment of the Clean Air Act Amendments of 1990, the President shall submit to the Congress a report—

(A) identifying and evaluating the economic effects of—

(i) the significant air quality standards and controls required under this Act, and

(ii) the differences between the significant standards and controls required under this Act and similar standards and controls adopted and enforced by the major trading partners of the United States,

on the international competitiveness of United States manufacturers; and

(B) containing a strategy for addressing such economic effects through trade consultations and negotiations.

(2) ADDITIONAL REPORTING REQUIREMENTS.—(A) The evaluation required under paragraph (1)(A) shall examine the extent to which the significant air quality standards and controls required under this Act are comparable to existing internationally-agreed norms.

(B) The strategy required to be developed under paragraph (1)(B) shall include recommended options (such as the harmonization of standards and trade adjustment measures) for reducing or eliminating competitive disadvantages caused by differences in standards and controls between the United States and each of its major trading partners.

(3) PUBLIC COMMENT.—Interested parties shall be given an opportunity to submit comments regarding the evaluations and strategy required in the report under paragraph (1). The President shall take any such comment into account in preparing the report.

(4) INTERIM REPORT.—Within 9 months after the date of the enactment of the Clean Air Act Amendments of 1990, the President shall submit to the Congress an interim report on the progress being made in complying with paragraph (1).

SEC. 803. REPORT ON COSTS AND BENEFITS.

Commencing on the second year after the date of the enactment of the Clean Air Act Amendments of 1990 and annually thereafter, the Comptroller General of the General Accounting Office, in consultation with other agencies, such as the Environmental Protection Agency, the Department of Labor, the Department of Commerce, the United States Trade Representative, the National Academy of Sciences, the Office of Technology Assessment, the National Academy of Engineering, the Council on Environmental Quality, and the Surgeon General, shall provide a report to the Congress on the incremental human health and environmental benefits, and incremental costs beyond current clean air requirements of the new control strategies and technologies required by this Act. The report shall include, for such strategies and technologies, an analysis of the actual emissions reductions beyond existing practice, the effects on human life, human health and the environment (including both positive impacts and those that may be detrimental to jobs and communities resulting from loss of employers and employment, etc.), the energy security impacts, and the effect on United States products and our industrial competitiveness in national and international markets.

SEC. 804. UNITED STATES-MEXICO OFFICE WITHIN EPA.

Title III is amended by inserting the following after section 325:

"SEC. 325A. UNITED STATES-MEXICO AIR QUALITY.

"(a) ESTABLISHMENT OF OFFICE.—In coordination with the Secretary of State, the Administrator shall establish in the Office of International Activities a United States-Mexico Air Quality Office to be under the direction of a Director for United-States-Mexico Air Quality affairs (hereinafter in this section referred to as the Director).

"(b) DUTIES OF DIRECTOR.—In addition to such other air quality duties as may be delegated to the Director, the Director shall have the responsibility to carry out each of the following:

"(1) A binational study of the prospects in Mexico for clean fuel automobiles and clean fuels (especially natural gas given Mexico's competitive advantage in this area).

"(2) A study on the possibility of standardized regulations between the United States and Mexico on air quality to contribute to greater coordination between the two jurisdictions.".

SEC. 805. COMBUSTION OF CONTAMINATED USED OIL IN SHIPS.

Within 2 years after the enactment of the Clean Air Act Amendments of 1990, the Administrator of the Environmental Protection Agency shall complete a study and submit a report to Congress evaluating the

health and environmental impacts of the combustion of contaminated used oil in ships, the reasons for using such oil for such purposes, the alternatives to such use, the costs of such alternatives, and other relevant factors and impacts. In preparing such study, the Administrator shall obtain the view and comments of all interested persons.

SEC. 806. AMERICAN MADE PRODUCTS.

It is the sense of the Congress that—

(1) existing equipment and machinery retrofitted to comply with the Clean Air Act's "Best Available Control Technology" language and all other specifications within the Act be produced in the United States and purchased from American manufacturers.

(2) The construction of new industrial and utility facilities comply to the Act's specifications through the incorporation of American made equipment and technology.

(3) Individuals, groups, and organizations in the public sector strive to purchase and produce American made products that improve our nation's air quality.

TITLE IX—CLEAN AIR RESEARCH

SEC. 901. Clean air research.

SEC. 901. CLEAN AIR RESEARCH.

(a) REFERENCES IN TEXT.—Unless otherwise specified, references in the text of this section to sections or other provisions are references to sections or other provisions of the Clean Air Act (42 U.S.C. 7401 et seq.).

(b) RESEARCH AND DEVELOPMENT PROGRAM.—Section 103(b) is amended—

(1) in paragraph (6) by striking "and" after "control thereof;";

(2) in paragraph (7) by striking the period and inserting in lieu thereof "; and"; and

(3) by adding at the end the following new paragraph:

"(8) construct such facilities and employ staff as are necessary to carry out this Act.".

(c) AIR POLLUTANT MONITORING AND EMISSIONS INVENTORIES.—Section 103(c) is amended to read as follows:

"(c) AIR POLLUTANT MONITORING AND INVENTORIES.—In carrying out subsection (a), the Administrator shall conduct a program of research, testing, and development of methods for sampling, measurement, monitoring, analysis, and modeling of air pollutants, including precursors of acid deposition. Such program shall include the following elements:

"(1) Consideration of individual, as well as complex mixtures of, air pollutants and their chemical transformations in the atmosphere.

"(2) Development of improved monitoring and modeling techniques to increase understanding of the sources of acid aerosols and the precursors of acid deposition.

"(3) Establishment of a national network to monitor, collect, and compile data with quantification of certainty in the status and trends of air emissions, deposition, air quality, surface water quality, forest condition, and visibility impairment, and to ensure the comparability of air quality data collected in different States and obtained from different nations.

"(4) Development of necessary instrumentation and quality assurance protocols for continuous monitoring of precursors of acid deposition.

"(5) The Administrator, in consultation with the Federal Coordinating Council for Science, Engineering, and Technology, shall oversee an experimental and analytical research effort, with the experimental research to be carried out at the Liquefied Gaseous Fuels Spill Test Facility. In consultation with scientists at Lawrence Livermore National Laboratories, the Administrator shall develop a list of chemicals and a schedule for field testing. Analysis of a minimum of 10 chemicals per year shall be carried out, with the selection of a minimum of one chemical for field testing each year. Highest priority shall be given to those chemicals that would present the greatest potential risk to human health as a result of an accidental release from a fixed site or related to the transport of such chemicals. The purpose of such research shall be to—

"(A) develop improved predictive models for atmospheric dispersion which at a minimum—

"(i) describe dense gas releases in complex terrain with variable winds;

"(ii) improve understanding of the effects of turbulence on dispersion patterns; and

"(iii) consider realistic behavior of aerosols by including physicochemical reactions with water vapor, ground deposition, and removal by water spray;

"(B) evaluate existing and future atmospheric dispersion models by—

"(i) the development of a rigorous, standardized methodology for dense gas models; and

"(ii) the application of such methodology to current dense gas dispersion models using data generated from field experiments; and

"(C) evaluate the effectiveness of hazard mitigation and emergency response technology for fixed site and transportation related accidental releases of toxic chemicals.

Models pertaining to accidental release shall be evaluated and improved periodically for their utility in planning and implementing evacuation procedures and other mitigative strategies designed to minimize human exposure to hazardous air pollutants released accidentally.

"(6) Development of improved monitoring and modeling techniques to increase understanding of the sources of ozone precursors, ozone formation, ozone transport, regional influences on urban ozone, regional ozone trends, and interactions of ozone with other pollutants. Emphasis shall be placed on those techniques which—

"(A) improve the ability to inventory emissions of volatile organic compounds and nitrogen oxides that contribute to urban air pollution, including anthropogenic and natural sources;

"(B) improve the understanding of the mechanism through which anthropogenic and biogenic volatile organic compounds react to form ozone and other oxidants; and

"(C) improve the ability to identify and evaluate region-specific prevention and control options for ozone pollution.

"(7) Periodic reports to the Congress which evaluate and assess the effectiveness of air pollution control regulations and programs using monitoring and modeling data collected pursuant to this subsection.

"(8) Opportunities for participation by industry, public interest groups, scientists, and other interested parties on the development of air pollution models under this subsection.".

(d) HEALTH EFFECTS.—Section 103(d) is amended to read as follows:

"(d) HEALTH EFFECTS.—(1) The Administrator shall conduct a research program on the short- and long-term effects of air pollutants on human health, including the effects of acid deposition and acid aerosols. In conducting such research program the Administrator—

"(A) shall conduct studies, including epidemiological, clinical, and laboratory studies, as necessary to identify and evaluate effects of air pollutants on human health;

"(B) may utilize, on a reimbursable basis, the facilities of existing Federal scientific laboratories and research centers; and

"(C) shall consult with other appropriate Federal agencies to ensure that similar research being conducted in other agencies is coordinated and is not duplicative.

"(2) In conducting the research program under this subsection, the Administrator shall develop methods and techniques necessary to identify and assess the risks to human health from both routine and accidental exposures to individual air pollutants and combinations thereof. Such research program shall include the following elements:

"(A) The creation of an Interagency Task Force to coordinate such program. The Task Force shall include representatives of the National Institute for Environmental Health Sciences, the Environmental Protection Agency, the Agency for Toxic Substances and Disease Registry, the National Toxicology Program, the National Institute of Standards and Technology, the National Science Foundation, and the Department of Energy. This Interagency Task Force shall be chaired by a representative of the Environmental Protection Agency and shall convene its first meeting within 60 days after the date of enactment of this subparagraph.

"(B) An evaluation, within 12 months after the date of enactment of this paragraph, of each of the hazardous air pollutants listed under section 112(b) of this Act, to decide, on the basis of available information, their relative priority for preparation of environmental health assessments pursuant to subparagraph (C). The evaluation shall be based on reasonably anticipated toxicity to humans and exposure factors such as frequency of occurrence as an air pollutant and volume of emissions in populated areas. Such evaluation shall be reviewed by the Interagency Task Force established pursuant to subparagraph (A).

"(C) Preparation of environmental health assessments for each of the hazardous air pollutants referred to in subparagraph (B), beginning 6 months after the first meeting of the Interagency Task Force and to be completed within 60 months thereafter. No fewer than 38 assessments shall be published annually. The assessments shall be prepared in accordance with guidelines developed by the Administrator in consultation with the Interagency Task Force and the Science Advisory Board of the Environmental Protection Agency. Each such assessment shall include—

"(i) an examination, summary, and evaluation of available toxicological and epidemiological information for the pollutant to ascertain the levels of human exposure which pose a significant threat to human health and the associated acute, subacute, and chronic adverse health effects;

"(ii) a determination of gaps in available information related to human health effects and exposure levels; and

"(iii) where appropriate, an identification of additional activities, including toxicological testing, needed to identify the types or levels of exposure which may present significant risk of adverse health effects in humans.".

(e) ECOSYSTEM STUDIES.—Section 103(f) is amended to read as follows:

"(f) ECOSYSTEM STUDIES.—In carrying out subsection (a), the Administrator shall conduct a research program to improve understanding of the causes, effects, and trends of

ecosystems damage from air pollutants, including acid deposition. Such program shall include the following elements:

"(1) Identification of regionally representative and critical ecosystems for research.

"(2) Evaluation of risks to ecosystems exposed to air pollutants, including characterization of the causes and effects of chronic and episodic exposures to air pollutants and determination of the reversibility of those effects.

"(3) Development of improved atmospheric dispersion models and monitoring systems and networks for evaluating and quantifying exposure to and effects of multiple environmental stresses associated with air pollution.

"(4) Evaluation of the effects of air pollution on water quality, including assessments of the short- and long-term ecological effects of acid deposition and other atmospherically derived pollutants on surface water (including wetlands and estuaries) and groundwater.

"(5) Evaluation of the effects of air pollution, including acid deposition, on forests, materials, crops, and other terrestrial and aquatic systems exposed to air pollutants.

"(6) Estimation of the ecological damages and their associated costs which have occurred as a result of exposure to air pollutants.".

(f) POLLUTION PREVENTION AND EMISSIONS CONTROL; COORDINATION OF RESEARCH; AND ACID DEPOSITION RESPONSE.—Section 103 is amended by inserting after subsection (f) the following:

"(g) POLLUTION PREVENTION AND EMISSIONS CONTROL.—In carrying out subsection (a), the Administrator shall conduct a basic engineering research and technology program to develop, evaluate, and demonstrate strategies and technologies for air pollution prevention, including the prevention of acid deposition. Such strategies and technologies shall be developed especially for those pollutants which pose a significant risk to human health and the environment, and may include nontechnological strategies for pollution prevention. Such program shall include the following elements:

"(1) Improvements in strategies and technologies for simultaneously reducing multiple air pollutants from fossil fuel power plants and other combustion facilities including sulfur oxides, nitrogen oxides, heavy metals, PM-10 (particulate matter), carbon monoxide, and carbon dioxide. Such strategies and technologies shall include—

"(A) improvements in the relative cost effectiveness and long-range implications of various air pollutant reduction and control strategies such as flue gas desulfurization, clean coal technologies (including retrofit control technologies for sulfur oxides and nitrogen oxides such as in-duct injection, LIMB, and spray-dry scrubbing processes), energy conservation including end-use efficiency, and fuel-switching to cleaner fuels such as natural gas; and

"(B) improvements in methods for training personnel employed by fossil fuel power plants and other combustion facilities.

"(2) Improvements in air pollution prevention strategies and technologies, especially those which simultaneously prevent multiple air pollutant emissions, for stationary sources other than fossil fuel power plants. Such strategies and technologies shall be considered for existing and new facilities, and shall to the extent possible be considered as part of the design process for new facilities.

"(3) Improvements in strategies and technologies for preventing air emissions from mobile sources, including development of, and evaluation of the relative cost effectiveness of, methods for reducing emissions of carbon dioxide from mobile sources.

"(4) Improvements in strategies and technologies for preventing air emissions from nonpoint pollution sources.

"(5) Improvements in strategies and technologies for preventing, detecting, and correcting accidental releases of hazardous air pollutants.

"(6) An analysis of the relative costs and benefits of tire disposal methods, including a comparison of waste-to-energy methods to alternatives such as asphalt rubber and polymer treatment of ground rubber, and the promotion of improvements in strategies and technologies that dispose of tires in ways that avoid adverse air quality impacts.

Nothing in this subsection shall be construed to authorize the imposition on any person of air pollution control requirements. The Administrator shall consult with other appropriate Federal agencies to ensure coordination and to avoid duplication of activities authorized under this subsection.

"(h) COORDINATION OF RESEARCH.—The Administrator shall develop and implement a plan for identifying areas in which activities authorized under subsections (c), (d), (f), and (g) can be carried out in conjunction with other Federal ecological and air pollution research efforts. The plan, which shall be submitted to Congress within 6 months after the date of enactment of this subsection, shall include—

"(1) an assessment of ambient monitoring stations and networks to determine cost effective ways to expand monitoring capabilities in both urban and rural environments, including monitoring of air pollutants and other airborne chemicals of concern;

"(2) a consideration of the extent of the feasibility and scientific value of conducting the research program under subsection (e) to include consideration of the effects of atmospheric processes and air pollution effects; and

"(3) a methodology for evaluating and ranking pollution prevention technologies, such as those developed under subsection (f), in terms of their ability to reduce cost effectively the emissions of air pollutants and other airborne chemicals of concern.

Not later than 2 years after the date of enactment of this subsection, and every 2 years thereafter, the Administrator shall report to Congress on the progress made in implementing the plan developed under this subsection, and shall include in such report any revisions of the plan.

"(i) ACID DEPOSITION RESPONSE ACTION.—(1) The President shall submit to the Congress, within 6 months after the date of enactment of this subsection, a plan describing activities and assigning responsibilities for Federal research on acid deposition, and including coordination of the activities of the Administrator under this subsection.

"(2) The President shall develop, and submit to the Congress within 1 year after the date of enactment of this subsection, an assessment framework for reporting complicated technical information about acid deposition in a manner useful to policymakers and the public to assist in formulating a response. Such framework should include guidelines for the reporting of—

"(A) actual and projected annual emissions trends;

"(B) actual and projected acid deposition trends;

"(C) effects of such deposition, including changes in the chemistry of surface water quality and forest conditions related to acid deposition;

"(D) average ambient concentrations of acid deposition precursors and their transformation products; and

"(E) descriptions of the confidence level associated with each conclusion to aid policymakers in using the information.

"(3) The President shall provide Congress with a report that delineates research activities and results in accordance with the framework provided for in paragraph (2), two years after the date of enactment of this subsection, with updates biennially thereafter.

"(4) On the basis of the information provided in the updated assessments, the President shall report to Congress on the reduction in deposition rates that must be achieved in order to prevent adverse ecological effects.".

(g) MISCELLANEOUS.—(1) Section 104 is amended by striking "low-cost" each place it appears and inserting in lieu thereof "cost-effective".

(2) Section 104(c) is amended to read as follows:

"(c) CLEAN ALTERNATIVE FUELS.—The Administrator shall conduct a research program to identify, characterize, and predict air emissions and other potential environmental effects related to the production, distribution, storage, and use of clean alternative fuels to determine the risks and benefits to human health and the environment relative to those from using gasoline and diesel fuels. The Administrator shall consult with other appropriate Federal agencies to ensure coordination and to avoid duplication of activities authorized under this subsection.".

(h) ASSESSMENT OF INTERNATIONAL AIR POLLUTION CONTROL TECHNOLOGIES.—The Administrator of the Environmental Protection Agency shall conduct a study that compares international air pollution control technologies of selected industrialized countries to determine if there exist air pollution control technologies in countries outside the United States that may have beneficial applications to this Nation's air pollution control efforts. With respect to each country studied, the study shall include the topics of urban air quality, motor vehicle emissions, toxic air emissions, and acid deposition. The Administrator shall, within 2 years after the date of enactment of this Act, submit to the Congress a report detailing the results of such study.

(i) ADIRONDACK DESTRUCTION ASSESSMENT.—The Administrator of the Environmental Protection Agency shall establish a program to research the effects of acid deposition on waters where acid deposition have been most acute. The Administrator shall enter into a multi-year contract for such purposes with an independent university which has a year-round field analytical laboratory on a body of water of not less than 25,000 acres nor greater than 75,000 acres, which lies within a geographic region designated as a Biosphere Reserve by the Department of State. The facility must have demonstrated the capability to analyze relevant data on said body of water over a period of 20 years as well as extensive ecosystem modeling capabilities. There is authorized to be appropriated to carry out this subsection not less than $6,000,000.

### TITLE X—DISADVANTAGED BUSINESS CONCERNS

Sec. 1001. Disadvantaged business concerns.
Sec. 1002. Use of quotas prohibited.

*SEC. 1001. DISADVANTAGED BUSINESS CONCERNS.*

*(a) IN GENERAL.—In providing for any research relating to the requirements of the amendments made by the Clean Air Act Amendments of 1990 which uses funds of the Environmental Protection Agency, the Administrator of the Environmental Protection Agency shall require that each contract which is to be entered into for such research provides that not less than 10 percent of such research will be conducted by a disadvantaged business concern.*

*(b) DEFINITION.—*

*(1)(A) For purposes of subsection (a), the term "disadvantaged business concern" means a concern—*

*(i) which is at least 51 percent owned by one or more socially and economically disadvantaged individuals or, in the case of a publicly traded company, at least 51 percent of the stock of which is owned by one or more socially and economically disadvantaged individuals; and*

*(ii) the management and daily business operations of which are controlled by such individuals.*

*(B)(i) A for-profit business concern is presumed to be a disadvantaged business concern for purposes of subsection (a) if it is at least 51 percent owned by, or in the case of a concern which is a publicly traded company at least 51 percent of the stock of the company is owned by, one or more individuals who are members of the following groups:*

*(I) Black Americans.*

*(II) Hispanic Americans.*

*(III) Native Americans.*

*(IV) Asian Americans.*

*(V) Women.*

*(VI) Disabled.*

*(ii) The presumption established by clause (i) may be rebutted with respect to a particular business concern if it is reasonably established that the individual or individuals referred to in that clause with respect to that business concern are not experiencing impediments to establishing or developing such concern as a result of the individual's identification as a member of a group specified in that clause.*

*(C) The following institutions are presumed to be disadvantaged business concerns for purposes of subsection (a):*

*(i) Historically Black colleges and universities, and colleges and universities having a student body in which 40 percent of the students are Hispanic.*

*(ii) Minority institutions (as that term is defined by the Secretary of Education pursuant to the General Education Provision Act (20 U.S.C. 1221 et seq.)).*

*(iii) Private and voluntary organizations controlled by individuals who are socially and economically disadvantaged.*

*(D) A joint venture may be considered to be a disadvantaged business concern under subsection (a), notwithstanding the size of such joint venture, if—*

*(i) a party to the joint venture is a disadvantaged business concern; and*

*(ii) that party owns at least 51 percent of the joint venture.*

*A person who is not an economically disadvantaged individual or a disadvantaged business concern, as a party to a joint venture, may not be a party to more than 2 awarded contracts in a fiscal year solely by reason of this subparagraph.*

*(E) Nothing in this paragraph shall prohibit any member of a racial or ethnic group that is not listed in subparagraph (B)(i) from establishing that they have been impeded in establishing or developing a business concern as a result of racial ethnic discrimination.*

*SEC. 1002. USE OF QUOTAS PROHIBITED.—Nothing in this title shall permit or require the use of quotas or a requirement that has the effect of a quota in determining eligibility under section 1001.*

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed.

The title of the Senate bill was amended so as to read: "A bill to amend the Clean Air Act to provide for the attainment and maintenance of the national ambient air quality standards, the control of toxic air pollutants, the prevention of acid deposition, and other improvements in the quality of the Nation's air."

A motion to reconsider was laid on the table.

A similar House bill (H.R. 3030) was laid on the table.

APPOINTMENT OF CONFEREES ON S. 1630, CLEAN AIR ACT AMENDMENTS OF 1990

Mr. DINGELL. Mr. Speaker, pursuant to House Resolution 399, I move to insist on the House amendments to S. 1630 and request a conference with the Senate thereon.

The motion was agreed to.

The SPEAKER. The Chair will make the appointment of conferees on tomorrow.

PERSONAL EXPLANATION

Mrs. BENTLEY. Mr. Speaker, due to a prior commitment I was unable to be present to vote for H.R. 770, the Family and Medical Leave Act. I was on a trade delegation mission with the Governor of Maryland, William Donald Schaefer, to Eastern Europe.

For the record, had I been present to vote for H.R. 770, I would have voted "nay."

I ask unanimous consent that my statement be inserted immediately following the vote in the permanent RECORD.

The SPEAKER. Is there objection to the request of the gentlewoman from Maryland?

There was no objection.

## PERSONAL EXPLANATION

Mr. CLINGER. Mr. Speaker, I was absent from the Chamber so that I could attend a meeting with representatives of U.S. air carriers to review their efforts to protect the traveling public from terrorists since the tragedy over Lockerbie, Scotland. Had I been present I would have voted "aye" on rollcall 132; "aye" on rollcall 133; "aye" on rollcall 134; "aye" on rollcall 135; "aye" on rollcall 136 and "yea" on rollcall 137.

## PERSONAL EXPLANATION

Mr. BALLENGER. Mr. Speaker, during consideration of the Clean Air Act Amendments, I was on the House floor and voted "aye" on rollcall vote No. 136. Unfortunately, because of a computer glitch in the House system, I am not recorded as voting on this particular amendment. Please let the record show that I supported the Dingell-Waxman-Lent-Madigan compromise on clean alternative fuel vehicles.

## PERSONAL EXPLANATION

Mr. NELSON of Florida. Mr. Speaker, had I been present, I would have voted "aye" on rollcall Nos. 134, 135, 136, and 137.

## REPORT ON RESOLUTION WAIVING POINTS OF ORDER AGAINST CONSIDERATION OF CONFERENCE REPORT AND AMENDMENTS IN DISAGREEMENT ON H.R. 4404, DIRE EMERGENCY SUPPLEMENTAL APPROPRIATIONS, 1990

Mr. MOAKLEY, from the Committee on Rules, submitted a privileged report (Rept. No. 101-495) on the resolution (H. Res. 400) waiving points of order against consideration of the conference report and amendments reported from conference in disagreement on the bill (H.R. 4404) making dire emergency supplemental appropriations for disaster assistance, food stamps, unemployment compensation administration, and other urgent needs and transfers, and reducing funds budgeted for military spending for the fiscal year ending September 30, 1990, and for other purposes, which was referred to the House Calendar and ordered to be printed.

## PROVIDING FOR USE OF THE CAPITOL ROTUNDA

Mr. KOLTER. Mr Speaker, I ask unanimous consent that the Committee on House Administration be discharged from further consideration of the Senate concurrent resolution (S. Con. Res. 133) providing for the use of the Capitol rotunda, and ask for its immediate consideration in the House.

The Clerk read the title of the Senate concurrent resolution.

The SPEAKER pro tempore (Mr. PARKER). Is there objection to the request of the gentleman from Pennsylvania?

Mr. GILLMOR. Mr. Speaker, reserving the right to object, I would ask the gentleman from Pennsylvania to explain the resolution.

Mr. KOLTER. Mr. Speaker, if the gentleman will yield, the resolution provides for the use of the rotunda for Members of Congress to assemble in conjunction with a ceremony commemorating American military heroism. The Senate adopted the resolution on Monday and the ceremony is tomorrow.

□ 2200

It is essential that we adopt it at this time in order to insure that the rotunda is available for the ceremony in the event of inclement weather.

Mr. GILLMOR. Mr. Speaker, further reserving the right to object, I join in supporting this resolution. I think it is only appropriate, and I particularly feel, as an Air Force veteran, that we should have this ceremony in the rotunda tomorrow recognizing the bravery of Americans.

Mr. Speaker, I would ask my colleagues to join in supporting the resolution.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore (Mr. PARKER). Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The Clerk read the Senate concurrent resolution, as follows:

S. CON. RES. 133

Whereas America can never forget the sacrifices of our brave military heroes: Now, therefore, be it

*Resolved by the Senate (the House of Representatives concurring),* That the Rotunda of the Capitol may be used on Thursday, May 24, 1989, at 10:30 a.m., to allow the assembling of Members of Congress for ceremonies celebrating American Military Heroism.

SEC. 2. The Architect of the Capitol may prescribe conditions for physical preparations with respect to the use of the Rotunda authorized by the first section.

The Senate concurrent resolution was concurred in.

A motion to reconsider was laid on the table.

## GENERAL LEAVE

Mr. KOLTER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on (S. Con. Res. 133) the Senate concurrent resolution just adopted.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

## ORDER OF BUSINESS

Mr. GILLMOR. Mr. Speaker, I ask unanimous consent that the 60-minute special order granted for today to Mr. BURTON of Indiana be vacated, and that he be permitted to take a 5-minute special order today instead.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

## TRIBUTE TO DR. EDWARD STEITZ

(Mr. NEAL of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. NEAL of Massachusetts. Mr. Speaker, I rise to pay tribute to one of the great names in the sport of basketball, Dr. Edward Steitz of Springfield, MA. Dr. Steitz died on Monday and anyone who has dribbled, passed or shot a basketball mourns his passing.

There is not enough time here to cover all of the accomplishments of Ed Steitz. He served Springfield College for 42 years, 33 of those as athletic director. We in Springfield knew him as a coach, a teacher, a vital force in the community and a friend. The world knew him as Dr. Ed Steitz—"master of college and international basketball rules" and "father of the three-point shot." For more than 20 years, Dr. Steitz worked hard to promote the great American game of basketball in international competition and the Olympics. It is a testament to his efforts that the game that Dr. James Naismith invented in Springfield is now played everywhere on the planet.

Mr. Speaker, I here include some material on Dr. Edward Steitz from Tuesday's Springfield Union-News. I would also like to express my sympathy to his wife, June, and their three children. I was proud to have worked with Dr. Steitz. He will be missed.

BASKETBALL WORLD MOURNS SC'S STEITZ

(By Jerry Radding)

Dr. Edward S. Steitz, one of the world's leading contributors to a sport that had its beginning in the city of Springfield, died suddenly yesterday.

Steitz and the game of basketball were synonymous for more than three decades.

He played a prominent part in the growth of the game that was started at Springfield College with the hanging of peach baskets by Dr. James Naismith nearly 100 years ago.

"Ed Steitz's death is a great loss to the city of Springfield," said Mayor Mary E. Hurley. "He was one of the warmest and kindest men I ever met.

"He was so proud of the Basketball Hall of Fame and the city. He gave all his efforts to the game of basketball internationally, nationally and to the city and I'm very, very sad."

Steitz, who retired as athletic director at Springfield College a year ago after 33 years on the job, was known around the world as the NCAA national basketball rules editor and interpreter, a position he held since 1976.

"Certainly we at the Basketball Hall of Fame are shocked," said Executive Director Joe O'Brien. "We don't have words to express our emotions.

"Sometimes you underestimate the kind of jobs that people in rules do, but you just can't replace a man like Ed. He truly made his mark on the great American game of basketball."

A memorial service for Steitz will be held tomorrow at 10 a.m. at SC's Blake Arena.

In honor of Steitz, elected to the Hall of Fame in 1983 as a contributor, the museum will be closed until 11 a.m. tomorrow, O'Brien said.

Springfield College had planned a testimonial to Steitz next year, coinciding with the 100th anniversary of basketball.

Steitz' contracts around the country with the top college basketball coaches and administrators played a vital role in the success of the Tip-Off Classic, an annual game showcasing championship-caliber teams at the Springfield Civic Center.

"His contacts with the coaches and athletic directors opened the door for us," said Burt Weinbaum, former president of the Tip-Off Classic.

"Ed wasn't the kind of a guy to sit back and let things happen—he made things happen. He had to be in the action."

"As a relative newcomer to Springfield College, I was struck with Steitz's powerful personality," said President Frank S. Falcone. "He was a major force in the life of Springfield College—a guy who brought attention to the school. He was a major figure not just to the college but to basketball. We don't have too many people like that."

"I know I speak for everybody at the college when I say that it's like losing a father," said assistant director of athletics Frank Wolcott, retired gymnastics coach.

"He bragged about Springfield College's 'Who's Who' of coaches. But he was the one responsible because he made sure they were involved with the NCAA championships and the like."

Steitz took special pride in the accomplishments of veteran Springfield College coaches like Archie Allen, Charles "Red" Silvia, Irv Schmid and Doug Parker, all now retired.

"We were awful close. . . . He was so great to my baseball progra," said Allen from his Florida home. "He started at the college as my assistant coach in '49—I think baseball was his first love."

"I feel I was a friend of Ed's—we were on the same wavelengths," said Silvia, the school's longtime swimming coach. "I think he was unique in that authority didn't change him. He was always approachable . . . a man of extreme integrity."

Schmid, who was a graduate student with Steitz in 1946 before going on to coach soccer at SC for 38 years, noted that "Ed might have gone to Cornell but he was a real Springfield College man. He took real pride in the school and as athletic director he was fair to everybody."

"He carried the torch that was lighted by Dr. Naismith," said Vern Cox, who has been coaching at SC since 1947.

Both Cox and Steitz started at Springfield as assistant basketball coaches under John Bunn.

"He was goal-oriented driven—one of the hardest-working people I ever came across," said Parker, who ran the wrestling program at SC for 38 years.

There was a time when controversial Indiana basketball coach Bob Knight wasn't happy with Steitz. It was back in 1986 after the veteran rules editor introduced the three-point field goal.

But after that first season with the trifecta, and after Knight's Hoosiers won the NCAA championship with the three-point shooting of Steve Alford, the IU coach felt differently.

"Ed Steitz is a guy that I personally liked and enjoyed," said Knight yesterday. "I thought he made a tremendous selfless contribution to basketball over the years. He worked harder than anybody ever has at the protection and development of the rules and in that regard, made a great contribution to college basketball."

"The game will miss his integrity and enthusiasm."

And Dean Smith, a Hall of Famer and a premier member of the coaching fraternity at North Carolina, also admitted being unhappy with the three-point basket.

"Personally I'll miss Ed even though we didn't always agree," said Smith. "We knew that his intent was always for the betterment of the game. What a giant he was in our game worldwide. His love for the game seemed to grow with each year."

"We're deeply saddened by this news," said Dave Gavitt, commissioner of the Big East Conference, who was attending meetings in Jacksonville, Fla. yesterday. "No one has provided more quality service to the

sport of college basketball. He will be missed and treasured for a long time."

Steitz returned from Denver and the scene of the NCAA basketball Final Four early last month after his annual meetings with the Rules Committee. That was less than a month after he was hospitalized after suffering a severe angina attack.

"Ed represented a very unique group of people involved in basketball—he was the guiding light for the game," said Brice Durbin, the executive director of the National Federation of High School Associations.

"The game will go on but there's going to be a big void," said Durbin, who served on the Rules Committee under Steitz for 17 years.

"In my judgment, Ed Steitz's commitment and dedication to the game is unparalleled," said NCAA assistant executive director Tom Jernstedt. "I can think of no one who has contributed more to the game both nationally and internationally. He served with distinction on the NCAA Executive Committee and also was the NCAA's primary representative in the dispute between the school/college community and the AAU for basketball's leadership. He led the charge. He also was a leader on the NCAA convention floor. He had the knowledge and conviction to stand up and speak—and people listened."

"Ed was an innovative thinker—he was singularly responsible for many rules changes that in the past 30 years have made the game what it is today," said Frosty Francis, executive director of International Association of Approved Basketball Officials.

"He was a life member of our association and for over 25 years we looked forward to his presentations at our annual meetings."

Steitz was co-founder of the Amateur Basketball Association, now called USA Basketball, the governing body for all international amateur basketball. He served as its president for 10 years.

"I've lost a great friend and a former boss," said Bill Wall, the executive director of USA Basketball "Basketball has lost an international treasure."

---

AMBASSADOR WHO WILL BE MISSED

(By Jim Fox)

Ed Steitz laughed when he told the little story, but he was proud as well.

He was in a familiar place, a room in a foreign country—was it Munich?—with representatives from around the world, talking, maybe arguing, about the rules of basketball.

Because, after all, it was the game that had started at his school and spread around the world.

Springfield College was defender of the faith, writer of the law.

"We were discussing things a bit," Steitz recalled, "and finally the Russian looked at me and said, "Ya, we play Edward's rules. Edward has best rules."

Ed Steitz did have the best rules because he had taken them from Naismith and his successors, played and coached the game, saw it grow, saw it spread and kept studying its subtleties.

He was Mr. Rules, here and around the world, acknowledged at FIBA, Olympics, NCAA, USA (ABAUSA) and the local IAABO board.

But rules were only part of the Steitz story, which grew to near legendary proportions in this part of the world and beyond. He was an ambassador and prophet, and battler for his cause.

All around the world he sang the song of Springfield College, the city, and the game.

So the sudden death of Ed Steitz yesterday hit with an especially stunning impact. Many of us had seen him within the week, shaken his hand or passed a few pleasantries.

Tuesday night at the Civic Center I could see him three or four tables away. It was a place where he looked entirely natural, the place one expected to see him every year forever.

Hall of Fame director Joe O'Brien talked about Steitz yesterday morning.

"He was very proud of his induction into the Hall of Fame. But in recent years what made him prouder I'd say was the number of enduring things he had done in the game of basketball.

"I can't think of anyone more dedicated to the game. And don't forget he was an initial incorporator of the Basketball Hall of Fame. At the time of his death he was the only charter member of the board of trustees active since the corporation was founded in 1953."

Up at Springfield College, athletic director Ed Bilik, assistant AD Frank Wolcott, the coaches, women who had worked with him for years and the entire college were stunned.

Bilik, who had played for him and been his coaching assistant, agreed Steitz could be demanding as a coach. He had a 160-86 won lost record.

Wolcott smiles at an incident from their earlier days. "When he first started as athletic director, he didn't seem to like me, and I didn't know why. Finally, after about a year I went to him and asked him why.

"Well, it seems that in old Judd Hall there had been about eight old basketball nets hanging from the balcony. They were interfering with our gymnasium work, so I took them down.

"Well one day, unknown to me, Ed had brought around a group from India and was going to show them how the game was played. But no baskets. I think he was a little embarrassed. It taught me to clear things with him ahead of time."

Steitz was a world traveler without peer in these parts, an unmatched frequent flyer. "He could do more work on the plane to Chicago said Wolcott, than I could in a week."

I used to kid Steitz about getting his old blazers, though we were hardly the same size. He had a silk number from India that would get anyone past the gate at the Taj-Mahal.

And he loved to collect souvenirs and mementos of his trips. He knew how to come up with the Olympic pins and flags and posters. He had been to eight.

There's a story up at Springfield College about the foreign lady traveler looking for the Hall of Fame, which was then just up Alden St.

Somehow misdirected, she wondered into Dr. Steitz's office and was impressed with the colorful decor. In fact she wanted to pay admission and thought it was a perfectly grand Hall of Fame.

If Ed Steiz had fun when he traveled he also accomplished a backbreaking amount of work. He worked for the U.S. Olympic Committee, the NCAA, FIBA, or went to a clinic for kids with equal zeal.

Bilik recalls that Steitz was an analytical coach. "He had an analytical mind. We would scout and he would pick up an amazing number of things. He just transferred the analysis to coaching."

As an administrator at Springfield Steitz will be remembered for two things:

"When he was at an NCAA or similar meeting and they asked who would run the championship he always had his hand up."

Wolcott can remember the NCAA's Jerry Miles blanching when Steitz volunteered to run the men's and women's swimming and gymnastics meets the same week.

"And he pushed our coaches to get on all the committees," remembers Wolcott. "We had a who's who staff. He pushed us for positions and that is how we traveled and the college became well known."

Ironically, much of Ed Steitz's work, until the recent recognition for nurturing the three-point basket, was carried on very much off camera.

"All the earlier work had been done behind the scenes," says O'Brien.

"The true measure is trying to replace a man like that. I think he is irreplaceable."

---

[From the Springfield Union-News]

ED STEITZ LEFT MARK ON BASKETBALL

"Mr. Basketball Rules" they called him and it was a title he carried proudly.

Other than James Naismith, who invented basketball at Springfield College 99 years ago, Edward S. Steitz probably put the college and city on the nation's basketball map more than any other individual.

Steitz, 69, died yesterday at his East Longmeadow home, the day after he had served as grand marshal at the college's graduation and less than a week after he marched to his place and other notables at the annual basketball Hall of Fame induction ceremonies.

He served as athletic director of Springfield College for 33 years before retiring last year. But it was probably the world's foremost authority on the rules of the sport that he made his mark.

His numerous accomplishments involving amateur basketball are noted elsewhere in today's Union-News, all of which contributed to his well-merited election to the Hall of Fame in 1983.

But in years to come, he probably will be best remembered as the father of the 45-second shot clock and the three-point shot in college basketball.

Those two rules changed the game immeasurably, America's sport—basketball—wouldn't be what it is today without the dedication, administrative skills and steadfastness of Ed Steitz. He will be missed.

## TOM LANTOS—A CHAMPION FOR LIBERTY AND FREEDOM

(Mr. McEWEN asked and was given permission to address the House for 1 minute.)

Mr. McEWEN. Mr. Speaker, this morning on "Good Morning America," there was a presentation by a Member of this House as well as a Member of the other body concerning the most-favored-nation status for the People's Republic of China. The spokesman for those who prefer that China be held accountable for its deeds over the past year was a Member from this House, the gentleman from California [Mr. LANTOS].

I would commend my colleague for his presentation. If there is any way it can be duplicated, I will attempt to

insert it in the RECORD. It is one of the most articulate presentations of the values that this Nation stands for that I have ever heard. It was a brilliant statement on behalf of those of us who believe in freedom and democracy versus tyranny and Communist oppression.

I commend the gentleman from California [Mr. LANTOS] for what he stands for, for the honor that he brings to this body, and for his articulate statements on behalf of freedom. This refugee, this person who came to this country seeking liberty, now champions that cause in an unprecedented manner, perhaps better than anyone on the globe today. I commend him for it, and I say again, that he brings honor to this body by his service.

ABC "GOOD MORNING AMERICA" INTERVIEW WITH SENATOR JOHN CHAFEE AND REPRESENTATIVE TOM LANTOS, MAY 23, 1990

CHARLES GIBSON. President Bush yesterday told Republican congressional leaders that he wants to extend China's Most Favored Nation trade status with the United States. Because the first anniversary of the Tiananmen Square massacre is fast approaching, some are bothered by the President's decision, and it will cause debate.

So joining us now from Washington are Senator John Chafee, Republican of Rhode Island, who was at the White House leadership meeting yesterday, and also Representative Tom Lantos, Democrat of California, member of the House Foreign Affairs Committee. And gentlemen, you are both nice to join us this morning.

Sen. CHAFEE. A pleasure to be here.

Mr. GIBSON. Senator, the images of Tiananmen Square are very much still in people's minds. Why is the President pressing ahead with this idea of extending what basically is a privilege to the Chinese?

Sen. CHAFEE. Well, I don't consider it necessarily a privilege. It's something that we grant to nearly every nation in the world, including Iraq, Syria and Yemen, for example. What the President's point is—and by the way, he hasn't completely made up his mind on this subject, decided exactly what he is going to do. He sought views yesterday. But what his view is, is that we've got to keep some contact with China, and to cut them off totally is a grievous mistake. With our contacts, we encourage those ideals that we believe in such as the freedoms, the freedom of the press, assembly, and speech. So to just isolate China totally would be a great mistake in the President's view, and I heartily agree with him, and so do most of those who one could consider experts in China, if there are such things.

Mr. GIBSON. Congressman Lantos, I know you disagree.

Rep. LANTOS. Well, with all due respect to my friend, Senator Chafee, this agrument, I think, is absurd. The Soviet Union doesn't enjoy Most Favored Nation treatment, and we certainly haven't cut off all contact with the Soviet Union. Next week, there will be a summit between the United States and the Soviet Union, and we have a tremendous array of contacts. No one is arguing terminating contact with China. But it is just the first anniversary of the bloodbath on Tiananmen Square. And after that bloodbath, the United States had an option. It could either go in the direction of putting serious sanctions on China, sanctions that matter, or it could take a very conciliatory attitude. The administration decided to take a conciliatory attitude, and that policy failed.

What we saw last June was the oriental-mascarade of Chinese communism being torn away, and there was this brutal regime in all its cruelty. Everybody agrees that human rights today in China are in wore shape than they were a year ago. No one is arguing about terminating relations with China. We want to do the thing which is principled and practical.

Mr. GIBSON. All right, Congressman, let me interrupt you, because you make a mention of sanctions. Even if the President does extend Most Favored Nation trade status, we do have sanctions on against China. There are—there's a suspension in military sales, for instance. There is a veto on World Bank loans. There is no foreign aid. Those are real sanctions, and nobody is talking about lifting those, even if we keep the Most Favored Nation trade status.

Rep. LANTOS. If I may comment on the military sanctions, it was China itself that cancelled the largest military contract they had with the United States, a $500 million contract, because of the changed international military situation and their lack of foreign exchange. The only sanctions that would matter would be to hit them in the pocketbook. They are benefitting from this trade relationship enormously. We are not. As a matter of fact, what we import from China is basically textiles and toys. There are not strategic good coming to the United States from China. There are plenty of other places that are ready to sell toys and textiles to us.

Mr. GIBSON. Let me go back to the Senator, and you have talked, Senator, about keeping lines open to China. We've kept them open for a year now. Do we have anything to show for it?

Sen. CHAFEE. No, but I don't think you can expect that with a government that has turned machine guns on its own people in Tiananmen Square a year ago that they're going to do a complete change. The point is, what are we trying to achieve? We are trying to bring China back into the family of nations, to respect those ideals we believe in. And certainly, we're not going to achieve that by just cuttng off everything, sending them into a corner as a pariah, drawing up the bidges and saying to China, "Retreat into your isolationism as you have in the past, and as you are perfectly prepared to do." I don't think that's the correct thing to do. We want to keep these lines of communcations, slim though they may be. The only contract we have with China is through our trade. We've cut off everything else.

Mr. GIBSON. But Senator, bottom line, isn't this a sort of basic decision? I mean, are we going to say we absolutely will stand behind human rights, or not?

Sen. CHAFEE. I don't think—yes, we're going to stand behind human rights. But how do you achieve the human rights? Is it by saying we're dropping every—all contact with you? It's through these very people that we trade with that we have the greatest chance of bringing to China some of the opening, some of the fostering of the beliefs that we consider so important. And certainly, we're not going to achieve that by just isolating them totally, which would be a grievous mistake.

Mr. GIBSON. Congressman, let me come back to you. Some people say that if we were to lift Most Favored Nation trade status, it actually wouldn't hurt the Chinese, it would hurt mostly the people of Hong Kong who are the middlemen in the trade between the United States and China, and that therefore they are the ones who would get hit, and therefore it would be mistake to do this.

Rep. LANTOS. Well, unfortunately, there would be some people hurt, both in China and in Hong Kong, and that's not our purpose. But we have done that and the heroes on Tiananmen Square who were mowed down by the tanks of that brutal communist regime, because they stood up for our principles? I think it's unprincipled and impractical to continue to kowtow to Deng Xiaoping and his octogenarian clique.

Mr. GIBSON. On that impassioned statement, I will leave it. Congressman, thank you. Senator, thank you for being with us. We appreciate your both being here this morning.

## THE NORTHWEST TIMBER SUPPLY CRISIS

(Mrs. UNSOELD asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. UNSOELD. Mr. Speaker, President Bush has just returned from a trip to the Northwest, where he called for balance in the spotted owl and timber supply crisis.

To speak of balance, as the President has, can provide a calming affect for the Northwest. Emotions are running high. People in our timber towns are fearful, anxious, and angry.

Banning exports of raw logs from public lands is the first step toward giving real relief to our timber towns.

I am calling on the President to support the bipartisan legislation to get timber to our starving mills. A conference committee is working to achieve a compromise bill before we recess for Memorial Day.

The President has said he wants to "hear more about" the timber supply crisis, and I have urged him to use his existing authority to hold hearings in the Northwest. Working together, the President's forest management agencies and the people of the Northwest can strike the balance we seek.

## HUMAN RIGHTS ABUSES IN KASHMIR AND PUNJAB

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana [Mr. BURTON], is recognized for 5 minutes.

Mr. BURTON of Indiana. Mr. Speaker, for a long, long time the people in Kashmir in northwestern India and in the Punjab, right next to Kashmir, there has been a great deal of repression by the Indian Government. There has been torture that has taken place, women have been raped, children have been murdered, innocent people have been killed, and we have been working on the human rights issue, many of us, for a long time trying to get human rights orga-

nizations in there to verify what has happened, tell the world about it so that we can put pressure on the Indian Government to stop it. But the Indian Government has said time and again they will not allow even the International Red Cross into the Punjab or Kashmir because they do not want the world to see what is going on.

Now, this past Monday Mr. Maulvi Mohammad Farooq, a religious leader in Kashmir, was gunned down by three unidentified assailants with AK-47 machineguns, which are the weapons used by the Indian troops in that area. The people of that area were enraged. But they did not do anything about it.

Instead, about 100,000 of them decided to take him to the burial grounds en masse to show their respect and admiration for the man.

The Indian troops blocked the highway to the burial grounds and they opened fire on unarmed civilians carrying this man's body, and over 100 Kashmiris were killed and over 400 were wounded.

This is just another manifestation of the inhuman attitude that the Indian Government has toward the people in Punjab and Kashmir.

Now, I wish that my colleagues would pay attention to this and join me in supporting a resolution out of this body which would cut off some aid to India until they allow human rights organizations and the International Red Cross into that area so that we can stop these atrocities from happening.

The people in Kashmir want peace, they want freedom and democracy. They are not being given it by the Indian Government. The people in Punjab likewise want the same thing. They are not getting it.

Instead, because they have cried out for freedom and democracy in those areas, they are getting inhuman treatment, atrocities are taking place, men, women, and children are being killed, women are being raped, and the world does not know about it.

ABC, CBS, NBC, CNN, where are you? We hear about what is going on on the West Bank of Israel. We hear about what is going on in other parts of the world. But nobody is talking about what is going on in the Kashmir and in the Punjab.

I say to my friends in the media, pay attention to the atrocities that are going on in the northwestern part of India. The world cries out to know about this.

These inhuman acts must stop. The only way they will stop is for the world to see them, for the media to focus attention on them and for human rights organizations to be allowed into the Punjab along with the International Red cross.

This is a terrible thing that is going on over there. It must stop. For God's sake, humanity demands it.

## SENSELESS ACTIONS IN EGYPT AND ISRAEL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York [Mr. GREEN] is recognized for 5 minutes.

Mr. GREEN. Mr. Speaker, on October 5, 1985, an Egyptian border policeman went mad and senselessly opened fire on a busload of Israeli tourists in the Sinai. Seven of the passengers lost their lives that day, four of them children. An Egyptian policeman was also slain. At the time of the shooting, it was reported that Egyptian soldiers did not permit an Israeli medical team to aid the victims. It is still not understood why the border policeman was carrying an automatic weapon instead of a handgun while on duty.

The Egyptian assailant was sentenced to life in prison. At the time of the trial, groups of Egyptians demonstrated againt his prison sentence, expressing their opinion that his atrocious action was somehow justified.

While there was great mourning in Israel for the tragedy that fell on her citizens, there were no anti-Arab riots staged by Israelis. Jewish Americans did not hold angry demonstrations in front of Egyptian diplomatic missions. No one asked the United Nations to intervene. The world recognized that the tragedy was the act of one demented man. Egypt's President Mubarak described the massacre as "a limited incident that can happen anywhere, carried out by an insane man."

Now, alas, there has been a very similar act. A dishonorably discharged Israeli solider with equal lack of provocation tragically killed a group of Arab laborers in Israel several days ago. Again, a senseless act was committed and innocent lives have been lost. The deranged gunman has been arrested by Israeli authorities. To compound the tragedy, violent riots have broken out between Israeli-Arabs, Palestinians and security forces in Israel. There have been several deaths and hundreds have been wounded. Arab anger has been incited by some Palestinians who are irresponsibly claiming that the former soldier's actions are somehow attributable to the Israeli government. Such absurd comments are inflammatory and serve only to aggravate a situation already out of control. PLO leaders, who should be calling for immediate calm in order to save lives, have also used the shooting tragedy to encourage Arab-Israeli violence and Palestinian rioting.

I ask those who seek to escalate this second shooting tragedy into still further violence or controversy, why does a different standard apply to the act of this second demented man? Why is it not in President Mubarak's words, "a limited incident that can happen anywhere, carried out by an insane man"?

□ 2210

## TWENTY-YEAR HISTORY OF TOTAL FORCE POLICY

The SPEAKER pro tempore (Mr. PARKER). Under a previous order of the House, the gentleman from Mississippi [Mr. MONTGOMERY] is recognized for 5 minutes.

Mr. MONTGOMERY. Mr. Speaker, I want to continue to share with my colleagues a series of articles which appeared in the Roll Call newspaper in the April 30, 1990, edition in a special policy brief, titled "National Guard and Reserves in a Changing World." This brief was developed to describe the roles and missions of the Reserve components and to educate the readers. I wrote the lead article in hopes of generating interest by the readers to learn more about the Guard and Reserve. I commend my colleagues to read these articles to gain a better appreciation of the Guard and Reserve. Today I'm sharing another in the series of articles that appeared in that April 30 Roll Call edition.

[From the Roll Call, Apr. 30, 1990]

20-YEAR HISTORY OF TOTAL FORCE POLICY

(By Maj. Gen. Charles Kiefner)

Almost 20 years ago, the changing world situation and pressure to reduce the defense budget resulted in development of the Total Force Policy.

Similar circumstances exist today.

The changing geopolitical environment, the growing call for military force reductions, and the reality of smaller defense budgets make it time to revisit the basic objectives of the Total Force Policy.

Then-Secretary of Defense Melvin Laird outlined the original concept in an August 1970 memo.

He wrote: "The President requested reduced expenditures during fiscal year 1971 and extension of these economies into future budgets. Within the Department of Defense, these economies will require reductions in overall strengths and capabilities of the Active Forces, and increased reliance on the combat and combat support units of the Guard and Reserves.

After indicating that the Service Secretaries should provide the necessary resources to balance development of Active, Guard, and Reserve Forces, Secretary Laird went on to say:

"Emphasis will be given to concurrent consideration of the Total Forces, Active, and Reserve to determine the most advantageous mix to support national strategy and meet the threat. A Total Force concept will be applied in all aspects of planning, programming, manning, equipping, and employing Guard and Reserve Forces.

"Application of the concept will be geared to recognition that in many instances the lower peacetime sustaining costs of Reserve Force units, compared to similar Active units, can result in larger Total Force for a given budget or the same size force for a lesser budget.

"In addition, attention will be given to the fact that Guard and Reserve Forces can perform peacetime missions as a by-product or

adjunct of training with significant manpower and monetary savings."

The end result, according to Laird, would be that "Guard and Reserve units and individuals of the Selected Reserves will be prepared to be the initial and primary source for augmentation of the Active Forces in any future emergency. . . "

In August 1973, his successor, Secretary James Schlesinger, made the following statement:

"An integral part of the central purpose of this Department—to build and maintain the necessary forces to deter war and to defend our country—is Total Force Policy as it pertains to the Guard and Reserve.

"It must be clearly understood that implicit in the Total Force Policy, as emphasized by Presidential and National Security Council documents, the Congress and Secretary of Defense policy, is the fact that the Guard and Reserve Forces will be used as the initial and primary augmentation of the Active Forces.

"Total Force is no longer a 'concept.' It is now the Total Force Policy which integrates the Active, Guard, and Reserve Forces into a homogeneous whole."

We have now come full cycle through the defense buildup of the early 1980s to the constrained budgets and potential drawdowns of the 1990s. Certainly, our national defense goal is no different today.

We must determine the mix of Active, Guard, and Reserve Forces necessary to support national strategy and meet the current and anticipated threats.

At no time in recent history has that been a greater challenge than in today's turbulent period—a result of both the evolving threat and the increasing pressure to rapidly decrease the level of defense budgets.

But developments over the past two decades make it relatively clear that there is no better way to achieve that goal than to continue to nurture and apply the Total Force Policy. As a low-cost peacetime deterrent force, the Guard and Reserve cannot be matched.

Their readiness and capability as an initial and primary source for augmentation of the Active Forces, even in emergencies requiring rapid deployment, has been shown in recent events in several areas of the world, including Panama. Twenty years of application of the Total Force Policy has had the intended positive result.

Of course, at this point there are a number of unanswered questions about the future. Although there is an apparent disintegration of the Warsaw Pact as a cohesive military force, the Europe that is emerging still harbors the same national, ethnic, and religious divisions that inflamed the pre-World War II Europe.

Certainly, large scale land warfare in Europe against a solid Warsaw Pact force is less probably in the near term, since current political realignment in East European countries is probably not easily reversible, at least on a broad scale.

When coupled with announced Soviet military drawdowns, this change in perceived threat may drive US force changes at a pace faster than our nation's leader can revise or restate our defense strategy.

Certainly changes are coming faster than the defense programming and budget cycle can be adjusted.

With evidence of continued modernization of Soviet strategic nuclear systems, we can assume a continued emphasis on modernization of at least some of the programs in this country. We can also assume there will be pressure to continue emphasis on research and development of new systems to be able to meet any future threat.

At the same time, there are calls for a reduction in production of what many consider redundant and costly high-tech advanced conventional and strategic systems. A partial absorption of budget reductions will most likely fall in these areas.

As a result of anticipated decreasing budget levels, in the FY 1990 Defense Authorization Act Congress directed the Secretary of Defense to convene a study group to review and make recommendations on the operation, effectiveness and soundness of the Total Force Policy; the assignment of missions to the Active, Guard and Reserve components of the Armed Forces; and the optimum force structure within these components.

The final report is due by Dec. 31.

The National Guard association believes the timing of the DoD study is such that it can serve as the most crucial review of our nation's defense forces since the beginning of the Cold War era.

With an increased perception of a changing threat, extended warming times, higher probability of low-intensity or limited conflicts, and reductions in defense resources, neither Congress nor the public will be satisfied with a simple fine-tuning of current forces or a token reduction of costs.

However, the time constraint placed on the study group may preclude achievement of the stated objectives.

At a turbulent time like this, those who are responsible for the defense of our nation want to ensure that sufficient forces are maintained to respond to a possible reversal of the perceived movement to a lower threat.

So it is a difficult time to step back and reevaluate requirements and make finite force decisions.

But it is also a time when such decisions must be made—to achieve not only short-term budget savings but to maintain adequate forces to support our national strategy and meet any evolving threat.

The DoD study can accomplish that goal, provided it is conducted in a manner which considers all factors and takes an openminded look at long-term requirements.

While the national defense strategy and the Total Force Policy may need some refinement, they have been successful in bringing us to an apparent time of peace. No doubt, significant force realignments will be undertaken to meet the changing threat.

There is also little doubt that such realignments and the impact of shrinking budget targets will require changes to the force structure of all the military components.

But all actions should recognize the proven success of the defense strategy and the Total Force Policy of the past 20 years.

It's time now to capitalize on the lessons learned in the past two decades. The DoD study should help to define the least costly, most effective realignment of Active, Guard, and Reserve Forces necessary to provide our mission with an adequate defense through the '90s and beyond.

We have a greater opportunity to realign and improve our Total Force posture than at any time since the beginning of the Cold War.

We must make sure we do it right.

## INAUGURATION OF ADMINISTRATION OF REPUBLIC OF CHINA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Arkansas [Mr. HAMMERSCHMIDT] is recognized for 30 minutes.

Mr. HAMMERSCHMIDT. Mr. Speaker, it was a great honor to attend the May 20 inauguration of Li Teng-hui and Li Yuan-zu as the eighth President and Vice President of the Republic of China.

Our U.S. Presidential delegation to the inauguration, in addition to myself, was comprised of Senator STEVE SYMMS and Tom Kleppe, a former House colleague and former Secretary of the Interior, attending as the President's personal representative.

We returned from Taiwan just last night. Today, I want to share with my colleagues in the Congress the excellent inaugural address of president Li Teng-hui.

The American people consider him and the citizens of the Republic of China to be close friends. I know of the warm ties between my congressional colleagues and many citizens in Taiwan, both in and out of government.

We have been impressed by the economic miracle of Taiwan and welcome the political reforms being continued by President Li.

I recommend the reading of his inaugural address to all of you as an indication of the ROC's dedication to moving forward to a new era.

[Inaugural address—the eighth President of the Republic of China, May 20, 1990]

OPENING A NEW ERA FOR THE CHINESE PEOPLE

My Dear Countrymen and Distinguished Guests:

The eighth session of the National Assembly elected me, Lee Teng-hui, to the eighth presidential term of the Republic of China. Today I, together with Vice President Li Yuan-zu, will take my oath of office in accordance with the stipulations of our Constitution. The entire people have charged me with a solemn office. With such a heavy responsibility on my shoulders, I will naturally do my utmost to adhere to the terms of the presidential oath, devoting my full efforts to protecting the country and enhancing the welfare of the people.

A look at the current world situation reveals that we now find ourselves in a great era of rapid change. The pursuit of political democracy, economic liberalization, and world peace by all of humanity is now a raging, irresistible tide that will inevitably destroy the shackles of systems that refuse to change with the times and the stockades of closed, totalitarian ideologies. Accordingly, the international situation has progressed from antagonism to conciliation. We, the Chinese people, naturally cannot exclude ourselves from this massive tide. Rising up to take advantage of this opportunity and lay a comprehensive and lasting foundation for the future of the Chinese people is the common responsibility of the 1.2 billion Chinese at home and abroad. It is also the duty of the people on our bastion of national revival, civilian and military alike, to lead the way with great wisdom, determination, and solidarity, based on our many years of experience and achievements in implementing political democracy and an economy that benefits the people. Accepting the people's high expectations and trust in

these extraordinary times, I feel the weight of my responsibility is multiplied many times over. I earnestly hope that all compatriots continue to offer your support and encouragement, so that over the coming six years of this presidential term, I can execute my duties to the fullest and fulfill the mission history has given us.

The Constitution of the Republic of China was drafted in accordance with the bequeathed teachings of our founding father, Dr. Sun Yat-sen. Its goal is to clearly delineate the distribution of power, and incorporate the strengths of China and the West to establish a sound democratic system. However, the process of drafting the Constitution involved many twists and turns and compromises. At the time it was first put into effect, the nation was embroiled in war and chaos. In view of these special circumstances, the Temporary Provisions Effective During the Period of Mobilization for the Suppression of the Communist rebellion were enacted. For the past forty-some years, under the leadership of the late presidents Chiang Kai-shek and Chiang Ching-kuo, this painstakingly executed design has made an undeniable contribution to maintaining stability on our bastion of national revival, and creating the miracle of the "Taiwan experience." Nevertheless, with the changing domestic and international situation and the increasingly ardent desire of the people for democratic rule of law, the political environment of our bastion of national revival is not the same as in the past. Everybody now recognizes that normal development of a system of constitutional democracy is the only path to thoroughly implementing political democracy. Thus it is my hope that a termination of the Period of Mobilization for the Suppression of the Communist Rebellion can be declared, in accordance with the law, in the shortest possible period of time. Furthermore, based on the many years of experience we have accumulated in implementing our Constitution and on the needs arising from the current national environment, forward-looking and necessary revisions will be made to portions of the Constitution concerning such matters as the parliamentary organs of the central government, the system of local government, and government organization to provide the Chinese people with a legal code that is in accord with the trends of our times, and to establish a great model of political democracy for all times. This difficult task cannot be achieved in a single leap. The government will, in fully sincerity and a spirit of selflessness, solicit the suggestions of people of all walks of life and cautiously and actively work at this task, with the participation and encouragement of the people, it can be completed within a period of two years.

Equally important as innovation in our system of consitutional government is the institutionalization of party politics. Fair competition among political parties and entrusting decisions to the will of the people are the best ways to ensure thorough implementation of constitutional democracy. I have tested stressed on many occasions that we must invest our full efforts in building up our system and in cultivating a sound concept of the rule of law, so that all political activities can be carried out within the framework of the system, and operate according to the standards of the law. However, I also wish to emphasize that any responsible political proposition must have identification with the Republic of China as its premise, and the welfare of all the people as its basis. The government will accelerate renovation of the judical system to solidify our foundation for the rule of law, make the civil service system sounder to raise administrative efficiency, and ensure clean elections so that outstanding members of society can achieve their goal of serving the people through a process of fair elections. If we proceed gradually, one step at a time, our system of party politics will naturally become sounder over time, our foundation of democracy will naturally become firmer, and the time when the country is well-governed and enjoys lasting stability will naturally be in sight.

We know that there is a mutually complementary and mutually reinforcing relationship between a prosperous economy and the development of political democracy. Because the Taiwan-Penghu-Kinmen-Matsu area has over the past forty years implemented a free economic system oriented toward enhancing the people's livelihood, it has a brilliant record of both rapid growth and equitable distribution of wealth. This fruit of the efforts of all the people has long been known throughout the world, and it has served to create a successful theory and model for all the developing countries of the world. Looking to the future, the government will, in addition to adhering to its set policies of liberalization and internationalization so as to maintain the continued growth of the economy and trade, design a comprehensive plan for the use and development of our land, accelerate state-of-the-art scientific and technological research and transfer, advance the upgrading of industry, improve the production structure of agriculture and fishery, open up markets for foreign trade, and strengthen international cooperation, so that through a concerted effort, our economic development can in the six years to come expand its scope and horizons in its march toward a new level of achievement.

We believe that ensuring the people's well-being is the most important task of all development, and the fruits of all development should be enjoyed by all the people. In the process of economic development, the government should actively invest more in social welfare, and should, based on the particular circumstances of our country, learn from the experiences of more advanced countries and design a concrete program for the welfare of all the people, so that our citizens can live and work in safety and harmony, and the aged, weak, and handicapped can receive the care they need. At the same time, the government should also thoroughly implement ecological protection and prevention of public hazards, while improving traffic, public safety, and living environment conditions. In this way the people will not only have access to plentiful resources for their everyday life, but will also enjoy rich and meaningful spiritual life, thus thoroughly realizing the ideals of prosperity and equitable distribution of wealth as prescribed in our Principle of the People's Well-Being.

We understand that culture and education are our nation's roots, and are the foundation of further national development. Any material or institutional development is destined to remain at a superficial level unless it is able to enrich our culture and raise our academic level. Through regional integration and cultural exchanges, the overall development of the international community is gradually moving toward becoming an indivisible whole. This age of unprecedented vigorous development in our bastion of national revival is also the ideal time for making an objective review of our culture, and to choose and retain the best portions of it, and incorporate the strengths of other cultures where appropriate. We must begin with elementary school education, cultivating sound growth according to a plan, so as to set the minds and spirits of our people on the right track, mold their temperaments, and develop in them the life attitudes of placing a high value on ethics, being public-spirited and trustworthy, maintaining honor and discipline, and respecting the law. This will in turn promote the development of the Chinese cultural characteristic of being able to accommodate many diverse influences, thus making a valuable contribution to the well-being of mankind and world peace.

Fellow Countrymen, Distinguished Guests: Although development in the Republic of China over the past forty years has been restricted to the Taiwan-Penghu-Kinmen-Matsu area, all plans have been conceived with the future of all of China in mind. Taiwan and the mainland are indivisible parts of China's territory, and all Chinese are compatriots of the same flesh and blood. At this time when all of humanity longs for peace and is pursuing conciliation, all Chinese should work together to seek peaceful and democratic means to achieve our common goal of national reunification. In this time when the Communist countries of the world, including the Soviet Union, are declaring their renouncement of one-party dictatorship and the communist economic system, the Chinese Communists truly have no reason, and no strength, to continue to resist this trend over the long term. We sincerely hope that the Chinese Communists will become cognizant of the trends of the times, face up to the future, quicken this pace, and boldly march toward the goals of political democratization, economic liberalization, and social pluralization.

I would like at this point to earnestly declare that, if the Chinese Communist authorities can recognize the overall world trend and the common hope of all Chinese, implement political democracy and a free economic system, renounced the use of military force in the Taiwan Straits and not interfere with our development of foreign relations on the basis of a one-China policy, we would be willing, on a basis of equality, to establish channels of communication, and completely open up academic, cultural, economic, trade, scientific, and technological exchange, to lay a foundation of mutual respect, peace, and prospertiy. We hope then, when objective conditions are ripe, we will be able to discuss the matter of our national reunification, based on the common will of the Chinese people on both sides of the Taiwan Straits.

Reunification, prosperity, and strength for China are the common hopes of all Chinese people. But in addition to the unshirkable responsibility borne by the people on both sides of the Taiwan Straits, overseas Chinese the world over, always loyal and patriotic, also play an important role. The government must expend its greatest efforts to assist overseas Chinese in their economic enterprises and in cultural and educational work. We have particular concern for our compatriots in Hongkong and Macao, and hope that the Chinese Communist authorities will fully respect their rights to political and economic freedom. The government of the Republic of China will not pull out its organizations now based in that area, so as to help maintain the prosperity and stabili-

ty of the Hongkong-Macao area and the well-being of all Chinese people.

At the same time, I wish to reiterate that the Republic of China is an independent and sovereign nation. We express our utmost admiration to the friendly countries who have maintained formal diplomatic relations with us over the years, and we value these relations highly. We also hope to be able to strengthen and upgrade mutual cooperation with countries who would like to treat us with friendship on a foundation of substantive relations. As a member of the international community, the Republic of China has, on a basis of equality and reciprocity, long adhered to international standards, participated in international organizations, and worked to carry out its international responsibilities. We will work even more actively and pragmatically to expand our freedom of action in international activities, promote international cooperation, and contribute our efforts toward greater prosperity and peace for the world community. It is our hope that we can continue to expand bilateral exchanges with the United States on the current basis, so as to enhance our traditional friendship and mutual interests. We hope that Japan will make even more constructive contributions to the future of both Japan and the Republic of China with a view to the long term. And we hope that through close cooperation with neighboring countries in the Asian-Pacific region we can together advance economic development in the region, to usher in the early arrival of the Age of the Pacific.

Fellow Countrymen, Distinguished Guests: Over two thousand years ago, Chinese culture gave birth to the ideal of a great world commonwealth of peace and prosperity. The political, economic, and social systems and goals that it entails are in full accord with those implemented and sought by modern free and democratic nations. A goal of these many years of untiring effort of the government of the Republic of China is also to achieve a renaissance and enhanced development of Chinese culture. We sincerely hope that during this generation, we can establish a political model of democratic rule of law, to lay the foundation for a prosperous and equitable economic system and to create a peaceful, happy, trusting, and harmonious society. We want Chinese the world over to be able to raise their heads and be proud, and live with meaning and dignity. We wish to solemnly declare to all Chinese as well as to the whole world that beginning now we are prepared with incomparable confidence to open a great and brilliant new era for the entire Chinese people.

Thank you.

## LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. CLINGER (at the request of Mr. MICHEL), for today at 4 p.m. and for the balance of the week, on account of official business.

Mr. ALEXANDER (at the request of Mr. GEPHARDT), for today after 2 p.m., on account of official business.

## SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. GILLMOR) to revise and extend their remarks and include extraneous material:)

Mr. GREEN, for 6 minutes, today.

Mr. HAMMERSCHMIDT, for 30 minutes, today.

(The following Members (at the request of Mr. HARRIS) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. MONTGOMERY, for 5 minutes, today.

Mr. POSHARD, for 60 minutes, today.

Mr. MCMILLEN of Maryland, for 60 minutes, today.

Mr. GAYDOS, for 60 minutes, on June 5 and 6.

## EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. BEVILL, on the Wise amendment on H.R. 3030 in the Committee of the Whole today.

Mr. WOLPE, on the Dingell amendment, on H.R. 3030, today.

(The following Members (at the request of Mr. GILLMOR) and to include extraneous matter:)

Mr. GILMAN.
Mr. GINGRICH for two instances.
Mr. RITTER.
Mr. CONTE.
Mr. LAGOMARSINO.
Mr. RINALDO.
Ms. ROS-LEHTINEN in two instances.
Mr. SCHULZE in two instances.
Mr. HYDE.
Mr. SOLOMON in two instances.
Mr. DOUGLAS.
Mr. BAKER.
Mr. BARTLETT.
Mr. COX.
Mr. MACHTLEY in four instances.
Mr. HAMMERSCHMIDT.
Mr. ROTH.
Mr. MORRISON of Washington.
Mr. CRAIG of Idaho.
Mr. MARLENEE.
Mr. BLILEY.
Mr. HOUGHTON.

(The following Members (at the request of Mr. HARRIS) and to include extraneous matter:)

Mr. THOMAS A. LUKEN.
Mr. WYDEN.
Mrs. BYRON.
Mr. LAUGHLIN.
Mr. LANTOS.
Mr. KANJORSKI.
Mr. ROE.
Mr. HAMILTON.
Mr. RANGEL.
Mr. PANETTA.
Mr. DE LA GARZA.
Mr. JACOBS.
Mr. SAWYER.
Mr. FAZIO.
Mr. TRAXLER.
Mr. MCMILLEN of Maryland.
Mr. MAZZOLI.
Mr. LIPINSKI.
Mr. MATSUI.
Mr. DELLUMS.
Mr. ENGEL.
Mr. FALEOMAVAEGA in two instances.
Mr. LEVINE of California.
Mr. CARDIN.
Mr. SCHEUER.
Mr. CAMPBELL of Colorado.
Mr. FEIGHAN.
Mr. APPLEGATE.
Mr. TOWNS.
Mr. KENNEDY.
Mr. DYSON.

## SENATE ENROLLED JOINT RESOLUTION SIGNED

The SPEAKER announced his signature to an enrolled joint resolution of the Senate of the following title:

S.J. Res. 231. Joint resolution to designate the week of June 10, 1990, through June 16, 1990, as "State-Supported Homes for Veterans Week."

## ADJOURNMENT

Mr. GREEN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock and 13 minutes p.m.), the House adjourned until tomorrow, Thursday, May 24, 1990, at 10 a.m.

## EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

3227. A letter from the Assistant Secretary of the Army (Financial Management), transmitting a report on the value of property, supplies, and commodities provided by the Berlin Magistrate for the quarter January 1, 1990, through March 31, 1990, pursuant to Public Law 101-165, section 9008 (103 Stat. 1130); to the Committee on Appropriations.

3228. A letter from the Assistant Secretary of the Army (Installations, Logistics, and Financial Management), transmitting notification of emergency munitions disposal, pursuant to 50 U.S.C. 1512(4) and 1518; to the Committee on Armed Services.

3229. A letter from the Assistant Secretary for Legislative Affairs, Department of State, transmitting a report on confidence building measures by Poland and Hungary, pursuant to Public Law 101-179, section 702 (103 Stat. 1320); to the Committee on Foreign Affairs.

3230. A letter from the Assistant Secretary for Legislative Affairs, Department of State, transmitting a copy of the President's determination that he has exercised the authority granted him under section 451(a)(1) of the Foreign Assistance Act of 1961, as amended, to provide emergency assistance to Nicaragua, pursuant to 22 U.S.C. 2261(a)(2); to the Committee on Foreign Affairs.

3231. A letter from the Comptroller General, General Accounting Office, transmitting a list of all reports issued by GAO in April 1990, pursuant to 31 U.S.C. 719(h); to the Committee on Government Operations.

3232. A letter from the Director, Office of Management and Budget, transmitting the annual report on the financial management by State and local governments of Federal financial assistance programs for the period ending January 30, 1990, pursuant to 31 U.S.C. 7507(b); to the Committee on Government Operations.

3233. A letter from the Acting Assistant Secretary for Indian Affairs, Department of the Interior, transmitting the first annual report on the implementation of the Indian Self-Determination and Education Assistance Act, pursuant to Public Law 100-472, section 205 (102 Stat. 2293); to the Committee on Interior and Insular Affairs.

3234. A letter from the Chairman, Federal Labor Relations Authority, transmitting a draft of proposed legislation to provide for a pay adjustment for the Chairman, members, and general counsel of the Federal Labor Relations Authority; to the Committee on Post Office and Civil Service.

3235. A letter from the Assistant Secretary of State for Legislative Affairs, transmitting the President's memorandum of justification for the transfer of funds to the international narcotics matters account for law enforcement training and for equipment for law enforcement units in Colombia, Bolivia, and Peru, pursuant to 22 U.S.C. 2349aa-3(a)(1); Public Law 101-231, section 3(f); jointly, to the Committees on Appropriations and Foreign Affairs.

3236. A letter from the Chairman, Architectural and Transportation Barriers Compliance Board, transmitting the Board's annual report of its activities during fiscal year 1989, pursuant to 29 U.S.C. 792; jointly, to the Committees on Education and Labor and Public Works and Transportation.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. BONIOR: Committee on Rules. Supplemental report on House Resolution 399 (Rept. 101-494, Pt. 2). Referred to the House Calendar.

Mr. FROST: Committee on Rules. House Resolution 400. Resolution waiving points of order against consideration of the conference report and amendments reported from conference in disagreement on H.R. 4404 (Rept. 101-495). Referred to the House Calendar.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. TAUZIN:

H.R. 4886. A bill to provide for Federal recognition of the United Houma Nation of Louisiana, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. LEWIS of Florida (for himself, Mr. ROE, Mr. WALKER, Mr. NELSON of Florida, Mr. SCHEUER, Mr. WALGREN, Mr. HALL of Texas, Mr. BUECHNER, Mr. PACKARD, Mr. MCMILLEN of Maryland, Mrs. LLOYD, Mr. TANNER, Mr. GLICKMAN, Mr. MINETA, and Mr. TORRICELLI):

H.R. 4887. A bill to amend the Federal Aviation Act of 1958 relating to research for prevention of defects, failures, and malfunctions of aircraft, aircraft engines, propellers, and appliances, which could result in a catastrophic failure of an aircraft; to the Committee on Science, Space, and Technology.

By Mr. TAUZIN (for himself, Mr. JONES of North Carolina, Mr. BATEMAN, Mr. ORTIZ, Mr. PALLONE, and, Mr. DAVIS):

H.R. 4888. A bill to improve navigational safety and to reduce the hazards to navigation resulting from vessel collisions with pipelines in the marine environment, and for other purposes; jointly, to the Committees on Merchant Marine and Fisheries, Public Works and Transportation, and Energy and Commerce.

By Mr. BARTLETT:

H.R. 4889. A bill to amend the Civil Rights Act of 1964 to streamline and strengthen the enforcement of laws that ban discrimination in employment, and for other purposes; to the Committee on Education and Labor.

By Mr. HALL of Texas:

H.R. 4890. A bill to provide disaster assistance for agricultural producers, and for other purposes; to the Committee on Agriculture.

By Mr. ANTHONY (for himself, Mr. ALEXANDER, Mr. HAMMERSCHMIDT, Mr. DURBIN, Mr. CHAPMAN, Mr. WATKINS, Mr. SYNAR, Mr. BRYANT, and Mr. HALL of Texas):

H.R. 4891. A bill to provide disaster assistance to agricultural producers, and for other purposes; to the Committee on Agriculture.

By Mr. CHAPMAN (for himself, Mr. WATKINS, Mr. ANTHONY, Mr. ENGLISH, Mr. MCCRERY, Mr. WILSON, Mr. HALL of Texas, Mr. ANDREWS, Mr. BARTON of Texas, and Mr. FROST):

H.R. 4892. A bill to provide disaster assistance to agricultural producers, and for other purposes; to the Committee on Agriculture.

By Mr. CONTE (for himself and Mr. MILLER of California):

H.R. 4893. A bill to amend the Food Security Act of 1985 to protect wetlands threatened by agricultural development; to the Committee on Agriculture.

By Mr. CONTE (for himself and Mr. DINGELL):

H.R. 4894. A bill to amend the Food Security Act of 1985 to preserve and restore wetlands threatened by agricultural development, and for other purposes; to the Committee on Agriculture.

By Mr. ESPY (for himself and Mr. ANTHONY):

H.R. 4895. A bill to amend the Federal Crop Insurance Act to expand the powers of the Federal Crop Insurance Corp., to provide for the offering of crop insurance to cover the cost of crop production, to establish regional crop insurance advisory committees, and for other purposes; to the Committee on Agriculture.

By Mr. KOSTMAYER:

H.R. 4896. A bill to amend section 21A of the Federal Home Loan Bank Act to establish additional procedures and requirements relating to the identification and disposition of environmentally sensitive land and other property with natural, cultural, recreational, or scientific values of special significance by the Resolution Trust Corp.; to the Committee on Banking, Finance and Urban Affairs.

By Mr. LEACH of Iowa:

H.R. 4897. A bill regarding the establishment of free trade areas between the United States and certain East European countries; to the Committee on Ways and Means.

By Mr. LEWIS of Georgia (for himself, Mr. CLAY, Mr. CONYERS, Mr. DIXON, Mr. DYMALLY, Mr. ESPY, Mr. FAUNTROY, Mr. FLAKE, Mr. FORD of Michigan, Mr. GRAY, Mr. HAWKINS, Mr. HUGHES, Mr. KILDEE, Mr. MFUME, Mr. MURPHY, Mr. OWENS of New York, Mr. RANGEL, Mr. STOKES, Mr. TOWNS, Mr. WASHINGTON, Mr. WHEAT, Mr. WYDEN, and Mr. BROOKS):

H.R. 4898. A bill to amend the act of August 30, 1890 (commonly known as the Second Morrill Act), to remove language purporting to permit racial segregation in land-grant colleges that receive funds under that act; to the Committee on Agriculture.

By Mr. MORRISON of Connecticut:

H.R. 4899. A bill to extend for 2 years the operation of sections 599D and 599E of the Foreign Operations, Export Financing, and Related Programs Appropriations Act, 1990; to the Committee on the Judiciary.

By Mr. MORRISON of Washington (for himself, Mr. YOUNG of Alaska, Mr. CRAIG, Mr. STALLINGS, Mr. MARLENEE, Mr. ROBERT F. SMITH, and Mr. CHANDLER):

H.R. 4900. A bill to amend title 28, United States Code, to divide the ninth judicial circuit of the United States into two circuits, and for other purposes; to the Committee on the Judiciary.

By Mr. RANGEL (for himself, Mr. STARK, Mr. FRENZEL, Mr. GRADISON, and Mr. MCGRATH):

H.R. 4901. A bill to clarify the deductibility of liabilities incurred in connection with minimum premium plans; to the Committee on Ways and Means.

By Mr. RIDGE:

H.R. 4902. A bill to amend title 23 of the United States Code relating to toll roads, bridges, and tunnels; to the Committee on Public Works and Transportation.

By Mr. RIDGE (for himself, Mr. SAWYER, Mr. GILMAN, Mr. FORD of Michigan, Mr. GOODLING, Mr. CLINGER, Mr. FOGLIETTA, Mr. KANJORSKI, Mr. MCDADE, Mr. MURTHA, Mr. MURPHY, Mr. YATRON, Mr. KLECZKA, Mr. WELDON, Mr. UPTON, Mr. BURTON of Indiana, Mr. GALLO, Mr. GREEN, Mr. WOLPE, Mr. HORTON, Mr. OBEY, Mr. ASPIN, Mr. KASTENMEIER, Mr. MOODY, Ms. KAPTUR, Mr. GEKAS, Mr. WALGREN, Mr. SHUSTER, Mr. COYNE, Ms. SLAUGHTER of New York, Mr. FISH, Mr. DWYER of New Jersey, Mr. PAYNE of New Jersey, Mrs. BYRON, Mr. RINALDO, and Mr. SCHUMER):

H.R. 4903. A bill to amend title 13, United States Code, to ensure that military personnel stationed outside the United States are not excluded from any census of population; to the Committee on Post Office and Civil Service.

By Mr. RITTER:

H.R. 4904. A bill to amend the Internal Revenue Code of 1986 to eliminate the marriage penalty for senior citizens in the standard deduction and the tax on Social Security benefits and to amend title II of the Social Security Act to increase the

exempt amount under the retirement test for individuals who have attained retirement age; to the Committee on Ways and Means.

By Mrs. SAIKI (for herself and Mr. BLAZ):

H.R. 4905. A bill to consolidate certain U.S. territories within existing organized U.S. jurisdictions; to the Committee on Interior and Insular Affairs.

By Mr. SCHEUER:

H.R. 4906. A bill to authorize research and evaluation programs for monitoring, detecting, and abating lead-based paint and other lead exposure hazards in housing, and for other purposes; to the Committee on Science, Space, and Technology.

By Mr. SLAUGHTER of Virginia:

H.R. 4907. A bill to exempt receipts of the Federal Hospital Insurance Trust Fund from the calculation of revenues for purposes of the Balanced Budget and Emergency Deficit Control Act of 1985, and for other purposes; jointly, to the Committees on Government Operations and Ways and Means.

By Mr. SMITH of Florida (for himself, Mr. FASCELL, Mr. LEHMAN of Florida, Mr. NELSON of Florida, Mr. JOHNSTON of Florida, Mr. GOSS, Mr. SHAW, and Mr. BENNETT):

H.R. 4908. A bill amending the Outer Continental Shelf Lands Act with respect to procedures for the cancellation of leases; to the Committee on Interior and Insular Affairs.

By Mr. ROBERT F. SMITH (for himself and Mr. DENNY SMITH):

H.R. 4909. A bill to assure stability of communities dependent on outputs of timber and other resources from national forests and public lands, and for other purposes; jointly, to the Committees on Agriculture and Interior and Insular Affairs.

By Mr. WYDEN (for himself, Mr. AUCOIN, and Mr. DEFAZIO):

H.R. 4910. A bill to amend the Federal Water Pollution Control Act relating to oil and hazardous substance liability; to the Committee on Public Works and Transportation.

By Mr. YATRON:

H.J. Res. 576. Joint resolution concerning nondiscriminatory (most-favored-nation) trade status for the People's Republic of China; jointly, to the Committees on Ways and Means and Foreign Affairs.

By Mr. KENNEDY:

H. Con. Res. 332. Concurrent resolution concerning the status of Dr. Fang Lizhi and other prodemocracy activitists in China; to the Committee on Foreign Affairs.

By Mr. RINALDO (for himself, Mr. ROYBAL, Mr. HAWKINS, Mr. GOODLING, Mr. KILDEE, Mr. TAUKE, Mr. DOWNEY, Ms. SNOWE, Mr. HUGHES, Mrs. LLOYD, Mr. REGULA, Mr. COURTER, Mr. BLAZ, Ms. SLAUGHTER of New York, Ms. OAKAR, Mr. SKELTON, Mr. BORSKI, Mr. DERRICK, Mr. MANTON, Mr. CLARKE, Mr. CROCKETT, Mr. MCGRATH, Mr. FAWELL, Mr. FORD of Tennessee, Mr. TOWNS, Mrs. BENTLEY, Mr. GRANT, Mr. SMITH of New Jersey, Mr. VOLKMER, Mr. BILBRAY, Mrs. SAIKI, Mr. YATRON, Mr. DIXON, Mr. ERDREICH, Mr. LEWIS of Georgia, Mr. DEFAZIO, Mr. GORDON, Mr. HENRY, Mr. STAGGERS, Mr. WAXMAN, Mr. NEAL of Massachusetts, Mr. JAMES, Mr. HORTON, Mr. DWYER of New Jersey, Mr. DYSON, Mr. WEISS, Mr. SYNAR, Mr. ACKERMAN, Mr. BRENNAN, Mr. PORTER, Mrs. PATTERSON, Mrs. MARTIN of Illinois, Mr. HAYES of Illinois, Mr. RICHARDSON, Mr. DURBIN, Mr. SHUMWAY, Mr. FAUNTROY, Mr. OWENS of Utah, Mr. MILLER of California, Mr. LEHMAN of Florida, Mr. RHODES, Mrs. BYRON, Mr. JOHNSTON of Florida, Mr. KANJORSKI, Mr. JONTZ, Mr. RANGEL, Mr. FALEOMAVAEGA, Mr. BATES, Mr. FROST, Mr. HERTEL, Mrs. BOXER, Ms. ROS-LEHTINEN, Mr. DYMALLY, Mr. SCHUETTE, Mr. SOLARZ, Mr. PAYNE of New Jersey, Mr. EVANS, Mr. STUDDS, Mr. BROWN of California, Mr. BOUCHER, Ms. SCHNEIDER, Mr. RIDGE, Mr. SAXTON, Mr. SPENCE, Mr. MCNULTY, Mrs. MORELLA, Mr. AUCOIN, Mr. PALLONE, Mrs. UNSOELD, Mr. WALSH, Mr. DUNCAN, Mr. KENNEDY, Mr. VENTO, Mr. UDALL, Mr. STALLINGS, Mr. EMERSON, Mr. GALLO, Mr. LIGHTFOOT, Mr. CLINGER, Mr. COSTELLO, Mr. WISE, Mr. BOEHLERT, Mrs. MEYERS of Kansas, Mr. MRAZEK, Mr. WYDEN, Mr. BILIRAKIS, Mr. SAWYER, Mr. POSHARD, Mrs. LOWEY of New York, Mr. STEARNS, Mr. THOMAS A. LUKEN, Mr. LANTOS, Mr. FRANK, Mr. SISISKY, Mr. PANETTA, Mr. HAMMERSCHMIDT, and Mrs. SCHROEDER):

H. Con. Res. 333. Concurrent resolution expressing the sense of the Congress concerning a 1991 White House Conference on Aging; to the Committee on Education and Labor.

## MEMORIALS

Under clause 4 of rule XXII,

399. The SPEAKER presented a memorial of the General Assembly of the State of Vermont, relative to artistic freedom; jointly, to the Committees on Appropriations and Education and Labor.

## ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

H.R. 60: Mr. BARNARD, Mr. HOAGLAND, Mr. ROHRABACHER, and Mr. CLARKE.

H.R. 101: Mr. BRUCE.

H.R. 539: Mr. QUILLEN and Mr. HOAGLAND.

H.R. 917: Mr. MCMILLEN of Maryland and Mr. CONDIT.

H.R. 1200: Mr. CONDIT.

H.R. 1400: Mr. MAZZOLI, Mr. NATCHER, Mr. WATKINS, Mr. ENGLISH, Mr. SCHUMER, Mr. CARPER, and Mr. PALLONE.

H.R. 1784: Mr. DWYER of New Jersey, Mr. LAFALCE, and Mr. DEFAZIO.

H.R. 1807: Mr. LEWIS of Georgia.

H.R. 2098: Mr. SABO and Mr. BORSKI.

H.R. 2319: Mr. HARRIS, Mr. CARR, and Mr. CAMPBELL of Colorado.

H.R. 2353: Mr. HAMILTON and Mr. NEAL of North Carolina.

H.R. 2386: Mr. MARKEY and Mr. COURTER.

H.R. 2418: Mr. COX.

H.R. 2437: Mr. MCCLOSKEY, Mr. STAGGERS, Mr. SOLOMON, and Ms. SCHNEIDER.

H.R. 2575: Mr. WOLPE, Mr. HOCHBRUECKNER, Mr. GEJDENSON, Mr. DE LA GARZA, Mr. SCHEUER, Mr. MILLER of Ohio, Mr. STANGELAND, Mr. HAMILTON, Mrs. LLOYD, Mr. MCDERMOTT, Mr. HANSEN, Mr. CONYERS, Mr. IRELAND, Mr. VENTO, Mr. SMITH of New Hampshire, Mr. KASICH, Ms. OAKAR, Mr. BLILEY, Mr. BROOKS, Mr. TOWNS, Mr. FEIGHAN, and Mr. COYNE.

H.R. 2600: Mr. KOLTER.

H.R. 3004: Mr. ALEXANDER and Mr. DYSON.

H.R. 3102: Mr. SCHAEFER.

H.R. 3106: Mr. SIKORSKI.

## PETITIONS, ETC.

Under clause 1 of rule XXII,

178. The SPEAKER presented a petition of the Board of County Commissioners, Monroe County, FL, relative to the interstate allocation of grant funds relative to the payment of Florida taxes; which was referred to the Committee on Government Operations.

# EXTENSIONS OF REMARKS

## HON. SIDNEY YATES OUTSTANDING CONTRIBUTIONS TO THE ARTS

**HON. RICHARD J. DURBIN**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mr. DURBIN. Mr. Speaker, I would like to take this opportunity to recognize my colleague, the Honorable SIDNEY YATES, for his outstanding contributions to the arts. As chairman of the House Appropriations Subcommittee on the Interior, Congressman YATES has worked hard to preserve the right of artistic freedom of expression. It is with great pleasure I submit the text of Congressman YATES' May 18 commencement address at the Juilliard School in New York, where he was presented with an honorary doctorate degree.

COMMENCEMENT ADDRESS OF SIDNEY R. YATES, RECIPIENT OF HONORARY DOCTORATE DEGREE

Thank you very much for your very gracious and generous statements. It's a very high honor you bestow upon me today.

I don't remember any other ceremony where my family—all my family—has come to see me honored. My wife, my son, my daughter-in-law, my three grandchildren—all have come here today to witness and enjoy this occasion.

To show you how they and I regard Juilliard, let me tell you about my grandson's reaction. Jonathan, aged 15, is a pianist for the Chicago Youth Orchestra. His sister, Lauren, who plays the violin, is a member of the Chicago Strings Orchestra.

When I told Jonathan I had been offered an honorary degree from a midwestern university, he didn't react. When I told him I'd been offered an honorary degree from another college, he dismissed it with an off handed—"That's nice."

When I told him that Juilliard had decided to give me an honorary degree his eyes widened and he exclaimed, "Juilliard—wow!" When I said, "Would you like to attend the ceremony," he said, "Would I? You know it, grandpa!" So, he and the family are here today.

At the hearing on the arts which I held as chairman of the Appropriations Subcommittee last Tuesday, the eminent cellist, Yo-Yo Ma, was a witness. As he sat down at the witness table, he congratulated me upon receiving an honorary degree from Juilliard. I thanked him and said: "You should be receiving the degree instead of me." He smiled and said: "I got mine last year." And then, Yo-Yo Ma sat down and played an unaccompanied Bach selection for us. That's the way to testify to a congressional committee.

I'm doubly honored to be part of the honorary class with Jessye Norman, Arthur Mitchell and Kevin Kline. I don't know why I've been asked to speak today when such stars are available—you can always hear a congressman—but think of hearing Jessye Norman's glorious voice, even her speaking voice. That would provide an everlasting memory.

Or Arthur Mitchell, whose eloquence is as charming, graceful and impressive as his dancing and choreography. Or Kevin Kline, the movie hero, now our modern-day Hamlet. As Kevin would say in Hamletese: "O, what an opportunity was missed here!"

I might be able to rise to the occasion, if I were as talented as Charlie Chaplin. I'm told that Charlie Chaplin, who was a wonderful mimic, gave a party one night for his friends in Hollywood. After dinner, he rose to entertain his guests, and in a magnificant tenor voice he sang "Una Furtiva Lagrima," as beautifully as Pavorotti or Domingo.

"Why, Charlie," exclaimed one of his friends, "I didn't know you could sing like that."

"I can't " replied Chaplin. "I was just imitating Enrico Caruso."

But, unfortunately, I'm no Charlie Chaplin. I'm a congressman—and for those who have an interest in the arts as you do, it is understandable that your suspicions should be aroused immediately, because the relationship between the Congress and the arts has not always been a happy one.

We might go back to ancient Greece to find the reason. We think of the ancient Greek civilization as one of glorious beauty—the sculptures, the ceramics, the architecture—But there was also the politician philosopher, the great Plato who called for the exiling of artists from his ideal republic because, he said, they endangered the stability of the state. They questioned too much. * * * They experimented, they reacted to emotion, rather than reason. They called for change. No wonder the politicians did not trust them.

If an enlightened person such as Plato looked upon artists with such a jaundiced eye, one can appreciate why members of Congress are not likely to be friendly to an artist's view of the life and society of his time.

When I came to Congress in 1949, a real Donnybrook was taking place between Congress and a number of acclaimed American artists over what was charged to be communist influence over the arts. It was the time of McCarthyism, and an exhibit of their works which was touring Europe was halted because of a congressional uproar that this was a show of communist art. The paintings were shipped back to the United States. Among the artists whose works were then sold for a fraction of their worth were some by Jackson Pollack, Mark Rothko, David Smith, Yasuo Kuniyoshi.

In 1950 while we were debating an appropriations bill for the Department of State, Congressman Busby from Chicago's south side offered an amendment to delete funds for a State Department art exhibit he had just seen in Paris. The communist influence in the paintings was overwhelming, he said. When I asked him to yield and to tell the House how he recognized communist influence, he replied, "I am glad you asked me that question. I spent a whole afternoon at the show with an art critic who pointed out the communist influence to me. For example, a painting which showed buildings tilted on an angle rather than upright—that was significant—it showed a tumbling of society's structure." Acid-tongued, John Rooney of New York then propounded the question, "Would the gentleman say that the leaning tower of Pisa is communistic?"

The fight that is taking place in the Congress today over federal funding for the arts is just as emotional and just as intense as was the fight over alleged communist influence in the arts. Except that today, it is not communism that is the bogey man. Today it is pornography—obscenity. Not all pornography, but only pornography is part of a National Endowment for the Arts (NEA) grant.

Suddenly NEA has become an embattled agency. Two grants to two little known photographers, Robert Mapplethorpe and Andre Serrano, became famous when far right conservatives attacked their photographs as obscene. Interestingly, those who attacked the grants had shown earlier their intention to end Federal funding for the arts. In concerted attacks, over and over again they use Mapplethorpe and Serrano as examples of typical NEA grants in the hope that constant repetition will impress the public—and the Congress—that NEA is the government's Sodom and Gomorrah.

Nothing is further from the truth. In the twenty-five years that NEA has been in existence there have been literally only a handful of grants that were controversial—about 20 out of 85,000 grants. 20 out of 85,000!

But the NEA opponents continue to talk of nothing else * * * Mapplethorpe and Serrano—M&S. The letters Members of Congress receive cite Mapplethorpe and Serrano indicating the belief that the NEA does nothing else but approve pornography. As far as they are concerned, NEA's other activities are meaningless. To them, fewer than 10 photographs by Mapplethorpe and Serrano, are much more important than the works done by NEA in building symphonies, chamber music, jazz, folk music, dance, theater, opera, museums, visual arts, and expansion arts throughout the country.

In reality, opponents of the NEA are demanding an impossibility—that NEA be the perfect agency, unlike any other government agency—that it not be allowed to make one error—one error that is alleged to be pornographic.

If we compare NEA's record with those of other government agencies:

The Department of Defense with its $700 toilet seats and the Stealth Bomber which rose in price from an estimate of $75 million to a cost of over $500,000,000 per plane.

Or the Savings and Loan debacle which will cost taxpayers hundreds of billions of dollars.

Or the corruption in the Housing Agency. These are examples of true obscenity.

The eminent violinist, Isaac Stern has written about that very special day in 1965 when he and many of his colleagues, world-renowned artists, gathered together with President Lyndon Johnson to sign the bill creating the National Endowments for the Arts and the Humanities:

● This "bullet" symbol identifies statements or insertions which are not spoken by a Member of the Senate on the floor.

Matter set in this typeface indicates words inserted or appended, rather than spoken, by a Member of the House on the floor.

"Our task," said Stern, "was to help devote excellence in the arts and to make that excellence more widely available and accessible to all our people. In the course of our first deliberations, we also knew that we had responsibilities to the creative minds and spirits in this country to make possible more and more opportunities for them to experiment, to have as we said, "the right to fail" without which the arts do not flourish. It was a memorable time. It produced remarkable results." That was Isaac Stern and his belief is still NEA's mission—NEA must not be afraid to carry out that mission because of congressional criticism.

Art is freedom, the freedom to follow one's own instincts and impulses. The freedom to explore the forbidden. The freedom to create something new and original.

The great artists of our time, or of any time, have been rebels and risk-takers. Like the Impressionists, who were called Les Fauves—the Wild Beasts, or the Abstract Expressionists—The New York School, whose paintings? Do you remember what your neighbor said: "Why, my 5 year old could paint that."

Listen to the wise words of a man who understands what censorship is, because he has suffered under it. The famous cellist, Mstislav Rostropovich, who played under censorship and under American freedom, testified before a Senate committee that: "Art and literature should be judged by the conscience of the creator, his peers in the field and all of the people, not by a separate bureaucracy, artificially compressing the arteries and veins of this life-sustaining circulation. Art is the soul of its people. 'Not by bread alone' does man survive. Especially the United States, with its great number of diverse ethnic and religious groups, must preserve in an untouchable state the right of each person to express himself."

Europe is freeing itself from communist authoritarianism. How ironic that in America some would impose government standards upon our art.

The conflict in the Congress over NEA will reach a showdown in a few weeks. I believe we will be able to defeat the conservatives' efforts to restrict the right of artistic freedom of expression. I believe we will win the battle to continue government funding for the arts.

I want to commend you upon achieving your degrees today. Graduating from Juilliard which is one of the preeminent centers of artistic excellence in the country is a wonderful achievement. Today, I ask you to go further—to take up the fight for other rights—to complement the priceless and magical gifts with which you are endowed—to assure your being able to be seen, to be heard, to be enjoyed. Become an active participant in other social problems so that your precious talent can be shared.

Being an artist is not enough. You must be a citizen, as well, for only through the participation of talented people like you can our country survive.

I urge you, I challenge you to become involved in fostering our country's well-being. We need better schools—better race relations—better care for the poor—better care for the elderly—health services for the indigent—civil rights—work experience and training for the unemployed and the youth who have never had a chance. We need expanded horizons on science—cleaner environment—decent housing—the elimination of religious bigotry—food for those who are ill-fed—and safer foods—research for crippling and deadly diseases like cancer, AIDS, strokes, heart attacks—and a myriad of other needs.

You, the fortunate, the able, the blessed, are needed desperately. Give of yourself more than your great artistic talent. Give so that the unfortunate can join with you in a more beautiful and enhanced society. It's your future. It's your world. You must couple your talent with civic participation. It will bring even more satisfaction and joy than you can imagine.

I'm very proud to receive this degree today when you receive yours. I wish you good music—good theater—good dance—good luck—and a good, good life.

## WHITE HOUSE CONFERENCE ON AGING

### HON. MATTHEW J. RINALDO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mr. RINALDO. Mr. Speaker, today, I am introducing a concurrent resolution to urge President Bush to announce the convening of the 1991 White House Conference on Aging as soon as possible. Joining me as original sponsors of this resolution are the chairman of the House Aging Committee, Representative ED ROYBAL, the entire membership of the committee, Representative GUS HAWKINS, chairman of the House Education and Labor Committee, and the chairman and ranking Republican member of the Human Resources Subcommittee, Representatives DALE KILDEE and TOM TAUKE.

The 1991 White House Conference on Aging was authorized by the Older Americans Act Amendments of 1987, Public Law 100-175. It would continue an important tradition of decennial conferences on issues affecting senior citizens, a tradition that has its roots in 1951 during the administration of President Harry Truman and which includes White House Conferences on Aging in 1961, 1971, and 1981. Previous White House Conferences have provided a nonpartisan forum for dialog on aging issues, and we believe that the 1991 Conference, adequately planned and administered, can be just as successful and constructive as its precedessors.

Unless this Conference is announced soon, however, its success will be jeopardized. Planning for the 1981 conference, for example, was begun in 1979, and many aging organizations have expressed deep apprehension at the delay in the announcement and preparations for the 1991 Conference.

I urge my colleagues to join me in pressing ahead to begin work on this Conference without delay.

## A TRIBUTE TO THE COALITION OF HISPANIC AMERICAN WOMEN

### HON. ILEANA ROS-LEHTINEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Ms. ROS-LEHTINEN. Mr. Speaker, it is with great pleasure that I come before you today to recognize the tremendous contributions by the Coalition of Hispanic American Women and to salute the individuals who will be honored at their annual Vivian Salazar Quevedo Awards Banquet on June 6, 1990.

The Coalition of Hispanic American Women was founded in the fall of 1979 in Miami. CHAW's founders recognized the need for a unified forum to promote and advance Hispanic women. Today, Mr. Speaker, CHAW is among the most influential organizations in south Florida, with a membership comprised of civic, professional, and business leaders.

CHAW's objectives are threefold: To propel Hispanic American women to leadership positions in the workplace and in the community, to seek equal access and opportunity for the entire community, and to create public awareness of the presence and concerns of Hispanic American women. Throughout the year, CHAW sponsors a variety of activities that highlight the needs and interests of Hispanic American women. These include legislative and political forums, a job-assistance seminar conducted in Spanish for Hispanic American women in transition, the Women's History Month celebration, the Vivian Salazar Quevedo Memorial Award for an outstanding community woman, scholarship awards to exceptional female graduating seniors of Hispanic heritage, and the December "Holiday Happening"—of which proceeds go to the battered women's shelter.

Mr. Speaker, the theme of the Coalition of Hispanic American Women's Vivian Salazar Quevedo Banquet is "The Hispanic Woman: Inspiration for the 90's." Viewing the contributions of the honorees, their actions are truly inspirational. During this annual event, the 1990 board of directors and officers will be installed, the Vivian Salazar Quevedo "Woman of the Year" Award will be presented to a Hispanic woman who has made significant contributions to other women as well as the local community. The Woman of the Year Award is presented in memory of Vivian Salazar Quevedo, a founding member of CHAW who distinguished herself for her service to the community and local media as a channel 23 executive.

In addition to the Woman of the Year Award, five high school graduates will receive the Elena Mederos/Concha Melendez Scholarship for their outstanding academic and community service records. The program is named in honor of Elena Mederos, a Cuban-American human rights activist, and Concha Melendez, a Puerto Rican educator, who paved the way for access and success for many young women with limited opportunities. Another award for leadership will be presented posthumously to Leslie Pantin, Sr., who was an insurance executive who was a true inspiration to all Cuban-Americans due to his extensive public service.

I would like to commend the Coalition of Hispanic American Women for all of their tireless efforts to further the role of the Hispanic woman in our great Nation. Mr. Speaker, I would also like to congratulate all past recipients of the awards and scholarships, and I would like to congratulate all the nominees for the Vivian Salazar Quevedo Award which includes Josie Romano, Luisa Garcia-Toledo, Aleida Leal, Aida Levitan, and Ana Maria Haar

and also the scholarship recipients: Clara Sanchez, Laura Escandel, Oxana Gonzalez, Hilda Abad, and Eugenia Vega.

The actions of all members of CHAW and the banquet's honorees deserve commendation for their civic pride, efforts of good will, and philanthropic activities.

## PUBLIC SCHOOL 93 IN THE BRONX CELEBRATING ITS 60TH ANNIVERSARY—1930-90

### HON. JOSÉ E. SERRANO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mr. SERRANO. Mr. Speaker, Public School 93, the Bronx, was erected in 1928-29 by the George Colon Construction Co., Inc., at the cost of $770,000 and was ready for occupancy on February 3, 1930. At the time of the opening of the school, no streets were cut through to it. Story Avenue existed only for the block on which the school lies. The school was erected on land formerly owned by the Watson family.

At the time of its construction, Public School 93 was considered state of the art for the semi-rural Bronx community it served. The school contained 33 classrooms, an auditorium, and a gymnasium. As was typical of the 1930's, the schoolyard was covered with ashfill until it was later covered with cement.

During the last 60 years, thousands of school children have passed its portals into American society. Its former students owe their successes to the labor of dedicated teachers. All who have studied and taught at Public School 93 found happiness and a lifetime of profit.

On this day our Nation takes pride in recognizing Public School 93's 60 years of educational service to the Soundview community in the Bronx, NY.

## THE FAMILY AND MEDICAL LEAVE ACT

### HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mr. MAZZOLI. Mr. Speaker, I wish to commend to the attention of my colleagues the following editorial from the Louisville Courier-Journal on the Family and Medical Leave Act which the House approved—with my support—on May 10.

[From the Courier-Journal, May 10, 1990]

AN ALL-AMERICAN BILL

Like Lemmings rushing into the sea, the Republicans in the White House could not resist opposing legislation in support of the American family—even at the risk of belying their claims of being "pro-family," motherhood and apple pie.

At stake is a bill that ought to delight President Bush and others who champion those traditional values: It would require larger employers to provide minimal, unpaid leaves of absence following the birth or adoption of a child or to cope with major illnesses.

When the House of Representatives takes up the bill—which could occur today—it should ignore the veto threat delivered earlier this week by White House Chief of Staff John H. Sununu and enact the Family and Medical Leave Act.

The White House, meanwhile, might rethink its opposition to this modest step toward adapting the workplace to dramatic social changes that have occurred over the last two decades. If the Bush administration truly wants to be "pro-family," it should examine the workplace more carefully, for that's where more and more of America's moms and dads are.

The basic, non-ideological point behind the Family and Medical Leave Act is that supportive public policy must be enacted to help growing numbers of working families cope with the competing demands of work and home. With single-parent and two-worker families forming a larger majority in America each year, such policies are no longer "fringe" benefits but essential aids to the well-being of families—and of children.

More simply, people should not have to risk losing their jobs to cope with the birth or adoption of a child or a serious illness. Yet thousands of Americans do that each year—and often end up collecting unemployment as a result.

Virtually every industrialized nation already recognizes that, including many that boast more productive workforces than America's. Most provide more generous benefits than any contemplated in Congress.

The bill under consideration substantially reduces the scope of the original Family Leave proposal introduced four years ago. It would require employers to provide up to 12 weeks a year of unpaid leave for workers to care for newborn or newly adopted children or to deal with serious medical problems in the immediate family.

Both male and female workers would be eligible, an important principle of equity. But the bill's scope is decidedly limited: Companies employing fewer than 50 workers—about 95 percent of all businesses—would be exempt.

The most compelling criticism of the bill is that, because the leaves would be unpaid, they would benefit only workers who can afford to forego their wages temporarily. It would begin, however, to provide basic job security for people who have no choice, including women who must take time off from work to recuperate from pregnancy.

The Family and Medical Leave Act is far from the definitive word on this complex issue. It will not eliminate the stress on American families—or on businesses that value mothers and fathers as workers. But it represents a step toward reducing the sometimes overwhelming conflict that exists between those two roles.

## CHAPIN HOME FOR THE AGING HONORS JOHN A. GAMBLING

### HON. GARY L. ACKERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mr. ACKERMAN. Mr. Speaker, I rise so I may share with you and all of our colleagues a little bit of the glorious history of New York City—my hometown.

In a few days, the citizens of the city will celebrate the anniversary of the Chapin Home for the Aging.

Mr. Speaker, this place is truly among the institutions of New York. Shortly after the Civil War, an outstanding woman of vision and energy, Mrs. Edwin H. Chapin, realized a growing need within the growing city was for a humane home where the senior citizens who served their city and Nation so well could find support and rest. So in 1869, the Chapin Home was opened.

As the new century took hold, so too did the industrial revolution with its associated hustle, bustle, and pollution. As I have indicated Mrs. Chapin was a woman of great vision and, in 1910, she moved the home to a better location. She chose a new home for her home in Queens, a Borough of New York without equal, and my home county.

Today, Mr. Speaker, on the 121st anniversary of the Chapin Home for the Aging, plans are underway for more improvements, including a new 220-bed building.

As part of this year's celebration, the wise trustees of the Chapin Home have decided to honor another institution equally essential to New York—radio personality, John A. Gambling. John A. is the current host of WOR Radio's "Rambling With Gambling" program.

For 65 years, the city has started its day listening to "Rambling With Gambling." John A.'s father, John B., inaugurated the broadcast in 1925. In the future, the station will continue to bring news, information, and intelligent conversation to the city with John A.'s son, John R., at the helm.

Today, when Billboard magazine formally recognizes John A. Gambling as "Air Personality of the Year," these experts are simply acknowledging fact.

When the listeners of the metropolitan area choose John A. as New York's favorite radio personality, they merely confirm what is already well known to John A.'s fans and competitors alike.

Not as well known, John A. and his wife, Sally, are the proud parents of three children and five grandchildren. Besides John R., the Gambling daughters, Ann and Sarah, pursue their own professional careers while maintaining their families.

New York City ia a richer place because both John A. Gambling and the Chapin Home are there.

Mr. Speaker, I call upon all my colleagues in the U.S. House of Representatives to join me in paying tribute to John A. Gambling and the Chapin Home for the Aging.

## IN RECOGNITION OF BEVERLY LANG, R.N., CRITICAL CARE NURSE OF THE YEAR, 1990

### HON. BEVERLY B. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mrs. BYRON. Mr. Speaker, I would like to take this opportunity to recognize and honor Beverly Lang, R.N., head nurse of the intensive care unit, Sacred Heart Hospital in Cumberland, MD. Ms. Lang was named the 1990 Critical Care Nurse of the Year on May 19, 1990. This award, which is sponsored by Critical Care magazine and Siemens Medical Sys-

tems, Inc., is given annually to the outstanding critical care nurse in the country. Western Maryland is fortunate to have such a skilled and caring person among its health care providers. Ms. Lang is an inspiration to all who come in contact with her, and we send her our congratuations.

I would like to insert the testimonial prepared by her colleagues:

CRITICAL CARE NURSE RECOGNITION AWARD

(Submitted by Mary D. Simmons, R.N., on behalf of nominee, Beverly Lang, R.N.)

For Intensive Care Nurse Manager Beverly Lang, caring, compassion, empathy, competence and professionalism are more than words; they are descriptions of her life. Her twenty years of outstanding contributions and dedicated service as a critical care nurse can be summarized in three words, success, achievement and humanitarianism.

Mrs. Lang's success is a measure of what she is, a sensitive, caring person who places the needs of her patients and their families first and foremost in everyday practice. She is a true patient advocate. She does not simply believe her patients deserve the best, she delivers it. Whether it is an arm around a grieving family member or an active participant in a code situation, Mrs. Lang is there giving her best.

Mrs. Lang's achievements are expressed by her in-depth knowledge of critical care, by her astute observations and professional judgement that has many times provided a favorable outcome for a patient during a life and death situation. She is a nurse who dedicates herself to upholding the standards of care as outlined by the AACRN with the utmost of professionalism and practice. She is ever learning, ever sharing, ever striving to improve the already perfected quality of patient care she offers and is ever giving of herself for others. She has achieved the respect of her co-workers, the gratitude of her patients and a degree of professionalism which is admired by all who know her.

Mrs. Lang is a humanitarian in every sense of the word. To the family weary from waiting she is as a drop of fresh water cooling their thirst for information, for understanding, for empathy. She has developed a form of communication whereby words are not always necessary but where the expression of understanding is always obvious. She has the ability to touch the heart of another human being with love and compassion. To her patients she is a nurse, a teacher, a counselor, a gentle, competent guide through a world of pain and suffering. To her co-workers she is a leader, a teacher, a helper, a friend. To a family member she is someone to talk to, to lean on, to laugh with, to cry with.

Mrs. Lang is a success by what she is, she is an achiever by what she does and a humanitarian through it all. Mrs. Lang is an outstanding example of nursing at its best.

## INTRODUCE LEGISLATION TO PLACE PROPERTY AND CASUALTY INSURANCE COMPANIES IN A "CATCH-22" SITUATION

### HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mr. RANGEL. Mr. Speaker, I am pleased today to join with Representatives PETE STARK, BILL FRENZEL, BILL GRADISON, and RAY MCGRATH in introducing legislation that would address a problem that places property and casualty insurance companies in a "catch-22" situation with the Internal Revenue Service over the treatment of termination reserves on minimum premium plans.

A minimum premium plan is a funding arrangement for accident and health insurance under which most of what would otherwise be paid as premiums is paid into a separate account which is then drawn upon by the insurance company to fund the payment of benefits under the plan. Economically, a minimum premium plan is indistinguishable from a conventional accident and health insurance plan.

This bill would clarify that amounts reflected as reserves or other liabilities on a property and casualty company's annual statement for future claim payments under minimum premium accident and health plans are properly deductible during the policy period.

These companies need legislative relief because the IRS has reached alternative, but inconsistent, conclusions on these minimum premium plans. In two separate determinations—Technical Advice Memorandum 87-05-003 and GCM 39609—the IRS denied any unpaid loss deduction for the taxpayer's minimum premium plan reserves on the ground that the risk of loss does not arise until the policy terminates or until the employer ceases to make required payments. In the same rulings, however, the IRS denied an unearned premium deduction for the same amounts, arguing that the risk of loss already occurred. These two conclusions are inconsistent.

An essentially identical provision was included in the Senate Committee on Finance's version of the 1989 tax bill last year. The provision was dropped, however, when all miscellaneous amendments were deleted on the Senate floor. During debate on the 1989 tax bill on the House floor, it was stated that the Committee on Ways and Means would revisit this problem early this year if it was not resolved at the administrative level; similar comments were made on the Senate floor. It has not been satisfactorily resolved, and therefore it is necessary to proceed with legislation.

I urge other Members of the House to join with me in supporting this legislation.

## THE WILLIAM LLOYD GARRISON SCHOOL IN THE BRONX CELEBRATING ITS 90TH ANNIVERSARY OF EDUCATION IN THE SOUTH BRONX 1900-90

### HON. JOSÉ E. SERRANO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mr. SERRANO. Mr. Speaker, in John McNamara's book, "McNamara's Bronx," he describes Special Primary School 31 as the "Castle on the Concourse." Situated at the Grand Concourse and East 144th Street, Special Public School 31 is an impressive edifice. Named in honor of the abolitionist and editor of the Liberator, the antislavery newspaper, the William Lloyd Garrison School is a prime example of the collegiate gothic styles. The school is marked by tudor arches, gabled bays, label moldings, stone tracery, and central entrance tower.

Only July 15, 1986, the Landmarks Preservation Commission of the city of New York designated Special Public School 31 an official New York City landmark.

The school has won other honors as well. Public School 31 has long been noted for its effective administration, leadership, and superior achievement in meeting the needs of its pupils. Public School 31 has established an enviable scholastic record. The school has been in the forefront of low income children with a high quality education in the liberal arts. Nearly 72 percent of its pupils read at or above grade level.

When former Secretary of Education William S. Bennett visited in January 1987, he stated that "Public School 31 is a school that works in circumstances where many believe schools cannot work."

The school has been recognized by successive New York City schools chancellors, the United Kingdom Secretary of State for Education, the New York State Commissioner of Education, journalists and scholars.

In the 90 years since the Garrison School opened its doors its teaching staff has pursued a commitment toward a quality education for the poor.

When inaugurating his antislavery newspaper, the Liberator, William Lloyd Garrison wrote, "I am in earnest—I will not equivocate—I will not excuse—I will not retreat a single inch and I will be heard." Those same words reverberate throughout the Garrison School in the South Bronx. Shared by their principal, Carol Russo, the teachers and students crusade for educational excellence.

In recognition of the 90th anniversary of Special Public School 31—the William Lloyd Garrison School—I ask that this body offer salutatory praise.

## TRIBUTE TO ADM. WILLIAM NARVA

SPEECH OF

### HON. GARY L. ACKERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, May 10, 1990*

Mr. ACKERMAN. Mr. Speaker, I want to join with my colleagues in thanking and saying goodbye to Adm. William Narva. This remarkable American has devoted 35 years of his life to the service of our country. And, within the Congress, we have been fortunate indeed to call Admiral Narva our doctor for the past 4 years.

I consider Bill Narva my friend, even though he often ordered me away from the delicious New York foods that I love the most—those with the high cholesterol count.

Many times he made a personal sacrifice and separated me from a corned beef sandwich, which he would then eat himself in order to save me.

He also certainly has been a friend to this House. As consultant to the Attending Physician to the Congress from 1966 through the

assumption of that position himself in 1986, Admiral Narva has offered wise counsel and advice to all of us.

Permit me for a moment, Mr. Speaker, to touch upon just a few of Bill's other accomplishments. He holds the Defense Superior Service Medal, the Legion of Merit, the Navy Meritorious Service Medal, and the Navy Commendation Medal.

The good Doctor headed the Dermatology Service at Bethesda Naval Hospital. He was the man in charge of the Surgeon General's Office at the Navy Department. The admiral also has served as special assistant to the Secretary of the Navy and, for two decades, he was consultant to the White House Physician.

In short, Mr. Speaker, this great American has given a great deal of talent, energy, and creativity to all of us. And, he permitted us to answer the question, "Is there a doctor in the house?"

Goodbye, Bill. Thank you. We all wish you good luck and good health. I will miss you.

## INTRODUCES LEGISLATION TO INDEX BASE AMOUNTS FOR SOCIAL SECURITY TAXATION

### HON. MATTHEW J. RINALDO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mr. RINALDO. Mr. Speaker, I recently introduced legislation to index the base amounts for the taxation of Social Security benefits and eliminate the bracket creep which reclaims Social Security benefits from an additional 390,000 older Americans every year. My bill, H.R. 4601, would provide an annual inflation adjustment to the income thresholds which trigger the tax on benefits, finally bringing this tax into line with our overall national tax policy.

The taxation of Social Security benefits was first enacted with the 1983 Social Security Reform Act. At the time the outlook for Social Security was dire and the collapse of the system seemed imminent. In view of the severity of the crisis, Congress chose to adopt the recommendations of the National Commission on Social Security Reform in their entirety rather than risk a fractious debate.

Today, things are different. In the 6 years since this debate, the Social Security trust fund has grown substantially, and cost-of-living adjustments for beneficiaries are routinely provided. Inflation, in the meantime, has eroded these income thresholds by 20 percent, and it will continue unless we take action to stop it. Eacy year that these thresholds are not adjusted for inflation, more people will be indexed into this tax bracket and find themselves relinquishing a portion of their Social Security benefits as taxable income. Moreover, while the law was intended to affect only the rich, each year it bites more and more deeply into the fabric of the middle class.

This tax works silently and stealthily against our Nation's senior citizens. Each year, without benefit of a vote, our failure to index these thresholds casts the pall of taxation over an additional 390,000 older Americans.

When this matter was first debated, indexing tax brackets was a new and unfamiliar concept, but the system has changed significantly. Following the Tax Reform Act of 1986, indexation formed the foundation of a more equitable tax system. Clearly, now is the time to index the base amounts for Social Security benefit taxation as well. I urge my colleagues to join me in this fight by cosponsoring H.R. 4601.

## HIALEAH GARDENS CELEBRATES FLAG DAY

### HON. ILEANA ROS-LEHTINEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Ms. ROS-LEHTINEN. Mr. Speaker, one of the most emotion-filled days of my first few months in Congress was the day when I led my colleagues in reciting the Pledge of Allegiance: "I pledge allegiance to the flag of the United States of America, and to the Republic for which it stands, one Nation under God, indivisible, with liberty and justice of all." Those words fill me with pride in being American, a Member of this illustrious body, and a representative of the people of the 18th District of Florida. On June 14, 1990, we will be celebrating National Flag Day. It is a pleasure to commend the city of Hialeah Gardens for their leadership in celebrating this holiday.

Mayor Gilda Oliveros has planned an event which will be the largest in the Miami area. It will concur with the 7 p.m. Pledge of Allegiance celebration in Washington, DC, "Pause for the Pledge of Allegiance." It is Mayor Oliveros' wish to encourage our young people to love and respect our flag, symbol of our national pride and of everything which we are.

Americans everywhere will pause for a moment on June 14, 1990, at 7 p.m. to say simultaneously the 31 words of the Pledge of Allegiance to the flag. The effect of this simple ceremony each year is a stimulating experience at home and a sign of unity abroad. This concept transcends age, race, religion, national origin, and geographic differences. The idea of the annual "Pause for the Pledge of Allegiance" originated in Baltimore, MD, in 1980. Since then, the concept has swept across the country in a grassroots movement supported by a broad spectrum of individuals, organizations, and businesses. In 1987, Mrs. Nancy Reagan became honorary chairman of the national "Pause for the Pledge of Allegiance" program.

As Americans, we taken pride in observing and celebrating this day honoring our flag and at the same time celebrating our history as a people, united under this great symbol of democracy and equality. I am proud to join the people of Hialeah Gardens, Mayor Oliveros, and Americans everywhere in reciting the Pledge of Allegiance to the flag.

Mr. Speaker, as a Florida certified teacher, and the mother of two young girls, I know how very important it is to educate our children, teaching them with our example to love this wonderful land of ours, the true home of the free and the brave, and an example for so many nations to follow.

## TRIBUTE TO THE LATE HENRY JULIUS BRZEZANSKI

### HON. BEVERLY B. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mrs. BYRON. Mr. Speaker, the Library of Congress and Maryland's Sixth Congressional District lost a faithful public servant with the passing of Henry Julius Brzezanski.

Mr. Brzezanski was born in Poland and defended that country during World War II. He was captured by the Nazis and kept as a POW for almost 5 years. He was able to escape, and rejoin the allies, first with the French Foreign Legion before being repatriated with the Polish Free Army. For this the French Government recognized his sacrifices and awarded him several decorations.

Mr. Brzezanski worked at the Library of Congress for 34 years as senior staff reference bibliographer. His last assignment, prior to his retirement in 1982 was in the newspaper and current periodical reading room. During his 34 years in Government service he served the President of the United States as well as Members of Congress and the U.S. Senate.

Henry Brzezanski was a patriot, a dedicated public servant, and a father who instilled in his children—first generation Americans—the love of freedom he so desired for his native Poland. He was a true American and will be missed.

## AMBASSADOR JEANE KIRKPATRICK ON THE ADMINISTRATION'S SHORT-SIGHTED POLICY IN THE MIDDLE EAST

### HON. TOM LANTOS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mr. LANTOS. Mr. Speaker, Ambassador Jeane Kirkpatrick was the distinguished representative of our Government to the United Nations. Earlier this week, the Washington Post published an excellent analysis of the administration's policy in the Middle East by Ambassador Kirkpatrick.

She notes that the administration "views Israel rather the same way the 'moderate' Arab States view Israel: As the source of the problem, the state that has disrupted the peace of the region." In fact, Israel is the only democracy in the region, the only country that shares our commitment to a parliamentary democracy with full and free elections, the only state committed to freedom of speech, a free press, and the rule of law.

The administration's misguided view of the Middle East has already provoked the collapse of the grand coalition government in Israel. An unfortunate statement from the administration on Jerusalem forced the Congress to adopt legislation reaffirming that Jerusalem is the capital of Israel, and this vote took place at a time when it was not particularly helpful to the administration's efforts to

bring peace in the area. The administration has bent over backward to be accommodating to the PLO, but at the same time the PLO has continued to provoke and incite unrest among the Palestinian population of Israel. At the same time the PLO continues to support terrorist activites.

Mr. Speaker, I insert Ambassador Kirkpatrick's outstanding article in the CONGRESSIONAL RECORD, and I urge my colleagues to give it the careful and thoughtful attention it deserves.

[From the Washington Post, May 21, 1990]

BUSH'S MIDEAST MYOPIA

(By Jeane Kirkpatrick)

The whole world knows that George Bush is not enthusiastic about "the vision thing"—about discussing or even articulating broad principles. Nonetheless, Bush does have perspectives on the world and its many problems, and his widely touted "pragmatism" has not prevented these perspectives from becoming progressively clear during the past year. They can be discerned in his choices and in his rhetoric in concrete situations.

Last week, for example, Bush welcomed to the White House Tunisia's President Zine al-Abidine Ben Ami, who in November of 1987 seized power from Tunisia's aging leader, Habib Bourguiba. Neither President Ben Ami's manner of arriving in power nor of retaining it through an uncontested presidential "election" diminished Bush's enthusiasm for this man, whom he described as "an intermediary between Arab countries and the West." Bush also described Tunisia as having "consistently supported a peaceful negotiated resolution to the Middle East issues, including the Arab-Israeli conflict."

Tunisia is, of course, the site of U.S. conversations with PLO representatives and, although the main purpose of Ben Ami's trip to the United States was to seek help with his country's pressing economic problems, he brought to the White House a president-to-president message for Bush from Yasser Arafat.

Though little specific information on the Bush-Ben Ami conversations was released, the assistant secretary of state for the New East, John Kelly, told reporters that the two leaders shared a concern about continuing Israeli settlements in the "occupied territories."

Indeed, Bush and the State Department seldom miss an opportunity to underscore their opposition to Israeli settlements on the West Bank, Gaza, and sometimes East Jerusalem. This attitude toward settlements is but one of a number of indicators of Bush's perspective on the Arab-Israeli conflict. Even though the president probably thinks of himself as "even-handed", the evidence suggests that Bush views Israel rather the same way the "moderate" Arab states view Israel: as the source of the problem, the state that has disrupted the peace of the region.

Administration proposals for the area usually assume that the Palestinian dream of a homeland should be fulfilled and that it is the duty of the smallest state in the region—Israel—to provide the land to satisfy that dream. Thus, Bush Administration proposals regularly focus on settlements as a major obstacle to peace, as if, of all the possible elements in a peace process, the United States should first demand a unilateral Israeli concession.

From this perspective it is natural, almost inevitable, that the Bush administration should have felt irritation with Yitzhak Shamir and his government. If you start from the premise that Israeli is the obstacle and that the peace process depends on preliminary Israeli concessions, and you have no great revulsion to the character of the PLO, then naturally Shamir's refusal to negotiate with the PLO—and his insistence on dealing on questions concerning the West Bank and Gaza with residents of the West Bank and Gaza—would seem tenacious, rigid, inflexible. A terrible irritation.

If you believe, as the Bush administration does, that of all conflicts in the Middle East and the world, you have a special vocation for settling this one, then you will not be overly concerned about whether your pressure causes the collapse of a government that you see as an obstacle to peace.

The Bush Administration's perspective on the Arab-Israeli conflict ignores a number of other factors, such as, for example, the necessary role of Jordan in any resolution of the conflict. In fact, the president and Secretary of State James Baker maintain an eerie silence on Jordan's absent contributions to the peace process—as it maintains silence on Syria's continuing occupation of Lebanon and its assistance to the most extreme PLO factions, silence on Iraq's threats and silence on the continuing Arab boycott.

I desire to be fair and accurate. The Bush administration has protected Israel in the United Nations Security Council. Only last week the United States made it clear that it would veto a draft Arab resolution accusing Israel of violating the Fourth Geneva Convention, declaring settlements in the West Bank and Gaza illegal, affirming a contentious Palestinian "right to return" and defining Jerusalem as an "occupied Arab territory."

There is room for the state of Israel within the Bush administration's perspective. It would be an Israel stripped of the West Bank, Gaza and East Jerusalem, coexisting with the Palestinian "entity" governed by the PLO and already recognized as a full-fledged state by a majority of governments in the world.

But a stripped-down Israel—with a PLO state on one border, an intimidated Jordan on another, a Syrian-occupied and terror-infested Lebanon on the third, a growing Islamic fundamentalist movement on all sides and with Iraq's Saddam Hussein brandishing weapons of mass destruction—would hardly satisfy the hopes of most israelis or most Americans for peace in the Middle East.

There is a better vision of peace for the area. It begins, as in Europe, with an end to war, free elections, economic cooperation and negotiations among the parties. But seeking that better vision requires a different perspective.

## JACK KEMP'S VISION

### HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, May 23, 1990*

Mr. RANGEL. Mr. Speaker, there is one Cabinet Secretary who stands tall with a vision about how to confront drugs and other social problems falling on our Nation. He is Jack Kemp, Secretary of Housing and Urban Development.

Jack Kemp knows that until we as a Nation attack the root causes of drug abuse—homelessness, joblessness, lack of education, lack of health care, lack of family, lack of opportunity, and above all, poverty—drug addiction and drug-related crime will continue to be a plague upon our land.

For benefit of our colleagues, I would like to place into the RECORD an article in the Washington Post, May 7, 1990, by William Raspberry, "Kemp Believes."

The article follows:

[From the Washington Post, May 7, 1990]

KEMP BELIEVES

(By William Raspberry)

The thing to understand about Jack Kemp, secretary of Housing and Urban Development, is that he believes.

Another secretary, given the budget restraints of the no-new-taxes Bush administration, might have been content to clean up the scandal-plagued agency he inherited 16 months ago. But Kemp believes he can make a difference—that he really can expand housing opportunities for the poor.

Another Republican administrator might have taken the growing enthusiasm for converting public housing to tenant ownership as a way of getting the government out of the public-housing business. Kemp believes it can be a way of transforming the poor.

Another fast-talking conservative might have found himself blaming "tax and spend" Democrats for the budget deficits that have become an all-purpose excuse for not helping the poor. Kemp has convinced himself that while more money would be helpful, a lot of good can be accomplished by using existing funds more intelligently.

He believes it. Thus he was in Dallas last week, pledging to create a million new homeowners from the ranks of the poor by 1992: not by shoveling out money to developers but by using existing law to deliver financial aid and technical assistance to the poor themselves.

There will be no more HUD scandals like those now the subject of congressional hearings, he told a public-housing tenant-management convention. "We've depoliticized it," he said. "There's no longer any room for political influence or profiteering at the expense of low-income people and neighborhoods. President Bush gave me a mandate to clean up, and we're doing that."

But he hopes to do a lot more than that, he said on his recent tour, which also included stops in Milwaukee and Detroit. On each of the visits, he repeated his pledge of a million new home owners, many of them to come from rehabilitating vacant public housing and selling it to the poor. And at every stop, he plumped for tenant-management of existing public housing, citing the success of programs in Washington and St. Louis.

"You wrote a piece about [Washington University assistant professor] Michael Sherraden and his idea that ownership of assets changes behavior," he told me in an interview after his return to Washington. "That's exactly right. Owning something changes behavior in ways that no amount of preaching middle-class values ever could. Democracy can't work without the component that goes to the heart of what freedom is all about—the chance to own a piece of property. That's why I'm determined to do what I can to put assets in the hands of the poor."

Kemp has discovered a truth that still escapes many of the traditional advocates of the poor: that ownership and control of assets is a surer path out of dependency than even the most generous income-transfer programs. And he is preaching that gospel to the poor themselves.

"Jack Kemp has talked face to face with more poor people in the last four years than most of the civil rights leaders have in the last 20," said Robert L. Woodson of the Center for Neighborhood Enterprise, who was in Dallas when the secretary made his pledge of a million new homeowners. "He understands that how you get something matters more than what you get. Just giving people money and free housing only earns you contempt for the gift. Giving them a chance to manage or own their housing gives them a stake in maintaining it."

A visit to to the tenant-managed Kenilworth-Parkside project in Washington or Cochran Gardens in St. Louis confirms the idea. Not only is the condition of the properties vastly improved since the tenants assumed management, but the rental collections are up to the point that they are actually turning a profit.

Still not everyone is convinced. Two weeks before Kemp's visit, Detroit Housing Authority Director Thomas Lewis said in an interview with the Free Press that training tenants to manage their own public-housing properties was too expensive and that HUD management rules were too complicated for them to learn.

He said it was all right for tenants to "play a role" in reviewing tenant applications or helping to maintain buildings and grounds, but insisted that actual management was best left to "what is already in place: a network of professionals—like myself—men who have made this their life's work."

Kemp minced no words when he learned of Lewis' remarks.

"I'm profoundly disappointed with Mr. Lewis for saying it would be too difficult for low-income people to do what I and President Bush want to do—give all public housing residents in America a chance . . . to manage and control and ultimately own public housing units within three to four years," he said. "What is [Lewis] saying? That low-income people don't know how to train? Are they to be perpetually poor?"

Kemp stressed that Lewis, whose agency's 9,500 units has a vacancy rate of 55 percent, does not work for HUD. "If he had been a HUD employee, he'd be looking for a new job right now." But he added that he had invited Lewis to Washington to see tenant-management at first hand.

"I think it's a new war on poverty, with or without Mr. Lewis," he said. "And it's one I intend to pursue, with or without Mr. Lewis."

Jack Kemp believes.

## SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of the meetings, when scheduled, and any cancellations or changes in the meetings as they occur.

As an additional procedure along with the computerization of this information, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Meetings scheduled for Thursday, May 24, 1990, may be found in the Daily Digest of today's RECORD.

### MEETINGS SCHEDULED

#### MAY 25

8:30 a.m.
Agriculture, Nutrition, and Forestry
Business meeting, to continue consideration of proposed legislation to strengthen and improve U.S. agricultural programs.
SR-332

2:00 p.m.
Agriculture, Nutrition, and Forestry
Business meeting, to continue consideration of proposed legislation to strengthen and improve U.S. agricultural programs.
SR-332

#### MAY 29

10:00 a.m.
Judiciary
Antitrust, Monopolies and Business Rights Subcommittee
To hold hearings to examine competitive issues in infant formula pricing.
SD-226

#### JUNE 1

9:30 a.m.
Joint Economic
To hold hearings on the employment-unemployment situation for May.
Room to be announced

#### JUNE 5

9:00 a.m.
Appropriations
Defense Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Department of Defense.
SD-192

9:30 a.m.
Governmental Affairs
Oversight of Government Management Subcommittee
To hold oversight hearings to examine certain Federal agency ethics programs.
SD-342

2:30 p.m.
Appropriations
Foreign Operations Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1991 for foreign assistance, focusing on organization and accountability.
SD-138

#### JUNE 6

9:00 a.m.
Armed Services
